AN UNIVERSAL
MILITARY DICTIONARY,

IN

ENGLISH AND FRENCH;

IN WHICH ARE EXPLAINED

THE TERMS OF THE PRINCIPAL SCIENCES

THAT ARE NECESSARY

FOR THE INFORMATION OF AN OFFICER.

BY CHARLES JAMES,

LATE MAJOR OF THE ROYAL ARTILLERY DRIVERS,

Author of the Regimental Companion; Comprehensive View; Poems, dedicated, by
Permission, to His Royal Highness the Prince of Wales, &c. &c.

Malheur aux apprentifs dont les sens égarés
Veulent, sans s'appliquer, franchir tous les degrés :
Téméraires, craignez le sort qui vous menace !
Phaëton périt seul par sa funeste audace :
Si vous guidez trop tôt le Char brillant de Mars,
Songez que tout l'Etat doit courir vos hasards.

KING OF PRUSSIA'S ART OF WAR.

FOURTH EDITION.

LONDON:

Printed for

T. EGERTON, BOOKSELLER TO THE ORDNANCE,

MILITARY LIBRARY, NEAR WHITEHALL.

1816.

CM

TO
HIS ROYAL HIGHNESS
FIELD MARSHAL
THE DUKE OF YORK,
COMMANDER IN CHIEF, &c.

Je n'ai point le sot amour-propre de voir mieux qu'un autre ; si chacun avoit la même franchise, il vous tiendrait le même langage.
Précis de la Vie Publique du Duc D'OTRANTE.—p. 65.

SIR,

I CONTINUE to inscribe this Work to your Royal Highness, because, under your auspices, the British army has arrived at a state of discipline and regulation, by which success abroad has been obtained, and tranquillity at home secured.

The Army stands indebted to you for the confirmation and improvement of that system which Frederick the Great of Prussia first reduced to practice, and which has been ably carried into execution by the united efforts of those officers who have acted under your influence.

Victories gained in the field may reflect the greatest honour upon men that have gallantly fought the battles of their Country ; but victories, after all, are little more than the fruits and consummation of those well digested principles by which the arduous science of war is managed, and without which no army can be well conducted, or finally triumphant. Even he,* who but lately astonished every quarter of the civilized globe by his military exploits and political daring, might still have stood at the head of a great nation, had he been governed by something less intoxicating than mere success.

That soldiers are necessary in every state, the wildest theorist must acknowledge ; and the good or bad direction of their energies alone makes them a curse or a blessing to community.

Five and twenty years hard experience in a neighbouring country must have convinced mankind, that mere abstract reasoning is not sufficient to cope with the vices and frailties of human nature. The dissolution of one frame of government may be effected by arms, but unless arms be resorted to for the support of another, anarchy must

* Bonaparte.

follow until the old system be restored, or a better one substituted in its room: so that whether we have recourse to Alfred's antiquated plan of national defence, to a militia as it now exists, or to a regular army, the consequences must be the same. The whole reasoning, in fact, is neither more nor less than a distinction without a difference. The same may indeed be said of Party, which has been truly called, the madness of many for the gain of a few.

These are truths as unquestionable, as that the necessity for criminal jurisprudence is rendered indispensable by the depravity of human nature. In the hands of a wicked despot, an army becomes a devouring locust, and a creature of ruin and desolation; in those of a man whose highest object is the welfare of his country, it is the palladium of the best rights and interests of a nation; and it is not flattery to say, that you have studiously endeavoured to render it so. Even the honour and honesty of its component parts have been kept in sight; and every species of fraud on the industrious tradesman has been discountenanced by the restrictive vigilance of your rules.*

Under circumstances by no means encouraging to any writer, I have attempted to add my mite to the general stock of military knowledge. That I have, in some degree, succeeded, is shewn by the wide circulation of the work, and most especially by the gratifying manner in which you have done me the honour to receive it.† The path I have been doomed to tread has been lowly, but not wholly destitute of merit, or unfruitful to the service; and although thousands may have eclipsed me by the brilliancy of their career in arms, I have the hardihood to assert, that few have done more, in zeal and assiduity, to second those views which have reflected so much honour upon yourself.‡

* In order to secure the profession of arms from the contaminating touch of fraud, and to convince officers of every rank and description, that the slightest deviation from honesty will be noticed at Head-Quarters, it is an admitted principle with His Royal Highness the Commander in Chief, the Right Honourable the Secretary at War, and the Right Honourable the Master-General of the Ordnance, to receive remonstrances from the lowest tradesman, and to put defaulters under suspension and stoppage of pay until the debt be discharged. In very gross cases dismissal from the service may take place. This is as it ought to be; for why should a man, with honour on his lips, indulge dishonest views in his heart, under the cloak of professional impunity?

† Extract from an Official Letter sent to the Author on his presenting the second edition:

Horse-Guards, 21st January, 1804.

‘I am also directed to inform you, that His Royal Highness very much applauds your zeal, which has induced you to allot so much of your time to the study of military subjects; and he considers the several treatises which you have presented to the public, to have been very beneficial to the service.’

Addressed,

(Signed) W. H. CLINTON.

CHARLES JAMES, Esq.

Albany, Piccadilly.

‡ See Hints to Lord Rawdon, now the Earl of Moira, published by Faulder, in 1790; Comprehensive View, in 1796; and the 7th edition of the Regimental Companion; and Military Dictionary, originally published in 1802, by T. Egerton, Whitehall.

During your administration of the Forces, not only the officer, but the private soldier, has been raised from a comparative state of indigence and degradation into one of comfort and respectability among his fellow citizens; their wives, widows, and children have been relieved;* and even the higher orders of the profession have been placed in a condition of honourable independence. Emulation has received an additional incentive by honorary marks of distinction, and the unavoidable calls of life have been answered by a fair appeal to national justice and liberality. The soldier of fortune and the unprotected officer, with grey hairs and crippled limbs, are no longer left to vegetate upon a miserable half-pay with nominal rank;† and although they may remain without regiments, they are still above the want of those means which are required for the support of their respective stations. And this has been done upon the best of all good principles, that of justice to the individual and economy to the public; for as regiments become vacant they are filled up according to seniority,‡ and are given to such meritorious officers as have distinguished themselves on actual service. In the distribution of military pensions the same regard has been paid to the public purse; for as officers recover, and become enabled to return to the full exercise of their functions; they are examined by the Medical Board, and the allowance drops. The *Date obolum Belisario* is no longer a matter of reproach to Englishmen; while a profligate expenditure of their means for the exclusive benefit of the army, ceases to be a just object of complaint. The interior economy of corps has been equally benefited by the wisdom of your arrangements. Troops and companies have obtained effective officers by the abolition of nominal captains in the several field officers. The Colonel's company, instead of being left, as it formerly was, to the sole direction of an ensign, (for the adjutant was usually its lieutenant,) is now under the immediate command of a captain and two subalterns; and the gay and thoughtless grenadier or light-infantry paymaster has been replaced by an unassuming man of conduct and calculation. Nor have the superior departments of the army been less fortunate under your influence and personal direction. Not only the General Staff has been improved and new-modelled by you, but all its minor branches have been made to correspond with the exigencies of real service. You have destroyed that system of plurality which once prevailed in the army, and which is so destructive in every well-regulated state, civil, military or ecclesiastical. We no longer see vested in the same person the contradictory duties of captain-lieutenant, adjutant, paymaster, quarter-master, and chaplain by

* See the Regulations respecting the provision for the widows and children, and the security of the effects of deceased officers and soldiers.

† For particulars respecting the melancholy situation of a General Officer of this description, before the allowance took place, see the Preface to the last edition of the Regimental Companion.—*Ab uno disce omnes.*

‡ The Royal Branches are, of course, an exception to the rule; and this exception is no more than one of the scarce feathers in the prerogative.

proxy,* for the shameless purpose of throwing into one pocket the accumulated pay and allowances of those situations without the possibility of doing justice to any. In a moral point of view, the condition of the British army has been such as to cause it to be respected abroad, and esteemed at home. Even the French, under the severe mortification of defeat, do not refuse their tribute to the general good behaviour of our men and officers.

With practical knowledge of the field and undaunted assiduity in office, Your Royal Highness has done that for the Army which the late Mr. Pitt, at his outset in life, and every wise man besides, has endeavoured to do for the state at large; you have not only reformed its abuses, but you have raised the long tried valour of its soldiers into acknowledged skill and reputation; you have wisely dismissed all parade and imposing grandeur, to receive officers and common citizens—for your situation embraces the concerns of both classes—as one honest man would receive another; you have not done, as many, most unfortunately for the country, sometimes do—you have not heard through the ears, or seen through the eyes of others; you have personally listened to, and patiently considered, the different statements that have been laid before you; and thereby enabled every man of zeal and ability to offer his contribution to the public service.

It is well known, that one of the boldest and the wisest manœuvres in naval, or military, tactics, was first suggested by a civilian, and afterwards successfully practised by Lord Rodney in 1782, and by Lord Nelson during the late war. It was also imitated by Bonaparte;—I mean that of cutting the enemy's line asunder.† Let it not then be said that books and writings are useless to the service, or that no notice ought to be taken of those men who devote their time and health to Theory and Research.

Animal courage most unquestionably deserves its eulogy; but something also is due to genius, skill and conduct, especially in a nation where courage springs from the cradle, and accompanies every true-born Briton to the grave.

When the army was first placed in your hands, you found it little better than an Augæan stable, choked by undue promotions, and reeking with the Sale, Exchange and Purchase of Commissions; you found Colonels, with their schoolboy habits still about them, standing at the head of battalions, and Ensigns emerging from the Nursery into troops and companies. These evils were obviated by your judicious regulations, in which, while seniority was duly respected, the path to promotion was not closed against superior merit. You have happily steered between the two extremes of an overweening adherence to mere rule and regulation, and an indiscriminate deviation from all system;‡ and after having borne the attacks of Calumny in its grossest

* See a Desultory Sketch of the Abuses in the Militia, addressed to the Earl of Moira in 1794; published by John Bell, Oxford-street.

† See Clerk's Naval Tactics.

‡ See the Seventeenth Report of the Commissioners of Military Inquiry.

sense, and been vindicated by Recantation in its purest spirit, you remain in your dignified station under the best of all pretensions, that of *doing well*.

This, Sir, is the unaltered language, and these are the uninvited sentiments of a plain individual, whose emoluments from the service have always been little, and whose rank is less; who is not bribed to flatter you, or any other distinguished personage, either by a sense of past, or a hope of future, favour; and who thus adds his slender testimony to that of the army at large, in acknowledging, that from the General Officer down to the widow and orphan child inclusive, the happy effects of your interference continue to be felt.

————— totamque diffusa per artus
Mens agitat molem, et magno se corpore miscet.—VIRGIL.

I have the honour to be,

SIR,

YOUR ROYAL HIGHNESS'S

Very obedient, humble Servant,

CHARLES JAMES.

London, November, 1816.

ADVERTISEMENT.

ALTHOUGH this Edition has considerably exceeded the proposed limits of the Author's plan, and contains more technical terms than are to be found in the original undertaking, it is nevertheless so far reduced as to be rendered more portable, and so far abridged as to be less elaborate in its explanation, and more copious in its terms.

Many words have been added in this impression which are not to be found in any work extant; and it is no small gratification to the Author to see the utility of his original introduction of foreign phrases sanctioned by events, in continental warfare, that have raised the character of the British army to the highest pinnacle of glory. More than fourteen years have elapsed, since he first ventured to give the explanation of military terms in general, with the admixture of French words. The propriety of this introduction is now unquestionable.

Without pretending to know more than his neighbours, or to be endowed with deeper sagacity than others, the Author was well aware, from an early view of the French Revolution, and a mature consideration of its course, that the military spirit of France would either over-run Europe, and lodge some of her moveable legions in Great Britain and Ireland, or be forced back by the awakened energies of the Continent upon her own distracted bosom; in either of which unavoidable consequences, a knowledge of the French language must be useful, and indeed necessary, to the British officer. One of these consequences has taken place: and Great Britain possesses the exclusive glory of seeing that power by which her very existence, as an independent nation, had been repeatedly menaced, placed under the guardian wing of a British Chief, whose skill, courage, and good fortune are unexampled in history.*

Of the execution of the Work itself, either in its original state, subsequent augmentation, or present abridgement, the Author can only say, that far from being satisfied himself, he has done his best to satisfy others. He has endeavoured to reduce the subject matter of two volumes into a more portable impression, without losing the smallest portion of its military cast and tenour; and by discharging a redundancy of explanation, he has obtained room for several fresh words. Some entire new matter has also been admitted; particularly that connected with the most important sieges which have occurred since the invention of gunpowder; and likewise the consequences that have ensued from those operations. The list of battles, which has appeared in former editions, is now given with additional matter, and fresh illustration. The Author is free to confess, that after having discovered many contradictory dates in recent publications, he has been enabled to correct them by a reference to that well executed and invaluable collection of mint-medals in which the principal events of the reign of Bonaparte, or Napoleon the 1st, are minutely described; and in imitation of which a series is in progress here to preserve the memory of the several contests in which the Duke of Wellington has proved victorious. Not that any metal, or com-

* To shew that the Author's opinion of the energy and stability of Great Britain has been uniformly the same, see the Dedication to the 4th edition of his Poems, originally written in 1792.

position, can be sufficiently lasting to vie with the living record of his transactions, which must pass down from the lips of one generation to those of another; for *he* may indeed exclaim, in the words of the Roman Poet, *Exegi monumentum ære perennius!*

Although in the prosecution of this volume, the Author has been left to his own labour and researches, and that too during a period of extraneous occupation, he is, nevertheless, called upon by his own feelings to say, that were he permitted to indulge his sense of the prompt and friendly manner in which he has been assisted through the list of Sieges, by an intelligent officer of Engineers, an unreserved acknowledgement would be truly gratifying. This tribute must, therefore, remain with no other direction to its object than may be found in the following French inscription: *A celui qui s'y reconnoitra!*

The Author can only repeat here what he has said in the last edition, that to render this work (what it ought to be) a national Military Encyclopædia, the Professors at Woolwich and Sandhurst should not only afford their theoretical contribution, but officers of known ability and experience, who are provided for in the several departments, should add their practical observations.

An office, or circumscribed department, at a moderate expense to the public, might, indeed, be established for the purpose of receiving communications, of translating foreign military works, and of digesting the different Acts of Parliament which relate to the army. This Office, or Literary Board, would be subordinate to the Commander in Chief and to the Secretary at War; under whose immediate sanction and direction works of a military tendency, as well as official rules and regulations, could be arranged in a short and conspicuous manner. Long subsequent to the publication of the Regimental Companion, a collection of Official Rules and Regulations was given by authority; but this collection contains no more than the bare existing rule without suggestion or illustration; and it is published so seldom,* that innumerable alterations occur between the appearance of one edition and the promulgation of another; so that the officer is frequently at a loss through the want of official reference. I shall not, I trust, be accused of egotism, when I have the presumption to arrogate to myself some slight merit in having struggled through many difficulties to bring the Companion and the present work into notice. The former, for a fair and candid reason,† was not sanctioned by the Commander in Chief, but it had, and still has, the distinguished countenance of His Royal Highness the Prince Regent.

To those persons whose chief study, and perhaps whose chief delight, consists in a malignant pursuit after errors only, the Author must observe, that "*It cannot be expected that he should please others, since he has not been able to please himself.*"

Si quid novisti rectius istis,
Candidus imperti: si non, his utere mecum.

London, 29th November, 1816.

* For the correctness of this remark, I appeal to the Comptrollers of Army Accounts.

† When the Author first requested permission to dedicate the Regimental Companion to His Royal Highness the Commander in Chief, Colonel (now Lieut. General) Brownrigg, who was then Military Secretary, told him, that as the work would contain desultory observations which might be misconstrued into Rules and Regulations, the sanction of Head-Quarters could not be given. This objection, however, was waved with respect to the Military Dictionary.

MILITARY DICTIONARY.

A B A

ABAB, a sort of militia among the Turks.

ABACOT, *Fr.* a cap of state.

ABACUS, (*abuque*, *Fr.*) in architecture, the upper member of the capital of a column, serving as a kind of crowning, both to the capital and the whole column. It is usually square in the Tuscan, Doric, and Ionic orders; and sloping, on the sides, or faces, in the Corinthian and Composite capitals. Vitruvius, and others after him, who give the history of the orders, say that the *abacus* was originally intended to represent a square tile laid over an urn, or rather a basket. See **ACANTHUS**.

ABAJOUR, *Fr.* a sky light; also a small sloping aperture which is made in walls for the purpose of receiving light from above, such as is seen in prisons and subterraneous buildings.

To **ABANDON**, (*abandonner*, *Fr.*) to leave a place to the mercy of an enemy, by suddenly retiring from it. Hence to abandon a fortress, &c.

ABATE, in horsemanship. A horse is said to abate, or take down, his curvets, when, working upon curvets, he puts his two hind legs to the ground both at once, and observes the same exactness in all his times.

ABATIS, *Fr.* trees cut down, and so laid with their branches, &c. turned towards the enemy, as to form a defence for troops stationed behind them. They are made either before redoubts, or other works, to render the attacks difficult, or sometimes along the skirts of a wood, to prevent the enemy from getting possession of it. In this case the trunks serve as a breast-work, behind which the troops are posted, and for that reason

A B O

should be so disposed, that the parts may, if possible, flank each other.

ABBUTTALS, the buttings and boundings of a piece of land expressing on what other lands, streets, highways, &c. the several extremes thereof abut or terminate.

To **ABDICATE**, (*abdiquer*, *Fr.*) to give up voluntarily any place of trust, as to abdicate the crown. The French use the word *abdiquer* in the same manner that we do *to resign*; hence *abdiquer le commandement d'une armée, d'une compagnie*, to resign the command of an army, of a company.

ABLECTI, in military antiquity, a choice or select part of the soldiery in the Roman armies, picked out of those called *extraordinarii*.

ABOARD, (*abord*, *Fr.*) in the ship. *On board* is frequently used to signify the same; but the term is evidently a corruption of its original import and etymology. *A* signifies *in*. Thus, aloft is derived from *a*, *in*, and *luft*, air, in the air; along, in the same track. So that instead of saying, the troops are *on board*, it should be, the troops are *aboard*.

ABOIS, *Fr.* a term used among the French to signify extreme distress. Thus an army which is hemmed in on all sides in a fortress or camp, and is in want of provisions, &c. is said to be *aux abois*. The word comes from *aboyer*, to bark; perhaps the term *at bay* is derived from it, as the stag *at bay*.

ABOI-VENTS, *Fr.* in fortification, small lodgments constructed in a covered way, or in any other part of a fortified place, to protect soldiers from the inclemency of the weather.

ABOLLA, in military antiquity, a warm kind of garment, generally lined or doubled, used both by the Greeks and Romans, chiefly out of the city, in finding the camp.

ABONNEMENT, *Fr.* an engagement entered into by a country, town, corporation, &c. for the purpose of supplying the exigencies of the state in time of war, or of granting provisions, &c. to an army.

ABORD, *Fr.* attack, onset.

D'ABORD, *Fr.* at first; in the beginning.

SABOUCHIER, *Fr.* to parley.

ABOUT, a technical word to express the movement, by which a body of troops changes its front or aspect, by facing according to any given word of command.

Right-ABOUT, is when the soldier, by placing the toe of the right foot on a line in contact with the heel of the left, makes a pivot of the latter, and completely changes the situation of his person, by a semi-circular movement to the right.

Left-ABOUT, is when the soldier, by placing the heel of his right foot on a line with the great toe of the left, changes the situation of his person, by a semi-circular movement to the left. When troops are under arms, they are sometimes put to the left-about, in order to prevent the clashing of the pouches, which frequently occurs in the semi-circular movement to the right.

ABOUT, *Fr.* in carpentry, that part of a piece of wood which is between one of the ends of the piece and a mortoise.

ABREAST, a term formerly used to express any number of men in front. At present they are determined by files.

ABREUVOIR, *Fr.* a watering place; any spot dug for the purpose of retaining water. This must always be attended to when a regular camp is first formed.

ABREUVOIR, *Fr.* in masonry, the joint, or juncture, of two stones; or the interstice, or space, which is left between, to be filled up with mortar or cement.

ABREUVOIR also signifies small trenches which are made in stone quarries to carry off the water.

ABRI, *Fr.* shelter, cover. *Etre à l'abri*, to be under cover, as of a wood, hillock, &c.

ABRIS, *Fr.* places of shelter.

ABSCISSA, in military mathematics, signifies any part of the diameter or axis of a curve, contained between its vertex or some other fixed point, and the intersection of the ordinate.

In the parabola, the *abscissa* is a third proportional to the parameter and the ordinate.

In the ellipsis, the square of the ordinate is equal to the rectangle under the parameter and *abscissa*, lessened by another rectangle under the said *abscissa*, and a fourth proportional to the axis, the parameter, and the *abscissa*.

In the hyperbola, the squares of the ordinates are as the rectangles of the *abscissa* by another line, compounded of the *abscissa* and the transverse axis.

But it must be remembered, that the two proportions relating to the ellipsis and hyperbola, the origin of the *abscissa*, or point from whence they began to be reckoned, is supposed to be the vertex of the curve, or, which amounts to the same thing, the point where the axis meets it; for if the origin of the *abscissa* be taken from the centre, as is often done, the above proportions will not be true.

ABSENT, a term used in the British army. It forms a part of the regimental reports and general returns, to account for the deficiency of any given number of officers or soldiers; and is usually distinguished under two principal heads, viz.

ABSENT with leave, (*avoir congé, ou être permis d'aller en semestre*, *Fr.*) officers with permission, or non-commissioned officers and soldiers on furlough; excused parade or field duty.

ABSENT without leave, (*être absent, ou s'absenter sans permission*, *Fr.*) Men who desert are frequently returned *absent without leave*, for the specific purpose of bringing their crime under regimental cognizance, and to prevent them from being tried capitally for desertion, according to the Mutiny Act.

ABSOLUTE Gravity, in philosophy, is the whole force by which a body, shell, or shot, is impelled towards the centre. See **GRAVITY**.

ABSOLUTE Number, in Algebra, is the known quantity which possesses entirely one side of the equation. Thus, in the equation, $x + 10x = 64$, the number 64, possessing entirely one side of the equation, is called the *absolute number*, and is equal to the square of the un-

known root x , added to $10x$, or to 10 times x .

ABUTMENT, that which abuts or supports the ends of any thing.

ACADEMY, in antiquity, the name of a villa situated about a mile from the city of Athens, where Plato and his followers assembled for conversing on philosophical subjects; and hence they acquired the name of Academics.

The term *Academy* is frequently used among the moderns for a regular society, or company, of learned persons, instituted under the protection of a prince, for the cultivation and improvement of arts or sciences. Some authors confound *academy* with university; but, though much the same in Latin, they are very different things in English. An university is, properly, a body composed of graduates in the several faculties; of professors, who teach in the public schools; of regents or tutors, and students who learn under them, and aspire likewise to degrees: whereas an *academy* was originally not intended for teaching, or to profess any art, but to improve it; it was not for novices to be instructed in, but for those who were more knowing, for persons of distinguished abilities to confer in, and communicate their lights and discoveries to each other, for their mutual benefit and improvement. The first *academy* we read of, was established by Charlemagne, at the motion of Alcuin; it was composed of the chief wits of the court, the emperor himself being a member.

Royal Military ACADEMY. We have in England two royal academies, one at Woolwich, and one at Portsmouth. The first was established by his late Majesty King George II. by warrants bearing date the 30th day of April, and the 18th day of November, 1741, endowed and supported for the instructing of the people belonging to the military branch of the ordnance, in the several parts of mathematics necessary to qualify them for the service of the artillery, and the business of engineers. The lectures of the masters in theory were then only attended by the practitioner-engineers, officers, serjeants, corporals, private men, and cadets. At present the gentlemen educated at this academy are the sons of the nobility and military officers. They are called gentlemen cadets, and are not admitted under 14, and not above 16 years of age. They are taught writing,

arithmetic, algebra, Latin, French, mathematics, mechanics, surveying, levelling, and fortification, together with the attack and defence; gunnery, mining, laboratory-works, geography, perspective, fencing, dancing, &c. The master-general of the ordnance is always captain of the company of gentlemen cadets. One second captain and two subalterns constantly do duty with the cadets, on the common; and there is the same number with those in the arsenal.

The academy at Portsmouth was founded by George I. in 1722, for teaching the branches of the mathematics, which more immediately relate to navigation.

ACANTHUS, in architecture, an ornament in the Corinthian and Composite orders, being the representation of the leaves of the plant in the capitals of them. Acanthus is the name of a thorn, or thistle, which is called, in English, bear's breech, and goat's horn.

ACANZI, in military history, the name of the Turkish light horse, that form the van-guard of the Grand Signior's army on a march.

ACCELERATED Motion on oblique or inclined planes. See MOTION.

ACCELERATED Motion of Pendulums. See PENDULUMS.

ACCELERATED Motion of Projectiles. See PROJECTILES.

ACCELERER, Fr. to hasten on; to press forward.

ACCÉLERER un siège, Fr. to carry the trench under the main body of a fortified place, in order to take it by a prompt assault.

ACCÉLERER une marche, Fr. to make extraordinary exertions in advancing against an enemy with rapidity; to make a forced march.

ACCENDONES, in military antiquity, a kind of gladiators, or supernumeraries, whose office was to excite and animate the combatants during the engagement.

ACCENSI, in antiquity, were officers attending the Roman magistrates; their business was to summon the people to the public games, and to assist the prætor when he sat on the bench.

ACCENSI, in military antiquity, was also an appellation given to a kind of adjutants appointed by the tribune to assist each centurion and decurion. According to Festus, they were supernumerary soldiers, whose duty it was to

attend their leaders, and supply the places of those who were either killed or wounded. Livy mentions them as irregular troops, but little esteemed.—Salmasius tells us, they were taken out of the fifth class of the poor citizens of Rome.

ACCESSIBLE, (*accessible*, Fr.) that which may be approached. We say, in a military style, that place, or that fortress, is *accessible* from the sea, or land, i. e. it may be entered on those sides.

ACCLAMATIONS, Fr. shouts of joy, &c. usually given by troops under arms, amidst the discharge of cannon, &c. on the surrender of a place: or in testimony of some great event: we use the term *cheers*.

ACCLIVITY, in a military sense, is the steepness or slope of any work, inclined to the horizon, reckoned upwards. Some writers on fortification use *acclivity* as synonymous to *talus*; though *talus* is commonly used to denote all manner of slopes.

ACCOMPANIMENT, something attendant on, or added to, another by way of ornament, or for the sake of symmetry.

ACCÓNTIUM, in ancient military writers, a kind of Grecian dart or javelin, somewhat resembling the Roman *pilum*.

ACCOTEMENT, Fr. an upsetting; among paviors, a space of ground which is between the border of a road and the ditch; a sort of footpath by which the road is widened. *Des-Accotement* signifies the reverse, or having both sides uncovered, or not upset.

Pay or Personal ACCOUNT, an account which is kept by army agents, specifying the several sums of money which have been received or disbursed for an officer under the heads of subsistence and allowances.

Clothing Account, an account which is kept by army agents, stating the sums of money which have been received or disbursed for a colonel on account of the clothing of his regiment.

ACCOUNTANT (*Public*). Every officer, be his rank and situation ever so high or low, becomes a public accountant the instant he is entrusted with the receipt and distribution of public property; and until he receive his quietus, he and his heirs remain amenable to the crown—*nullo tempore occurrat Regi*.

ACCOUTREMENTS, in a military sense, signify habits, equipage, or furniture, of a soldier, such as buffs, belts, pouches, cartridge boxes, &c. Accoutrements should be made of stout, smooth buff, as well for the service to be expected from them, as for their superior look above the spongy kind, which is always stretching, and difficult to clean. The buff belts are about 2½ inches broad, with two buckles to fix them to the pouch. Pouches are made of the stoutest blackened calf-skin, especially the outside flaps, which are of such a substance as to turn the severest rain. Cartridge-boxes are made as light as possible, with 36 holes in each, to hold so many cartridges. The bayonet-belt is also 2½ inches broad, and better worn over the shoulder than about the waist.

ACCULER *une armée, une troupe*, Fr. to drive an army or body of men into such a situation that they must either fight or surrender; also to come to close action.

ACÉRER, Fr. to mix steel with iron; thus the point, or edge, of a tool is said to be *bien acéré*, well steeled, when the mixture of steel is pure.

ACIARNEMENT, Fr. the rage and frenzy to which soldiers are subjected in the heat of an engagement; a thirst for blood and carnage.

ACLIDES, in Roman antiquity, a kind of missive weapon, with a thong fixed to it, whereby it might be drawn back again. Most authors describe the *aclides* as a dart or javelin; but Scaliger makes it somewhat of a round and globular shape, with a wooden stem to poise it by.

ACOLUTHI, in military antiquity, was a title in the Grecian empire given to the captain or commander of the *varangi*, or body guards, appointed for the security of the emperor's palace.

ACRÔTERIA, (*acrotères*, Fr.) in architecture, small pedestals, usually without bases, placed on pediments, and serving to support statues.

Sometimes *acroteria* is used to signify those sharp pinnacles, or spiral battlements, which stand in ranges about flat buildings, with rails and balustrades.

ACTIAN games, in antiquity, were games instituted, or at least restored, by Augustus, in memory of the famous victory, at Actium, over Mark Anthony.

ACTIAN years, in chronology, a series of years, commencing with the epocha of the battle of Actium, otherwise called the æra of Augustus.

ACTION, (*action*, Fr.) in the military art, is an engagement between two armies, or any smaller body of troops, or between different bodies belonging thereto. The word is likewise used to signify some memorable act done by an officer, soldier, detachment, or party.

ACTION of the mouth, in a horse, the agitation of the tongue and the mandible of a horse, which, by champing upon the bridle, keeps his mouth fresh.

ACTIVITÉ, Fr. See **ACTIVITY**.

Etré en ACTIVITÉ, Fr. to be in force, or have existence, as a law, rule, or order; also to be on service.

ACTIVITY, in a military sense, denotes laboriousness, attention, labour, diligence, and study.

ACTS of hostility, (*actes d'hostilité*, Fr.) certain overt acts by sea or land, which tend to a declaration of war between two countries; or to a renewal of it, after a truce had been agreed upon.

ACULER, from the French, signifies, in the manège, that a horse, working upon volts, does not go far enough forwards, at every motion, so that his shoulders embrace, or take in, too little ground, and his croupe comes too near the center of the volt. A horse is said to have *acule*, when the horseman does not turn his hand, and put him on with the calf of the inner leg.

ACUTE angle. See **ANGLE**.

ADACTED, applies to stakes, or piles, driven into the earth with large malls shod with iron, as in securing ramparts or pontoons.

ADAPTER, Fr. in architecture, to fit an ornament to any particular object.

ADDICE, a sort of axe which cuts horizontally. It is commonly, or corruptly, called an adze.

ADDOSSER, Fr. See **ADOSSER**.

ADIT, the shaft, or entrance into a mine; a passage under ground, by which miners approach the part they intend to sap. See **GALLERY**.

ADJUTANT-GENERAL, an officer of distinction, who aids and assists the general in his laborious duty: he forms the several details of duty of the army, with the brigade majors, and keeps an exact state of each brigade and regiment, with a roll of the lieutenant-ge-

nerals, major-generals, colonels, lieutenant-colonels, and majors. He every day at head quarters receives orders from the general officer of the day, and distributes them to the majors of brigades, from whom he receives the number of men they are to furnish for the duty of the army, and informs them of any detail which may concern them. On marching days he accompanies the general to the ground of the camp. He makes a daily report of the situation of all the posts placed for the safety of the army, and of any changes made in their posts. In a day of battle the adjutant-general sees the infantry drawn up, after which he places himself by the general to receive orders. In a siege he visits the several posts and guards of the trenches, and reports their situation, and how circumstanced; he gives and signs all orders for skirmishing parties, (if time permit,) and has a serjeant from each brigade to carry any orders which he may have to send.

ADJUTANT, an officer who eases the major of part of the burthen of his duty, and performs it in his absence. He receives orders from the brigade major, if in camp; and when in garrison, from the town major. After he has carried them to his colonel or officer commanding the regiment, he then assembles the serjeant-major, drum-major, and file-major, with a serjeant and corporal of each company, who write the orders to shew to their respective officers. If convoys, parties, detachments, or guards, are to be furnished, he gives the number which each company is to furnish, and hour and place for the assembling: he must keep an exact roster and roll of duties, and have a perfect knowledge of all manœuvres, &c.

ADMINISTRATION intérieure des Corps, Fr. the interior economy or internal management of regiments; such as the clothing, capping, accoutring, paying the men their allowances, &c.

ADMINISTRER, Fr. to furnish; to supply.

ADMINISTRER des munitions, Fr. to supply a town or army with the necessary means of attack and defence.

ADMIRAL, the commander in chief of a fleet, squadron, &c. When on shore, he is entitled to receive military honours, and ranks with generals in the army.

ADOS, Fr. a bank of earth which

is raised against a wall that is much exposed.

ADOSSER, *Fr.* to place one thing behind another.

ADOUBER, } *Fr.* to stop up
RADOUBER, } chasms or holes in a fountain, machine, &c.

ADOUCCISEMENT, in architecture, the junction of one body with another; also the reducing two bodies to the same surface, or making them even.

ADVANCE. See *PAY in Advance.*

ADVANCED signifies some part of an army in front of the rest, as in *advanced guards*, which always precede the line of march or operations of a body of troops; again, as when a battalion, or guns of a second line are brought up in front and before the first line. This term also applies to the promotions of officers and soldiers.

ADVANCED { *Fossé* } See FORTIFI-
 { *Ditch* } CATION.
 { *Guard.* } See GUARD.

ADVANCEMENT, in a military sense, signifies honour, promotion, or preferment, in an army, regiment, or company.

ADVANTAGE *Ground*, a ground that gives superiority, or an opportunity of annoyance or resistance.

ADVICE *Bout*, a vessel employed for intelligence.

ADVOCATE *General.* See JUDGE *Marshal.*

ÆNEATORES, in military antiquity, the musicians in an army; including those who sounded the trumpets, horns, *litui*, *buccinae*, &c.

AFFAIR, in the military acceptation of the word, means any action or engagement.

AFFAIR of Honour, a duel.

AFFAIRE *de poste*, *Fr.* any engagement fought by an army for the purpose of securing some object of importance; as the key of a country, &c.

AFFAISSEMENT *d'un ouvrage de fortification*, *Fr.* the sinking or lowering of any part of a fortification, either through time, or by pressure, &c.

AFFAMER *unc armée*, *Fr.* to prevent an army from receiving provisions, &c. and thereby starve it out.

AFFAMER *unc place*, *Fr.* to besiege a place so closely as to starve the garrison and inhabitants. See BLOCKADE.

AFFIDAVIT, in military law, signifies an oath taken before some person

who is properly authorized to administer it; as first, when a soldier is enlisted, when it is styled an attestation; secondly, by all officers appointed for a court-martial; thirdly, by the commissaries, or muster-masters, &c.

AFFIDÉ, *Fr.* a man that is trusted; one in the confidence of another.

AFFLEURER, *Fr.* to place two things upon the same level.

AFFOIBLIR, *Fr.* to weaken; hence *affoiblir un ennemi*, to weaken an enemy.

AFFRONTER *les périls*, *Fr.* to face all dangers; not to be intimidated by the sword, ball, or even death itself.

S'AFFRONTER, *Fr.* to engage one another rudely. *Les deux armées s'affrontèrent*, the two armies came to close action, and fought hand to hand.

AFFRONTER, *Fr.* to encounter or attack boldly.

AFFUT, the French name for a gun-carriage, and for which we have no proper name; the only distinction from all other carriages is, that it belongs to a gun. See CARRIAGE.

AGA, in the Turkish army, is the same as a general with us.

AGE. A young man must be 14 years old before he can become an officer in the line, or be entered as a cadet at Woolwich.

Persons may be enlisted for soldiers from 17 to 45. After the latter age, every inhabitant is exempted from serving in the British militia.

By a late regulation, growing boys may be enlisted under 16 years of age. These recruits are chiefly intended for the East-India service.

The Romans were obliged to enter themselves in the army at the age of 17 years; at 45 they might demand their dismissal. Amongst the Lombards, the age of entry was between 18 and 19; among the Saxons, at 13.

AGE of a horse. The age of a horse is discovered by several outward characters, but principally by his teeth; which see. We also refer the curious to *M. de Solleysel's Complete Horseman*, for particular remarks on this important head.

AGEMA, in the ancient military art, a kind of soldiery chiefly in the Macedonian armies. The word is Greek, and literally denotes vehemence, to express the strength and eagerness of this corps. Some authors will have *agemata* to denote

a certain number of picked men, answering to a legion among the Romans.

AGENCY, a certain proportion of money which is ordered to be subtracted from all the pay and allowances of the British army, for transacting the business of the several regiments composing it.

AGENDA, *Fr.* a term used among the French, signifying a minute detail of every thing that is required in the interior economy of a regiment, troop, or company.

AGENT, a person in the civil department of the army, between the paymaster-general and the paymaster of the regiment, through whom every regimental concern of a pecuniary nature must be transacted. He gives security to government, or to the colonels of regiments, who are responsible to government, for all monies which may pass through his hands in the capacity of an Agent—and by the Mutiny Act it is provided, That if an agent shall withhold the Pay of Officers or Soldiers for the space of one Month, he shall be dismissed from his Office, and forfeit 100*l.* (39th Geo. III. Sect. 69.)

Half-pay AGENT, a person named or appointed by an officer on half-pay, to receive his allowances. He does not give any security.

AGENT, *Fr.* the person who is entrusted with the interior economy of a regiment, troop, or company.

AGGER, in ancient military writers, denotes the middle part of a military road, raised into a ridge, with a gentle slope on each side, to make a drain for the water, and keep the way dry.

AGGER is also used for the whole road or military way. Where highways were to be made in low grounds, as between two hills, the Romans used to raise them above the adjacent land, so as to make them of a level with the hills. These banks they called *aggeres*. Bergier mentions several in the *Gallia Belgica*, which were thus raised 10, 15, or 20 feet above ground, and 5 or 6 leagues long. They are sometimes called *aggeres calceati*, or causeways, as with us.

AGGER also denotes a work of fortification, used both for the defence and the attack of towns, camps, &c. in which sense *agger* is the same with what was otherwise called *vallum*, and in later times, *agestum*; and among the mo-

derns, *lines*; sometimes, *cavaliers*, *terrasses*, &c.

The *agger* was usually a bank, or elevation of earth, or other matter, bound and supported with timber; having sometimes turrets on the top, wherein the workmen, engineers, and soldiery, were placed. It was also accompanied with a ditch, which served as its chief defence. The height of the *agger* was frequently equal to that of the wall of the place. Cæsar tells us of one he made, which was 30 feet high, and 330 feet broad. Besides the use of *aggers* before towns, they generally used to fortify their camps with the same, for want of which precaution, divers armies have been surprised and ruined.

There were vast *aggers* made in towns and places on the sea-side, fortified with towers, castles, &c. Those made by Cæsar and Pompey, at Brundisium, are famous. Sometimes *aggers* were even built across arms of the sea, lakes, and morasses; as was done by Alexander before Tyre, and by M. Anthony and Cassius.

The wall of Severus, in the north of England, may be considered as a grand *agger*, to which belong several lesser ones. Besides the principal *agger*, or *vallum*, on the brink of the ditch, Mr. Horsley describes another on the south side of the former, about 5 paces distant from it, which he calls the south *agger*; and another larger one, on the north side of the ditch, called the north *agger*. This latter he conjectures to have served as a military way; the former, probably, was made for the inner defence, in case the enemy should beat them from any part of the principal *vallum*, or to protect the soldiers against any sudden attack from the provincial Britons.

AGGER *Tarquinius* was a famous fence built by Tarquinius Superbus, on the east side of Rome, to stop the incursions of the Latins and other enemies, whereby the city might be invested.

AGGER is also used for the earth dug out of a ditch or trench, and thrown up on the brink of it: in which sense, the Chevalier Folard thinks the word to be understood, when used in the plural number, since we can hardly suppose they would raise a number of cavaliers or terrasses.

AGGER is also used for a bank or wall, erected against the sea, or some great river, to confine or keep it within bounds;

in which sense, *agger* amounts to the same with what the ancients called *tumulus* and *moles*; the Dutch, *dylke*; and we, *dam*, *sea-wall*, &c.

AGIADES, in the Turkish armies, are a kind of pioneers, or rather field engineers, employed in fortifying the camp, &c.

AGIR, *Fr.* to act; hence *agir en offensive*; *agir en défensive*; to act offensively; to act defensively, or on the defensive.

AGITATOR, (*Affidé*, *Fr.*) a person in the confidence of a superior, who mixes with his fellow subjects or comrades, and discusses various matters for the purpose of discovering their views and principles. This character was first created by Oliver Cromwell; and a similar one was much employed among the French, in order to preserve the military ascendancy of Bonaparte.

AGUERRI, *Fr.* an officer or soldier experienced in war; a veteran.

AID, in horsemanship. To aid, assist, or succour a horse, is to help him to work true. This is done by the gentle and moderate exercise of the bridle, the spur, the cavesson, the pincion, the rod, the action of the legs, the motion of the thighs, and the sound of the tongue.

AIDE-DE-CAMP, an officer appointed to attend a general officer, in the field, in winter quarters, and in garrison; he receives and carries the orders, as occasion requires. He is seldom under the degree of a captain, and all aides-de-camp have 10s. a day allowed for their duty. This employment is of greater importance than is generally believed: it is, however, often entrusted to young officers of little experience, and of as little capacity; but in most foreign services they give great attention to this article. Marshal de Puysegur mentions the loss of a battle through the incapacity of an aide-de-camp. The king may appoint for himself as many as he pleases, which appointment gives the rank of colonel in the army. Generals, being field marshals, have *four*, lieutenant generals *two*, major generals *one*, and brigadier generals *one brigade major*.

AIDE du Parc des Vivres, *Fr.* an officer in France, acting immediately under the commissary of stores and provisions.

AID-MAJOR. See ADJUTANT.

AIGREMORE, a term used by the

artificers in the laboratory, to express the charcoal in a state fitted for the making of powder.

AIGUILLE, an instrument used by engineers to pierce a rock for the lodgment of powder, as in a mine; or to mine a rock, so as to excavate and make roads.

AIGUILLE de chariot, *Fr.* the draught tree of a chariot.

AIGUILLES, *Fr.* in carpentry, short upright pieces of wood used in the roofs of houses.

AIGUILLES, in hydraulics, round or square pieces of wood which serve to lift up, or let down, a flood-gate.

AIGUILLETES, *Fr.* tagged points, such as hang from the shoulders in military uniforms, particularly among the Russians, Prussians, &c.

AILE, *Fr.* a wing or flank of an army or fortification.

AILES de moulin à vent, *Fr.* the sails of a windmill.

AILERONS, *Fr.* the short boards which are set into the outside of a water-mill's wheel; we call them *ladles*, or *aveboards*. *Aubes*, *Fr.* signify the same.

AILERONS also signify small buttresses, or starlings, which are laid along the sides of rivers, or water courses, in order to prevent them from undermining any particular building. According to Belidor, the word *épis* is more appropriate.

AIM, the act of bringing the musquet, piece of ordnance, or any other missive weapon, to its proper line of direction with the object intended to be struck.

AIM-FRONTLET, a piece of wood hollowed out to fit the muzzle of a gun, to make it of an equal height with the breech, formerly made use of by the gunners, to level and direct their pieces. It is not used at present.

AIR, (*air*, *Fr.*) in a horse, a cadence and liberty of motion, suited to the natural disposition of the horse, which makes him work in the manege, and rise correctly.

AIR, *Fr.* air, manner, way, &c. also look, countenance, &c.

AIR de service, *Fr.* a look of hardship, or of war; weather-beaten.

AIR-GUN, a pneumatic machine for exploding bullets, &c. with great violence.

The common air-gun is made of brass,

and has two barrels: the inside barrel is of a small bore, from whence the bullets are exploded; and a large barrel on the outside of it. There is likewise a syringe fixed in the stock of the gun, by which the air is injected into the cavity between the two barrels through a valve. The ball is put down into its place in the small barrel with the rammer, as in any other gun. Another valve, being opened by the trigger, permits the air to come behind the bullet, so as to drive it out with great force. If this valve be opened and shut suddenly, one charge of condensed air may be sufficient for several discharges of bullets; but if the whole air be discharged on one single bullet, it will drive it out with uncommon force. This discharge is effected by means of a lock placed here, as usual in other guns; for the trigger being pulled, the cock will go down and drive the lever, which will open the valve, and let in the air upon the bullet: but as the expansive power of the condensed air diminishes at each discharge, its force is not determined with sufficient precision for the purposes of war. Hence it has been long out of use among military men.

In the air-gun, and all other cases where the air is required to be condensed to a very great degree, it will be necessary to have the syringe of a small bore, viz. not exceeding half an inch in diameter; because the pressure against every square inch is about 15 pounds, and therefore against every circular inch about 12 pounds. If therefore the syringe be one inch in diameter, when one atmosphere is injected, there will be a resistance of 12 pounds against the piston; and when ten are injected, there will be a force of 120 pounds to be overcome; whereas ten atmospheres act against the circular half-inch piston (whose area is only $\frac{1}{4}$ part so big) with only a force equal to 30 pounds; or 40 atmospheres may be injected with such a syringe, as well as 10 with the other. In short, the facility of working will be inversely as the squares of the diameter of the syringe.

AIR-SHAFTS, in mining. See **MINING**.

AIRE, *Fr.* any smooth or even spot of ground upon which one treads.

AIRE, *Fr.* in geometry, the area or inside of any geometrical figure.

AIRE, *Fr.* in architecture, the space between the walls in a building.

AIRÉE, *Fr.* a barn-floor.

AIRIER, *Fr.* to fumigate.

AIS, *Fr.* board, plank.

Ais d'entrevoux, *Fr.* boards or planks which cover the space between the rafters, or beams, in a building.

AISCEAU, *Fr.* a chip-axe, or one handed plane axe, with which carpenters hew their timber smooth.

AISCETTE, *Fr.* a small planing axe.

AISSE, *Fr.* a linch pin.

AISSIEU, *Fr.* axle-tree, axis. It is also called *tympan* or *tambour*, round which a rope may be wound for the purpose of drawing up any load affixed to it.

AJUTAGE, (*ajutage*, *Fr.*) in hydraulics, part of the apparatus of an artificial fountain; being a sort of *jet d'eau*, or kind of tube fitted to the mouth or aperture of a vessel, through which the water is to be played, and thrown into a particular form or figure.

AJUTAGES, *Fr.* pipes for water-works.

ALAISE, *Fr.* in carpentry, a thin piece of wood which is used to finish the wooden pannels of a door. It is also written *alèse*.

ALARM is a sudden apprehension upon some report, which makes men run to their arms to stand upon their guard; it implies either the apprehension of being suddenly attacked, or the notice given of such an attack being actually made; generally signified by the firing of a cannon, the beat of a drum, &c.

ALARM-Post, in the field, is the ground appointed by the quarter-master general for each regiment to march to, in case of an alarm.

ALARM-Post, in a garrison, is the place allotted by the governor for the troops to draw up in, on any sudden alarm.

False-ALARMS, are stratagems of war, frequently made use of to harass an enemy, by keeping them perpetually under arms. They are often conveyed by false reports, occasioned by a fearful or negligent sentinel. A vigilant officer will sometimes make a false alarm, to try if his guards are strict upon duty.

ALARM-Bell, the bell rung upon any sudden emergency, as a fire, mutiny, approach of an enemy, or the like, called by the French, *Tocsin*.

ALCANTARA, knights of, a Spanish military order, who gained great honour during the wars with the Moors.

ALDER, an aquatic tree well known; still much esteemed for such parts of works as lie continually under water.

Vitruvius tells us, that the morasses about *Ravenna*, in Italy, were piled with *alder* timber, in order to build upon.

The *Rialto* at Venice is built upon piles of this wood.

ALERT, originally derived from the French word *alerte*, which is formed of *a* and *airte*. The French formerly said *airte* for air; so that *alerte* means something continually in the air, and always ready to be put in action. A general is said to be *alert* when he is particularly vigilant.

To be kept upon the *ALERT* is to be in continual apprehension of being surprized. *Alerte*, among the French, is an expression which is used to put soldiers upon their guard. It is likewise used by a post that may be attacked in the night, to give notice to the one that is destined to support it; and by a sentry to give warning when any part of the enemy is approaching.

ALETTE, *Fr.* in architecture, the side of a pier between two arcades: alettes also signify jaumbs, or piedroits.

ALGARIE, *Fr.* a catheter which surgeons use to draw off the urine.

ALGEBRA, the science of numbers in general, in which, by general marks for numbers, and others for operations with them, the properties of numbers are demonstrated, and questions relative to them are solved in an easy and concise manner. This science has been rendered obscure by an affectation of mystery, and the supposition, that numbers might be less than nothing, and impossible. But as number is definite in itself, and one of the clearest ideas, whenever such a mysterious expression occurs, it must be owing to the negligence of the person using it, not to any fault in the science. The study of this easy branch of knowledge might be recommended to officers in general, from the example set them by *Descartes*, the great philosopher of France, who when a young man, and encamped near an university, solved a difficult problem, which exercised the talents of their deepest students. To officers in the ordnance department the knowledge of Algebra is indispensably necessary. See *Mr.*

French's very able publication on this science.

ALIDADE, *Fr.* a small instrument which is used in making the grooves of a rille barrel equal; a cross-staff; also the index of a nocturnal or sea quadrant.

ALIEN, in law, implies a person born in a foreign country, not within the king's dominions, in contradistinction to a denizen, or natural-born subject.

ALIEN-OFFICE. See OFFICE.

ALIGNEMENT implies any thing straight: for instance, the *alignement* of a battalion means the situation of a body of men when drawn up in line. The *alignement* of a camp signifies the relative position of the tents, &c. so as to form a straight line from given points.

ALÆ, in the ancient military art, the two wings or extremes of an army ranged in order of battle.

ALIQVANT, (*aliquante*, *Fr.*) parts of a number, which, however repeated, will never make up the number exactly; as, 3 is an aliquant of 10, thrice 3 being 9, four times 3 making 12.

ALIQVOT, (*aliquotes*, *Fr.*) aliquot parts of any number or quantity, such as will exactly measure it without any remainder; as three is an aliquot part of 12, because being taken four times, it will just measure it. Thus also, the aliquot parts of 18 are 2, 3, 6, 9.

ALLEGIANCE, in law, implies the obedience which every subject ought to pay to his lawful sovereign.

Oath of ALLEGIANCE is that taken by the subject, by which he acknowledges the king his lawful sovereign. It is also applied to the oath taken by officers, non-commissioned officers, and soldiers in pledge of their fidelity to the monarch, prince, or state, under which they serve.

ALLEGIAN, loyal.

ALLER à l'enemi, *Fr.* to meet the enemy; to march against him.

ALLÉZER, *Fr.* to cleanse the mouth of a cannon or other piece of ordnance, and to increase the bore, so as to produce its determined calibre.

ALLÉZOIR, *Fr.* a frame of timber firmly suspended in the air with strong cordage, on which is placed a piece of ordnance with the muzzle downwards. In this situation the bore is rounded and enlarged by means of an instrument which has a very sharp and strong

edge made to traverse the bore by men or horses, and in an horizontal direction.

ALLÉZURES, *Fr.* the metal taken from the cannon by boring.

ALLIAGE, a term used by the French, to denote the composition of metals used for the fabrication of cannon and mortars, &c.

ALLIANCE, *Fr.* in a military sense, signifies a treaty entered into by sovereign princes and states, for their mutual safety and defence. In this sense alliances may be divided into such as are offensive, where the contracting parties oblige themselves jointly to attack some other power; and into such as are defensive, whereby the contracting powers bind themselves to stand by, and defend one another, in case of being attacked by any other power.

Alliances are variously distinguished according to their object, the parties in them, &c. Hence we read of equal, unequal, triple, quadruple, grand, offensive, defensive alliances, &c.

ALLODIAL, independent; not feudal. The Allodii of the Romans were bodies of men embodied on any emergency, in a manner similar to our volunteer associations.

ALLOGNE, the cordage used with floating bridges, by which they are guided from one side of a river to the other.

ALLONGE, *Fr.* a pass or thrust with a rapier or small sword; also a long rein used in the exercising of horses.

ALLONGER, *Fr.* to lengthen.

ALLOWANCE, a sum paid monthly or otherwise, as the case may be, for services rendered, &c. The French use the word *traitement* in this sense. They also say *Allouance*, from *Allouer*, to allow.

ALLOY is the mixture of metals that enter into the composition of the metal proper for cannon and mortars.

ALLY, in a military sense, implies any nation united to another, under a treaty, either offensive or defensive, or both.

ALMADIE, a kind of military canoe, or small vessel, about 24 feet long, made of the bark of a tree, and used by the negroes of Africa.

ALMADIE is also the name of a long-boat used at Calcutta, near 30 feet long, and generally six or seven broad.

ALTIMETRY, the taking or measuring altitude, or heights.

ALTITUDE, height or distance from the ground measured upwards, and may be either accessible or inaccessible.

ALTITUDE of figure is the distance of its vertex from its base, or the length of a perpendicular let fall from the vertex to the base.

ALTITUDE of a shot or shell is the perpendicular height of the vertex of the curve in which it moves above the horizon. See **GUNNERY** and **PROJECTILES**.

ALTITUDE, in optics, is usually considered as the angle subtended between a line drawn through the eye, parallel to the horizon, and a visual ray emitted from an object of the eye.

ALTITUDE, in cosmography, is the perpendicular height of an object, or its distance from the horizon upwards.

ALTITUDES are divided into *accessible* and *inaccessible*.

Accessible ALTITUDE of an object is that whose base you can have access to, i. e. measure the nearest distance between your station and the foot of the object on the ground.

Inaccessible ALTITUDE of an object is that when the foot or bottom of it cannot be approached, by reason of some impediment; such as water, or the like. The instruments chiefly used in measuring *altitudes*, are the quadrant, theodolite, geometric quadrant, or line of shadows, &c.

ALTITUDE of the eye, in perspective, is a right line let fall from the eye, perpendicular to the geometrical plane.

ALTITUDE of motion, a term used by some writers, to express the measure of any motion, computed according to the line of direction of the moving force.

AMARRER sur la culasse d'un canon, *Fr.* to tie or lash to the breech of a gun, in order to inflict bodily chastisement, or to answer any other purpose.

AMAS, *Fr.* stores.

AMAZON, one of those women who inhabited the country so called. They are said to have composed a nation of themselves, exclusive of males, and to have derived their name from their cutting off one of their breasts, that it might not hinder or impede the exercise of their arms. This term has often by modern writers been used to signify a bold daring woman, whom the delicacy of her sex does not hinder from engaging in the most hazardous attempts.

The last and former wars with France have furnished us with several instances of females who have undergone the fatigue of a campaign with alacrity, and run the hazards of a battle with the greatest intrepidity.

AMBIT, the compass or circuit of any work or place, as of a fortification or encampment, &c.

AMBITION, in a military sense, signifies a desire of greater posts, or preferment. Every gentleman in the army or navy ought to have a spirit of ambition to arrive at the very summit of the profession.

AMBLÉE *ou emblée*, Fr. main force, or assault.

AMBLING, a motion in a horse between the gallop and trot.

AMBULANT, Fr. changing situation according to circumstances; hence *Hôpital ambulant*, an hospital which follows the army; *Chirurgien ambulant*, a surgeon who follows the line of action.

AMBUSCADE, a snare set for the enemy, either to surprize him when marching without precaution; or by posting yourself advantageously, and drawing him on by different stratagems, to attack him with superior force.

AMBUSH, a place of concealment for soldiers to surprize an enemy, by falling suddenly upon him.

AME, a French term, similar in its import to the word *chamber*, as applied to cannon, &c.

AMENDE *Honorable*, among the French, signifies an apology for some injury done to another, or satisfaction given for an offence committed against the rules of honour or military etiquette; and was also applied to an infamous kind of punishment inflicted upon traitors, parricides, or sacrilegious persons, in the following manner: the offender being delivered into the hands of the hangman, his shirt is stripped off, a rope put about his neck, and a taper in his hand; then he is led into court, where he must beg pardon of God, the king, the court, and his country. Sometimes the punishment ends here; but at other times it is only a prelude to death, or banishment to the galleys.

AMMUNITION implies all sorts of powder and ball, shells, bullets, cartridges, grape-shot, tin and case-shot, carcasses, grenades, &c.

AMMUNITION, *fixed* and *unfixed*.—The *fixed* comprises loaded shells, car-

tridges, and cartridges, filled with powder; also shot, fixed to powder, for the convenience of loading quick, and preventing mistakes in using the charges of powder for firing the different natures of round and case-shot, for field service; but this latter practice has of late years been discontinued, owing to the great danger there is in mixing the powder with the shot, when travelling, and from the ammunition fixed in this manner not being proper to deposit in magazines. Ball and blank cartridges for the troops, of different descriptions, to suit the natures of arms, are also termed *fixed* ammunition.

Unfixed ammunition means round, case, and grape-shot, or shells, not filled with powder.

Ammunition for the navy is all unfixed, at the time it is sent on board ship, except it may be the handgrenades; and when on board, the gunner receives directions to keep a certain number of cartridges, filled with powder, for immediate service.

AMMUNITION, or *gun-powder*, may be prohibited to be exported, at the king's pleasure, by Car. II. cap. 4. sect. 13.

Arms, utensils of war, or gun-powder, imported without licence from his majesty, are to be forfeited with treble the value. Such licence obtained, except for the furnishing his majesty's public stores, is to be void, and the offender to incur a premonition, and be disabled to hold any office from the crown.

AMMUNITION *bread*, such as is contracted for by government, and served in camp, garrison, and barracks.

AMMUNITION *shoes, stockings, shirts, storks*, &c. such of those articles as are served out to the private soldiers by government. See **HALF MOUNTINGS**.

AMMUNITION *wagon* is generally a four-wheel carriage with shafts; the sides are railed in with staves and raves, and lined with wicker work, so as to carry bread and all sorts of tools. It is drawn by four horses, and loaded with 1200 pounds weight. See **WAGON**.

AMMUNITION *cart*, a two-wheel carriage with shafts; the sides of which, as well as the fore and hind parts, are inclosed.

AMNESTY, (*amnistic*, Fr.) an act of oblivion; a general pardon.

AMOISE, Fr. in carpentry, a piece of wood which is laid between two half-

beams of timber to support the rafters in a roof.

AMORCE, an old military word for fine-grained powder, such as is sometimes used for the priming of great guns, mortars, or howitzers; as also for small arms, on account of its rapid inflammation: a port fire, or quick match.

AMORCES, *Fr.* in masonry, bricks or stones which serve to unite a wall of some extent, but which is not completed all together.

AMORTIR, *Fr.* to deaden; as *Amortir un coup de feu*, to deaden a shot from a fire-arm.

AMORTISSEMENT, *ou couronnement*, *Fr.* a piece of architecture, or ornament of sculpture, which diminishes as it rises, to terminate some decoration.

AMPLITUDE *de parabole*, *Fr.* in artillery, the horizontal range of a shell, from its departure out of a mortar to the spot on which it drops.

AMPLITUDE *of the range of a projectile*. See PROJECTILE.

AMPOULETTE, an old military term used by the French to express the stock of a musket, &c.

AMUSETTE, a species of offensive weapon which was invented by the celebrated Marshal Saxe. It is fired off in the same manner as a musquet, but is mounted nearly like a canon. It was found of considerable use during the late war, especially among the French, who armed their horse artillery with it; and found it superior to the one adopted by the Prussians. The ball with which it is loaded is from one pound and a half to two pounds weight of lead.

ANABASII, in antiquity, were expeditious couriers, who carried dispatches of great importance, in the Roman wars.

ANACLETICUM, in the ancient art of war, a particular blast of the trumpet, whereby the fearful and flying soldiers were rallied and recalled to the combat.

ANALOGY, in geometry, &c. the comparison of several ratios together; and is the same as proportion.

ANALYSIS, (*analyse*, *Fr.*) a separation of a compound body into the several parts of which it consists.

ANBURY is a kind of wen, or spongy wart, growing upon any part of a horse's body, full of blood.

ANCHOR, (*ancree*, *Fr.*) a heavy iron composed of a long shank, having a ring at one end, to which the cable is fastened, and at the other branching out into two arms or flukes, tending upwards with barbs or edges on each side: its use is to hold the ship, by being fixed to the ground. There are ten parts belonging to an anchor, viz. the shank, the eye, the ring, the nuts, the crown, the arms, the palms, the flukes, the bill, and the stock.

ANCHORS, in architecture, a sort of carving which resembles an anchor, or arrow head.

ANCIENT, a term used formerly to express the grand ensign or standard of an army.

ANCILE, in antiquity, a kind of shield, which fell, as was pretended, from heaven, in the reign of Numa Pompilius; at which time, likewise, a voice was heard, declaring, that Rome would be mistress of the world as long as she should preserve this holy buckler.

Authors are much divided about its shape: however, it was kept with great care in the temple of Mars, under the direction of twelve priests; and lest any should attempt to steal it, eleven others were made so like it, as not to be distinguished from the sacred one. These *Ancilia* were carried in procession every year round the city of Rome.

ANCONES are the corners, or coins of walls, cross-beams, or rafters. *Vitruvius* calls the consols, ancones.

ANCRE, *Fr.* an iron brace.

ANDABATÆ, in military antiquity, a kind of gladiators, who fought hoodwinked, having a sort of helmet that covered the eyes and face. They fought mounted on horseback, or out of chariots.

St. Andrew, or *the Thistle*, a military order of knighthood in Scotland; the motto is, *Nemo me impune lucescit*. The occasion of instituting this order is variously related by different authors. John Lesley, bishop of Ross, reports, that the night before the battle betwixt Athelstane, king of England, or rather Northumberland, and Hungus, king of the Picts, a bright cross, in the fashion of that whereon St. Andrew suffered martyrdom, appeared in the air to Hungus; he having gained the victory, bore the figure of that cross at all times after in his ensigns and banners; from which time all succeeding Kings of Scotland

have religiously observed the same bearing. Others assert, that this extraordinary appearance was not to Hungus, but to the Scots, whom Achaius, king of Scotland, sent to his assistance. This victory is said to have been obtained in the year 819, (though, according to Buchanan, Achaius died nine years before,) and that Hungus and Achaius went bare-footed in solemn procession to the kirk of St. Andrew, to return thanks to God and his apostle, promising, that they and their posterity would ever use in their ensigns the cross of St. Andrew, which custom prevailed among the Picts, and continues among the Scots unto this day; and that both these kings instituted an order, which they named the order of St. Andrew.

Others, who allow that Achaius instituted this order, give the following account of its origin: Achaius having formed that famous league, offensive and defensive, with Charlemagne, against all other princes, found himself thereby so strong, that he took for his device the *Thistle* and the *Rue*, which he composed into a collar of his order, and for his motto, *Pour ma défense*, intimating thereby, that he feared not the powers of foreign princes, seeing he leaned on the succour and alliance of the French. And though from hence may be inferred, that these two plants, the Thistle and the Rue, were the united symbols of one order of knighthood, yet Menenius divides them into two, making one whose badge was the thistle, whence the knights were so called, and the motto, *Nemo me impune lacessit*; another vulgarly called *Sertum ruta*, or the Garland of Rue; the collar of which was composed of two branches or sprigs thereof, or else of several of its leaves: at both these collars hung one and the same jewel, to wit, the figure of St. Andrew, bearing before him the cross of his martyrdom.

But though the thistle has been acknowledged for the badge and symbol of the kingdom of Scotland, even from the reign of Achaius, as the rose was of England, and the lily of France, the pomegranate of Spain, &c. yet there are some who refer the order of the thistle to later times, in the reign of Charles VII. of France, when the league of amity was renewed between that kingdom and Scotland, by which the former received great succour from the latter, at a period of extraordinary distress.

Others again place the foundation still later, even as low as the year 1500; but without any degree of certainty.

The chief and principal ensign of this order is a gold collar, composed of thistles, interlinked with annulets of gold, having pendent thereto the image of St. Andrew, with his cross, and this motto, *Nemo me impune lacessit*.

Knights of St. Andrew is also an order instituted by Peter the Great, of Muscovy, in 1698; the badge of which is a golden medal, on one side whereof is represented St. Andrew's cross; and on the other are these words, *Czar Pierre, monarque de toute la Russie*. This medal, being fastened to a blue ribbon, is suspended from the right shoulder.

ANGARIA, in ancient military writers, means a guard of soldiers posted in any place for the security of it. Vide Vegetius, lib. i. c. 3. lib. ii. c. 19. lib. iii. c. 8.

ANGARIA, in civil law, implies a service by compulsion, as furnishing horses and carriages for conveying corn or other stores for the army.

ANGE, a term used by the French to express chain shot.

ANGEL Shot. See CHAIN SHOT.

ANGEL Bed, an open bed without bed-posts, such as may be seen in the wards of gaols, hospitals, &c.

ANGELOT, a gold coin, which was struck at Paris when that capital was in the hands of the English; and so called from its representing the figure of an angel, supporting the arms of England and France; also a musical instrument resembling a lute.

ANGLE, in geometry, is the inclination of two lines meeting one another in a point.

The measure of an angle is the arch of a circle whose center is the angular point, and radius any distance in the lines forming the angle, and by which the arc is intercepted. As many degrees, &c. as are contained in that arch, so many degrees, &c. the angle is said to consist of.

ANGLES are either *right*, *acute*, or *obtuse*.

A *right* ANGLE is that formed by a line falling perpendicularly on another; or that which subtends an arc of 90 degrees. All right angles are equal to each other.

An *acute* ANGLE is that which is less than a right angle, or 90°.

An obtuse ANGLE is that which is greater than a right angle; or whose measure exceeds 90° .

Adjacent ANGLES are such as have the same vertex, and one common side. The sum of the adjacent angles is always equal to two right angles (13 *Eucl.* 1), and therefore, if one of them be acute, the other will be obtuse; and the contrary: whence, if either of them be given, the other is also given, it being the complement of the former to 180° .

Homologous or like ANGLES, in similar figures, are such as retain the same order, reckoning from the first in both figures.

Vertical ANGLES are the opposite angles made by two lines cutting or crossing each other. When two lines cut or cross each other, the vertical angles are equal. (15 *Eucl.* 1.)

Alternate ANGLES are the angles formed by a straight line falling on two parallel straight lines, so that each angle shall have a common leg, but the other legs are on opposite sides of this common leg. These alternate angles are always equal. (29 *Eucl.* 1.)

A rectilinear or right-lined ANGLE is made by straight lines, to distinguish it from the spherical or curvilinear angle.

ANGLES of contact are angles formed by a curve with its tangent, which may be considered as true angles, and should be compared with one another, though not with right-lined angles, as being infinitely smaller.

ANGLE of elevation, in gunnery, is that which the axis of the hollow cylinder, or barrel of the gun, makes with a horizontal line. See *ELEVATION*.

ANGLES oblique are those which are greater than right angles.

Spherical ANGLE is an angle formed by the intersection of two great circles of the sphere. A spherical angle is measured by the arc of a great circle, intercepted between the legs, or the legs produced, whose pole is in the vertex of the angle.

ANGLE lunular is an angle formed by the intersection of two curves, the one concave and the other convex.

Mixed-line ANGLE is that comprehended between a right line and a curved line.

Curved-line ANGLE is that intercepted between two curved lines meeting each other in one point, in the same plane.

ANGLE of a semi-circle is that which

the diameter of a circle makes with the circumference.

ANGLE of incidence is that which the line of direction of a ray of light, &c. makes at the point where it first touches the body it strikes against, with a line erected perpendicular to the surface of that body.

Angle of incidence, in projectiles, is the angle which the line of direction of the projectile makes with the surface of the obstacle on which it impinges. The force or effect of a shot striking a wall, or other obstacle, in an oblique direction, is to its force, if it had struck the same obstacle in a perpendicular direction, as the angle of incidence is to the radius. Hence the impulsive forces of the same shot, fired in different directions, are to each other, as the respective angles of incidence of these directions.

ANGLE of interval, between two places, is that formed by two lines directed from the eye to those places.

ANGLE of reflection is the angle intercepted between the line of direction of a body rebounding after it has struck against another body, and a perpendicular erected at the point of contact.

ANGLE at the center, in fortification, is the angle formed at the middle of the polygon, by lines drawn from thence to the points of the two adjacent bastions.

ANGLE of the curtain, } that which is
ANGLE of the flank, } made by, and
contained between the curtain and the flank.

ANGLE of the polygon, that which is made by the meeting of the two sides of the polygon, or figure in the center of the bastion.

ANGLE of the triangle is half the angle of the polygon.

ANGLE of the bastion, or } that which
Flanked ANGLE, } is made by
the two faces, being the utmost part of the bastion most exposed to the enemy's batteries, frequently called the point of the bastion.

Diminished ANGLE, only used by some foreign engineers, and more especially the Dutch, is composed of the face of the bastion, and the exterior side of the polygon.

ANGLE of the shoulder, } is formed by
ANGLE of the épaule, } one face, and
one flank of the bastion.

ANGLE of the tenaille, } is made by
ANGLE reentrant, } two lines fi-

chant, that is, the faces of the two bastions extended till they meet in an angle towards the curtain, and is that which always carries its point towards the out-works.

ANGLE of the flank exterior is that which is before the center of the curtain, formed by the prolongation of the faces of the bastion, or by both the fichant lines of defence, intersecting each other on planning a fortification.

ANGLE of the flank interior is formed by the flanked line of defence and the curtain; being that point where the line of defence falls upon the curtain.

ANGLE of the line of defence is that angle made by the flank and the line of defence.

ANGLE of the face is formed by the angle of the face and the line of defence produced till they intersect each other.

ANGLE of the base interior is the half of the angle of the figure, which the interior polygon makes with the radius, when they join each other in the center; intersecting the center of the gorges of each bastion.

ANGLE of the base exterior is an angle formed by lines drawn from the center of the figure to the angle of the exterior polygon, cutting the center of the gorges of each bastion.

ANGLE of the gorge is that angle formed by the prolongation of the curtains intersecting each other, in the center of the gorge, through which the capital line passes.

ANGLE of the ditch is formed before the center of the curtain, by the outward line of the ditch.

ANGLE of the mole is that which is made before the curtain where it is intersected.

Flanked ANGLE. See *ANGLE of the bastion.*

Salient ANGLE, γ is that angle which

ANGLE sortant, \S points outwards, or towards the country; such is the angle of the counterscarp before the point of a bastion.

Entering ANGLE, or γ an angle point-
ANGLE rentrant, \S ing inwards, as the salient angle points outwards; such is the angle of the counterscarp before the curtain.

ANGLE of the counterscarp, made by two sides of the counterscarp meeting before the center of the curtain.

ANGLE at the circumference of a cir-

cle, is an angle formed by two chords in the circumference of a circle.

ANGLE of the circumference is the mixed angle formed by an arch, drawn from one gorge to another.

Re-entering ANGLE. See *Entering ANGLE.*

ANGLE of the complement of the line of defence is the angle formed by the intersection of the two complements with each other.

ANGLES of a battalion are made by the last men at the extremity of the ranks and files.

Front ANGLES, the two last men of the front rank.

Rear ANGLES, the two last men of the rear rank.

Dead ANGLE is a re-entering angle, consequently not defended.

Flank-forming ANGLE. When the flank, as in Ozanam's method, passes when produced through the center of the polygon, the angle formed by that line and the oblique, or great radius, is called by him the flank-forming angle. In the Dutch construction, it is the angle formed by a demi-gorge and a right line drawn to the adjacent epaule from that extremity thereof, which is in the angle of the gorge or center of the bastion.

ANGLET, *Fr.* an anglet, a corner; also a small right-angled cavity; a term in architecture.

ANGON, in ancient military history, was a kind of dart of a moderate length, having an iron bearded head and cheeks; in use about the fifth century. This sort of javelin was much used by the French. The iron head of it resembles a fleur-de-lis; and it is the opinion of some writers, that the arms of France are not fleurs-de-lis, but the iron point of the *angon* or javelin of the ancient French.

ANGULAR, in a general sense, denotes something relating to, or that has angles.

To ANIMATE, in a military sense, is to encourage, to incite, to add fresh impulse to any body of men who are advancing against an enemy, or to prevent them from shamefully abandoning their colours in critical situations. Soldiers may be encouraged and incited to gallant actions not only by words, but by the looks and gestures of the officers, particularly of their commanding one. It is by the latter alone, indeed, that any of these artificial means should be

resorted to; for silence, steadiness, and calmness are the peculiar requisites in the character of subordinate officers.

ANIMOSITY, (*animosité*, Fr.) hatred, grudge, quarrel, contention.

ANLACE, a falchion or sword, shaped like a scythe.

ANNA, *Ind.* the sixteenth of a rupee; the lowest nominal coin in India, equal to about 2d. English.

ANNALS, a species of military history, wherein events are related in the chronological order they happened. They differ from a perfect history, in being only a mere relation of what passes every year, as a journal is of what passes every day.

ANNELET, γ (*annelet*, Fr.) from *annulet*, ζ *nulus*, a ring, a small square member of the Doric capital, under the quarter-round, &c.

Annulets are used in architecture to signify narrow flat mouldings. An annulet is the same member which M. *Mauclerc*, from *Vitruvius*, calls a fillet; and *Palladio* a listel or cincture; and M. *Brown*, from *Scamozzi*, a *supercilium*, *tinea*, *eye-brow*, *square* and *rabbit*.

ANNUNCIADA, an order of military knighthood in Savoy, first instituted by Amadeus I. in the year 1409; their collar was of 15 links, interwoven one with another, and the motto *F. E. R. T.* signifying *Fortitudo ejus Rhodum tenuit*. Amadeus VIII. changed the image of St. Maurice, patron of Savoy, which hung at the collar, for that of the Virgin Mary; and instead of the motto above mentioned, substituted the words of the angel's salutation.

ANOLYMPIADES. See OLYMPIAD.

ANOMALOUS, irregular, unequal, out of rank.

ANSE *des pièces*, Fr. the handles of cannon. Those of brass have two—those of iron seldom any—these handles serve to pass cords, handspikes, or levers, the more easily to move so heavy a body, and are made to represent dolphins, serpents, &c.

ANSPESEDE. See LANCECORPORAL.

ANTA, (*antes*, Fr.) in architecture, is used by M. *Le Clerc*, for a kind of shaft of a pilaster, without base or capital, and even without any moulding. Belidor calls them angular pilasters, which are placed in the corners of buildings adorned with orders of architecture.

ANTÆ, pilasters adjoining to a wall.

ANTEMURAILLE, Fr. in the an-

cient military art, denoted what now the moderns generally call the out-works.

ANTES, square pilasters, which the ancients placed at the corners of their temples.

To ANTEDATE, (*antedater*, Fr.) to date a letter, &c. before the time. Hence to antedate a commission.

ANTESTATURE, in ancient fortification, signifies an intrenchment of palisades or sacks of earth thrown up in order to dispute the remainder of a piece of ground.

ANTHONY, or *Knights of St. Anthony*, a military order instituted by Albert, duke of Bavaria, Holland, and Zealand, when he designed to make war against the Turks in 1382. The knights wore a collar of gold made in the form of a hermit's girdle, from which hung a stick like a crutch, with a little bell, as they are represented in St. Anthony's pictures.

ANTICHAMBER, (*antichambre*, Fr.) an apartment in a house before the principal chamber; a lobby or outer room of a large or noble house, where servants, strangers, or petitioners wait till the lord or master of the house is at leisure to be spoken to. The French say *Chauffer l'antichambre*, to dance attendance.

ANTIPIGMENTS, ornaments, or garnishings in carved work set upon the architrave.

ANTIQUO-moderna, a term used in speaking of old Gothic churches, to distinguish them from those of the Greeks and Romans.

APERTURE, the opening of any thing; or a hole, cleft, or vacant place in some solid or continuous substance. In architecture, doors, windows, staircases, chimnies, outlets and inlets for light, smoke, &c. are termed apertures.

APERTURE, in geometry, is used for the space left between two lines, which mutually incline towards each other, to form an angle.

APOPHYGE, in architecture, that part of a column where it begins to spring out of its base, and shoot upwards. The French call it *échappe*, *congé*.

The apophyge, in its original, was no more than the ring or ferril, heretofore fastened at the extremities of wooden pillars, to keep them from splitting, which was afterwards imitated in stonework.

APPANAGE, *Fr.* train, retinue.

APPAREIL, *Fr.* height or thickness of a stone in the quarry; also, in architecture, the method of cutting stones and laying them.

Pierre APPAREILLÉE, *Fr.* a stone cut to the measure given.

APPAREILLES, *Fr.* are those slopes that lead to the platform of the bastion. See FORTIFICATION.

APPAREILLEUR, *Fr.* an architect who superintends the workmen in the construction of fortifications, sluices, &c. a marker of stones to be cut.

APPEAL might formerly have been made, by the prosecutor or prisoner, from the sentence or jurisdiction of a regimental to a general court-martial.—At present no soldier has a right to appeal, except in cases where his immediate subsistence is concerned.

APPEL, *Fr.* a roll call, a beat of drum for assembling; a challenge.

APPEL, in fencing, a smart beat with your blade on that of your antagonist on the contrary side to that you have engaged, generally accompanied with a stamp of the foot, and used for the purpose of procuring an opening.

APPENTIS, *Fr.* in carpentry, a shed. See *Hangar*.

APPOINTÉ. This word was applicable to French soldiers only, during the monarchy of France, and meant a man who, for his long service and extraordinary bravery, received more than common pay. There were likewise instances in which officers were distinguished by being styled *officiers appointés*. They were usually rewarded by the king.

The word *appointé* was originally derived from its being said that a soldier was appointed among those who were to do some singular act of courage, as by going upon a forlorn hope, &c. &c.

APPOINTMENT, in a military sense, is the pay of the army; it likewise applies to warlike habiliments, accoutrements, &c.

APPREHEND, in a military sense, implies the seizing or confining of any person. According to the Articles of War, every person who apprehends a deserter, and attests the fact duly before a magistrate, is entitled to receive twenty shillings.

APPROACHES. All the works are generally so called that are carried on towards a place which is besieged; such as the first, second, and third parallels, the

trenches, epaulements with and without trenches, redoubts, places of arms, saps, galleries, and lodgments. See these words more particularly under the head FORTIFICATION.

This is the most difficult part of a siege, and where most lives are lost. The ground is disputed inch by inch, and neither gained nor maintained without the loss of men. It is of the utmost importance to make your approaches with great caution, and to secure them as much as possible, that you may not throw away the lives of your soldiers. The besieged neglect nothing to hinder the approaches; the besiegers do every thing to carry them on; and on this depends the taking or defending the place.

The trenches being carried to their glacis, you attack and make yourself master of their covered-way, establish a lodgment on their counterscarp, and effect a breach by the sap, or by mines with several chambers, which blow up their intrenchments and fougades, or small mines, if they have any.

You cover yourselves with gabions, fascines, barrels, or sacks; and if these are wanting, you sink a trench.

You open the counterscarp by saps to make yourself master of it; but, before you open it, you must mine the flanks that defend it. The best attack of the place is the face of the bastion, when by its regularity it permits regular approaches and attacks according to art. If the place be irregular, you must not observe regular approaches, but proceed according to the irregularity of it; observing to humour the ground, which permits you to attack it in such a manner at one place, as would be useless or dangerous at another; so that the engineer who directs the attack ought exactly to know the part he would attack, its proportions, its force and solidity, in the most geometrical manner.

APPROACHES, in a more confined sense, signify attacks.

Counter APPROACHES are such trenches as are carried on by the besieged, against those of the besiegers.

APPRENTI, *Fr.* apprentice.

In France they had apprentices or soldiers among the artillery, who served for less pay than the regular artillerymen, until they became perfect in their profession, when they were admitted to such vacancies as occurred in their respective branches.

APPROXIMATION, (*approximation*, Fr.) in arithmetic or algebra, is a continued approaching still nearer and nearer to the root or quantity sought, without ever expecting to have it exactly.

APPUI, with horsemen, the stay upon the horseman's hand, or the reciprocal sense between the horse's mouth and the bridle hand; or the horse's sense of the action of the bridle in the horseman's hand. Horses for the army ought to have a full *appui*, or *firm stay* upon the hand.

A full **APPUI**, in horsemanship, a firm stay without resting very heavy, and without bearing upon the horseman's hand.

A more than full **APPUI**, upon the hand, is when the horse is stopped with some force; but still so that he does not force the hand. This *appui* is good for such riders as depend upon the bridle, instead of their thighs.

APPUI, (*point d'appui*, Fr.) any particular given point or body, upon which troops are formed, or by which they are marched in line or column.

Aller à l'APPUI, Fr. to go to the assistance of any body; to second, to back.

Hauteur d'APPUI, Fr. breast-height.

APPUYER, Fr. to sustain, to support. Hence, *une armée appuyée d'un bois, d'un marais*; an army which has a wood or a marsh on either of its flanks.

APPUYER also signifies to force any thing into an object; as, *appuyer l'éperon à un cheval*, to drive the spur into a horse.

APPRELLE, Fr. horse-tail.

APRON, in gunnery, a square plate of lead that covers the vent of a cannon, to keep the charge dry, and the vent clean and open.

AQUEDUCT, a channel to convey water from one place to another. Aqueducts, in military architecture, are generally made to bring water from a spring or river to a fortress, &c.; they are likewise used to carry canals over low grounds, and over brooks or small rivers; they are built with arches like a bridge, only not so wide, and are covered above by an arch, to prevent dust or dirt from being thrown into the water. See Muller's *Practical Fortification*.

The Romans had aqueducts which extended 100 miles. That of Louis XIV. near Maintenon, which carries the river Bute to Versailles, is 7000 toises long.

ARAIGNÉE, Fr. in fortification. See **GALLERY**.

ARABESQUE, } something done af-
ARABESK, } ter the manner of
the *Arabians*.

Arabesk, *grotesque*, and *moresque*, are terms applied to such paintings, ornaments of friezes, &c. on which there are no human or animal figures; but which consist wholly of imaginary foliage, plants, stalks, &c.

The terms are derived from the *Arabs*, *Moors*, and other *Mahometans*, who use these kinds of ornaments, because their religion forbids them to make any images or figures of men, or of other animals.

ARABIAN horse, a horse supposed to be of high value, but not so useful as the common English breed.

ARASEMENT, Fr. in masonry, the last course of stone or brick upon a wall of an equal height.

ARASER, Fr. to carry the different courses of stone or brick to an equal height.

ARASES, Fr. stones or bricks which are larger or smaller than those of the other courses, and are used to make any given height.

ARBALET, in the ancient art of war, a cross-bow, made of steel, set in a shaft of wood, with a string and trigger, bent with a piece of iron fitted for that purpose, and used to throw bullets, large arrows, darts, &c. Also a mathematical instrument called a *Jacob's Staff*, to measure the height of the stars upon the horizon.

ARBALETE à jalet, Fr. a stone bow.

ARBALETRIÈRE, Fr. a cross-bowman.

ARBALETRIÈRE d'une galière, Fr. that part of a galley where the cross-bowmen were placed during an engagement.

ARBORER, Fr. to plant, to hoist. *Arborer l'étendart*, to plant the standard.

ARBRE, Fr. tree; in mechanics, the thickest piece of timber upon which all other pieces turn, that it supports.

ARC, Fr. a bow; an arch in building.

ARC en plein cintre, Fr. in architecture, an arch which is formed of a perfect half-circle.

ARC en anse de panier, Fr. an elliptic arch drawn upon three centers.

ARC biais, ou de côté, Fr. an arch whose piedroits are not even with their plans.

ARC rampant, Fr. that which in an

upright wall is somewhat inclined towards a gentle slope.

ARC en tabut, Fr. that which is made to ease a *platband* or an *architrave*, and whose declivities bear upon the summers. An arch is also so called when it is made in a wall that slopes.

ARC en tiers-point, ou Gothique, Fr. that which is made of two portions of a circle, which intersect each other, at the point of the angle at top.

ARC de cloitre, Fr. See *VOUTE en arc de cloitre*.

ARC à l'envers, Fr. an inverse arch that is made to support the piles of a bridge, between the arches, and to prevent their falling against each other, which often happens in loose ground.

ARCADE, (*areade*, Fr.) a continued arch; a walk arched over.

ARCBOUTANT, (from the French *arc* and *bouter*, to *abut*,) a flat arch, or part of an arch abutting against the reins of a vault, to support and prevent its giving way.

ARCBOUTANT, Fr. in carpentry, any piece of timber which is used as a buttress or support in scaffolds.

ARCBOUTER, ou contrebouter, Fr. to restrain or keep in the bellying of an arch, or of a *platband*, by means of a pile or buttress.

ARCEAU, Fr. an arch. This term, however, is chiefly applied to the small arch of a bridge. *Arceau* also means a saddle-bow.

ARCH, in military architecture, is a vault or concave building, in form of a curve, erected to support some heavy structure, or passage.

Triumphal ARCH, in military history, is a stately erection generally of a semi-circular form, adorned with sculpture, inscriptions, &c. in honour of those heroes who have deserved a triumph. For a very able Treatise on Arches, see Mr. Atwood's late publication; and under *PARABOLA* see *Parabolic arches*.

ARCHE en plein ceintre, Fr. an arch formed by a perfect semi-circle.

ARCHE elliptique, Fr. that which is formed by a half-oval.

ARCHE surbaissée, Fr. that which is of the lowest proportion; called also *en ans de panier*, from its resemblance to the handle of a basket.

ARCHE en portion de cercle, Fr. that which contains less than a semi-circle.

ARCHE extradossée, Fr. is that, all the

bendings of which are equal in length and parallel to the cintry.

ARCHE d'assemblage, Fr. When a wooden bridge is made of one arch, the arch is so called.

ARCHED. A horse is said to have arched legs, when his knees are bent arch-wise. This relates to the fore-quarters, and the infirmity is generally occasioned by hard riding.

There are horses, however, which the French call *brassicourts*, or short fore-thighs, that have their knees naturally arched.

ARCHIERS, in military history, a kind of militia or soldiery, armed with bows and arrows. They were much used in former times, but are now laid aside, excepting in Turkey, and in some of the eastern countries.

ARCHERY, (*l'art de tirer de l'arc*, Fr.) the art of shooting with a bow and arrow. Our ancestors were famous for being the best archers in Europe, and most of our victories in France were gained by the long-bow. The statutes made in 33 Hen. VIII. relative to this exercise, are worth perusal. It is forbidden, by statute, to shoot at a standing mark, unless it be for a rover, where the *archer* is to change his mark at every shot. Any person above 24 years old is also forbidden to shoot with any prick-shaft, or flight, at a mark of eleven score yards or under. 33 Hen. VIII. chap. 9. The former was a provision for making good marksmen at sight; the latter for giving strength and sinews.

ARCHIPELAGO, (*archipel, archipelage, archipelague*, Fr.) a certain extent of the ocean, which is intersected by several islands; that part which was anciently called the Ægean Sea, having Romania, Macedonia, and Greece, on the N. and W., Natolia on the E., and the Ionian Sea on the S. It contains a vast quantity of large and small islands.

ARCHIPELAGO, (*Northern*,) situated between Kamshatka and the N. W. parts of America.

ARCHITECTURE, in a military sense, is the art of erecting all kinds of military edifices or buildings, whether for habitation or defence.

Military ARCHITECTURE instructs us in the method of fortifying cities, sea-ports, camps, building powder magazines, barracks, &c. *Military architec-*

ture is divided into *regular* and *irregular* fortification.

Naval ARCHITECTURE, the art of building the hull or body of a ship, distinct from her machinery and furniture for sailing, and may properly be comprehended in three principal articles. 1. To give the ship such a figure, or outward form, as may be most suitable to the service for which she is intended. 2. To find the exact shape of the pieces of timber necessary to compose such a fabric. 3. To make convenient apartments for the artillery, ammunition, provisions, and cargo, together with suitable accommodation for the officers and men.

ARCHITRAVE, the master-beam, or chief supporter, in any part of a subterraneous fortification.

ARCHIVAULT, (*archivolte*, Fr.) the inner contour of an arch, adorned with mouldings, which goes round the faces of the arch stones, and bears upon the imposts. This contour differs according to the different orders in architecture.

Faire vuider les ARÇONS, Fr. to throw out of the saddle.

Perdre les ARÇONS, Fr. to lose one's seat in riding.

AREA, the superficial content of any rampart, or other work of fortification.

ARÉNER, Fr. to sink under. This is said of a beam or plank, which gives way on account of the weight upon it.

AREOMETER, (*aréomètre*, Fr.) an instrument usually made of fine thin glass, which, having had as much running quicksilver put into it, as will serve to keep it upright, is sealed up at the top; so that the stem or neck being divided into degrees, the heaviness or lightness of any liquor may be found, by the vessel's sinking more or less into it.

ARESTIER, Fr. the corner side of a building. Also the back part of the blade of a sword.

ARESTIER de plomb, Fr. the end of a piece of lead, which lies under the top of a roof that is slated.

ARESTIÈRES, Fr. the beds or lays of plaster which tile-coverers, or slaters, put at the angles of the top of a roof that is tiled.

ARGANEAU, Fr. the ring of an anchor.

ARGYRASPIDES, a part of the old Macedonian phalanx, which served under Alexander the Great, and was dis-

tinguished from the rest of the men who composed that body, by carrying silver shields.

ARIGOT, Fr. a pipe or flute.

ARM, in geography, denotes a branch of the sea, or of a river.

ARM is also used figuratively to denote power.

ARM signifies also any particular description or class of troops.

To *ARM*, to take arms, to be provided against an enemy.

ARMADA, a Spanish term, signifying a fleet of men of war, applied particularly to that great one fitted out by the Spaniards, with an intention to conquer this island, in 1588, and which was defeated by the English fleet, under admirals Lord Howard and Sir Francis Drake.

ARMADILLA, a Spanish term, signifying a small squadron.

ARMATEUR, Fr. a privateer.

ARMATURA, in ancient military history, signifies the fixed and established military exercise of the Romans, nearly in the sense we use the word exercise.— Under this word is understood the throwing of the spear, javelin, shooting with bows and arrows, &c.

ARMATURA is also an appellation given to the soldiers who were light-armed. Aquinas seems, without reason, to restrain *armatura* to the *tyrones*, or young soldiers.

ARMATURA is also a denomination given to the soldiers in the emperor's retinue.

ARMATURE, Fr. In architecture, this word comprehends the bars, iron pins, stirrups, and all other iron hold-fasts which are used in a large assemblage of carpentry.

ARME, Fr. This word is used among the French to express any distinct body of armed men.

ARME-à-feu, Fr. a fire-arm; a gun; a musket.

ARME de trait, Fr. a bow, a cross-bow.

ARME blanche, Fr. This term is used among the French to signify sword or bayonet.

Attaquer à l'ARME blanche, Fr. to attack sword in hand, or with fixed bayonets.

ARMED, in a general sense, denotes something provided with, or carrying arms.

An *ARMED body of men* denotes a military detachment, provided with arms

and ammunition, ready for an engagement.

ARMED, in the sea language. A cross-bar-shot is said to be armed, when some rope-yarn, or the like, is rolled about the end of the iron bar which runs through the shot.

ARMED ship is a vessel taken into the government's service, and equipped, in time of war, with artillery, ammunition, and warlike instruments: it is commanded by an officer who has the rank of master and commander in the navy, and upon the same establishment with sloops of war, having a lieutenant, master, purser, surgeon, &c.

Passer par les ARMES, Fr. to be shot.

Faire les ARMES, Fr. to fence.

Aux ARMES! Fr. to arms!

ARMET, Fr. a casque or helmet. This term is grown obsolete, and is only found in old stories concerning the knights errant.

Amain ARMÉE, Fr. with open force.

Entrer un pays à main ARMÉE; to enter a country with open force.

ARMÉE, Fr. See ARMY.

ARMÉE navale, Fr. the naval forces.

ARMÉE de terre, Fr. the land forces.

ARMEMENT, Fr. a levy of troops, equipage of war, either by land or sea.

ARMER un fourneau de mine, Fr. to close up a mine, after it has been properly charged.

ARMES à l'épreuve, a French term for armour of polished steel, which was proof against the sword or small arms; but its weight so encumbered the wearer, that modern tacticians have wholly rejected its use.

ARMES à la légère, Fr. light-armed troops, who were employed to attack in small bodies, as opportunity occurred. See RIFLEMEN, &c.

ARMES des pièces de canon, the French term for the tools used in practical gunnery, as the scoop, rammer, sponge, &c.

ARMES au pied, Fr. ground arms!

Faire les premières ARMES, Fr. to begin the military profession, or to enter the service.

ARMIGER, an esquire or armour-bearer, who formerly attended his knight or chieftain in war, combat, or tournament, and who carried his lance, shield, or other weapons with which he fought.

ARMILUSTRIUM, in Roman antiquity, a feast observed among the Ro-

man generals, in which they sacrificed, armed, to the sound of trumpets, and other warlike instruments.

ARMISTICE, a temporary truce, or cessation of arms for a very short space of time only.

ARMORY, a warehouse of arms, or a place where the military habiliments are kept, to be ready for use.

ARMOUR denotes all such habiliments as serve to defend the body from wounds, especially darts, a sword, a lance, &c. A complete suit of armour formerly consisted of a helmet, a shield, a cuirasse, a coat of mail, a gantlet, &c. now almost universally laid aside.

ARMOUR-BEARER, he that carries the armour of another.

ARMOURER, a person who makes or deals in armour or arms; also a person who keeps them clean.

ARMS, (*armes*, Fr.) in a general sense, signify all kinds of weapons, whether used for offence or defence.

Arms may properly be classed under two specific heads—

Arms of offence, which include musket, bayonet, sword, pistol, &c.

Arms of defence, which are shields, helmets, coats of mail, or any species of repulsive or impenetrable covering, by which the body of a man is protected.

In a legal sense, arms may extend to any thing that a man wears for his own defence, or takes in his hand, and uses in anger, to strike, throw at, or wound another. It is supposed, that the first artificial arms were of wood, and only employed against beasts; and that Belus, the son of Nimrod, was the first that waged war: whence, according to some, came the appellation *bellum*. Diodorus Siculus takes Belus to be the same with Mars, who first trained soldiers up to battle. *Arms* of stone, and even of brass, appear to have been used before they came to iron and steel. Josephus assures us that the patriarch Joseph first taught the use of iron arms in Egypt, arming the troops of Pharaoh with a casque and buckler.

The principal *arms* of the ancient Britons were hatchets, scythes, lances, swords, and bucklers: the Saxons, &c. brought in the halberd, bow, arrows, cross-bows, &c. By the ancient laws of England, every man was obliged to bear arms, except the judges and clergy. Under Henry VIII. it was expressly enjoined on all persons to be regularly

instructed, even from their tender years, in the exercise of the *arms* then in use, viz. the long bow and arrows, and to be provided with a certain number of them.

By the common law, it is an offence for persons to go or ride armed with dangerous weapons; but gentlemen, both in and out of the army, may wear common armour, according to their quality. The king may prohibit force of *arms*, and punish offenders according to law; and herein every subject is bound to be aiding. Stat. 7. Edward I. None shall come with force and *arms* before the king's justices, or ride armed in affray of the peace, on pain of forfeiting their armour, and suffering imprisonment, &c. 2 Edward III. c. 3. The importation of *arms* and ammunition is prohibited by 1 Jac. II. c. 8. and by William and Mary, stat. 2. c. 2. So likewise *arms*, &c. shipped after prohibition, are forfeited, by 29 Geo. I. c. 16. sec. 2.

Arms of parade, or *courtesy*, were those used in the ancient jousts and tournaments, which were commonly unshod lances, swords without edge or point, wooden swords, and even canes.

Bells of ARMS, or *Bell Tents*, a kind of tents in the shape of a cone, where the company's arms are lodged in the field. They are generally painted with the colour of the facing of the regiment, and the king's arms in front.

Pass of ARMS, a kind of combat, when anciently one or more cavaliers undertook to defend a pass against all attacks.

Place of ARMS. See FORTIFICATION.

Stand of ARMS, a complete set of arms for one soldier.

ARMS, in artillery, are the two ends of an axletree. See *Axletree*, under the word CARRIAGE.

Fire-ARMS are great guns, firelocks, carbines, guns, and pistols; or any other machine discharged by inflamed powder.

ARMY, any given number of soldiers, consisting of artillery, foot, horse, dragoons, and hussars or light horse, completely armed, and provided with engineers, a train of artillery, ammunition, provisions, commissariat, forage, &c. under the command of one general, having lieutenant-generals, major-generals, brigadier-generals, colonels, lieutenant-colonels, majors, captains, and subalterns. An army is composed of brigades, regiments, battalions, and squa-

drons, and is generally divided into three or more corps, and formed into three lines: the first of which is called the front line, a part of which forms the van guard; the second, the main body; and the third, the rear guard, or corps of reserve. The center of each line is generally occupied by the foot; the cavalry form the right and left wings of each line; and sometimes a squadron of horse is posted in the intervals between the battalions.

Armies in general are distinguished by the following appellations—

A covering army.

A blockading army.

An army of observation.

An army of reserve.

A flying army.

An army is said to *cover* a place when it lies encamped or in cantonments, for the protection of the different passes which lead to a principal object of defence.

An army is said to *blockade* a place, when, being well provided with heavy ordnance and other warlike means, it is employed to invest a town for the direct and immediate purpose of reducing it by assault or famine.

An *ARMY of observation* is so called because, by its advanced positions and desultory movements, it is constantly employed in watching the enemy.

An *ARMY of reserve* may not improperly be called a general dépôt of troops for effective service. In cases of emergency the whole or detached parts of an army of reserve are generally employed to recover a lost day or to secure a victory. It is likewise sometimes made use of for the double purpose of secretly increasing the number of active forces, and rendering the aid necessary according to the exigency of the moment, and of deceiving the enemy with respect to its real strength.

Flying ARMY, a strong body of horse and foot, commanded, for the most part, by a lieutenant-general, which is always in motion both to cover its own garrisons, and to keep the enemy in continual alarm.

A naval or sea ARMY is a number of ships of war, equipped and manned with sailors, mariners, and marines, under the command of an admiral, with the requisite inferior officers under him.

ARNAUTS, Turkish light cavalry, whose only weapon was a sabre very

much curved. Some are in the Russian service.

ARPEMENT, *Fr.* a French acre, which contains ten square perches in length, upon as many in breadth.

ARPEMENTAGE, *Fr.* the art of surveying land, and of taking the plan of it.

ARPEMENTEUR, *Fr.* a land surveyor.

ARQUEBUSE *à croc*, an old fire-arm, resembling a musket, but which is supported on a rest by a hook of iron, fastened to the barrel. It is longer than a musket, and of larger calibre, and was formerly used to fire through the loop-holes of antique fortifications.

ARQUEBUSIER, a French term, formerly applied to all the soldiery who fought with fire-arms, whether cavalry or infantry.

D'ARRACHIE-*pie*, *Fr.* without intermission.

ARRACHEMENT, *Fr.* the taking out particular stones, leaving others alternately, in order to join one wall to another.

ARRAY, order of battle. See BATTLE ARRAY.

ARRAYERS, officers who anciently had the charge of seeing the soldiers duly appointed in their armour.

ARREARS, in the army, were the difference between the full pay and subsistence of each officer, which was directed to be paid once a year by the agent. This retention of pay has been abolished in the army of the line and militia; but it still exists among his Majesty's horse and foot guards.

ARREST, a French phrase, similar in its import to the Latin word *retinaculum*. It consists in a small piece of steel or iron, which was formerly used in the construction of fire-arms, to prevent the piece from going off. *Ce pistolet est en arrêt* is a familiar phrase among military men in France, this pistol is in arrest, or is stopped.

ARREST is the exercise of that part of military jurisdiction, by which an officer is noticed for misconduct, or put into a situation to prepare for his trial by a general court-martial.

ARRESTE *of the glacis* is the junction of the talus which is formed at all the angles.

ARRET *de pont*, *Fr.* an engine that goes with a vice, and hinders a draw-bridge, once down, from being pulled up again.

ARRET, *Fr.* the rest for a lance.

ARRET, *Fr.* the stopping of a horse.

ARRET *d'une épée*, *Fr.* the crest, or ridge, of a sword.

ARRETE, *Fr.* in fortification, the shelving sides which form the glacis of the covered-way, where the salient angles are.

ARRETE, *Fr.* the edge, or angle, formed by two faces of any solid, whether of timber, stone, or iron.

Vive ARRETE *de voûte*, *Fr.* the outstanding edge of a vault. Boyer writes the word *arête*.

ARRETÉ, *Fr.* resolution; decree.

ARRETÉ *de compte*, *Fr.* a settled account.

ARRIÈRE, *Fr.* the rear.

ARRIÈRE *Ban*, *Fr.* See BANN.

ARRIÈRE-garde, *Fr.* the rear-guard.

En ARRIÈRE—marche! *Fr.* to the rear—march!

ARRIÈRE-*voussure*, *Fr.* the bending of an arch or vault which is made behind a door or casement in order to give more light.

ARRIÈRE, *Fr.* in arrears.

S'ARRIÈRER, *Fr.* to be in arrears; to remain behind; not to advance.

ARRIMAGE, *Fr.* stowage.

ARRIMER, *Fr.* to stow.

ARRONDISSEMENT, *Fr.* district.

ARROW, a missive weapon of offence, slender and pointed, made to be shot with a bow.

ARROW. See FORTIFICATION.

ARRUGIE, *Fr.* subterranean canal.

ARSENAL is that place where all warlike instruments are deposited, and kept arranged in a state for any service, such as guns, mortars, howitzers, small arms, &c. &c. with quantities of spare gun-carriages, mortar-beds, materials, tools, &c. &c. In an arsenal of consequence, all the proper departments connected with the artillery service, are provided with suitable buildings and accommodations applicable to their particular branches, such as the foundry, for casting of brass ordnance; the carriage department, which includes the wheelers, carpenters, and smiths; the laboratory, for making up and preparing all kinds of ammunition; as well as all other departments requisite, according to the extent of the arsenal. The term Arsenal also applies to a place where naval stores are deposited.

Royal ARSENAL, a place at Woolwich, where stores, &c. belonging to the

royal artillery are deposited. It was formerly called the Warren.

ART. Military art may be divided into two principal branches. The first branch relates to the order and arrangement which must be observed in the management of an army, when it is to fight, to march, or to be encamped.

The other branch of military art includes the composition and the application of warlike machines.

ARTICLES of WAR are known rules and regulations for the better government of the army in the kingdoms of Great Britain and Ireland, dominions beyond the seas, and foreign parts dependent upon Great Britain. They may be altered and enlarged at the pleasure of the king; but they must be annually confirmed by parliament under the mutiny act. And in certain cases extend to civilians—as when by proclamation any place shall be put under martial law; or when people follow a camp or army for the sale of merchandize, or serve in any menial capacity. It is ordained, that the Articles of War shall be read in the circle of each regiment belonging to the British army every month, or oftener if the commanding officer thinks proper. A recruit or soldier is not liable to be tried by a military tribunal, unless it can be proved that the Articles of War have been duly read to him.

ARTIFICE, among the French, is understood as comprehending every thing which enters into the composition of fire-works; as the sulphur, salt-petre, charcoal, &c. See **FIRE-WORKS**.

ARTIFICER or **ARTIFICIER**, he who makes fire-works, or works in the artillery laboratory, who prepares the fuzes, bombs, grenades, &c. It is also applied to the military smiths, collar-makers, &c. &c. and to a particular corps.

ARTIFICERS, in a military capacity, are those persons who are employed with the artillery in the field, or in the arsenals; such as wheelers, smiths, carpenters, collar-makers, coopers, tinmen, &c. There is also a corps of royal military artificers attached to the engineer's department, for the erection of fortifications and buildings in the ordnance service. The artificers of different trades necessary to be employed in ship-building, in the king's dock yards, also come under the description of artificers.

ARTILLERY, in a general sense, signifies all sorts of great guns or cannon, mortars, howitzers, petards, and the like; together with all the apparatus and stores thereto belonging, which are not only taken into the field, but likewise to sieges, and made use of both to attack and defend fortified places. See **ORDNANCE**.

ARTILLERY, in a particular sense, signifies the science of artillery or gunnery, which art includes a knowledge of surveying, levelling; also that of geometry, trigonometry, conic sections, laws of motion, mechanics, fortification and projectiles.

The artillery service is divided into the following branches, viz.

Royal Regiment of Artillery. It consists at present of ten battalions of foot, exclusive of the royal horse artillery, and an invalid battalion; but from the great want of artillery-men, in all our foreign possessions, as well as for field service generally, and the defence of the batteries on our own coast, there is no doubt but the necessity of an addition to this corps must be obvious to every one acquainted with the duties of the service; for it would be the means of having the artillery better served, and do away the necessity of breaking up the strength of regiments of the line, by calling upon them to furnish additional gunners.

Each battalion, including the invalid battalion, consists of one colonel-commandant, two colonels en second, three lieutenant-colonels, one major, and ten companies, each company consisting of one captain, one second captain, two first and one second lieutenant, and 120 non-commissioned officers and privates: there is also an adjutant and quartermaster to each battalion, and some chaplains for the different principal stations of the corps, besides a medical establishment: but it appears that it would be an advantage to the field service, which is the most important part, if the companies were reduced to 100 non-commissioned officers and men each, which number would be sufficient to man a brigade, on the present establishment, and furnish a proportion for park duties, and replacing the sick and wounded, and would have the good effect of preventing a general mixture of companies in the same brigade; and other obvious advantages. The princi-

pal staff of the regiment consists of a deputy adjutant-general and assistants, who are stationed at Woolwich, and act immediately from the orders of the master-general.

The duties of the invalid battalion are confined to Great Britain only, and some of its dependant islands.

The head-quarters of the regiment are at Woolwich, where all the officers and men first assemble, upon joining the regiment, for the purpose of being instructed in the various duties of the profession, previous to being employed on foreign service.

Royal Horse Artillery. There are twelve troops, in addition to the foot artillery, each troop consisting of one captain, one second captain, three subalterns, two staff serjeants, twelve non-commissioned officers, seventy-five gunners, forty-six drivers, six artificers, and one trumpeter, with eighty-six draught horses, and fifty-six riding horses, and six pieces of ordnance, with carriages for the conveyance of ammunition, camp equipage, and stores. The introduction of horse artillery into the service of this country was brought forward in the year 1792, by the Duke of Richmond, who was then master-general of the ordnance, for the purpose of acting with cavalry. There is a colonel-commandant, two colonels en second, four lieutenant-colonels, and one major, attached to it. The movements of horse artillery are made with great celerity, and it has been found, that they are perfectly adapted to act with cavalry in the field, in their most rapid movements, and are considered as forming an essential addition to the artillery service.

Royal Artillery Drivers, (conducteurs d'artillerie, Fr.) This corps was first formed about twelve years ago, by the late Duke of Richmond. The great advantage derived from having men regularly enlisted, and well trained to the service, instead of men accidentally picked up by contractors, soon became so evident, that at present the whole of the field artillery is furnished with drivers from this corps. Previous to the corps being established, the horses and drivers were provided by contract; but, as no reliance could be placed on the service of either men or horses so procured, it was found absolutely necessary to abolish so unmilitary and destructive

a system. The artillery horses are now kept in the highest condition for service, the drivers being thoroughly drilled to the manœuvres of artillery; so that the brigades, instead of being an incumbrance to an army, are not only capable of accompanying the troops, but also of securing, by rapid movements, advantageous positions in the field, so as to annoy an enemy, or protect our own troops. This change arises from the high state of excellence in which the brigades are equipped, and from the artillery-men being, in particular cases, mounted upon the cars attending the brigades. The corps consisted, in 1809, of one colonel-commandant, three lieutenant-colonels, one major, nine captains, 54 subalterns, two adjutants, eight veterinary surgeons, 45 staff serjeants, 405 non-commissioned officers, 360 artificers, 45 trumpeters, 4050 drivers, and 7000 horses, all well appointed, and in the greatest state of readiness for any service, either at home or abroad, for which they might be required. A considerable reduction took place in 1814, when four troops were discharged; the situation of major having been abolished in 1812.

Commissary's Department, under the colonel-commandant of the field train, consists of commissaries, assistant commissaries, clerks, and conductors of stores, as well as artificers of different trades, upon the civil establishment of the Ordnance. This system differs from the rules of the service with most of the continental powers of Europe, it being with them a military establishment, and placed upon a footing with the officers of the army at large, under the superintendance of a colonel-commandant, colonel-en-second, comptrollers, &c. &c. The duties of this department are of great importance; the whole service of artillery in the field depending upon their exertions for the good arrangement made in the equipment of the ordnance, the proportioning the ammunition and stores for all services, as well as the forming all the depôts of ammunition, not only for the artillery, but also for the whole army. The commissaries and their assistants are detached, in common with the regiment of artillery, upon all services. It is consequently of the greatest importance that experienced persons should be selected

for these employments, it being a work of time for them to be fully instructed and made acquainted with the artillery service. On this account, young men should be early brought into the department, so as to be trained up regularly from one situation to another, until they become complete masters of their profession.

Train of Artillery. This train is formed from the number of attendants and carriages which follow the artillery in the field, such as commissaries, clerks of stores, conductors of stores, wheelers, carriage and shoeing smiths, collar makers, carpenters, coopers, tinnmen, &c. &c. with necessary materials and tools, carriages conveying reserve ammunition for the artillery and troops, spare stores, intrenching tools, spare wheels, camp equipage, baggage, &c. &c. All these are comprehended in the term Train of Artillery.

Nearly the whole of the field artillery is divided into brigades upon a new establishment of five guns and one howitzer to each brigade, for the natures of 12 pounders medium and 9 pounders, 6 pounders heavy and light, 3 pounders heavy and light, as also 5½ inch howitzers heavy and light. The guns and howitzers are accompanied by ammunition cars, upon a new principle. To every brigade is a forge cart, a camp equipage wagon, and spare gun carriage, with spare wheels, and tools for a wheeler, collar maker, and carriage smith. The proportioning of field and battering ordnance, for foreign service, is a business of great importance, from the knowledge which is requisite to fix upon all the numerous articles to accompany the service, and the method to be pursued in equalizing, arranging, and disposing of the guns, ammunition, and stores. No certain criterion can ever be established as to the proportion of artillery to be sent upon any expedition, as it must depend entirely upon the nature of the service; and great changes are generally made to suit the ideas of the officer who is to command the army, and also those of the officer of artillery, who may be selected to accompany it. It would therefore only tend to mislead were any detailed account to be given. Two brigades of field artillery to a division of an army consisting of 6000 men, may be considered a good proportion, independent of the reserve park. When

any proportion of artillery is required for foreign service, the arrangement of it is left to the commandant of the field train, whose immediate duty is to make out all proportions, and to consider all demands for artillery and stores for foreign service, under the orders of the master-general and Board of Ordnance. The grand depôt of field artillery is kept at Woolwich, in a perfect state of readiness for service. Of late there have been other depôts established in different parts of Great Britain, under the orders of the master-general and Board of Ordnance. The great utility of an effective artillery is now so manifest, that nothing has been left undone to raise the British to the greatest degree of perfection; and the exertions to promote that object are clearly evinced by the acknowledged superiority of its equipment over that of any other service in Europe.

In the year 1500, an army of 50,000 men had only 40 pieces of cannon in the field, and in the year 1757, the same number of troops brought 200 pieces into the field, including mortars and howitzers.

At the battle of Jemmappes, which was fought between the French and Austrians on the 6th of November, 1792, the latter had 120 pieces of cannon disposed along the heights of Framery, whilst their effective force in men did not exceed 17,000. The French, on this occasion, brought nearly the same quantity of ordnance, some indeed of extraordinary calibre, but their strength in men was considerably more formidable.

The Park of ARTILLERY is a place selected by the general of an army, to form the grand depôt of guns, ammunition, and stores, to be in readiness as occasion may require. Attached to the park there are generally as many officers and men of the royal artillery as are sufficient to man the reserve guns in the park, and to replace casualties that may happen in the detached guns and brigades. If a siege is to be undertaken, the number of officers and artillery-men in the park must of course be augmented. The reserve officers, drivers and horses, the principal commissary with his assistants and the several necessary artificers are also stationed here. To the park all the brigades and field pieces detached with the army, look for their

resources, and when any thing is requisite, the park is the place whence all supplies are forwarded. The reserve ammunition for the troops is also deposited at the park of artillery, and supplied upon requisition under the orders of the commanding officer of artillery. The manner of forming the Park is almost every where the same, except that some artillery officers differ in the disposition of the carriages, &c.; however, the best and most approved method is to divide the whole of the guns into brigades of different natures, and place their ammunition in the cars or wagons behind them, in one or more lines, according to the number of ammunition carriages attached to the natures of ordnance. Each brigade of artillery, including the ammunition carriage, forge carts, and camp equipage wagons, have a distinct number to prevent any mixture of carriages either in disembarking or breaking up of a campaign. The arrangement necessary to be made in forming a park of artillery of any magnitude, requires great exertions and abilities to prevent its being encumbered with any greater quantity of carriages, ammunition and stores than are absolutely wanted for the service, in case there should be any sudden movement, yet at the same time to have a sufficiency for the purpose of affording any supplies which the army may stand in need of. Upon expedition service, where disembarkations of artillery take place, the depôt of reserve carriages, ammunition and stores, is usually formed near to the spot where the articles are landed from the ships, and a communication is kept up between the advanced park and the depôt, from whence the articles are forwarded as demanded for the immediate exigencies of the park.

Field ARTILLERY includes every requisite to forward the operations of an army, or of any part of an army acting offensively or defensively in the field.

Encampment of a Regiment of ARTILLERY. Regiments of artillery are always encamped, half on the right and half on the left of the park. The company of bombardiers (when they are formed into companies, which is the case in almost every nation excepting England) always takes the right of the whole, and the lieutenant colonel's company the left; next to the bombardiers, the colonels, the majors, &c. so that

the two youngest are next but one to the center or park: the two companies next to the park, are the miners on the right, and the artificers on the left.

In the rear of, and 36 feet from the park, are encamped the civil list, all in one line.

March of the ARTILLERY. The marches of the artillery are, of all the operations of war, the most delicate; because they must not only be directed on the object you have in view, but according to the movements the enemy make. Armies generally march in three columns, the center column of which is the artillery: should the army march in more columns, the artillery and heavy baggage march nevertheless in one or more of the center columns; the situation of the enemy determines this. If they are far from the enemy, the baggage and ammunition go before or behind, or are sent by a particular road; an army in such a case cannot march in too many columns. But should the march be towards the enemy, the baggage must absolutely be all in the rear, and the whole artillery form the center column, except some brigades, one of which marches at the head of each column, with guns loaded and burning matches, preceded by a detachment for their safety. The French almost invariably place their baggage in the center.

Suppose the enemy's army in a condition to march towards the heads of your columns: the best disposition for the march is in three columns only, that of the center for the artillery; for it is then easy to form it in order of battle. Hence it is equally commodious for each brigade of artillery to plant itself at the head of the troops, in the place marked for it, in such a manner, that the whole disposition being understood, and well executed, the line of battle may be quickly formed in an open country, and in the presence of any enemy, without risking a surprize; by which method the artillery will always be in a condition to act as soon as the troops, provided it march in brigades.

If your march should be through a country full of defiles, some dragoons must march at the head of the columns, followed by a detachment of grenadiers, and a brigade of artillery; cannon being absolutely necessary to obstruct the enemy's forming into order of battle.

When you decamp in the face of the

enemy, you must give most attention to your rear guard. On such occasions, all the baggage, ammunition, provisions, and artillery, march before the troops; your best grenadiers, best cavalry, some good brigades of infantry, together with some brigades of artillery, form the rear guard. Cannon is of infinite use for a rear guard, when you are obliged to pass a defile, or a river, and should be placed at the entry of such defile, on an eminence, if there be one, or on any other place, from whence the ground can be discovered, through which the enemy must march to attack the rear guard.

A detachment of pioneers, with tools, must always march at the head of the artillery, and of each column of equipage or baggage.

If the enemy be encamped on the right flanks of the march, the artillery, &c. should march to the left of the troops, and vice versâ. Should the enemy appear in motion, the troops front that way, by wheeling to the right or left by divisions; and the artillery, which marches in a line with the columns, passes through their intervals, and draws up at the head of the front line, which is formed of the column that flanked nearest the enemy; taking care at the same time that the baggage be well covered during the action.

Though we have said armies generally march in three columns, yet where the country will allow it, it is better to march in a greater number; and let that number be what it will, the artillery must form the center columns.

Officers of ARTILLERY. The master general of the ordnance, who is commander in chief of the artillery, is entrusted with one of the most laborious employments, both in war and peace, requiring the greatest ability, application, and experience. The officers in general should be great mathematicians and engineers; should know all the powers of artillery; the attack and defence of fortified places; in a word, every thing which appertains to that very important corps.

Honourable ARTILLERY Company, a band of infantry, consisting of 600 men, of which the Prince of Wales is always colonel. This corps forms part of the militia, or city guard of London.

ARTILLEUR, Fr. an officer belonging to the French service, who was formerly appointed by, and acted imme-

diately under, the master general of the ordnance.

ARTILLIER, Fr. a man who works on pieces of ordnance as a founder; or one who serves them in action.

ARTILLIER, Fr. a matross.

ARTISONNÉ, Fr. } worm-eaten, as
Bois ARTISONNÉ, } wood may be.

ARX, in the ancient military art, a fort, castle, &c. for the defence of a place.

ARZEGAGES, Fr. batons or canes with iron at both ends. They were carried by the Estradiots or Albanian cavaliers who served in France under Charles VIII. and Louis XII.

ASAPPES, or AZAPES, auxiliary troops which are raised among the Christians subject to the Turkish empire. These troops are generally placed in the front to receive the first shock of the enemy.

ASCENSION, Fr. in artillery, the upward flight of a bomb from its explosion out of the mortar, to its utmost point of elevation. *Descension de la bombe* signifies, on the contrary, the range which a bomb takes from its highest pitch down to its fall.

ASCENT. See *GUNNERY.*

ASPECT is the view or profile of land or coast, and contains the figure or representation of the borders of any particular part of the sea. These figures and representations may be found in all the ruttiers or directories for the sea coast. The Italians call them *demonstratione*. By means of this knowledge you may ascertain whether the land round the shore be high; if the coast itself be steep or sloping; bent in the form of an arc, or extended in straight lines; round at the top, or rising to a point. Every thing, in a word, is brought in a correct state before the eye, as far as regards harbours, bogs, gulphs, adjacent churches, trees, wind-mills, &c. &c.

A menacing ASPECT. An army is said to hold a menacing aspect, when by advanced movements or positions it gives the opposing enemy cause to apprehend offensive operations.

A military ASPECT. A country is said to have a military aspect when its general situation presents appropriate obstacles or facilities for an army acting on the offensive or defensive.

An imposing ASPECT. An army is said to have an imposing aspect, when it appears stronger than it really is. This appearance is often assumed for the

purpose of deceiving an enemy, and may not improperly be considered as a principal *ruse de guerre*, or feint in war.

ASPIC, *Fr.* a piece of ordnance which carries a 12 pound shot. The piece itself weighs 4250 pounds.

ASPIRANT, *Fr.* a midshipman; a person waiting for promotion; a candidate for any place, or employment.

ASSAILLIR, *Fr.* to attack; to assail. This old French term applies equally to bodies of men and to individuals.

ASSAULT, a furious effort to carry a fortified post, camp, or fortress, where the assailants do not screen themselves by any works. While an assault during a siege continues, the batteries cease, for fear of killing their own men. An assault is sometimes made by the regiments that guard the trenches of a siege, sustained by detachments from the army.

To give an **ASSAULT** is to attack any post, &c.

To repulse an **ASSAULT**, to cause the assailants to retreat, to beat them back.

To carry by **ASSAULT**, to gain a post by storm, &c.

ASSAUT, *Fr.* See **ASSAULT**.

ASSEMBLAGE, (*assemblage*, *Fr.*) the joining or uniting of several things together; also the things themselves so joined or united: of which assemblages there are several kinds and forms used by joiners, as with mortises, tenons, dove-tails, &c.

ASSEMBLÉE, *Fr.* the assembling together of an army; also a call by beat of drum. See **ASSEMBLY**.

ASSEMBLY, the second beating of the drum before a march; at which the men strike their tents, if encamped, roll them up, and stand to arms. See **DRUM**.

ASSEOIR, *Fr.* to lay; as to lay the first stones of a foundation. This word is also used to signify the laying of stones for a pavement.

ASSESSMENT, in a military sense, signifies a certain rate which is paid by the county treasurer to the receiver general of the land-tax, to indemnify any place for not having raised the militia; which sum is to be paid by the receiver-general into the exchequer. The sum to be assessed is five pounds for each man, where no annual certificate of the state of the militia has been transmitted to the clerk of the peace; if not paid be-

fore June yearly it may be levied on the parish officers. Such assessment, where there is no county rate, is to be raised as the poor's rate.

To **ASSIEGE**, (*assiéger*, *Fr.*) an obsolete term for besiege.

ASSIÉGER, *Fr.* to besiege.

ASSIETTE, *Fr.* the immediate site or position of a camp, &c.

To **ASSIGN**, to make over; as, to assign a certain proportion of one's pay, for the discharge of debts contracted.

ASSIGNAT, *Fr.* paper issued upon supposed, or imaginary, property. Of this description were the assignats in France, at the commencement of the French revolution.

ASSIGNMENT, appropriation of one thing to another thing or person; as the assignment which is made by the colonel of a British regiment for the off-reckonings, which are to be issued on the clothing, and for which he generally pays 5 per cent. to the clothier.

ASSOCIATION, any number of men embodied in arms for mutual defence in their district, and to preserve the public tranquillity therein, against foreign or domestic enemies.

ASTRAGAL. See **CANNON**.

ASYLUM, (*asile*, *Fr.*) a sanctuary, a place of refuge. It derives its name from a temple, so called by the Romans, which was built by Remulus for the reception of malefactors. It is now generally used to signify any place of refuge or reception. Hence the York Asylum, which has been erected under the auspices of the Duke of York, and is devoted to the education of military children.

ASSISE, *Fr.* a course of stones which is carried on equally high, and is only broken, or interrupted, by doors or windows.

ASSISE de pierre dure, *Fr.* the hard rough stone which is laid for the foundation of a wall reaching up to the ground-floor.

ASSISE de parpain, *Fr.* a course of stones that crosses a wall.

ASYMPTOTES, (*asymptotes*, *Fr.*) straight lines which approach nearer and nearer to the curve, but being indefinitely prolonged, never meet. Of all the curves of the second degree, such as conic sections, the hyperbole is the only one that has asymptotes.

Asymptotes may also be called tangents to their curves, at an infinite distance.

The *conchoid*, *cissoïd*, and logarithmic curve, have each one asymptote.

ATILT, in the attitude of thrusting with a spear, &c. as was formerly the case in tournaments, &c.

ATLASSES, in architecture, figures or half figures of men, used instead of columns or pilasters, to support any member in architecture, as a balcony or the like. They are also called *telamones*.

ATMOSPHERE, (*atmosphère*, Fr.) a subtle and elastic substance which surrounds the earth, which gravitates upon its center, and partakes of all its motions.

ATRE, Fr. hearth; or the ground under a chimney.

To ATTACH, to place, to appoint. Officers and non-commissioned officers are said to be attached to the respective army, regiment, battalion, troop, or company with which they are instructed to act.

To ATTACH, in a pecuniary sense, signifies to prevent the issue of pay or allowance to an officer on full or half-pay, by an order from the commander in chief or secretary at war, which is lodged at the regimental agent's, or in the pay office.

ATTACHE, Fr. the seal and signature of the colonel-general in the old French service, which were affixed to the commissions of officers after they had been duly examined.

The ratification of military appointments in this manner was attended with a trifling expense to each individual, which became the perquisite of the colonel's secretary.

ATTACK, any general assault, or onset, that is given to gain a post, or break a body of troops.

ATTACK of a siege is a furious assault made by the besiegers by means of trenches, galleries, saps, breaches, or mines, &c. by storming any part of the front attack. Sometimes two attacks are carried on at the same time, between which a communication must be made. See **SIEGE**.

False ATTACKS are never carried on with that vigour and briskness that the others are; the design of them being to favour the true attack, by amusing the enemy, and by obliging the garrison to do a greater duty in dividing their forces, that the true attack may be more successful.

Regular ATTACK is that which is car-

ried on in form, according to the rules of art. See **SIEGE**.

To ATTACK in front or flank, in fortification, means to attack the salient angle, or both sides of the bastion. This phrase is familiarly used with respect to bodies of men which attack each other in a military way. The French say: *En front et sur les flancs*.

ATTACK and Defence. A part of the drill for recruits learning the sword exercise, which is commenced with the recruit stationary on horseback, the teacher riding round him, striking at different parts as openings appear, and instructing the recruit how to ward his several attacks; it is next executed in a walk, and, as the learner becomes more perfect, in speed; in the latter instance under the idea of a pursuit. The attack and defence in line and in speed form the concluding part of the sword exercise when practised at a review of cavalry. It is to be observed, that although denominated *in speed*, yet when practising, or at a review, the pace of the horse ought not to exceed *three quarters speed*.

ATTEINDRE, Fr. to reach; to get up.

ATTEINDRE l'ennemi, Fr. to get up with the enemy.

ATELIER, Fr. in fortification, all sorts of work which may be done by a variety of hands, and which are superintended by one or more engineers.

Entendre bien l'ATELIER, Fr. among engineers, to be master of the business; to know how to superintend works, and to see plans executed.

ATTENDANCE, the act of waiting on another; service.

ATTENTION! a cautionary word used in the British service as a preparative to any particular exercise or manœuvre. *Gare-à-vous* has the same signification in the French service.

ATTESTATION, a certificate made by some justice of the peace within four days after the enlistment of a recruit. This certificate is to bear testimony, that the said recruit has been brought before him in conformity to the 55th clause of the Mutiny Act, and has declared his *assent* or *dissent* to such enlistment; and, if according to the said act he shall have been, and is duly enlisted, that the proper oaths have been administered to him by the said magistrate, and that the 2d and 6th

sections of the Articles of War against mutiny and desertion have been read to the said recruit.

AVANT, *Fr.* foremost, most advanced towards the enemy.

AVANT-*bec*, *Fr.* the starting of a stone bridge. Those startings which are always pointed towards the current of the water, are called *avant-*bec*-d'*umont**, and the others *avant-*bec*-d'*aval**.

AVANT-*chemin-couvert*, *Fr.* the advanced covered-way which is made at the foot of the glacis to oppose the approaches of an enemy.

AVANT-*duc*, *Fr.* the pile-work which is formed by a number of young trees on the edge or entrance of a river. They are driven into the ground with battering rams or strong pieces of iron, to form a level floor, by means of strong planks being nailed upon it, which serve for the foundation of a bridge. Boats are placed where the *avant-duc* terminates. The *avant-duc* is had recourse to when the river is so broad that there are not boats sufficient to make a bridge across. *Avant-duc*s are made on each side of the river.

AVANT-*fossé*, *Fr.* the ditch of the counterscarp next to the country. It is dug at the foot of the glacis. See **FORTIFICATION**.

AVANT-*garde*. See **VAN GUARD**.

AVANT-*main*, *Fr.* the fore-hand of a horse.

AVANT-*train*, *Fr.* the limbers of a field piece, on which are placed two boxes containing ammunition enough for immediate service.

AUDIT-*office*, an office at Somerset-house, where accounts are audited.

AUDITOR, the person who audits regimental or other military accounts. He is generally a field officer.

AL'AVENANT, *Fr.* proportionably; at equal rates.

AVENUE, in fortification, is any kind of opening or inlet into a fort, bastion, or out-work.

AUGE, *Fr.* a trough which holds water.

AUGET, or **AUGETTE**, *Fr.* a wooden pipe which contains the powder by which a mine is set fire to.

AUGMENTATION, increase of any thing. Hence colonel commandant by augmentation; that is, colonel of an additional battalion.

AVIVES, *Fr.* vives; a disease in horses.

AULNE de Paris, a French measure, containing 44 inches, used to measure sand-bags.

AUTHORITY, in a general acceptance of the term, signifies a right to command, and a consequent right to be obeyed. The King of Great Britain has, by the constitution of the land, a perpetual inherent right to exercise military authority without controul, so far as it regards the army. His Majesty may appoint or dismiss officers at his pleasure.

AUXILIARY Troops. Foreign or subsidiary troops which are furnished to a belligerent power in consequence of a treaty of alliance, or for pecuniary considerations. Of the latter description, may be considered the Swiss soldiers who formerly served in France, and the Hessians who were employed by Great-Britain.

AWARD, the sentence or determination of a military court.

AXIS, (*axe*, *Fr.*) the line that passes through the center of a body, which is moveable upon the same, as in a cylinder, cone, or pyramid, and which is perpendicular to its base.

AXLE-TREE, a transverse beam supporting a carriage, and on the ends of which the wheels revolve.

B

BAC, *Fr.* a ferry boat; also a sort of box made of large boards, through which water is passed, and carried from one quarter to another.

BACK-*nails*, nails made with flat shanks, so as to hold fast, and not to open the grain of the wood.

BACK-*step*, the retrograde movement of a man or body of men without changing front.

BACKWARDS, a technical word made use of in the British service to express the retrograde movement of troops

from line into column, and vice versâ. See WHEEL.

BACULE, *ou bascule*, Fr. a swipe, or swing gate.

BACULOMETRY, (*baculamétrie*, Fr.) in geometry, the art of measuring accessible or inaccessible lines, by the help of one or more staves.

BACULUS *divinatorius*, that is, a divining staff or rod; a branch of hazel tree forked, and used for the discovery of mines, springs, &c.

BAGGAGE, in military affairs, signifies the clothes, tents, utensils of divers sorts, and provisions, &c. belonging to an army.

BAGGAGE-WAGONS. See WAGONS.

BAGPIPE, the name of a well-known warlike instrument, of the wind kind, greatly used by the Scotch regiments, and sometimes by the Irish. Bagpipes are supposed to have been introduced by the Danes; but we are of opinion that they are much older, as there is in Rome a most beautiful bas-relievo, a piece of Grecian sculpture of the highest antiquity, which represents a bag-piper playing on his instrument exactly like a modern Highlander. The Greeks had also an instrument composed of a *pipe* and *blown-up skin*. The Romans, in all probability, borrowed it from them. The Italians still use it under the names of *piva* and *cornu-musa*. The bagpipe has been a favourite instrument among the Scots, and has two varieties: the one with long pipes, and sounded with the mouth: the other with short pipes, played on with the fingers: the first is the loudest and most ear-piercing of all music; is the genuine Highland pipe; and is well suited to the warlike genius of that people. It formerly roused their courage to battle, alarmed them when too secure, and collected them when scattered; solaced them in their long and painful marches; and in times of peace kept up the memory of the gallantry of their ancestors, by tunes composed after signal victories.

BAGS, in military employments, are used on many occasions: as,

Sand-BAGS, generally 16 inches diameter, and 30 high, filled with earth or sand, to repair breaches and the embrasures of batteries, when damaged by the enemy's fire, or by the blast of the guns. Sometimes they are made less, and placed three together, upon the parapets, for the men to fire through.

Earth-BAGS, containing about a cubical foot of earth, are used to raise a parapet in haste, or to repair one that is beaten down. They are only used when the ground is rocky, and does not afford earth enough to carry on the approaches.

BAGUETTE, in architecture, a small round moulding less than an astragal. When enriched with ornaments, it is called a chaplet.

BAGUETTES, Fr. drumsticks; they also signify the switches with which soldiers were formerly punished in the French service; as *passer par les baguettes*, to run the gauntlet.

BAHU, Fr. a trunk. According to Belidor it also signifies the rounded profiles which are generally given to the paved roads of an open country; also the rounded edge or profile of the buttress of a parapet, &c.

Cheval BAHUTIER, Fr. a sumpter horse, or one that carries a portmanteau.

BAILLOQUE, Fr. an ostrich feather.

BAJOYERS, Fr. the side walls in a sluice or dam. They are also called *jouillières*.

BALANCE, in mechanics, one of the six simple powers principally used for determining the equality, or difference, of weights in heavy bodies, and consequently other masses and quantities of matter.

BALANCE, Fr. a term used in the French artillery to express a machine in which stores and ammunition are weighed.

BALANCIER *d'une écluse*, Fr. the thick bar of iron which serves as a handle to shut or open a sluice with one or two flood-gates.

BALATRONES, an ancient name given to wicked, lewd, and cowardly persons, from Servilius Balatro, a debauched libertine; whence, according to Bailey, the French have probably derived their *Poltron*, which see.

BALISTA, Lat. an instrument from which arrows, darts, and javelins were thrown in ancient times.

BALISTIQUE, Fr. the art of throwing or projecting heavy substances, as shells and cannon-balls, to a given distance.

BALIVEAUX, Fr. young oaks that are under 40 years growth, and measure from 12 to 24 French feet in the girth.

BALKS, poles or rafters, over out-houses or barns; and among bricklayers,

great beams, such as are used in making scaffolds. The word is also, by some, applied to great pieces of timber coming from beyond seas by floats.

BALL, (*balle*, Fr.) a round substance, made of iron or lead, put into heavy ordnance, or fire-arms, for the purpose of killing or wounding, or making a breach.

Cannon-BALLS are of iron, and musket and pistol balls are of lead. Cannon balls are always distinguished by their respective calibres, thus,

A 42	} pound ball, the diameter of which is	{ 6,684 inches
32		{ 6,105
24		{ 5,517

Fire-BALLS, } of which there are va-

Light-BALLS, } rious sorts, are used for various purposes. Their composition is mealed powder 2, saltpetre $1\frac{1}{2}$, sulphur 1, rosin 1, turpentine $2\frac{1}{2}$. Sometimes they are made of an iron shell, sometimes a stone, filled and covered with various coats of the above composition, till it conglomerates to a proper size, the last coat being of grained powder. But the best sort, in our opinion, is to take thick brown paper, and make a shell the size of the mortar, and fill it with a composition of an equal quantity of sulphur, pitch, rosin, and mealed powder, which being well mixed, and put in warm, will give a clear fire, and burn a considerable time.

When they are intended to set fire to magazines, buildings, &c. the composition must be mealed powder 10, saltpetre 2, sulphur 4, and rosin 1; or rather, mealed powder 43, saltpetre 32, sulphur 16, rosin 4, steel or iron filings 2, fir-tree saw-dust boiled in saltpetre ley 2, birch-wood charcoal 1, well rammed into a shell for that purpose, having various holes filled with small barrels, loaded with musket-balls; and lastly, the whole immersed in melted pitch, rosin, and turpentine oil.

Smoke-BALLS are prepared as above, with this difference, that they contain 5 to 1 of pitch, rosin, and saw-dust. This composition is put into shells made for that purpose, having 4 holes to let out the smoke. Smoke-balls are thrown

out of mortars, and continue to smoke from 25 to 30 minutes.

Stink-BALLS are prepared by a composition of mealed powder, rosin, saltpetre, pitch, sulphur, rasped horses and asses hoofs, burnt in the fire, *assa-fœtida*, scraphim-gum or ferula, and bug or stinking herbs, made up into balls, as mentioned in **Light-BALLS**, agreeable to the size of the mortar out of which you intend to throw them.

Poisoned-BALLS. We are not sure that they have ever been used in Europe; but the Indians and Africans have always been very ingenious at poisoning several sorts of warlike stores and instruments. Their composition is mealed powder 4, pitch 6, rosin 3, sulphur 5, *assa-fœtida* 3, extract of toads poison 12, other poisonous substances 12, made into balls as above directed. At the commencement of the French Revolution, poisoned balls were exhibited to the people, pretended to have been fired by the Austrians, particularly at the siege of Lisle. We have seen some of this sort ourselves. They contained glass, small pieces of iron, &c. and were said to be concocted together by means of a greasy composition, which was impregnated with poisonous matter. In 1792 they were deposited in the archives of Paris.

Red-hot BALLS, balls made red-hot, upon a large coal fire in a square hole made in the ground, 6 feet every way, and 4 or 5 feet deep. Some make the fire under an iron grate, on which the shell or ball is laid; but the best method is to put the ball into the middle of a clear burning fire, and when red-hot, all the fiery particles must be swept off. Whatever machine you use to throw the red-hot ball out of, it must be elevated according to the distance you intend it shall range, and the charge of powder must be put into a flannel cartridge, and a good wad upon that; then a piece of wood of the exact diameter of the piece, and about $3\frac{1}{2}$ inches thick, to prevent the ball from setting fire to the powder; then place the ball on the edge of the mortar, &c. with an instrument for that purpose, and let it roll of itself against the wood, and instantly fire it off. Should there be a ditch or parallel before such a battery, with soldiers, the wood must not be used, as the blast of powder will break it to pieces, and its own elasticity prevent it from flying far; it would in

that case either kill or wound your own people. On this account the wad must be double, the second being damp. If the gun lies at a depression, there must be a wad over the shot, which may be rammed home.

Chain-BALLS are two balls linked together by a chain of 8 or 10 inches long, and some have been made with a chain of 3 or 4 feet long; they are used to destroy the palisadoes, wooden bridges, and chevaux-de-frizes of a fortification. They are also very destructive to the rigging of a ship.

Stang-BALLS are generally termed bar-shot, and by some called balls of two heads; they are sometimes made of two half-balls joined together by a bar of iron from 8 to 14 inches long; they are likewise made of two entire balls: they answer the same purpose as the before mentioned.

Anchor-BALLS are made in the same way as the light-balls, and filled with the same composition, only with this addition, that these are made with an iron bar two-thirds of the ball's diameter in length, and 3 or 4 inches square. One half is fixed within the ball, and the other half remains without; the exterior end is made with a grapple-hook. Anchor-balls are very useful to set fire to wooden bridges, or any thing made of wood, or even the rigging of ships, &c. for the pile end being the heaviest, flies foremost, and wherever it touches, fastens, and sets all on fire about it.

Message-BALLS. See SHELLS.

BALLE-à-Feu, Fr. See *Fire-BALLS*.

BALLE-machée, Fr. a musket ball, which the soldier bites and indents in different places before he loads his musket. It is contrary to the established rules of war to use any thing of the sort.

BALLIUM, a term used in ancient military history. In towns, the appellation of ballium was given to a work fenced with palisades, and sometimes to masonry, covering the suburbs; but in castles, it was the space immediately within the outer wall.

BALLON, Fr. balloon.

BALLON, Fr. in architecture, the round globe on the top of a pier or pillar.

BALLON à bombes, Fr. a bag in which are placed beds of smaller bombs, that are charged and interlaid with gunpowder. This bag is put into another covering, that is pitched and tarred, with

the neck closely tied up with pack-thread, in which a fuse is fixed, as in ordinary bombs. These balloons, or bags containing bombs, are thrown out of mortars, and are frequently used in the attack and defence of fortified places. Colonel Shrapnel's invention of the spherical case-shot is of a superior kind.

BALLON à cailloux, Fr. a balloon or bag filled with stones or pebbles in the same manner as the above mentioned.

BALLON à grenades, Fr. a balloon or bag, impregnated with pitch, containing several beds of grenades, with a fuse attached to each.

BALLOON, a hollow vessel of silk, varnished over and filled with inflammable air, or gas, by which means it ascends in the atmosphere. It has sometimes been used by the French in reconnoitring, particularly at Fleurus, during the revolutionary war.

BALLOON for communicating intelligence. This balloon is 5 feet diameter, and will carry between 4 and 5 lbs. weight, or about 3000 printed papers, each 5 inches square. The balloon by which the papers are carried and discharged is 12 inches diameter. The fire will burn at the rate of one minute per inch: consequently one round will be 36 inches; and the double ring will, of course, continue to discharge for one hour and 12 minutes, and so on in proportion, if the battery be triple, as the circle may go 20 times round; by which means the discharging of papers may be kept up for hours: and to prevent any possibility of the fire going out, it may be made to burn double; although there is not one chance in a hundred of its going out by single fire. By a simple communication of fire to the inflammable air in the balloon, after the last parcel of papers is discharged, the whole is exploded into air. This balloon was tried at the Royal Arsenal in Woolwich, by order of the Earl of Moira in 1806, and was favourably reported upon.

The battery, when charged, is covered with skin, to prevent the rain or wet from affecting the fire.

BALLOT, a little ball or ticket used in giving votes. The act of voting by ballot.

To BALLOT, to chuse by balls or tickets, without open declaration of the vote. The militia of Great Britain and Ireland is drawn for by ballot in the several counties and parishes.

BALLOTS, *Fr.* sacks or bales of wool, made use of, in cases of great emergency, to form parapets or places of arms. They are likewise adapted for the defence of trenches, to cover the workmen in saps, and in all instances where promptitude is required.

BALUSTER, (*balustre*, *Fr.*) This word is usually, but corruptly, pronounced *bannister*. It is a small column or pilaster of different dimensions, viz. from an inch and three quarters, to four inches square, or diameter. The sizes and forms of balusters are various, according to the fancy of the workman.

BALUSTRADE, (*balustrade*, *Fr.*) an assemblage of one or more rows of little turned pillars, called balusters.

BALUSTRADE feinte, *Fr.* small pillars or balusters which are fixed, half their usual height, upon any ground.

BAN and *Arrière BAN*, a French military phrase, signifying the convocation of vassals under the feudal system. *Ménage*, a French writer, derives the term from the German word *ban*, which means *publication*. *Nicod* derives it from another German term, which signifies *field*. *Borel*, from the Greek *πav*, which means *all*, because the convocation was general. In the reign of Charles VII. the *ban* and *arrière ban* had different significations. Formerly it meant the assembling of the ordinary militia. After the days of Charles VII. it was called the extraordinary militia. The first served more than the latter; and each was distinguished according to the nature of its particular service. The persons belonging to the *arrière-ban* were at one period accoutred and mounted like light horse: but there were occasions on which they served like infantry,—once under Francis I. in 1545, and again under Lewis XIII. who issued out an order in 1637, that the *arrière-ban* should serve on foot.

BAN likewise signified, during the ancient monarchy of France, a proclamation made by the sound of drums, trumpets, and tambourines, either at the head of a body of troops, or in quarters. Sometimes to prevent the men from quitting camp, at others to enforce the rigour of military discipline; sometimes for the purpose of receiving a new commanding officer, and at others to degrade and punish a military character.

BANC, *Fr.* a bed or layer of stones in the quarry.

BANC de ciel, *Fr.* that bed or layer of the hardest upper stones, which is supported by pillars, at intermediate distances.

BAND, (*bande*, *Fr.*) in architecture, is a general name for any flat low member, or one that is broad, and not very deep; which is also called *face*, from the Latin *fascia*, which *Vitruvius* uses for the same thing; and sometimes *fillet*, *plinth*, &c.

BANDELET, (*bandelette*, *Fr.*) a little fillet or band.

BANDER, *Fr.* to hind, to bend, to cock. *Bander les yeux à un trompette*, to blindfold a trumpeter. *Bander un pistolet*, to cock a pistol.

BANDER also signifies to unite, to intrigue together for the purposes of insurrection.

BANDERET, *Fr.* in military history, implies the commander in chief of the troops of the canton of Bern, in Switzerland.

BANDES, *Fr.* bands, bodies of infantry.

BANDES Françaises, *Fr.* The French infantry was anciently so called. The term, however, has of late become less general, and been confined to the *Prévôt des Bandes*, or the Judge or Provost Marshal that tried the men belonging to the French guards.

BANDES, *Fr.* iron hoops or rings.

Sous-BANDES, *Fr.* the iron hoops in a mortar-carriage on which the trunnions lie.

Sus-BANDES, *Fr.* the iron bands or hoops that cover the trunnions of cannons or mortars when mounted on their carriages: they are usually made with a hinge.

BANDIÈRE, *Fr.* This term is frequently used in the same sense with *bannière*, banner; especially on board ship.

BANDIÈRE, *Fr.* *Une armée rangée en front de bandière* signifies an army in battle-array. This disposition of the army is opposed to that in which it is cantoned and divided into several bodies.

Une armée campée front de BANDIÈRE, *Fr.* an army which is encamped with the regular stand of colours in front. Hence *La ligne bandière*, the camp-colour line. The sentries should not, on any account, permit persons out of regimentals to pass this line.

BANDIT or **BANDITTO**, (*bandit*, *Fr.*) a lawless plunderer, a military depredator.

BANDOLEER, in ancient military history, a large leathern belt worn over

the right shoulder, and hanging under the left arm, to carry some kind of warlike weapon.

BANDOLEERS are likewise little wooden cases covered with leather, of which every musketeer used to wear 12 hanging on a shoulder-belt; each of them contained the charge of powder for a musket. They are now no more in use, but are still to be seen in the small armoury in the Tower.

BANDROLS. See **CAMP-COLOURS.**

BANDS, properly bodies of foot, though almost out of date. The term *band* is also applied to the body of musicians attached to any regiment or battalion.

Train-BANDS. In England, the militia of the City of London were generally so called. The third regiment of Foot, or the Old Buffs, were originally recruited from the Train Bands, which circumstance has given that corps the exclusive privilege of marching through London with drums beating and colours flying.

BAND of Pensioners, a company of gentlemen so called, who attend the King's person upon all solemn occasions. They are 120 in number, and receive a yearly allowance of 100l.

BAND is also the denomination of a military order in Spain, instituted by Alphonso XI. King of Castile, for the younger sons of the nobility, who, before their admission, must serve 10 years, at least, either in the army or during a war; and are bound to take up arms in defence of the Catholic faith, against the infidels.

Nave-BANDS, with gunners, hoops of iron, binding the nave of a gun-carriage at both ends.

BANNER, the ordnance flag fixed on the fore part of the drum-major's kettle-drum carriage, formerly used by the Royal Artillery. At present, when a flag is carried, it is affixed to the carriage of the right hand gun of the park, generally a 12 pounder.

BANNER, in the horse equipage, for the kettle-drums and trumpets, must be of the colour of the facing of the regiment. The badge of the regiment, or its rank, to be in the center of the banner of the kettle-drums, as on the second standard. The king's cypher and crown to be on the banner of the trumpets, with the rank of the regiment in figures underneath. The depth of the

kettle-drum banners to be 3 feet 6 inches; the length 4 feet 8 inches, excluding the fringe. Those of the trumpets to be 12 inches in depth, and 18 inches in length.

BANNERET, *Fr.* a term derived from *bannière*. This appellation was attached to any lord of a fief who had vassals sufficient to unite them under one *bannière* or *banner*, and to become chief of the troop or company.

Un Chevalier BANNERET, or a *Knight BANNERET*, gave precedence to the troop or company which he commanded over that of a banneret who was not a knight or chevalier; the latter obeyed the former, and the banner of the first was cut into fewer vanes than that of the second.

BANNERET. *Knights-banneret*, according to the English acceptance of the term, are persons who, for any particular act of valour, have been knighted on the field of battle.

The late Sir William Erskine, on his return from the Continent in 1764, was made a knight-banneret in Hyde Park, by his present Majesty, in consequence of his distinguished conduct at the battle of Emsdorff. But he was not acknowledged as such in this country, although he was invested with the order between the two standards of the 15th regiment of light dragoons, because the ceremony did not take place where the engagement happened. Captain Trollope of the Royal Navy is the last created knight-banneret. *Knights-banneret* take precedence next to knights of the Bath.

BANNIANS, *Ind.* a name signifying *innocent people*, and *without guile*; a religious sect among the Indians, who believe in a transmigration of souls, and therefore do not eat the flesh of any living creature, nor will they even kill a noxious animal. They wear round their necks a stone called *tambesau*, about the bigness of an egg, which is perforated, and has three strings run in it; this stone, they say, represents their great God; and on this account, the Indians shew them very great respect.

BANNIAN-day, a day so called from the above sect, on which no animal food is touched.

BANQUET. See **BRIDGES.**

BANQUET, *of a bridle*, is that small part of the branch of a bridle that is under the eye, which is rounded like a

small rod, and gathers and joins the extremities of a bit to the branch, so that the banquet is not seen, but is covered by the cap, or that part of the bit which is next to the branch.

BANQUETTE, *Fr.* a kind of step made on the rampart of a work near the parapet. See **FORTIFICATION**.

BAR, a long piece of wood or iron, used to keep things together. Bars have various denominations in the construction of artillery carriages, as sweep and cross bars for tumbrils; fore, hind, and under cross bars for powder-carts; shaft bars for wagons, and dowel bars used in mortar beds.

BAR-shot. See **Stang-BALLS**, under the head **BALL**.

To **BAR a vein**, in farriery, is to strike it, or open it above the skin, and after it has been disengaged, and tied above and below, to strike between the ligatures.

BAR, (a sea word,) a rock or sand, lying before a harbour, which ships cannot sail over, but upon a flood.

BARAQUER une armée, *Fr.* to put an army into cantonments.

BARAQUES, *Fr.* small huts made with wood and earth for the accommodation of soldiers during a campaign.

BARB, the reflected points of the head of an arrow. See **BARBE**.

BARBACAN, or **BARBICAN**, a watch-tower for the purpose of desecring an enemy at a great distance: it also implies an outer defence or sort of ancient fortification to a city or castle, used especially as a fence to the city or walls; also an aperture made in the walls of a fortress to fire through upon the enemy. It is sometimes used to denote a fort at the entrance of a bridge, having a double wall with towers.

BARBACANAGE, money given to the maintenance of a barbacan.

BARBE, the armour of the horses of the ancient knights and soldiers, that were accoutred at all points.

BARBETS are peasants subject to the King of Sardinia, who abandon their dwellings when the enemy has taken possession of them. The King forms them into bodies, who defend the Alps, being part of his dominions.

BARBET-battery, in gunnery, is when the breast-work of a battery is only 3 feet high, that the guns may fire over it without being obliged to make embrasures: in such cases, it is said the guns fire *en barbet*. See **BATTERY**.

BARDE, *Fr.* a long saddle for an ass or mule, made only of coarse canvass stuffed with flocks.

Javeline de BARDE, *Fr.* a barbed javelin for a horseman.

BARDÉ, *Fr.* barbed or trapped, as a great horse is; also bound or tied across.

BARDEAU, *Fr.* a small piece of ship-timber, made in the shape of a tile, with which pent-houses and windmills are covered.

BARDÉES d'eau, *Fr.* a measure used in the making of saltpetre, containing three half hogsheads of water, which are poured into tubs for the purpose of refining it. Four half hogsheads are sometimes thrown in.

BARDELLE, *Fr.* a bardello; the quilted or canvass saddle with which colts are backed.

BARGE-COURSE, with bricklayers, a term used for part of the tiling which projects over, without the principal rafters, in all sorts of buildings where there is either a gable, or a kirkin-head.

BARILLAR, *Fr.* an officer who was formerly employed among the galleys, whose chief duty is to superintend the distribution of bread and water.

BARILLET, *Fr.* keg; the barrel of a watch; also the body or funnel of a sucking pump, in which the piston plays up and down. It is likewise called **Secret**.

BARILS, *Fr.* small barrels, containing gunpowder, flints, &c.

BARILS foudroyans et flumboyans, *Fr.* See **THUNDERING BARRELS**.

BARM, or **BERM**. See **BERM**.

BARQUE, *Fr.* a small vessel which has only one deck, and serves chiefly for the carriage of goods. It has three masts.

BARQUE longue, *Fr.* a small vessel used in war, without a deck, lower than the ordinary barges, with a peak head, and carrying sails and oars.

BARRACKS (*barraques*, *Fr.*) are places erected for both officers and men to lodge in; they are built different ways, according to their different situations. When there is sufficient room to make a large square, surrounded with buildings, they are very convenient, because the soldiers are easily confined to their quarters, and the rooms being contiguous, orders are executed with privacy and expedition; and the troops have not the least connection with the inhabitants of the place: this prevents quarrels and riots. Those for the horse were

formerly called *barracks*, and those for the foot *huts*; but now *barrack* is used indifferently for both. See *CASERNE*.

Barrack comes from the Spanish, *baraccas*, small cabins which the fishermen make on the sea-shore.

BARRACK-allowance, a specific allowance of bread, beer, coals, &c. to the regiments stationed in barracks.

BARRACK-guard. When a regiment is in barracks, the principal guard is the *barrack-guard*; the officer being responsible for the regularity of the men in barracks, and for all prisoners duly committed to his charge while on that duty.

BARRACK-Master General, a staff officer at the head of the *barrack* department; he has a number of *barrack-masters* and deputies under him, who are stationed at the different barracks; he has an office and clerks for the dispatch of business; to this office all reports, &c. respecting the *barrack* department are made.

BARRACK-Office, the office at which all business relating to the *barrack* department is transacted.

BARRE, *Fr.* a spar, or long thin piece of wood which serves to keep together the boards in a partition, and to fasten other works; also a whipstaff; a barrier.

BARRE ou barreau de fer, *Fr.* a solid bar of iron.

BARRELS, in military affairs, are of various kinds.

Fire-BARRELS are of different sorts; some are mounted on wheels, filled with composition, and intermixed with loaded grenades, and the outside full of sharp spikes: some are placed under ground, which have the effect of small mines: others are used to roll down a breach, to prevent the enemy's entrance.—Composition: corned powder, 30lb. Swedish pitch 12, saltpetre 6, and tallow 3. Not used now.

Thundering-BARRELS are for the same purpose, filled with various kinds of combustibles, intermixed with small shells, grenades, and other fire-works. They are not used now.

Powder-BARRELS are about 16 inches diameter, and 30 or 32 inches long, holding 100 pounds of powder; but the quantity put into a whole barrel is only 90 lbs. into an half barrel 45 lbs. and a quarter barrel, used for rifle powder, only 22½ lbs.; this proportion leaves a space for the powder to sepa-

rate when rolled, or otherwise it would always be in lumps, and liable thereby to damage.

Budge-BARRELS hold from 40 to 60 pounds of powder; at one end is fixed a leathern bag with brass nails: they are used in actual service on the batteries, for loading the guns and mortars, to keep the powder from firing by accident.

BARRELS of earth, in an army, a sort of half-hogsheads filled with earth, which are used as breast-works for covering the soldiery; and also to break the gabions made in the ditch; also to roll into breaches.

BARRER, *Fr.* to stop; to obstruct.

BARRER le chemin d'une troupe, ou d'une armée ennemie, *Fr.* to take possession of any particular road or passage, and to cut it up, or plant it with ordnance, &c. in such a manner that no hostile force could march through.

BARRES, *Fr.* the martial sport called *bars*.

BARRICADE. To *barricade* is to fortify with trees, or branches of trees, cut down for that purpose, the brushy ends towards the enemy. Carts, wagons, &c. are sometimes made use of for the same purpose, viz. to keep back both horse and foot for some time.

BARRICADES, *Fr.* obstructions or obstacles created by means of ditches, temporary abattis, &c.

BARRIER, (*barrière*, *Fr.*) in a general sense, means any fortification, or strong place on the frontiers of a country. It is likewise a kind of fence composed of stakes, and transoms, as overthwart rafters, erected to defend the entrance of a passage, retrenchment, or the like. In the middle of the barrier is a moveable bar of wood, which is opened and shut at pleasure. It also implies a gate made of wooden bars, about 5 feet long, perpendicular to the horizon, and kept together by two long bars going across, and another crossing diagonally. *Barriers* are used to stop the cut made through the esplanade before the gate of a town.

BARRIER-towns, (*villes barrières*, *Fr.*) The barrier-towns in Europe were Menin, Dendermond, Ypres, Tournay, Mons, Namur, and Maestricht. These towns were formerly garrisoned half by French or Imperial, and half by Dutch troops. They were established in 1713 by the treaty of Utrecht, and demolished by Joseph II. in 1782.

BAS-BORD, *Fr.* a sea-term; the lar-

board side. The French use the words *bas-bord* and *stri-bord* to distinguish the right and left sides of a sluice, when a person is going through. *Stri-bord* is the right, and *bas-bord* the left, or *star-board* and *larboard*, looking at the prow of a ship.

BASALTES, a sort of marble of an iron colour: the hardest block marble.

BASCULE, *Fr.* a counterpoise which serves to lift up the draw-bridge of a town. Likewise a term used in fortification to express a door that shuts and opens like a trap-door.

BASE, rest, support, foundation; any body which bears another. It particularly applies to the lower parts of a column, or pedestal.

BASE, or **BASTIS**, in fortification, the exterior part or side of a polygon, or that imaginary line which is drawn from the flanked angle of a bastion to the angle opposite to it.

BASE signifies also the level line on which any work stands that is even with the ground, or other work on which it is erected. Hence the base of a parapet is the rampart.

BASE-line, the line on which troops in column move. The first division that marches into the alignment forms the base-line, which each successive division prolongs.

BASE-line also signifies the line on which all the magazines and means of supply of an army are established, and from which the lines of operation proceed.

BASE-ring. See **CANNON**.

BASE, with gunners, the smallest piece of ordnance, 4 feet and a half long, the diameter at the bore 1 inch 1 quarter; it weighs 203 pounds, carries a ball 1 inch 1-8th diameter, and weighs five or six ounces.

BASIL, with joiners, the angle to which the edge of an iron tool is ground. To work on soft wood, *basils* are usually made twelve degrees; for hard wood, eighteen degrees: it being observed, that the more acute or thin the *basil* is, the better and smoother it cuts; and the more obtuse, the stronger and fitter for service.

BASILISK, an ancient name given to a 48 pounder. See **CANNON**.

BASIS. See **BASE**.

BASKET-hilt, the hilt of a sword, so made as to contain and guard the whole hand.

BASKETS, in military affairs, are simple baskets, frequently used in sieges. They are filled with earth, and placed on the parapet of a trench, or any other part. They are generally about a foot and a half in diameter at the top, and eight inches at the bottom, and a foot and a half in height; so that, being placed on the parapet, a kind of embrasure is formed at the bottom, through which the soldiers fire, without being exposed to the shot of the enemy. See **GABION**.

There are common wicker baskets, bushel and half-bushel, used in the field in making batteries, &c. besides the gabion appropriated to forming part of the batteries, by being filled with earth.

BASE-OFFICIERS, *Fr.* non-commissioned officers, *i. e.* serjeants and corporals, are so called in the French service. With us, the serjeants and lance serjeants only are so called.

BASON, a reservatory of water, as the bason of a *jet d'eau* or fountain. It is also applied to a port or harbour, as the inner or outward bason, where ships may be moored.

BASSE, *Fr.* a collar for cart-horses, made of rushes, sedge, straw, &c.

BASSIN, *Fr.* a wet dock.

BASSIN de partage, *Fr.* that spot, in an artificial canal, where the summit of the slope is on a level, and the waters join for the continuation of the canal. *Point de partage* is the point where the junction is formed.

BASSIN à chaux, *Fr.* a lime-kiln, or a place where lime is slaked and mortar made.

BASSINET, *Fr.* the pan of a musket.

BASSO-RELIEVO } See **RELIEVO**.

BASS-RELIEF, }

BASSON or **BASSOON**, a wind instrument blown with a reed, performing the base to all martial music, one or two of which are attached to each regimental band.

BASTILLE, *Fr.* any place fortified with towers.

BASTILLE, a state prison which stood near the Temple in Paris, and was destroyed by the inhabitants of that capital on the 14th of July, 1789.

BASTINADO, a punishment among the Turkish soldiers, which is performed by beating them with a cane or the flat side of a sword on the soles of their feet. Among the French, the culprit is tied upon a bundle of straw, and re-

ceives a prescribed number of blows, either upon the shoulders or upon his posteriors.

BASTION. See **FORTIFICATION.**

BAT, Fr. a pack-saddle.

BAT-Horses, } are baggage horses
BAW-Horses, } belonging to the officers when on actual duty.

BAT-Men, } were originally servants

Baw-Men, } hired in war time, to take care of the horses belonging to the train of artillery, bakery, baggage, &c. They generally wear the King's livery during their service. Men who are excused regimental duty, for the specific purpose of attending to the horses belonging to their officers, are called *bâtmen*.

BATABLE, that may be disputed. This term was applicable to the contests which once existed between the Borderers of England and Scotland.

BATAGE, BATTAGE, Fr. the time employed in reducing gunpowder to its proper consistency. The French usually consumed 24 hours in pounding the materials to make good gunpowder; supposing the mortar to contain 16 pounds of composition, it would require the application of the pestle 3500 times each hour. The labour required in this process is less in summer than in winter, because the water is softer.

BATAILLE, Fr. a battle.

Cheval de BATAILLE, Fr. a war horse, or charger. This expression is used figuratively as a sheet anchor or last resource.

BATAILLE rangée, Fr. troops drawn up in a regular line for action.

BATAILLER, Fr. to engage one another partially, or by detachments, without coming to a general engagement; to struggle hard.

BATAILLON, Fr. battalion, which see.

BATAILLON quarré, Fr. a battalion which is drawn up in such a manner, that it forms a perfect square, and is equally strong on the four sides.

BATARDE, French 8 pounders are so called. They are used in action.

BATARDEAU, in fortification, is a massive perpendicular pile of masonry, whose length is equal to the breadth of the ditch, inundation, or any part of a fortification where the water cannot be kept in without the raising of these sorts of works, which are described

either on the capitals prolonged of the bastions or half-moons, or upon their faces. In thickness it is from 15 to 18 feet, that it may be able to withstand the violence of the enemy's batteries. Its height depends upon the depth of the ditch, and upon the elevation of the water that is necessary to be kept up for an inundation; but the top of the building must always be under the cover of the parapet of the covert-way, so as not to be exposed to the enemy's view. In the middle of its length is raised a massive cylindrical turret, whose height exceeds the *atardeau* 6 feet.

BATER, Fr. to saddle with a pack-saddle.

BATESME du Tropique, Fr. a christening under the Line. This is a prophane and ridiculous ceremony which every person is obliged to go through the first time he crosses the Line on his passage to the East Indies. Different methods of performing it are observed by different nations. Englishmen frequently buy themselves off. Among the French, the individual who was to be baptized or christened, swore solemnly by the Evangelists, that he would individually assist in forcing every person hereafter, who should be similarly situated, to go through the same ceremony.

Knights of the BATH, an English military order of uncertain original. Some writers say it was instituted in the Saxon times; some will have it to have been founded by Richard II. and others by Henry IV. nor is the occasion that gave rise to the order better known. Some say it arose from the custom which formerly prevailed of bathing, before they received the golden spurs. Others say that Henry IV. being in the bath, was told by a knight, that two widows were come to demand justice of him; when, leaping out of the bath, he cried, "It was his duty to prefer the doing of justice to his subjects to the pleasures of the bath;" and in memory of this transaction the Knights of the Bath were created. Camden however insists, that this was only the restoration of the order, which was in that prince's reign almost abolished: but however that may be, the order was revived under George I. by a solemn creation of a considerable number of knights. They wear a red ribband, and their motto is *Tria*

juncta in uno, alluding to the three cardinal virtues which every knight ought to possess.

BATIMENT, *Fr.* any thing built or raised by art; regular or irregular; also a ship or vessel.

BATON, *Fr.* a staff.

BATON à deux bouts, *Fr.* a quarter-staff.

BATON de commandement, *Fr.* an instrument of particular distinction which was formerly given to generals in the French army. Henry III. before his ascension to the throne, was made generalissimo of all the armies belonging to his brother Charles the IXth, and publicly received the *Bâton*, as a mark of high command.

BATON ferrat et non ferrat, *Fr.* all sorts of weapons.

Obtenir son objet par le tour du BATON, *Fr.* to accomplish one's ends by equivocal means.

Etre bien assuré de son BATON, *Fr.* to be morally certain of a thing.

Etre réduit au BATON blanc, *Fr.* to be reduced to one's last stake.

Se conduire à BATONS rompus, *Fr.* to do any thing by fits and starts, to be undecided in one's plans of attack, &c.

BATOON, a truncheon, or marshal's staff.

BATTA, allowances made to troops in India.

Dry-BATTA, *Ind.* money which is given in India to the troops, in lieu of rations; or batta received in money, to distinguish it from wet-batta or batta received in kind. This distinction applies only to privates, as the batta to officers is always paid in money.

Full-BATTA, *Ind.* an additional allowance which is given by the East India Company to their troops.

Half-BATTA, *Ind.* half of the above allowance, drawn by troops in garrison.

Wet-BATTA, *Ind.* batta given in kind.

BATTALOUS, a warlike or military appearance.

BATTALIA. Johnson adopts the word from *Battaglia*, *Ital.* and calls it the main body of an army, distinguished from its wings. We are of opinion, that it further implies an army or considerable detachment of troops drawn up in order of battle, or in any other proper form to attack the enemy. See **BATTLE**.

BATTALION or **BATALION**, an undetermined body of infantry in regard

to number, generally from 600 to 1000 men. The royal regiment of artillery consists of 10 battalions, exclusive of the invalid or veteran battalion. Sometimes regiments consist each of 1 battalion only; but if more numerous, are divided into several battalions, according to their strength; so that every one may come within the number mentioned. A battalion of one of our marching regiments consists of 1000 and sometimes of 1200 men, officers and non-commissioned included. When there are companies of several regiments in a garrison to form a battalion, those of the eldest regiment post themselves on the right, those of the second on the left, and so on till the youngest fall into the center. The officers take their posts before their companies, from the right and left, according to seniority. Each battalion is divided into 4 divisions, and each division into two subdivisions, which are again divided into sections. The companies of grenadiers being unequal in all battalions, their post must be regulated by the commanding officer. See **REGIMENT**.

Triangular BATTALION, in ancient military history, a body of troops ranged in the form of a triangle, in which the ranks exceed each other by an equal number of men. If the first rank consists of one man only, and the difference between the ranks is only one, then its form is that of an equilateral triangle; and when the difference between the ranks is more than one, its form may then be an isoscele, having two sides equal, or scalene triangle. This method is now laid aside.

BATTEN, among carpenters, a scantling of wooden stuff, from two to four inches broad, and about one inch thick.

BATTER, a term used by bricklayers, carpenters, &c. to signify that a wall, piece of timber, or the like, does not stand upright, but leans from the person looking front-way at it. When, on the contrary, it leans towards the person, so looking, it is said to *over-hung*, or *hang-over*.

BATTER, a cannonade of heavy ordnance, from the 1st or 2d parallel of entrenchment, against any fortress or works.

To BATTER in breach implies a heavy cannonade of many pieces directed to one part of the revetement from the third parallel.

BATTERIE de tambour, a French beat of the drum similar to the *General* in the British service.

BATTERIE en roüage, Fr. a battery used to dismount the enemy's cannon.

BATTERIE par camarade, Fr. the discharge of several pieces of ordnance together, directed at one object or place.

BATTERIE à barbette, Fr. pieces of ordnance which are planted above a parapet that is not sufficiently high to admit of embrasures.

BATTERIE de canons, Fr. This term among the French signifies not only the park of artillery, or the place where the pieces of ordnance are planted, but also the pieces themselves.

BATTERIE directe, Fr. cannon planted right in front of a work, or of a body of men, and which can play directly upon either.

BATTERIE d'enfilade, Fr. cannon so planted that it can play along the whole extent of a line.

BATTERIE enterrée, Fr. cannon or ordnance sunk into the earth in such a manner, that the shot can graze the whole surface of the ground it goes over.

BATTERIE de mortier, Fr. a collection of bombs or shells, generally formed within the circumference of a wall.

BATTERIE d'obusier, Fr. a battery formed of howitzers.

BATTERIE de pierriers, Fr. a battery consisting of machines, from which stones may be thrown.

BATTERIE en plein champ, Fr. a battery consisting of cannon, which are planted in such a manner, that their object of attack is wholly unmasked.

BATTERIE en redans, Fr. cannon planted in such a manner, that the several pieces form a species of saw, and are fired from alternate intervals. Cannon thus ranged may be said to stand pointed in echelon.

BATTERING implies the firing with heavy artillery on some fortification or strong post possessed by an enemy, in order to demolish the works.

BATTERING-pieces are large pieces of cannon, used in battering a fortified town or post.

It is judged by all nations, that no less than 24 or 18 pounders are proper for that purpose. Formerly much larger calibres were used, but as they were so long and heavy, and very troublesome to transport and manage, they were for a long time rejected, till adopted among

the French, who, during the late war, have brought 36 and 43 pounders into the field. At present they use light pieces in the field.

BATTERING-Train, a train of artillery used solely for besieging a strong place, inclusive of mortars and howitzers: all heavy 24, 18, and 12 pounders, come under this denomination; as likewise the 13, 10, and 8 inch mortars and howitzers.

BATTERING-Ram. See the article RAM.

BATTERY implies any place where cannon or mortars are mounted, either to attack the forces of the enemy, or to batter a fortification: hence batteries have various names, agreeable to the purposes they are designed for.

Gun-BATTERY is a defence made of earth faced with green sods or fascines, and sometimes made of gabions filled with earth: it consists of a *breast-work*, *parapet*, or *epaulement*, of 18 or 20 feet thick at top, and of 22 or 24 at the foundation; of a ditch 12 feet broad at the bottom, and 18 at the top, and 7 feet deep. They must be $7\frac{1}{2}$ feet high. The embrasures are 2 feet wide within, and 9 without, sloping a little downwards, to depress the metal on occasion. The distance from the center of one embrasure to that of the other is 18 feet; that is, the guns are placed at 18 feet distance from each other; consequently the *merlons* (or the solid earth between the embrasures) are 16 feet within, and 7 without. The *génouillères* (or part of the parapet which covers the carriage of the gun) are generally made $2\frac{1}{2}$ feet high from the platform to the opening of the embrasures; though this height ought to be regulated according to the semi-diameter of the wheels of the carriage, or the nature of the gun. The platforms are a kind of wooden floors, made to prevent the cannon from sinking into the ground, and to render the working of the guns more easy; and are, strictly speaking, a part of the battery. They are composed of 5 sleepers, or joists of wood, laid lengthways, the whole extent of the intended platform; and to keep them firm in their places, stakes must be driven into the ground on each side; these sleepers are then covered with sound thick planks, laid parallel to the parapet; and at the lower end of the platform, next to the parapet, a piece

of timber 6 inches square, called a *hurter*, is placed, to prevent the wheels from damaging the parapet. Platforms are generally made 18 feet long, 15 feet broad behind, and 9 before, with a slope of about 9 or 10 inches, to prevent the guns from recoiling too much, and to bring them more easily forward when loaded. The dimensions of the platforms, sleepers, planks, hurters, and nails, ought to be regulated according to the nature of the pieces that are to be mounted.

The powder magazines to serve the batteries ought to be at a convenient distance from the same, as also from each other; the large one, at least 55 feet in the rear of the battery, and the small ones about 25. Sometimes the large magazines are made either to the right or left of the battery, in order to deceive the enemy; they are generally built 5 feet under ground; the sides and roof must be well secured with boards, and covered with earth, clay, or something of a similar substance, to prevent the powder from being fired: they are guarded by sentinels. The balls are piled in readiness beside the merlons, between the embrasures.

Mortar-BATTERY. These kinds of batteries differ from gun-batteries, only in having no embrasures. They consist of a parapet of 18 or 20 feet thick, $7\frac{1}{2}$ high in front, and 6 in the rear; of a berm $2\frac{1}{2}$ or 3 feet broad, according to the quality of the earth; of a ditch 24 feet broad at the top, and 20 at the bottom. The beds must be 9 feet long, 6 broad, 3 from each other, and 5 feet from the parapet: they are not to be sloping like the gun-platforms, but exactly horizontal. The insides of these batteries are sometimes sunk 2 or 3 feet into the ground, by which they are much sooner made than those of cannon. The powder magazines and piles of shells are placed as is mentioned in the article **Gun-BATTERY.**

Ricochet-BATTERY, (*Batterie à ricochet*, Fr.) so called by its inventor M. Vauban, and first used at the siege of Aeth in 1697. It is a method of discharging cannon with a very small quantity of powder. The elevation is so as just to fire over the parapet; and then the shot will roll along the opposite rampart, dismounting the cannon, and driving or destroying the troops. In a siege, Ricochet Batteries are gene-

rally placed at about 300 feet before the first parallel, perpendicular to the faces produced, which they are to entrench. Ricochet practice is not confined to cannon alone; small mortars and howitzers may effectually be used for the same purpose.—They are of singular use in action to enfilade the enemy's ranks; for when the men perceive the shells rolling and bouncing about with their fuzes burning, expecting them to burst every moment, the bravest among them will hardly have courage to wait their approach, and face the havoc of their explosion.

Horizontal BATTERIES, (*Batteries horizontales*, Fr.) are such as have only a parapet and a ditch; the platform being no more than the surface of the horizon made level.

Cross BATTERIES are such as play athwart each other against the same object, forming an angle at the point of contact; whence greater destruction follows, because what one shot shakes, the other beats down.

Oblique BATTERIES, or *Batteries en écharpe, ou par bricole*, Fr. are those which play on any work obliquely; making an obtuse angle with the line of range, after striking the object.

Enfilading BATTERIES, (*Batteries d'enfilade*, Fr.) are those that sweep or scour the whole length of a straight line, or the face or flank of any work.

Sweeping BATTERIES. See *Enfilading BATTERIES.*

Redan BATTERIES, (*Batteries en redans*, Fr.) are such as flank each other at the salient and reentrant angles of a fortification.

Direct BATTERIES, (*Batteries directes*, Fr.) are those situated opposite to the place intended to be battered, so that the balls strike the works nearly at right angles.

Reverse BATTERIES, (*Batteries de revers, ou meurtrières*, Fr.) are those which play on the rear of the troops appointed to defend the place.

Glancing-BATTERIES are such whose shot strike the object at an angle of about 20° , after which the ball glances from the object, and recoils to some adjacent parts.

Joint BATTERIES, or *Comrade BATTERIES,* (*Batteries par camarade*, Fr.) are so called from several guns firing on the same object at the same time.—When 10 guns are fired at once, their

effect will be much greater than when fired separately.

Sunk BATTERIES, (*batteries enterrées*, Fr.) are those whose platforms are sunk beneath the level of the field; the ground serving for the parapet; and in it the embrasures are made. This often happens in mortar, but seldom in gun-batteries.

Fuscine BATTERIES, (*batteries à fusines*, Fr.) and *Gabion BATTERIES*, are batteries made of those machines, where sods are scarce, and the earth very loose or sandy.

BATTERY-planks are the planks or boards used in making platforms.

BATTERY-boxes are square chests or boxes, filled with earth or dung; used in making batteries, where gabions and earth are not to be had. They must not be too large, but of a size that is governable.

BATTERY-nails are wooden pins made of the toughest wood, with which the planks that cover the platforms are nailed. Iron nails might strike fire against the iron-work of the wheels, in recoiling, &c. and be dangerous.

BATTERY-master, the person whose duty formerly it was to raise the batteries. This office is now suppressed in England.

BATTEURS d'estrade, Fr. See *SCOUTS*.

BATTLE implies an action where the forces of two armies are engaged; and is of two kinds, *general* and *particular*; general where the whole army is engaged, and particular where only a part is in action; but as they only differ in numbers, the methods are nearly alike.

The following are some of the most important Battles and Actions that have taken place in all parts of the civilized World.

ABRAHAM (St.) Sept. 15, 1759.—Death of General Wolfe.

Aculco, (Mexico) Nov. 7, 1810.

Adige, March 28, 1799.

Aghrim, July 22, 1691.

Agincourt, Oct. 25, 1415.—Won by the English.

Agnaudell, 1599.

Airolo, 1799.

Albans, (St.) May 31, 1555; 1556.

Albeck, Oct. 1805.

Alberes, April 27 to 30, 1794.

Albis Rieden, June 9, 1799.

Albuhera, May 16, 1811.

Alcaçar-quivir, June 24, 1574.

Aldenhoven, Mar. 1, 1793; Oct. 2, 1794.

Aldudes, June 3, 1794.

Aleppo, 1517.

Alessandria, (Italy), May 17, 1799.

Alexandria, July 2, 1798; March 12, 1801; March 21, 1801, expulsion of the French from Egypt.

Alkmaar, Aug. 27 to Nov. 30, 1799.

Alli Ghur, Sept. 4, 1803.

Almanza, 1707.—In this battle the English were entirely defeated. The English army was commanded by a Frenchman, and that which conquered them was headed by an Englishman.

Almeida, May 11, 1811.

Altenkirchen, June 4, 1796; Sept. 19, 1796.

Altenheim, July 16, 1675.

Altorf, Aug. 14, 1799; Sept. 30, 1799.

Amailhon, July 1, 1793.

Amberg, Aug. 21, 1796.

Ampfingen, Nov. 30, 1800.

Ancenis, Dec. 15, 1793.

Andaye, June 21, 1793.

Anderlecht, Nov. 15, 1792.

Anghiari, Jan. 15 and 16, 1797.

Angouri, 1400.—Bajazet I., at the head of 100,000 men, was defeated and taken prisoner by Tamerlane at the head of 800,000. He received from his conqueror the respect due to his rank. He was not inclosed in an iron cage, nor did he meet with a cruel death, as the Greek historians assert.

Antoine, (Fauxbourg St.) July 5, 1652.

Antraim, Nov. 20, 1793.

Aoste, June 12, 1794.

Appenwirth, 1796.

Aran, (Valley of), 1793.

Arcis-sur-Aube, 1814.

Arcoli, November 15, 16 and 17, 1796.

—Won by Bonaparte.

Arlon, 1792, 1793; April 17, 1796.

Arques, September 21, 1589.

Arroyo del Molino, October 23, 1811.

Arsch, (El), 1799.

Aspe, September 6, 1794.

Ascalon, (Judaea), 1192.—Richard, King of England, defeats Saladin's army, consisting of 300,000 fighting men.

Ashdown, 1016.—Between Canute and Edmund.

Asperne, August 21, 1809.

Assaye, Sept. 23, 1803.—Won by the British in India; on which occasion the present Duke of Wellington, then Lieut. Colonel Wellesley of the 33d Foot, greatly distinguished himself.

Aumale, 1692.

Aubin, (St.) 1488.

Auray, Sept. 29, 1364.

- Aussoy, 1794.
 Austerlitz, Dec. 2, 1805.—The conquest of Germany by Bonaparte.
 Avcin, 1686
 Ayvaille, 1794.
 Aymooz, March, 1799.
 Baden, July 4, 1796.
 Bagdad, 1753.
 Bagnols, October 25, 1793.
 Bagnouls-la-Maizo, 1793.
 Baltimore, 1781; September 12, 1811.
 Bamberg, August 4, 1796.
 Bambury, July 26, 1469.
 Bannockburn, June 27, 1314.
 Barekham, October 7 to 9, 1683.
 Bardis, April 5, 1798.
 Barnett, April 14, 1471.
 Barrosa, March 5, 1811.—Won by the British under General Graham, now Lord Lynedock.
 Bartholomew, (St.) May 8, 1800.
 Bassano, Sept. 8, 1796; January 11, 1801; November 5, 1805.
 Bassignana, May 19, 1799.
 Bastan, (Valley of St.) July 24, 1794.
 Bautzen, May 20 to 21, 1813.
 Baylen, July 20, 1808.
 Bayonne, December 10 to 12, 1813.—Won by the Duke of Wellington.
 Baugé, April 3, 1421.
 Beaulieu, September 20, 1793.
 Beaumont, April 26, 1794.
 Beaupreau, March 29, 1793.
 Beauséjour, 1793.
 Belbeys, March 31, 1800.
 Bellum, March 13, 1797.
 Belone, July 5, 1796.
 Belvedere, 1793; April 29, 1794.
 Bclver, June 26, 1794.
 Beneadi, April 18, 1798.
 Bera, 1793; July 24, 1794.
 Berchem, December 2 to 4, 1793.
 Bergara, November 23, 1794.
 Bergen, April 13, 1759.
 Bergfried, February 3, 1807.
 Bergzabern, October 3, 1793.
 Beresina, November 28, 1812.
 Berne, March 5, 1798.
 Bessai, July 30, 1793.
 Beterzill, March 12, 1794.
 Bezalu, July 20, 1794.
 Bhurtpore, April 2, 1805.
 Biberach, Oct. 2, 1796; May 9, 1810.
 Bicoeque. 1522.
 Biddassoa, August 17 and October 9, 1813.
 Bilbao, July 12 to 18, 1794.
 Binasco, April 20 and 21, 1794.
 Bingen, March 17, 1793; March 27, 1793.
 Bischofswerda, September 22, 1813.
 Bitonto, May 25, 1734.
 Blackheath, June 22, 1497.
 Blackmere, 1323.
 Bladensburg, August 24, 1814.—Capture of the city of Washington.
 Blaregmes, September 14, 1709.
 Blascheidt, November 20, 1794.
 Bleneau, April 7, 1652.
 Blenheim, August 13, 1704.—Won by the Duke of Marlborough.
 Bloreheath, September 24, 1439.
 Borghetto, May 30, 1796.
 Borisloff, June 25, 1703.
 Bornio, March 26, 1799.
 Borodino, September 7, 1812.—The capture of Moscow by the French.
 Bosco, October 24, 1799.
 Bosworth, August 24, 1485.
 Bothwell Bridge, June 22, 1679.
 Boulon, August 13, 1794.
 Bouvines, July 27, 1214.
 Bouxweiller, November 18 to 20, 1793.
 Boxtel, September 14 and 15, 1794.
 Boyne, July 11, 1690.
 Braunsberg, February 26, 1807.
 Brandy-wine Creek, September 12, 1777.
 Breeds-hill, 1775.
 Brenta, (Defiles of the,) September 7, 1796; November 2 and 3, 1796.
 Breslaw, November 21, 1757.
 Bressuire, August 24, 1792.
 Brienne, January 29, 1814.
 Briga, April 24, 1794.
 Brignais, 1361.
 Brooklynn, August 22, 1776.
 Brouzil, 1793.
 Brusshall, September 4 to 15, 1796.
 Brzecl, September 19, 1791.
 Bullarola, June 23, 1636.
 Bunker's-hill, near Boston, June 17, 1775.—Won by the Americans.
 Burg-eberach, Nov. 3 and 4, 1800.
 Burguet, October 16, 1794.
 Bussingen, October 7, 1799.
 Butzbach, July 9, 1796.
 Buzzaco, September 27, 1810.
 Byn-el-barr, April 2, 1798.
 Cadibona, April 5, 1800.
 Cairo, (Egypt,) April 19 to 27, 1800.
 Cairo, (Italy,) September 20, 1794.
 Calcinato, April 19, 1706.
 Caldero, December 12, 1796.
 Calderon, (bridge of,) January 17, 1811. (Mexico).
 Calvi, December 6, 1796.
 Campo Santo, 1743.
 Cana, June 10, 1798.
 Camden, March 25, 1781.
 Cantalupo, December 11, 1798.

- Carpenedolo, January 26, 1796.
 Carpi, 1701.
 Cars, June 17, 1744.
 Casasola, March 19, 1797.
 Cassano, 1705; April 25, 1799.
 Cassovie, 1389.
 Cast, September 4 to 10, 1753.
 Castel-franco, November 23, 1803.
 Castel-genest, November 21, 1793.
 Castellamare, 1647; April 27, 1799.
 Castella, May 12, 1812.
 Castellaro, Sept. 12, 1796.
 Castelnaudari, 1632.
 Castel-novo, November 21, 1796.
 Castel-novo, (Dalmatia,) September 30,
 and October 10, 1806.
 Castiglione, June 29, 1796.
 Castrel, (Mount,) April 30, 1794.
 Cateau-Cambresis, April 7, 1794.
 Cê, (bridge of,) April 26 and 28, 1792.
 Cerea, September 11, 1798.
 Ceret, May 4, 1794.
 Cerignolles, April 28, 1503.
 Cerise, September 1, 1794.
 Cerisolles, April 15, 1544.
 Ceva, April 26, 1796.
 Cezio, May 7, 1800.
 Chabotière, March 23, 1796.
 Champagne, (Campaign of,) August 22
 to October 25, 1792.—The Prussian
 army, dreadfully afflicted with the
 dysentery, in consequence of the sol-
 diers eating unripe grapes, forced to
 abandon the coalition.
 Chantonnay, September, 1793.
 Chateigneraye, 1793.
 Chatillon, (Savo,) May 18, 1800.
 Chatillon, (France,) July 8 to October 6,
 1793.
 Chebreisse, July 13, 1793.
 Chemillé, February 24, 1796.
 Chiari, 1801.
 Chili, (India,) 1803.
 Chiusa, August 5, 1796; January 2,
 1801.
 Chiusella, April 25, 1800.
 Choczim, November 11, 1673.
 Chollet, March 15, 1793; October 15,
 1794; February, 1794.
 Chotzemitz, July 18, 1745.
 Circeo, July 29, August 2 to 9, 1798.
 Cistella, May 5 and 6, 1795.
 Ciudad Rodrigo, January 19, 1812.—
 Won by the British under the Duke of
 Wellington.
 Civita-Castellana, December 4, 1798.
 Clausen, 1797.
 Closter-camp, October 16, 1760.
 Cocherel, 1364.
 Coefeld, August 1, 1759.
 Col-du-mont, Apr. 17 and May 12, 1795.
 Colombino, January, 1794.
 Commines, 1332.
 Consarbruck, November 9 to December
 30, 1792.
 Constance, October 7, 1799.
 Coimbra, October 7, 1810.
 Coptos, March 8, 1798.
 Coraim, March 23, 1800.
 Coron, September 17, 1793.
 Corbach, June 24, 1760.
 Cornelis, August 26, 1811.—Total de-
 feat of the Dutch; the general and a
 few followers being all that escaped of
 10,000 men.—The conquest of Java
 by the English.
 Corsica, 1769; 1793; October, 1796.—
 Taken by the British, who expelled the
 French.
 Corunna, January 16, 1809.—Won by
 the British under Sir John Moore, who
 was killed.
 Cosdorf, February 20, 1760.
 Cossaria, April 13, 1796.
 Costheim, September, 1795.
 Courtrai, 1302; June 17 to 30, 1792;
 May 10, 1794.
 Coutras, October 20, 1587.
 Cracovie, 1702.
 Cressy, August 26, 1346.—Won by the
 British.
 Crevelt, June 23, 1758.
 Crevent, June, 1423.
 Croix-des-bouquets, June 23, 1793.
 Croix-de-Mortimer, 1461.
 Culloden, April 27, 1746.
 Culm, August, September, 1813.
 Cunnorsdorf, August 12, 1759.
 Cyr, (St.) September, 1795.
 Czarnowo, December 22, 1806.
 Czaslawau, May 17, 1742.
 Dalem, 1563.
 Dego, April 15, 1796.
 Delhi, September 9, 1803.
 Delmesingen, May 22, 1800.
 Demenhour, May 3, 1799.
 Denain, 1712.
 Denis, (St.) 1567.
 Dennewitz, September 6, 1813.
 Deppen, February 5, 1807; June 6,
 1807.
 Dettingen, June 26, 1745.—George the
 Second commanded in person.
 Deux-ponts, September 22, 1793.
 Deva, June 28, 1795.
 Dierdorf, April 17, 1797.
 Diernstein, Nov. 14, 1305.
 Diersheim, April 20 to 25, 1797.
 Dieltickon, September 22 to 26, 1799.
 Dobeln, May 12, 1762.

- Domingo, (St.) 1592, 1700.
 Dresden, August 27 and 28, 1813.—
 Morcau mortally wounded.
 Dreux, December 19, 1562.
 Dumblain, November 12, 1715.
 Duna, 1701.
 Dunbar, September 3, 1650.
 Dunes, 1638.
 Dunkirk, September 7, 1793.
 Durham, October 17, 1346.—David,
 king of Scots, taken prisoner.
 Dusseldorf, September 8, 1795.
 Eckeren, June 30, 1703 —Gen. Obdam
 commanding the allies ran off at full
 speed, declaring all lost; but General
 Slangenbomg remained with the troops
 and made a skilful retreat.
 Edgehill, October 23, 1642.—Lost by
 Charles I. and won by Oliver Crom-
 well.
 Einbeck, August 24, 1761.
 Eltz, October 19, 1796.
 Einsdorf, July 9, 1760.—Won by the
 allied army commanded by Prince
 Ferdinand, when the Fifteenth Light
 Dragoons first distinguished themselves
 under Lord Heathfield, then Lt. Col.
 Elliot.
 Engadines, (Affairs in the,) March, 1799.
 Engen, May 3, 1800.
 Ens, 1800.
 Ensheim, October 4, 1674.
 Erbach, October 18, 1800,
 Erivan, 1805.
 Ernani, 1794.
 Escaulas, November 20, 1794.
 Esslingen, July 21, 1796.
 Essling, May 22, 1809.
 Etlingen, July 9, 1796.
 Evesham, August 4, 1265.
 Exiles, July 19, 1747.
 Eylau, February 8, 1807.
 Faenza, February 8, 1797.
 Faioum, October 8, 1796.
 Falkirk, July 21, 1298; Jan. 28, 1746.
 Famars, May 1 to 26, 1798.
 Favorite, (La,) January 14, 1797.
 Fehrbellin, June 18, 1675.
 Feldkirk, March 5 to 23, 1799; July 15,
 1799.
 Ferneuil, August 27, 1424.
 Ferruckabad, (E.I.) November 17, 1804.
 Figuiero, November 27, 1794.
 Fleurus, August 30, 1622; July 1, 1696;
 May 24 and June 26, 1794.
 Flines, 1792.
 Flodden, Sept. 9, 1513.—James IV. king
 of Scots, killed.
 Florent, (St.) March 10, 1793.
 Fluvia, June 15, 1795.
- Fombio, May 9, 1796.
 Fontaine-française, 1595.
 Fontarabia, August 1, 1794,
 Fontenai, (Vendée,) May 16 and 24,
 1793.
 Fontenoi, May 11, 1745.—Won by the
 French under Marshal Saxe, after the
 British had been masters of the field
 all day. They were commanded by
 the fat Duke of Cumberland.
 Fontoi, August 19, 1792.
 Forham, July 21, 1739.
 Formigni, April 15, 1450.
 Formosa, 1662.
 Fornone, 1494.
 Fossano, April 23, 1796.
 Fougères, November 2, 1793.
 Frankfort-on-the-Maine, December 2,
 1792; October 5, 1799.
 Frankfort-on-the-Oder, August 12, 1759.
 Frankenthal, June 24, 1796.
 Frauenfeld, May 22, 1799.
 Fravenstal, 1706.
 Freibach, July 2 to 14, 1794.
 Frelicgné, September 13, 1794.
 Freschweiler, December 22, 1792.
 Freudenstadt, July 4, 1796.

- There is no action in war more brilliant than that of battles, the success of which sometimes decides the fate of kingdoms. It is by this action a general acquires his reputation. It is in battle that his valour, his force of genius, and his prudence, appear in their full extent; and where especially he has occasion for that firmness of mind, without which the most able general will hardly succeed.
- Battles have ever been the last resource of good generals. A situation where chance and accident often battle and overcome the most prudent and most able arrangements, and where superiority in numbers by no means ensures success, is such as is never entered into without a clear necessity for so doing. The fighting a battle only because an enemy is near, or from having no other formed plan of offence, is a direful way of making war. Darius lost his crown and life by it; King Harold of England, did the same; and Francis I. at Pavia, lost the battle and his liberty. King John, of France, fought the battle of Poitiers, though ruin attended his enemy if he had not fought. The Russian and Prussian campaigns against Bonaparte, in 1806 and 1807, are also strong illustrations of this truth; and particularly so, the battle of Waterloo.
- The true situation for giving battle is

when an army's situation cannot be worse, if defeated, than if it does not fight at all; and when the advantage may be great, and the loss little. Such was the Duke of Cumberland's at Hastenbeck, in 1757, and Prince Ferdinand's at Vellinghausen, in 1761. The reasons and situations for giving battle are so numerous, that to treat of them all would fill a large volume: we will therefore content ourselves with the following. There may be exigencies of state that require its army, to attack the enemy at all events. Such were the causes of the battle of Blenheim, in 1794, of Zorndorff, in 1758, of Cunnersdorff, in 1759, and of Rosbach, in 1757. To raise a siege, to obstruct or cover a country.—An army is also obliged to engage when shut up in a post. An army may give battle to effectuate its junction with another army, &c.

The preparations for battle admit of infinite variety. By a knowledge of the detail of battles, the precept will accompany the example. The main general preparations are, to profit by any advantage of ground; that the tactical form of the army be in some measure adapted to it; and that such form be, if possible, a form tactically better than the enemy's. In forming the army, a most careful attention should be given to multiply resources, so that the fate of the army may not hang on one or two efforts; to give any particular part of the army, whose quality is superior to such part in the enemy's army, a position that ensures action; and finally, to have a rear by nature, or, if possible, by art, capable of checking the enemy in case of defeat; that is, never to lose sight of the *Base Line*.

The dispositions of battles admit likewise of an infinite variety of cases; for even the difference of ground which happens at almost every step, gives occasion to change the disposition or plan; and a general's experience will teach him to profit by this, and take the advantage the ground offers him. It is an instant, a *coup-d'œil*, which decides this: for it is to be feared the enemy may deprive you of those advantages, or turn them to his own profit; and for that reason this admits of no precise rule; the whole depending upon time and opportunity.

With regard to battles, there are three things to be considered; what

precedes, what accompanies, and what follows the action. As to what precedes the action, you should unite all your force, examine the advantage of the ground, the wind, and the sun, (things not to be neglected,) and chuse, if possible, a field of battle proportioned to the number of your troops.

You must post the different kinds of troops advantageously for each: they must be so disposed as to be able to return often to the charge; for he who can charge often with fresh troops, is commonly victorious; witness the uniform practice of the French. Your wings must be covered so as not to be surrounded, and you must take care, that your troops can assist each other without any confusion, the intervals being proportioned to the battalions and squadrons.

Particular regard must be had to the regulation of the artillery, which should be disposed so as to be able to act in every place to the greatest advantage; for nothing is more certain than that, if the artillery be well commanded, properly distributed, and manfully served, it will greatly contribute to gaining the battle; being looked upon as the general instrument of the army and the most essential part of military force.—The artillery must be well supplied with ammunition, and each soldier have a sufficient number of cartridges. The baggage, provisions, and treasures of the army, should, on the day of battle, be sent to a place of safety.

In battle, where the attacks are, there is also the principal defence. If an army attacks, it forms at pleasure; it makes its points at will: if it defends, it will be sometimes difficult to penetrate into the designs of the enemy, but when once found, succour succeeds to the discovery. Ground and numbers must ever lead in the arrangement of battles; impression and resource will ever give them the fairest chance of success. Never to be surprized is perhaps the surest way never to be beaten.

The *BATTLE*, a term of distinction which was used during the 13th and 14th centuries, to mark the cavalry, or gentlemen who served on horseback. Robertson, in his *View of the State of Europe*, vol. i. page 80, observes, that, during those periods, the armies of Europe were composed almost entirely of cavalry. No gentleman would appear

in the field but on horseback. To serve in any other manner, he would have deemed derogatory to his rank. The cavalry, by way of distinction, was called *The Battle*, and on it alone depended the fate of every action. The infantry, collected from the dregs and refuse of the people, ill armed, and worse disciplined, was almost of no account.

BATTLE-Array, } the method and
Line of BATTLE, } order of arranging the troops in line of battle; the form of drawing up the army for an engagement. This method generally consists of three lines, viz. the front line, the rear line, and the reserve.

The second line should be about 300 paces behind the first, and the reserve at about 5 or 600 paces behind the second. The artillery is likewise distributed along the front of the first line. The front line should be stronger than the rear line, that its shock may be more violent, and that, by being more extensive, it may more easily close on the enemy's flanks. If the first line has the advantage, it should continue to act, and attack the enemy's second line, which must be already terrified by the defeat of the first. The artillery must always accompany the line of battle in the order it was at first distributed, if the ground permit; and the rest of the army should follow the motions of the first line, when it continues to march on after its first success.

Main BATTLE. See **BATTLE-ARRAY.**

BATTLE-axe, (*hache d'armes*, Fr.) an offensive weapon, formerly much used by the Danes, and other northern infantry. It was a kind of halberd, and did great execution when wielded by a strong arm.

BATTLEMENTS, in military affairs, are the indentures in the top of old castles or fortified walls, or other buildings, in the form of embrasures, for the greater conveniency of firing or looking through.

BATTRE, Fr. to direct one or more pieces of ordnance in such a manner, that any given object may be destroyed or broken into by the continued discharge of cannon ball, or of other warlike materials; it likewise means to silence an enemy's fire.

BATTRE en brèche, Fr. to batter in breach. The word *battre* is also applied, in the artillery, to all the different ways of battering.

BATTRE l'estrade, Fr. to scour; to scout.

BATTRE la campagne, Fr. to scour the country, or make incursions against an enemy.

BATTRE de front, Fr. to throw cannon-shot in a perpendicular or almost perpendicular direction against any body or place which becomes an object of attack. This mode of attack is less effectual than any other unless you *batter in breach.*

BATTRE d'écharpe, Fr. to direct shot, so that the lines of fire make a manifest acute angle with respect to the line of any particular object against which cannon is discharged.

BATTRE en flanc, Fr. is when the shot from a battery runs along the length of the front of any object or place against which it is directed.

BATTRE à dos, Fr. to direct the shot from one or several pieces of cannon so as to batter, almost perpendicularly, from behind any body of troops, part of a rampart or intrenchment.

BATTRE de revers, Fr. to direct shot in such a manner as to run between the two last mentioned liens of fire. When you batter from behind, the shot fall almost perpendicularly upon the reverse of the parapet. When you batter from the reverse side, the trajectories or lines of fire describe acute angles of forty-five degrees or under, with the prolongation of that reverse.

BATTRE de bricole, Fr. This method can only be put in practice at sieges, and against works which have been constructed in front of others that are invested. Every good billiard player will readily comprehend what is meant by *bricole* or back-stroke.

BATTRE en sape, Fr. to batter a work at the foot of its revetement.

BATTRE en salve, Fr. to make a general discharge of heavy ordnance against any spot in which a breach is attempted to be made.

BATTRE la caisse, Fr. to beat a drum.

BATTRE l'assemblée, Fr. to beat the assembly.

BATTRE un ban, Fr. to give notice by sound of drum, when an officer is to be received, orders given out, or any punishment to be publicly inflicted.

BATTRE la chamade, Fr. to give intimation by the sound of drum, from a besieged place, of a disposition to capitulate; to beat a parley.

BATTRE aux champs, Fr. to give notice, by beat of drum, that a regiment, or armed body of men, is approaching or marching off. It also signifies the beat which is made when a superior officer comes near a guard, &c.

BATTRE la charge, Fr. to beat the charge; or to give notice that a general discharge of musketry is about to take place, and that the whole line is to charge with bayonets.

BATTRE la Diane, Fr. to beat the Réveillé.

BATTRE les drapeaux, Fr. to announce, by beat of drum, that the colours are about to be lodged.

BATTRE la générale, Fr. to beat the General; a signal to collect the soldiers together for immediate action, or for quitting camp, or quarters.

BATTRE la marche, Fr. to give notice, by beat of drum, for troops to advance or retreat.

BATTRE la messe, Fr. to give notice, by beat of drum, for soldiers to march to church.

BATTRE la prière, Fr. to give notice, by beat of drum, for soldiers to assemble at any particular place to hear prayers.

BATTRE la retraite, Fr. to beat the retreat; a notice given by all the drums of a regiment or army, for soldiers to keep to their several colours, and to retire in the best order they can, after a disastrous battle.

Se **BATTRE en retraite**, Fr. to maintain a running fight.

Mener battant, to overcome.

Mener quelqu'un au tambour battant, to disconcert, to confound, puzzle, and perplex any body.

BATTURES, Fr. breakers; shelves.

BAUDRIER, Fr. a cross-belt. It also signifies a sword-belt.

BAVETTE, Fr. in architecture, a piece, or apron, of lead, which is placed in front of a water pipe, or upon a roof that is slated. It signifies, literally, a bib, such as is put before a child.

BAUGE, Fr. a coarse sort of mortar which is made with chopped straw, and pounded hay, in the manner that lime and sand are mixed up. This species of mortar is used in lieu of better.

BAVINS, in military affairs, implies small faggots, made of brush-wood, of a considerable length, no part of the brush being taken off. See **FASCINES**.

BAYARD, Fr. a provincial term used

in Languedoc and Roussillon to signify a wheel-barrow.

BAY, (*baye*, Fr.) an inlet of the sea between two capes or headlands. It also signifies such a gulph or inlet of the land as does not run very deep into it, whether large or small; but smaller bays are frequently denominated creeks, havens, or roads. It may be observed, indeed, in general, that a bay has a proportionably wider entrance than either a gulph, or a haven; and that a creek has usually a small inlet, and is always much less than a bay.

Bay-window, one that is composed of an arch of a circle; consequently it will stand without the stress of the building: by which means spectators may better see what is done in the street.

BAYE, *Bêe* ou *Jour*, Fr. in architecture, every sort of aperture in a building is so called.

BAYONET, (*bayonnette*, Fr.) a kind of triangular dagger, made with a hollow handle, and a shoulder, to fix on the muzzle of a firelock or musket, so that neither the charging nor firing is prevented by its being fixed on the piece. It is of infinite service against horse. At first the bayonet was screwed into the muzzle of the barrel, consequently could not be used during the fire. It is said by some to have been invented by the people of Malacca, and first made use of on quitting the pikes. According to others, it was first used by the fuzileers in France, who were afterwards made the body of Royal Artillery. At present it is given to every infantry regiment. This weapon was formerly called dagger. In some old English writers it is written Bagonet; and, indeed, generally now so pronounced by the common soldiers.

A French writer, in a work entitled *L'Essai général de la Tactique*, has proposed a method of exercising the soldiers in a species of fencing or tilting with this weapon. But, as another very sensible author (*Mauvillon* in his *Essai sur l'Influence de la Poudre à Canon dans l'Art de la Guerre Moderne*) justly asks, how can any man tilt or fence with so cumbrous an instrument, and so difficult to be handled, as the firelock? It seems probable that great advantage may be obtained by a person who has been taught to use such a weapon scientifically, when contending with an individual; but we do not think that the

niceties of parrying are applicable to the charge in line; but a firm grasp and a quick and steady thrust are required. A French author, M. G. De Levis, in his *Maxims and Reflexions*, observes: *Oser combattre à l'arme blanche, voilà ce qui constitue le véritable guerrier. Les peuples qui ont cette énergie (et ils sont en bien petit nombre) peuvent s'appeler à bon droit les "Grenadiers de l'Europe."* Experience has convinced the French that this daring quality is peculiarly marked in the character and conduct of a British soldier, of which a signal proof was given at the battle of Waterloo, on the 18th June, 1815.

BEACON, (*fanal*, Fr.) something raised on an eminence to be fired, or displayed, on the approach of an enemy, to alarm the country; also, marks erected, or lights made in the night, (as on the North and South Forelands on the Coast of Kent, and elsewhere,) to direct navigators in their course, and warn them from rocks, shallows, and sandbanks. It is said that Bonaparte's boasted pillar near Boulogne will be converted into one.

On certain eminent places of the country are placed long poles erect, whereon are fastened pitch-barrels to be fired by night, and smoke made by day, to give notice, in a few hours, to the whole kingdom, of an approaching invasion.

To BEAR, in gunnery. A piece of ordnance is said to *bear*, or *come to bear*, when pointed directly against the object; that is, pointed to hit the object.

BEARD, the reflected points of the head of an ancient arrow, particularly of such as were jagged.

To BEAT, in a military sense, signifies to gain the day, to win the battle, &c.

To BEAT a parley. See **CHAMADE**.

To BEAT a drum. See **DRUM**.

To BEAT to arms, to assemble the soldiers, or armed citizens of a town or place by beat of drum.

BEAVER, that part of the ancient helmet which covered the face, and which was moveable so as to expose the face without removing the beaver from the helmet.

BEC de corbin, Fr. a battle-axe.

BÈCHE, Fr. a spade used by pioneers.

BEDS, in the military language, are of various sorts, viz.

Mortar-BEDS serve for the same pur-

pose as a carriage does to a cannon: they are made of solid timber, consisting generally of two pieces fastened together with strong iron bolts and bars. Their sizes are according to the kind of mortar they carry.

Royal-BEDS, } are carriages for a
Coehorn-BEDS, } royal mortar, whose diameter is 5 . 8 inches: and a coehorn mortar, whose diameter is 4 . 6 inches. These beds are made of one solid block only.

Sea-Mortar-BEDS are likewise made of solid timber, like the former, but differ in their form, having a hole in the center to receive the pintle or strong iron bolt, about which the bed turns. Sea-mortars are mounted on these beds, on board of the bomb-ketches.

N. B. These beds are placed upon very strong timber frames, fixed into the bomb-ketch, in which the pintle is fixed, so as the bed is turned about it, to fire any way. The fore part of these beds is an arc of a circle described from the same center as the pintle-hole.

There are iron mortar-beds, as well as wood, for the nature of 13, 10, and 8 inch mortars, which are expressly for land service.

Stool-BED is a piece of wood on which the breech of a gun rests upon a truck-carriage, with another piece fixed to it at the hind end, that rests upon the body of the hind axle-tree; and the fore part is supported by an iron bolt. See **CARRIAGE**.

BED of stone, in masonry, a course or range of stones. The joint of the bed is the mortar between two stones placed over each other.

BEEFEATERS, (*Buffetiers*), yeomen of the guard to the King of Great Britain, so called from being stationed by the sideboard at great royal dinners. They are kept up rather from state than for any military service. Their arms are a sword and lance.

BETLES, in a military sense, are large wooden hammers for driving down palisades, and for other uses, &c.

BETLESTOCK, the stock or handle of a beetle.

BÉFROI, Fr. belfry, alarm-bell; also a watch-tower, or high place fit for discovery.

BÉLANDRE, Fr. a flat-bottomed vessel, with masts and sails, &c. which is used in Flanders for the conveyance of goods.

BÉLIER, *Fr.* a hattering ram.

BELLIGERENT, in a state of warfare. Hence any two or more nations at war are called belligerent powers.

BELTS, in the army, are of different sorts, and for various purposes, viz.

Sword-BELT, a leathern strap in which a sword hangs.

Shoulder-BELT, a broad leathern belt, which goes over the shoulder, and to which the pouch is fixed: it is also called *Cross-Belt*. It should be made of stout smooth buff, with two buckles to fix the pouch to the belt. See **POUCH**.

Waist-BELT, a leathern strap fixed round the waist, by which a sword or bayonet is suspended.

BELTS are known among the ancient and middle-age writers by divers names, as *zona*, *cingulum*, *reminiculum*, *ringa*, and *baldrellus*. The *belt* was an essential piece of the ancient armour, inasmuch that we sometimes find it used to denote the whole armour. In latter ages the *belt* was given to a person when he was raised to knighthood; whence it has also been used as a badge or mark of the knightly order.

BELVÉDÈRE, *Fr.* a turret, or raised pavilion, on an elevated ground, in the shape of a platform, whence the country round may be seen.

BÉNAR, *Fr.* a large four-wheeled wagon, which is used to carry stones in the construction of fortified places.

BENDINGS, in military and sea matters, are ropes, wood, &c. bent for several purposes. M. Amontons gives several experiments concerning the *bending* of ropes. The friction of a rope *bent*, or wound round an immoveable cylinder, is sufficient, with a very small power, to sustain very great weights. Divers methods have been contrived for *bending* timber, in order to supply crooked planks and pieces for building ships; such as by sand, boiling water, steam of boiling water, and by fire. See M. Du Hamel, in his book called *Du Transport, de la Conservation, et de la Force des Bois*. M. Delesme ingeniously enough proposed to have the young trees bent while growing in the forest. The method of *bending* planks by sand-heat, now used in the king's yards, was invented by Captain Cumberland.

A method has been lately invented and practised for *bending* pieces of timber, so as to make the wheels of carriages without joints. The *bending* of

boards, and other pieces of timber for carved works in joinery, is effected by holding them to the fire, then giving them the figure required, and keeping them in it by tools for the purpose.

BÉNÉDICTION de drapeaux, *Fr.* the consecration of colours.

BÉNÉDICTION générale, *Fr.* a religious invocation which is made to God by the principal chaplain belonging to a French army on the eve of an engagement.

BENEFICIARII, in ancient military history, denotes soldiers who attend the chief officers of the army, being exempted from all other duty.

BENEFICIARII were also soldiers discharged from the military service or duty, and provided with *beneficia* to subsist on.

BERCEAU, *Fr.* literally a cradle; a full-arched vault.

BERGE, *Fr.* the high bank or border of a river. *Rivage* signifies the edge of the water, but *berge* means the adjacent high ground which secures the country round from inundations.

BÈRM, a little space or path between the ditch and the parapet. See **FORTIFICATION**.

To BESIEGE, to lay siege to, or invest any place with armed forces.

BESIEGERS, the army that lays siege to a fortified place.

BESIEGED, the garrison that defends the place against the army that lays siege to it. See **SIEGE**.

BÉTAIL, *Fr.* cattle in general.

To BETRAY, (*trahir*, *Fr.*) to deliver perfidiously any place or body of troops into the hands of the enemy; to discover that which has been entrusted to secrecy.

BETTY, a machine used for forcing open gates or doors. See **PETARD**.

BÉVEAU, *Fr.* a mathematical instrument which is used to carry a mixed-lined angle from one angle to another.

BEVIL, γ in masonry and joinery, a

BEVEL, δ kind of square, one leg of which is frequently crooked, according to the sweep of an arch or vault. It is moveable on a point or center, and may, therefore, be set to any angle. The make and use of the bevel are much the same as those of the common square and mitre, except that the latter are fixed; the first at an angle of 90 degrees, and the second at 45: whereas the *bevel* being moveable, it may in some measure do the office of both, and also their de-

iciency, which it is chiefly intended to supply, serving to set off or transfer angles, either greater or less than 90 or 45 degrees.

BEVEL-angle, any angle that is not square, whether it be more obtuse or more acute than a right angle; but if it be one half as much as a right angle, viz. 45 degrees, it is then called a *mitre*. There is also a *half-mitre*, which is an angle that is one quarter of a quadrant or square, viz. 22½ degrees.

BEY, (*Beis*, Fr.) an officer of high rank among the Turks, but inferior in command to the Pacha.

BLAIS, Fr. bevel, slanting, sloping, overthwart.

Entreprendre une affaire de tous les Biais, to undertake a thing in every way.

BLAISER, Fr. to bevel, to slope: figuratively, to shuffle.

BICOQUE, Fr. a term used in France to signify a place ill-fortified and incapable of much defence. It is derived from a place on the road between Lodi and Milan, which was originally a gentleman's country-house surrounded by ditches. In the year 1522, a body of imperial troops were stationed in it, and stood the attack of the whole French army during the reign of Francis I. This engagement was called the battle of *Bicoque*.

BIDON, Fr. a sort of oblong ball or shot, which goes farther than a round one.

BIEZ, Fr. that particular part of a navigable canal which lies between two floodgates, and whence waters are drawn in order to facilitate the ascent or descent of boats and barges, where there are falls.

BIGORNE, Fr. an anvil.

BIGORNEAU, Fr. a small rising anvil.

BIHOUAC, **BIUAC**, **BIUVAC**, or **BIVOUAQ**, Fr. [derived by some from the German *weywacht*, a double watch or guard: by others from the German *biwacht*, an extraordinary guard, set at night, for the safety of a camp:] a night-guard, or a detachment of the whole army, which, during a siege, or in the presence of an enemy, marches out every night in squadrons or battalions to line the circumvallations, or to take post in front of the camp, for the purpose of securing their quarters, preventing surprises, and of obstructing supplies. When an army does not encamp,

but lies under arms all night, it is said to *bivouaq*.

BIVOUAC also signifies small huts or sheds to which troops upon the outposts of an army may occasionally retire for repose. In the *Dictionnaire de l'Académie* this word is written *bivac* or *bi-rvouac*.

Lever le BIVOUAC, Fr. to draw in the out-posts, after break of day, and order the different parties, horse or foot, into camp or barracks.

BIVAQUER, or **BIVOUAQUER**, Fr. to be out all night in the open air. The *Excubie* of the Romans corresponded with these duties, which were done night and day. See *D'Aquino's Lexicon Militare*.

BILAN, Fr. a book in which French bankers and merchants write their active and passive debts.

BILBO, a rapier or small sword was formerly so called.

BILBOQUETS, Fr. small pieces of stone which have been sawed from the block, and remain in store.

BILL or **BILL-HOOK**, a small hatchet, used for cutting wood for fascines, gabions, bavins, &c. When it is long, it is called a *hedging-bill*; when short, a *hand-bill*.

To BILL up, a term used when a soldier is ordered not to go out of barracks or camp; his name being stuck up at the barrack-gate, or given in at the quarter-guard to prevent his egress. This word is also used, in some regiments, to signify the putting a soldier into the black-hole, or into what the Guards call the *Dry-room*.

BILLE pendante, Fr. in hydraulics, the piece of timber which is suspended from the end of the balance or beam, and serves to put some other essential piece in motion.

BILLE couchée, Fr. a piece of timber which advances and recedes with the motion of the wheel in a water-mill.

BILLET, a well-known ticket for quartering soldiers, which entitles each soldier, by act of parliament, to candles, vinegar, and salt, with the use of fire, and the necessary utensils for dressing and eating their meat. The allowance of small beer has been altered by a late regulation.

BILLET, blanc ou noir, Fr. a piece of white or black paper which is folded up, and serves to determine various matters by drawing lots.

BILLET de caisse, Fr. an acknowledgment which is given in writing by the paymaster of a regiment for money in hand.

BILLET d'entrée à l'hôpital, Fr. a ticket which is given to a sick soldier to entitle him to a birth in the military hospital.

BILLET d'honneur, Fr. a written acknowledgment which is given by an officer for articles taken on credit; but this more frequently happens in matters of play.

BILLET de logement, Fr. a billet for quarters. This billet or ticket was formerly delivered out to the French troops upon the same general principles that it is issued in England.

BILLETING, in the army, implies the quartering soldiers in the houses of any town or village.

BILLETES d'une espieu, Fr. cross bars of iron or steel.

BINACLE, a telescope with two tubes, so constructed, that a distant object might be seen with both eyes, now rarely used.

BINARD, Fr. See **BÉNAR**.

BINN, a great chest to put corn in.

BINOCLE, (*binocle*, Fr.) a kind of dioptric telescope.

BINOMIAL root, in mathematics, is a root composed of two parts, joined by the sign $+$. If it has three parts, it is called a *trinomial*; and any root consisting of more than three parts is called a *multinomial*.

BISSAC, Fr. a wallet, or a sack which opens down the middle.

BISSECTION, in geometry, the division of any quantity into two equal parts. It is the same as *bipartition*. Hence to bissect any line is to divide it into two equal parts.

BISTOURE, Fr. in surgery, an incision knife.

BIT, the bridle of a horse which acts by the assistance of a curb. See **CURB** and **BRIDON**.

BLACK-HOLE, a place in which soldiers may be confined by the commanding officer, but not by any inferior officer. In this place they are generally restricted to bread and water. Many colonels and commanding officers of corps are advocates for this sort of correction, in preference to flogging or corporal punishment.

BLANKETS, combustibles things made

of coarse paper steeped in a solution of saltpetre, which, when dry, are again dipt in a composition of tallow, resin, and sulphur. They are used only in fire-ships.

BLAST, and **BLASTING**. See **MINES** and **MINING**.

BLINDAGE, a work which is carried on along a trench, to secure it from the shells, &c. of a besieged garrison.

BLINDE, Fr. See **BLINDS**.

BLINDER, Fr. to make use of blinds.

BLINDS. in military affairs, are wooden frames composed of 4 pieces, either flat or round, two of which are 6 feet long, and the others 3 or 4 feet, which serve as spars to fasten the two first together: the longest are pointed at both ends, and the two others are fastened towards the extremities of the former, at about 10 or 12 inches from their points, the whole forming a rectangular parallelogram, the long sides of which project beyond the other about 10 or 12 inches. Their use is to fix them either upright, or in a vertical position, against the sides of the trenches or saps, to sustain the earth. Their points at the bottom serve to fix them in the earth, and those at the top to hold the fascines that are placed upon them; so that the sap or trench is formed into a kind of covered gallery, to secure the troops from stones and grenades.

The term *Blind* is also used to express a kind of hurdle, made of the branches of trees, behind which the soldiers, miners, or labourers, may carry on their work without being seen. See **HURDLE**.

BLINDS are sometimes only canvass stretched to obstruct the sight of the enemy. Sometimes they are planks set up; for which see **MANTLET**. Sometimes they are made of a kind of coarse basket-work. See **GABIONS**. Sometimes of barrels, or sacks filled with earth. In short, they signify any thing that covers the labourers from the enemy.

BLIND. See **ORILLON** and **FORTIFICATION**.

BLOCAGES, Fr. small stones, or shards, which are used in mortar, or thrown into water for a sort of foundation.

BLOCAGE, ou **BLOCAILLE**, Fr. rubbish; such as is used to fill up walls.

BLOCKADE, } in military affairs,
BLOCKADING, } implies the sur-

rounding a place with different bodies of troops, who shut up all the avenues on every side, and prevent every thing from going in or out of the place—this is usually effected by means of the cavalry. The design of the blockade is to oblige those who are shut up in the town to consume all their provisions, and by that means to compel them to surrender for want of subsistence.

Hence it appears that a blockade must last a long time, when a place is well provided with necessaries: for which reason this method of reducing a town is seldom taken, but when there is reason to believe the magazines are unprovided, or sometimes when the nature or situation of the place permits not the approaches to be made, which are necessary to attack in the usual way.

Maritime towns, which have a port, are in much the same case as other towns, when their port can be blocked up, and the besiegers are masters of the sea, and can prevent succours from being conveyed that way into the place.

To BLOCKADE or to block up a place, is to shut up all the avenues, so that it cannot receive any relief either of men or provisions, &c.

To raise a BLOCKADE is to march from before the place, and leave it free and open as before.

To turn a siege into a BLOCKADE is to desist from a regular method of besieging, and to surround the place with those troops who had formed the siege.

To form a BLOCKADE is to surround the place with troops, and hinder any thing from going in or coming out.

BLOCQUER, BLOQUER, or FLOQUER, *Fr.* a sea term, signifying to apply the sheathing hair to a ship's bottom.

BLOCUL, *Fr.* the main pole in a tent; also a small tower.

BLOCUS, *Fr.* See BLOCKADE.

BLOCK-battery, in gunnery, a wooden battery for two or more small pieces mounted on wheels, and moveable from place to place; very ready to fire *en barbette*, in the galleries and casemates, &c. where room is wanted.

Block-house, in the military art, a kind of wooden fort or fortification, sometimes mounted on rollers, or on a flat-bottomed vessel, serving either on the lakes or rivers, or in counterscarps or counter-approaches. The *Brisbane*,

on the south side of Calais harbour, is of this description, standing on wooden piles, and surrounded by a battery. This name is sometimes given to a brick or a stone building on a bridge, or the brink of river, serving not only for its defence, but for the command of the river, both above and below.

BLOQUER, *Fr.* to blockade.

BLOQUER, *Fr.* in mason-work, to erect thick rough walls along the trenches, without confining them to measure or line, as is the case in stone walls.

Bloquer also signifies to fill up, indiscriminately, the chasms in walls with rubbish and coarse mortar, as is the case in works constructed under water.

BLUES, or Royal Horse Guards, commonly called the Oxford Blues. This regiment was originally raised at Oxford, and possesses landed property in that county. It consists of 1 colonel, with 8 warrant men; 2 lieutenant colonels; 2 majors; 8 captains, (of whom his present Majesty is one); 8 lieutenants; 8 cornets; 8 quarter-masters, who all bear the King's commission; 2 surgeons; 1 adjutant; 1 assistant surgeon; 1 veterinary surgeon; 1 corporal-major; 42 corporals; 9 trumpeters; 560 privates. It is worthy of remark, that lieutenant colonels and captains of this regiment do not pay any thing to the agent, as is the case in other regiments.

The kettle drummers and trumpeters belonging to this corps, and to the Life Guards, being household troops, have their clothing furnished to them out of his Majesty's wardrobe.

BLUNDERBUSS, (*mousqueton*, *Fr.*) a well-known fire-arm, consisting of a wide, short, but very large bore, capable of holding a number of musket or pistol balls, or slugs; very fit for doing great execution in a croud, making good a narrow passage, defending the door of a house, staircase, &c. or repelling an attempt to board a ship.

To BOAR, } with horsemen. A horse
To BORE, } is said to boar or bore,
when he shoots out his nose as high as he can.

BOARD, (*conseil*, *bureau*, *département*, *Fr.*) an office under the government, where the affairs of the state are transacted; of which there are several sorts in England; as Board of Ordnance, Board of Admiralty, &c. &c.

BOAT. See ADVICE BOAT, PONTOON-BOAT, &c.

BOB-tail, with archers, is the steel of an arrow or shaft, which is small breasted, and large towards the head.

BODY, (*corps*, Fr.) in the art of war, is a number of forces, horse or foot, united under one commander.

Main Body of an army sometimes means the troops encamped in the center between the two wings, and generally consists of infantry. The main body on a march signifies the whole of the army, exclusive of the van and rear-guard.

Body of reserve. See RESERVE.

Body of a place is, generally speaking, the buildings in a fortified town; yet the inclosure round them is generally understood by it.

BOETES *pour les réjouissances*, Fr. small guns, made of wrought or cast iron, which are laid in a vertical position, after they have been loaded with guppowder, and then plugged up with a wooden stopper. These guns are let off, like other pieces of ordnance, by applying the match to the bottom of the box. The train, along which the fire is conveyed, consists of bran, with gunpowder at the top, in order to secure the latter from moisture.

BOETE, in the artillery, an instrument made of brass, to which a steel tempered blade is attached, with which the metal in a cannon is diminished, for the purpose of widening the bore. See ALLÏZER.

BOETE, ou coffre, Fr. a wooden box, in which is carried the gun-powder for a mine.

BOETE-à-pierrier, Fr. a hollow cylinder made of iron or copper, which, when loaded, is placed in a mortar, so that an immediate communication takes place between the fuse of the latter and its touch-hole, and it is propelled to the place of destination.

Aller au BOIS, Fr. to go with a party of men for the purpose of procuring wood, &c.

Bois de remontage, Fr. every species of timber which is used to new mount cannon, or refit ammunition wagons, &c.

Bois de chauffage, Fr. the fuel which is distributed among French troops.

Long Bois, Fr. a pike, lance, or spear.

Faire de tout Bois flèches, Fr. figuratively, to use every thing that turns to one's purpose. Literally, to make arrows out of every sort of wood.

Faire haut le Bois, Fr. pikemen are said to do so, when they stop and make a stand, advancing their pikes.

L'ail tendu au Bois, Fr. warily; watchfully; alluding to a bowman, who keeps his eye upon the wood of his instrument, when he takes aim.

BOISE, Fr. a log, or great piece of timber; more particularly a brace of timber.

BOISSEAU, Fr. a French bushel, being the 12th part of a septier, and somewhat less than our London peck and a half. A *boisseau* of wheat weighs 20 pounds; our peck of wheat-meal 14.

BOISSEL d'osier, Fr. a weel or weere of osier twigs.

BOISSIER, Fr. to wainscot walls, &c.

BOISSIÈRE, Fr. a hedge, thicket, or plot of box trees.

BOLT, an iron pin used for strengthening a piece of timber, or for fastening two or more articles together. Bolts in gunnery, being of several sorts, admit of various denominations, which arise from the specific application of them, as

- | | |
|---------------------|----------|
| 1. <i>Eye</i> | } BOLTS. |
| 2. <i>Joint</i> | |
| 3. <i>Transom</i> | |
| 4. <i>Bed</i> | |
| 5. <i>Brecching</i> | |
| 6. <i>Bracket</i> | |
| 7. <i>Stool-bed</i> | |
| 8. <i>Garnish</i> | |
| 9. <i>Axle-tree</i> | |
| 10. <i>Bolster</i> | |

Bolts of iron for house-building are distinguished by ironmongers into three kinds, viz. *plate, round, and spring bolts*. *Plate* and *spring bolts* are used for the fastening of doors and windows. *Round bolts* are long iron pins, with a head at one end and a key hole at the other.

Prize-BOLTS, with gunners, are large knobs of iron on the cheek of a carriage, which prevent the handspike from sliding, when it is poising up the breech of the piece.

Transom-BOLTS, with gunners, are bolts which go between the cheeks of a gun-carriage to strengthen the *tray-soms*.

Traverse-BOLTS, with gunners, two short bolts put one into each end of an English mortar carriage, which serve to traverse the mortar.

Bracket-BOLTS, with gunners, bolts

which go through the cheeks of a mortar, and by the help of the coins keep it fixed to the elevation given her.

See SHELL.

BOMB } Chest. See CAISSON.
 } Vessels, } small vessels, made
 } Ketches, } very strong, with

large beams, particularly calculated for throwing shells into a town, castle, or fortification, from 13 to 10-inch mortars, two of which are placed on board of each ship. They are said to have been invented by one M. Reyneau, a Frenchman, and to have been first put in action at the bombardment of Algiers in 1681: till then it had been judged impracticable to bombard a place from the sea.

BOMB Tender, a small vessel of war laden with ammunition for the bomb ketch, and from which the latter is constantly supplied. The ammunition and stores are now carried in the bomb vessel: tenders not being employed in that service.

BOMBARD, (*bombarde*, Fr.) an ancient piece of ordnance, very short, and very thick, with an uncommon large bore. There have been bombards which have thrown a ball or shell of 3 cwt.: they made use of cranes to load them. The Turks use some of them at present.

To BOMBARD, (*bombarder*, Fr.) See BOMBARDING.

BOMBARDING, } the act of as-
 BOMBARDMENT, } saulting a city or fortress, by throwing shells into it, in order to set fire to, and ruin the houses, churches, magazines, &c. and to do other mischief. As one of the effects of the shell results from its weight, it is never discharged as a ball from a cannon, that is, by pointing it at a certain object: but the mortars in England are fixed at an elevation of 45 degrees; that is, inclined so many degrees from the horizon, that the shell describes a curve, called the military projectile: hence a mortar, whose trunnions are placed at the breech, can have no point blank range. I am of opinion that mortars should be so contrived, that they may be elevated to any degree required, as much preferable to those fixed at an angle of 45°; because shells should never be thrown at that angle but in one single case only, which seldom happens; that is, when the battery is so far off, that they cannot otherwise reach the works: for when shells are thrown

from the trenches into the works of a fortification, or from the town into the trenches, they should have as little elevation as possible, in order to roll along, and not bury themselves; whereby the damage they do and the terror they cause to the troops, is much greater than if they sink into the ground. On the contrary, when shells are thrown upon magazines, or any other buildings, with an intention to destroy them, the mortar should be elevated as high as possible, that the shells may acquire a greater force in their fall. Some mortars (5½ inch brass) have of late been constructed to fire at different elevations, upon brigadier-general Lawson's principle.

Shells should be loaded with no more powder than is required to burst them into the greatest number of pieces, and the length of the fuzes should be exactly calculated according to the required ranges; for, should the fuze set fire to the powder in the shell before it falls on the place intended, the shell will burst in the air, and probably do more mischief to those who fired the mortar, than to those against whom it was discharged. To prevent this, the fuzes are divided into as many seconds as the greatest range requires, consequently may be cut to any distance, at an elevation of 45 degrees.

Mortars are not to be fired with two fires; for when the fuze is properly fixed, and both fuze and shell dredged with mealed powder, the blast of the powder in the chamber of the mortar, when inflamed by the tube, will likewise set fire to the fuze in the shell.

BOMBARDIERS, non-commissioned officer, so called because they were chiefly employed in mortar and howitzer duty. They are to load them on all occasions; and in most services they load the shells and grenades, fix the fuzes, prepare the composition both for fuzes and tubes, and fire both mortars and howitzers on every occasion. They are also employed on all services in the artillery. In the English service, shells, grenades, and composition for the same, fuzes, &c. are prepared in the Laboratory by people well skilled in that business.

In most foreign services, both officers and soldiers belonging to the companies of bombardiers have an extraordinary pay, as it requires more mathematical learning to throw shells with some de-

gree of exactness, than is requisite for the rest of the artillery. In the British service, a specific number is attached to each company of artillery; but they do not form a separate corps as in other countries.

BOMBÉ, ou courbé, Fr. a flat portion of a circle, such as is made upon the base of an equilateral triangle, whose center is the angle at the top.

BOMBÉ, Fr. timber that is crooked, and fit for crotches, knees, &c.

BOMBELLES, Fr. diminutive bombs or shells, which are used against a besieged fortress, or for the purpose of creating confusion among a body of men.

BOMBEMENT, Fr. curvity, convexity, also the swelling of a pillar.

BON, Fr. a written document which always precedes the signature of a sovereign or a minister, and by which some appointment is confirmed, to one or more persons.

BONACE or BONNACE, Fr. calm weather, with a serene sky and smooth sea.

BONAVOGLIE, Fr. a man that for a certain consideration voluntarily engages to row.

BONDIR, Fr. to bound; to fly up as a cannon ball does. It is also applied to a horse that suddenly leaps forward.

BONNET, in fortification, implies a small but useful work, that greatly annoys the enemy in his lodgments. This work consists of two faces, which make a salient angle in the nature of a ravelin, without any ditch, having only a parapet three feet high, and 10 or 12 feet broad. They are made at the salient angles of the glacis, outworks, and body of the place, beyond the counterscarp, and in the faussebray. See FORTIFICATION.

BONNET, a sort of cap which is worn by the Highlanders, hence called Bonnet-men.

BONNET à Prêtre, or Priest's-cap, in fortification, is an outwork, having three salient and two inward angles, and differs from the double tenaille only in having its sides incline inwards towards the gorge, and those of a double tenaille are parallel to each other. See FORTIFICATION.

BONNET de fer, Fr. an iron scull, a sallad.

BOOKS. There are different books made use of in the British army, for the

specific purposes of general and regimental economy.

The general order book is kept by the brigade major, from which the leading orders of regiments, conveying the parole and countersign, are always taken.

The regimental order book contains the peculiar instructions of corps which are given by a colonel or commanding officer to the adjutant—Hence *adjutant's order book*.—And from him to the serjeant-major, who delivers the same to the different serjeants of companies assembled in the orderly room for that purpose. Hence the *company's order book*.

The regimental book is kept by the clerk of the regiment, and contains all the records, &c. belonging to the corps.

The black book is a sort of memorandum which is kept in every regiment to describe the character and conduct of non-commissioned officers and soldiers; when, and how often, they have been reduced, or punished, &c.

Every quarter-master belonging to the cavalry and infantry has likewise a book which may not improperly be called a book or inventory of regimental stores, &c. A black book is kept in the adjutant-general's office in Dublin, so that the commander in chief can always know the state or condition of each regiment in that country, with respect to its interior management. This system ought to be general.

Time book. A book which is usually kept at public offices in order to ascertain the exact time at which the clerks, &c. make their appearance, particularly at the War-Office.

Quarter book. A book kept in the Office of Ordnance, which contains the names of such officers, and such salaries only, as have been sanctioned by his Majesty's warrants.

Practice book. A book containing the weight, range, &c. of cannon; and also the manner of exercising with pieces of artillery. Every officer belonging to the royal artillery ought to have a book of practice.

Regimental court-martial book. This book contains the names of the soldiers who have been tried since the date of the last inspection of a regiment, stating the crime for which each man has been tried; the punishment awarded, and the punishment inflicted.

Description book. This book is likewise called regimental book.

BOOM, in marine fortification, is a long piece of timber, with which rivers or harbours are stopped, to prevent the enemy's coming in: it is sometimes done by a cable or chain, and floated with yards, top-masts, or spars of wood lashed to it.

BOOTS, a familiar term used in the British service. It means the youngest officer at a regimental mess, and takes its origin, most probably, from what is generally called Boots at an inn.

BORDAGE, *Fr.* the planks of a ship's side.

Franc **BORDAGE**, *Fr.* the outside planks.

BORDÉE de canon, *Fr.* a broadside, or all the guns on one side of a ship.

BORDER, in military drawings, implies single or double lines, or any other ornament round a drawing, &c.

BORDER, *Fr.* in a military sense, to line: as *Border la côte*, to line the coast.

BORDEREAU, *Fr.* a sort of diary which is kept in a troop or company, for the purpose of ascertaining what articles have been distributed, and what money has been paid to the soldiers.

BORDERERS (King's own.) The 25th regiment is so called; from the regiment having originally been stationed on the boundaries of Scotland.

BORDURE, *Fr.* in architecture, a profile in relief, which is either oval or round. When it is square, it is called *cadre*, and serves to frame a picture or pannel.

BORDURE de pavé, *Fr.* the curb stone on each side of a paved road.

BORE, in gunnery, implies the cavity of the barrel of a gun, mortar, howitzer, or any other piece of ordnance. See **CANNON**.

BORNE, *Fr.* a stone stud, which is placed at the corner of, or before, a wall, to secure it against wagons, &c.

BORNE, *Fr.* limit; bound.

BORNOYER, *Fr.* to ascertain the straightness of a line, by looking with one eye through three or more stakes or poles, in order to erect a wall, or plant a row of trees.

BOSCAGE, a term in architecture,

BOSSAGE, § used for any stone that has a projecture, and is laid in a place, in a building, lineal, to be afterwards carved into mouldings, capitals, coats of arms, &c.

BOSSAGE is also that which is otherwise called *rustic work*.

BOSSAGE en liaison, *Fr.* that which represents the squares and stones laid cross-ways.

BOSSE, *Fr.* a term used in the French artillery to express a glass bottle which is very thin, contains four or five pounds of powder, and round the neck of which four or five matches are hung under, after it has been well corked. A cord, two or three feet in length, is tied to the bottle, which serves to throw it. The instant the bottle breaks, the powder catches fire, and every thing within the immediate effects of the explosion is destroyed, or injured.

BOSSE, *Fr.* a small knob or embossment, which is left on the dressing of a stone, to shew that the dimensions have not been toised, and which the workman pares off when he finishes.

BOTTER, *Fr.* to boot.

BOTTINE, *Fr.* half boots worn by the hussars and dragoons in foreign armies.

BOUCHE, *Fr.* the aperture or mouth of a piece of ordnance, &c.

BOUCHE, *Fr.* the king's kitchen.

BOUCAES à feu, *Fr.* This word is generally used to signify pieces of ordnance, such as cannon and mortars.

Grosse BOUCHE à feu, *Fr.* a piece of heavy ordnance.

Petite BOUCHE à feu, *Fr.* a carbine, musket, or pistol.

BOUCHERS d'une armée, *Fr.* This term is sometimes used among the French, to signify the persons who contract with the quarter-master general's department for a regular supply of meat.

BOUCHON d'étoupe, de foin, de paille, *Fr.* the wad of a cannon, made of tow, hay, straw, &c.

Un port BOUCLÉ, *Fr.* a land-locked harbour.

BOULANGERIE, *Fr.* a bakery; the spot where bread is baked for an army, or where biscuits are made at a sea-port.

BOULANGERS, *Fr.* bakers. Persons of this description are generally attached to armies.

BOULDER-walls, a kind of wall which is built with round flints, or pebbles, laid in strong mortar. These walls are chiefly used where the sea has a beach cast up, or where there is plenty of flints.

BOULER *la matière*, Fr. to stir up the different metals which are used in casting cannon.

BOULETS à deux têtes, ou anges, Fr. double headed shot.

BOULETS enchaînés, Fr. chain-shot.

BOULETS ramés, Fr. barred-shot.

BOULETS rouges, Fr. red hot shot:

BOULEVART, Fr. formerly meant a *bastion*. It is no longer used as a military phrase, although it sometimes occurs in the description of works or lines which cover a whole country, and protect it from the incursions of an enemy. Thus Strasburgh and Landau may be called two principal boulevarts or bulwarks, by which France is protected on this side of the Rhine.

The elevated line, or rampart, which reaches from the Champs Elysées in Paris beyond the spot where the Bastille was destroyed in 1789, and surrounds Paris, is styled the Boulevard.

In ancient times, when the Romans attacked any place, they raised boulevarts near the circumference of the walls. These boulevarts were 80 feet high, 300 feet broad, upon which wooden towers commanding the ramparts were erected, covered on all sides with iron-work, and from which the besiegers threw upon the besieged stones, darts, fire-works, &c. to facilitate the approaches of the archers and hattering rams.

BOULINER, Fr. to pilfer. *Bouliner dans un camp*, to steal or pilfer in a camp. *Un soldat boulineur*, a soldier that plunders.

BOULINS, Fr. pieces of timber which are fastened into walls in order to erect a scaffold.

Trous de BouLINS, Fr. scaffoldingholes.

BOULON, Fr. an iron bolt.

BOULONNER, Fr. to fasten with an iron bolt.

BOULONS d'affût, Fr. the bolts of the gun-carriage.

BOUNTY, a certain sum of money which is given to men who enlist.

Fresh-BOUNTY, money given to a soldier when he continues in the service after the expiration of the term for which he enlisted.

BOURE, Fr. See Mousse.

BOURGEOIS, Fr. the middle order of people in a town are so called, to distinguish them from the military and nobility.

BOURGEOISIE, Fr. that class of

inhabitants which consists of respectable tradesmen who are united among themselves, and, in moments of danger, learn military movements, and turn out as volunteers for the security of their rights, &c.

BOURGUIGNOTE, Fr. a helmet or morion which is usually worn with a breast-plate. It is proof against pikes and swords. It is also called a Cabosset.

BOURRADE, Fr. a thrust which is made with the barrel end of the musket instead of the butt.

BOURRE, Fr. a wad.

BOURRELET, Fr. the extremity of a piece of ordnance towards its mouth. Bourrelet means likewise a pad or collar.

BOURRER, Fr. to ram the wad or any other materials into the barrel of a fire-arm.

BOURRER une mine, Fr. to fill up the gallery of a mine with earth, stones, &c.

BOURRIQUET, Fr. a basket made use of in mining, to draw up the earth, and to let down whatever may be necessary for the miner.

BOURSEAU, Fr. in architecture, a round moulding upon the ridge of lead, on the top of a house that is slated.

BOUSIN, Fr. soft crust of stones taken out of the quarry.

BOUSSOLE, Fr. a compass, which every miner must be in possession of to direct him in his work.

BOUTE-SELLE, Fr. the signal or word which is given to the cavalry to saddle their horses.

BOUTON, Fr. the sight of a musket.

BOW, an ancient weapon of offence, made of steel, wood, or other elastic matter; which, after being bent by means of a string fastened to its two ends, in returning to its natural state throws out an arrow with prodigious force.

The use of the bow is, without all doubt, of the earliest antiquity. It has likewise been the most universal of all weapons, having obtained amongst the most barbarous and remote people, who had the least communication with the rest of mankind.

The bow is a weapon of offence amongst the inhabitants of Asia, Africa, and America, at this day; and in Europe, before the invention of fire-arms, a part of the infantry was armed with bows. Lewis XII. first abolished the use of bows in France, introducing, in

their stead, the halbert, pike, and broadsword. The long-bow was formerly in great use in England, and many laws were made to encourage the practice of it. The parliament under Henry VII. complained of the disuse of long-bows, heretofore the safeguard and defence of this kingdom, and the dread and terror of its enemies.

Cross Bow is likewise an ancient weapon of offence, of the eleventh century. Philip II. surnamed the Conqueror, introduced cross-bows into France. In this reign Richard I. of England, was killed by a cross-bow at the siege of Chalus.

BOWMAN. See ARCHER.

BOWYER. the man who made or repaired the military bows was so called.

BOXES, in military affairs, are of several sorts, and for various purposes.

A cutting Box, a box wherein chopped straw and cut hay may be kept. Every troop of cavalry intended for service or parade, ought to have a cutting box belonging to it, and one man constantly employed, all day, at it in chopping hay, straw, &c. Forage of all kinds should be cut and mixed together. Among the Germans, every trooper carries a double feed of chopped straw and corn mingled together, which is never touched but by express order of the commanding officer.

Battery-BOXES. See BATTERY.

Cartouch-BOXES. See CARTOUCH.

Nave-BOXES are made of iron, and fastened one at each end of the nave, to prevent the arms of the axle-tree, about which the boxes turn, from causing too much friction.

Tin-BOXES, such as are filled with small shot for grape, according to the size of the gun they are to be fired out of.

Wood-BOXES, with lids, for holding grape-shot, &c. Each calibre has its own, distinguished by marks of the calibre on the lid.

There are wooden boxes which contain ammunition carried upon the limbers and cars for field ordnance; also boxes to contain the reserve ammunition as it comes from the Laboratory. The shot, shells, cartridges, &c. are packed in these boxes, according to their natures and descriptions, so as to prevent any confusion; and the ends of the boxes are marked in letters to shew what they contain.

BOYAU, in fortification, is a particu-

lar trench separated from the others, which, in winding about, incloses different spaces of ground, and runs parallel with the works of the place, that it may not be enfiladed. When two attacks are made at once, one near to the other, the boyan makes a communication between the trenches, and serves as a line of contravallation, not only to hinder the sallies of the besieged, but likewise to secure the miners.

BRACES, in a military sense, are a kind of armour for the arm: they were formerly a part of a coat of mail. The straps which are worn across the shoulders, in order to suspend the breeches, are also called *Braces*.

BRACKETS, in gunnery, are the cheeks of the travelling carriage of guns and howitzers; they are made of strong wooden planks. This name is sometimes given to that part of a large mortar-bed, where the trunnions are placed, for the elevation of the mortar: they are sometimes made of wood, and more frequently of iron, of almost a semi-circular figure, well fastened with nails and strong plates.

BRACONS, *Fr.* in carpentry, small stakes of wood which are assembled with the cross-beams in the flood-gates of large sluices.

BRADS, a kind of nails used in building, which have no spreading heads, as other nails have. They are distinguished by ironmongers in the following manner: *joiners' brads, flooring brads, batten brads, bill brads or quarter heads, &c.*

BRAGUE, *Fr.* a kind of mortoise, or joining of pieces together.

BRANCARD *ou civière,* *Fr.* a handbarrow, or litter. This word literally means shaft. It is sometimes used as a machine to carry sick or wounded soldiers upon. The difference between *brancard* and *civière* is that the first is only a frame; and the second, being boarded inside, and raised round, it can be used for the conveyance of earth, sand, &c.

BRANCHE, *Fr.* branch. This word is peculiarly adapted to the covert-way, ditch, horn-works, and to every part of a fortification, and signifies the long sides of the different works which surround a fortified town or camp. See **MINE** and **GALLERY**.

BRANCHE d'un projet de guerre, *offensive ou défensive,* *Fr.* This term comprehends the various designs and

means which are embraced to carry on offensive or defensive measures.

BRANCHE de rivière, Fr. a branch of a river.

Branche also signifies, as with us, the various divisions of a department, as civil and military branches.

BRAND, an ancient term for a sword; so called by the Saxons.

BRANDINS, Fr. See **CHEVRONS**.

BRAQUEMART, Fr. a broad short sword, which is usually worn on the left side, and is properly a cutlass.

BRAQUER, Fr. to bring up any thing, so that it may be used immediately: hence *Braquer le canon*, to bring cannon to bear.

BRAS de mer, Fr. an arm of the sea.

BRASSER la matière, Fr. to mix the different ingredients which are required for the making of gunpowder or other combustible matter.

BRASSARTS, Fr. thin plates of beaten iron which were anciently used to cover the arms above the coat of mail.

BRAVOURE, Fr. According to the author of the French Military Dictionary, this word signifies any act of courage and valour by which the enterprising character of a man is distinguished.

BRAYETTE, Fr. See *TORRE corrompu*.

BRAZING, the soldering or joining two pieces of iron, by means of thin plates of brass melted between the two pieces to be joined.

BREACH, (*brèche*, Fr.) a gap, or opening, in any part of the works of a fortified place, made by the artillery or mines of the besiegers, preparatory to the making of an assault.

A practicable BREACH, (*brèche practicable*, Fr.) an opening made into the wall of a fortified place, through which soldiers may enter.

To repair a BREACH, to stop or fill up the gap with gabions, fascines, &c. and prevent the assault.

To fortify a BREACH, to render it inaccessible with chevaux-de-frize, crow's-feet, &c.

To make a lodgment in the BREACH. After the besieged are driven away, the besiegers secure themselves against any future attack in the breach.

To clear the BREACH, to remove the ruins, that it may be the better defended.

BREAK-off, a term used when cavalry is ordered to diminish its front—similar to file-off in the infantry. It is

also used to signify wheeling from line; as **BREAKING-off** to the left, for *wheeling* to the left.

To BREAK-off, (*rompre, discontinuer*, Fr.) also signifies to desist suddenly: as *to BREAK-off negotiations*.

To BREAK a horse, (*dresser un cheval*, Fr.) to render a horse manageable.

To BREAK-ground, (*ouvrir la tranchée*, Fr.) to make the first opening of the earth to form entrenchments, as at the commencement of a siege. It applies also to the striking of tents, and quitting the ground on which any troops had been encamped.

BREAST-PLATE, a piece of defensive armour worn on the breast.

BREAST-work. See **PARAPET**.

BRÈCHE, Fr. any opening which is made by force. It is also used among the French, to signify a successful charge upon a body of men.

BREECH of a gun, the end near the vent. See **CANNON**.

BRETESQUE, Fr. a public place in a town wherein proclamations are usually made; also a port or portal of defence in the rampart, or wall of a town.

BRETESSE, Fr. embattled; garnished or furnished with battlements.

BRETESSE, Fr. the battlement of a wall.

BREVET-rank is a rank in the army higher than that for which pay is received. It gives precedence (when corps are brigaded) according to the date of the brevet commission.

The BREVET, a term used to express general promotion, by which a given number of officers are raised from the rank of captain, upwards, without any additional pay, until they reach the rank of major-general; when, by a late regulation, they become entitled to a quarterly allowance.

BREVET, Fr. commission, appointment. All officers in the old French service, from a cornet or sub-lieutenant up to a marshal of France, were styled *officiers à brevet*.

BREVETS d'assurance ou de retenue d'argent, Fr. certain military and civil appointments granted by the old kings of France, which were distinguished from other places of trust, in as much as every successor was obliged to pay a certain sum of money to the heirs of the deceased, or for the discharge of his debts.

BRICKS, substances composed of an

earthy matter, which are hardened by art: they may be very well considered as artificial stone. Bricks are of very great antiquity, as appears from sacred history, the Tower of Babel being built with them; and it is said the remains are still visible. The Greeks and Romans, &c. generally used bricks in their buildings, witness the Pantheon, &c. In the east they baked their bricks in the sun. The Romans used them unburnt, having first left them to dry in the air for three, four, or five years.

The best bricks must not be made of any earth that is full of sand or gravel, nor of such as is gritty or stony; but of a greyish marle, or whitish chalky clay, or at least of reddish earth. But if there is a necessity to use that which is sandy, choice should be made of that which is tough and strong.

The best season for making bricks is the spring; because they will be subject to crack, and be full of chinks, if made in the summer: the loam should be well steeped or soaked, and wrought with water. They are shaped in a mould, and, after some drying in the sun or air, are burnt to a hardness. This is our manner of making bricks; but whether they were always made in this manner admits a doubt. We are not clear what was the use of straw in the bricks for building in Egypt, or why in some parts of Germany they mix saw-dust in their clay for bricks.

We are in general tied down by custom to one form, and one size; which is truly ridiculous: 8 or 9 inches in length, and 4 in breadth, is our general measure: but beyond doubt there might be other forms, and other sizes, introduced very advantageously. Bricks, without any particular form or shape, are used in the north of England to make up the public roads, &c. particularly those in the neighbourhood of Sheffield, Wakefield, and Leeds.

Compass BRICKS are of a circular form; their use is for steening of walls; we have also concave, and semi-cylindrical, used for different purposes.

Grey-Stocks are made of the purest earth, and better wrought: they are used in front in building, being the strongest and handsomest of this kind.

Place-BRICKS are made of the same earth, or worse, with a mixture of dirt from the streets, and being carelessly put out of hand, are therefore weaker

and more brittle, and are only used out of sight, and where little stress is laid on them.

Red-Stocks are made of a particular earth, well wrought, and little injured by mixture: they are used in fine work, and ornaments.

Hedgerley-BRICKS are made of a yellowish coloured loam, very hard to the touch, containing a great quantity of sand: their particular excellence is, that they will bear the greatest violence of fire without hurt.

BRIDGES, in military affairs, are of several sorts and denominations, viz.

Rush-BRIDGES are made of large bundles of rushes, bound fast together, over which planks are laid, and fastened: these are put in marshy places, for the army to pass over on any emergency.

Pendant or *hanging* BRIDGES are those not supported by posts, pillars, or buttments, but hung at large in the air, sustained only at the two ends.

Draw-BRIDGE, that which is fastened with hinges at one end only, so that the other may be drawn up (in which case the bridge is almost perpendicular) to hinder the passage of a ditch, &c.—There are others made to draw back and hinder the passage; and some that open in the middle; one half of which turns away on one side, and the other half to the other, and both again join at pleasure.

Flying-BRIDGE is generally made of two small bridges, laid one over the other, in such a manner that the uppermost stretches out by the help of certain cords running through pulleys placed along the sides of the upper bridge, which push it forwards, till the end of it joins the place it is intended to be fixed on. They are frequently used to surprise works, or out-posts, that have only narrow ditches.

BRIDGE of *boats* is a number of common boats joined parallel to each other, at the distance of 6 feet, till they reach across the river; which being covered with strong planks, and fastened with anchors and ropes, the troops march over.

BRIDGE of *communication* is that made over a river, by which two armies, or forts, which are separated by that river, have a free communication with one another.

Floating-BRIDGE, a bridge resembling

a work in fortification, which is called a redoubt; consisting of two boats covered with planks, that are solidly framed, so as to bear either horse or artillery. Bridges of this kind are frequently used.

Ponton-BRIDGE, a number of tin or copper boats placed at the distance of 7 or 8 feet asunder, each fastened with an anchor, or a strong rope that goes across the river, running through the rings of the pontoons. They are covered with baulks, and then with chesses or planks, for the army to walk over. See *PONTON*.

Cask, or Barrel BRIDGE, a number of empty casks that support baulks and planks, made as above into a bridge, where pontoons, &c. are wanting. Experience has taught us that 5 tuns of empty casks will support above water 9000 pounds: hence any calculation may be made.

BRIDGES are made of carpentry or masonry. The number of arches of a bridge is generally made odd; either that the middle of the stream or chief current may flow freely without interruption of a pier; or that the two halves of the bridge, by gradually rising from the ends to the middle, may there meet in the highest and largest arch; or else, for the sake of grace, that being open in the middle, the eye in observing it may look directly through, as we always expect to do in looking at it; and without which opening we generally feel a disappointment in viewing it.

If the bridge be equally high throughout, the arches, being all of a height, are made of one size, which causes a great saving of centering. If the bridge be higher in the middle than at the ends, let the arches decrease from the middle towards each end, but so that each half have the arches exactly alike, and that they decrease in span proportionally to their height, so as to be always the same kind of figure. Bridges should rather be of few and large arches, than of many and small ones, if the height and situation will allow of it.

Several bridges have lately been constructed of cast iron, as those of Sunderland, Colebrook Dale, &c.—A portable iron bridge is constructing under the immediate direction of Major By, of the corps of Royal Engineers, the principle

of which is highly spoken of; the model is at the Office of Ordnance, in Pall-Mall.—Bridges have sometimes been built in commemoration of great battles, such as those of Jena, Austerlitz, &c. in Paris.

Names of all the Terms peculiar to BRIDGES, &c.

Abutment. See *Butment*.

Arch, an opening of a bridge, through or under which the water, &c. passes, and which is supported by piers or butments. Arches are denominated circular, elliptical, cycloidal, catenarian, equilibrical, gothic, &c. according to their figure or curve.

Archivolt, the curve or line formed by the upper sides of the voussoirs or arch-stones. It is parallel to the intrados or under side of the arch, when the voussoirs are all of the same length; otherwise not.

By the archivolt is also sometimes understood the whole set of voussoirs.

Banquet, the raised foot-path at the sides of the bridge next the parapet.

Battardeau, or } a case of piling, &c.

Coffer-dam, } without a bottom, fixed in the river, water-tight, or nearly so, in order to lay the bottom dry for a space large enough to build the pier on. When it is fixed, its sides reaching above the level of the water, the water is pumped out of it, or drawn off by engines, &c. till the space be dry: and it is kept so by the same means, until the pier is built up in it, and then the materials of it are drawn up again. Battardeaux are made in various manners, either by a single inclosure, or by a double one, with clay or chalk rammed in between the two, to prevent the water from coming through the sides: and these inclosures are also made either with piles only, driven close by one another, and sometimes notched or dovetailed into each other; or with piles grooved in the sides, driven in at a distance from one another, and boards let down between them in the grooves.

Butments are the extremities of a bridge, by which it joins to, or abuts upon the land, or sides of the river, &c.

These must be made very secure, quite immovable, and more than barely sufficient to resist the drift of its adjacent arch; so that, if there are not rocks or very solid banks to raise them against, they must be well reinforced with proper walls or returns, &c.

Caisson, a kind of chest, or flat-hot-

toned boat, in which a pier is built, then sunk to the bed of the river, and the sides loosened and taken off from the bottom, by a contrivance for that purpose: the bottom of it being left under the pier as a foundation. It is evident therefore, that the bottoms of the caissons must be made very strong and fit for the foundations of the piers. The caisson is kept afloat till the pier be built to the height of low-water mark; and for that purpose its sides must either be made of more than that height at first, or else gradually raised to it, as it sinks by the weight of the work, so as always to keep its top above water: and therefore the sides must be made very strong, and kept asunder by cross timbers within, lest the great pressure of the ambient water crush the sides in, and so not only endanger the work, but also drown the workmen within it. The caisson is made of the shape of the pier, but some feet wider on every side, to make room for the men to work; the whole of the sides are of two pieces, both joined to the bottom quite round, and to each other at the salient angle, so as to be disengaged from the bottom, and from each other, when the pier is raised to the desired height, and sunk. It is also convenient to have a little sluice made in the bottom, occasionally to open and shut, to sink the caisson and pier sometimes by, before it be finished, to try if it bottom level and rightly; for by opening the sluice, the water will rush in and fill it to the height of the exterior water, and the weight of the work already built will sink it; then by shutting the sluice again, and pumping out the water, it will be made to float again, and the rest of the work may be completed. It must not however be sunk except when the sides are high enough to reach above the surface of the water, otherwise it cannot be raised and laid dry again.—Mr. Labeyle tells us, that the caissons in which he built Westminster bridge, contained above 150 load of fir timber, of 40 cubic feet each, and were of more tonnage or capacity than a 40-gun ship of war.

Centers are the timber frames erected in the spaces of the arches to turn them on, by building on them the voussoirs of the arch. As the center serves as a foundation for the arch to be built upon, when the arch is completed, that

foundation is struck from under it, to make way for the water and navigation, and then the arch will stand of itself from its curved figure. The center must be constructed of the exact figure of the intended arch, convex, as the arch is concave, to receive it on as a mould. If the form be circular, the curve is struck from a central point by a radius; if it be elliptical, it should be struck with a double chord, passing over two pins fixed in the focusses, as the mathematicians describe their ellipses: and not by striking different pieces or arcs of circles from several centers: for these will form no ellipsis at all, but an irregular mis-shapen curve made up of broken pieces of different circular arches; but if the arch be of any other form, the several abscissas and ordinates should be calculated; then their corresponding lengths, transferred to the centering, will give so many points of the curve; by bending a bow of pliable matter, according to those points, the curve may be drawn.

The centers are constructed of beams of timber, firmly pinned and bound together, into one entire compact frame, covered smooth at top with planks or boards to place the voussoirs on; the whole supported by off-sets in the sides of the piers, and by piles driven into the bed of the river, and capable of being raised and depressed by wedges contrived for that purpose, and for taking them down when the arch is completed. They should also be constructed of a strength more than sufficient to bear the weight of the arch.

In raking the center down, first lower it a little, all in a piece, by easing some of the wedges; then let it rest a few days to try if the arch makes any efforts to fall, or any joints open, or any stones crush or crack, &c. that the damage may be repaired before the center is entirely removed, which is not to be done till the arch ceases to make any visible efforts.

Chest. See *Caisson*.

Coffer-dam. See *Battardeau*.

Drift, } of an arch, is the push or
Shoot, or } force which it exerts in the
Thrust, } direction of the length of the bridge. This force arises from the perpendicular gravitation of the stones of the arch, which being kept from descending by the form of the arch, and the resistance of the pier, exert their

force in a lateral or horizontal direction. This force is computed in *Prop. 10*, of Mr. Hutton's *Principles of Bridges*, where the thickness of the pier is determined that is necessary to resist it, and is greater the lower the arch is, *ceteris paribus*.

Elevation, the orthographic projection of the front of a bridge, on the vertical plane, parallel to its length. This is necessary to shew the form and dimensions of the arches and other parts, as to height and breadth, and therefore has a plain scale annexed to it, to measure the parts by. It also shews the manner of working up and decorating the fronts of the bridge.

Extrados, the exterior curvature, or line of an arch. In the propositions of the second section of Professor Hutton's *Principles of Bridges*, it is the outer or upper line of the wall above the arch, but it often means only the upper or exterior curve of the voussoirs.

Foundations, the bottoms of the piers, &c. or the bases on which they are built. These bottoms are always to be made with projections, greater or less, according to the spaces on which they are built. Agreeable to the nature of the ground, depth and velocity of water, &c. the foundations are laid, and the piers built after different manners, either in caissons, in battardeaus, on stilts with starlings, &c. for the particular method of doing which, see each under its respective term.

The most obvious and simple method of laying the foundations and raising the piers up to the water-mark, is to turn the river out of its course above the place of the bridge, into a new channel cut for it near the place where it makes an elbow or turn; then the piers are built on dry ground, and the water turned into its old course again; the new one being securely banked up. This is certainly the best method, when the new channel can be easily and conveniently made. It is, however, seldom or never the case.

Another method is, to lay only the space of each pier dry till it be built, by surrounding it with piles and planks driven down into the bed of the river, so close together as to exclude the water from coming in; then the water is pumped out of the enclosed space, the pier built in it, and lastly the piles and planks drawn up. This is coffer-dam

work, but evidently cannot be practised if the bottom be of a loose consistence, admitting the water to ooze and spring up through it.

When neither the whole nor part of the river can be easily laid dry as above, other methods are to be used; such as to build either on caissons or on stilts, both which methods are described under their proper words; or yet by another method, which hath, though seldom, been sometimes used, without laying the bottom dry, and which is thus: the pier is built upon strong rafts or gratings of timber, well bound together, and buoyed up on the surface of the water by strong cables, fixed to the other floats or machines till the pier is built; the whole is then gently let-down to the bottom, which must be made level for the purpose: but of these methods, that of building in caissons is best.

But before the pier can be built in any manner, the ground at the bottom must be well secured, and made quite good and safe, if it be not so naturally. The space must be bored into, to try the consistence of the ground; and if a good bottom of stone, or firm gravel, clay, &c. be met with, within a moderate depth below the bed of the river, the loose sand, &c. must be removed and digged out to it, and the foundation laid on the firm bottom on a strong grating or base of timber made much broader every way than the pier, that there may be the greater base to press on, to prevent its being sunk. But if a solid bottom cannot be found at a convenient depth to dig to, the space must then be driven full of strong piles, whose tops must be sawed off level some feet below the bed of the water, the sand having been previously dug out for that purpose; and then the foundation on; a grating of timber laid on their tops as before: or when the bottom is not good, if it be made level, and a strong grating of timber, 2, 3, or 4 times as large as the base of the pier be made, it will form a good base to build on, its great size preventing it from sinking. In driving the piles, begin at the middle, proceed outwards all the way to the headers or margin; the reason of which is, that if the outer ones were driven first, the earth of the inner space would be thereby so jammed together, as not to allow the inner piles to be driven: and besides the piles immediately under

the piers, it is also very prudent to drive in a single, double, or triple row of them round, and close to the frame of the foundation, cutting them off a little above it, to secure it from slipping aside out of its place: and to bind the ground under the pier firmer, for, as the safety of the whole bridge depends on the foundation, too much care cannot be used to have the bottom made quite secure.

Jettée, the border made round the stilts under a pier. See STARLING.

Impost is the part of the pier on which the feet of the arches stand, or from which they spring.

Key-stone, the middle voussoir, or the arch-stone in the top or immediately over the center of the arch. The length of the key-stone, or thickness of the archivolt at top, is allowed to be about 1-15th or 1-16th of the span by the best architects.

Orthography, the elevation of a bridge or front view, as seen at an infinite distance.

Parapet, the breast-wall made on the top of a bridge to prevent passengers from falling over. In good bridges, to build the parapet but a little part of its height close or solid, and upon that a balustrade to above a man's height, has an elegant effect.

Piers, the walls built for the support of the arches, and from which they spring as their bases. They should be built of large blocks of stone, solid throughout, and cramped together with iron, which will make the whole as one solid stone. Their faces or ends, from the base up to high-water mark, should project sharp out with a salient angle, to divide the stream: or perhaps the bottom of the pier should be built flat or square up to about half the height of low-water mark, to allow a lodgment against it for the sand and mud, to go over the foundation; lest, by being kept bare, the water should in time undermine, and so ruin or injure it. The best form of the projection for dividing the stream, is the triangle; and the longer it is, or the more acute the salient angle, the better it will divide it, and the less will the force of the water be against the pier; but it may be sufficient to make that angle a right one, as it will make the work stronger; and in that case the perpendicular projection will be equal to half the breadth or

thickness of the pier. In rivers, on which large heavy craft navigate and pass the arches, it may, perhaps, be better to make the ends semicircular: for, although it does not divide the water so well as the triangle, it will both better turn off and bear the shock of the craft.

The thickness of the piers should be such as will make them of weight, or strength, sufficient to support their interjacent arch, independent of any other arches; and then, if the middle of the pier be run up to its full height, the centering may be struck to be used in another arch before the haunches are filled up. The whole theory of the piers may be seen in the third section of Professor Hutton's *Principles of Bridges*.

They should be made with a broad bottom on the foundation, and gradually diminishing in thickness by off-sets up to lower water-mark.

Piles are timbers driven into the bed of the river for various purposes, and are either round, square, or flat like planks. They may be of any wood which will not rot under water; but oak and fir are mostly used, especially the latter, on account of its length, straightness, and cheapness. They are shod with a pointed iron at the bottom, the better to penetrate into the ground, and are bound with a strong iron-band or ring at top, to prevent them from being split by the violent strokes of the ram by which they are driven down.

Piles are either used to build the foundations on, or they are driven about the pier as a border of defence, or to support the centers on; and in this case, when the centering is removed, they must either be drawn up, or sawed off very low under water; but it is perhaps better to saw them off and leave them sticking in the bottom, lest the drawing of them out should loosen the ground about the foundation of the pier.—Those to build on, are either such as are cut off by the bottom of the water, or rather a few feet within the bed of the river: or else such as are cut off at low water mark, and then they are called stilts. Those to form borders of defence are rows driven in close by the frame of a foundation to keep it firm, or else they are to form a case or jettée about the stilts, to keep the stones within it, that are thrown in to fill it up: in this case the piles are grooved, driven at a little distance from each other, and *plank piles*

let into the grooves between them, and driven down also, till the whole space is surrounded. Besides using this for stilts, it is sometimes necessary to surround a stone pier with a starling or jettée, and fill it up with stones to secure an injured pier from being still more damaged, and the whole bridge ruined. The piles to support the centers may also serve as a border of piling to secure the foundation, cutting them off low enough after the center is removed.

Pile-driver, an engine for driving down the piles. It consists of a large ram or iron sliding perpendicularly down between two guide posts; which being lifted up to the top of them, and there let fall from a great height, comes down upon the top of the pile with a violent blow. It is worked either with men or horses, and either with or without wheel work. That which was used at the building of Westminster bridge, is perhaps the best ever invented.

Pitch of an arch, the perpendicular height from the spring or impost to the key-stone.

Plan, of any part, as of the foundations, or piers, or superstructure, is the orthographic projection of it on a plane parallel to the horizon.

Push, of an arch. See *Drift*.

Salient angle, of a pier, the projection of the end against the stream, to divide itself. The right-lined angle best divides the stream, and the more acute, the better for that purpose; but the right angle is generally used, as making the best masonry. A semicircular end, though it does not divide the stream so well, is sometimes preferable in large navigable rivers, as it carries the craft off, or bears their shocks better.

Shoot, of an arch. See *Drift*.

Springs are the first or lowest stones of an arch, being those at its feet, and bearing immediately on the impost.

Starlings, or *Jettées*, a kind of case made about a pier of stilts, &c. to secure it, and is particularly described under the next word, *Stilts*.

Stilts, a set of piles driven into the space intended for the pier, whose tops being sawed level off, above low-water mark, the pier is then raised on them.

Thrust. See *Drift*.

Voussoirs, the stones which immediately form the arch, their undersides constituting the intrados. The middle

one, or key-stone, should be about 1-15th or 1-16th of the span, as has been observed; and the rest should increase in size all the way down to the impost; the more they increase the better, as they will the better bear the great weight which rests upon them without being crushed; and also will bind the firmer together. Their joints should also be cut perpendicular to the curve of the intrados. For more information, see Professor Hutton's *Principles of Bridges*, Newcastle, 1772, in 8vo.

BRIDGE, in gunnery, the two pieces of timber which go between the two transoms of a gun-carriage, on which the coils are placed, for elevating the piece. See **CARRIAGE**.

BRIDLE-arm Protect, a guard used by the cavalry, which consists in having the sword-hilt above the helmet; the blade crossing the back of the head, the point of the left shoulder, and the bridle-arm; its edge directed to the left, and turned a little upwards in order to bring the mounting in a proper direction to protect the hand.

BRIDON or **BRIDOX**, the snaffle and rein of a military bridle; which acts independent of the bit and curb at the pleasure of the rider.

BRIGADE, in military affairs, implies a party or division of a body of soldiers, whether horse, foot, or artillery, under the command of a brigadier. There are, properly speaking, three sorts of brigades, viz. the brigade of an army, the brigade of a troop of horse, and the brigade of artillery. A brigade of the army is either foot or dragoons, whose exact number is not fixed, but generally consists of 3 regiments, or 6 battalions: a brigade of horse may consist of 8, 10, or 12 squadrons; and that of artillery, of five guns and one howitzer, with their appurtenances. The eldest brigade takes the right of the first line, the second of the second line, and the rest in order; the youngest always possessing the center. The cavalry and artillery observe the same order.

BRIGADE Major, an officer appointed by the brigadier, to assist him in the management of his brigade. The most experienced captains are generally nominated to this post. According to the regulations published by authority, a brigade-major is attached to the brigade, and not to any particular brigadier-general, as the aide-de-camp is.

Brigade-majors must be taken from the regular forces, and must not be effective field officers. If they are subalterns, they take rank in the brigade or garrison, in which they are serving, as junior captains.

BRIGADE-Major-General. The military commands in Great-Britain being divided into districts, an office has been established for the sole transaction of brigade duties. Through this office all orders from the commander-in-chief to the generals of districts relative to corps of officers, &c. must pass. This appointment is now absorbed in that of assistant adjutant-general.

BRIGADE of Engineers. A brigade of engineers may consist of only two or three officers, who are attached to an army.

To BRIGADE, (*embrigader*, Fr.) to make any given number of regiments, or battalions, act together for the purposes of service.

BRIGADE, Fr. according to the French, signifies the re-union of several squadrons or battalions, under the command of one colonel, who has also the rank of brigadier-general in the army.

BRIGADE de boulangers, Fr. It was usual in the old French service to brigade the bakers belonging to the army. Each brigade consisted of one master and three boys.

Irish BRIGADE, (*la brigade Irlandaise*, Fr.) Irish regiments which once served in France, Spain, and Naples.

BRIGADIER, a military officer, whose rank is next above that of a colonel, appointed to command a corps, consisting of several battalions or regiments, called a brigade. This title in England is suppressed in time of peace, but revived in actual service in the field. Every brigadier marches at the head of his brigade upon duty.

BRIGADIER, (*Brigadier*, Fr.) a certain rank which is given to a mounted soldier. He is next to the quarter-master.

BRIGADIER des armées, Fr. This corresponds with our term Brigadier-General. A brigadier-general ranks above a colonel, and has the command of a brigade of cavalry, dragoons, or infantry.

BRIGADIER d'équipage, Fr. a sort of head commissary or wagon-master-general.

BRIGAND, Fr. a free-booter; every soldier, who, contrary to orders and the

acknowledged usages of war, commits acts of plunder.

BRIGANDINE or **BRIGANTINE**, in ancient military history, a coat of mail, or kind of defensive armour, consisting of tin; so called from the troops by which it was first worn, who were called Brigands, and were a kind of light-armed irregular foot, much addicted to plunder. The brigandine is frequently confounded with the jack; sometimes with the habergeon, or coat of plate mail.

BRIGUE, Fr. a plot, or conspiracy which is formed against a commanding officer, to deprive him of his situation.

BRINGER, a term used in the recruiting branch of the British service, to signify a person who produces a man or boy, within the regulated age, that is willing to enlist. He is allowed one guinea for his trouble.

BRINGERS-up, an antiquated military expression, to signify the whole rear rank of a battalion drawn up, as being the hindmost men of every file.

BRIN d'estoc, Fr. quarter-staff.

Bois de BRIN, Fr. solid timber.

BRINS d'est, Fr. large sticks or poles resembling small pickets, with iron at each end. They are used to cross ditches, particularly in Flanders.

BRISER les fers, Fr. to break the fetters; to obtain liberty.

BRISE, Fr. in sluices, a beam that is placed, swiye fashion, on the top of a large pile, upon which it turns.

BRISE-cou, Fr. a break-neck place; as a defect in a staircase, &c.

BRISE-glace, Fr. starlings; literally an ice-breaker, after a thaw.

Lit BRISÉ, Fr. a folding bed.

BRISURE, in fortification, is a line of 4 or 5 fathoms, which is allowed to the curtain and orillon, to make the hollow tower, or to cover the concealed flank.

BROADSIDE, in a sea-fight, implies the discharge of all the artillery on one side of a ship of war.

BROAD-SWORD, a sword with a broad blade, chiefly designed for cutting; not at present much used in the British service, except by some few regiments of cavalry and Highland infantry. Among the cavalry, this weapon has in general given place to the sabre.

The principal guards with the broad sword are:

The *inside guard*, (similar to *carte* in fencing,) which is formed by directing

your point in a line about 6 inches higher than your antagonist's left eye, the hilt opposite your own breast, the finger nails turned upwards, and the edge of the sword to the left.

The *outside guard*, (resembling tierce,) in which by a turn of the wrist from the former position, the point of the sword is directed above your antagonist's right eye, and the edge turned to the right, to protect the outside of your body from the attack.

The *medium guard*, which is a position between the inside and outside guard, seldom used, as it affords very little protection.

The *hanging guard*, (similar to prime and seconde,) in which the hilt of your sword is raised high enough to view your opponent under the shell, and the point directed towards his body.

The *St. George's guard*, which protects the head, and differs from the last described, only in raising the hand somewhat higher, and bringing the point nearer to yourself.

The swords worn by officers of the infantry being constructed either for cutting or thrusting, it is necessary for gentlemen to be acquainted both with the method of attacking and defending with the broad-sword and with the rapier. Those who have not the opportunity of regular lessons from a professed teacher, may obtain much useful information from a work entitled the Art of Defence on Foot, with the Broad-Sword, &c. in which the spadron or cut and thrust sword play is reduced to a regular system.

BROCHOIR, *Fr.* a smith's shoeing hammer.

BRODEQUINS, *Fr.* buskins or half boots. They are generally worn by light armed troops.

BROKEN-down. A horse is said to be broken down, when he is shook in the shoulders, hurt in the loins, or lame about the feet from hard riding or working. The malady generally lies in the feet or back sinews.

BROKEN-WINDED, (*poussif*, *Fr.*) subject to a difficulty in breathing.

BROKERS, persons who act between two trafficking parties.

ARMY-BROKERS, persons who formerly acted between army agents and individuals wishing to purchase, sell, or exchange commissions. In 1806, a clause was introduced into the Mutiny Bill to prevent this species of traffic.

BROND. See **BRAND**.

BRONZE, *Fr.* bronze; brass.

BROTHER - SOLDIERS, (*Frères d'armes*, *Fr.*) an affectionate and endearing term which is used among military men, from the commander-in-chief of an army to the lowest drum-boy inclusive. Soldiers ought, in fact, to constitute a family within themselves. The cause they have to defend, and the dangers they must encounter, are so many motives for mutual attachment, especially in a foreign country.

BROUETTE, *Fr.* a wheelbarrow.

BROUILLON, *Fr.* a rough copy; day book.

BROWNBILL, the ancient weapon of the English foot, resembling a *battle-axe*.

BRUGNE. The hauberk was sometimes so called.

BRUIOT, *Fr.* a fire-ship.

BRUNT, (*choc*, *Fr.*) the principal shock of the enemy in action.

BRUSQUER une attaque, *Fr.* to open the trenches in the nearest approaches to a place, completing the works from the front towards the rear. This undertaking is extremely hazardous, unless the object invested, or attacked, be ill-garrisoned, have a narrow front to besiege, or the ditches be dry, &c.

BRUSQUER l'affaire, *Fr.* to attack suddenly, and without attending to any regular rule of military manœuvre.

BRUSQUER une place, *Fr.* to storm a place.

BRUT, *Fr.* any thing in the rough; as stones from the quarry.

BUCCANEER, **BOUCANIER**, (*flibustier*, *Fr.*) in military history, a name frequently applied to those famous adventurers, consisting of pirates, &c. from all the maritime nations of Europe, who formerly joined together, and made war upon the Spaniards in America.

BUCCINATEUR, *Fr.* a trumpeter.

BUCCINE, *Fr.* a cornet.

BUCKLER, a piece of defensive armour used by the ancients. It was always worn on the left arm, and composed of wicker-work, of the lightest sort, but most commonly of hides, fortified with plates of brass or other metals. The shape of it varied considerably, being sometimes round, sometimes oval, and often nearly square.

BUDGE-Barrels. See **BARREL**.

BUFF-Leather, in military accoutrements, is a sort of leather prepared from the buffalo, which, dressed with

oil, after the manner of a shamoy, makes what is generally called buff-skin.

BUGLE-HORN, the old Saxon horn; it is now used by all the light infantry in the British service, and also by the horse artillery, and some regiments of light cavalry.

BUGLER, the person who blows the bugle-horn.

BUGLES, BEUGLES, BIBLES, Fr. were engines used in former times for throwing large stones.

BUILDING, (*édifice*, Fr.) a fabric erected by art.

Military BUILDINGS are of various sorts, viz. powder-magazines, bridges, gates, barracks, hospitals, store-houses, guard-rooms. &c.

Regular BUILDING is that whose plan is square, the opposite sides equal, and all the parts disposed with symmetry.

Irregular BUILDING, that whose plan is not contained within equal or parallel lines, and whose parts are not relative to one another in the elevation.

Insulated BUILDING, that which is not contiguous to any other, but is encompassed with streets, open squares, &c. or any building which stands in a river, on a rock surrounded by the sea, marsh, &c.

Engaged BUILDING, one surrounded with other buildings, having no front to any street or public place, nor any communication without, but by a common passage.

Interred or sunk BUILDING, one whose area is below the surface of the place where it stands, and of which the lowest courses of stone are concealed.

In *building* there are three things to be considered, viz. commodity or convenience; secondly, firmness or stability; thirdly, delight.

To accomplish which ends, Sir Henry Wotton considers the whole subject under two heads, namely, the seat or situation, and the work.

1. As for the seat, either that of the whole is to be considered, or that of its parts.

2. As to the situation, regard is to be had to the quality, temperature, and salubrity, or healthiness of the air; that it be a good healthy air, not subject to foggy noisomeness from adjacent fens or marshes; also free from noxious mineral exhalations; nor should the place want the sweet influence of the sun-

beams, nor be wholly destitute of the breezes of wind, that will fan and purge the air; the want of which would render it like a stagnated pool, and would be very unhealthy.

In the foundations of *buildings*, Vitruvius orders the ground to be dug up, to examine its firmness; that an apparent solidity is not to be trusted, unless the whole mould cut through be sound and solid: it is true, he does not say to what depth it should be dug; but Palladio determines it to be a sixth part of the height of the building.

The great laws of walling are:—
1. That the walls stand perpendicular on the ground-work, the right angle being the foundation of all stability. 2. That the largest and heaviest materials be the lowest, as more proper to sustain others than to be sustained themselves. 3. That the work diminish in thickness, as it rises, both for the ease of weight, and to lessen the expense. 4. That certain courses, or lodges, of more strength than the rest, be interlaid, like bones, to sustain the wall from total ruin, if some of the under parts chance to decay. 5. Lastly, that the angles be firmly bound, they being the nerves of the whole fabric. These are sometimes fortified on each side the corners, even in brick buildings, with square stones; which add both beauty and strength to the edifice.

BUNDES, *Fr.* a shield used by the Turks and Tartars when they fight with sabres.

BULLETIN, *Fr.* any official account which is given of public transactions. See **GAZETTE**.

BULLETIN also signifies any account which is given of the state of a person's health, &c. Likewise a specific account of military transactions; hence *Bulletin de l'armée*.

BULLETS, (*balles, boulets*, Fr.) are leaden balls, wherewith all kinds of small fire-arms are loaded. The diameter of any bullet is found, by dividing 1.6706 by the cube root of the number, which shews how many of them make a pound; or it may be done in a shorter way. From the logarithm .2228756 of 1.6706 subtract continually the third part of the logarithm of the number of bullets in the pound, and the difference will be the logarithm of the diameter required.

Thus the diameter of a bullet, where-

of 12 weigh a pound, is found by subtracting .3597270, a third part of the logarithm of 12, from the given logarithm .2228756, or, when the logarithm is less than the former, an unit must be added, so as to have 1.2228756, and the difference .8631486 will be the logarithm of the diameter sought, which is .7297 inches; observing that the number found will always be a decimal, when the logarithm, which is to be subtracted is greater than that of one pound; because the divisor is greater than the dividend in this case.

Hence, from the specific gravity of lead, the diameter of any bullet may be found from its given weight: for, since a cube foot weighs 11325 ounces, and 678 is to 355 as the cube 1728 of a foot, or 12 inches, is the content of the sphere, which therefore is 5929.7 ounces; and since spheres are as the cubes of their diameters; the weight 5929.7 is to 16 ounces, or a pound, as the cube 1728 is to the cube of the diameter of a sphere which weighs a pound; which cube therefore is 4.66263, and its root 1.6706 inches, the diameter sought.

The diameter of musket bullets differs but 1-50th part from that of the musket bore; for if the shot but just rolls into the barrel, it is sufficient. Government allows 11 bullets in the pound for the proof of muskets, and 14 in the pound, or 29 in two pounds, for service; 17 for the proof of carbines, and 20 for service; and 28 in the pound for the proof of pistols, and 34 for service.

BULLET, ball or shot, have various denominations according to the use that is made of them, viz.

Hollow BULLETS, or shells, of a cylindrical shape. These have an opening and a fuze at the end, by which fire is communicated to the combustibles within, and an explosion takes place, similar to that occasioned by the blowing up of a mine.

Chain BULLETS. See *Chain BALLS*.

Branch BULLETS, two balls joined together by an iron bar.

Two-headed BULLETS, sometimes called angles, are two halves of a bullet which are kept together by means of a bar or chain.

BULLOCK-Serjeant, Ind. a non-commissioned officer in India who has the care and superintendance of the bullocks on service.

BULWARK, the ancient name for bastion or rampart.

BUNGALOW, Ind. a house with a thatched roof. The rent of a bungalow is from forty to fifty rupees per month. But those persons, who have ready money, generally build themselves, and when they leave the place, especially if in the military service, they either sell their bungalows, or let them. The rent is sometimes as high as sixty or eighty rupees; and the expense of building is from 1000 to 1200 rupees.

BURDEN, } in a general sense im-

BURTHEN, } plies a load or weight, supposed to be as much as a man, horse, &c. can well carry. A sound healthful man can raise a weight equal to his own, can also draw and carry 50lb. a moderate distance. An able horse can draw 350lb. though in length of time 300 is sufficient. Hence all artillery calculations are made. One horse will draw as much as 7 men, and 7 oxen will draw as much as 11 or 12 horses. Burthen, in a figurative sense, means impost, tax, &c.

Beast of BURDEN, (*bête de somme*, Fr.) an animal that is used to carry loads of every kind.

BUREAU, Fr. office.

BUREAU de la Guerre, Fr. War-Office.

BUREAU du Timbre, Fr. Stamp-Office.

BURGANET or *BURGONET*, Fr. a kind of helmet used by the French.

BURIALS, as practised by the military, are as follow, viz. The funeral of a field-marshal shall be saluted with 3 rounds of 15 pieces of cannon, attended by 6 battalions, and 8 squadrons.

That of a general, with 3 rounds of 11 pieces of cannon, 4 battalions, and 6 squadrons.

That of a lieutenant-general, with 3 rounds of 9 pieces of canon, 3 battalions, and 4 squadrons.

That of a major-general, with 3 rounds of 7 pieces of cannon, 2 battalions, and 3 squadrons.

That of a brigadier-general, 3 rounds of 5 pieces of cannon, 1 battalion, and 2 squadrons.

That of a colonel, by his own battalion, or an equal number by detachment, with 3 rounds of small arms.

That of a lieutenant-colonel, by 300 men and officers, with 3 rounds of small arms.

That of a major, by 200 men and officers, with 3 rounds of small arms.

That of a captain, by his own company, or 70 rank and file, with 3 rounds of small arms.

That of a lieutenant, by 1 lieutenant, 1 serjeant, 1 drummer, 1 fifer, and 36 rank and file, with 3 rounds.

That of an ensign, by an ensign, a serjeant, and drummer, and 27 rank and file, with 3 rounds.

That of an adjutant, surgeon, and quarter-master, the same party as an ensign.

That of a serjeant, by a serjeant, and 19 rank and file, with 3 rounds of small arms.

That of a corporal, musician, private man, drummer, and fife, by 1 serjeant, and 13 rank and file, with 3 rounds of small arms.

All officers, attending the funerals of even their nearest relations, shall notwithstanding wear their regimentals, and only have a black crape round their left arm.

The pall to be supported by officers of the same rank with that of the deceased: if the number cannot be had, officers next in seniority are to supply their place.

The order of march to be observed in military funerals is reversed with respect to rank. For instance, if an officer is buried in a garrison town or from a camp, it is customary for the officers belonging to other corps to pay his remains the compliment of attendance. In which case the youngest ensign marches at the head immediately after the pall, and the general, if there be one, in the rear of the commissioned officers, who take their posts in reversed order according to seniority. The battalion, troop, or company, follow the same rule.

The expense for a regimental burial is to be charged against the captains of the respective troops or companies.

BURR, in gunnery, a round iron ring, which serves to rivet the end of the bolt, so as to form a round head; also a broad iron ring for a lance.

BURREL-shot, small bullets, nails and stones discharged from any piece of ordnance.

BUSC d'écluse, Fr. the salient point which is made by two flood-gates that are shut; presenting an angle towards the body of water which it sustains.

BUTER, Fr. to support a wall, or to prevent it from bellying out, by means of an arch or buttress.

BUTIÈRE, Fr. a species of large fire-arm, which was formerly used among the French to fire point-blank.

BUTIN, Fr. booty or pillage.

BUTMENTS. See BRIDGES.

BUTT, in gunnery, is a solid earthen parapet, to fire against in the proving of guns, or in practice.

BUTT or **BUTT-END**, (*couche*, Fr.) that extremity of a firelock which rests against the shoulder when it is brought up to a position of levelling, or when it rests upon the hand.

BUTTON, in gunnery, a part of the cascable, in either a gun or howitzer, and in the hind part of the piece, made round in the form of a ball. See CANNON.

BUTTRESS. See COUNTERFORT.

BUZE, a wooden, or leaden pipe, to convey the air into mines.

BY-PROFITS, (*tour du bâton*, Fr.) certain advantages or emoluments which are gained by individuals over and above their regular salaries or wages. They are also called *By-gains*.

C

CABANE, Fr. a flat-bottomed boat with a deck, used on the river Loire for the accommodation of passengers.

CABAS, Fr. a basket made of rushes, which is used in Languedoc and Roussillon, for the purpose of conveying stores and ammunition.

CABASSET, Fr. a piece of armour which was formerly used by foot-soldiers to cover the head. A slight kind of helmet.

CABESTAN, Fr. See CAPSTAN.

CABINET, (*cabinet*, Fr.) a private room in which consultations are held.

CABINET Council, a council held with privacy and unbounded confidence.—Hence *Cabinet minister*.

CABLE or **CHABLE**, Fr. a large rope which is used in the French artillery. This word is likewise used, in French, to signify all kinds of ropes that are neces-

sary in dragging, or raising loads, or things of burthen.

CABOCHE, *Fr.* a long-headed nail.

CABOOSE, *Fr.* the cooking-place of a ship.

CABOTAGE, *Fr.* coasting.

CABOTER, *Fr.* to coast.

CABRER, *Fr.* to rear as a horse does when he is improperly checked, &c.

CABRIOLET, *Fr.* a light low chaise.

CABROUET, *Fr.* a cart.

CABROUETIER, *Fr.* a carman or carter.

CACADE, *Fr.* a word used among the French to signify an unlucky enterprise in war, occasioned by an ill-concerted measure for the prosecution of it, and by ignorance or want of courage in its execution.

CADENCE, in tactics, implies a very regular and uniform method of marching: it may not be improperly called mathematical marching; for after the length of a step is determined, the time and distance may be found.

CADENCE or *Cadency*, in cavalry, is an equal measure or proportion, which a horse observes in all his motions.

CADET, among the military, is a young gentleman, who applies himself to the study of fortification and gunnery, &c. and who sometimes serves in the army, with or without pay, till a vacancy happens for his promotion. There is a company of gentlemen cadets maintained at Woolwich, at the King's expense, where they are taught all the sciences necessary to form a complete officer. Their number has lately been increased, and commissions are given to them when qualified. The proper signification of the word is, younger brother. See ACADEMY.

GENTLEMAN-Cadet, a term applied to every youth belonging to the company of cadets, consisting of one hundred individuals, who are educated at the Royal Military College at Great Marlow, in the county of Bucks, and also to the company of cadets at Woolwich.—For particulars, see vol. i. p. 116, *Regimental Companion*.

CADET, *Fr.* differs in its signification from the term as it is used in our language. A cadet in the French service did not receive any pay, but entered as a volunteer in a troop or company, for the specific purpose of becoming master of military tactics.

CADET, *Fr.* likewise means any officer that is junior to another.

CADRE, *Fr.* literary a frame; this word is used in France to denote the proposed establishment of a regiment.

En-CADRER, *Fr.* to place an officer or soldier in some particular regiment.

CEMENT, } among engineers, a
CEMENT, } strong sort of mortar, used to bind bricks or stones together for some kind of moulding; or in cementing a block of bricks for the carrying of capitals, scrolls, or the like.—There are two sorts, *i. e.* hot cement, which is the most common, made of resin, bees-wax, brick-dust, and chalk, boiled together; the bricks to be cemented with this mixture must be made hot in the fire, and rubbed to and fro after the cement is spread, in the same manner as joiners do when they glue two boards together. Cold cement, made of Cheshire cheese, milk, quick lime, and whites of eggs. This cement is less used than the former, and is accounted a secret known but to very few bricklayers.

CÆSTUS, in military antiquity, was a large gauntlet, composed of raw hides, used by pugilists at the public games.

CAFFTAN, the name of a vest worn among the Turks.

CAGE, a machine which was formerly used in this island for the security of a prisoner of war. Rymer gives a singular account respecting the imprisonment of the Countess of Baghun, or Buchan, a Scotch prisoner, in the reign of Edward I. A. D. 1306.—The sister of Robert Bruce was prisoner at the same time. This cage was built of lattice-work, constructed with stout posts and bars, and well strengthened with iron. It was so contrived, that the prisoner might have the convenience of a privy, and it was placed in one of the turrets of the castle of Berwick upon Tweed. So much for the chivalry of those times! and the homage said to have been paid to the fair sex!

CAGE de la bascule, *Fr.* a space into which one part of the draw-bridge falls, whilst the other rises and conceals the gate.

CAHUTE, *Fr.* a small hut or cabin which soldiers make to defend them against the inclemency of the weather.

CAIC, CAIQUE, *Fr.* a galley boat.

CAILLOUX, *Fr.* small pebbles used in paving aqueducts, grottoes, &c.

CAIMACAN, an officer among the Turks, nearly answering to our lieutenant.

CAISSE, *Fr.* a sort of wooden box in which the necessary charge for the explosion of a mine is deposited.

CAISSE, *Fr.* the military chest, containing the necessary funds for the payment of a troop or company, regiment or army.

CAISSE also signifies a drum.

CAISSIER, *Fr.* a treasurer; any person entrusted with regimental monies; a paymaster.

CAISSON, (*caisson*, *Fr.*) a wooden frame or chest, made square, the side planks about two inches thick: it may be made to contain from 4 to 20 loaded shells, according to the execution they are to do, or as the ground is firmer or looser. The sides must be high enough, that when the cover is nailed on, the fuzes may not be damaged. *Caissons* are buried under ground at the depth of 5 or 6 feet, under some work the enemy intends to possess himself of; and when he becomes master of it, fire is put to the train conveyed through a pipe, which inflames the shells, and blows up the assailants. Sometimes a quantity of loose powder is put into the chest, on which the shells are placed, sufficient to put them in motion, and raise them above ground; at the same time that the blast of powder sets fire to the fuze in the shells, which must be calculated to burn from 1 to $2\frac{1}{2}$ seconds. When no powder is put under the shells, a small quantity of mealed powder must be strewed over them, having a communication with the saucisson, in order to convey the fire to the fuzes.

CAISSON signifies also a covered wagon, to carry bread or ammunition.

CALATRAVA, a Spanish military order, so called from a fort of that name.

The knights of Calatrava bear a cross; gules, fleur-de-lis with green, &c.

CALCULATION, in military affairs, is the art of computing the amplitudes of shells, time of flight, projectile curve, velocity of shots, charges of mines, &c. together with the necessary tables for practice.

Military CALCULATION, (*calcul militaire*, *Fr.*) a consideration of things and events in a military manner; a view of

all the geographical bearings, political relations, and effective forces for or against a country, &c.

CALE, *Fr.* creek.

La CALE, *Fr.* a punishment among the French, which is inflicted when one soldier, or sailor, wounds another maliciously. The culprit is tied to the yard-arm, and suddenly plunged into the sea, and hauled up again. It corresponds, in some degree, with our keel-hauling.

CALE, *ou fond de cale*, *Fr.* ship's hold.

CALER, *Fr.* in architecture, to place a piece of thin wood under a stone, in order to determine the width of the seam or joint that is to be filled.

CALFATER, *Fr.* to calk.

CALIBER, in gunnery, signifies the same as the bore or opening; and the diameter of the bore is called the diameter of its caliber. This expression regards all pieces of artillery.

CALIBER-compasses, } the name of a
CALLIPER-compasses, } particular instrument used by gunners, for measuring the diameters of shot, shells, &c. as also the cylinders of cannon, mortars, and howitzers. They resemble other compasses, except in their legs, which are arched, in order that the points may touch the extremities of the arch. To find the true diameter of a circle, they have a quadrant fastened to one leg, and passing through the other, marked with inches and parts, to express the diameter required: the length of each ruler or plate is usually between the limits of 6 inches and a foot. On these rulers are a variety of scales, tables, proportions, &c. such as are esteemed useful to be known by gunners. The following articles are on the completest gunners-callipers, viz. 1. The measure of convex diameters in inches. 2. Of concave ditto. 3. The weight of iron shot from given diameters. 4. The weight of iron shot from given gun bores. 5. The degrees of a semicircle. 6. The proportion of troy and avoirdupois weight. 7. The proportion of English and French feet and pounds. 8. Factors used in circular and spherical figures. 9. Tables of the specific gravity and weight of bodies. 10. Tables of the quantity of powder necessary for proof and service of brass and iron guns. 11. Rules for computing the number of shot or shells, in a finished pile. 12. Rule concerning the fall of heavy bodies. 13. Rules for raising water. 14. Rules for firing

artillery and mortars. 15. A line of inches. 16. Logarithmic scales of numbers, sines, versed sines and tangents. 17. A sectoral line of equal parts, or the line of lines. 18. A sectoral line of plans, and superficies. 19. A sectoral line of solids.

CALIBRE, Fr. See **CALIBER**.

CALIBRE, Fr. signifies, in a figurative sense, cast, weight or character; as *un homme de ce calibre*, a man of this cast, or weight.

CALIBRER, Fr. to take the measurement of the caliber of a gun.

CALIVER, an old term for an arquebuse or musket.

CALOMNIÈRE, Fr. a pop-gun.

CALOTE, Fr. a species of skull-cap which officers and soldiers wear under their hats in the French cavalry, and which is proof against a sabre or sword. Calotes are usually made of iron, wick, or dressed leather, and every officer chuses the sort he likes best. Those delivered out to the troops are made of iron.

The CALOTE, a term used in the French service for the Lieutenants' Court, at which the first lieutenant of the regiment, for the time being, always presided. The form of a *calote* shews its connexion with the English expression *Round Robin*, (which see;) the latter taking its allusion from a circle, and the former from the sphere.

Its *object* was to watch over the conduct of the subalterns: and the president instructed young men, on their arrival, in all the private regulations of the corps, as also in the general rules necessary for going through the service with honour.

It took cognizance, as a court of honour, of all disputes and quarrels in which the laws of honour, or of good breeding, had been violated. Our regimental committees, in some degree, resemble the Calote, especially with regard to the expulsion of an officer, or the sending of him to Coventry.

CALOTE sphérique, Fr. the section of a sphere, having a circle for its basis.

CALOTE also signifies a tonsure, or that back part of the head which is shaved to denote a person in orders, according to the rites of the Romish church.

CALOTIN, one who has the tonsure. This term has been generally used by the French, especially the soldiery, since the commencement of the Revolution, in derision of the priesthood; and is one of

the many proofs of contempt into which every sort of religion has fallen, and to which the immorality of the nation may be attributed.

CALQUER, Fr. to take off a counter-part of any drawing or design, by friction or impression.

CALQUING, } (calquer, Fr.) the art
CALKING, } of tracing any kind of a military drawing, &c. upon some plate, paper, &c. It is performed by covering the backside of the drawing with a black or red colour, and fixing the side so covered upon a piece of paper, waxed plate, &c. This done, every line in the drawing is to be traced over with a point, by which means all the outlines will be transferred to the paper or plate, &c.

CALTROPS, pieces of iron having four points, so disposed that three of them always rest upon the ground, and the fourth stands upwards in a perpendicular direction. Each point is three or four inches long. They are scattered over the ground and passages where the enemy is expected to march, especially the cavalry, in order to embarrass their progress.

CAMARADE, Fr. See **COMRADE**.

CAMBRE, ou Cambrure, Fr. the bending of a piece of timber, or the curve of an arch.

CAMBRER, Fr. to vault; to bend. Also to fit pannel squares, boards, and other pieces of timber to curved dimensions, by means of fire, &c.

CAMION, Fr. a species of cart or dray with three wheels, which is drawn by two men, and serves to convey cannon-balls, &c. These carts are very useful in fortified towns.

It is also called *petit tombereau*, small tumbrel.

CAMISADE or CAMISADO, Fr. in military transactions, an attack by surprise, either during the night, or at break of day, when the enemy is supposed to be asleep, or off his guard; it is so called from the soldiers wearing their shirts outside, in order to know one another in the darkness.

CAMOUFLET, Fr. in war, a kind of stinking combustible blown out of paper cases into the miners' faces, when they are at work in the galleries of the countermines.

CAMOUFLET also signifies the sudden explosion of a pistol, &c. which takes place when miners encounter one an-

other; hence *donner le camouflet*, to take another by surprise, or fire at him unexpectedly.

CAMP, the extent of ground occupied by an army pitching its tents when in the field, and upon which all its baggage and apparatus are lodged. It is marked out by the quarter-master-general, who allots to every regiment its ground. The extent of the front of a regiment of infantry is 200 yards, including the two battalion guns, and depth 320, when the regiment contains 9 companies, each of 100 private men, and the companies' tents in two rows; but when the companies tents stand in one row, and about 70 private men to each row, the front is then but 155 yards. A squadron of horse has 120 yards in front, and 100 for an interval between each regiment.

The nature of the ground must also be consulted, both for defence against the enemy, and for supplies to the army. It should have a communication with that army's garrisons, and have plenty of water, forage, fuel, and either rivers, marshes, hills, or woods to cover it. An army always encamps fronting the enemy, and generally in two parallel lines, besides a corps de reserve, about 500 yards distant from each other; the horse and dragoons on the wings, and the foot in the center. Where and how the train of artillery is encamped, see *Park of artillery, and Encampment of a regiment of artillery*, under the word **ARTILLERY**.

In a siege, the *camp* is placed all along the line of circumvallation, or rather in the rear of the approaches, out of cannon-shot; the army faces the circumvallation, if there be any.

There is one thing very essential in the establishing a *camp*, and which should be particularly attended to, if the enemy is near, which is, that there should not only be a commodious spot of ground at the head of the camp, where the army, in case of surprise, may in a moment be under arms, and in condition to repulse the enemy; but also a convenient field of battle at a small distance, and of a sufficient extent for them to form advantageously, and to move with facility.

The arrangement of the tents in *camp* is nearly the same all over Europe, which is to dispose them in such a manner, that the troops may form with safety and expedition.

To answer this end, the troops are encamped in the same order as that in which they are to engage, which is by battalions and squadrons; hence, the post of each battalion and squadron in the line of battle must necessarily be at the head of its own encampment. Gustavus Adolphus, king of Sweden, was the first who formed encampments according to the order of battle.

By this disposition, the extent of the *camp* from right to left, of each battalion and squadron, will be equal to the front of each in line of battle: and consequently, the extent from right to left of the whole *camp*, should be equal to the front of the whole army when drawn up in line of battle, with the same intervals between the several encampments of the battalions and squadrons, as are in the line.

There is no fixed rule for the intervals: some will have no intervals, some small ones, and others are for intervals equal to the front of the battalion or squadron. The most general method is, an interval of 60 feet between each battalion, and of 36 feet between each squadron.

Distribution of the front and depth of the CAMP for a battalion of infantry. The present mode of encampments differs from what was formerly adopted. The front of the *camp* for a battalion of 10 companies of 60 men each, is at present 400 feet, and during the late war only 360 feet; the depth at present 759 feet, and during the late war 960. The front of the *camp* of a battalion of 10 companies of 100 men each is at present 668 feet, and formerly only 592. The breadth of the streets from 45 to 55 feet, excepting the main street, which is sometimes from 60 to 90 feet broad.

Of the CAMP of a battalion by a new method. This is, by placing the tents in 3 rows parallel to the principal front of the *camp*; which is suitable to the 3 ranks in which the battalion is drawn up: the tents of the first row, which front the *camp*, are for the men of the front rank: the tents of the second row front the rear, and are for the men of the second rank; and the tents of the third row, which front the center row, are for the men of the rear rank.

When two field-pieces are allowed to each battalion, they are posted to the right of it. Gustavus Adolphus, king of Sweden, was the first who ordered

two field-pieces to each battalion, which are generally light 6 pounders.

CAMP of Cavalry. The tents for the cavalry, as well as for the infantry, are placed in rows perpendicular to the principal front of the *camp*; and their number is conformable to the number of troops. The horses of each troop are placed in a line parallel to the tents, with their head towards them.

The number of tents in each row is regulated by the strength of the troops, and the number of troopers allotted to each tent is 5: it follows, that a troop of 30 men will require 6 tents, a troop of 60 men 12 tents, and a troop of 100 men 20 tents. The tents for the cavalry are of the same form as those of the infantry, but more spacious, the better to contain the fire-arms, accoutrements, saddles, bridles, boots, &c. See *TENTS*.

Distribution of the front and depth of a CAMP of Cavalry. Supposing the regiment to consist of 2 squadrons, of 3 troops each, and of 50 men in each troop, the extent of the front will be 450 feet, if drawn up in 2 ranks; but if drawn up in 3 ranks, the front will be only 300 feet, the depth 220, and the breadth of the back streets 30 feet, and the other streets 46 feet each. In the last war 600 feet were allowed each regiment of cavalry in front, 774 feet for the depth, and the breadth of the streets as above.

The standard-guard tents are pitched in the center, in a line with the quarter-master's. The camp-colours of the cavalry are also of the same colour as the facings of the regiments, with the rank of the horse are square, like those of the foot; and those of the dragoons are swallow-tailed. The dung of each troop is laid up behind the horses.

CAMP duty consists in guards, both ordinary and extraordinary: the ordinary guards are relieved regularly at a certain hour every day (generally about 9 or 10 o'clock in the morning); the extraordinary guards are all kinds of detachments commanded on particular occasions for the further security of the *camp*, for covering the foragers, for convoys, escorts, or expeditions.

The ordinary guards are distinguished into grand guards, standard, and quarter guards; rear guards, picket guards, and guards for the general officers; train of artillery, bread wagons, paymaster ge-

neral, quarter-master general, majors of brigade, judge advocate, and provost marshal guards.

The number and strength of the grand guards and out-posts, whether of cavalry or infantry, depend on the situation of the *camp*, nature of the country, and the position of the enemy. The strength of general officers guards is limited.

CAMP maxims are, 1. The principal rule in forming a *camp*, is to give it the same front the troops occupy in order of battle.

2. The method of encamping is by battalions and squadrons, except the royal regiment of artillery, which is encamped on the right and left of the park of artillery.

3. Each man is allowed 2 feet in the ranks of the battalion, and 3 feet in the squadron: thence the front of a battalion of 900 men, formed 3 deep, will be 600 feet; and the front of a squadron of 150 men, formed 2 deep, will be 225 feet.

4. The depth of the *camp* when the army is encamped in 3 lines, is at least 2750 feet; that is, 750 feet for the depth of each line, and 250 feet for the space between each of those lines.

5. The park of artillery should always be placed on a dry rising ground, if any such situation offers; either in the center of the front line, or in the rear of the second line; with all the train horses encamped in the rear of the park.

6. The bread-wagons should be stationed in the rear of the *camp*, and as near as possible to the center, that the distribution of bread may be rendered easy.

7. When the commander in chief encamps, it is generally in the center of the army; and the town or village chosen for his residence is called head-quarters.

8. That general is inexcusable, who, for his own personal accommodation, makes choice of quarters that are not properly secured, or lie at too great a distance to have an easy communication with the *camp*.

9. If the ground permits, the troops should be encamped as near to good water as possible.

10. When there are hussars, they are generally posted near the head-quarters, or in the front of the army.

11. The ground taken up by the encampment of an army should be equally

distributed, and, if possible, in a straight line; as the whole will have more grace; for a crooked line, and an inequality of disposition, afford a very displeasing view, both of the camp and of the troops when they are under arms.

12. Cleanliness is essentially necessary to the health of a *camp*, especially when it is to remain for any length of time. To maintain this, the privies should be often filled up, and others opened; at least every 6 days. The offal of cattle, and the carcasses of dead horses, should be buried very deep; and all kinds of corrupt effluvia, that may infect the air and produce epidemical disorders, should be constantly removed.

Choice of CAMPS. 1. At the beginning of a campaign, when the enemy is at too great a distance to occasion any alarm, all situations for *camps* that are healthy are good, provided the troops have room, and are within reach of water, wood, and provisions. More ground should be allowed to the troops in stationary *camps*, than in temporary ones.

2. *Camps* should be situated as near as possible to navigable rivers to facilitate the conveyance of all manner of supplies; for convenience and safety are the principal objects for *camps*.

3. A *camp* should never be placed too near heights from whence the enemy may overlook it; nor too near woods, from whence the enemy may surprise it. If there are eminences, not commanded by others, they should be taken into the *camp*; and when that cannot be done, they should be fortified.

4. The choice of a *camp* depends in a great measure on the position of the enemy, on his strength, and on the nature and situation of the country.

5. A skilful general will avail himself of all the advantages for a *camp*, which nature may present, whether in plains, mountains, ravines, hollows, woods, lakes, inclosures, rivers, rivulets, &c.

6. The disposition of the troops in *camp* should depend on the nature and situation of the ground; as there are occasions which require all the infantry to encamp on the right, and the cavalry on the left; and there are others which require the cavalry to form in the center, and the infantry on the wings.

7. A *camp* should never be formed on the banks of a river, without the space of at least 2 or 3,000 feet, for drawing out the army in order of battle: the

enemy cannot then easily alarm the *camp*, by artillery and small arms from the other side.

8. *Camps* should never be situated near rivers that are subject to be overflowed, either by the melting of the snow, or by accidental torrents from the mountains. Marshy grounds should also be avoided, on account of the vapours arising from stagnant waters, which infect the air.

9. On the choice of *camps* and posts, frequently depends the success of a campaign, and even sometimes of a war.

CAMP guards. They are of two sorts: the one serves to maintain good order within the *camp*; and the other, which is stationed without the *camp*, serves to cover and secure it against the enemy. These guards are formed of both infantry and cavalry; and in proportion to the strength of the army, situation of the *camp*, and disposition of the enemy. Sometimes it is required, that these guards should consist of the 8th part of the army; at others, of the 3d part; and when an attack from the enemy is apprehended, even of the half.

Manner of stationing the CAMP guards. It is of the utmost consequence to station the guards in such places, as may enable them to discover easily whatever approaches the *camp*.

2. The guards of the cavalry are generally removed farther from the *camp*, than those of the infantry; but never at so great a distance, as to endanger their being cut off: within cannon-shot is a very good distance. They are often stationed in highways, in open places, and on small heights; but they are always so disposed as to see and communicate with one another.

3. The vedettes to the out-posts must be double; for should they make a discovery, one may be detached to inform the officer commanding the out-post, and the other remain on duty; they should not be at too great a distance from their detachment; probably, about 50 or 60 paces will be sufficient.

4. The guards of infantry have different objects, and are differently stationed: their duty is, to receive and support the guards of cavalry in cases of need; to protect the troops sent out for wood, forage, or water; in short to prevent any approaches from the small parties of the enemy. Some are stationed in the churches of the neigh-

bouring villages, in castles, houses, and in passages and avenues of woods; others are stationed on the borders of rivulets, and in every place necessary to secure the *camp*. Guards that are stationed in churches, steeples, in woods, or among trees, castles, and houses, should, if possible, be seen from the army, or at least from some grand guard in its neighbourhood, that signals may be readily perceived and repeated.

5. The guards of infantry are generally fixed; that is, they have the same post both day and night, except such as are to support and protect the guards of cavalry, and to cover the forage grounds. All out-guards should have intrenching-tools with them.

6. The guards of cavalry have generally a day-post and a night-post; the latter is seldom more than 4 or 500 paces from the *camp*; one third should be mounted, one third bridled, and one third feeding their horses; but when near the enemy, the whole guard should be kept mounted during the night.

7. The security and tranquillity of a *camp* depending upon the vigilance of the guards, the officers who command them cannot be too active in preventing surprises: a neglect in this particular is often of fatal consequence. Though an officer must, at all times, be strictly attentive to every part of the service, yet he should be more particularly watchful in the night than in the day. The night is the time most favourable for surprises; as those who are not on duty, are generally asleep, and cannot immediately afford assistance; but in the day time, the attention of all the troops is turned to the movements of the enemy; they are sooner under arms, sooner in readiness to march, and in much less danger of being thrown into confusion. It ought also to be remembered, that the officer of the quarter-guard and the advanced sentries should never permit any person in coloured clothes to pass the front line of the camp, or in any shape enter it, without being minutely questioned as to his situation in life, &c. For this end, he should be conducted to the quarter-guard, there to give in writing the necessary information. Those who wish to be better acquainted with the nature and mode of encampments, may read Mr. Lochée's useful *Essay on Castramentation*.

Concerning the healthiness of the different seasons of a campaign, the ingenious Dr. Pringle has the following observations. The first three weeks are always sickly; after which the sickness decreases, and the men enjoy a tolerable degree of health throughout the summer, unless they get wet clothes. The most sickly part of the campaign is towards the end of August, whilst the days are still hot, but the nights cold and damp with fogs and dews; then, if not sooner, the dysentery prevails; and though its violence is over by the beginning of October, yet the remitting fever, gaining ground, continues throughout the rest of the campaign, and never entirely ceases, even in winter quarters, till the frost begins. He likewise observes, that the last 14 days of a campaign, if protracted till the beginning of November, are attended with more sickness than the two first months of the encampment. As to winter expeditions, though severe in appearance, he tells us they are attended with little sickness, if the men have strong and good shoes, warm quarters, fuel, and provisions enough.

CAMP-Colour-men, men who carry the camp-colours. Each regiment has generally 6, and sometimes 1 per company; they always march with the quarter-master, to assist in making the necessary preparations against the arrival of the regiment in a new encampment. They also carry the triangles when a soldier is to be flogged.

CAMP-Fight, (*combat en champ clos*, Fr.) When an engagement takes place within certain lines of a *camp* or inclosed position, it is called a *camp-fight*. *Camp-fight* was also formerly used to signify *combat*.

Flying-CAMP, or army, generally means a strong body of horse and foot, commanded for the most part by a lieutenant-general, which is always in motion, both to cover its own garrisons, and to keep the enemy's army in continual alarm. It is sometimes used to signify the ground on which such a body of men encamp.

CAMP-utensils, hatchets, shovels, mattocks, blankets, camp-kettles, canteens, tents, poles, and pins: each company has 10 shovels and 5 mattocks; each tent 1 hatchet, 2 blankets, 1 camp-kettle, with its linen bag; and each soldier 1 canteen, 1 knapsack, and 1 *havre-sack*.

CAMP-diseases, are chiefly bilious fevers, malignant fevers, fluxes, scurvy, rheumatism, &c.

CAMP is also used by the Siamese and some other nations in the East Indies, to express the quarters where the persons from different countries, who come to trade with them, usually reside.

CAMP d'assemblée, Fr. the first ground which is taken when troops are encamped on the opening of a campaign.

CAMP à cheval, Fr. a ground of encampment across which any river runs, &c.

CAMP décousu, Fr. a ground of encampment, which is occupied by different regiments, without any attention being paid to a regular line, &c.

CAMP déséparé, Fr. a ground upon which the enemy has been encamped the preceding day, or during the course of the one on which the ground is reconnoitred.

CAMP détendu, Fr. a ground of encampment upon which the tents are struck, either for the purpose of engaging the enemy, of marching from him, or of making any particular movement.

CAMP en échelons, Fr. a ground of encampment which is taken up in such a manner, that the different regiments lie obliquely in advance one to the other. By means of this disposition the flanks nearest to the enemy are supported by those that are farther from him, and are not exposed to have their wing turned.

CAMP fixe, Fr. a regular, or stationary camp.

CAMP bien ordonné, Fr. a well regulated camp.

CAMP d'instruction, ou de discipline, Fr. a ground of encampment which is occupied for the purpose of training troops, &c.

CAMP momentané, Fr. a ground of encampment which is taken for a short interval.

CAMP de passage, Fr. ground taken for the purpose of passing through a country, crossing a river, &c.

CAMP de plaisance, Fr. a camp which is taken for the purposes of parade.

CAMP de position, Fr. ground taken to enable an army to act offensively, or defensively, against any opposing force.

CAMP retranché, Fr. an entrenched camp. See **CAMP**.

CAMP tendu, Fr. a ground of encampment, where tents, &c. are regularly pitched.

CAMP volant, Fr. a flying camp, one which is formed and broken up from day to day.

CAMP de Mars, Fr. a piece of ground in the vicinity of Paris, where troops are occasionally exercised, and public festivals kept.

CAMPAGNE, Fr. campaign.

Se mettre en CAMPAGNE, Fr. to take the field.

Tenir la CAMPAGNE, Fr. to keep the field, or remain encamped.

CAMPAIGN, in military affairs, the time every year that an army continues in the field, in war time. The word is also used for an open country before any town, &c.

CAMPEMENT, Fr. an encampment. This word is also used to denote a detachment sent before the army to mark out the ground for a camp.

CAMPER, Fr. to encamp.

CAMPUS Maii, an anniversary assembly which was observed by our ancestors on May-day, when they mutually pledged themselves to one another for the defence of the country against foreign and domestic foes. Of this description was the famous *Champ de Mai* when Bonaparte assembled the troops and citizens of Paris in 1815.

CAMPUS Martius, a public place so called among the Romans, from Mars, the God of War.

CHAMP de Mai, Fr. See **CAMPUS MAII**.

CANAL de lumière, Fr. the aperture, or touch-hole, which leads from the pan to the barrel of a fire arm.

CANAL, (*canal*, Fr.) that part of a stone, or wooden aqueduct, through which the water passes.

CANAPSA, Fr. knapsack; more properly an old leathern bag or satchel, which a beggar or soldier's boy carries.

CANAPSA also means the individual who carries the bag.

CANARDER, Fr. to pelt, to shoot; to fire from any secret place.

CANEVAS, Fr. canvass; rough draught.

CANIVEAUX, Fr. a strong pavement which runs across a street where wagons pass.

CANNIPERS. See **CALLIPERS**.

CANNON, or *pieces of ORDNANCE*, in the military art, imply machines having tubes of brass, or iron. They are charged with powder and ball, or sometimes cartridges, grape and tin-shot, &c.

The length is distinguished by three parts; the first re-inforce, the second re-inforce, and the chace: the first re-inforce is 2-7ths, and the second 1-7th and a half of the diameter of the shot. The inside hollow, wherein the powder and shot are lodged, is called the bore, &c.

History of CANNON or pieces of ORD-NANCE. They were originally made of iron bars soldered together, and fortified with strong iron hoops; some of which are still to be seen, viz. one in the tower of London, two at Woolwich, and one in the royal arsenal at Lisbon. Others were made of thin sheets of iron rolled up together, and hooped; and on emergencies they were made of leather, with plates of iron or copper. These pieces were made in a rude and imperfect manner, like the first essays of many new inventions. Stone balls were thrown out of these cannon, and a small quantity of powder used on account of their weakness. These pieces have no ornaments, are placed on their carriages by rings, and are of cylindrical form. When or by whom they were made, is uncertain: however, we read of *cannon* being used as early as the 13th century, in a sea engagement between the king of Tunis and the Moorish king of Seville. The Venetians used *cannon* at the siege of Claudia Jessa, now called Chioggia, in 1366, which were brought thither by two Germans, with some powder and leaden balls; as likewise in their wars with the Genoese in 1379. Our glorious king Edward III. made use of *cannon* at the battle of Cressy in 1346. On this occasion the English had 4 pieces of ordnance planted upon a height, which caused such a panic in the French troops, that Edward defeated Philip of Valois, who commanded his army in person, without experiencing much opposition. *Cannon* was employed at the siege of Calais in 1347. Pieces of ordnance were made use of by the Turks at the siege of Constantinople, then in possession of the Christians, in 1394, or in that of 1452, that threw a weight of 1006lb. but they generally burst, either the first, second, or third shot. Louis XII. had one cast at Tours, of the same size, which threw a ball from the Bastille to Charenton. One of those famous *cannon* was taken at the siege of Dieu, in 1546, by Don John de Castro, and is in the castle of St. Julião da Barra, 10 miles from Lisbon; its length is 20 feet

7 inches, diameter at the center 6 feet 3 inches, and discharges a ball of 1000lb. It has neither dolphins, rings, nor button, is of a curious kind of metal, and has a large Indostan inscription upon it, which says it was cast in 1400.

Ancient and present names of CANNON. Formerly they were dignified with uncommon names; for in 1503 Louis XII. had 12 brass cannon cast, of an uncommon size, called after the names of the 12 peers of France. The Spanish and Portugueze called them after their saints. The emperor Charles V. when he marched before Tunis, founded the 12 Apostles. At Milan there is a 70-pounder, called the Pimontelle; and one at Bois-le-duc, called the Devil. A 60-pounder at Dover castle, called Queen Elizabeth's Pocket-pistol. An 80-pounder in the tower of London (formerly in Edinburgh castle) called Mounts-meg. An 80-pounder in the royal arsenal at Berlin, called the Thunderer. An 80-pounder at Malaga, called the Terrible. Two curious 60-pounders in the arsenal at Bremen, called the Messengers of bad news. And lastly an uncommon 70-pounder in the castle of St. Angelo at Rome, made of the nails that fastened the copper plates which covered the ancient Pantheon, with this inscription upon it: *Ex clavis trabalibus porticus Agrippæ.*

In addition to the above curiosities, there are two leather field pieces in the Tower, and one in the armoury at Malta; there is also a very singular old piece of brass ordnance in the island of Rhodes, about 20 feet in length, with a chamber 5 feet long, to contain the charge of powder, which screws on at the breech of the gun. The calibre of the piece is 24 inches, carrying a spherical stone ball, and seems to have been used at a very early period. There is likewise an ancient piece of brass ordnance, supposed to be Turkish, in St. James's Park, brought home from one of the arsenals in Alexandria, when the British troops, under the command of Lord Hutchinson, conquered the French in Egypt.

In the beginning of the 15th century the uncommon names of Terrible, Devil, &c. were generally abolished, and the following more universal ones took place, viz.

	Pounders.	Cwt.
Cannon royal, or } carthoun }	= 48	about 90
M		

Bastard cannon, } or $\frac{1}{2}$ carthoun }	= 36	79	
$\frac{1}{2}$ carthoun	= 24	60	
Whole culverins	= 18	50	
Demy culverins	= 9	30	
Falcon	= 6	25	
Saker {	lowest sort	= 5	13
	ordinary	= 6	15
	largest size	= 8	18
Basilisk	= 43	35	
Serpentine	= 4	8	
Aspik	= 2	7	
Dragon	= 6	12	
Syren	= 60	31	
Falconet	= 3, 2, & 1	15, 10, 5	

lowing, viz. To 210lb. of metal fit for casting, they put 68lb. of copper, 52lb. of brass, and 12lb. of tin. To 4200lb. of metal fit for casting, the Germans put 3687 $\frac{1}{4}$ of copper, 204 $\frac{1}{4}$ lb. of brass, and 307 $\frac{3}{4}$ lb. of tin. Others again use 100lb. of copper, 6lb. of brass, and 9lb. of tin; and lastly, others, 100lb. of copper, 10lb. of brass, and 15lb. of tin. With respect to iron guns, their structure is the same as that of the others, and they generally stand the most severe engagements, being frequently used on ship-board. Several experiments have taught us that the Swedish iron guns are preferable to all others.

CANNON is now generally cast solid, and the cavity bored afterwards by a very curious machine for that purpose, where the gun is placed in a perpendicular position; but of late these machines have been made to bore horizontally, and much truer than those that bore in a vertical form. This new machine was first invented at Strasburgh, and greatly improved by Mr. Verbruggen, a Dutchman, who was head founder at the royal foundery at Woolwich, where probably the best horizontal-boring machine in Europe has been lately fixed; it both bores the inside, and turns and polishes the outside at once.

Names of the several parts of a CANNON.

The grand divisions exterior are as follows, viz. *First re-inforce* is that part of a gun next the breech, which is made stronger to resist the force of powder.

Second re-inforce. This begins where the first ends, and is made something smaller than the first.

The chace is the whole space from the trunnions to the muzzle.

The muzzle, properly so called, is the part from the muzzle astragal to the end of the piece.

Small divisions exterior.
The cascable, the hindermost part of the breech, from the base-ring to the end of the button.

The cascable-astragal is the diminishing part between the two breech-mouldings.

The neck of the cascable is the narrow space between the breech-moulding and the button.

The breech is the solid piece of metal behind, between the vent and the extremity of the base-ring, and which termi-

Moyens, which carried a ball of 10 or 12 ounces, &c.

Rabinet, which carried a ball of 10 ounces.

These curious names of beasts and birds of prey were adopted, on account of their swiftness in motion, or of their cruelty; as the *falconet*, *falcon*, *saker*, and *culverin*, &c. for their swiftness in flying; the *basilisk*, *serpentine*, *aspik*, *dragon*, *syren*, &c. for their cruelty. See the Latin poet Forcastarius.

At present *cannon*, or pieces of ordnance, take their names from the weight of the ball they discharge: thus a piece that discharges a ball of 24 pounds, is called a 24-pounder; one that carries a ball of 12 pounds, is called a 12-pounder; and so of the rest, divided into the following sorts, viz.

Ship-guns, consisting in 42, 32, 24, 18, 12, 9, 6, and 3 pounds.

Garrison-guns, in 42, 32, 24, 18, 12, 9, and 6 pounds.

Battering-guns, in 24, 18, and 12 pounds.

Field-pieces, in 18, 12, 9, 6, 3, 2, 1 $\frac{1}{2}$, 1, and $\frac{1}{2}$ pounds.

The British seldom use any of lower calibre than 6 in the field.

The metal of which brass cannon is made, is in a manner kept a secret by the founders: yet, with all their art and secrecy, they have not hitherto found out a composition that will stand a hot engagement without melting, or at least being rendered useless. Those cast at Woolwich bid fairest towards this amendment. The respective quantities which should enter into this composition, is a point not decided; every founder has his own proportions, which are peculiar to himself. The most common proportions of the ingredients are the fol-

nates the hind part of the gun, exclusive of the cascable.

The breech-mouldings are the eminent parts, as squares or rounds, which serve only for ornaments to the piece, &c.

The base-ring and ogee are ornamental mouldings: the latter is always in the shape of an S, taken from civil architecture, and used in guns, mortars, and howitzers.

The vent-field is the part from the vent to the first re-inforce astragal.

The vent astragal and fillets are the mouldings and fillets at or near the vent.

The charging cylinder is all the space from the chace-astragal to the muzzle-astragal.

The first re-inforce ring and ogee are the ornaments on the second re-inforce.

The first re-inforce astragal is the ornament between the first and second re-inforce.

The chace girdle is the ornament close to the trunnions.

The trunnions are two solid cylindrical pieces of metal in every gun, which project from the piece, and by which it is supported upon its carriage.

The dolphins are two handles, placed on the second re-inforce ring of brass guns, resembling the fish of that name: they serve for mounting and dismounting the guns.

The second re-inforce ring and ogee are the two ornaments joining the trunnions.

The second re-inforce astragal is the moulding nearest the trunnions.

The chace-astragal and fillets, the two last-mentioned ornaments jointly.

The muzzle-astragal and fillets, the joint ornaments nearest the muzzle.

The muzzle-mouldings, the ornaments at the very muzzle of the piece.

The swelling of the muzzle, the projected part behind the muzzle-mouldings.

Interior parts.

The mouth, or entrance of the bore, is that part where both powder and ball are put in, or the hollow part which receives the charge.

The vent, in all kinds of fire-arms, is commonly called the touch-hole: it is a small hole pierced at the end, or near it, of the bore or chamber, to prime the piece with powder, or to introduce the tube, in order, when lighted, to set fire to the charge.

The chamber is the place where the powder is lodged, which forms the charge.

Tools for loading and firing CANNON are rammers, sponges, ladles, worms, handspikes, wedges, and screws.

Coins, or wedges, to lay under the breech of the gun, in order to elevate or depress it.

Hand-spikes serve to move and to lay the gun.

Ladles serve to load the gun with loose powder.

Rammers are cylinders of wood, whose diameters and axes are equal to those of the shot: they serve to ram home the wads put upon the powder and shot.

Sponge is fixed at the opposite end of the rammer, covered with lamb-skin, and serves to clean the gun when fired.

Screws are used to field-pieces instead of coins, by which the gun is kept to the same elevation.

Tools necessary for proving CANNON are, a searcher with a reliever, and a searcher with one point.

Searcher is an iron, hollow at one end to receive a wooden handle, and on the other end has from 4 to 8 flat springs of about 8 or 10 inches long, pointed and turned outwards at the ends.

The Reliever is an iron flat ring, with a wooden handle, at right angles to it. When a gun is to be searched after it has been fired, the searcher is introduced; and turned every way, from end to end, and if there is any hole, the point of one or other of the springs gets into it, and remains till the reliever, passing round the handle of the searcher, and pressing the springs together, relieves it.

When there is any hole or roughness in the gun, the distance from the mouth is marked on the outside with chalk.

The other searcher has also a wooden handle, and a point at the fore end, of about an inch long, at right angles to the length: about this point is put some wax mixed with tallow, which, when introduced into the hole or cavity, is pressed in, when the impression upon the wax gives the depth, and the length is known by the motion of the searcher backwards and forwards: if the fissure be 1-ninth of an inch deep, the gun is rejected. See INSTRUMENTS.

N. B. The strength of gunpowder having been considerably increased by

the late Lieutenant General Sir William Congreve, of the Royal Artillery, the quantity for service has been somewhat reduced; that for proof remaining as heretofore.

CANNON } *Ball.* See BALLS.

CANNON } *Shot.* See SHOT.

CANNON-Baskets. See GARRONS.

To nail CANNON. See NAIL.

CANNON. The author of *Marimes Politiques*, page 125, says, "*Le canon est le dernier moyen des rois, (ultima ratio regum,) comme l'insurrection est le dernier moyen des peuples. Les maux qui en résultent sont certains, les remèdes douteux; il est donc aussi insensé que coupable, de ne pas épuiser toutes les ressources de la modération et de la patience avant d'en venir à ces cruelles extrémités.*"

This sound doctrine holds good with respect to king and people. Let the social compact which ought to bind the ruler and the ruled be honestly followed, and there will be little occasion for cannon.

CANONNADE, the direction of the powers of artillery against some distant object intended to be seized or destroyed, as the troops in battle, battery, fortress, or out-work.

To CANONNADE, (*cannoner*, Fr.) to fire against any thing with cannon, or pieces of ordnance.

CANNONEER, (*canonnier*, Fr.) the person who manages the gun. See GUNNER.

CANON, Fr. See CANNON. Cannon also means in French the barrel of any fire-arm, great or small.

CANON *chambré*, Fr. a piece that has not been well cast, and could not be used without danger, on account of the defective cavities which exist in the body of the metal.

CANON *secret*, Fr. one, or several pieces of ordnance placed on a battery, unperceived by the enemy. These are used by the besieged for the defence of breaches, and by the besiegers to oppose a *sortie*.

CANON *à la Suédois*, Fr. a piece of ordnance adopted by the French, and so called from the Swedish pieces, of which it is an imitation. It is very convenient in long marches, as being very light. The weight at most 525lb. the ball 4lb. weight.

CANON *double*, Fr. See *Reveil matin*.

CANON *Rayé*, Fr. a rifle gun. See RIFLE.

CANON BIT, that part of the bit which is let into the horse's mouth.

CANONNADE, Fr. See CANNONNADE.

CANONNIÈRE, *ou Embrasure*, Fr. an opening which is made in the parapet of a work for the purpose of pointing cannon against any particular object.

CANONNIERE, Fr. a sort of shed covered over with canvass for the accommodation of soldiers and sutlers.

CANONNER, Fr. to fire against any fortified place or body of armed men with heavy ordnance, &c.

CANONS *de goutière*, Fr. in architecture, the extremities or mouths of copper or leaden pipes, which serve to carry off the water from a roof, &c.

Military CANT terms, familiar expressions which obtain currency among military men, when they are employed in garrison, or elsewhere. These phrases are too numerous to be recited, especially as they prevail differently in different corps. The Guards, for instance, have phrases peculiar to themselves. Instead of *no parish business*, the Guards say *no pipe clay*, when they wish to put an end to regimental discussion; and instead of *scabbaring* a soldier, as in the infantry of the line, or *booting* him, as in the cavalry, they call it *tarring* a man, &c.

CANTABRES, Fr. soldiers held in high repute at the time of the Romans: and, in fact, the renown of the gallant *Cantabres* was such, that a great number of the Spanish provinces reckoned it a great honour to be comprehended within the limits of ancient Cantabria. In the year 1745, Lewis XV. formed a regiment of *Cantabres*, which since were called *Royal Cantabres*.

CANTABRUM, a standard introduced during the reign of the Roman Emperors, and which differed from the *vexillum*. This latter was a large standard, distinguished by its particular colour and motto; whereas the *cantabrum* was only a small flag, with its particular colour also, and used as a signal for the troops to rally.

CANTEEN, a suttling-house for the convenience of officers and soldiers; also a machine made of wood or leather with compartments for several utensils, generally used by officers. The tin vessels used by the soldiers on a march, &c. to carry water or other liquor in, each holding about 2 quarts, are also called *canteens*.

To CANTER, (*aller au petit-galop*, Fr.) to go a hand-gallop, or three-quarter speed. See HAND.

CANTINE, Fr. See CANTEEN. *Cantine* is sometimes used among the French to signify the meat, &c. that is ready drest.

CANTINIER, Fr. the person who keeps a canteen, booth, or sutling house.

To CANTON, (*cantonner*, Fr.) to disperse troops into winter or summer quarters.

CANTONMENTS are distinct situations, in towns and villages, where the different parts of an army lie as near to each other as possible, and in the same manner as they encamp in the field. The chief reasons for cantoning an army are, first, when the campaign begins early; on which occasion, in cantoning your troops, two objects demand attention, viz. the military object, and that of subsistence: the second is, when an army has finished a siege early, the troops are allowed to repose till the fields produce forage for their subsistence: the third reason is, when the autumn proves rainy, and forage scarce, the troops are cantoned to protect them from the bad weather.

CANVASS-BAGS. See BAGS, Sand-BAGS, &c.

CAPA-AGA, an old and experienced officer of the Seraglio, who has the charge of instructing and superintending the *Ichonoglans*; which office he fulfils with the utmost severity, in order to accustom them to subordination and discipline, and that they may be the better qualified to command in their turns.

CAPARISON. Under this term is included the bridle, saddle, and housing of a military horse.

CAPE du *batardeau*, Fr. a roof sloping on both sides, which covers the upper part of the *batardeau* constructed in the ditch at the salient angle of a bastion. A small turret about six or seven feet high is erected in the center of the *cape*, to prevent desertion.

CAPPLINE, a kind of iron helmet worn by the cavalry, under John, Duke of Britany.

CAPELETTI, a Venetian militia, composed of *Sclavonians*, *Dalmatians*, *Albanians*, *Mollachians*, and formerly reckoned the best troops in the service of the state of Venice.

CAPICULY, otherwise called *Jani-*

zaries, the first corps of the Turkish infantry.

CAPITAINE *en pied*, Fr. an officer who is in actual pay and does duty.

CAPITAINE *réformé*, Fr. a reduced officer.

CAPITAINE *général des vivres*, Fr. the person who has the chief management and superintendance of military stores and provisions.

CAPITAINE *des guides*, Fr. a person appointed to direct the roads by which the army is to march: he must be well versed in topography: is under the direction of the quarter-master general, and is obliged to provide guides for all general officers, detachments, and convoys.

CAPITAINE *des charrois*, Fr. captain of the wagon-train.

CAPITAINE *général des chariots de munition*, Fr. the person who commands the whole of the *ammunition wagons*, and *wagon-train*.

CAPITAINE *des mulets*, Fr. His functions are the same as those of the *capitaine des charrois*, with this difference, that he sometimes has a hundred, or a hundred and fifty *mules* under his management: this branch of service is of great importance when the war is carried on in a mountainous country, where the progress of the *caissons* is rendered very difficult.

CAPITAINE *des ouvriers*, Fr. one who commands the carpenters, wheelwrights, and other workmen in the artillery; and among the engineers, he superintends the workmen employed by those corps.

CAPITAINES *conducteurs d'artillerie*, Fr. persons entrusted in the armies and fortified towns with the particular details of the functions of the *Captain General*.

CAPITAINE *des portes*, Fr. a commissioned officer who resides in a garrison town, and whose sole duty is to receive the keys of the gates from the Governor every morning, and to deliver them to him every night, at appointed hours.

CAPITAL, in fortification, is an imaginary line which divides any work into two equal and similar parts. It signifies also, a line drawn from the angle of a polygon to the point of the bastion, or from the point of the bastion to the middle of the gorge.

CAPITAN, Fr. an unconscionable vaunter, who boasts of incredible acts of bravery, although he be a real coward. A *capitan* also signifies in harsher lan-

guage, a *coward*; every military man who has been once found guilty of cowardice is ruined beyond recovery.

CAPITOU, *Fr.* chief magistrate of Toulouse.

To **CAPITULATE**, to surrender any place, or body of troops, to the enemy, on certain stipulated conditions.

CAPITULATION, in military affairs, implies the conditions on which the garrison of a place besieged agrees to deliver it up, &c.

CAPITULATION, *Fr.* is sometimes used to denote an agreement which is made on enlisting upon certain terms or conditions. The capitulations of the foreign corps that have been taken into the British service are of this description.

CAPONNIÈRE, in fortification, is a passage made from one work to another, of 10 or 12 feet wide, and about 5 feet deep, covered on each side by a parapet, terminating in a glacis. Caponnières are sometimes covered with planks and earth. See **FORTIFICATION**.

Demi-CAPONNIÈRE, *Fr.* a passage which is made in the bottom of a dry ditch, and which is only defended towards the enemy by a parapet or glacis. Its object is to protect the branch or passage belonging to the ditch which is directly in front.

CAPORAL, *Fr.* corporal.

CAPOTE de faction, *Fr.* a large great coat with a hood or cowl, which is worn by sentinels in bad weather.

CAPS, in gunnery, are made of leather, and used for the same purpose that tampons were, to prevent rain or rubbish from collecting in the bore of the guns and howitzers. There are also canvass caps for similar purposes used for mortars.

CAP-Squares. See **CARRIAGES**.

CAP-A-PLE implies being clothed in armour from head to foot, or fully accoutred.

CAPSTAN, } a strong massy piece
CAPSTERN, } of timber in the form of a truncated cone, having its upper part, called the drum-head, pierced with a number of square holes, for receiving the levers. By turning it round, several actions may be performed that require an extraordinary power.

CAPTAIN is a military officer, who is the commander of a troop of horse or dragoons, or of a company of foot or artillery. The name of captain was the

first term made use of to express the chief or head of a company, troop, or body of men. He is both to march and fight at the head of his company. Captains of artillery and engineers ought to be more masters of the attack and defence of fortified places than either a captain of infantry or cavalry; because they must be good mathematicians, and understand the raising of all kinds of batteries, to open the trenches, to conduct the sap, to make mines and fougasses, and to calculate their charges. They ought farther to be well acquainted with the power of artillery, the doctrine of the military projectile, and the laws of motion, together with the system of mechanics; and should be good draughtsmen. A captain has, in most services, the power of appointing his own sergeants and corporals, but cannot by his own authority reduce or break them; neither can he punish a soldier with death, unless he revolts against him on duty.

CAPTAIN General. By the constitution, the King is *Captain General* of all the forces of Great Britain. This term implies the first rank, power, and authority known in the British army. His Majesty was pleased to delegate this rank, and the powers annexed to it, to his Royal Highness the Duke of York, in 1799.

CAPTAIN-Lieutenant, formerly the commanding officer of the colonel's troop or company in every regiment, in case the colonel is absent, or he gives up the command of it to him. This rank has been abolished in the British army.

CAPTAIN reformed, one who, upon a reduction of the forces on the termination of war, loses his company, yet keeps his rank and pay, whether on duty or not.

CAPTAIN on half pay is one who loses his company on the reduction of an army, and retires on half-pay, until seniority puts him into duty and full pay again.

CAPTAIN en second, or second captain, is one whose company has been broke, and who is joined to another, to serve under the captain of it.

CAPTAIN, (*Capitaine*, *Fr.*) In the highest acceptation of the term, this word signifies a man of great talents, genius, and perseverance, who can undertake the management of a whole army and conduct it to victory; few such men exist. Hence *Un grand capitaine*, a great captain, as

the Duke of Wellington has been justly called.

CAPTAINS of halberts, or black-bills, certain persons who, during the reign of our ancient kings, and as late down as the reign of Queen Elizabeth, had the charge and direction of a body of men called Halberts and Black-bills, who were always in the heat of a battle. In the armies of king Henry VIII. Mary, and Elizabeth, there were a great number of bill-men.

According to some writers, the denomination of captain and lieutenant, applied to officers commanding small bodies of men, equivalent to our troops and companies, was scarcely introduced into our armies before the reign of Henry VII. and VIII. where we find them borne by the officers commanding the yeomen of the guard and the band of gentlemen pensioners, and their occasional representatives.

CAPTIVE, (captif, Fr.) a prisoner of war.

CAPTIVI, the name given by the Romans to their prisoners of war, who were generally loaded with chains, and placed near the colours. The captive kings had their heads shaved, and were sent to Rome, to enhance the splendour of the triumph.

CAPTURE, Fr. any seizure or capture which is made against the enemy.

CAQUE de poudre, Fr. a term synonymous to a tun or barrel of powder.

CAR, in military antiquity, a kind of small carriage; figuratively, used by the poets for a chariot: it is mounted on wheels, representing a stately throne, used in triumphs and on other solemn occasions.

CAR-taker to His Majesty; a sinecure which is enjoyed by the entering clerk at the Pay-office, value 39*l.* per annum net.

CAR, (char, ou chariot à deux roues, Fr.) a carriage with two wheels, fitted up with boxes to contain ammunition, and to carry artillery men that are attached and formed into brigades, for the purpose of accompanying field ordnance. This car is considered an important improvement in artillery equipment, and was first introduced into the service by the Hon. W. W. Pole, when clerk of the ordnance. It is now universally used for all natures of field ordnance, instead of the covered ammunition wagons with low wheels, which are not constructed

upon a principle equal to move with the same rapidity as the guns themselves. An improvement has lately been made in the principle of the wheel-car, by a spare gun-carriage, of the nature of the guns attached to the brigade, being substituted to carry the spare wheels, &c. before mentioned.

CARABINE, Fr. a carbine.

CARABINIERS, Fr. One complete regiment of carabiniers was formed during the monarchy of France, out of the different corps of cavalry. They were usually distributed among other bodies of troops, and it was their duty to charge the advanced posts of the enemy. See **CARBINEERS.**

CARABINS, Fr. these were light armed horsemen, who sometimes acted on foot. They were generally stationed in the outposts, for the purpose of harassing the enemy, defending narrow passes, &c. In action, they usually fought in front of the dragoons, or upon the wings of the first line. Their name is derived from the Arabian word *Karab*, which signifies, generally, any warlike instrument.

CARACOLE, a semi-circular motion or half wheel, chiefly applied to that used either by individuals, or squadrons of cavalry, to prevent an enemy from discovering where they intend to make their attack.

CARACOLER autour d'une troupe ennemie, Fr. to hang upon the flanks of an enemy, in order to take him by surprise, or otherwise perplex him.

CARACORE, an Indian vessel belonging to the island of Borneo.

CARAVAN, (caravanne, Fr.) from a Turkish word, which signifies a troop of travellers, pilgrims, or merchants, formed in a body, and who journey across the deserts, under an escort commanded by a chief who is called an *Aga*. There are guides attached to the *caravans*, who direct them to encamp near those places where water can be procured. With regard to other provisions, the travellers take care to provide a large quantity, which they share with the Arabs, in case they should appear in great numbers; but if the escort are confident of their superiority, they will engage and sometimes give a severe drubbing to those intruders. The appellation of *caravanne* is also given to the first voyages or cruizes which the knights of Malta are obliged to undertake before they become

graduates, or can be promoted to the commanderies of the order.

CARAVELLE, *Fr.* caravel; a small expeditious Portuguese vessel, square sterned, and with lateen sails.

CARBINE, a fire-arm, somewhat smaller than the firelock of the infantry, and used by the cavalry.

CARBINEERS, or *carabineers*, horse-men armed with carbines, who occasionally act as infantry. All regiments of light-armed horse were formerly called carbineers; but since the establishing of hussars and chasseurs, they have lost that denomination, and now all the foreign heavy cavalry are called carbineers.

CARCAMOUSE, *Mouton, Marmouton, Fr.* the battering-ram which was used by the ancients.

CARCAN, *Fr.* an iron collar.

CARCASS, (*carcasse, Fr.*) a composition of combustibles. Carcasses are of two sorts, oblong and round: the uncertain flight of the first sort has almost rendered them useless. They are prepared in the following manner: boil 12 or 15lb. of pitch in a glazed earthen pot; mix with that 3lb. of tallow, 30lb. of powder, 6lb. of salt-petre, and as many stopins as can be put in. Before the composition is cold, the carcass must be filled; to do which, smear your hands with oil or tallow, and fill the carcass one third full with the above composition; then put in loaded pieces of gun or pistol barrels, loaded grenades, and fill the intervals with composition; cover the whole over with coarse cloth, well sewed together, keeping it in a round form. Then put it into the carcass, having a hollow top and bottom, with bars running between them to hold them together, and composed of four slips of iron joined at top, and fixed at the bottom, at equal distances, to a piece of iron which, together with the hoops, when filled, form a complete globular body. When quite finished and cold, the carcass must be steeped in melted pitch, and then instantly immersed in cold water. Lastly, bore three or four holes at top, and fill the same with fuze composition, covering the holes with pitch until used. Carcasses are thrown out of mortars, and weigh from 50 to 230lbs. according to the size of the mortars out of which they are to be thrown. There are other carcasses for the sea-service, which differ from a shell only in the com-

position, and in the 4 holes from which it burns when fired.

Oblong CARCASSES are obsolete in the British service, and the round carcasses are applicable for howitzers as well as mortars. The 13-inch round carcass weighs about 212lb. 10-inch 96lb. 8-inch 48lb. and 5½-inch 16lb. Carcasses are seldom or ever fired from guns and carronades in the land service, or in the sea service excepting in bomb vessels, and then only from mortars.

After the first invention of bombs, that of carcasses and grenades naturally followed. They are said to have been first used in 1594, and afterwards by the Bishop of Munster, at the siege of Groll, in 1672, where the Duke of Luxemburg commanded.

CARELET, *Fr.* See **SEMELLE**.

CARÈNE, *Fr.* all the parts of a ship under water.

CARIPI, a kind of cavalry in the Turkish army, which to the number of 1000 are not slaves, nor bred up in the seraglio, like the rest, but are generally Moors, or renegado Christians, who have obtained the rank of horse-guards to the Grand Signior.

CARMAGNOLE, *Fr.* a name given to the French soldiers who first engaged in the cause of republicanism. It comes from a place in Italy, situate in Piedmont, near the Po.

CARMINE, a bright scarlet colour which is used in plans of fortification, and serves to describe those lines that have mason work.

CARNAGE, (*carnage, Fr.*) the slaughter which takes place in consequence of a desperate action between two bodies of armed men.

CARNEY, a disease in horses by which their mouths become so furred and clammy that they cannot feed.

CARNOUSE, the base ring about the breech of a gun.

CAROLUS, a broad piece of gold of King Charles the First, made then for 20 shillings, and since current at 23.

CAROUSAL, (*Carrousel, Fr.*) in military history signifies a magnificent entertainment, exhibited by princes or other great personages, on some public occasion, consisting of cavalcades of gentlemen, richly dressed and equipped, after the manner of the ancient cavaliers, divided into squadrons, meeting in some public place, and performing jousts, tournaments, &c. It also signifies among

the French, from whom the term is taken, the place where tournaments, &c. were formerly exhibited. Thus the *Place Carrousel* in Paris, which is contiguous to the palaces of the Louvre and the Tuileries, was appropriated to this purpose as late down as the sixteenth century. According to Madame Genlis, this place received its appellation from the feasts and tournaments which were exhibited by order of Louis the XIVth, to please his mistress Madame de la Vallière.

CARQUOIS, *Fr.* a quiver.

CARRÉ, *Fr.* square.

CARREAU, *Fr.* in a military sense, the ground. *Coucher sur le carreau*, *Fr.* to lay low; to knock down.

CARREAU, *Fr.* a very ancient sort of arrow. The *carreau* was trimmed with brass instead of being feathered, and was thrown from a *balista*; whereas the arrow was trimmed with feather, and shot from a bow.

CARREAU, *Fr.* a square piece of stone which is broader upon the superficies of a wall than it is within.

CARREAU de plancher, *Fr.* clay made into different shapes and sizes, for the pavement of floors, &c.: as flat tiles, &c.

CARREAU de Hollande, *Fr.* Dutch tile.

CARREAUX, *Fr.* the bends, or wales of a ship.

CARREFOUR, *Fr.* a cross-way.

CARRELAGE, *Fr.* all works which are made of clay, stone, or marble, are distinguished under this term.

CARRELER, *Fr.* to pave or cover over with square tiles.

CARRIAGE-master-general, or wagon-master-general, an office of great trust and much labour. Amongst the Romans he was called *Impedimentorum magister*, the master of the impediments or hindrances in the wars.

CARRIAGES, in military affairs, are of various kinds, viz.

Ammunition Limber CARRIAGES have been constructed of late with four wheels, fitted up with boxes for the conveyance of ammunition, and to carry artillery men. This alteration, or rather improvement, possesses many advantages over the common ammunition wagon, which is calculated to carry ammunition only.

Garrison CARRIAGES are those on which all sorts of garrison pieces are mounted. They are made much shorter than field carriages. Those for land service are carried upon iron trucks,

and those for sea service upon wooden ones. Iron trucks however destroy the decks and platforms, which is the only objection against them. Travelling carriages for the natures of 24 and 12 pounders are used upon garrison service, or more particularly in the field, where platforms cannot be provided.

N. B. As the trucks of garrison carriages are generally made of cast-iron, their axle-trees should have copper clouts underneath, to diminish the friction of the iron against the wood.

Travelling-CARRIAGES are such as guns are mounted on for sieges, and for the field; they are much longer, and differently constructed from garrison-carriages; having 4 wheels, 2 for the carriage, and 2 for the limber, which last are only used on marches. Travelling carriages are in many respects very unfit for garrison service, though they are frequently used.

Field-CARRIAGES are both shorter and lighter than those before mentioned, bearing a proportion to the pieces mounted upon them. They consist of the natures of 24-pounders and 12-pounders, for iron guns, mostly used in the field against fortified places. The proper carriages under the denomination of field carriages are of the natures of 12-pounders medium and light, 9-pounders, 6-pounders heavy and light, 3-pounders heavy and light, 8-inch howitzers and 5½-inch heavy and light with limbers; the whole of which are now, upon the principle introduced into the service by General Lawson, of the Royal Artillery, constructed with block trails, and fitted with boxes upon the limbers to carry ammunition; upon which boxes the artillery men are usually seated, in order to accompany the brigades. The quantity of ammunition carried into the field with each nature of carriage is as follows, viz.

12-pounders	{	medium	12 rounds.
		light	12 do.
9-pounders			
6-pounders	{	heavy	48 do.
		light	48 do.
3-pounders	{	heavy	
		light	
8-inch howitzers		none.	
5½-inch	{	heavy	24 do.
howitzers		light	24 do.

Besides the proportion of ammunition which is carried in the limber boxes of the field carriages, there are cars or limber carriages upon a new principle,

loaded with ammunition to accompany each piece of ordnance. All the field pieces (except iron 24-pounders and 12-pounders) are elevated by means of a screw fixed in the carriages, between the cheeks, and to the breech of the guns, or howitzers. The iron 24-pounder and 12-pounder guns, as also the whole of the guns mounted upon garrison, or ship, carriages, are elevated by coils of wood, and not by screws.

Gallopers-CARRIAGES serve for $1\frac{1}{2}$ pounders. These carriages are made with shafts, so as to be drawn without a limber. The king of Prussia once mounted light 3-pounders on these carriages, which answered very well. This description of carriage is now obsolete in the British service.

Mountain-CARRIAGE, a carriage peculiarly constructed for the use of the artillery in mountainous countries.

Howitz-CARRIAGES are made on the same principle as field carriages, which see.

Tumbrel-CARRIAGE. See *TUMBREL*.

Block-CARRIAGE, a carriage which is made from a solid piece of timber, hollowed out so as to receive the gun or howitzer into the cap-squares; the lower part of the cap-square is let into the solid wood, and the gun or howitzer is either elevated or depressed by a screw, as in other carriages. The limber for this carriage carries two large chests for ammunition, and takes four men. The pintle of the limber is so constructed as to receive the gudgeon of the carriage; by which means a greater relief is afforded when the carriage passes over rough ground.

Block-CARRIAGES are also used by the horse artillery as carriages. They are particularly useful on service. The original inventor of them was the late General Sir William Congreve, R. A. to whom the Board of Ordnance was not a little indebted for many improvements, and of whose services the most unquestionable records are preserved.

Devil-CARRIAGES are carriages upon a very strong construction, with four wheels; the two hind wheels being very high, and the two fore, or limber wheels, being much smaller. These carriages are used for transporting heavy guns, which cannot be conveyed upon their own carriages. The garrison carriage of the gun, so carried, is placed upon the carriage in a very compact manner for travelling.

Platform-CARRIAGES are constructed with four wheels, having a platform fitted up to carry one heavy gun or mortar, with its carriage or bed, and is of a similar use with the devil-carriage.

Truck-CARRIAGES are to carry timber and other heavy burthens from one place to another, at no great distance: they serve also to convey guns or mortars upon a battery, whither their own carriages cannot go, and are drawn by men as well as horses.

Pontoon-CARRIAGES. Carriages of this kind are solely for transporting the pontoons; they had formerly but two wheels, but are generally now made with four. The making use of two-wheel carriages for travelling a great way, is contrary to sense and reason; because the whole weight lying upon the two wheels, must make them sink deeper into the ground than those of a four-wheel carriage.

Spare-Gun CARRIAGES have lately been introduced into the field artillery service, and independent of being spare gun carriages, are fitted up to carry spare wheels, with a proportion of tools and materials for a collar-marker and wheeler, who ride upon the carriage. One of these carriages is attached to each brigade of field ordnance.

CARRIER, a kind of pigeon, so called from its having been used in armies, to carry orders from one division of an army to another, or intelligence to some officer commanding a post, or army, at a distance.

CARRIÈRE, *Fr.* a large spot intended for tournaments, races, and other exercises; also a quarry.

Prendre CARRIÈRE, *Fr.* to commence the full speed at which cavalry charge.

M. de Folard says, that the cavalry is to start (*prendre carrière*) from sixty paces distance to charge the enemy.

CARRONADE, a very short piece of iron ordnance, originally made at Carron, a river in Scotland, from whence the Carron company, or foundery, derives its name.

It is different from ordnance in general, having no trunnions, and being elevated upon a joint and bolt. The length of the calibre seldom exceeds three feet; on which account a thin projection of metal is cast upon the muzzle, to carry the explosion of the charge more clear of the sides and rigging of ships. All carronades have chambers, and much less windage than

guns, by which means they make a considerable range, and a recoil that is almost ungovernable.

To CARRY, to obtain possession of by force; as, To carry the outworks.

To CARRY ON, in a military sense to prosecute, to continue, as *to carry on the war*.

CART, (*chariot*, Fr.) a vehicle mounted on two wheels, and drawn by one or more horses; of which there are several sorts, viz.

Ball Cartridge CARTS, constructed to draw with two horses abreast. They are common sized carts with sides, which let down occasionally, and have wooden tops, covered with canvass, for the security of the ammunition. Each cart will contain 11,000 ball cartridges, and 1000 flints in eleven half barrels.

Forge-CARTS, or *Forge-WAGONS*, are travelling machines fitted up for the purpose of assisting the artillery in the field, and in repairing or replacing any iron work, when no other means can be obtained. Each cart, or wagon, has four wheels—the hind part of the carriage has a body in which a pair of small bellows are fixed. In the front of the body are a fire place, and a trough for carrying coals and water. There is also a box at the hind part of the cart for carrying the smith's tools. The two front wheels are merely a limber for the support of the body of the cart, which limber is generally taken off, and the body supported by a prop, when the cart is in actual use.

Powder-CARTS, for carrying powder with the army; they are divided into 4 parts, by boards of an inch thick, which enter about an inch into the shafts. Each of these carts can only stow 4 barrels of powder. The roof is covered with an oil-cloth, to prevent dampness from coming to the powder. These carts are not at present used in the British service.

Sling-CARTS have two strong wheels fitted up with rollers, pall, handspikes, and ropes, and are used to carry mortars or heavy guns from one place to another at a small distance, but chiefly to transport guns from the water-side to the proof-place, and from thence back again; as also to convey artillery to the batteries in a fortification, &c.

Tumbrel-CARTS are carts with two wheels, and square bodies, with a canvass painted top, for the conveyance of

ammunition. These carts are not much used in the field artillery service.

Hand-CARTS are low small carts with two wheels and iron arms.

Trench-CARTS are precisely upon the same principle with hand-carts, excepting that they have wooden axles, and are calculated to carry heavier weights. They are found to be useful in carrying mortars and their beds, ammunition, &c.

CARTE is a thrust with a sword at the inside of the upper part of the body, with the nails of your sword hand upward. *Low carte* is a thrust at the inside of the lower half of the body; the position of the hand being the same as in the former.

CARTE also signifies *bill of fare*, such as is given at a tavern.

CARTE-blanche, Fr. a full and absolute power which is lodged in the hands of a general of an army, to act according to the best of his judgment, without waiting for superior instructions, or orders. It likewise strictly means a blank paper: a paper to be filled up with such conditions as the person to whom it is sent thinks proper.

CARTE détaillée d'un pays, Fr. a correct drawing of a country, so that all its various localities may be seen with a bird's eye view.

CARTEL, in military transactions, an agreement between two states at war for the mutual exchange of prisoners.

CARTEL, Fr. a challenge or rendezvous given by two persons whose intentions are to fight.

CARTOUCH, a case of wood about 3 inches thick at bottom, bound about with marline, holding about 400 musket-balls, besides 3 or 10 iron balls of a pound each, to be fired out of a howitzer, for the defence of a pass, &c. Cartouches with musket-balls are at present not much used in the British service. See GRAPE SHOT.

CARTOUCHE, Fr. a charge; a cartridge.

CARTOUCHE, Fr. in geographical, or topographical, design, a particular species or mode of sketching out with a crow's quill, and with Indian ink. This sketch is made on the left of one of the lower angles; and if there be two sketches, the least of the two is always on the right.

CARTOUCHE *infumante*, CARTOUCHE *jaune*, Fr. a discharge given to a soldier in the French service in consequence of

his being rendered unworthy to carry arms, after having been degraded and punished. It is printed on yellow paper.

CARTOUCHES, in artillery, are made of leather, to sling over the shoulder of the gunner, who therein carries the ammunition from the magazine or wagon, for the service of the artillery, when at exercise or real service.

CARTOUCHES, ou formules, Fr. military passes which were given to soldiers going on furlough.

CARTOUCHIER, ou Portc-Cartouche, Fr. a cartridge-box.

CARTRIDGE, a case of paper, parchment or flannel, fitted to the bore of the piece, and holding exactly its proper charge. Musket and pistol cartridges are always made of strong paper; between 30 or 40 of which are made from 1 pound of powder, including their priming. The French musket ball-cartridges are capped with flannel or coarse cotton.

CARTRIDGES for heavy guns are now partly made of cured paper only, and partly of cured paper with flannel bottoms. Those for field ordnance are all made of flannel, and their nature and size suited to the bore, or chamber of pieces for which they are intended.

CARTRIDGES for small arms. The ball cartridges for wall pieces, muskets, carbines and pistols are made of whited brown paper, on formers of wood. One sheet of paper will make 6 for wall pieces, 12 for muskets, sixteen for carbines, and 24 for pistols. The quantity of powder contained in the above cartridges is, for wall pieces, 10 drams, musket 6, carbine 4, and pistol 3 drams. Blank cartridges for muskets, carbines, and pistols are made of blue paper, to preserve a distinction between ball and blank, and to prevent the possibility of accidents happening from the ball cartridges being mixed with the blank.

CARTRIDGE-Box, a case of wood carried by a soldier, which contains his several rounds of ball, or blank, cartridges. When firelocks were first used, cartridge boxes were introduced instead of the bandeoleers; the imperfections of which are fully stated by Lord Orrery. See **Pouch**.

CASAQUE, Fr. a kind of coat that does not sit so tight as the common coat. This was formerly the regimental dress of the French troops, and as each

company wore a *casaque* of a particular colour, it was easily known at once what company the delinquent belonged to. When the *casaque* was abolished, scarfs of different colours were introduced in lieu of it.

CASCADE, Fr. This literally means a water fall; a cascade. In mining, it signifies the several descents or ascents which are made. Hence *Cheminer par cascades*, to make way by intermediate descents, or ascents.

CASCANS, (*cascans*, Fr.) holes in the form of wells, serving as entrances to galleries, or giving vent to the enemy's mines. See **FORTIFICATION**.

CASEMATE, in fortification, a vault, or arch of mason-work, in that part of the flank of a bastion which is next the curtain, made to defend the ditch, and the face of the opposite bastion. See **FORTIFICATION**.

CASEMATES nouvelles, Fr. arched batteries which are constructed under all the openings of revetments, or ramparts. The different forts at Cherbourg are defended by these casemates: the works which have been thrown up during the late war round Dover Castle, come likewise under the description.

CASERNER une troupe, Fr. to put a troop into barracks.

CASERNES, in fortification, large buildings for the soldiers of the garrison to live in; generally erected between the houses of fortified towns, and the rampart.

CASERNES, in a general acceptation, signify barracks.

CASE-Shot. See **SHOT**, and **LABORATORY**.

Spherical CASE-Shot. See **SPHERICAL** or **SHRAPNEL**.

CASES of wood are made of wood, the exact size of the different natures of cartridges of powder, for the purpose of carrying the cartridges from the magazine, with safety, to the guns, either in batteries or on board of ship. There are also a number of square deal cases used in packing laboratory stores.

CASHEERING, or, as now generally spelt, *Cashiering*, from the French *Casser*, to break, signifies a dishonourable dismissal of an officer, or soldier. In the case of an officer this punishment admits of four degrees.

The first is simply a dismissal from his employment; the commander-in-chief, or the secretary at war, (should

the former be out of office,) signifying by a letter to him that the king has no further occasion for his services; or by the sentence of a court-martial.

The second mode, which first occurred in 1800, when seven officers belonging to the 85th regiment of foot were dismissed without a trial, is called displacing; by which an officer is dismissed from some particular regiment.

The third is dismissing an officer from the service, and rendering him incapable of serving for the future in any military capacity.

The fourth is dismissal with infamy, and degradation from the rank of a soldier and a gentleman, as was the case of a member of parliament when colonel of a militia regiment.

CASK, or CASQUE, the ancient helmet or armour for the head.

CASSETTE, *Fr.* casket; also privy purse, as *la CASSETTE du Roi*, the King's privy purse.

CASSI-*Ascher*, the provost marshal in a Turkish army.

CASSINE, *Fr.* a house surrounded by a ditch. Cassines are very convenient to post small parties in, where they will be sheltered from any sudden attack, and will even make head till the nearest detachments can come and relieve them.

CASSIONS. See CAISSONS.

CASSIS, *Fr.* casque, or helmet.

CASTELLATED, (*entouré*, *Fr.*) enclosed within a building.

CASTILLE, *Fr.* a term formerly used to signify the attack of a tower or castle. It also became a species of military amusement, in which the combatants threw snow-balls at one another. In 1546, a difference took place among the sbain-fighters at *Roche-Guyon*, and rose to such a pitch, that the Duke D'Engbien lost his life in the struggle. This event put an end to the game of Castille, as did the melancholy fate of Henry the Third of France to tournaments.

CASTING, in founding guns, implies the operation of running any sort of metal into a mould prepared for that purpose.

CASTLE, a fortified place, or strong hold, to defend a town or city from an enemy. Castles are for the most part no higher in antiquity than the conquest; or rather about the middle of king Stephen's reign. Castles were erected in almost all parts of the king-

dom, by the several contending parties; and each owner of a castle was a kind of petty prince, coining his own money, and exercising sovereign jurisdiction over his people. History informs us that 1017 castles were built in this reign.

The CASTLE, a figurative name for a close head-piece, deduced from its inclosing and defending the head, as a castle did the whole body; or a corruption from the old French word *casquelet*, a small or light helmet.

CASTRAMETATION is the art of measuring, or tracing out, the form of a camp on the ground; yet it sometimes has a more extensive signification, by including all the views and designs of a general; the one requires only the knowledge of a mathematician, the other the experience of an old soldier. The ancients were accustomed to fortify their camps by throwing up entrenchments round them. The Turks, and other Asiatic nations, fortify themselves, when in an open country, with their wagons and other carriages. The practice of the Europeans is quite different; for the surety of their camp consists in the facility and convenience of drawing out their troops at the head of their encampment; for which reason, whatever particular order of battle is regarded as the best disposition for fighting, it follows of course, that we should encamp in such a manner as to assemble and parade our troops in that order and disposition as soon as possible. It is therefore the order of battle that should regulate the order of encampment; that is to say, the post of each regiment in the line of battle should be at the head of its own encampment; from whence it follows, that the extent of the line of battle from right to left of the camp should be equal to the front of the troops in line of battle, with the same intervals in the camp as in the line. By this means every battalion covers its own tents, and the soldiers can all lodge themselves, or turn out in case of necessity, at a minute's warning.

If the front of the camp is greater than the line, the troops must leave large intervals, or expose their flanks; if less, the troops will not have room to form with the proper intervals.

The front or principal line of the camp is commonly directed to face the enemy. See CAMP.

CASUALS, a term sometimes adopted

in the general and regimental returns of the British army, signifying men that are dead, (since first enlisted,) that have been discharged, or have deserted. The term *casualties* is more generally used, and is certainly more correct.

CAT, CATTUS, or GATTUS, also CAT-HOUSE, a covered shed, occasionally fixed on wheels, and formerly used for covering soldiers employed in filling up the ditch, preparing the way for the moveable tower, or mining the wall. It was called cat, because under it soldiers lay in watch, like a cat for its prey.

Castellated CATS, cats that had crenelles or loop-holes, whence the archers could discharge their arrows. Sometimes under the cover of this machine, the besiegers worked a small kind of ram.

CAT *o' nine tails*, a whip with nine knotted cords, with which the British soldiers and sailors are punished. Sometimes it has only five cords.

To *Comb the CAT*, a term used among sailors and soldiers, signifying to arrange the different cords of a cat *o' nine tails* so as to make them more uniform. This is done by untangling them, and drawing the whole through the fingers.

CATACOMBS, grottoes, or subterranean places for the burial of the dead; also divisions in a cellar to stow wine, &c. in.

CATADROME, an engine like a crane, used by builders in lifting up and letting down any great weights.

CATAFALCO, in military architecture, a scaffold of timber, decorated with sculpture, painting, &c. for supporting the coffin of a deceased hero, during the funeral solemnity.

CATAMARAN, a sort of floating raft, originally used in China, and among the Portuguese as a fishing boat. The Catamarans in India consist of two logs of wood upon which the natives float, and go through the heaviest surf to carry or bring letters on shore.

This name has also been given to a case filled with combustibles, and contrived to remain so low in the water as to be almost imperceptible. This being towed to the building, or ship, against which the attack is to be directed, is left to explode by means of machinery within itself, when its operation is sometimes very destructive.

CATAPHRACT, the old Roman term for a horseman in complete armour.

CATAPHRACTA, in the ancient military art, a piece of heavy defensive armour, formed of cloth or leather, fortified with iron scales or links, where-with sometimes only the breast, sometimes the whole body, and sometimes the horse too was covered.

CATAPHRASTARI, horsemen in the Roman army.

CATAPULTA, in military antiquity, an engine contrived for the throwing of arrows, darts and stones, upon the enemy. Some of these engines were so large and of such force, that they would throw stones of an hundred weight. Josephus takes notice of the surprising effects of these engines, and says, that the stones thrown out of them beat down the battlements, knocked off the angles of the towers, and had force sufficient to level a very deep file of soldiers.

CATATROME. See CRANE.

CATEJA, a kind of arrow formerly in use amongst the Teutonians and the Gauls, made of very heavy wood.

CATELLA, a small chain which the Romans used to wear about their necks: a part of the military recompenses.

CATERVA, among ancient military writers, a term used in speaking of the Gaulish or Celtiberian armies, denoting a body of 6000 armed men. The word is also used to denote a party of soldiers in disarray; in opposition to *cohort* or *turma*, which signifies in good order.

CATHETUS, in geometry, a perpendicular, or a line, or radius falling perpendicularly on another line or surface.

CATHOLES, holes above the gun-room port, through which a ship may be heaved astern.

CATOPTRICS, the science of reflex vision, or that branch of optics, which treats of, or gives the laws of light reflected from mirrors, &c.

CAVALCADE, a pompous procession of horsemen, equipages, &c. by way of parade, to grace a triumph, public entry, or the like.

CAVALIER, *Fr.* a horseman.

CAVALIER, a work raised within the body of the place, 10 or 12 feet higher than the rest of the works.

Trench-CAVALIER, (*cavalier de tranchée*, *Fr.*) in the attacks, is an elevation which the besiegers make by means of earth or gabions, within half-way, or two thirds of the glacis, to discover, or to enfilade the covert way.

CAVALOT, *Fr.* an ancient piece of ordnance about 5 French feet in length, carrying about 8 or 900 paces, and generally loaded with a ball of 1 pound weight, and a pound of gunpowder.

CAVALQUET, *Fr.* a particular sound of the trumpet which is used among the French, when troops of horse come near, or pass through, a town.

CAVALRY, that body of soldiers which serves and fights on horseback. Under this denomination are included

Horse, that is, regiments or troops of horse. In England there are, the Horse-guards, commonly called the *first and second regiments of life guards*, and the *Oxford blues*; formerly there was the *royal regiment of horse grenadier guards*, which is now reduced. The first troop of horse was raised in 1660.

Dragoons, which are likewise regiments of horse, but distinguished from the former by being obliged to fight both on foot and on horseback. In England there are 7 regiments of dragoon-guards, 5 regiments of dragoons, and 19 regiments of light dragoons. The first regiment of dragoons was raised in 1681.

Light-horse, regiments of cavalry, mounted on light, swift horses, whose men are of a middling stature, and lightly accoutred. They were first raised in 1757.

Hussars, properly Hungarian horse. Their uniform is a large furred cap, adorned with a cock's feather; those of the officers, either with an eagle's or a heron's; a very short waistcoat, with a pair of breeches and stockings in one; short light boots, generally of red or yellow leather; with a curious doublet, having five rows of buttons, which hang loosely on the left shoulder. Their arms are a long crooked sabre, light carbines, and pistols. Most of the German powers have troops under this name, and so has France; into which country they were originally introduced under Louis the XIII. and were called Hungarian cavalry. There are also several regiments of hussars in the British service.

CAUDINE Forks, (*Fourchettes Caudines*, *Fr.*) from the Latin *Caudina Furca*; projecting or forky hills, near Caudium, in the country of the Samnites, where the Roman army was defeated under Titus Veturius and Sp. Posthumius, and the prisoners, after

having been stripped to the waist, were disgracefully passed under the yoke, and sent back to Rome. Bonaparte, in his address to his army, previous to the battle of Waterloo, made a pointed allusion to this event. For the Roman particulars see Livy, lib. ix. cap. v.

CAVEATING, in fencing, implies a motion whereby a person in an instant brings his sword, which was presented to one side of his adversary, to the opposite side.

CAVESSON, *Fr.* an iron instrument fixed to the nostrils of a horse, to curb, or render him manageable, through the pain it occasions.

CAVIN, in military affairs, implies a natural hollow, sufficiently capacious to lodge a body of troops, and facilitate their approach to a place. If it be within musket-shot, it is a place of arms ready made, and serves for opening the trenches, free from the enemy's shot.

CAVIN, *Fr.* in fortification, a hollow way which runs round the works of a fortified place, and which answers the purpose of a trench.

CAUTION, an explanation given previous to the word of command, by which the soldiers are called to attention, that they may execute any given movement with unanimity and correctness.

CAZEMATTE, (*Cazamates*,) *Place basse* or *Flanc bas*. See **CASEMATE**.

CAZEMATE. See **CASEMATE**.

CAZERNES, *Fr.* See **CASERNES**.

CEILING, the upper part or roof of a lower room, or a lay or covering of plaster over laths nailed on the bottom of the joists, which bear the floor of the upper room, or on joists put up for that purpose.

CEILING joists or *beams*, joists put up for the purpose of having laths nailed to them, which are to be plastered over, for a ceiling.

CEINTRE, *Fr.* wooden arch to build vaults upon.

CEINTURE, *Fr.* inclosure, cincture; any continuity of wall which surrounds a place. Ceinture also signifies the ring or circle which goes round the top, or base of a column.

CEINTURE militaire, *Fr.* a broad leathern belt which is worn round the waist, and is ornamented with gold or silver plates.

CEINTURON, *Fr.* sword-belt.

CELERES. The life-guards which at-

tended Romulus, in the infancy of Rome, were so called. They were laid aside by Numa Pompilius. Celeres are properly distinguished from other troops, by being lightly armed and acting always on foot. The Celeres cannot be considered under the same head as Velites.

CEMENT, } in the general sense of
CÆMENT, } the word, signifies any composition of a glutinous or tenacious nature, proper for binding, uniting, and keeping things in a state of cohesion.

CEMENT, in architecture, is a strong sort of mortar used to bind or fix bricks or stones together for some kind of mouldings; or in cementing a block of bricks for the carving of capitals, scrolls, or the like.

CENDRÉE de Tournai, Fr. In the neighbourhood of Tournay there is a particular hard stone from which lime of a most excellent quality may be made. After it has been some time in an oven or furnace, it breaks into small particles which drop through the grate, and being mixed with the ashes, it forms what is called *Cendric de Tournai*; and is sold as soon as it can be collected together.

CENOTAPH, a monument erected to the honour of a person, without the body of the deceased being interred in or near it.

CENSURE, correction, reflection, reproof. Hence vote of censure.

CENTENIER, Fr. the chief, or captain of a troop or company which consists of 100 men.

CENTER, } in a general sense, sig-
CENTRE, } nifies a point equally distant from the extremities of a line, surface, or solid. See **FORTIFICATION**.

CENTER of attack, (*centre d'attaque*, Fr.) when a considerable front is taken before a besieged place, and the lines of attack are carried upon three capitals, the capital in the middle, which usually leads to the half-moon, is styled the *center of attack*.

CENTER of a battalion, on parade, is the middle, where an interval is left for the colours; of an encampment, it is the main street; and on a march, is an interval for the baggage; when it is so placed.

CENTER of a bastion is a point in the middle of the gorge of the bastion, from whence the capital line commences, and which is generally at the inner polygon of the figure.

CENTER of gravity, in mechanics, is

that point about which the several parts of a body exactly balance each other in any situation.

CENTER of a conic section is a point where all the diameters meet.

CENTER of an ellipsis is that point where the transverse and conjugate diameters meet.

CENTER of motion, (*centre de mouvement*, Fr.) is that point which remains at rest while all the other parts of the body move about it.

CENTER of percussion, (*centre de percussion*, Fr.) is that point in which the force of the stroke is the greatest possible. When the moving body revolves round a fixed point, the center of percussion is the same with the center of oscillation, and found by the same method: but when the body moves in a parallel direction, the center of percussion is the same with the center of gravity.

CENTER in geometry, that point which is exactly in the center of a regular figure. For instance, the *center of the circle* is a point from whence all the straight lines that are equal within themselves are severally drawn. The *center of a regular polygon* is a point, whose lines being drawn to the angles of the polygon are equal within themselves. The same holds good with respect to the *center of a square*, or of a *right angle*. The regular solids, as the globe or sphere and the polyhedra, have also their several centers.

CENTESIMATION, in ancient military history, a mild kind of military punishment, in cases of desertion, mutiny, and the like, when only every 100th man was executed.

CENTINEL, } is a private soldier,
CENTRY, } from the guard, posted upon any spot of ground, to stand and watch carefully for the security of the said guard, or of any body of troops, or post, and to prevent any surprize from the enemy. All centinels are to be very vigilant on their posts; they are not to sing, smoke, or suffer any noise to be made near them. Neither are they to sit down, lay their arms out of their hands, or sleep; but keep moving about their posts during the two hours they stand, if the weather will allow of it. No centry to move more than 50 paces to the right, and as many to the left of his post; and let the weather be ever so bad, he must not get under any

other cover, but that of the centry-box. No centry can be allowed to go from his post without leave from his commanding officer; and, to prevent desertion or marauding, the centries and vedettes must be charged to let no soldier pass.

CENTINEL *perdu*, Fr. a soldier posted near an enemy in some very dangerous post, where he is in perpetual danger of being shot or taken.

CENTRY-box, a sort of wooden box, or hut, to shelter the centinel from the injuries of the weather; but in fortifications made of masonry, they are of stone, in a circular form.

CENTURION, a military officer among the ancient Romans, who commanded an hundred men. The term is now obsolete.

CENTURY, in a military sense, means an hundred soldiers, who were employed in working the battering-ram.

CEPS, *Fr.* stocks, fetters. It also means a trap.

CEPS de Cæsar, *Fr.* Cæsar's trap. A stratagem which was used by Julius Cæsar in one of his campaigns, and was called *Ceps de Cæsar*, from the snare into which the enemy was led. Being solicitous to draw their forces towards Alexia, he made an avenue through a forest, which seemed to be the only pass through which his army could possibly move. They gave into the snare, and eagerly pursued Cæsar into the forest. The latter, however, had had the precaution to order a great number of trees on each side to be sawed within three inches of the ground, and round their several trunks there were various pieces of wood and branches, spread in such a manner, that the soldiers could not pass without being tripped up, and the road consequently choked.

CERAMICUS, a place so called in Athens, surrounded with walls, and where the tombs and statues of such men as had died in fighting for their country were to be seen. Divers inscriptions in praise of them bore testimony of their exploits.

CERCLE, *Grand Cercle*, *Fr.* a form observed under the old government of France, by which it was directed, that every evening, at a specific hour, the serjeants and corporals of a brigade should assemble to receive orders; the former standing in front of the latter. Subse-

quent to the *grand cercle*, a smaller one was made in each regiment, when general or regimental orders were again repeated to the serjeants of each corps, and from them communicated to the officers of the several companies.

CERCLE meurtrier, *Fr.* a large flat piece of iron, one inch thick, which is made red hot, and thrown at the assailants.

CERCLES goudronnés, (*pitched hoops*.) Old matches, or pieces of old cordage, dipped into pitch or tar, and made in the shape of a circle, which are placed on chafing dishes to light the garrison of a besieged town or post.

CERCLES à feu, *Fr.* two, three, or four hoops tied together with wire, and all around which are fixed grenades, loaded pistol-barrels, crackers, pointed pieces of iron, &c. The whole is covered with tow and fire-work: these hoops are then driven across the works of the besiegers: they are likewise used to oppose an assault; in which case they are called *couronnes foudroyantes*.

CERNER, *Fr.* to surround.

CERNER un ouvrage de fortification, *Fr.* to surround any particular part of a fortification, troop, or company.

CERTIFICAT, *Fr.* See CERTIFICATE.

CERTIFICATE, a testimonial bearing witness to the existence of some requisite qualification, or to the performance of some act required by the regulations of the army, and for which the officer who signs is responsible, whether he certifies for himself, or for any other officer.

Military CERTIFICATES are of various denominations, and consist chiefly of the following kinds, viz.

Certificate from a field officer to the commander in chief, affirming the eligibility of a young man to hold a commission in his Majesty's service. See printed forms at the Military Library, Whitehall.

Certificate of the officer upon honour, that he does not exceed the regulation in the purchase of his commission.

Certificate from a general officer to affirm and prove the losses which officers may sustain in the field.

Certificate from colonels of regiments to the board for admission of proper objects to the Hospital at Chelsea.

Certificate from a magistrate to iden-

tify the person of a recruit, and to affirm, that he has enlisted himself voluntarily into the service: likewise, that the Articles of War have been read to him.

Certificate from regimental surgeons, whether men when they join are proper and fit objects to be enlisted; ditto to be discharged.

Certificate of commanding officers for stores, &c.

Certificate to enable an officer to receive his half-pay.

Certificate of surgeons and assistant surgeons, to prove their having passed a proper examination.

Certificate from the Medical Board to ascertain the nature of an officer's wounds, enabling him to receive a year's pay for the same, or a pension, as the case may be.

CERVELLE, *Fr.* literally the brain. See *MINE sans cervelle*.

CERVELLE, *Fr.* This word is applied to such earth, in digging a ditch, a well, or a gallery for a mine, that is not sufficiently firm to support itself, but must be upheld above, and sustained on the sides. Whence *terre sans cervelle*, which literally means earth without brains.

CERVELIER, *Fr.* a kind of helmet to protect the head.

CESSATION, or *cessation of arms*, in a military sense, means a truce, or the total abrogation of all military operations for a limited time. When a town is so closely besieged that the governor must either surrender, or sacrifice himself, his garrison and inhabitants to the enemy, he plants a *white flag* on the breach, or beats the *chamade* to capitulate, when both parties cease firing.

CESTUS, a thick leathern glove, covered with lead, which the ancient pugilists used in the course of their various exercises, and especially when they fought for the prize of pugilism. The Greeks had four different sorts of Cestuses. The first, which was called *imantes*, was made of the hide of an ox, dried but not dressed. The second, called *myrmecas*, was covered with metal. The third, named *meliques*, was made of thin leathern thongs; and did not cover either the wrist or fingers. The fourth, which was called *sphoeroe*, is the thick glove which we have mentioned.

CESTROSPONDONUS, a dart, that received its appellation from the sling, from which it was thrown: it was pointed at both ends.

CETRA, a small and very light shield made of the hide of an elephant, in use amongst the Africans and Spaniards.

CHABLEAU, *Fr.* a middle-sized rope which is used to draw the craft up a river.

CHABLIS, *Fr.* wind-fallen wood.

CHACE of a gun generally means the whole length of it. See *CANNON*.

CHAFFERY, that part of the foundry where the forges are placed for hammering iron into complete bars.

CHAIN for engineers is a sort of a wire chain divided into links of an equal length, made use of for setting out works on the ground, because cords are apt to shrink and give way.

There are several sorts of chains made use of in measurement; as Mr. Rathbone's, of two perches in length: others one perch long; some of 1000 feet in length; but that which is most in use amongst engineers is Mr. Gunter's, which is 4 poles long, and contains 100 links, each link being $7\frac{23}{100}$ inches in length.

CHAIN-shot. See *SHOT*.

CHAINS of iron used across streets. In times of war, or civil dissension, the streets of towns have been often defended by iron chains drawn across them. These chains were attached to portable machines, by which the avenues of towns and villages are barricaded.

CHAINE, ou *enceinte, d'un fourrage*, *Fr.* a body of armed men thrown round the place where corn and hay are gathering for the use of an army, to protect the foragers against the attacks of the enemy.

CHAINE de *quartiers*, *Fr.* a regular chain or communication which is kept up between towns, villages, &c. for the safety of an army.

CHAINE, *Fr.* in masonry, a height or elevation which contains several layers or courses of bricks or rubble throughout the thickness of walls; also a corbel of stone-work.

CHAINE d'*arpenteur*, *Fr.* a surveyor's line, or measure.

CHAINEAU, *Fr.* pipe of a lead.

CHAINES de *pierres*, *Fr.* in the construction of walls made of rubble, coins, or basing stones, which are laid upright at given distances, in order to support them.

CHAISE, *Fr.* four pieces of strong timber united and put together for the

purpose of supporting any particular weight, as the bottom of a wind-mill, &c.

CHALLENGE, a cartel, or invitation to a duel, or other combat.

CHALLENGE is also a term applied to an objection made against any member of a court-martial, on the score of real or presumed partiality. The prisoner, however, in this case, must assign his cause of challenge; of the relevancy, or validity of which the members are themselves the judges; so that peremptory challenges, though allowed in civil cases, are not acknowledged in military law. The privilege of challenging belongs equally to the prisoner and the prosecutor.

CHALOUPE, *Fr.* a small vessel which is capable of accompanying ships, or of making short sea voyages.

CHAMADE, in a military sense, means a signal made by the enemy, either by beat of drum, or sound of trumpet, when they have any matter to propose; such as to bury their dead, &c. See **PARLEY**.

CHAMAILLER, *Fr.* to fight at close quarters, or hand to hand, in full armour.

CHAMBER of a cannon, mortar, &c. the space where the powder lies, and is much narrower than the rest of the cylinder. These chambers are of different forms.

CHAMBER of a mine, that place where the charge of powder is lodged, to blow up the works over it. It is generally of a cubical form. See **MINE**.

CHAMBER of a battery is a place sunk under-ground for holding powder, loaded shells, and fuzes, where they may be out of danger, and preserved from rain or moisture.

CHAMBRE, *Fr.* chamber, signifies among the French a hollow space or chasm which is sometimes discovered in pieces of ordnance after they have been cast. Whenever this happens, the piece is condemned.

This term is now used to express the bottom part of the bore of a gun, womb of a mortar, or barrel of a musket which is *concave*, and either *round* or *oval*.

CHAMBRE de port, *Fr.* a French scattern, signifying that part of a harbour which is most retired, as an inward bason, a back-water, and where ships may be repaired and careened, &c. It is also called *darsine*.

CHAMBRE d'écluse, *Fr.* a sort of canal, or reservoir of water, which remains between the two flood-gates of a dam:

CHAMBRÉE, *Fr.* a military phrase among the French, to signify several persons lodged in the same room, barrack, or tent.

CHAMFRAIN, *Fr.* an armour used to protect the horse: it was made either of metal or of boiled leather, and covered the front part of the animal's head, in the shape of a mask. A round, sharp pointed piece of iron was fixed on the center of it. The *chamfrain* of the Comte de Saint Pol, (1449,) at the siege of Harfleur, under Charles VII. was valued at 30,000 crowns of the then currency; that of the Count de Foix, at the taking of Bayonne, was worth 15,000 gold crowns.

CHAMP CLOS, *Fr.* camp list, in the first centuries and even long after, was a privileged spot, granted by royal assent, under the authority of the laws of the country, where such individuals who had a difference or an affair of honour to settle, were admitted to private combat. The place allotted for tournaments was also called *Champ clos*.

CHAMP de bataille, *Fr.* field of battle; the ground on which two armies meet.

CHAMP de Mars, *Fr.* the Field of Mars, an open place in the neighbourhood of Paris, where troops were frequently reviewed by the kings of France, and in which the public festivals have been observed since the Revolution.

CHAMPION, he who undertook to settle the difference of contending armies, by single combat. A warrior who fights in support of a cause, whether his own or another person's.

It is likewise an honorary title which descends to the male issue of a particular family in England. The champion of England is drunk to at every coronation, and receives a golden cup from his new sovereign.

CHAMPION, *Fr.* champion. Among the French, this word signifies a brave soldier, or military man.

CHANDELIERS, in military affairs, constitute a kind of movable parapet, consisting of wooden frames, on which fascines are laid to cover the workmen when at work on the trenches. They are made of various sorts and sizes.

CHANFREIN, *Fr.* shafferoon; a piece of black cloth, or black nodding plumes upon a horse's forehead. It also

signifies the forehead itself; also a set of feathers for a horse on a solemn day.

CHANFREIN *de cheval d'armes*, Fr. the front-stall, head-piece, or forehead-piece of a barbed horse.

CHANFRON, CHAMFREIN, or SHAFFRON, armour for a horse's head.

CHANGE, Fr. a word given when troops are on a march, directing the men to shift the firelock from one shoulder to the other; sloping arms.

CHANTE-pleure, Fr. an outlet made in the wall of a building which stands near a running stream, in order to let the water that overflows pass freely in and out of the place.

CHANTIER, Fr. a timber-yard; it also signifies the scaffolding in a dock-yard upon which shipwrights work.

CHANTIER, Fr. a square piece of wood, which is used for the purpose of raising any thing. It serves to place barrels of gunpowder in a proper manner, and frequently to try pieces of ordnance instead of frames.

CHAPE, the metalline part put on the end of a scabbard, to prevent the point of the sword or bayonet from piercing through.

CHAPE, Fr. a barrel containing another barrel, which holds gunpowder. It likewise means a composition of earth, horse-dung, and wad, that covers the mouth of a cannon, or mortar.

CHAPELET, Fr. a piece of flat iron with three tenons or ends of timber, which is fixed to the end of a cannon.

CHAPELET *de fer*, Fr. iron hat, or chaplet.

CHAPERON, Fr. a cap with a pad, and a pointed tail hanging behind, in use only a few centuries back. These caps were made of different sorts of stuffs, and of two different colours. At the time of the famous League, which ended when *Henry of Navarre* mounted the French throne, the opposite factions were distinguished by the colour of their *chaperons*. The same had taken place at the time of the disturbances between the Dukes of Orleans, or Burgundy, and of Armagnac.

CHAPERON, Fr. a pistol holster.

CHAPITEAUX, Fr. two small boards which are joined together obliquely, and serve to cover the touch-hole of a piece of ordnance.

CHAPLAIN, (*chapelain*, Fr.) he that performs divine service in a chapel; a clergyman that officiates in domestic worship.

CHAPLAIN-General, a situation made out by order of the Duke of York, when commander in chief, for the government of brigade and regimental chaplains. The chaplain general is responsible to head-quarters for the recommendation and good conduct of all such persons.

CHAPLAINSHIP, (*chapelainic*, Fr.) the office or business of a chaplain; also the possession or revenue of a chapel.

CHAR, } a job, or small piece of
CHARE, } work; hence, chare-woman; also an old word for chariot, now called car.

CHARACTER, in a general sense, implies any mark used for representing either ideas, or objects.

Military CHARACTERS, } are
Mathematical CHARACTERS, } certain marks invented for avoiding proximity, and more clearly conveying the thoughts of the learned in those sciences; the chief of which are as follow:

+ is the mark of addition, and when placed between two numbers, shews that the latter is to be added to the former, thus $5+3=8$ is five, add three, make eight.

— is the mark of subtraction, thus: $5-3=2$ is from five, take three, there remain two.

The qualities called negative, are those which have the mark — before them without any preceding number; but such a mode of writing is asserted by Mr. Baron Meseres, in his use of the negative sign, and by Mr. Frend, in his excellent Treatise on Algebra, to be neither useful nor proper.

+ in algebra is the sign of the real existence of the quality it stands before, and is called an affirmative, or positive sign. It is also the mark of addition, and signifies, that the numbers, or quantities on each side of it are added together.

— this is the note of negation, negative existence, or non-entity. It is the sign of subtraction, and signifies that the numbers, or quantities which come after it, are to be taken from the numbers, or quantities which stand before it.

N. B. + signifies a *positive* or *affirmative* quantity, or *absolute* number; but — signifies a *fictitious* or *negative* number or quantity. Thus — 8, is 8 times less than nothing. So that any number or quantity, with the sign \times being added to the same number, or

quantity with the sign $-$, their sum will be equal to nothing. Thus 8 added to $- 8$ is equal to 0, but $- 8$ taken from $\times 8$, is equal to 16.

\times is the sign of multiplication. It signifies *into*, or *multiplied by*.

\div is the mark of division, and signifies, that the numbers, or quantities before it are to be divided by the numbers after it.

$=$ are the signs of equality, and signify, that the quantities and numbers on the one side of it are equal to the quantities and numbers on the other.

\surd is the sign of radicality, and shews (according to the index of the power that is set over or after it) the square, cube or other root, that is extracted, or is to be so, out of any quantity.

$\sqrt[3]{}$ is the sign of the cube root, and signifies the extraction of it, as in the square root above.

\therefore is the sign of continued, or geometrical proportion.

$::$ is the mark of geometrical proportion disjunct, and is usually placed between two pair of equal ratios; as $3 : 6 :: 4 : 8$, shews, that 3 is to 6, as 4 to 8. Or $a : b :: d : e$, and are thus read, as a is to b , so is d to e , &c.

$>$ or \sqsupset are signs of majority; thus $a > b$ expresses that a is greater than b .

$<$ or \sqsubset are signs of minority; and when we would denote that a is less than b , we write $a < b$, or $a \sqsubset b$, &c.

\pm signifies *more* or *less such a quantity*, and is often used in extraction of roots, completing of squares, &c.

Artillery-CHARACTERS, most generally used, are as follow:

C. qr. lb. which signify centners, or hundreds of 112 pounds, *qr.* quarters of 28 pounds, *lb.* pounds. Thus a piece of artillery with $14 : 3 : 16$, is 14 hundred, 3 quarters, and 16 pounds.

Pr. signifies pounder. Thus 24 *pr.* is a 24 pounder.

T. C. qr. lb. signifies tuns, centners, quarters, pounds; and 28 *lb.* is one quarter; 4 *qr.* is one centner, or 112 pounds: and 20 *C.* is one ton.

lb. oz. dr. mean pounds, ounces, and drams: 16 *dr.* is one ounce, and 16 *oz.* is one pound.

lb. oz. dwts. gr. are pounds, ounces, penny-weights, and grains; of which 24 *gr.* make one penny-weight, 20 *dwt.* make one ounce, and 12 *oz.* one pound of troy-weight.

CHARACTERS in fire-works, are the following.

- M* Means meal-powder.
- \ominus Corned powder.
- \oplus Saltpetre.
- Z* Brimstone.
- C Z* Crude Sulphur.
- C +* Charcoal.
- C S* Sea-coal.
- B R* Beech raspings.
- S x* Steel or iron filings.
- B x* Brass-dust.
- G x* Glass-dust.
- T x* Tanner's dust,
- C I* Cast-iron.
- C A* Crude antimony.
- \otimes Camphor.
- A Y* Yellow amber.
- LS* Lapis calaminaris.
- \odot Gun.
- B L* Lamp-black.
- G I* Ising-glass.
- W* Spirit of wine.
- S T* Spirit of turpentine.
- P O* Oil of spike

CHARACTERS used in the arithmetic of infinities, are dots over letters, denoting the character of an infinitesimal, or fluxion. Thus, the first fluxions of x , y , z , being marked thus, \dot{x} , \dot{y} , \dot{z} ; the second are \ddot{x} , \ddot{y} , \ddot{z} ; and the third $\overset{\cdot}{\underset{\cdot}{x}}$, $\overset{\cdot}{\underset{\cdot}{y}}$, $\overset{\cdot}{\underset{\cdot}{z}}$.

Geographical CHARACTERS are $^{\circ}$, $'$, $''$, $'''$, &c. which signify degrees, minutes, seconds, thirds. Thus 40° , $35'$, $18''$, $55'''$, is read 40 degrees, 35 minutes, 18 seconds, 55 thirds. It is also used in the elevation of pieces of artillery.

CHARBON, Fr. See *AIGREMORE*.

CHARDONS pour monter à l'assaut, Fr. cramp-irons used by scaling parties. Previous to the *cramp-iron* being known, the soldiers, to prevent their slipping in the attempt of storming a rampart, used to take off one shoe. At present they use the *cramp-iron*, or *chardon de fer*, which is fixed over the shoe by means of a strap with a buckle, or is screwed in the heel. We do not imagine this second method to be so safe as the other, especially when the attempt is extremely hazardous.

CHARDONS, Fr. iron points in the shape of a dart, which are placed on the top of a gate, or wall, to prevent persons from getting over it.

CHARGE, in gunnery, implies the

quantity of powder, ball, shot, shells, grenades, &c. with which a gun, mortar, or howitzer, is loaded.

The usual charge of powder for heavy and medium guns, is one third the weight of the shot for round and for case shot; that for light field guns is only one fourth the weight of the shot. Howitzers, 8-inch, are fired with 3lbs. of powder; 5½ inch, heavy, with 2lbs., and 5½ inch, light, with 1lb. The charge for spherical case-shot is the same as for the guns and howitzers. Charges for mortars are determined by the range required. The charge of powder, for sea service, is one fourth the round shot's weight for case, and one third for round shot.

CHARGE is also the attack of cavalry; and *charge bayonet* is a word of command given to infantry, to rush on the enemy whom they are to charge at the point of the bayonet. *To sound a charge* is the sound of the trumpet as a signal for cavalry to begin the attack.

CHARGE, in military law, is the specification of any crime, or offence, for which a commissioned, a non-commissioned officer, or soldier is tried before a court-martial. In all charges of this nature, the time and place, when and where the crime or offence was committed, must be set forth with accuracy and precision.

CHARGE, *Fr.* The French technically use this term in two different senses, viz. *charge précipitée*, and *charge à volonté*. *Charge précipitée* is given when the four times are expressly marked, as *chargez vos armes, un, deux, quatre*; and applies chiefly to the drill. *Charge à volonté* is executed in the same manner as the *charge précipitée*, with this difference, that the soldiers do not wait for the specific words.

CHARGE *de mine*, *Fr.* the disposition of a certain quantity of powder, which is used for the explosion of a mine.

CHARGED *cylinder*, in gunnery, implies that part of the chase of a gun, which contains the powder and ball.

CHARGER *bayonette*, *Fr.* to charge bayonet.

CHARGER, (*cheval de guerre*, *Fr.*) any horse belonging to an officer on which he rides in action or parade, &c.

CHARGERS (*chargcoirs*, *Fr.*) are either handoleers, or little flasks that contain powder for loading or priming.

CHARGER, *Fr.* to load a piece of ordnance, or a fire-arm.

CHARGER *une mine*, *Fr.* to place the quantity of gunpowder necessary for the explosion of a mine.

CHARGER *avec l'arme blanche*, *Fr.* to charge with fixed bayonet, or sword in hand.

CHARGES *militaires*, *Fr.* military commissions and appointments.

CHARIAGE, *Fr.* land-carriage. The French also say *Charroi*.

CHARIER *du canon*, *Fr.* to convey ordnance. It is likewise used to express the carriage of ammunition and military stores.

CHARIOT, a car, in which men of arms were anciently placed. These were armed with scythes, hooks, &c.

CHARIOT, *Fr.* wagon.

CHARIOT *couvert*, *Fr.* a covered wagon.

CHARIOT *à porter corps*, *Fr.* a wagon upon four wheels, which is used for the carriage of a piece of ordnance that is not mounted.

CHARIOT *à ridelles*, *Fr.* a four-wheeled wagon with railing round its sides. It is used in the conveyance of cannon balls, shells, and ammunition.

CHARIOTS *de guerre*, *Fr.* armed chariots.

CHARIOTS *d'une armée*, *Fr.* wagon-train.

CHARIOTS *d'artillerie*, *Fr.* artillery-wagons.

CHARIOTS *des vivres*, *Fr.* provision wagons.

CHARIOTS *d'outils, à pioniers et tranchans*, *Fr.* wagons to carry pioneers tools, &c. for the attack, or defence, of places.

CHARPENTE, *Fr.* carpentry.

CHARPENTIER, *Fr.* a carpenter.

CHARPENTIER *soldat*, *Fr.* an enlisted man who is employed in carpentry work for military purposes.

CHARPIE, *Fr.* lint; such as is used in dressing wounds.

CHARRONS, *Fr.* wheelwrights.

CHARROYER, *Fr.* to convey any thing in carts or wagons.

CHART, or *sea-CHART*, is a hydrographical map, or a projection of some part of the earth's superficies in plano, for the use of navigators and geographers.

Plane-CHART is a representation of some part of the superficies of the terraqueous globe, in which the meridians are supposed parallel to each other, the parallels of latitude at equal distances, and consequently the degrees of latitude and longitude every where equal to each other.

CHART of reduction is that where the meridians are represented by right lines, inclining towards each other; thence it appears by construction, that these charts must correct the errors of the plane ones. But since these parallels should cut the meridians at right angles, and do not, they are defective, inasmuch as they exhibit the parallels inclined to meridians.

Mercator's-CHART is that where the meridians are straight lines parallel to each other, and equidistant: these parallels are also straight lines, and parallel to each other; but the distance between increases from the equinoctial towards each pole, in the ratio of the secant of the latitude to the radius.

Globular-CHART, a meridional projection, wherein the distance of the eye from the plane of the meridian, upon which the projection is made, is supposed to be equal to the sine of the angle of 45° . This projection comes the nearest of all to the nature of the globe, because the meridians therein are placed at equal distances.

Chorographic-CHARTS are descriptions of particular countries.

Heliographic-CHARTS, descriptions of the body of the sun, and of the maculæ or spots observed in it.

Selenographic-CHARTS, particular descriptions of the spots of the moon, her appearance and maculæ. Hevelius has written very accurately on Selenography.

Telegraphic-CHARTS are descriptions of the telegraph on paper.

Topographic-CHARTS are specific delineations of military positions, in any given tract of country. Companies of topographers have been formed among the French, for the purpose of accurately and expeditiously pointing out to generals and commanding officers, all the relative points of locality, &c.

Magnu CHARTA, the great charter, originally signed by King John, containing a number of laws ordained in the ninth year of Henry III. and confirmed by Edward I. comprehending and exhibiting, in honest English, the sum of all the written laws of England; particularly that invaluable and exclusive privilege which every Englishman, in a civil or military capacity enjoys, of being tried by his peers. Even the dreadful crime of high-treason, or an attempt to destroy one's lawful sovereign, must pass through the ordeal of a jury. Com-

mitment for a breach of privilege against the House of Commons, is, however, considered, by some persons, as an exception; but the question is at issue.

CHARTAGNE, *Fr.* a strong entrenchment, most generally concealed from the view of the enemy, and which is used in woods and forests, for the defence of important passages.

CHASE-gun, a gun in the fore-part of a ship which is fired upon those that are pursued. Bailey calls chase guns the guns in the head or stern of a ship; the latter, however, are generally called stern chasers.

CHASE of a gun. See **CHASE**.

To CHASE, to pursue.

CHASSE, *Fr.* in mechanics, the vibrating motion which puts a body in action.

CHASSE-Coquins, *Fr.* See **BANDOU-LIÈRE**.

CHASSE, *Fr.* a charge of coarse powder which is thrown into the bottom of the cartouche, to facilitate the explosion of the fire-work it contains.

CHASSER, *Fr.* to drive away; to force an enemy to quit a position, &c.

CHASSER, *Fr.* among workmen, to fasten together pieces of joinery by driving them home with a mallet, &c.

CHASSEURS, *Fr.* light infantry men, forming a select body upon the left of a battalion, in the same manner that grenadiers are posted on the right. They must be particularly active, courageous, and enterprising.

CHASSEURS, *Fr.* See **HUNTERS**.

CHASSEURS à cheval, *Fr.* a species of light troops in the French service.

CHASSIS, *Fr.* a square platform made of wood, which is used in mining.

CHASSIS de gallerie, *Fr.* beams of different lengths, which the miners use to support the earth in proportion as they advance into the gallery. These beams support other transversal ones which prevent the earth from falling down; the whole is called *chassis du mineur*.

CHASSIS à secret, *Fr.* a particular method of drawing lines upon a sheet of paper, and folding it in such a manner, that when the words which are written in the intervals are read, they appear incomprehensible, except to the person who is provided with a correspondent sheet, and who by placing it upon the one received, unravels the signification of its contents.

CHASSIS, *Fr.* sash; frame; case.

CHASSIS *de fer*, *Fr.* iron frame work.

CHASSIS *de mine*, *Fr.* frames which are made for the galleries in a mine.

CHASSOIR, *Fr.* cooper's driver.

CHAT, *Fr.* a piece of iron having one, two, or three very sharp prongs, or claws; arranged in a triangular shape, when it has three prongs. This piece of iron is fixed to a shaft. It is used in the examination of a piece of ordnance, and by being introduced into the bore, shews whether it be honey-combed, damaged, or otherwise defective.

There is another species of *chat* which differs a little from the one we have just described. It consists of two branches of iron, that are fixed to the end of a piece of the same metal, and have, each of them, two steel prongs or claws. One of these branches contains a hinge with a spring so fixed, that when the *chat* is put into the bore, the least cavity releases the spring, and the defect is instantly discovered. Master-founders, who by no means like the invention, call the common *chat* *le diable*, the devil; and they distinguish the one with two branches, by terming it *la malice du diable*, the malice of the devil.

CHAT, *Fr.* a kind of turret formerly in use amongst the French, for the conveyance of the troops who were going to besiege a town.

CHATEAU, *Fr.* a small castle which stands by itself, and is sometimes occupied by a troop or company of soldiers who mean to hold out.

CHATEAUX *des havres*, *Fr.* small forts, or covered batteries, which are built on the shore close to sea-ports, in order to protect the shipping that may lie off.

CHATELET, *Fr.* in former times a small castle or fortress. The officer who had the command of it was called *Chatelain*. At present a place of confinement, in Paris, is so called.

CHATIMENT, *Fr.* punishment, chastisement.

CHATTE, *Fr.* a small two masted vessel.

CHATTER *les pièces*, *Fr.* to search, to probe, or examine pieces of ordnance with a chat, in order to discover whether there are any defects within the bore of a cannon.

CHAUDE-*Chasse*, *Fr.* running after a prisoner.

CHAUMENT, *Fr.* hotly; warmly.

CHAUDIÈRES, *Fr.* are vessels made

use of in military magazines, to boil pitch in for various purposes.

CHAUDRON, *Fr.* a kettle; a chaldron.

CHAUFFAGE *militaire*, *Fr.* a ration of wood or other fuel.

CHAUFFE, *Fr.* a spot where the wood is collected and burnt in a foundry. The *chauffe* stands three feet under the side of the furnace, the flames which issue from it spread over every part of the inside of the furnace, and by their intense heat dissolve the metal.

CHAUFFER *l'antichambre*, *Fr.* a figurative term used among the French, to signify *in waiting*, or dancing attendance.

CHAUFFER *une troupe, une forteresse*, *Fr.* to keep up a hot and continual discharge of ordnance or musketry against an armed body of men, or fortified place.

CHAUFFER, *Fr.* to heat; to warm.

CHAUFFER *la tranchée*, *Fr.* to commence an attack by firing into an enemy's trenches.

CHAUFFERIE, *Fr.* a kind of forge.

CHAUFFOIR, *Fr.* a warming place.

CHAUFOUR, *Fr.* a lime-kiln.

CHAUFournier, *Fr.* a lime-maker.

CHAUSSE-*trapes*, *Fr.* are what we call crow's feet or caltrops; they consist of nails with 4 or 5 points, of which one always stands upward, above the level of the ground; each point is 4 or 5 inches long. They are usually fixed in different parts of a breach, or in any place which is accessible to cavalry, to prevent its approach: sometimes they are of use to obstruct the passage of cavalry through the streets.

CHAUSSÉE, *Fr.* any paved way which is raised across a morass, &c. It also signifies the broad road.

CHAUSSÉE, or *Rez de CHAUSSÉE*, *Fr.* an old expression for the level of the field or the plain ground.

CHAUX, *Fr.* lime.

CHIECAYA, the second officer in command among the Janizaries; the Aga's lieutenant.

CHECK-*mate*, a term used at the game of chess, when the king is shut up so close that there is no way left for his escape. Hence, according to Spencer, check-mate signifies defeat, overthrow.

To CHECK-*mate*, to block up; to render it impossible to move without being taken.

CHEEKS, a general name among mechanics, for those pieces of timber in

their machines, which are double, and perfectly corresponding to each other. In the construction of military carriages, &c. the term is used to denote the strong planks which form the sides.

To CHEER, (*animer*, Fr.) to incite; to encourage; to inspire; to huzza.

CHEERS, (a military term used among the English in the same sense that the word *acclamations* obtains among the French,) signs of joy; assurances of success before, or, after an engagement; testimonies of loyalty and affection on the appearance of a chief magistrate, general, &c. expressed by huzzas.

CHEF, Fr. the chief or head of a party, troop, company, regiment, or army. The person who has the principal command.

CHEF *d'escadre*, Fr. a general officer, who commands any part of an army, or division of a fleet.

CHEFS *de files*, Fr. the front rank of a battalion, consisting generally of the best and bravest soldiers.

CHEF *de file*, Fr. the man who stands on the right of a troop or company.

CHELSEA COLLEGE, or HOSPITAL, a noble edifice which stands on the northern bank of the river Thames, and was originally begun by James the First, in the fifth year of his reign, for a college to consist of a number of learned divines.

For this purpose a Provost and Fellows were incorporated by the title of King James's College, Chelsea.

This corporation he endowed, by his letters patent, with the reversion of certain lands in Chelsea, then under lease to Charles Earl of Nottingham.

After the restoration, King Charles II. wanting a convenient hospital for the reception of sick, maimed, and superannuated soldiers, converted the unfinished buildings of this college to that use; whence it has still occasionally retained the title of The College. He accordingly began to erect his royal hospital on this spot, but did not complete it; it was carried on during the short reign of James II. and finished in the reign of King William and Queen Mary, by Sir Christopher Wren. One of the principal contributors to this patriotic institution was Sir Stephen Fox. He was grandfather to the late Mr. Fox, and ancestor of the Earls of Ilchester and the Lords Holland, and was a man of the greatest abilities and most accom-

plished manners. His fidelity to his sovereign was proverbial; and though the reigning powers at that time tried their utmost to make him withdraw his allegiance from his exiled master, King Charles II. they found him incorruptible. But what will endear his memory to the latest posterity is, his being the first projector of the noble design of Chelsea Hospital, having contributed to the expense of it about 130,000*l*. His motive to it was known from his own words: he said "he could not bear to see the common soldiers, who had spent their strength in our service, beg at our doors." He therefore did what he could to remove such a scandal from the kingdom. He first purchased some grounds near the old college at Chelsea, which had been escheated to the crown, in the reign of James I. and on these grounds the present college is erected. Numerous were his public and private charities. He lived to see his noble design take effect, and died October 28th, 1716, aged 89, universally regretted.

Non-commissioned officers and private men, who have been wounded or maimed in the service, are entitled to the benefit of this hospital. There are in and out-pensioners belonging to the establishment, and the provisions of it extend to the militia under the following restrictions; serjeants who have served fifteen years, and corporals or drummers who have served twenty, may be recommended to the bounty. Serjeants on the establishment may likewise receive that allowance, with their pay in the militia. But serjeants who have been appointed subsequent to the passing of the 26th of George III. are not entitled to it under twenty years service.

CHEMIN-*couvert*. See COVERT-WAY.

CHEMIN *des rondes*, in *fortification*, a space between the rampart and low parapet under it, for the rounds to go about it.

CHEMINER, Fr. in *fortification*, to carry on some particular work, such as a trench, &c. towards a given object.

CHEMISE, Fr. an obsolete term to signify the revetement made of brick work, which was formerly constructed to secure works made of earth, especially those that were formed of sandy soil, and would necessarily require too large a talus to support the weight. The modern term is *ouvrage revêtu*, *place revêtuë*.

CHEMISE à feu, Fr. a piece of cloth which is steeped in combustible matter, and is made use of against a scaling party.

CHEMISE de feu, Fr. a French sea-term, to signify several pieces of old sails of various sizes, which, after they have been pitched, and thoroughly soaked in other combustible matter, such as oil of petrol, camphor, &c. may be nailed to an enemy's ship on boarding her, and when set fire to, will consume the same.

CHEMISE de maille, Fr. a shirt of mail.

CHEMISE de coup de main, de surprise, Fr. a shirt made of cloth highly bleached, and of which a general provides a number when he premeditates a *coup de main*. This chemise must not come below the waist, in order that it may be got over the coat and cartouch box. The general directs these shirts to be made either with two sleeves, with one, or without any at all. A *coup de main* of this kind must be kept secret till the moment of its execution. This stratagem is practised to prevent a soldier from attacking his brother soldier.

CHEMISTRY, the art of examining bodies, and of extracting from them any of their component parts.

CHENAL, Fr. a channel, or gutter.

CHESS. See *Pontoon-BRIDGE*.

CHESS, a nice and abstruse game, supposed to have been invented during the siege of Troy. This game is particularly adapted to military capacities.

CHEVAL, Fr. a horse.

CHEVAL de bois, Fr. a wooden-horse, a military chastisement, which common prostitutes, who followed the French army, were subject to undergo, by exposing them, we presume, on a machine of that description.

CHEVAL éclopé, Fr. a lame horse.

CHEVAL encloué, Fr. a horse that has been pricked or cloyed in being shod.

CHEVAL morveux, Fr. a horse that has the glanders.

CHEVAL d'ordonnance, Fr. a horse which is impressed in a town or village for some military purpose.

A-CHEVAL, Fr. on horseback. Also, To horse! A notice given by sound of trumpet for dragoons to mount.

CHEVAL de bataille, Fr. a charger.

CHEVAL de frise, Fr. See *CHEVAUX de frise*.

CHEVAL de bât, Fr. a bat, or pack-horse. It also signifies, figuratively, a drudge; a looby.

Etre à CHEVAL sur une rivière, sur

une chaussée, Fr. to be encamped or drawn up on each side of a river, or road.

CHEVALEMENT, Fr. in architecture, a sort of prop which is made of one or two pieces of timber, with a head, laid buttress fashion, upon a rest. It serves to support jainbs, beams, &c.

CHEVALER, Fr. to prop; to support; also to run to and fro.

CHEVALER, in the manège, is said of a horse, when, in passing upon a walk or trot, his off fore leg crosses the near fore leg every second motion.

CHEVALERESQUE, Fr. chivalrous.

CHEVALET, Fr. a sort of bell-tent, formerly used in the French service, when an army encamped. It resembles, in some degree, the wigwam of the Indian.

CHEVALET, Fr. a raft for troops to cross rivers upon; also a wooden horse, used in military punishments.

CHEVALET d'armes, Fr. a covered rack which is made in the front of a line of encampment for the regular distribution and security of the fire-arms belonging to the different troops, or companies. This is sometimes called *faisceau d'armes*, a pile of arms.

CHEVALIER, in a general sense, signifies a knight, or horseman. *Chevalier* also means a buttress.

CHEVALIER d'industrie, Fr. a sharper.

CHEVALIER d'honneur, Fr. first gentleman usher.

CHEVALIER du guet, Fr. captain of a watch on horseback.

CHEVALIERS errans, Fr. knights-errant.

CHEVALIÈRE, Fr. a knight's lady.

CHEVAU-LÉGERS, Fr. a corps of cavalry, which, during the old monarchy, was composed of two hundred gentlemen, making part of the King of France's guard. It has been noticed, to the honour of this corps, that they never lost their kettle drums, nor their colours. They were established by Henry IV. who first exclusively confined the *hommes d'armes* to the natives of *Navarre*.

The French also formerly said *un cheveu léger*, in the singular number, when they spoke of any individual belonging to a particular corps of light horse, who were not heavily armed. See *Dictionnaire de l'Académie*.

CHEVAUCHÉE, Fr. a journey, or round which is made on horseback by persons employed officially. It is only used in this sense.

CHEVAUCHER, *Fr.* an old word which is only used in the following phrases, *chevaucher court*, *chevaucher long*, to ride short, to ride long.

CHEVAUX-de-frise, in *fortification*, a large joist or piece of timber, about 5 or 6 inches square, and 10 or 12 feet in length; into the sides whereof are driven a great number of wooden pins, about 6 feet long, and $1\frac{1}{2}$ inch diameter, crossing one another at right angles, and pointed with iron. They are used on numberless occasions; as to stop up the breaches, to secure the avenues of a camp from the inroads both of horse and foot, &c. They are sometimes mounted on wheels, with artificial fires, to roll down in an assault, &c. They were first used at the siege of Groningen, in 1658.

CHEVET, *Fr.* a quoin or wedge; likewise that part of a wooden draw-bridge to which the chains are fastened.

CHEVETAINE, *Fr.* a term anciently used among the French to signify the leader of a troop, or company. The chevetaine was the same as *capitaine* or *connétable*, with this difference, that the commission only lasted during the time of hostilities.

CHEVILLE d'affût, *Fr.* an iron bolt which goes across the whole of a gun carriage.

CHEVILLE à oreilles, *Fr.* an iron bolt of the above description which has rings.

CHEVILLE ouvrière, *Fr.* a large flat headed nail, which confines the avant-train to the gun carriage of a piece of ordnance.

CHEVILLE à tourniquet, *Fr.* a stick or round piece of wood, which serves to tighten a rope in packing.

CHEVILLES de travaux militaires, *Fr.* large nails used in the artillery. See **NAILS**.

CHEVISANCE, *Fr.* enterprize, feat, or achievement.

CHÈVRE, *Fr.* a crab or gin. See **CHEVRETTE**.

CHEVRETTE, *Fr.* a kind of gin. Among the many inventions for raising guns or mortars into their carriages, this engine is very useful: it is made of two pieces of wood about 4 feet long, standing upright upon a third, which is square: they are about a foot asunder, and parallel; pierced with holes opposite one another, to hold a strong bolt of iron, which may be raised higher or lower at pleasure: it may be used with

a hand-spike, which takes its poise over this bolt, to raise any thing by force.

CHEVRONS, *Fr.* rafters; also the distinguishing marks on the sleeves of non-commissioned officers.

CHEVROTINES, *Fr.* leaden bullets of small calibre; there are generally 60 to a pound weight.

CHAJA-boch, the third general officer in command among the Janizaries. We may judge of the power of the Aga, who is chief commandant of the Janizaries, from the rights and authority of his second lieutenant: he is captain of the richest company, which he governs despotically; he inherits the whole property of all the Janizaries who die without issue, or leave no relations behind them; and appoints his subaltern officers to be governors of the fortified towns.

CHIAUS, the captain of a company of Janizaries; this officer, of high rank, has two captain-lieutenants under his command.

CHICANERY, (*chicane*, *Fr.*) trick; stratagem. In war it signifies the various expedients which are resorted to. Hence *chicaner le terrain*, &c.

CHIEF, or **CHIEFTAIN**, a leader, or commander.

CHIEN d'une arme à feu, *Fr.* that part of the cock of a musket or pistol which holds the flint.

CHIFFRES, *Fr.* ciphers, certain characters, consisting of different names and words which are used in military correspondence.

CHILIARCH, (*chiliarque*, *Fr.*) the name given in Athens to a captain who commanded 1000 men.

CHIOURME, *Fr.* the crew of galley slaves and bonavogliers or volunteers.

CHIOUS, an officer attached to the grand signior.

CHIRURGIE, *Fr.* surgery.

CHIRURGIEN, *Fr.* surgeon, from two Greek words signifying *hand* and *work*; and meaning an operator with the hand, in contradistinction of physicians, who work with the head.

CHIRURGIEN-major, *Fr.* surgeon-major.

CHIRURGIEN d'un régiment, *Fr.* a regimental surgeon.

CHISSEL, an instrument used in carpentry, joinery, masonry, sculpture, &c.

CHIURTS, certain Turks expert in horsemanship.

CHLAMIS, a short cloak which com-

posed part of the military dress of the Greeks: it was worn over the tunic. The Roman emperors also adopted the *chlamis* for their military dress, and called it *paludamentum*.

CHOC, *Fr.* shock; the percussion which takes place in an engagement between adverse armies; the running foul of one ship against another.

CHOPINE, *Fr.* a French half-pint; an English pint, Winchester measure.

CHORD of an arch is a right line drawn from one extremity of an arch to the other; called also the subtense.

CHOROBATTS, *Fr.* a level used by the ancients with a double square, in the form of a T.

CHOROGRAPHY, in *engineering*, is the art of making a drawing or map of a country, province, or district.

CHOROGRAPHY, (*chorographie*.) *Fr.* a general description of a country. It is not limited, as *Geography* or *Topography*; the first comprehending the description of the earth, and the second of any particular part of it, with its dependencies.

CHOSE publique, *Fr.* public safety; common-weal.

CHOUAN, *Fr.* the name of a counter-revolutionary party which appeared in France in November, 1793, after the Vendéans had crossed the river Loire. The original founders of this party were four brothers, whose real name was *Cottereau*. They were called Chouan from a corruption of the word *chat-huant*, (an owl,) because they imitated the cry of this bird, whenever they wished to be known to each other in the woods, or during the night. At the beginning, they seldom ventured beyond the forests of Pertre and Guerche. Having been reinforced by the junction of the royalists of Brittany, La Manche and Calvados, and of the remnant of Talmont's army after the actions of Mans and Savenay, they assumed a regular form, and in the name of Louis XVIII. made war upon a larger scale. Out of the four brothers only one survived; the other three having fallen in battle.

CHOUDREE, *Ind.* troops employed to go to market to buy forage for the troops; also a money lender.

CHURCHWARDENS. The only proper sense in which they can be taken with respect to military matters, relates to the militia. They are to pay, when ordered by two deputy lieutenants, half the price of volunteers, to persons

chosen by ballot, on penalty of 5*l.* They are likewise, with the consent of the inhabitants, to provide volunteers, and make a rate for the expense, which must not exceed 6*l.* per man. They are liable to have the rates on places where the militia has not been raised, levied upon them. One penny in the pound is allowed them for all the money they collect. In the counties of Kent and Sussex, they possess the power of constables, for the purposes specified in the 26th of the King.

CHUTE d'eau, *Fr.* the sloping, or downward direction of a conduit of water, from its reservoir to the upward shooting of a water-spout.

CICATRICE, *Fr.* a scar; the mark which a wound leaves upon the surface of the human body.

Se **CICATRISER**, *Fr.* to heal; to become sound.

CID, *Fr.* a word borrowed from the Arabic, signifying *Chief*; *Commander*; *Lord*.

CIDARIS, *Fr.* the turban or cap worn by the kings of Persia, Armenia, Pontus, and Egypt.

CIERGE d'eau, *Fr.* several water-spouts which play in the same direction, into a long basin at the head of a canal and cascade.

CILIBO, a round table upon which the Roman and Greek soldiers used to lay down their shields, when they returned from an expedition.

CILICES, *Fr.* coarse tissues of horse or goat's hair, quilted with seaweeds or cow-hair stuffed between. The ancients used to hang these *cilices* over the parapets, the ditches and breaches, to stop the darts or arrows that were shot from *balistas* or *cata-pultas*.

CILICIA, or *Cilice*, a dress made of goat's-hair, worn by the troops in ancient times, and invented by the Cilicians. When properly woven it is water-proof.

CILINDRE, *Fr.* See **CYLINDER**.

CIMENT, *Fr.* See **CEMENT**.

CIMETERRE, *Fr.* scimitar.

CIMETIÈRE, *Fr.* church-yard; burial-ground.

CIMIER, *Fr.* a heavy ornament, which the ancient knights or chevaliers, in France and in other countries, were accustomed to wear upon their helmets; small figures were afterwards substituted in their stead.

CIMITER. See **SCIMITAR**.

CINCTURE, (*ceintre*, Fr.) a girdle. In architecture, a ring, list, or orlo, at the top and bottom of the shaft, at one end from the base, and at the other from the capital. That at the bottom is particularly called apophyses, as if the pillar took its height from it; and that at top, *colarin* or *collar*, from the French *colier*, and sometimes *annulus*, a ring.

CINCTUS, the appellation given to a Roman soldier, who was bound to carry arms and to fight. He received at the same time the *cingulum*, (a belt,) to be stript of which was reckoned the utmost disgrace.

CINQUAIN, in ancient military history, was an order of battle, to draw up 5 battalions, so that they might make 3 lines; that is, a van, main body, and reserve. Supposing the 5 battalions to be in a line, the 2d and 4th advance and form the van, the 3d falls back and forms the rear, the 1st and 5th form the main body upon the same ground. Lastly, every battalion ought to have a squadron of horse on both the right and left wings. Any number of regiments, produced by multiplying by 5, may be drawn up in the same manner.

CINQUENELLES, *Fr.* thick ropes which are used in artillery for the purpose of throwing a bridge of boats, or pontoons, across a river.

CINTRE, *ou ceintre*, *Fr.* This word expresses the figure of an arch, and of all curved timber, which is used in roofs, &c.

CINTRER, *Fr.* to lay the wooden frame work or curve in order to establish the bending of an arch. *Cintrer* or *Cintrer* signifies also to give more or less circle to an arch or vault.

CIPHER, } (*chiffre*, *Fr.*) one of the
CYPHER, } numeral characters or figures, in this form, 0. The cipher in itself implies a privation of value; but when placed with other characters on the left hand of it, in common arithmetic, it serves to augment each of their values by ten; and in decimal arithmetic, lessens the value of each figure at the right thereof in the same proportion. Figuratively, a *thing* called a man, with or without titles, which has neither talents nor industry to do anything for the community at large, and is a splendid nothing in society.

CIRCITOR, a Roman officer, who, after having received his orders from a tribune, began to visit the posts, and to

ascertain whether the sentinels were alert and steady at their posts.

CIRCLE, in mathematics, is a plane figure, comprehended under one line only, to which all right lines drawn from a point in the middle of it, are equal to one another.

CIRCLE, (*cercle*, *Fr.*) a smooth surface which is terminated by one curved line, called a circumference, within which there is a point called a *center*, that is equidistant from all the points of the *circumference*.

Demi-CIRCLE, (*demi-cercele*, *Fr.*) consists of two equal parts of a circle divided by the diameter.

CIRCLE, called by the French *cercle g n rateur*. See **CYCLOID**.

Concentrical CIRCLES, (*cercles concentriques*, *Fr.*) circles described upon the same center, with parallel circumferences. *Eccentric* circles are such as, being contained within one another, have not been described by the same center, and whose circumferences are not parallel.

CIRCUIT, (*circuit*, *Fr.*) that space which immediately surrounds a town or place; it also signifies the march of a body of men, who do not move in a direct line towards any given object.

CIRCULAR, any thing that is described or moved in a round; as the circumference of a circle, or the surface of a circle.

Circular lines are such straight lines as are divided from the divisions made in the arch of a circle; as sines, tangents, secants, &c.

Circular numbers are such whose powers end in the roots themselves; as 5, whose square is 25, and cube 125.

CIRCULAR, (*circulaire*, *Fr.*) an official paper or document which is sent to the army, or to any department belonging to the state, for the guidance and information of individuals thereto belonging.

CIRCUMCELLIONS, a set of mad Christians in St. Augustin's time, who strolled about from place to place; and to get repute, either would lay violent hands upon themselves, or get others to kill them.

CIRCUMFERENCE, (*circonf rence*, *Fr.*) a compass; a circle; the periphery or limit of a circle.

CIRCUMFERENTER, an instrument used by engineers for measuring angles.

CIRCUMSPECT, (*circonspect*, *Fr.*) a person who observes every thing, con-

ceals what he designs to put in execution, and is cautious with regard to every thing he says, or does. Such ought every commanding officer of a regiment and every general of an army to be.

CIRCUMSPECTION, (*circonspection*, Fr.) dignified reserve, great prudence, and marked discretion. These are qualifications essentially necessary to every man who holds a public situation.

CIRCUMVALLATION, or *line of circumvallation*, (*circonvallation*, ou *lignes de circonvallation*, Fr.) a fortification of earth, consisting of a parapet and trench, made round the town intended to be besieged, when any molestation is apprehended from parties of the enemy, which may march to relieve the place.

Before the attack of a place is begun, care is to be taken to have the most exact plan of it possible; and upon this, the line of circumvallation, and the attack are projected. This line, being a fortification opposed to an enemy that may come from the open country to relieve the besieged, ought to have its defences directed against them; that is, so as to fire from the town: and the besiegers are to be encamped behind this line, and between it and the place. The camp should be as much as possible out of the reach of the shot of the place: and the line of circumvallation, which is to be farther distant from the place than the camp, ought still more to be out of the reach of its artillery.

As cannon are never to be fired from the rear of the camp, this line should be upwards of 1200 fathoms from the place; we will suppose its distance fixed at 1400 fathoms from the covert-way. The depth of the camp may be computed at about 30 fathoms, and from the head of the camp to the line of circumvallation 120 fathoms, that the army may have room to draw up in order of battle at the head of the camp, behind the line. This distance, added to the 30 fathoms, makes 150 fathoms, which being added to the 1400, makes 1550 fathoms, constituting the distance of the line of circumvallation from the covert-way. The top of this line is generally 12 feet broad, and 7 feet deep; the parapet runs quite round the top of it, and at certain distances it is frequently strengthened with redoubts and small forts; the base 18 feet wide, the height within 6, and on the outside 5 feet, with

a banquet of 3 feet wide, and $1\frac{1}{2}$ high. See **CONTRAVALLATION**, or **COUNTERVALLATION**.

CIRCUMVOLUTIONS, the torus of the spiral line of the Ionic volute.

CIRCUS, (*cirque*, Fr.) in military antiquity, a very capacious building, of a round or oval form, erected by the ancients for exhibiting shews to the people.

CIRE préparée, Fr. a composition which is made of yellow wax, tallow, and pitch, and is used as a sort of mastic gum to close up the heads of fuses, &c.

CISALPINE, lying on this side the Alps.

CISEAUX, Fr. chisels used by miners, to loosen earth from the sides of the excavation, without making a noise; which the miner effects by striking the chisel with his hand.

CISELURE, Fr. chasing; chased work; also chissel work, such as is done in dressing stones.

CISSOID, (*cissoide*, Fr.) the name of a curve in transcendant geometry, the properties, &c. of which may be found in *Savcrien's Dictionnaire Universel de Mathématique*.

CISTERN, (*citerne*, Fr.) a reservoir; every fortified town or place should have one.

CITADEL, (*citadelle*, Fr.) a fort with 4, 5, or 6 bastions, raised on the most advantageous ground about a city, the better to command it; and commonly divided from it by an esplanade, the more effectually to hinder the approach of an enemy; so that the citadel defends the inhabitants if they continue in their duty, and punishes them if they revolt. Besiegers always attack the city first, that, being masters of it, they may cover themselves the better against the fire of the citadel. Having bastions, it is thereby distinguished from a castle. Sometimes the citadel stands half within, and half without the ramparts of the place.

CITERNEAU, Fr. a small reservoir arched over for the purpose of holding rain water.

CITIZEN, a freeman of a city or town, as a citizen of London; a townsman; a man of trade; not a gentleman; also an inhabitant; a dweller in any place. Shakespeare makes an adjective of the word, having the qualities of a citizen.

CITROYEN, Fr. citizen; the inhabitant of a place.

CITROYEN-soldat, Fr. an armed citizen; a volunteer.

CITY, (*cit *, Fr.) a town or place containing many houses surrounded by walls. City also means, in French and English, the oldest parts of a town, as the City of London; *La Cit * in Paris.

CIVIC-CROWN, among the ancient Romans, was a crown given to any soldier who had saved the life of a citizen. It was composed only of oaken boughs, but accounted more honourable than any other.

CIVI RE, Fr. a small hand-barrow, which is carried by two men, and is much used in the artillery; also a large wooden frame, upon which loads may be carried by four men.

CIVILIAN, a person who is in no way connected with the army.

CLAIE, Fr. a kind of hurdle in the shape of a rectangle, made of twigs well interwoven: these *claires* are used during a siege, for want of blinds, to cover a lodgment, a sap, or the passage over a ditch, and are covered over with earth to protect the workmen against fire-works.

CLAIES poiss es, Fr. pitched hurdles. These are used with great advantage to form causeways in a marshy soil, when the waters have been drained.

CLAION, Fr. a small hurdle.

CLAIRE-voie, Fr. in carpentry, too wide a space between beams or rafters. Also rails in a park; also an open gate.

CLAIRI RE, Fr. a glade in the wood.

CLAIRON, Fr. a species of trumpet, which is shriller in its sound than the ordinary kind.

CLAIRVOYANCE, Fr. sagacity; penetration.

CLAIRVOYANT, Fr. clear-sighted.

A CLAMP is a kind of kiln built above ground (of bricks unburnt) for the burning of bricks.

CLAMP-nails are such nails as are used to fasten on clamps in the building or repairing of ships.

CLAN, a term used among the Scotch for a number of families subject to one head, or chief, who formerly led them to war.

CLARENCEUX, the second king at arms, so called from the duke of Clarence, third son to king Edward III.

CLARIGATION, in Roman antiquity, a ceremony which always preceded a formal declaration of war. It was performed in the following manner: the chief of the heralds went to the territory of the enemy, where, after some solemn prefatory indication, he, with a

loud voice, intimated, that he declared war against them for certain reasons specified; such as injury done to the Roman allies or the like.

CLARINETTE, Fr. a clarinette; a shrill musical instrument, resembling the hautboy, which is used in regimental bands.

CLATES. } See HURDLES.

CLAYES. }

CLAYONNAGES, Fr. hurdles with which the timber work of a gallery is covered. They are likewise used in saps.

CLEAR, to clear the trenches. See TRENCHES.

CLEARINGS. See *Off-RECKONINGS, Regimental Companion.*

CLEATS, slings used in transports to hang the accoutrements of soldiers on;

CLEF, Fr. the keystone of an arch.

CLEF d'un  tat, d'un pays, Fr. literally signifies the key of a state or country. Any fortified place which must necessarily be taken before an irruption can with safety be made into a country. Thus Luxemburgh is called the key of the Austrian dominions towards France.

CLEF de mousquet, de carabine, de pistolt t, Fr. an iron instrument with only one square hole, and a handle: it serves to cock the piece.

CLEF d'arbal te, Fr. gaffle of a cross-bow.

CLEFS, Fr. long pieces of timber which are used in the construction of quays, dykes, and wooden jetties.

CLEPSYDRE, Fr. an hour-glass; an instrument measuring time by the running of water or sand; originally used before the invention of clocks or watches.

CLERK, in the general acceptation of the term, a writer in a public office, an officer of various kinds.

CLERK of the general meeting for the levying, &c. of militia men. In time of peace this person has authority to adjourn any such meeting, when no lieutenant or deputy attends. It is his duty likewise to file amended lists of militia-men, to send notice of the time and place of exercise to the chief constables, and to transmit copies of accounts he receives of the commitment of deserted serjeants, &c. to the colonel and adjutant of the county battalion.

CLERK of the subdivision meeting. His functions are to give notice of the meeting to the deputy lieutenants, &c. and to transmit lists of men enrolled to

the commanding officer: to appoint another meeting when there is not due attendance, and give notice of the same; to certify, *gratis*, in what list any person's name is inserted; to transmit copies of rolls to the clerk of the general meeting; to transmit a list of the persons enrolled to the commanding officer and adjutant; to enter on the roll the time of apprehending substitutes who desert.

CLERK of the peace is to transmit copies of qualifications to the county lieutenant; to enter qualifications; to cause dates, &c. of commissions to be inserted in the Gazette; and to transmit an annual account of qualifications to the secretary of state; to transmit an account of the arrival from abroad of the colonel, to the officer commanding in his absence; to deliver the annual certificate of the state of the militia, or certify his not having received one to the quarter sessions; to file certificates of officers' service, and certify their names to the high constable; to transmit copies of certificates from the county lieutenants, &c. to the treasury, and the receiver general of the land tax; to certify to the solicitor of the treasury the omission at the quarter session of assessing money on places where the militia had not been raised. He is liable to penalty for neglecting to record, &c. certificates.

CLERK of the battalion. The colonel or commanding officer of every militia regiment, in time of peace, may appoint a clerk to his battalion, who is to act as paymaster. All army agents come under the denomination of clerks, acting by the authority of the colonels of regiments, who are responsible to the public.

When the militia is embodied, the paymaster may appoint some intelligent serjeant to act in the capacity of clerk. The same regulation holds good in the line.

There is likewise a *regimental clerk*, who acts under the serjeant major. See *REGIMENTAL BOOK*.

CLERK of the check, an officer who has the check and controul of the yeomen of the guard; also an officer in the ordnance, who, conjointly with the clerk of survey, is a check upon, and must sign all the accounts of the store-keeper before they are passed by the board.

CLERK of survey, an officer in the ordnance in the store-keeper's office who

must survey the stores and see them kept in order. He also signs the store-keeper's accounts before they pass the board.

CLERK of the stores, an officer under the board of ordnance, who is responsible to the commissary for all ordnance stores under his charge; keeping an account of all issues or receipts.

CLERK of the ordnance. This officer, who is a member of the board, makes up and delivers the annual estimates to parliament; and the debentures, or orders for payment of the bills allowed by the surveyor general, are made out in his office to be signed by the board. All balances, both of money and stores, as well as all accounts of records, are kept in his office.

CLERK of the deliveries under the board of ordnance. All issues of stores, at distant stations, are, directly, or indirectly, made from this office. He is also a member of the board.

CLICH, a sabre in use among the Turks; the blade of which is crooked and very broad. The Turks have also another kind of sabre, which is sharp only at one edge; the back of the blade is tipped with a piece of strong iron; this they call *gaduru*; it is not so much falcated as the *clich*. They have a third kind of sabre, straight, sharp at both edges, especially towards the point, which is blunted: this they call *pâlas*.

CLIDE, or *Janclide*, a long piece of timber withheld by a counterpoise, which, upon the latter being let loose, would throw a heavy load of stones into a fortress: the *clide* was still in use under Charlemaiu.

CLIENTS, *Fr.* noblemen who formerly served in the French armies under the pennant of a knight, the banner of a banneret, &c.

CLIMATE, (*climat*, *Fr.*) a term used in cosmography. It signifies a portion of the world between north and south, containing some notable difference in sun-rising.

CLINKERS, those bricks which, having naturally much nitre, or saltpetre, in them, and lying next the fire in the clamp, or kiln, by the intense heat of the fire, are run and glazed over.

CLIQUE, *Fr.* gang; party; faction. See *REGIMENT*.

CLIQUETIS, *Fr.* clashing of swords.

CLOCHE, *Fr.* a bell.

CLOCHEs sujettes à la taxe militaire,

Fr. bells subject to military requisition. The moment a town that has been battered with cannon, surrenders, the inhabitants are compelled to redeem the bells belonging to the churches, and divers utensils made either of brass or some other metal. This kind of tribute is at the disposal of the chief of the artillery, who, as he thinks proper, divides it between the officers under his command; such at least was the custom during the old French monarchy.

CLOTHING. The clothing of the British army is determined by a permanent board composed of the commander in chief, and a certain number of general officers, who act under the king's immediate authority. A considerable alteration has lately taken place in almost all articles which, under this head, are supplied to the soldiers. Those under the name of half-mounting have been wholly laid aside.

The annual clothing of the infantry of the line, or fencible infantry, serving in Europe, in North America, or at the Cape of Good Hope, (Highland corps excepted,) consists in a coat, waistcoat, or waistcoat front, a pair of breeches, unlined, except the waistband, and with one pocket only; a cap made of felt and leather, with brass plate, cockade, and tuft. The felt crown of the cap, cockade, and tuft, to be supplied annually, the leather part and brass plate, every two years. Two pair of good shoes, of the value of 5s. 6d. each pair, are to be supplied annually in lieu of the half mounting, and each serjeant is to be credited with the sum of 3s. being the difference between the value of the former articles of half mounting for a serjeant and private man. Some exceptions are made with respect to Highland corps, and regiments serving in the East and West Indies.—For further particulars, see Regulations, published by authority.

CLOTURE, *mur de CLOTURE*, Fr. a wall which surrounds any given space, such as a park, garden, &c.

CLOY, or *To cloy guns*. See *To NAIL*.

CLOUTS. See *AXLE-TREE*.

CLOUX, Fr. See *NAILS*.

To CLUB, in a military sense, to throw into confusion; to deform through ignorance, or inadvertency.

To CLUB a battalion, to throw it into confusion. This happens through a

temporary inability in the commanding officer to restore any given body of men to their natural front in line or column, which sometimes occurs after some manœuvre has been performed, and is occasioned by false directions being given to the different component parts. Ignorant and unexperienced officers may frequently commit this error; sometimes, however, the circumstance may arise from an erroneous movement of a division or company, notwithstanding that the word of command has been correct. An able officer in that case will instantly know how to unravel the several parts. The less informed and the less capable may find a relief in sounding the *Disperse*, which see. It does not, however, always follow, that because an officer may occasionally commit this error with respect to the minute movements of a battalion, he must therefore be unequal to the superior functions of command; or that when a man, who has risen from the ranks, is perfectly master of the mechanical arrangement of inferior movements, he should be able to act upon the enlarged scale of locality and position. The military science which is required in each of these cases essentially differs in its appropriate exercise, but both are necessary. See *STRATEGY*.

CLY-MORE, a great two-handed sword, formerly in use among the Highlanders, two inches broad, doubly edged; the length of the blade, 3 feet 7 inches; the handle, 14 inches; of a plain transverse guard, 1 foot; the weight, 6 pounds and a half. These swords were the original weapons of England, as appears by the figure of a soldier found among the ruins of London, after the great fire in 1666.

COAT of mail, armour made of scales, or iron rings.

COB, a coin current in Gibraltar, and the south of Spain, equal to 4s. 6d. English.

COBBING, a mode of punishment amongst soldiers for petty offences which are committed in camp, barracks, or quarters, and which is inflicted without the form of a court-martial. These trespasses consist chiefly in acts of indecency, filth, and dirtiness, which are more properly punished privately than exposed to the public. In this case, some of the culprit's comrades investi-

gate the matter, and a strapping with the belt or scabbard takes place.

COCARDE *militaire*, Fr. Amongst all nations the cockade has succeeded to the scarf: it is not long, however, since the Dutch continued to wear the scarf crossways, and the Austrians over their belts. From the colour, or colours, of the cockade, it is discovered what country a soldier belongs to. When first this mark of distinction was introduced, it was reckoned a badge of honour. With regard to the scarfs, they were attended with great inconvenience, since an officer or private might easily be seized by it, pulled from his horse, or at least stopped in his flight. From this very reason the French, within forty years, have given up the shoulder knots and aiguillettes with tassels formerly worn by their cavalry and dragoons. We have adopted them!

COCHLEA, in mechanics, one of the five mechanical powers, otherwise called the *screw*.

COCK, that part of the lock of a musket, which sustains the two small pieces of iron called jaws, between which the flint is fixed.

To Cock, to fix the cock of a musket or pistol, so as to have it ready for an instant discharge.

COCKADE, a ribbon worn in the hat. We have already observed, that this military mark succeeded the scarf which was formerly worn by the officers and soldiers belonging to European nations, and which are principally distinguished in the following manner: in the army and navy of Great Britain, black silk ribbon for the officers, and hair cockades for the non-commissioned officers, private soldiers and marines; white distinguishes the French; red marks the Spaniard, black the Prussian and Austrian, green the Russian, &c. In France, before the Revolution, officers were not permitted to wear a cockade, unless they were regimentally dressed; and, singular as it may appear, the officers and men belonging to a certain number of old regiments in the Prussian service did not wear any mark in their hats. In England the cockade is worn, in and out of regimentals, by every species of military character. Indeed it is so generally abused, that almost every prostitute, who can afford to keep a man or boy, trims his hat with it.

COCKLE-stairs. See *Winding-STAIRS*.

COCKPIT, a sort of theatre, where game cocks fight their battles. It is commonly a house, or hovel, covered over. Also an apartment in the treasury, where the King's speech is read before the meeting of parliament; and where the appeals on prize causes are made.

Iron-CODPIECES, appendages attached to ancient armour, to prevent the ill consequences of violent shocks in charging, and to contain sponges to receive the water of the riders in the heat of battle.

CODE, (*code*, Fr.) a collection of laws, rules, and regulations, by which the civilized proportion of mankind is governed.

Military CODE, (*code militaire*, Fr.) rules and regulations for the good order and discipline of an army. Of this description are our Articles of War; a revision of which is much wanted at this time.

COEFFER, Fr. to cap, or put a head-piece on any thing.

COEFFER les fusées à bombes, Fr. to stop the vents or apertures of shells with any sort of mastic composition.

CENOTAPH, an empty tomb, or monument, erected in memory of some illustrious deceased person, who, having perished by shipwreck, in battle, &c. his body could not be found to be interred, or deposited in the same.

CŒUR, Fr. the heart. This word is frequently used among the French to signify *courage*, intrepidity, manhood, &c. Hence the expression in Corneille's *Cid*: Roderigue, as-tu du cœur? which may be thus translated—Roderigues, art thou a man of resolution?

COFFER, in *fortification*, a hollow lodgment sunk in the bottom of a dry ditch, from 6 to 7 feet deep, and from 16 to 18 feet broad; and the length of it, the whole breadth of the said ditch, from side to side. The besieged generally make use of these coffers to repulse the besiegers, when they attempt to pass the ditch: they are distinguished only by their length from *Caponiers*; the difference between coffers and the traverse and gallery, consists in this, that the latter are made by the besiegers, and the former by the besieged. They are covered with joists, hurdles, and earth, raised 2 feet above the bottom of the

ditch; which rising, serves instead of a parapet, with loop-holes in it.

COFFRE. See COFFER.

COFFRE, *Fr.* a wooden frame, well calked and pitched, that is let down into the water for the purpose of laying the foundation of a building, when the necessary draining has not been practicable.

COFFRE *d'une batterie*, *Fr.* the solid work which covers the pieces of ordnance that are planted in a battery, as well as the soldiers who are attached to the guns.

COFFRE *à feu*, *Fr.* a machine filled with combustible materials, for the purpose of doing mischief to a sailing party, or of blowing up a ship, &c.

COFFRES *des galeries de mine*, *Fr.* when mine galleries are carried through ground which wants consistence, the upper part of the gallery, and its sides, are supported by planks made into a platform, and placed at equal distances one from another, to prevent the earth from falling in.

COGNIZANCE, judicial notice, trial, judicial authority; in a military sense, it implies the investigation to which any person or action is liable. During the suspension of civil authority, every offence comes under military cognizance, is subject to military law, and may be proceeded upon according to the summary spirit of its regulation. Hence, a drum-head court-martial is the strongest instance of military cognizance.

COHORT, (*cohorte*, *Fr.*) in Roman antiquity, a name given to part of the Roman legion, comprehending about 600 men; a component part of a modern French army, consisting of 1000 men.

COIN, in gunnery, (*coin d'artilleur*, *coin de mire*, *Fr.*) a kind of wedge to lay under the breech of a gun in order to raise, or depress, the metal.

COIN *de manœuvre militaire*, *Fr.* a particular manner in which the ancients used to dispose their troops on the front of the army, to break the line of the enemy. This disposition consisted in giving a great depth, and allowing only a small front, to the body of troops, which was called *faire la tête de porc*. This last title was given to an officer who commanded a column. See WEDGE.

COLGIAT, a large glove which the Turks wear in the field. The *colgiat* covers the arm up to the elbow, and while it protects the head, it helps them

in parrying the blows that are aimed at their heads.

Royal Military COLLEGE, a new institution which has been created by the immediate sanction of his Majesty, with the consent of parliament, and under the direction of the commander in chief, for the time being.—This college is now at Sandhurst, near Windsor.

COLLÈGE *Royal Militaire*, *Fr.* a general term used among the French to express that place where military instruction was given during their monarchy. This establishment consisted of several colleges, which were subordinate to the Royal Military School, or *École Royale Militaire*, of Paris.

On the 28th of March, 1776, the French King gave directions, that ten colleges should be established, over the gates of each of which was written—*Collège Royal Militaire*, Royal Military College. These colleges were under the immediate care and instruction of the Benedictine Monks, and other religious orders; the most enlightened of which was that of the Jesuits.

The secretary of state held the same jurisdiction over these colleges that he possessed over *La Flèche* and the Military School in Paris.—For particulars respecting the old institution, see the article *Royal Military School*.

COLLÈR, *Fr.* literally means to paste; to glue.

Se COLLER, *Fr.* to adhere to; to stick close to any thing.

COLLÈT, *Fr.* that part of a cannon which is between the astragal and the muzzle.

COLLIERS, *Fr.* iron or brass hold-fasts which are used in flood-gates.

COLOBE, a kind of short coat, with half sleeves, called a Dalmatica.

COLOMBE, *Fr.* an old word, signifying every sort of raft, that is placed upright in partitions; whence the term *colombage*.

COLONEL, the commander in chief of a regiment, whether of horse, foot, dragoons, or artillery, in England: but in France, Spain, and some other southern nations, colonels of horse are called *Maîtres de camp*. Colonels of horse take place, and command one another according to the dates of their commissions, and not in consequence of the seniority of their regiments. Colo-

nels of foot command in the same manner. A colonel of a regiment, properly so called, is, with us, the nominal head of a given number of men; the clothing, &c. of whom is exclusively entrusted to him, as well as the appointment of an agent, who receives the pay and subsistence of the corps, but for whose solvency and character the colonel is responsible to the public.

According to some authors, the word *Colonel* is derived from the Italians or Spaniards.

Skinner supposes it may come from colony, *colonia*, and that the heads or chiefs of colonies may have given the appellation to the officers commanding regiments.

In former times, officers, although at the head of considerable corps, were only styled captains, but not colonels. See *Dictionnaire de Trévoux*, fol. edit.

A question arises whether the old word *Coronel* might not have been derived from the Latin *Coronarius*; either from some ceremony which was performed upon the person receiving the rank, or from his being placed at the head, *corona*, of a regiment. The former certainly appears the most probable, as it might have had its origin from the Roman manner of rewarding a general.

The Spaniards have it *Coronel*; the Italians, *Colonello*.

We are inclined to think, that it is derived from the Latin *Corona*, whence *Coronarius*; and that it came to us from the Spanish. Both the English and Scotch, but particularly the latter, pronounce the word *Coronel*, and so do the Irish.

According to Grose, some derive it from the French word *colonne*, or *column*, because the colonel marches at the head of the column. Kelly, in 1627, calls this officer *Crowner*.

COLONEL of horse is the first officer of the regiment; hence his attention ought to be given to keep the regiment complete, to have it composed both of men and horses fit for service, and to take particular care to have them well exercised and taught the different evolutions; to be able on all occasions to form themselves according to the ground, or manner in which they may attack, or be attacked.

COLONEL of foot, or infantry. His functions are more extensive than those

of the cavalry, as the infantry are employed to more different purposes. A colonel of infantry should understand something of fortification, and be well acquainted with field-engineering. He cannot be too careful to maintain union and harmony among his officers; and, to succeed in this, he must acquire their esteem and confidence, and conduct himself so as to be respected. The true way to succeed in this, is to keep up subordination with unalterable firmness; to do justice to every one, to employ all his credit to procure favours to the corps in general, and to the officers in particular, without ever losing sight of the health, comfort, and contentment of his men.

COLONEL of dragoons is nearly connected with that of horse, to which word we refer the reader.

COLONEL of artillery, the commander of a battalion of artillery. He is presumed to be a very able mathematician and engineer, to be thoroughly acquainted with the power of artillery, to understand the attack and defence of fortifications in all the different branches; to be able, on all occasions, to form the artillery according to the ground or manner in which they may attack, or be attacked; in short, he should be master of every thing belonging to that important corps.

COLONEL of engineers should be a very able mathematician and mechanic; he should be master of fortification, and be correctly versed in the art of planning, constructing, attacking, and defending. See *ENGINEER*.

Lieutenant-COLONEL is the second person in command of a regiment. Under his direction all the affairs of the regiment roll. His military qualifications should be adequate to the size and the importance of the corps he has the honour to serve in.

COLONEL general of the French infantry, an appointment formerly of great trust and authority. He was entitled to the nomination of every commission and place of trust in the infantry. He could order courts-martial, and enforce the sentences awarded by them without ulterior reference; and he had a company in every regiment, which was called the colonel-general's company.

This appointment was created during

the reign of Francis I. in 1544, and became an immediate gift of the crown, under Henry III. in 1534.

There was likewise a colonel-general of the cavalry; which appointment was entrusted to two officers under the reign of Louis XIII. One commanded the French and the other the German cavalry.

The appointment of colonel-general of dragoons was created by Louis XIV. in 1688.

COLONEL by brevet, (Breveté Colonel, Fr.) one who has obtained the rank of colonel in the army, without having that rank in any particular regiment.

COLONEL réformé, Fr. a reduced half-pay officer, who has the rank of colonel in the army, without having any command or regimental rank, or who has retired from the service retaining his brevet rank.

COLONELLE, Fr. is the first company in a French regiment. *Madame la Colonelle* is the colonel's wife.

COLONNE, Fr. column. This word is variously used in military phraseology.

COLONNE étroite, Fr. close column.

COLONNE ouverte, Fr. open column.

COLONNE d'artillerie, Fr. the march or movements of a corps of artillery in regular order, with the several pieces of ordnance, accompanied by stores and ammunition, for the purpose of attacking or checking an enemy.

COLONNE d'équipages, Fr. the line of march which is observed by the baggage-wagons, &c. In advancing against an enemy these always follow the main army, and precede it when the troops are forced to retreat.

Fermer une COLONNE, Fr. to be the rear rank of a body of troops that are marching rank and file in any direction.

Ouvrir une COLONNE, Fr. to be the leading or front rank of a body of troops that are marching in regular order.

Ouvrir une COLONNE, Fr. to plant signals as marks of direction for troops that are marching in regular order. To clear the way, by removing all sorts of obstacles, &c.

Serrer la COLONNE, Fr. to close the column.

COLONELLING, beating about for soldiers; a familiar phrase, which is used in various senses.

COLOSSE, Fr. Colossus, an image or statue of exceeding greatness.

COLOURS, in the military art, are large silk flags fixed on half pikes, and carried by the ensign. When a battalion is encamped, they are placed in its front; but in garrison they are lodged with the commanding officer.

The first standard, guidon, or colours, of a regiment, are not to be carried on any guard but that of his Majesty, the Queen, Regent or Prince of Wales, or captain-general.

The size of the colours to be 6 feet 6 inches flying, and 6 feet deep on the pike. The length of the pike (spear and ferril included) to be 9 feet 10 inches. The cords and tassels of the whole to be crimson and gold mixed.

Camp-COLOURS are a small sort of colours placed on the right and left of the parade of the regiment when in the field: they are 18 inches square, and of the colour of the facing of the regiment, with the number of the regiment upon them. The poles to be 7 feet 6 inches long, except those of the quarter and rear guards, which are to be 9 feet.

COLOUR-Guard. See *GUARD.*

A pair of COLOURS, a term used in the British service to signify an ensigncy, or the first commissioned appointment in the army.

COLOURS used in the drawings of fortification. It is necessary to use colours in the drawings of plans and profiles of a fortification, in order to distinguish every particular part, and separate, as it were, the one from the other, so as to make their difference more sensible. The different sorts of colours, generally used in these kinds of drawings, are, *Indian-ink, carmine, verdigrise, sap-green, gum-bouch, Prussian blue, indigo,* and *umber.*

Indian-ink is the first and most necessary thing required in drawing; for it serves, in drawing the lines, to express hills or rising grounds, and, in short, for all what is called shading, in drawings. The best sort of *Indian-ink* is of a bluish black, soft, and easily reduced into a liquid, free from sand or gravel. It is sold in sticks from sixpence a stick to half a crown, according to its goodness and quantity. That made in Europe is good for nothing.

The manner of liquefying it is by

putting a little clear water into a shell or tea-cup, and rubbing it gently till the water is black, and of a consistence much like common ink: when it is used for drawing lines, it must be made very black, though not too thick, otherwise it will not easily flow out of the drawing-pen; but when it is for shading, it must be pale, so as to go over the same shade several times, which adds a beauty to the shading.

Carmine is an impalpable powder, and the fairest red we know of: it serves for colouring the sections of masonry, the plans of houses, and all kinds of military buildings; as likewise their elevation: but then it is made of a paler colour. It is also used for drawing red lines in plans, to represent walls. It is exceedingly dear, being generally sold for a guinea an ounce; but a little will go a great way. It must be mixed with a little gum-water.

Verdigrease, or *sea-green*, used in drawings, is either liquid in small vials for six pence a piece, or mixed in little pots or shells, &c. it serves to colour wet ditches, rivers, seas, and in general to represent all watery places.

Sap-green is a stone of a faint yellowish green, when liquefied with clear water; but when mixed with a little sea-green, it makes a beautiful grass-green; but, as all mixed colours are liable to fade, if *verd'iris* can be had, it will be much better. *Sap-green* is very cheap.

Gum-bouch is a fine yellow in stones, and very cheap. It may be dissolved in water, but without gum: it serves to colour all projects of works; as likewise to distinguish the works unfinished from those that are complete. It serves also to colour the trenches of an attack.

Indigo is in small cakes, and very cheap; it serves to colour iron, and roofs of buildings which are covered with slates: it must be well ground upon a smooth stone or glass, and mixed with a little gum-water.

Prussian blue is a kind of friable stone, of an exceeding fine blue: it is used to represent the colour of blue cloth in drawing encampments, battles, &c. It must be well ground, and mixed with a little gum-water.

Smalt, also a good sort of blue, and may be used for the same purposes. It is not dear.

Ultramarine is an impalpable powder, and of a very delicate sky-blue. It is a dear colour.

Umber is a yellowish brown colour, in powder: when it is mixed with gum-water, it serves to colour dry ditches, sand, and all kinds of earth. By mixing a little red ink with it, it will make a wood colour.

If some tobacco-leaves are steeped in clear water for several hours, and filtered through a woollen cloth, or brown paper, with a little red ink mixed with it, it will make the best earth or wood colour, as lying smoother than any other.

Gum-water is best when it is made some time before it is used; for which reason take some *gum arabic* and steep it in clear water for some hours, till it is dissolved: then strain it through a woollen cloth or brown paper, and preserve it in phials, well stopped, till wanted.

COLUMN, a body of troops formed in *deep files*, and narrow *front*, the whole advancing with the same degree of movement, and having sufficient space between the ranks and files to prevent confusion. The name of column is also given to several bodies placed behind each other, and intended to march on successively, to form or to keep in *order of battle*: but in this case they are not to be called *files of troops*. There are more or less *columns*, according to the nature of the ground, but it is not necessary that they should all of them advance the same way in order to meet at an appointed spot. Those officers, who have been taught by experience alone, (which is far from being sufficient if they are ignorant of the theory,) will do well to consult *L'Art de la guerre par règles et par principes*, by *Maréchal de Puysegur*, and *Les Œuvres de Folard*. It is next to an impossibility to remember all that is prescribed by those skilful authors; but every officer, who is anxious to improve his knowledge in the military art, may derive great advantage from the perusal of their works.

Close-COLUMN, a compact solid column, with very little space between the divisions of which it is composed.

Open-COLUMN, a column with intervals between the divisions equal to their respective fronts.

COMBAT, a battle or duel. Anciently it was not uncommon for con-

tending powers to adjust their dispute by single combat, when each party chose for itself a champion, who contested the point in presence of both armies.

COMBATANTS, (*combattans*, Fr.) troops engaged in action.

Non-COMBATTANS, Fr. persons about an army whose employments are wholly civil; such as commissaries, barrack-masters, paymasters, surgeons, chaplains, &c.

COMBATTRE, Fr. to act against an enemy with offensive weapons, for the purpose of defending one's country and its rights, &c. Hence, *tout est soldat pour vous combattre*: every thing is up in arms to fight you.

COMBINAISON, Fr. a calm and dispassionate examination of the various projects and designs which are suggested to the human mind by their multiplied occurrences in warfare.

COMBINAISON also signifies the art of calculating numbers and quantities, and comparing them together.

COMBINER *ce que fait l'ennemi*, Fr. to weigh well the movements of an enemy.

COMBLE, Fr. roof. It is also called *toit*.

COMBLEAU, Fr. a cord used to load and unload pieces of artillery, also to hoist them on their carriage, the same as other heavy burdens, by means of a crane.

COMBLEMENT *des fosses*, Fr. When the besiegers have succeeded in rendering themselves masters of the covert-way, they contrive, by all possible means, to fill up the ditches, by establishing galleries which protect the workmen, in order that the miners may carry on their operations with more safety: by this means they form an intrenchment which defends them against the sorties, or any other attempt, that might be made by the besieged.

COMBUSTIBLES, Fr. combustible materials; such as are used in offensive and defensive operations.

COME-in. Soldiers are said to come in, as volunteers, recruits, &c. when they join any particular standard.

COME-over. When men desert from an enemy, and join the army that opposes him, they are said to come over. This term is opposed to *go over*.

To COME-in to, to join with, to bring help. "They marched to Wells, where

the Lord Audley, with whom their leaders had before secret intelligence, *came in to them*." *Johnson*.

To COME-up, to overtake. To come up with an enemy, is a military phrase much in use.

COMINGE, Fr. a shell of extreme magnitude, which takes its name from the person who originally invented it, containing 18 inches in diameter, and 500lbs. in weight.

COMMAND, generally called *the word of command*, is a term used by officers in exercise, or upon service.

COMMAND, in military matters. All commands fall to the eldest in the same circumstances, whether of horse, dragons, artillery, foot, or marines. Among the officers of the corps of the British troops, entire or in parts, in case two of the same date interfere, a retrospection of former commissions, or length of service, is to be examined and ended by the judgment of the rules of war.

COMMANDS in fortification, are:

A command in front, when any eminence is directly facing the work which it commands.

A command in rear, when any eminence is directly behind the work which it commands.

A command by enfilade, when an eminence is situated in the prolongation of any line of a work, and a considerable part of it may be seen from thence.

To have in command, an official term, signifying to have authority or instruction to make a communication; as, I have it in command from his Royal Highness the Duke of York, &c.

COMMANDANT is that person who has the command of a garrison, fort, castle, regiment, company, &c. called also commander.

COMMANDE, Fr. a rope made use of in boats and pontoons.

COMMANDE, Fr. a person under the orders of another.

Ouvrage COMMANDÉ, Fr. a work which is overlooked, and consequently commanded by some other.

COMMANDEMENT, Fr. in a military sense, means any spot which is higher than another. A commandement is called *simple*, when the difference between two heights is only 9 feet. It is called *double*, when the difference is 18 feet; *triple* when 27, and so progressively, taking 9 feet invariably for the height of each com-

mandement. A commandement may be considered in three lights; in *front*, in *enfilade*, and in *reverse*. The commandement in *front*, is when you see all the persons who are employed in protecting a work; in *enfilade*, when you only see them from a flank; and in *reverse*, when you see them obliquely from behind.

COMMANDEMENT, *Fr.* an order; a command; a situation of trust which is given to a military officer.

COMMANDEMENT (*ordre de*), *Fr.* a right of command which formerly existed among the French between officers of cavalry and infantry. In a fortified post, or town, the officers of infantry have the command over the officers of cavalry; but in an open country the officers of infantry are commanded by the former.

Knight-COMMANDER. See KNIGHT.

COMMANDER, *Fr.* to command; to be superior in rank, and to possess authority over others.

COMMANDER, *Fr.* in fortification, to overlook, to command.

COMMANDERY, a certain benefice belonging to some military order. A body of the Knights of Malta are so called.

COMMANDEUR, *Fr.* a knight of an order who enjoys some lucrative situation in consequence of his rank, such as the Knights of Malta formerly enjoyed.

COMMANDING-ground implies, in a military sense, a rising ground which overlooks any post, or strong place. There are, strictly speaking, three sorts of commanding grounds; namely,

Front COMMANDING-ground. Every height is called so, that lies opposite to the face of the post which plays upon its front.

Reverse COMMANDING-ground, an eminence which plays upon the rear of a post.

Enfilade COMMANDING-ground, or *Curtain COMMANDING-ground*, a high place, which, with its shot, scours all the length of a line, &c.

COMMIS, *Fr.* clerk or inferior person, who is employed in any of the French war-departments, &c.

COMMISSAIRE, *Fr.* commissary; This term was used in the old French service, before the Revolution, to express a variety of military occupations. The following are the principal designations:

COMMISSAIRE-général des armées, *Fr.* commissary-general of the armies.

COMMISSAIRE général de la cavalerie légère, *Fr.* commissary general of light cavalry. He ranked as the third general officer of the cavalry.

COMMISSAIRE d'artillerie, *Fr.* commissary of artillery.

COMMISSAIRES provinciaux d'artillerie, *Fr.* provincial commissaries attached to the ordnance.

COMMISSAIRES ordinaires d'artillerie, *Fr.* commissaries in ordinary attached to the ordnance. These were subordinate to the provincial commissaries, and were distributed among the navy, forts, and garrison towns.

COMMISSAIRES extraordinaires d'artillerie, *Fr.* extraordinary commissaries attached to the ordnance. These formed the third class of commissaries under the former monarchical government of France. They likewise did duty on board the king's ships, or in garrison towns.

COMMISSAIRE provincial en l'arsenal de Paris au département de l'Isle de France, *Fr.* provincial commissary belonging to the arsenal in Paris.

COMMISSAIRE général des poudres et salpêtres, *Fr.* commissary general of gun-powder and saltpetre. This place was created with that of the superintendent general of gun-powder and saltpetre, in 1634, but was finally suppressed.

COMMISSAIRE général des fontes, *Fr.* commissary general of the founderies.

COMMISSAIRE ordonnateur, *Fr.* a person entrusted with the chief management of the commissariat department on service. The situation corresponds with that of our chief commissary.

COMMISSAIRES des guerres, *Fr.* commissaries of the war departments, or muster-masters-general.

COMMISSAIRES ordinaires des guerres, *Fr.* commissaries in ordinary, or deputy muster-masters. These were subordinate to the former, and were entrusted with the superintendance of hospitals, to see that proper provisions were procured for and distributed among the sick. They likewise gave proper vouchers to account for the absence of soldiers, and regulated what number of extraordinary wagons should be furnished to the troops on marches.

COMMISSAIRES provinciaux et ordinaires des guerres, *Fr.* provincial or ordinary commissaries of war.

COMMISSAIRES des guerres entretenus dans l'Hôtel des Invalides, Fr. commissaries of war, specifically attached to and resident in the Hôtel des Invalides.

COMMISSAIRE des vivres, Fr. commissary of stores.

COMMISSAIRE général des fortifications, Fr. commissary general of fortifications.

COMMISSAIRES provinciaux des guerres, Fr. provincial commissaries of war, created in 1635; they were first suppressed and then re-established by Louis XIV. in 1704.

COMMISSAIRE Impérial, Fr. judge advocate; so called during the reign of Napoleon in France.

COMMISSARY is of various denominations, though he is generally a civil officer appointed to inspect the musters, stores, and provisions of the army. In war time the number of commissaries is unlimited.

COMMISSARY'S department, in the artillery service. See **ARTILLERY**.

COMMISSARIES general, and **COMMISSARIES of accounts**, are appointed by warrant under the king's sign manual, directing them to obey all instructions given them for the execution of their duty by the lords commissioners of the treasury. These instructions are generally prepared by the comptrollers of the army accounts, under the orders, and subjected to the subsequent inspection, of the treasury.

COMMISSARY-general of the musters, or *muster-master general*. He takes account of the strength of every regiment as often as he pleases; reviews them, sees that the horses are well mounted, and all the men well armed and clothed. He receives and inspects the muster-rolls, and knows exactly the strength of the army. A new appointment has been created in the person of inspector general of cavalry, which answers every purpose for which that of muster-master general was intended, as far as regards the cavalry.

COMMISSARY-general of stores, a civil officer in the artillery, who formerly had the charge of all the stores, for which he is accountable to the office of ordnance. He was allowed various other deputy commissaries, clerks, and conductors, especially in war-time. At present there is no such appointment in the British artillery service, although from the magnitude and importance of the situation, and the responsibility attached

to it, such an appointment is absolutely necessary to support the respectability of so extensive a department. The officers of this description are called commissaries of stores. Instead of there being a commissary general, deputy commissaries and assistant commissaries are employed in rank according to the magnitude of the trust committed to their charge both in cash and stores. Both duties generally center in one person.

COMMISSARY of the train horses, a civil officer formerly of the artillery, who had the inspection of all horses belonging to the train, the hospital and the bakery; having under him a number of conductors, drivers, &c. There is at present no such appointment in the British service.

COMMISSARY of accounts is a responsible person who attends each army, where the numbers are of sufficient importance, with a proper establishment, for the purpose of examining and controlling accounts on the spot. All commissaries of accounts make returns of their examinations, and on these documents the comptrollers of the army accounts found the best inquiry into the public expenditure which the nature of the subject admits of.

COMMISSARY-general of provisions has the charge of furnishing the army in the field with all sorts of provisions, forage, &c. by contract: he must be very vigilant and industrious, that the troops may never suffer want. He has under him various commissaries, store-keepers, clerks, &c.

COMMISSION, any situation or place which an individual may hold in the regular army, militia or volunteers of Great Britain. All commissions in the line, guards, or volunteer corps must have the royal sign manual. The former are issued from the War-office, subjecting the individual to the payment of certain fees, according to the rank he holds; which fees are received by the several agents, (who deduct them in the first instance,) and account for them to the War-office. Commissions in the militia do not bear the royal sign manual; that of the adjutant alone excepted, who is generally called a king's officer. Lieutenants or deputy lieutenants of counties affix their seals and signatures to these commissions or appointments; but they must previously have been

laid before the king for his approbation. Fourteen days constitute the allotted time; and if his majesty does not *disapprove* of the person so recommended, a notification is sent by one of the principal secretaries of state to the lord lieutenant, or to those acting by commission in his absence, or during a vacancy, stating his majesty's pleasure.

COMMISSION of array. In the reign of Henry II. 1181, an assize of arms was settled to the following effect. That every person possessed of a knight's fee, was to have a coat of mail, an helmet, a shield, and a lance, and as many of these as he had fees. Every free layman that had in goods or rents to the value of 16 marks, was to have the same arms; and such as had 10 marks were to have a lesser coat of mail, an iron cap, and a lance; the two last of which, with a *wambois*, were assigned for the arms of burgesses, and all the freemen of boroughs. These arms were all to be provided before the feast of St. Hilary next following.

To enforce these regulations, it was customary for the time, at certain seasons of the year, to issue commissions to experienced officers, to draw out and array the fittest men for service in each county, and to march them to the sea-coasts, or to such other quarters of the country as were judged to be most in danger. Of these *commissions of array*, there are many hundreds in the Gascon and French rolls in the Tower of London, from the 36th of Henry III. to the reign of Edward IV. The form of the ancient commissions of array may be seen in Rushworth's Historical Collection published in 1640. These commissions were again attempted to be revived by Charles I. but they were voted illegal and unconstitutional by the parliament in those days. They would not be so in these times.

COMMISSION militaire, Fr. a commission in the army.

COMMISSION militaire, Fr. a temporary court or tribunal established to inquire into capital offences, and to pass sentence on the delinquents.

Non-COMMISSIONED applies to that particular class of men who act between what are called the rank and file of a battalion, and the commissioned or warrant officers. See *SERGEANTS*.

COMMISSIONER, (*commissaire intendant*, Fr.) a person entrusted by go-

vernment to superintend any particular department, or branch of civil or military service.

COMMISSIONERS, certain persons who, towards the latter end of the reign of King James I. and in the beginning of that of Charles, his successor, constituted a kind of mixed court, composed of civil and military members, whose duty was to try all offences committed by the soldiers or followers of the army, within certain counties and districts. At what time courts-martial, according to their present form, were first held, does not appear; they are, however, mentioned, with the distinction of general and regimental, in the ordonnances of war of King James II. published by authority, A. D. 1686.

Military COMMISSIONERS, certain persons who are authorized by parliament to examine army accounts, &c. They are likewise called *commissioners for the inspection of army accounts*. Also individuals who are invested with a certain authority for the purpose of communicating with foreign powers, particularly such as may be subsidized by England.

COMMISSIONERS of the royal military college consist of persons who are mostly military men, under the immediate direction of the commander in chief of his Majesty's forces for the time being.

COMMITTEE, a select number of persons to whom the more particular consideration of some matter is referred, and who are to report their opinion to the court, &c. of which they are members.

COMMITTEE of artillery officers, a select committee of artillery officers established at Woolwich by the King's warrant, to whom all improvements and inventions are submitted, under the authority of the master general of the ordnance, to whom they report upon all matters referred to them.

COMMON, in geometry, is applied to an angle, line, or the like, which belongs equally to two figures, or makes a necessary part of both.

COMMON divisor, in arithmetic, is a quantity, or number, which exactly divides two or more other quantities, or numbers, without having any remainder.

COMMUNICATION, in fortification, signifies all sorts of passages or ways which lead from one work to an-

other. The best and indeed the only good communications are those which the besieger cannot annoy, or interrupt by his fire. The obstinate defence of a work is rendered almost impracticable, if you are destitute of good communications. Subterraneous galleries, coffers, or caponieres, slopes made on the outside of gorges, may be termed communications. When the ditches are filled with water, floating bridges, &c. serve as communications.

Line of COMMUNICATION. See *LINE.*

COMPAGNE, Fr. a room or cabin belonging to the chief of a galley.

COMPAGNIE, Fr. a certain number of soldiers under the inspection or management of a chief called *captain.*

COMPAGNIE-colonelle, Fr. among the French the first company in a battalion, or that which is called the colonel's.

COMPAGNIE-lieutenant-colonelle, Fr. the second company in a battalion, or that which belonged to the lieutenant-colonel.

COMPAGNIES-franches, Fr. free corps, or companies, which, during the old monarchical government of France, were put upon a certain establishment in war time. See *Free-COMPANY.*

COMPANY, in a military sense, means a small body of foot or artillery, the number of which is never fixed, but is generally from 50 to 120, commanded by a captain, a lieutenant, and an ensign, and sometimes by a first and second lieutenant, as in the artillery, and flank companies of the line. A company has usually three or four serjeants, three or four corporals, and two drums. In the Guards, the companies consist of 120 men each, as in the artillery. In the Austrian service a company consists of 200 men.

Free-COMPANY is one of those corps commonly called irregular; is seldom or never under the same orders with the regular corps of the army, but for the most part acts like a detached army, either by itself, or in conjunction with some of its own kind; therefore their operations are properly considered under the title of the *petite guerre.*

Independent-COMPANY, that which is not incorporated in a regiment.

COMPARTIMENT de feu, Fr. a specific division of the intermediate spaces belonging to a mine, and the regular allotment of the saucissons or train-bags

to convey fire to the furnaces at one and the same time.

COMPARTIMENT du mineur, Fr. See *COMPARTIMENT de feu.*

COMPAS, Fr. See *COMPASS.*

COMPAS de proportion, Fr. a mathematical instrument which facilitates the prompt dividing of the lines on a plan.

COMPASS, a circle, space, limits; an instrument whereby mariners steer.

COMPASS, an instrument for dividing, measuring, or drawing circles. The original invention of compasses has been given to Dædalus, who is affirmed by Pliny to have been the inventor of all sorts of carpenters' tools. He was an Athenian by birth. But Ovid gives the invention of the compasses to Perdrix, who was sister's son to Dædalus.

COMPASSEMENT de feu, Fr. See *COMPARTIMENT.*

COMPASSER la mèche, Fr. to try the match.

COMPASSION, (compassion, Fr.) According to a French author, (see *Dictionnaire Militaire, par M. Dupain de Montesson,*) a quality not known in military life. He describes compassion to be a sentiment, or impulse, of the soul, which carries us insensibly towards the relief of every object in bodily or mental distress: a sentiment, however, which in war we carefully conceal; repressing every feeling of the heart, becoming obdurate on every occasion, and seeking nothing but the destruction of our enemies. Such are the sentiments of this French writer. British valour is, on the contrary, susceptible of much compassion.

COMPASSIONATE List. See *LIST.*

COMPÉTENCE militaire, Fr. military cognizance.

COMPÉTITOR, (compétiteur, Fr.) one who sues or fights for the same thing that another does.

COMPLEMENT, (complet, Fr.) the full establishment of a regiment, &c.

COMPLEMENT of the curtain, that part in the interior side of a fortification which makes the demi-gorge. See *FORTIFICATION.*

COMPLEMENT of the line of defence, the remainder of the line of defence, after you have taken away the angle of the flank. See *FORTIFICATION.*

COMPLEMENT (in a parallelogram), are the two lesser parallelograms, which are made by drawing two right lines parallel

to each side of the figure through a given point in the diagonal.

COMPLEMENT, in geometry, is what remains of the quadrant of a circle, or of ninety degrees, after a certain arch has been retrenched from it. Thus, if an arch or angle be 25 degrees, they say its complement is 65: since $65 + 25 = 90$.

COMPLEMENT of an angle, (*complément d'un angle*, Fr.) the quantity of degrees which an acute angle wants to be equal to a right angle.

COMPLETE, (*complet*, Fr.) A battalion, troop, or company is said to be complete, when the established number of men are present and fit for duty. The French say, *Le complet d'un bataillon, d'une compagnie*, &c. the full establishment of a battalion, company, &c.

To COMPLETE, (*compléter*, Fr.) to carry up to its full establishment.

COMPLIMENT of the line of the army. See HONOURS.

COMPLIMENT from guards. See HONOURS.

COMPLICITÉ, Fr. the act of being an accomplice.

COMPOSER, Fr. to enter into a composition; to make terms with an enemy; as when a fortress, town, or body of men surrender.

COMPOSITION, Fr. This term among the French signifies the component or constituent parts of any establishment, &c. Thus regiments form divisions, and the whole put together make up an army. Hence *composition d'une armée*.

COMPOSITIONS, Fr. terms, conditions, &c. which are entered into by two contending parties, when one is forced to give way.

COMPOSITION, Fr. in artillery, the different ingredients with which gunpowder is made, viz. sulphur, saltpetre, and charcoal.

COMPOSITION also signifies a mixture of beeswax with pitch and tar, that is used in the making up of fuses and shells.

COMPOUND motion. See GUNNERY.

COMPRESS, (*compresse*, Fr.) in surgery, a bolster made up with linen, to be laid on a wound, or on the orifice of a vein.

COMPRESSION, the act or circumstance of being restrained or confined.

Globe of COMPRESSION, an excavation of a globular form, which is made in the earth, and is filled with gunpowder.

COMPTRROLLER, (*contrôleur*, Fr.) a

person who inspects accounts, and makes his report upon them, after due examination, without favour or partiality.

COMPTRROLLER of the artillery, (*contrôleur d'artillerie*, Fr.) a civil officer who formerly inspected the musters of artillery, made the pay lists, took the account and remains of stores, and was subordinate to the board of ordnance. No such appointment exists at present in this department.

COMPTROLLERS of army accounts, certain persons appointed by government to inspect the general expenditure of the army, and to report thereon to the Treasury. The office is in Whitehall.

COMPTE borgne, Fr. odd money.

COMPTE ronde, Fr. even money.

Argent COMPTANT, Fr. ready money.

COMPTEPAS, Fr. (from *compter les pas*, to count or measure steps or paces,) an instrument which serves to measure the ground a person has run over, whether on foot, on horseback, or in a carriage. See ODOMETRE.

COMRADE, (*camarade*, Fr.) a fellow-soldier in the same regiment, troop, or company, from the Italian *camera*, a chamber.

COMPTER, Fr. to reckon; to depend upon: as *compter sur les troupes*, to depend upon the troops.

To CONCAMERATE, to make an arched roof, as in vaults, &c.; to arch over.

CONCAVE, (*concave*, Fr.) hollow, as the inside of a shell, &c.

CONCAVITY, (*concavité*, Fr.) the hollow space which appears in an excavation, &c. Such, for instance, is the hollow that is made by the springing of a mine.

CONCQUE, Fr. a piece of ordnance wider about the mouth than at the breech. A kind of shell used by the ancients in lieu of a trumpet.

CONCEIT, (*entêtement, opinion*, Fr.) fondness; over-weening opinion of oneself.

CONCEITED, (*entêté, affecté*, Fr.) proud; fond of himself; opiniative; fantastical; every thing in a word which a brave and intelligent officer is not. See GLORIOLE.

To CONCERT, (*concerter*, Fr.) in a military sense, to digest, arrange, and dispose matters in such a manner, that you may be able to act in conjunction with other forces, however much divided, at any given point of offensive, or defensive, operation.

CONCERTE *une opération de guerre*, Fr. to concert measures for actual warfare: as to fix on some specific time, describe some direct mode, and adopt the necessary means to carry a plan into execution.

CONCHOIDE, Fr. a curve of the third kind, which was originally invented by Nicodemus.

CONCIERGE, Fr. keeper of a palace. It also signifies keeper of a prison.

CONCIERGERIE, Fr. the situation, or place, of the keeper of a castle, &c. Also an old state prison, now a common jail, in Paris.

CONCILE, Fr. See **COUNCIL**.

CONCITOYEN, Fr. fellow-citizen; countryman.

CONCLAVE, in architecture, a closet or inner chamber, from the French *conclave*; also a room in the Vatican at Rome, where the Roman cardinals meet to chuse a Pope.

Etre en CONCLAVE, Fr. to be closetted.

Military-CONCORD, agreement, union, good understanding. This is represented by the Goddess Pallas, having in her right hand a spear, and in her left serpents.

CONCORDAT, Fr. compact; convention; agreement.

CONCORDATES, public acts of agreement between popes and princes.

CONCOURIR au bien du service, Fr. to do every thing in one's power for the good of the service.

CONCUSSION, a shock occasioned by two bodies which are moving in contrary directions.

CONCUSSION, Fr. public extortion, when any officer or magistrate pillages the people by threats, or pretence of authority.

CONDITION, quality; state of being.

Out of CONDITION, a term used to signify that a horse is not fit for work, either through want of nutriment, or from hard usage, &c.

CONDITIONS of peace, (*conditions de paix*, Fr.) terms upon which peace is made.

CONDUCT, (*conduite*, Fr.) that line which is observed by an officer, who is entrusted with the management of others, or has the direction of any particular enterprise.

Safe-CONDUCT, a guard of soldiers who defend the common people from the violence of an enemy. Also a protec-

tion given to individuals who pass through an enemy's country or lines.

CONDUCTEUR, Fr. a person entrusted with the conveyance of military stores, &c.

CONDUCTEUR, ou *guide*, Fr. an inhabitant of a town or village, who is well acquainted with the different roads, and acts as a guide.

CONDUCTORS, (*conducteurs d'équipages*, Fr.) are assistants to the commissary of stores, to conduct depôts, or magazines, from one place to another: they have also the care of the ammunition wagons in the field: they report to the commissary, and are under his command.

CONDUIRE, Fr. to lead; to manage; as *conduire une armée*, to conduct or head an army.

CONDUIT, Fr. a conduit; a pipe.

CONDUITE d'une troupe, Fr. the charge or management of any body of troops on a march.

CONDUITE d'eau, Fr. a succession or train of pipes made to convey water from one quarter to another.

CONE, (*cone*, Fr.) a solid having a circular base, and growing smaller and smaller until it ends in a point, which is called the vertex, and may be nearly represented by a sugar-loaf.

CONFEDERATE troops, (*troupes confédérées*, Fr.) troops of different nations united together in one common cause against an enemy. Hence the league by which they are so engaged, is called a *confederacy*.

CONFEDERATES, (*confédérés*, Fr.) different princes, states, or bodies of people acting together.

CONFEDERATION, (*confédération*, Fr.) a compact entered into by two or more powers to act offensively against a common enemy, or to stand upon the defensive; an assembly of people.

CONFÉRENCE, Fr. an oral discussion between two or more persons to settle the conditions of a peace, &c.

CONFIDENCE, in a military sense, implies an explicit reliance upon the skill, courage, &c. of an individual. Next to a perfect knowledge of military tactics, the faculty of securing the confidence of the soldiers is, perhaps, one of the surest means of becoming successful in war. There are instances, indeed, which prove that many victories have been gained by men who had the entire confidence of their army, without

being remarkable for much military knowledge: whilst, on the other hand, battles have been lost by the most celebrated generals, because they did not possess the good opinion of their men. When confidence and military science go together, an army must be unfortunate not to succeed in the most desperate enterprize.

CONFLICT. See **COMBAT.**

CONFUSION, (*confusion*, Fr.) the loose and disorderly state into which a regiment or a whole army is thrown, by defeat.

CONGÉ, Fr. leave of absence. The old monarchical service of France admitted of two sorts. The *Congé limité*, a limited or specific leave, and *Congé absolu*, a full discharge: in time of war, the latter was always suspended.

CONGÉDIER, Fr. to dismiss.

CONGÉDIER une armée, Fr. to send an army into quarters.

CONGLOMERATE, to gather together, to assemble in a knot.

CONGRESS, (*congrès*, Fr.) in military and political affairs, is an assembly of commissioners, deputies, envoys, &c. from several courts, meeting to agree on terms for a general pacification, or to concert matters for their common good.

CONIC, (*conique*, Fr.) like a cone. A piece of ordnance wider towards the mouth, than about the breech, is said to be conic.

CONIC section is a figure which is made by the solidity of a cone, being supposed to be cut by a plane.

CONICS, that part of the geometry of curves, which considers the cone, and the several curve lines arising from the sections thereof.

CONJUGATE, (*conjugué*, Fr.) an epithet used in geometry to signify the junction of two lines.

CONJUGATE axis, (*axe conjugué*, Fr.) two axes that cross each other.

CONJUGATE diameter, (*diamètre conjugué*, Fr.) the shortest axis or diameter in an ellipsis or oval.

CONJUGATE of the hyperbola, (*hyperbole conjugué*, Fr.) a line drawn parallel to the middle point of the transverse axis, sometimes called the second axis.

CONJURATEURS, ou *conjurés*, Fr. conspirators; persons leagued together by oath, for the purpose of assassinating their prince or sovereign, or of overturning the established government. This term applies generally to any illegal combination of men.

CONJURATION, Fr. conspiracy; league entered into by persons who are mutually sworn to support and carry into execution some projected scheme.

CONNÉTABLE de France, Fr. constable of France. This appointment succeeded to that of Grand Sénéchal de France. It was not originally a military place of trust, but merely an office belonging to the king's household.

CONNÉTABLE de France, Fr. was a particular corps under the immediate command and direction of the Marshals of France; composed of forty-eight mounted guards, who wore a *hoqueton*, for the king's service, of a provost-general, four lieutenants, and four *exempts*.

CONNOISSANCE, Fr. knowledge of any thing.

CONNOISSANCE d'un pays, Fr. the complete knowledge of a country, of its mountains, vallies, rivers, fortified places and bridges, &c. also of its magazines and means of subsistence for an army.

Pays de CONNOISSANCE, Fr. This expression is used by the French to express a familiar knowledge of persons or things; hence, *Etre en pays de connoissance*, to be perfectly acquainted; to be at home.

Avoir des CONNOISSANCES, Fr. to have much knowledge; much skill.

CONOID, (*conoïde*, Fr.) in geometry, the solid produced by the circumvolution or turning of any section of a cone about its axis.

Parabolic-CONOID, or *paraboloïde*, (*conoïde parabolique*, ou *paraboloïde*, Fr.) a conoid which is produced by the whole circumvolution of a parabola round its axis.

Hyperbolic-CONOID, (*conoïde hyperbolique*, Fr.) that which is produced by the entire circumvolution of an hyperbola round its axis.

Elliptic-CONOID, (*conoïde elliptique*, Fr.) that which is produced by the terminated motion of an ellipsis round one of its two axes.

To CONQUER, (*conquérir*, Fr.) to conquer, to obtain possession of a town, country, &c. by force of arms.

CONQUEROR, (*conquérant*, Fr.) a warrior who manages his affairs in such a manner, that he gets the better of all his enemies, and obtains a complete triumph.

CONQUEST, (*conquête*, Fr.) victory; territory, &c. obtained by dint of fighting.

Pays CONQUIS, *Fr.* conquered countries.

CONSCRIPT, (*conscriptus*, *Lat.*) a term anciently applied to the senators of Rome, from their names being entered all in one register.

CONSCRIPTS, men raised to recruit the Imperial and French armies. In Bohemia and Hungary, all men capable of bearing arms are enregistered, and must march whenever there is occasion for their services. The conscripts in France were raised, during the late wars, upon similar principles.

CONSEIL, *Fr.* This word is variously used by the French, viz.

Le CONSEIL d'Etat, *Fr.* council of state. It is also called *Le Conseil d'en haut*, or the upper council.

Le CONSEIL Privé, *Fr.* privy council. It is also styled *Le Conseil des Parties*, the meeting of the heads of certain departments.

CONSEIL de guerre, *Fr.* This term not only signified a council of war, at which the French king and his ministers sat to determine upon military matters, both by sea and land, but it likewise meant a general or regimental court-martial.

CONSEIL de guerre secret, *Fr.* a secret council held by the sovereign and his ministers to deliberate on a defensive, offensive, or federative war.

Arrêt du CONSEIL d'Etat, *Fr.* a state-warrant.

CONSERVATEUR, *Fr.* This word literally signifies *preserver*. Politically applied, it means guardian, having objects of state in trust.

Sénat CONSERVATEUR, *Fr.* a name given to an assembly in France, which was instituted by Bonaparte, when First Consul, and was permitted to exist after he assumed the title of Emperor of the French.

CONSERVATION, *Fr.* a town-hall; a place where commercial objects were discussed and settled. Hence *La Conservation de Lyons*.

Aller de CONSERVE, *Fr.* to go in company, as ships do at sea.

CONSERVER, *Fr.* to keep upon the establishment: hence, *Conserver un Régiment*.

CONSIDÉRATION, *Fr.* consideration; weight; value; estimation.

CONSIGNE, *Fr.* the aggregate of the orders given to each sentry.

It likewise means, when used in the masculine gender, a person paid by the

French government for constantly residing in a garrison town in order to take cognizance of all persons who entered, or went out, of the gates. He had a place allotted to him in the half-moon, and delivered a regular report to the governor, or commandant of the place.

CONSIGNE, *Fr.* an individual who is not permitted to go beyond certain limits, or to leave a house wherein he is detained by superior command.

CONSIGNÉ, *Fr.* to order a person to be stopped. It also signifies to regulate things in a town, or garrison, so as to ensure public tranquillity. Also to put down upon paper; to enrol.

CONSOÛDE, *Fr.* comfrey; a plant with monopetalous leaves, which have a healing quality, particularly a styptic one, in wounds.

CONSPIRATION, *Fr.* conspiracy.

CONSPIRING powers, in mechanics, are all such as act in directions not opposite to one another.

CONSTABLE, *Chief*, a person employed under the militia establishment of Great Britain, to issue, when directed, orders to the constables to return lists of men liable to serve, and to give notice to the constables of the number of men appointed to serve, and direct them to give notice to the men chosen. To forward notice of the time and place of exercise to the constables, and of the orders for embodying the militia. To order proper persons to furnish carriages for the militia, as well as for every other part of the British army on its march, and to be repaid their extra expenses by the county treasurer. To transmit to the petty constables certificates from the clerk of the peace of the service of officers. Constables are allowed one penny in the pound of the money they collect; but they forfeit fifty pounds whenever they neglect to assist in raising money to be assessed where the militia has not been raised.

CONSTABLES are to attend subdivision-meetings, with lists of men liable to serve, and verify them; likewise to produce returns on oath of the days notice was given to the men chosen by ballot. On their refusing to return lists, they are liable to be imprisoned, or to suffer fine. It is their duty to affix notice of the time and place of exercise on the church doors. They are paid for their trouble in the same manner as the chief constables are, but are only subject to 20l. penalty, for neglecting to assist in

raising money directed to be assessed where the militia has not been raised.

They may likewise apprehend persons suspected of being deserted serjeants, corporals, or drummers, belonging to the militia.

Lord High CONSTABLE of England, an officer who anciently was of so great power, that it was thought too great for a subject; his jurisdiction was the same with that of the Earl Marshal, and took place of him as chief judge in the marshal's court.

CONSTABLE of the Tower, a general officer who has the chief superintendance over the Tower, and is Lord Lieutenant of the Tower Hamlets. He holds his appointment by letters patent from the King, and is not removable at pleasure. The Tower, being a state prison, is also considered as a garrison, of which the constable is governor.

High CONSTABLE and Marshal, (*Grand Connétable, et Maréchal de France*, Fr.) were officers of considerable weight and dignity, not only in France, but throughout all the feudal governments of Europe. The title of constable, of *comes stabuli*, according to the ingenious author of an essay on military law, explains the original nature of this office, which was that of commander of the cavalry; and as these once constituted the principal strength of the imperial or royal armies, this officer became naturally the commander in chief of those armies. The office of marshal appears originally to have been of a much inferior nature, the person who exercised it being the actual superintendant of the stables, or chief of the equerries, whose duty was to furnish the provender for the horses, and to oversee their proper management. But in process of time this office grew into high consideration, and the marshal, subordinate only to the constable, became the second in command of the armies, and in the absence of the latter supplied his place. See *MARSHAL*.

The powers of the constable as a field officer were extremely ample and dignified. The constable was subordinate only to the king in the command of the army; and even when the king was actually in the field, the efficient command of the troops seems to have been in this officer, and all the general orders were issued jointly in the sovereign's name and in the constable's.

To outrun the CONSTABLE, in a military sense, to spend half-a-crown out of sixpence a day.

CONSTANCE, Fr. perseverance and resolution: qualities which are essentially necessary in war.

CONSTITUTION d'un pays, Fr. the nature of a country; its local advantages, or disadvantages, with respect to military operations.

CONSTRUCTION, (*construction*, Fr.) in geometry, the drawing such lines of a figure, as are necessary, beforehand, in order to render the demonstration more plain and undeniable.

CONSUL, the person invested with the powers of the consulate.

Chief CONSUL, (*Premier Consul*, Fr.) the first, or chief magistrate, of three persons, each bearing the title of consul, in France. The duty of the chief consul was to command, direct, and superintend all the military establishments of the country, and, whenever it was judged expedient, to lead her armies into battle. Bonaparte, in consequence of the revolution which took place in 1799, was appointed chief consul.

Avoir la Goutte CONSULAIRE, Fr. a figurative term to express the constraint which an individual labours under who is afraid of stirring out, on account of any particular sentence of a court, or from the fear of being served with a writ, &c.

CONSULAR, relating or appertaining to the consul.

CONSULATE, a civil and military power which was originally instituted by the Romans, on the extinction of their kings in Tarquin the Proud.

CONSULSHIP, the office of consul.

CONSUMPTION, (*consommation*, Fr.) the expending, or waste of stores, ammunition, &c.

CONTACT, (*contact*, Fr.) the relative state of two things that touch each other. Those points which touch each other are called points of contact.

CONTAGION, (*contagion*, Fr.) the same with an infection, the spreading, or catching of a disease; as when it is communicated, or transferred, from one body to another, by certain effluvia, or steams, emitted, or sent forth, from the body of a diseased person, or from a contaminated atmosphere. Contagion is also figuratively used, as the contagion of example.

Grande CONTAGION, *Fr.* the same as *peste*, the plague.

CONTE *pas*, *Fr.* an instrument which serves to measure the ground one goes over. It is also called odometer, *odomètre*, *Fr.*

CONTENIR *une armée, un ennemi*, *Fr.* to keep an army, or an enemy, in check. Of this description was supposed to be the confederacy formed at Pilnitz in 1792, to check the French Revolution. But its issue proved, that partial views gained the ascendancy over the common cause; and that instead of weakening, or restraining, the French, its incongruous materials only served to strengthen them.

CONTENT, the capacity, or area, of a space, or the quality of any matter, or space included in certain bounds.

The content of a ton of round timber is forty three solid feet. A load of hewn timber contains fifty cubic feet. In a foot of timber are contained seventeen hundred and twenty-eight cubic, or square inches; and as often as seventeen hundred and twenty-eight inches are contained in a piece of timber, be it round or square, so many feet of timber are contained in the piece.

CONTIGUOUS, (*contigu*, *Fr.*) Two or more things are said to be contiguous, when they are disposed so near each other, that they join, or touch.

CONTIGUOUS angles, (*angles contigus*, *Fr.*) in geometry, such as have one leg common to each angle, otherwise called adjoining angles, in contradistinction to those produced by continuing their legs through the point of contact; which are called opposite, or vertical angles.

CONTINGENCIES, in army accounts, items of intermediate expenditure; payments made on account of casualties, or unforeseen circumstances.

Lumping CONTINGENCIES, monies paid and charged against the public, without any specific declaration being made of the service, or avowal of the person, for which, and to whom, such monies have been issued. Charges of this description are so open to the natural misrepresentation of mankind, that, for the sake of every fair and honest servant of the public, each item of expenditure ought to be given.

CONTINGENT, something casual, or uncertain, that may, or may not happen.

The CONTINGENT bill of a regiment is an account of extra charges, which

depend on the accidental situation or circumstances, that may attend any regiment in its due course of service. See INCIDENTS.

CONTINGENT, (*contingent*, *Fr.*) the quota of armed men, or pecuniary subsidy, which one state gives to another.

CONTOUR, *Fr.* the limits of a country, of a town, camp, plan, or drawing; it is the basis, or foundation, of each.

CONTOURNER, *Fr.* to draw the contours, or outline of a picture; to give grace and symmetry to any thing which is drawn, or designed, by the hand.

Mal CONTOURNER, *Fr.* to draw any thing out of proportion.

CONTRABAND. This term is applicable to various foreign commodities which are either totally prohibited by the English laws, or are subject to severe penalties and heavy duties. For the encouragement of the fair trader, and in order to secure the revenue from illicit encroachments, the light dragoons are frequently employed upon the coast to prevent the smugglers from carrying contraband goods into the country. Other troops are sometimes put upon this service; but light horsemen are best calculated to do the duty. Dragoons and military parties, duly authorised, employed upon this service, receive a certain proportion of every thing that is taken.

CONTRACTILE *force*, in mechanics, is that power, or property, inherent in certain bodies, whereby, when extended, they are enabled to draw themselves up again to their former dimensions.

CONTRAINdre, *Fr.* to levy contributions on a town, village, &c. either in money or provisions.

CONTRAInTE, *Fr.* the exaction which is made when a town, or country, is put under contribution.

CONTRAMURE, in fortification, is a wall built before another partition-wall to strengthen it, so that it may receive no damage from the adjacent buildings.

CONTRAT, *Fr.* contract; agreement. It also signifies a deed.

CONTRAVALLATION, (*contravallation*, *Fr.*) a line formed in the same manner as the line of circumvallation, to defend the besiegers against the enterprises of the garrison: so that the army, forming a siege, lies between the lines of circumvallation and contravalla-

tion. The trench of this line is towards the town, at the foot of the parapet, and is never made but when the garrison is numerous enough to harass and interrupt the besieger by sallies. This line is constructed in the rear of the camp, and by the same rule as the line of circumvallation, with this difference, that as it is only intended to resist a body of troops much inferior to a force which might attack the circumvallation, so its parapet is not made so thick, nor the ditch so wide and deep; 6 feet are sufficient for the first, and the ditch is 8 feet broad, and 5 feet deep.

Among the ancients this line was very common, but their garrisons were much stronger than ours; for, as the inhabitants of towns were then almost the only soldiers, there were commonly as many troops to defend a place as there were inhabitants in it. The lines of circumvallation and contravallation are very ancient; examples of them being found in histories of the remotest antiquity. The author of the military history of *Louis le Grand* pretends, however, that *Cæsar* was the first inventor of them; but it appears from the *Chevalier de Folard's* treatise on the method of attack and defence of places, used by the ancients, that these lines are as old as the time in which towns were first surrounded with walls.

CONTRAVENTION militaire, Fr. responsibility; every commanding officer, whatever his rank may be, is responsible for all the offences committed by the troops under his command.

CONTRAVENTION also signifies, both in French and English, a contravening, an infringement, &c. also a breach: hence *en contravention d'une loi militaire*, in breach of an article of war.

CONTREBANDE, Fr. See **CONTRABAND**.

Faire la CONTREBANDE, Fr. to smuggle.

CONTREBANDIER, Fr. a smuggler, or what is familiarly called a fair trader.

CONTRE-approches, Fr. lines in fortification, or trenches which a besieged garrison, or invested army, makes to defeat the attempts of its adversaries.

CONTRE-batteries, Fr. batteries which are erected for the purpose of answering those of an enemy, who besieges a place, or gives battle.

CONTRE-finesse, or **CONTRE-ruse**, Fr. a stratagem employed to oppose, or

prevent, the effect of another: it is also called *contre-mine*.

CONTRE-forts, Fr. brick-work which is added to the revetement of a rampart on the side of the *terre-pleine*, and which is equal to its height. *Contre-forts* are used to support the body of earth with which the rampart is formed. They are likewise practised in the revetements of counterscarps, in gorges, and *demi-gorges*, &c. The latter are constructed upon a less scale than the former. It has been suggested by an able engineer in the French service, to unite *contre-forts*, and consequently to strengthen them, by means of arches.

Contre-forts likewise form a part of the construction of powder-magazines, which are bomb-proof.

CONTRE-garde, ou conserve, ou couvre-face, Fr. in fortification, counter-guard.

CONTRE-ligne, Fr. a sort of temporary fortification which is thrown up with earth, and stands between a besieged town, or fortress, and a besieging army, in order to prevent the sorties of the former.

CONTRE-marche, Fr. See **MARCH**.

CONTRE-mine, Fr. See **MINE**.

CONTRE-mineurs, Fr. See **MINE**.

CONTRE-mont, Fr. up the river; up hill.

CONTRE-mot, Fr. a second parole, or countersign, which is given in times of alarm.

CONTRE-mur, Fr. an outward wall erected round the principal wall of a town.

CONTRE-ordre, Fr. a counter-order.

CONTRE-porte, Fr. an inward door, or gate.

CONTRE-queuc d'ironde, Fr. a work in fortification, which has two faces, or sides, making a reentrant angle, by joining together towards the inside of the work. It has also two branches, which, with the faces, contain a narrower space towards the enemy than on the other side.

CONTRE-ronde, Fr. a round which is made subsequent to another, to see if the first round was gone according to order.

CONTRE-sanglon, Fr. girth-leather.

CONTRE-signe, Fr. the signature, or name of a prince, minister, or of any privileged person, which is written on the outside of a letter, and renders it post free, &c. This word is properly written *Contre-scing*.

CONTRE-signer, Fr. to countersign; to frank.

CONTRE-temps, Fr. When two per-

sons, fighting with swords, thrust at the same time without parrying; the thrust is equally dangerous for both parties, and is called a *contre-temps*, or counter-thrust.

CONTRE-tranchées, Fr. trenches made against the besiegers with their parapet; they must communicate with several parts of the town, in order that the garrison may be able to retire into it hastily, after having broken or stopped the communications; otherwise it would be losing time to erect a work which you would be obliged to demolish, or to fill up, when you had reached the third parallel.

CONTRÉE, Fr. country; region.

CONTRESCARPE, Fr. counter-scarp.

CONTRESCARPER, Fr. to counter-scarp.

CONTRESCCEL, Fr. counter-seal.

CONTRESCCELLER, Fr. to counter-seal.

CONTRESPALIER, Fr. hedge-row of trees.

CONTRIBUTE, (*contribuer*, Fr.) to furnish from good-will and patriotism, or from compulsion, money, stores, &c. for the support of an army.

CONTRIBUTION, in military history, is an imposition, or tax, paid by countries who bear the scourge of war, to secure themselves from being plundered and totally destroyed by the enemy. When a belligerent prince, wanting money, raises it on the enemy's country, and is either paid in provisions, or in money, and sometimes in both, he is said to do so by contribution.

Mettre à CONTRIBUTION, Fr. to put under contribution.

CONTROL, *comptrol*, (*contrôle*, Fr.) is properly a double register kept of acts, issues of the officers, or commissioners, in the revenues, army, &c. in order to ascertain the true state thereof.

CONTROLES, Fr. See *MUSTER-ROLLS*.

CONTROLEURS des guerres, Fr. muster-masters. This term was likewise applied to signify various other appointments belonging to the interior arrangement of the French army, viz. *contrôleurs généraux d'artillerie*, *contrôleurs des hôpitaux militaires*.

CONTROLEUR général des vivres, Fr. commissary-general of stores.

CONTUSION, (*contusion*, Fr.) the effect of a ball, or of any other hard sub-

stance, upon the human frame, when it is struck, without breaking, or tearing, the skin.

CONVALESCENT, (*convalescent*, Fr.) recovering, returning to a state of health. Hospitals have been established during the present war in different districts, for the preservation of our troops. Among others, there is in each district a convalescent hospital.

List of CONVALESCENTS is a return made out by the surgeon belonging to a battalion, hospital, &c. to ascertain the specific number of men who may shortly be expected to do duty.

CONVENTION, (*convention*, Fr.) an agreement which is entered into by troops that are opposed to one another, either for the evacuation of some particular post, the suspension of hostilities, or the exchange of prisoners.

CONVENTION, Fr. convention; contract; agreement. The French say *de difficile convention*, hard to deal with.

CONVENTION-Nationale, Fr. the National Convention, which succeeded the National Assembly at Paris, in 1792, and at the tribunal of which Louis XVI. was tried and condemned to death, 21st January, 1793.

CONVENTIONS entre Souverains pour restitution des déserteurs, Fr. agreements, or stipulations, made between neighbouring powers to check desertions. In conformity to these conventions, all deserters whatever are arrested within the dominions of a sovereign, who has passed an agreement of the kind with the prince from whose army they have deserted. The intelligence is forwarded to the commandant of the nearest town, who sends for the deserter, and forwards him to his corps, where the expenses of his escort are repaid. No such agreements have ever been entered into by Great Britain.

CONVENTIONS secrètes entre les officiers d'un corps, Fr. certain secret agreements which are entered into by the officers of a regiment, either for the benefit of the regiment, or in opposition to a commanding officer. Of this description is the Round Robin.

CONVERSION, Fr. a sudden motion of the troops whilst manœuvring, or in battle, which is made either by wheeling from the right, or from the left. This word corresponds with our term *WHEEL*.

CONVERSION, *quart de conversion*, Fr. a wheel which comprehends the quarter

of a circle, and turns the front of a battalion where the flank was.

Faire CONVERSION, *Fr.* See *To* WHEEL.

CONVEX, (*convexe*, *Fr.*) externally round, as a globe, cannon ball, &c.

CONVEXITY, (*convexité*, *Fr.*) the external surface of any round body, or substance.

CONVOCATION, *Fr.* the act of summoning various persons belonging to a state, for the purpose of discussing matters which relate to civil or military matters.

CONVOQUER, *Fr.* to call together.

To CONVOY, (*convoyer*, *Fr.*) This term is used among the French, both for sea, or land.

CONVOY, (*convoi*, *Fr.*) a detachment of troops employed to guard any supply of men, money, ammunition, provision, stores, &c. conveyed in time of war, by land or sea, to a town or army. A body of men that marches to secure any thing from falling into the enemy's hand is also called a *convoy*.

To CO-OPERATE, (*co-opérer*, *Fr.*) to put a well-digested plan into execution, so that forces, however divided, may act upon one principle, and towards one end.

COOK, (*cuisinier*, *Fr.*) each troop or company has cooks, who are excused from other duties.

COPEAU, *Fr.* chip; shaving.

Vin de COPEAU, *Fr.* wine just made, and running through shavings.

COPPER, (*cuiivre*, *Fr.*) no other metal is allowed to the magazines, or barrels of gunpowder. It is one of the six primitive metals.

COPPER, (*chaudière*, *Fr.*) a large boiler, such as is used in regimental kitchens for the soldiers.

Mess-COPPERS, a term used in India among the King's troops, meaning any surplus that may remain in the hands of the serjeants in charge of the messes, at the expiration of each ten days, which money it has been customary immediately to divide amongst the men.

Molten-COPPER, (*rosette*, *Fr.*) copper that is melted.

COPPER-plate, (*taille douce*, *Fr.*) a plate on which pictures, &c. are engraved.

COQUILLES à boulet, *Fr.* shells or moulds. They are made either of brass, or iron; two are required for the casting of a cannon-ball; but they never close so effectually as to prevent the liquid metal, which has been poured in,

from running somewhat out of the part where they join. This excrescence is called the beard, which is broken off to render the ball perfectly round.

COR, *Fr.* a French horn. *A cor et à cri*, with hue and cry; with might and main.

CORBELLES, *Fr.* large baskets, which being filled with earth, and placed one by another along the parapet, serve to cover the besieged from the shot of the assailing enemy. See BASKET.

CORBILLARD, *Fr.* a horse.

CORDAGES, *Fr.* all sorts of ropes which are used in the artillery, &c.

CORDE, *Fr.* cord, in geometry, and fortification, means a straight line which cuts the circumference into two parts, without running through the center.

CORDE-à-feu, *Fr.* a rope-match, composed of combustible materials.

CORDE d'estrapade, *Fr.* a rope by which men or women are hoisted up, by way of chastisement.

CORDE de l'arc, *Fr.* See SUBTENDANT.

CORDEAU, *Fr.* a cord which is used in measuring ground. It is divided into toises, feet, and inches, for the purpose of ascertaining, with precision, the opening of angles and the extent of lines. In wet weather a small chain made of wire is substituted, to prevent mistakes that would necessarily occur from the end becoming shorter or longer, according to the influence of the weather. The technical terms among French engineers, are—*Manier le cordeau*; *Pendre le cordeau*; *Travailler au cordeau*.

CORDEAU de campement, *Fr.* a long cord divided at equal distances with a piece of cloth of a bright colour, that it may be better seen; it serves to mark, from left to right, the alignment of the camp of each battalion in battle array.

CORDEAU de mesure, *Fr.* See CHAÎNE d'ingénieur.

CORDERIE, *Fr.* a rope-walk.

CORDON, in fortification, is a row of stones made round on the outside, and placed between the termination of the slope of the wall, and the parapet which stands perpendicular, in such a manner, that this difference may not be offensive to the eye; whence those cordons serve only as ornaments in walled fortifications.

The CORDON of the revetment of the rampart is often on a level with the terre-pleine of the rampart. It has been

observed in a French military publication, that it might be more advantageously placed some feet lower, especially when there is a wall attached to the parapet, to shield the rounds from the enemy's fire.

CORDON, in military history, is a chain of posts, or an imaginary line of separation between two armies, either in the field, or in winter quarters.

CORDON bleu, Fr. the blue ribbon. See **ORDER**.

CORDON rouge, Fr. the red ribbon. See **ORDER**.

Cordon also signifies the outermost border of a wall, &c. generally made of stone.

CORNAGE, an ancient tenure, which obliged the land-holder to give notice of an invasion by blowing a horn.

CORNE à amorcer, Fr. a priming-horn.

CORNE, ou OUVRAGE à CORNE, Fr. See **HORNED-WORK**.

CORNES de bélier, Fr. low flanks in lieu of tenailles, for the defence of the ditch. See **OUVRAGE à corne**.

CORNES, Fr. horns. The French say figuratively, *Lever les cornes*, to rebel against one's superiors.

CORNET, in the military history of the ancients, an instrument much in the nature of a trumpet: when the cornet was sounded alone, the ensigns were to march without the soldiers; whereas, when the trumpet only sounded, the soldiers were to move forward without the ensigns. A troop of horse was so called.

CORNET, in the military history of the moderns, the third commissioned officer in a troop of horse or dragoons, subordinate to the captain and lieutenant, equivalent to the ensign amongst the foot. His duty is to carry the standard, near the center of the front rank of the squadron.

CORNET d'ouïe, Fr. a horn made of beaten iron, which the officers use in going their rounds to hear from over the parapet what passes in the ditches, and even beyond the covert-way.

CORNETTE, Fr. See **CORNET**.

The **CORNETTES** or *Cornets* of the colonel-general of cavalry, in the old French service, as well as those attached to the quarter-master-general and commissary-general, ranked as lieutenants, and the *Cornettes* of la Colonelle-générale des dragons ranked as youngest lieutenants, and commanded all other cornets.

CORNETTE, Fr. was likewise the term used to signify the standard peculiarly appropriated to the light cavalry. Hence *cornettes* and troops were synonymous terms to express the number of light-horse attached to an army. The standard so called was made of taffetas or glazed silk, one foot and a half square, upon which the arms, motto, and cypher of the prince who commanded the cavalry were engraved. A sort of scarf, or long piece of white silk, was tied to the *cornette* whenever the cavalry went into action, in order to render the standard conspicuous, that the men might rally round it.

CORNETTE (porte) BLANCHE, Fr. an ornament which, in ancient times, served to distinguish French officers who were high in command. It was worn by them on the top of their helmets. It likewise meant a royal standard, and was substituted in the room of the Pennon Roïal. The *cornette-blanche* was only unfurled when the king joined the army; and the persons who served under it were princes, noblemen, marshals of France, and old captains, who received orders from his Majesty direct.

CORNICE, (*corniche*, Fr.) in architecture, the uppermost member of the entablature of a column, or that which crowns the order.

The *cornice* is the third grand division of the *trabeation*, commencing with the *frieze*, and ending with the *cymatium*.

According to *Belidor*, *cornice* signifies every salient profile that crowns a work.

CORNICON, Fr. a species of trumpet used among the ancients. Prior to the Romans being acquainted with the trumpet and kettle-drum, a *Cornicon* drew sounds from the horn of a wild bullock, lined with silver. The sound was loud and shrill, and was heard from a great distance. This instrument, which, perhaps in the opinion of some, will not be considered as a very wonderful invention, did not originally belong to the Romans, but was borrowed from the Phrygians. A Phrygian named *Marsyas* was the inventor, who, probably, little thought, that a horn would render his name memorable.

CORNICULUM, a kind of iron or brass horn added to the helmet as a military distinction, which was granted to the Roman soldier who had shewn proofs of extraordinary valour.

CORNISH ring, in gunnery, the next

ring from the muzzle backwards. See CANNON.

CORNUA Exercitus. The Romans used to call by this name what we term *right* and *left wing* of an army. However, according to Polybius, by *cornua exercitus*, they only meant the auxiliary troops which were divided so as to occupy both extremities of a Roman army. These two divisions were distinguished by the appellation of *dextrum cornu* and *sinistrum cornu*, right and left wing.

COROLLARY, (*corollaire*, Fr.) with mathematicians, an useful consequence drawn from something that has been advanced before: as, *that a triangle that has three sides equal, has also two angles equal*; and this consequence should be inferred, *that a triangle, all whose sides are equal, has also its three angles equal*.

CORONA, } in architecture, is a
CORONE, } large flat member of
CROWN, } the *cornice*, so called,
CROWNING, } because it crowns not only the cornice, but the entablature, and the whole order.

CORPORAL, (*caporal*, Fr.) a rank and file man with superior pay to that of common soldiers, and with nominal rank under a serjeant. He has charge of one of the squads of the company, places and relieves sentinels, and keeps good order in the guard. He receives the word of the inferior rounds that pass by his guard. Every company has three or four corporals.

Lance-CORPORAL, (*caporal breveté*, Fr.) one who acts as corporal, receiving pay as a private. He is also called *vice-caporal*, and by the common soldiers *caporal postiche*.

CORPORAL of a ship, an officer whose business is to look to all the small shot and arms, to keep them clean, with due proportions of match, &c.

CORPS, with architects, a term signifying any part that projects, or advances beyond the naked of a wall, and which serves as a ground for some decoration.

CORPS, any body of forces. Corps is also applied to specific regiments; as the corps of Guards; likewise to a particular class of men; as a fine corps of drums and fifes.

Corps de garde, Fr. in the French acceptance of the word, signifies not only the place itself, but likewise the men who are stationed to protect it. See GUARD-HOUSE.

Corps de garde avancée, Fr. When a camp is secured by intrenchments, and has one line of defence, the corps de garde, or advanced post of the cavalry, is on the outside of the line, and each part has its quarter and main guard. The quarter guard, or *petit corps de garde*, is more in front, but still in sight of the main guard, and the *vedette* is still farther in advance, for the security of both.

Corps de réserve. See RESERVE.

Corps d'armée, Fr. the whole of an army, including detachments, &c.

Corps de bataille, Fr. the whole line of an army which is drawn out in order of battle.

Corps de casernes, Fr. the range of buildings called barracks, erected for the convenience of troops.

Corps géométrique, Fr. signifies length, breadth, and depth.

CORRELET or *Corolet*, an ancient suit of armour which was chiefly worn by pikemen, who were thence often denominated *Corselets*. The same kind of armour was worn by the harquebusiers.

To CORRESPOND, to hold intercourse. An officer or soldier who corresponds with the enemy, is liable to suffer death, by the Articles of War.

CORRESPONDENCE, (*correspondance*, Fr.) a written intercourse which is kept up between officers at the head of the army, or between belligerent powers, who are embarked in the same cause, and who communicate together in order to secure ultimate success.

Military CORRESPONDENCE, (*correspondance de guerre*, Fr.) See MILITARY SECRETARY.

Secret CORRESPONDENCE, (*correspondance secrète*, Fr.) secret intelligence or correspondence which is maintained between the general of an army, and some one or more confidential agents that are employed to watch the enemy.

CORRIDOR, (*corridor*, Fr.) the covert-way which is formed between the fosse and palisade on the counterscarp. See COVERT-WAY. This word is becoming obsolete as a military term, and is chiefly used to designate a gallery, &c.

CORRODY, a defalcation from an allowance or salary, for some other than the original purpose. Thus an officer who retires upon the full pay of a short troop or company, holds a Corrody.

CORROYER, Fr. to mix lime and sand with water, well together, in order to make mortar.

CORYPHÉE, Fr. chief; leader.

CORSAGE, *Fr.* the trunk of the body; either of a man or animal.

CORSAIR, (*corsaire*, *Fr.*) in naval history, a name given to the piratical cruisers of Barbary, who frequently plunder the merchant ships of countries with whom they are at peace; a pirate.

CORSELET, a little cuirass; or, according to others, an armour, or coat made to cover the whole body, anciently worn by the pikemen, who were usually placed in the front and on the flanks of the battle, for the better resisting the enemy's assaults, and guarding the soldiers posted behind them.

CORTÈGE, *Fr.* the suite or retinue which accompanies a person of distinction. We use the term in the same sense.

CORTES, the states, or the assembly of the states, in Madrid.

CORVÉE, *Fr.* a species of hard labour for the repair of public roads, &c. to which a certain number of soldiers, and sometimes the inhabitants of towns and villages, were subjected during the old French monarchy. This personal tax was done away at the Revolution, and turnpikes have since been established throughout France. *Corvée* likewise means a job.

CO-SÉCANT, (*co-secant*, *Fr.*) the secant of an arch, which is the complement of another to 90°.

CO-SINE, (*co-sinus*, *Fr.*) is the right sine of an arch, which is the complement of another to 90°.

COSMOGRAPHY, (*cosmographie*, *Fr.*) a science which teaches the structure, shape, disposition, and connection of all the different parts of the globe; likewise the manner of delineating them on paper: it is composed of two parts, viz. astronomy and geography.

COSMOLABE, an ancient mathematical instrument for measuring distances both above and below.

COSMOPOLITAN, (*cosmopolitain*, *cosmopolite*, *Fr.*) a citizen of the world.

COSSAQUES or **COSSACKS**. According to Sir Robert Wilson, in his brief remarks on the Character and Composition of the Russian army, the Cossacs are a description of troops peculiar to the Russian Army. There are some writers who believe, that the Cossacs have been a people 900 years, and suppose them to have come originally from the neighbourhood of Mount Caucasus, and to have settled on the Don, anciently called the Tanais; whence they sent out

colonies, and conquered Siberia, which they ceded to Russia in 1574, and in 1584 they established themselves on the Volga. In 1574 they made their first appearance in the Russian armies.

The Cossaque is mounted on a very little, ill-conditioned, but well-bred horse, which can walk at the rate of five miles an hour with ease, or vie with the swiftest goer.

The Cossaque has only a snaffle bridle on his horse, for the convenience of feeding at all times, and even in the presence of an enemy. He carries a short whip on his wrist, as he does not wear a spur; and as he is constantly armed with a lance, a pistol in his girdle, and a sword, he never fears a competitor in single combat. The Cossacs distinguished themselves during the war between the Russians and the French on several occasions. Though supposed to be less civilized than their brethren in arms, the uniform tenour of their conduct, both in 1814 and 1815, has entitled them to general esteem, and secured them from reproach, even in France.

COSSE, *Fr.* a measure of distance in the East Indies, equal to 2500 geometrical paces.

COSSE, } as Cossick Numbers.

COSSICK, } This was the old name of the art of *algebra*, and is derived from *cosa*, *Ital.* for *res* or the root; for the Italians call algebra, *regula rei et census*, i. e. the rule of the root and the square. *Cossick* numbers, with some algebraists, are the powers of numbers, as the roots, the square, the cube, &c.

COTANGENT, the tangent of an arch which is the complement of another to 90°.

COTÉ, *Fr.* side. The whole extent or length of a branch in fortification; the distance or space between two given points, or the demi-gorges of two neighbouring bastions.

COTÉ extérieur du polygone, *Fr.* exterior side of the polygon. The line which is drawn from the capital of one bastion to another.

COTÉ intérieur du polygone, *Fr.* interior side of the polygon. The line which is drawn from the angle of one gorge to the angle of the gorge most contiguous to it. See sides of the POLYGON.

Du Coté de l'Orient, *Fr.* eastwards.

COTE à COTE, *Fr.* abreast.

COTEAU, *Fr.* a hillock.

COTER, *Fr.* to mark upon the plans and profiles of works of fortification, the exact measurement thereof divided into toises, feet, inches, and lines: the figure which is used to distinguish the different parts of the work is called the *côté*: so that when it is necessary to repair a bastion, the engineer instantly knows the defective part.

COTISER, *Fr.* to give one's allotted proportion of money or provisions, &c. for the use of an army. Also to make a person contribute any rate according to his means.

COTOYER *une armée*, *Fr.* to keep a parallel line with an enemy, so as to prevent him from crossing a river, or to seize a convenient opportunity to attack him.

COTOYER also signifies to coast along.

COTTE *d'armes*, *Fr.* the military dress of the ancient Gauls, the length of which frequently varied; sometimes it hung to the ground both before and behind, with the sides sloping; sometimes it came just above the knee, and at other times just below it. In subsequent years it was only worn by the *hérauts d'armes* and *les gardes de la manche*, as we may have seen in our days. Those Gauls that were opulent displayed great magnificence in their *cotte d'armes*. Since that period the privilege has descended to the sons of grandees and noblemen.

COTTE *de mailles*, *Fr.* coat of mail.

COTTEREAUX, *Fr.* a banditti that formerly infested France, particularly the province of Berri. They were destroyed by Philip Augustus in 1163. Their only weapon was a large knife.

COUARD, *Fr.* See **COWARD**.

COUARDISE, *Fr.* See **COWARDICE**.

COUCH, (*couche*, *Fr.*) with painters, a lay or impression of colour, or varnish.

To COUCH, a term used in the exercise of the lance. Bring the lance under the right arm, and holding it firm there by pressing the arm to the body, direct the point with the right hand.

COUCHE, *Fr.* in carpentry, a piece of timber which is laid flat under the foot of a prop or stay.

COUCHER, *Fr.* in an active sense of the verb, to lay.

COUCHER *sur le carreau*, *Fr.* to lay low.

COUCHER *en joue*, *Fr.* to take aim with a firelock: figuratively, to keep any person, or thing, in view, for the purpose of gaining some object.

COUCHER *un écrit*, *Fr.* to write down, to take down in writing.

COUCHES, *Fr.* courses or layers of sand, which are spread about one foot deep, over the boarding of a wooden bridge, in order to place the stones upon it. Also any layer of sand or gravel which serves to have a pavement laid upon.

COUDE, *Fr.* an obtuse angle in the continuity of a front or partition wall, taken outside, with one turn, or bent within. Also any angle.

COUDE, *Fr.* any turning or deviation from a direct line, that is made by a river, canal, road, or branch of a work in fortification.

COUDE *d'une rivière*, *Fr.* a winding of the river.

COUDÉE, *Fr.* an ancient measure taken from the elbow to the end of the hand.

COVENTRY, a town in Warwickshire.

To be sent to COVENTRY, a military term used to express the situation of an officer who is not upon a good footing with his brother officers. This term derives its origin from a circumstance which happened to a regiment that was quartered in the town of Coventry, where the officers were extremely ill received by the inhabitants, or rather denied all sort of intercourse with them. Hence **to be sent to Coventry** signifies to be excluded from all social communication with others; or, more properly, with those who before were intimate.

To COVER, in the mathematical disposition of a battalion, company, or squad, only means that a man is to stand in such a position in file, as that, when he looks exactly forward to the neck of the man who leads him, he cannot see the second man from him. Nothing but great attention at the drill can bring men to cover so truly as never to destroy the perpendicular direction of any leading body. The least deviation in the men who cover upon either flank of a leading column, or division, will throw all that follow out of the true line.

To COVER ground is to occupy a certain proportion of ground, individually, or collectively. A foot soldier upon an average covers 22 inches of ground when he stands in the ranks. The dimensions are taken from his shoulder points.

A file on horseback covers or occupies in the ranks about 2 feet 8 inches. Thus three file will occupy 8 feet; twelve file 32 feet or 10 yards and 2 feet; thirteen file, 34 feet 8 inches, or 11 yards, 1 foot, 8 inches; fourteen file, 37 feet 4 inches, or 12 yards 1 foot 4 inches, and so on.

One horse's length from nose to croup, on an average, 3 feet and about 2 inches, or 2 yards 2 feet 2 inches. This consequently will be the space which about three file occupy in front.

Cavalry and infantry officers cannot pay too much attention to the calculation of distances; by an accurate knowledge of which, ground will be properly covered, and any proportion of men, on horseback or on foot, be drawn up so as to answer the intentions of an able general. The best way that an officer can form his eye, is to exercise it to the measurement of ground by the regular pace of 2 feet, used in military drawings; by this he can calculate his interval exactly, when he once knows how many feet his division occupies; for it is only halving the number of feet, and the number, so produced, is his distance in paces of two feet each. This instruction has been given to cavalry officers, by a very able tactician.

COVER, (*à couvert*, Fr.) a term in war to express security or protection: thus, to land under cover of the guns, is to advance offensively against an enemy who dares not approach on account of the fire from ships, boats, or batteries. It likewise signifies whatever renders any movement imperceptible: as, under cover of the night, under cover of a wood, &c. The gallery or corridor in fortification is, however, particularly distinguished by the term *chemin couvert*, covert-way, because the glacis of the parade is its parapet.

COVERER. The serjeant, corporal, or private that is posted in the rear of a leader is so called.

COVERT-WAY, in fortification, is a space of 5 or 6 fathoms on the border of the ditch toward the country, covered by a rising ground, which has a gentle slope towards the field. This slope is called the glacis of the covert-way. See FORTIFICATION.

Second COVERT-WAY, or, as the French call it, *avant-chemin couvert*, is the co-

vert-way at the foot of the glacis. See FORTIFICATION.

COULER *une pièce de canon*, Fr. to liquify the metal for the purpose of casting it into a mould.

COULET, from *col*, Fr. covering for the neck.

COULEVRINE, Fr. a piece of ordnance of great length, and which carries a ball to a considerable distance.

The *Coulevrine* of *Nanci* in France, which is still to be seen at *Dunkirk*, is twenty-two French feet long from the breech to the mouth, and carries an eighteen pound shot.

COULIS, Fr. plaster well mixed, for the purpose of filling up the joints of stones, and to keep them together.

Vent COULIS, Fr. wind issuing out of chinks.

COULISSE, Fr. any piece of timber which has grooves in it. Also pieces of wood which hold the floodgates in a sluice.

COULVRENIER, Fr. a militia-man of the fifteenth century. The *Coulvrenier* wore a habergeon with sleeves, a gorgerin and salade, a breast plate of brass, a dagger, and a sharp edged sword.

COUNCIL of *wa*, (*conseil de guerre*, Fr.) an assembly of principal officers of an army or fleet, called by the general or admiral who commands, to concert measures for their conduct. See CONSEIL.

COUNTER of a horse is that part of the fore-hand of a horse, that lies between the shoulder and under the neck.

COUNTER-APPROACHES, lines or trenches made by the besieged, when they come out to attack the lines of the besiegers in form.

Line of COUNTER-APPROACH, a trench which the besieged make from their covered-way to the right and left of the attacks, in order to scour, or enfilade, the enemy's works.

COUNTER-battery, a battery used to play on another in order to dismount the guns. See BATTERY.

COUNTER-breastwork, (*contre-parapet*, Fr.) See FAUSSE-BRAYE.

COUNTER-forts, in fortification, are certain pillars and parts of the wall, distant from 15 to 20 feet one from another, which are advanced as much as may be in the ground, and are joined to the height of the cordon by vaults, to sustain the *chemin des rondes*, or that part of the *raupart* where the rounds

are gone, as well as to fortify the wall, and strengthen the ground. See BUTTRESSES.

COUNTER-guards, in fortification, are small ramparts, with parapets and ditches, to cover some part of the body of the place. They are of several shapes, and differently situated. They are generally made before the bastions, in order to cover the opposite flanks from being seen from the covert-way; consisting then of 2 faces, making a salient angle, and parallel to the faces of the bastion. They are sometimes made before the ravelins. See FORTIFICATION.

COUNTER-round. See ROUNDS.

COUNTER-mines. See MINES.

COUNTER-trenches. See SIEGE.

COUNTER working is the raising of works to oppose those of the enemy.

COUNTER-swallow's tail, (*contre-queue d'hironde*, Fr.) in fortification, is a kind of an out-work very much resembling a single tenaille.

COUNTER-parole, or word, (*contremot*, Fr.) a parole or word which is given in times of trouble and alarm, and is taken from the name of some instrument, such as *cone*, *hammer*, *pistol*, &c.

COUNTER-time, with horsemen, is the defence or resistance of a horse, that interrupts his cadence and the measure of his manage.

COUNTER-light, with architects, a light opposite to any thing which makes it appear to disadvantage.

COUNTER-lath, with builders, a lath that is laid in length between the rafters.

COUNTER-gage, in carpentry, a method used in measuring the joints, by transferring the breadth of a mortise to the place in the timber where the tenon is to be, in order to make them fit together.

To COUNTERMAND, (*contremander*, Fr.) to give contrary orders to those already issued; to contradict former orders, &c.

COUNTERMARCH, (*contre-marche*, Fr.) a change by wings, companies, subdivisions, or files, whereby those who were on the right take up the ground originally occupied by the left, and *vice versa*. See MARCH.

To COUNTERMARCH, (*faire une contre-marche*, Fr.) to change the front of an army, battalion, &c. by an inversion of their several component parts.

To COUNTERMARK a horse, a trick frequently played by the knowing

ones for the purpose of concealing the real age of a horse. This is done by means of slips and scratches which are made by the graver on the outside of the hollows of the teeth.

COUNTERMURE, (*contremur*, Fr.) a wall built up behind another, in order to increase the strength of any work.

COUNTERPOISE, with horsemen, is the balance of the body, or the liberty of the action and seat of a horseman, acquired by practising in the manage, so that in all the motions the horse makes, the horseman does not incline his body more to one side than to the other, but continues in the middle of the saddle, bearing equally on the stirrups, in order to give the horse the seasonable and proper aids.

COUNTERSCARP, in fortification, is properly the exterior talus, or slope of the ditch, on the farther side from the place, and facing it. Sometimes the covert-way and glacis are meant by this expression. See FORTIFICATION.

COUNTERSIGN, in a general acceptance of the term, means any particular word, such as the name of a place or a person, which, like the parole, is exchanged between guards, entrusted to persons who visit military posts, go the rounds, or have any business to transact with soldiers in camp, or garrison. It ought always to be given in the language best known to the troops.

COUNTERVALLATION, or *Line of Countervallation*, a trench with a parapet, made by the besiegers, betwixt them and the besieged, to secure them from the sallies of the garrison; so that the troops which form the siege are encamped between the lines of circumvallation and countervallation. When the enemy has no army in the field, these lines are useless.

COUNTY-lieutenant. See LIEUTENANT of COUNTY.

COUNTY-treasurer. See TREASURER of COUNTY.

COUP, Fr. a blow, or stroke.

COUP d'arme à feu, Fr. shot.

COUP de canon, Fr. cannon-shot.

COUPS de corde, Fr. blows given with ropes-ends, such as are used in our ships of war. Although the punishment of flogging does not exist in the French army, the navy is subjected to it. *Coups de corde* is also used to signify the several jerks given in the punishment by *estrapade*. See ESTRAPADE.

Un Coup d'épée, Fr. a thrust with a sword.

Coup de main, Fr. a sudden and unforeseen attack, &c. The favourable side of the proposed action must ever be viewed; for if what *may* happen, arrive, or fall out, is chiefly thought upon, it will, at the very best, not only greatly discourage, but, in general, produce a failure.

Les Coups de main, Fr. To use a vulgar English phrase, this term signifies off-hand-business, or a word and a blow. During the paroxysm of the French Revolution, it was common to have recourse to what the revolutionists called *Les hommes d'exécution pour faire des coups de main*. Of this description were the Septembrizers in 1792.

Coup de langue, Fr. language or words which are used for the purpose of injuring another. It literally signifies a stroke of the tongue, or that mean and cowardly attack which is made against a man's character without his knowledge. The French say, *Les coups de langue blessent bien plus fort que les coups de sabre*; of this description is insinuating abuse.

Coup-d'œil, Fr. in a military sense, *First Sight*, or that fortunate aptitude of eye in a general, or other officer, by which he is enabled, by one glance on the map, or otherwise, to see the weak parts of an enemy's country, or to discern the strong ones of his own. It also signifies to catch a ready view, and thereby to secure an accurate knowledge of the enemy's position and movements in action. By possessing a ready *coup-d'œil*, a general may surmount the greatest difficulties, particularly in offensive operations. On a small scale this faculty is of the greatest utility, especially in an aide-de-camp. Actions have been recovered by a sudden conception of different openings upon the enemy, which could only be ascertained by a quick and ready eye, during the rapid movements of opposing armies. General Desaix, at the battle of Marengo, gave a striking proof of the importance of this faculty, and so did the Duke of Wellington at the battle of Waterloo.

Coup-fourré, Fr. a term used in fencing, signifying a double thrust, or one given by two antagonists at the same time. The French also say figuratively, *Porter un coup fourré à quelqu'un*, to

do an ill turn to somebody behind his back.

Coup de partance, Fr. the signal of departure which a fleet, or ship of war, makes by firing cannon.

Coup de Jarnac, Fr. an underhand blow. This term is always used in a bad sense by the French. It comes from the circumstance of a Frenchman, named *Jarnac*, having killed his countryman *La Châtaigneraie* unfairly in a duel.

COUPE, Fr. the rough draft, or sketch, of a drawing which represents the inside of a building, &c. We also say *cut* in some cases.

CORPE-gorge, Fr. a cut-throat; it also signifies any dangerous spot, avenue, or cutlet, where a man might be way-laid and murdered. Also a gambling-house, &c.

COUPELLE, Fr. a kind of tin or copper shovel, which is used in the artillery to fill the cartridges with gunpowder, &c.

COUPER *une communication, un convoi, un pont, une retraite, une troupe*, Fr. to cut off a communication, to intercept a convoy, break down a bridge, cut off a retreat, or any armed body of men.

COUPURES, in fortification, are passages sometimes cut through the glacis, of about 12 or 15 feet broad, in the re-entrant angle of the covert-way, to facilitate the sallies of the besieged. They are sometimes made through the lower curtain, to let boats into a little haven built in the reentrant angle of the counterscarp of the out-works.

COUPURE, Fr. a ditch that is dug to prevent a besieging army from getting too close to the walls of a fortified town, or place.

COUR-martiale, Fr. See *COUR-MARTIAL*.

COURAGE, derived from *cœur*, Fr. heart, that being supposed to be the seat of it: so we say, stout at heart is synonymous to brave. This quality of the mind is sometimes natural, and sometimes acquired. It is equally necessary to the officer and soldier. The French make a difference between bravery and courage. They say soldiers may be very brave, and yet not have courage enough upon all occasions to manifest their bravery. A general who is determined, upon an *emergency*, to risk *neck or nothing*, always knows how to inspire his

troops with courage, (provided they be well disciplined, for if not, he can do nothing,) and in that respect the famous *Turenne* and *Maurice of Nassau*, who were often opposed by a superior force, were wonderfully skillful. *Fernand Cortez*, who had only five hundred men of infantry, and twenty horse, to make the conquest of Mexico, perceiving that his troops, (which he called an army,) were frightened at the great number of Indians mustering against them, ordered his ships to be set on fire. He conquered the enemy; but we must confess, that he had to deal with barbarians, who mistook his twenty horsemen for sea monsters, and the firing from the musketry and artillery, for the thunder from above. All manner of stratagems must be recurred to, in order to revive, or inspire, courage. A general, for instance, who, at the head of an inferior force, cannot avoid a battle, causes it to be rumoured, that the enemy will give no quarter, and that he has heard the report from his spies, &c.

COURAGE *militaire*, Fr. military prowess, active fortitude. A peculiar degree of hardihood, by which the mind is driven to acts of uncommon boldness and enterprize. The late General Sir Thomas Picton, K. B. was remarkable for this species of courage.

COURANTIN, Fr. in artificial fireworks, this term is given to those fusées that carry the fire from one quarter to another by means of a cord which is stretched very light in the air.

COURBE, à double courbure, Fr. a curved line which has two other curves within it. M. Clairaut has written very learnedly upon this head in a book intitled, *Recherches sur les Courbes à double courbure*.

COURBETTER, Fr. to curvet.

COURCON, Fr. a strong piece of iron which serves to connect and secure the moulds for cannon.

COUREURS, Fr. light armed troops that are mounted, and go upon reconnoitring parties, or in pursuit of a flying enemy. It literally means *runners*. Those who, on a march, leave their ranks to go marauding, are also called *coureurs*.

COURGE, Fr. a gourd; a yoke. Also a stone or iron crow which sustains the false mantle-tree of an old chimney.

COURIER, a messenger sent post, or express, to carry dispatches of battles

gained, lost, &c. or any other occurrences that happen in war, &c.

COURIER de cabinet, Fr. a state messenger.

COURIERS des vivres, Fr. were two active and expert messengers attached to the French army, whose duty consisted wholly in conveying packets of importance to and fro, and taking charge of pecuniary remittances.

COURIR aux armes, Fr. to run to arms.

COURONNE de picur, Fr. the head of a stake, which is sometimes bound round with iron, to prevent it from splitting when driven down by the rammer.

COURONNER, Fr. to terminate or finish any piece of work.

COURONEMENT, or *Couronnement*, Fr. in fortification, implies the most exterior part of a work when besieged.

COURONNES guerrières, Fr. military crowns or garlands. See **CROWNS**.

COURROYES, Fr. stirrup-leathers. Dragoons are sometimes punished with these articles. The culprit is obliged to pass through two lines facing inwards, and receives a blow from every soldier as he goes by.

COURS de lisses, Fr. See **LISSES**.

COURSE, with architects, a continued range of bricks or stones of the same height throughout the length of the work.

COURSER. See **CHARGER**.

COURSES, Fr. the incursions which an army makes into an enemy's country.

COURSIER, Fr. that canal in a water-mill, or in any other hydraulic machine, where the bottom of the ladle-wheel is confined, and where the water issues with great force from under the flood-gate, to put the wheel in motion.

COURSIER, Fr. a gun which is placed in the fore-castle of a galley for the purpose of firing over the ship's beak. The weight of its ball is from 33 to 34lb.

COURSEY, in a galley, a space, or passage, about a foot and a half broad, on both sides of which slaves are placed.

COURT-martial, (*Cour-martiale*, Fr.) a court appointed for the investigation and subsequent punishment of offences in officers, under-officers, soldiers, and sailors: the powers of which are regulated by the Mutiny-bill, in the words, and to the effect following. "His Majesty may, from time to time, grant a commission, under his royal sign manual,

to any officer, not under the degree of a field-officer, for holding a general court-martial within this realm; and also grant his warrant to the lord-lieutenant of Ireland, or other chief governor or governors there, for the time being, or the governor or governors of Minorca, Gibraltar, and any of his Majesty's dominions beyond the seas respectively, or the person or persons, their commander in chief, from time to time, to appoint courts-martial in the kingdom of Ireland, and other places and dominions respectively; in which courts-martial, all offences mentioned in the Articles of War, and all other offences hereinafter specified, shall be tried and proceeded against in such manner as the act for that purpose directs." The courts have power by their sentence of judgment to inflict corporal punishment, not extending to life or limb, on any soldier for immoralities, misbehaviour, or neglect of duty. A general court-martial shall not consist of a less number than 13, whereof none are to be under the degree of a commissioned officer; and the president of such general court-martial shall neither be the commander in chief, or governor of the garrison where the offender shall be tried, nor under the degree of a field officer, unless where a field officer cannot be had; in which case the officer next in seniority, not being under the degree of a captain, shall preside at such court-martial; and that such court-martial shall have power and authority to administer an oath, to every witness, in order to the examination or trial of any of the offences that shall come before them.

That in all trials of offenders by general courts-martial, to be held by virtue of this act, every officer, present at such trial, before any proceedings be had thereupon, shall take an oath, upon the Holy Evangelists, before the court and judge advocate, or his deputy.

A *regimental COURT-MARTIAL* cannot sentence to the loss of life or limb. The colonel or commanding officer approves the sentence of a regimental court-martial. By a clause in the Mutiny-bill of 1806, all the members of a regimental court-martial must be sworn.

A *garrison COURT-MARTIAL* only differs from a regimental one by being composed of officers of different regiments. The governor, or other commanding officer of the garrison, ap-

proves the sentence. For further particulars respecting courts-martial, see *Regimental Companion*, vol. ii. 5th edition.

COURT of inquiry, a meeting of officers who are empowered to inquire into the conduct of the commander of an expedition, &c. or to see whether there be ground for a court-martial, &c. Courts of inquiry cannot award punishment, but must report to the officer by whose order they were assembled. Courts of inquiry are also appointed to examine into the quality and distribution of military stores, &c.

COURTAUD, with horsemen, a crop, or cropped horse; a bob-tail.

COURTAUD, with gunners, a short kind of ordnance used at sea.

COURTADER, *Fr.* to crop a horse's tail.

COURTIER, *Fr.* an agent.

COURTIER de change, *Fr.* a money broker.

COURTIER privilégié, *Fr.* an agent of government.

COURTINE, *Fr.* See *CURTAIN* in *FORTIFICATION*.

COUSSIN, *Fr.* a sort of wedge, or small piece of wood, which is placed under the breech of a cannon in order to point it properly, and to keep it steady in the proposed direction.

COUSSINET, *Fr.* a wedge of wood which is fixed between the carriage and the center part of a mortar, and serves to keep it in a prescribed degree of elevation.

COUSSINET à mousquetaire, *Fr.* a bag formerly worn by a French soldier on his left side beneath the cross-belt. It hung upon hooks near the butt of his musquet. Its object was to resist the recoil of a large fire arm, particularly during a siege.

COUSTILLE, *Fr.* an offensive weapon which was occasionally used by the troops in the fifteenth century, in the time of Charles VII.; it was longer than the common sword, sharp edged from the hilt to the point, of a triangular shape, and very slender.

COUSTILLER, *Fr.* a person armed with a *coustille*.

COUTEAU, *Fr.* a knife.

COUTEAU de chasse, *Fr.* a hanger.

COUTEAU de bois, ou spatule, *Fr.* a wooden instrument in the shape of a short blunt blade. It is used in pressing down earth or hay between a shell

and the inside of a mortar, in order to keep the former compact and steady.

COUDELAS, Fr. See **CUTLASS**.

COUTER, Fr. to cost; to have a price, or value. This expression is used figuratively among the French in a military sense—viz. *Ce général expose ses troupes à tout moment; les hommes ne lui content guère.*—That general exposes his troops every moment, he puts no price or value upon the loss of men.

A plate COUTURE, Fr. utterly; entirely. *Désaite à plate couture*, an utter defeat.

COUVADE, Fr. the act of skulking.

Faire le COUVADE, Fr. to lurk in camp, or quarters, when others are gallantly fighting in the field of battle.

COUVERT, Fr. cover.

Pays COUVERT, Fr. a woody country.

COUVRE-FACE, Fr. a term used by some engineers, and among others by Coehorn, to express the counter-guard: others, particularly Montalembert, convey by *couvre-face générale* a second line of complete investment.

Le COUVRE-FEU, Fr. a signal made by the ringing of a bell, or beat of drum, to give notice to the soldiers or inhabitants of a fortified place, that the gates are shortly to be shut. It literally means the covering, or extinction, of fire, or light. See **CURFEW**.

COUVRIR, Fr. to cover, defend, conceal.

COUVRIR une ville, un port, une troupe, un pays, un magasin, un entrepôt, une armée assiégante, Fr. to lie encamped in front of a town, bridge, body of men, any particular ground or post, magazine, or between a fortified place and the main besieging army, so as to prevent the approaches of an enemy. To this end temporary works should be erected, defended by chosen troops, who must be attacked and beaten, before possession can be obtained of any of the above-mentioned objects.

COUVRIR une marche, un mouvement, une communication, &c. Fr. to cover the march or movement of an army, by means of detachments, which are sent forward for that purpose.

COWARD, according to Dr. Johnson, a word of uncertain derivation. A poltroon; a wretch whose predominant passion is fear; a thing unworthy of, and unfit for, the navy or army. It is sometimes used as an adjective.

COYAUX, Fr. hip rafters.

COYER, Fr. a piece of timber which is laid diagonally in the groove, or hollow of a roof.

COYON, Fr. a coward; a base dastardly fellow.

COYONADE, Fr. cowardice; dastardly conduct.

CRAB. See **GIN**.

CRABBAT, (cravate, Fr.) Bailoy **CRAVAT,** derives this word from one *Crabbat*, a *Croatian*, who first wore a sort of neckcloth. Before the Revolution, there was a German regiment in the French service, called *Royal Cravats*, probably from the men having originally been recruited out of Croatia, and also wearing the neckcloth. This regiment gave way at the famous sortie of Lisle, in 1792, when Colonel Dillon led out a body of troops to attack an advanced post of the Austrians. The consequence of their panic was the inhuman murder of that brave officer, and of Berthier the engineer, who was suspended from a lamp iron, and shot, and cut at by the fugitives as they returned to the citadel.

CRADLE, a machine made of stout sail-cloth for the purpose of shipping and unshipping horses; also a hollow piece of leather for a fractured or broken limb to rest in.

CRADLE, with shipwrights, a frame of timber raised along the outside of a ship by the bulge, serving more securely and commodiously to launch her.

CRAIKE. The constabulary of this place, as far as it regards the militia, is deemed a part of the North Riding of Yorkshire, and is subject to the jurisdiction of the Lord Lieutenant.

CRAMPON de cuir, Fr. a loop, or tab of leather.

CRAMPONS, Fr. pieces of iron hooked at the end; grappling hooks. Iron instruments distributed amongst the troops intended to storm a rampart, and which they fastened to their shoes by means of a strong strap of leather, to be able to climb up.

CRAMPONNER, Fr. to join or fasten together with cramp-irons.

CRAMPONNER des fers de cheval, Fr. to shoe a horse with frost nails.

CRAMPONNET, Fr. a little cramp iron; tack or hoop.

Les CRAMPONS d'un fer de cheval, Fr. the frost nails of a horse-shoe; caulks; the caulking.

CRANE, an instrument made with

ropes, pulleys, and hooks, by which great weights are raised.

CRANE, *Fr.* literally the skull, brain pan, or bone of the head. The French say of a stubborn hot-headed man, *C'est une crâne*

CRANEQUIN, *Fr.* the gaffle of a cross bow. It is also written *Crennequin*, and signifies an engine for battery, used in old times.

CRANEQUIER, **CRANEQUIER**, *Fr.* formerly an *archer* who served both on foot and horseback; his bow was very light; in the origin it was made of wood, next of horn, and finally of iron: it was bent by means of an iron bandage, called *crunequin*, which was fastened round the waist. The Dukes of Burgundy used to have six hundred of them in their suite. This appellation was also formerly given to an inferior officer who had the management of warlike machines.

CRAPAUD, *ou affût*, *Fr.* Crapaud literally means a toad. It is a sort of gun-carriage without wheels, on which a mortar is carried.

CRAPAUDINE, *Fr.* a sort of sucker, which is placed at the bottom of reservoirs and basons, in order to keep them dry, or to draw off the water. *Crapaudine* also signifies the cavity in which the hinge of a door, &c. turns.

CRAPAUDINE, in a horse, an ulcer on the coronet, called also *a tread upon the coronet*.

CRATCH, (*ratelier*, *Fr.*) a rack, in which hay is put for cattle.

CRATCHES, (*crevasse*, *Fr.*) a crack; a disease in horses.

CRATES, engines of war used by the ancients to cover the workmen in proportion as they drew nearer to the walls of a besieged town.

CRAVATES, *Fr.* See **CROATS**.

Royales CRAVATES, *Fr.* a mounted militia, or species of Life Guards, formerly so called in France.

CRAVATES des drapeaux, *Fr.* the corners of a colour or flag.

CRECHE, *Fr.* a manger; a crib.

CREDIT, (*crédit*, *Fr.*) trust reposed, with regard to property: correlative to *debt*. Johnson. It is customary, upon the arrival of troops that are to continue quartered in a town, village, &c. to warn the inhabitants not to give credit to the men.

CREDITS. See **DEBTS and Credits**.

CREESE, a dagger used by the Malays.

CRÉMILLE, in field fortification, is when the inside line of the parapet is broken in such a manner as to resemble the teeth of a saw; whereby this advantage is gained, that a greater fire can be brought to bear upon the defilé, than if only a simple face were opposed to it; and consequently the passage is rendered more difficult. Béliidor, in his *Dictionnaire Portatif de l'Ingénieur*, writes the word, *Crémillière*.

CRÉMILLIÈRE, *Fr.* a pot-hanger.

CRÉMILLON, *Fr.* a hook.

CRÉNAUX, *Fr.* small openings, or loop, holes which are made through the walls of a fortified town or place. They are extremely narrow towards the enemy, and wide within; so that the balls from the besiegers can scarcely ever enter, whereas two or three soldiers may fire from within.

CRÉNÉLÉ, *Fr.* embattled; having loop-holes.

CRÉNÉLER, *Fr.* to indent; notch.

CRÉNELLATED Parapet, an embattled parapet with loop-holes to fire through.

CRÉNELURE, *Fr.* indenting.

CREOLE, **CREOLIAN**, (*Créole*, *Fr.*) A person born in the West Indies, but of European origin. Creolians are very tenacious of their birth, and will not associate with blacks, or mulattoes.

CREPAINE, **CRÉPANCE**, *Fr.* an ulcer seated in the midst of the forepart of a horse's foot, about an inch above the coronet.

CREPUSCULE, *Fr.* twilight.

CRESCENT. See **ORDERS**.

CRÉSSET, any great light upon a beacon, light-house, or watch-tower.

CREST of the parapet, or *of the glacis*, is the superior surface, or top, of the parapet of any work.

CREST, (*crête*, *Fr.*) a tuft of feathers, a plume, a tassel, generally worn in the helmet. These crests were originally made of horse-hair; and, according to Herodotus, were invented by the Ethiopians.

CREST-fallen, dispirited, out of heart, cast down, &c.

CRÈTE, in fortification, implies the earth thrown out of the ditch in a fortification, trench, &c. The most elevated part of a parapet, or glacis.

CRÈTE d'un chemin couvert, *d'une*

pièce de fortification, d'une montagne, d'un rocher, &c. Fr. the peak or highest part of a covert-way, or of any work in fortification; the summit of a hill, rock, &c.

The French say figuratively, *Baisser la crête*, to be less haughty, to lose one's vigour or strength.

CREVICE, (*crévasse*, Fr.) a chasm or hollow space which is made by time, or mismanagement, in a piece of ordnance &c.; it also signifies a crack in a wall, &c.

CRI, Fr. the acclamation or shout which is made by soldiers when the enemy gives way, and a battle is won. Also the sound given by the voice in challenging a sentry. *Cri* also signifies the motto which is written upon colours, or coats of arms belonging to illustrious houses.

CRI *des armes*, Fr. a savage custom which is still preserved by the Turks and other uncivilized nations, whenever they go into action. It was formerly practised among the French, Spaniards, and the English, &c. The national exclamations were *Montjoie* and *St. Denys* for France, *St. James* for Spain, *St. George* for England, *Farrah* formerly for Ireland, *St. Andrew* for Scotland, *St. Malo*, or *St. Yves*, for the Dukes of Brittany, *St. Lambert* for the principality of Liege, &c. The war-hoop may likewise be considered in this light. It is still practised among the savages of America. See *WARHOOP*.

In making any desperate assault, or in charging bayonet, or when one battalion is directly opposed to another, or squadron to squadron, French soldiers frequently use the *cri des armes*; *Tuez! tuez!* and the Spaniards vociferate *Mata!* Silence and calmness in the soldier, and steadiness and observation in the officer, are, nevertheless, superior to such ungovernable effusions. The former must contribute to regularity, the latter seldom fail to create disorder.

CRIBLE, Fr. a riddle; a sieve.

CRIBLÉ *de coups*, Fr. covered with blows, or wounds; pierced through and through.

CRIBLER, Fr. to lame; to cripple; to render unfit for service.

CRIC, CRICQ, Fr. a machine which is used to move forwards, or drag up a piece of ordnance, a mortar, &c. or any load, from the ground. The *c* is not pronounced in this word.

CRIC, Fr. a poignard used by the Malya people. The *c* is pronounced in this word.

CRIME *de lèse-majesté*, Fr. high treason.

CRIMP, (*raccolcur*, Fr.) a person who makes it his business to entice others into a military life, generally by unfair means.

CRINIÈRE, Fr. that part of the caparison which covers the horse's neck. The name of *crinière* is also given to a bunch of curling horse-hair worn upon the helmets of the dragoons, which flows down on the sides, like a garland, or upon the back.

CRINIÈRE, or *mançaire*, a defence for the neck of a horse against a blow from a sword. It consisted of a number of small plates, generally about twelve, hooked together, and fastened to the chanfron, so as to be moveable.

CRITUÈS, Fr. small ditches.

CRISIS, (*crise*, Fr.) the point of time at which any affair comes to the height.

CRISTA, a plume. See *CAEST*.

CRIT, Fr. a small dagger.

CROATS, light irregular troops from Croatia. Their method of fighting is the same as the Pandours. They wear a short waistcoat, and long white breeches, with light boots, and a cap greatly resembling the hussar cap. Their arms are a long firelock with rifled barrel, and short bayonet, a crooked hanger, and a brace of pistols. The late Empress Queen of Austria had 5000 of these troops, the greatest part of which had no pay, but lived by plunder.

CROC, or *CROCIET de SAPE*, Fr. a pole with an iron hook, used to place the gabions and fascines.

CROCIET *de tranchée*, Fr. the further end of a trench or *boyau*, which is purposely carried on to conceal the head of the *boyau*, in order to prevent it from being entailed; and to serve as a small place-of-arms from whence soldiers may fire against sallying parties.

CROCUS, Fr. whisksers.

CROCUS, (*safran des métaux*, Fr.) a calcined metal used by soldiers to clean their muskets, &c.

CROISADE, CRUSADE, (*croisade*, Fr.) a holy war, or an expedition of the Christians against the Infidels for the recovery of the Holy Land, so called from those who engaged in it wearing a cross on their clothes.

CROIX *de St. André*, Fr. St. An-

drew's cross, so called from the saint of that name having been crucified upon it. It consists of two pieces of wood placed diagonally across each other.

CROIX de St. Louis, Fr. the cross of St. Louis, a French order which is purely of a military nature. It was instituted by Louis, surnamed the Great, in 1693.

In 1719 the number of grand crosses to be distributed in the French army was limited, with appropriate allowances, in the following manner:

445 commandeurs and chevaliers, 12 grand crosses at 6000 livres, 13 commandeurs at 4000 livres, 27 ditto at 3000, 35 chevaliers at 2000, 38 ditto at 1500, 106 ditto at 1000, 1 ditto at 900, 99 ditto at 800, 45 ditto at 600, 25 ditto at 500, 35 ditto at 400, 5 ditto at 300, and 4 ditto at 200.

The King is Sovereign Grand Master of the Order. Land and sea officers wear it promiscuously. The cross consists of an enamelled golden *fleur de lis*, which is attached to the button-hole of the coat by means of a small ribbon, crimson coloured and watered.

On one side is the cross of St. Louis with this inscription: *Ludovicus Magnus instituit, 1693*; on the reverse side a blazing sword with the following words, *Bellicæ virtutis premium*.

This is the only order which can be properly and strictly called military. There are several others, which we judge superfluous to our present undertaking.

CRONE, Fr. a round low tower, covered at the top like a windmill, which stands upon the sea-side, or on the banks of a river, and turns upon a pivot, with a hook, serving to load and unload cargoes.

CRONET, the iron at the end of a tilling spade.

To CROP, (tondre, Fr.) to cut short.

A CROP, (tête tondue, Fr.) what was called among the followers of Oliver Cromwell, a roundhead. During the late war, the officers and soldiers were relieved from a certain regulated length of tail, and permitted to have short hair without powder.

CROQUANT, Fr. the name of a faction which committed great depredations towards the end of the sixteenth century, in several provinces on the other side of the Loire. In 1593, the peasantry of Perigord, Limousin, and Poitou assembled in large bodies, ap-

pointed their commanders, refused to pay the taxes, over-ran the country, and gave no quarter to any of the nobility that had the misfortune to fall into their hands. They were named *Croquants*, from the word *croquer*, to devour, or pilfer; literally to crack.

CROQUES, Fr. a rough sketch taken of any thing.

CROSS, the ensign, or grand standard borne by the crusaders in the Holy Land.

GRAND-Cross, a superior mark of distinction belonging to the military order of the Bath, lately created. See **ORDER**.

Cross-battery, (batterie de travers, Fr.) See **BATTERY**.

Cross-fire is when the lines of fire of two or more adjoining sides of a field redoubt, &c. cross one another; it is frequently used to prevent an enemy's passing a defile. It may be two ways obtained: first by constructing the redoubt with the face opposite to the defile, tenailed; that is, forming a re-entering angle. The other way is, to defend the defile by two redoubts, whose faces command the passage; flanking each other at the same time.

Cross-bar shot, (balle ramée, Fr.) shot with iron bars crossing through them, sometimes standing 6 or 8 inches out at both sides: they are used at sea for destroying the enemy's rigging. At a siege they are of great service in demolishing the enemy's palisading, &c.

Cross-bars, (croisées, Fr.) bars laid across one another.

Cross-bars, sometimes called the splinter, or master-bar, that part of the carriage which the shafts are fixed in, and from which the draft of the carriage is produced.

Cross-bow, called by the Latins *arcus balistarius*, or *balista manualis*, was an offensive weapon which consisted of a bow fixed to the top of a sort of staff, or stick of wood, which the string of the bow, when unbent, crossed at right angles. See **Bow**.

CROSSES, distinctions given to military men for exploits and good conduct in war. See **ORDER**.

CROUP, (croupe, Fr.) the buttocks of a horse.

CROUPADES, Fr. higher leaps than common curvets. The bouncing of a horse.

CROUPE, Fr. the top of a hill.

CROUPIÈRE, or *buttock-piece*, horse armour.

CROW, an iron bar, used as a lever in moving heavy ordnance or carriages, &c. The crows used in the artillery service are 4 feet 6 inches, and 5 feet in length.

CROWN, (*couronne*, Fr.) the ornament of the head which denotes imperial and regal dignity. It also signifies reward, honorary distinction, as a *crown of laurels*, &c.

The crowns, in ancient military history, were of various uses and denominations, viz.

Oval Crown, *corona ovalis*, given to a general who, without effusion of blood, had conquered the enemy.

Naval Crown, *corona navalis*, distributed to those who first should board an enemy's ship.

Camp Crown, *corona castrensis*, the reward of those who first passed the palisades, and forced an enemy's camp.

Mural Crown, *corona muralis*, the recompense and mark of honour due to those who first mounted the breach at the assault of a besieged town.

Civic Crown, *corona civica*, more esteemed than the preceding: it was the distinguishing mark of those who had saved the life of a Roman citizen in battle. It was given to Cicero for dissipating the conspiracy of Catiline, and denied to Cæsar, because he imbrued his hands in the blood of his fellow-citizens.

Triumphal Crown, *corona triumphalis*, the symbol of victory, and presented to a general who gained any signal advantage to the republic.

Grass Crown, *corona graminca*, was delivered by the whole Roman people to any general who had relieved an army invested, or besieged, by the enemy. The other crowns were distributed by the emperors and generals; this was given to Fabius by the Roman people, for obliging Hannibal to decamp from Rome.

Olive Crown, *corona oliva*, the symbol of peace, and presented to the negotiators of it.

Iron Crown, (*couronne de fer*, Fr.) a crown which was formerly worn by the kings of Lombardy, and by Charlemagne as emperor of the West; in imitation of whom, Napoleon the First was crowned with it by the Pope, as king of Italy, in 1806.

Crown of thorns, (*couronne d'épines*, Fr.) a crown well known in holy history,

as having been placed, in mockery, upon the bleeding temples of our Redeemer by order of Pontius Pilate to satisfy the Jews. It also signifies any crown acquired by usurpation, or supported by tyranny, or imbecility.

CROWN-work, in fortification, an out-work that takes up more ground than any other. It consists of a large gorge, and two sides terminating towards the country in two demi-bastions, each of which is joined by a particular curtain, forming two half bastions and one whole one. Crown-works are made before the curtain, or the bastion, and generally serve to enclose some buildings which cannot be brought within the body of the place, or to cover the town-gates, or else to occupy a spot of ground which might be advantageous to the enemy. See FORTIFICATION.

CROWNED horn-work, in fortification, is a horn-work, with a crown-work before it.

CROWS-*fect* are 4 pointed irons, so made, that what way soever they fall, one point is always uppermost. The short ones are about 4 inches in length, and the long ones 6 or 7. The short ones are thrown on bridges, &c. and the long ones on the earth; both serving to incommode the cavalry, that they may not approach without great difficulty.

CROWS-bill, a surgeon's instrument for extracting bullets, broken bones, &c.

CRUCIES à feu, Fr. earthen pots with two handles, filled with grenades, having the intervals between them filled with powder: these *fire-pots* are first stopped with a sheep skin fastened round the neck; a match is next fixed to each handle; these are set fire to, and thrown upon the enemy, on their approach to storm the walls; the moment the pots break, the fire from the matches communicates to the powder and to the grenades.

CRUPELLAIRES, Fr. the nobility amongst the ancient Gauls, all of them *fervestis*, that is to say, covered with iron; they served on foot, until, pursuant to a regulation of Charles VII. king of France, they were named *hommes des armes*, men at arms, and each of them was obliged to keep four horses.

CRUPPER, a leather strap which is placed under a horse's tail to prevent the saddle from moving forwards. It forms a part of a horseman's military furniture.

CRUPPER-buckles are large square buckles fixed to the saddle-tree behind, to fasten the crupper, each buckle having a roller or two, to make it draw easily.

CŪ, γ *Fr.* literally the bottom, or

CUL, \S brainless part of the human, or animal, frame.

Cu de basse fosse, *Fr.* a deep dun-geon.

Tirer le Cu en arrière, *Fr.* to loiter, to hang behind,

Tour faite en Cu de lampe, *Fr.* a tower winding downwards like a wreathed shell.

Cu or CUL de lampe, according to Belidor, signifies also a kind of pendentive which hangs from the mouldings in Gothic vaults; also an assemblage of sculptured stones which serve to support centry-boxes, or small turrets attached to the salient angles of stone and brick works.

Cu de sac, *Fr.* a blind alley; an alley, street, or place, that has no thoroughfare.

Avoir le CUL sur la selle, *Fr.* to be on horseback.

Tenir conseil de guerre le CUL sur la selle, *Fr.* to hold a council of war on horseback.

CUBATION, γ (*cubation*, *Fr.*) is the

CUBATURE, \S cubing of a solid, or the art of measuring the solidity of bodies. This solidity is usually ascertained by multiplying together their three several dimensions: viz. their length, breadth, and height or depth.

The cubature has respect to the content of a solid, as the quadrature has to the superficies of a figure: so that the *cubature* of the sphere turns on the same thing as the quadrature of the circle.

CUBE, a solid contained between six equal square sides. The solidity of any cube is found by multiplying the superficial content of any one of the sides by the height. Cubes are to one another in the triplicate ratio of their diagonals.

CUBE-root is the side of one of the squares constituting the cube.

CUBIC-foot implies so much as is contained in a cube, whose side is 1 foot or 12 inches.

Cubic hyperbola is a figure expressed by the equation $x y^2 = a$, having 2 asymptotes, and consisting of 2 hyperbolas, lying in the adjoining angles of the asymptotes, and not in the opposite

angles, like the Apollonian hyperbola, being otherwise called, by Sir Isaac Newton, in his *enumeratio linearum tertii ordinis*, an hyperbolismus of a parabola; and is the 65th species of a lines, according to him.

CUBIC number is that which is produced by multiplying any number by itself, and then again the product by that number.

CUBIC parabola, a curve of the second order, having infinite legs, diverging contrary ways.

CUE or QUEUE, the hair tied in form of a tail. All the British soldiers, excepting the grenadiers and light infantry, were formerly ordered to wear their hair cue'd. They are now permitted to wear it short,

En CUERPO, *en chemise*, *Fr.* from the Spanish, in one's shirt.—*Se battre en cuerpo*, To fight in one's shirt.

CUILLER, ou *cuillère à canon*, *Fr.* a copper ladle or scoop, which is used to draw the cartridge out of the gun.

CUIR bouilli, *Fr.* jacked leather, such as jack-boots, leathern bottles, pouches, &c. are made of.

CUIRASSE, a piece of defensive armour, made of plate, well hammered, serving to cover the body, from the neck to the girdle, both before and behind, called breast and back-plate.

CUIRASSIERS, a sort of heavy cavalry armed with cuirasses, as most of the German horse are. The several German powers have regiments of cuirassiers, especially the Emperor, and the King of Prussia. The late King of France had also one regiment; but we have had none in the English army since the Revolution. There were troops of this description engaged in the battle of Waterloo, who had, until that time, been thought invincible, but were completely routed and destroyed by the superior weight and dexterity of the Life Guards; notwithstanding the peculiar advantages of their armour, which was musket-proof in most parts.

CUISH, from *cuisse*, *Fr.* thigh. See **CUISSARS**.

CUISINES, *Fr.* kitchens; ditches dug by the soldiers, in rear of the camp, to cook their victuals.

CUISSARS, *Fr.* are plates or scales made of beaten iron, which formerly served to cover the thighs.

CUITE, *Fr.* a technical word to

express the preparation of saltpetre for the making of gunpowder. See **SALT-PETRE**.

CUL de chaudron, Fr. the hollow or excavation left after the explosion of a mine.

CULASSE, Fr. breech of a gun; butt-end of a musket.

CULATE, Fr. that part which stands between the touch-hole of a cannon and the button.

CULBUTER, Fr. to overthrow; break; turn upside down.

CULBUTER une colonne, Fr. to overthrow a column.

CULCITE, mattresses used from time immemorial; at first they were made of dried herbs, next of feathers, and finally of wool. In proportion as the Romans relaxed from their former severe discipline, they would carry mattresses with them, notwithstanding they were forbidden. During the siege of Numantia, *Scipio*, finding that all prohibitions were superfluous, set the example to his troops; insisted upon having no bed made for himself, but constantly slept on a bundle of hay. It is not necessary, however, that a general should lie on the bare ground for ever; let it suffice that he has done so once; he stands more in need of sleep than any other man in his army; he is exposed to be summoned up frequently in the course of the night; besides, the fatigues and agitation of mind which he has undergone on the preceding day, require that he should enjoy some repose to be able to resume the labour of the morrow. The Duke of Wellington has been remarkable for his neglect of bodily comfort; especially during the campaigns in the Peninsula.

CULÉE d'arc boutant, Fr. a massy pile which receives and sustains the declivities of an arch or a buttress.

CULÈRE, Fr. a crupper, which see.

CULLION head, a sconce, or block-house, the same as a bastion.

CULOT, Fr. the thickest part of a shell.

CULOTTE, Fr. breeches. See **SANS-CULOTTES**.

CULSTODE, Fr. See **CUSTODE**.

CULVERIN,

CULVERIN-ordinary,

CULVERIN of the largest size } See

CANNON.

CULVERTAIL, in carpentry, the same as dove-tail.

CUNEUS. See **WEDGE**.

CUNETTE. See **CUVETTE**.

CURB, a chain of iron, made fast to the upper part of the branches of the bridle, in a hole called the eye, and running over the beard of the horse.

CURBOULY, a boot of jacked leather, which was formerly worn by horsemen.

CURE-pic, Fr. See **HORSE-PICKER**.

CURFEW-bell, a signal given in cities taken in war, &c. to the inhabitants to go to bed. The most memorable curfew in England was that established by William the Conqueror, who ordered, under severe penalties, that at the ringing of a bell, at 8 o'clock in the evening, every one should put out his lights and fires, and go to bed, &c.

CURRIER, a kind of piece formerly used in sieges. According to Sir John Smith, in his remarks on the writings of Captain Berwick, a currier was of the same calibre and strength as aarquebuss, but had a longer barrel.

CURRYCOMB, an iron instrument used for currying horses.

To **CURTAIL a horse**, to dock him, to cut off his tail.

CURTAIN, in fortification, is that part of the body of the place which joins the flank of one bastion to that of the next. See **FORTIFICATION**.

CURTELASSE,

CURTELAX, } See **CUTLASS**.

CURTICONE, in geometry, a cone whose top is cut off by a plane parallel to its basis.

CURVATURE of a line in its bending, or flexure, whereby it becomes a curve of such peculiar properties.

CURVE, (*courbe*, Fr.) in geometry, a line, wherein the several points it consists of, tend several ways, or are placed in different directions.

CURVILINEAL, (*curviligne*, Fr.) crooked lined, or consisting of crooked lines.

CURVILINEAL figures, in geometry, are spaces bounded by crooked lines; as circles, ellipses, spherical triangles, &c.

CUSTODE, Fr. a holster cap.

CUSTREL, the shield-bearer of the ancients was so called.

To **CUT**, in farriery, to interfere. See **INTERFERE**.

CUT, the action of a sharp or edged instrument. There are six cuts established for the use of the cavalry, to be made with the broad sword, or sabre. See **SWORD Exercise**.

To **CUT off**, to intercept, to hinder from

union or return. In a military sense, this phrase is variously applicable, and extremely familiar.

To **Cut short**, to abridge; as the soldiers were cut short of their pay.

To **Cut up**, to destroy promiscuously. When the cavalry are sent in pursuit of a flying enemy, the latter are generally cut up.

To **Cut through, sword in hand**. A small body of brave men, headed by a good officer, will frequently extricate itself from apparent captivity, or destruction, by cutting its way through superior force. British soldiers have often exhibited proofs of this extraordinary effort of national courage.

Cut and thrust sword, See SPADROON.

To **Cut the round**, or **Cut the volt**, is to change the hand when a horse works upon volts of one tread, so that dividing the volt in two, he turns and parts upon a right line to recommence another volt.

CUTLER, an artificer whose business is to forge, temper, and mount all sorts of sword-blades, &c.

CUTTING-off. See RETRENCHMENT.

CUTTS, a sort of flat-bottomed boats, formerly used for the transportation of horses.

CUVE, *Fr.* This word literally signifies a tub; but it is also used by the French to express any thing steep of ascent, as *fossés à fond de cuve*, steep ditches.

CUVETTE, *Fr.* a cistern: a small ditch, or reservoir. In fortification, it is a small ditch of 10 or 12 feet broad, made in the middle of a large dry ditch, about 4 or $4\frac{1}{2}$ feet deep, serving as a retrenchment to defend the ditch, or else to let water in, (if it can be had during a siege,) and afford an obstacle, should the enemy endeavour to cross the fossé.

CYCLISCUS, in surgery, an instrument made in the form of a half-moon, for scraping away corrupt flesh, &c.

CYCLOID, a curve formed by a point in a circle revolving upon a plane. Thus

every point in the outer rim of a carriage wheel in motion moves in a cycloid. M. Huyghens has applied the *cycloid* to clocks, by which he renders their movements more equal and regular.

CYCLOIDAL space, the space contained between the *cycloid* and the subtense thereof.

CYCLOMETRY, (*cyclométrie*, *Fr.*) the art of measuring cycles, or circles.

CYCLOPÆDIA. See ENCYCLOPÆDIA.

CYLINDER, a solid body, having two flat surfaces and one circular.

CYLINDER, or *concave cylinder of a gun*, is all the hollow length of the piece or bore. See CANNON.

Charged CYLINDER, the chamber, or that part which receives the powder and ball.

Vacant CYLINDER, that part of the hollow or bore which remains empty when the piece is loaded.

CYLINDROID is a frustum of a cone, having its bases parallel to each other, but unlike.

CYMAR, a slight covering; a scarf.

CYMBAL, (*cymbale*, *Fr.*) a warlike musical instrument in use among the ancients, made of brass and silver, not unlike our kettle-drums, and, as some think, in their form, but smaller. They are now used by the British and other European nations, in their martial music.

CZAR, a title of honour assumed by the great dukes, or, as they are now styled, emperors of all the Russias. This title is no doubt, by corruption, taken from *Cæsar*, emperor: and the Czars accordingly bear an eagle as the symbol of their empire. The first that bore this title was Basil, the son of Basilides, about the year 1470. The empress is called the Czarina or Tzarina.

CZARIENNE, *Fr.* a term applied only in the following manner: *Sa Majesté Czarienne*, his or her Czarine Majesty.

CZARINE, the Czar's wife; or the female sovereign of Russia.

CZAROWITZ, the son of the Czar or Czarine of Russia.

D

D A N

D. BY the Articles of War it is enacted, that a court-martial may order any non-commissioned officer or soldier who has been convicted of desertion, to be marked on the left side, two inches below the arm-pit, with the letter D. Such letter not to be less than half an inch long, and to be marked upon the skin with some ink, or gunpowder, or other preparation, so as to be visible and conspicuous, and not liable to be obliterated.

DAG, an obsolete word for hand-gun, or pistol; so called from serving the purposes of a dagger, being carried secretly, and doing mischief suddenly.

DAGGER, (*daguer*, Fr.) in military affairs, a short sword or poignard, about 12 or 13 inches long.

DAGUE de prévôt, Fr. a cat o' nine tails.

DALES, Fr. flag-stones.

DAM. See ДУКЕ.

DAMAS, Fr. a sabre made of the best polished steel, and well tempered: it is excessively sharp, and is so called from Damascus in Syria, where the first of the kind were manufactured.

To **DAMASK**, (*damasquiner*, Fr.) to inlay iron or steel, with gold or silver, as to damask the hilt or blade of a sword.

DAMASQUINÉ, Fr. is said of a poignard, sabre, sword, musket, pistol, shield, helmet, or lance, that is ornamented with gold or silver.

DAME, Fr. a bank of earth; a dam. *Dame* likewise means a piece of wood with two handles, used to press down turf or dirt in a mortar.

DAME ou quille, Fr. a small turret which is erected upon a rampart wall, or on the top of a building, to overlook the country, and prevent soldiers from deserting.

DANE jeanne, Fr. a large bottle in which wine or other liquors may be kept.

DAMNED, (*dammé*, Fr.) lost; profligate.

L'ame DAMNÉE de quelqu'un, Fr. the tool, or unprincipled instrument of any one.

DANE-gelt, an ancient tribute of twelve pence laid upon every hide of land

D A U

by the Danes, after they had invaded England.

DANGERS to which land forces are exposed, (*dangers pour les troupes de terre*, Fr.) Under this title are comprehended unknown defiles, certain passages in a country that have not been reconnoitred; bridges which, from the straggle of the enemy, are rendered unsafe; rocks, straits of rivers, a wood, a forest, an ambuscade; a height in the shape of a curtain, behind which troops are concealed; marshes, sandy grounds; false information; traitors; weariness; the want of pay and of provisions; hard treatment; want of discipline; the bad example given by the officers; neglect; unbounded security; bad morals; plunder allowed unseasonably: all the above are things which at various times may expose an army; but a wise and prudent general knows how to remove all dangers of the kind. Mistrust and want of confidence, occasioned by the improvident appointment of weak commanders, are likewise great dangers for an army.

DANSE militaire, Fr. a military dance used among the ancients.

DARD, Fr. a dart.

DARD à feu, Fr. a javelin trimmed with fire-works, that is thrown on ships, or against places which you wish to set on fire.

DARDER, Fr. to throw a dart, or any other pointed weapon.

DARDEUR, Fr. a person who throws a dart.

DARE, a challenge or defiance to single combat.

DARRAIN. See BATTLE-array.

DARSE, Fr. the interior part of a port, which is shut with a chain, and where galleys and other small craft are sheltered.

DART, in ancient military history, implies a small kind of lance, thrown by the hand. It was invented by Etholus or Cætolus, the son of Mars.

DAUPHIN, a title given to the eldest son of France, and heir presumptive to the crown, on account of the province of Dauphiny, which, in 1343, was given to

Philip of Valois, on this condition, by Humbert, dauphin of the Viennois.

DAUPHIN, *Fr.* a warlike engine used by the ancients to pierce through and sink the galleys of their enemy. It threw a heavy mass of lead or of iron with such impetuosity as to do great execution. This engine is mentioned in the account of the naval engagement in which the Athenians, under the command of Nicias, were defeated by the Syracusans.

DAUPHINS des canons, *Fr.* dolphins which are made in relief on the trunnions of field pieces.

DAY, in a military sense, implies any time in which armies may be engaged, from the rising of one day's sun to that of another. According to Johnson it signifies the day of contest, the contest, the battle. Hence a hard-fought day.

DAYS MAN, an umpire of the combat was so called.

DÉ, *Fr.* See **DIE**.

DEATH's-head Hussars. See **HUSSARS**.

DÉBACLE, *Fr.* breaking of a frozen river.

DÉBACLEUR, *Fr.* water-bailiff.

DÉBANDADE, *Fr.* à la débandede, helter-skelter.

Se battre à la DÉBANDADE, to fight in a loose, dispersed manner.

Laisser à la DÉBANDADE, to leave at random, or in disorder, as the late Emperor of the French left his army on the 18th day of June, 1815, after the battle of Waterloo.

DÉBANDEMENT, *Fr.* the act of being out of the line, or irregularly formed.

DÉBARCADEUR, *Fr.* place for the landing of a ship's cargo.

DÉBARDEUR, *Fr.* a lighterman.

DÉBARK. See **DISSEMBARK**.

DÉBARQUEMENT, *Fr.* disembarking.

DÉBAUCHER, *Fr.* to debauch, seduce, or entice a soldier from the service of his king and country. During the reign of Louis XV. and in former reigns, it was enacted, that any person who should be convicted of having *debauched*, or enticed, a soldier from his duty should suffer death. By a late act of parliament it is made a capital offence to entice, or seduce, a soldier from any regiment in the British service.

DEBENTURE is a kind of warrant, given in the office of the board of ordnance, whereby the person whose

name is therein specified, is entitled to receive such a sum of money as by former contract had been agreed on, whether wages or otherwise. Debuture, in some of the acts of parliament, denotes a kind of bond or bill, first given in 1649, whereby the government is charged to pay the soldier, creditor, or his assign, the money due on auditing the account of his arrears. The payments of the board of ordnance for the larger services at home are always made by debentures; and the usual practice has been to make those payments which are said to be in course of office, at a period which is always somewhat more than three months after the date of each debenture, and which can never exceed six: to pay, for instance, at once for the three months of January, February, and March, as early as possible after the 30th of June.

Army-Debentures are generally made up at the Pay-Office, by virtue of warrants from the War-Office, with the state of regimental charges annexed, after which is issued the final, or clearing warrant. See **WARRANT**.

DÉBET, *Fr.* balance. It also signifies the same as *débiteur*, debtor.

DÉBILLER, *Fr.* to take off the horses that are used in dragging boats up a river.

DÉBITER, *Fr.* to saw stones for the purpose of converting the several pieces into flag-stones, &c. It also signifies to saw wood into thin planks.

DÉBLAI, *Fr.* the depth, or excavation, made by digging.

DÉBLAYER, *Fr.* to make holes or excavations in the earth with spades or pick-axes, &c.

DÉBLAYER un camp, *Fr.* to evacuate a camp for the purpose of cleaning and purifying the ground.

DÉBLAYER les terres d'un fossé, *Fr.* to throw away the superfluous earth which is not used in constructing a parapet.

To DEBLOCADE, from the French *Débloquer*; to raise the siege of a place, or to clear the avenues to a town of an enemy that prevents ready access to it.

DÉBORDEMENT, *Fr.* This word is applied to that excess and want of good order among troops, which induce them to overrun a country that is friendly or otherwise. *Débordement* was the ancient appellation given to the irruption of a tribe of barbarians, who came from afar to invade a strange country.

DÉBORDER, *Fr.* to extend to the right or left so as to be beyond the extreme points of a fortified town or place.

DÉBOUCHÉ, *Fr.* the outlet of a wood, or narrow pass.

DÉBOUCHÉ de tranchée, *Fr.* the opening which is made at the extremity of a trench, in order to carry the work more forward, by forming new boyaus, and to attack a place more closely.

DÉBOUCHÉMENT, *Fr.* the marching of an army from a narrow place into one more open.

DÉBOUCHER, *Fr.* to march out of a defile or narrow pass, or out of a wood, village, &c. either to meet an enemy or to retire from him. It also signifies to begin a trench or boyau, in fortification, in a zig-zag direction from a preceding one.

DÉBOUCHER une grosse bouche à feu, *Fr.* to take the wadding out of a heavy piece of ordnance.

DÉBOURRER, *Fr.* to take the wadding out of a cannon, or musket.

DÉBOURS, *Fr.* disbursements.

DEBOUT, *Fr.* Up! a word of command in the French service, when troops kneel upon one knee in the presence of the consecrated host.

DÉBRIS d'une armée, *Fr.* the remains of an army which has been routed.

DEBTS and Credits. Every captain of a troop or company in the British service is directed to give in a monthly statement of the *debts and credits* of his men; and it is the duty of every commanding officer to examine each list, and to see that no injustice or irregularity has been countenanced or overlooked, in so important an object as every money matter between officer and soldier most unquestionably is.

DÉBUSQUER, *Fr.* to drive an enemy's party from an ambuscade or advantageous position.

DECAGON, (*décagone*, *Fr.*) in fortification, is a polygon figure, having 10 sides, and as many angles, and if all the sides and angles be equal, it is called a regular decagon, and may be inscribed in a circle. The sides of a regular decagon are, in power and length, equal to the greatest segment of an hexagon inscribed in the same circle, and cut in extreme and mean proportion.

To **DECAMP**, (*décamper*, *Fr.*) to march an army or body of men from the ground where it before lay encamped. It also signifies to quit any

any place or position in an unexpected manner.

DÉCAMPEMENT, *Fr.* the breaking up of an encampment.

DÉCAMPER, *Fr.* to leave one camp in order to go and occupy another.

DECANUS, in Roman military history, an officer who presided over ten other officers, and was head of the *contubernium*, or serjeant of a file of Roman soldiers.

DÉCASQUER, *Fr.* to take off one's helmet.

DÉCÉDER, *Fr.* to die a natural death; hence de cease.

DECEMPEDAL, (*décempède*, *Fr.*) an ancient measure of ten feet.

DECENVIR, (*décenvir*, *Fr.*) In Roman history one of the ten magistrates that were created, on various occasions, under the republican government.

DECENVIRATE, (*décenvirat*, *Fr.*) the station, or dignity, of a decenvir; also the period of its duration.

DÉCHARGE, *Fr.* the act of firing off a musket.

DÉCHARGE générale, *Fr.* a general discharge.

DÉCHARGE d'armes sur un mort, *Fr.* a discharge of musketry over a dead body.

Une DÉCHARGE de coups de bâton, *Fr.* a bastinado; a volley of blows.

DÉCHARGEURS, *Fr.* men appointed to attend the park of artillery, and to assist the non-commissioned officers, &c. who are employed on that service. It is the duty of the former to keep a specific account of articles received and consumed, in order to enable the latter to furnish their officers with accurate statements.

DÉCHIRER la cartouche avec les dents, *Fr.* to bite cartridge.

DÉCHOUER, *Fr.* a sea term, signifying to get a ship afloat, which has touched or been stranded.

To **DECIMATE** (*décimer*, *Fr.*) to chuse one out of ten, by lot.

DECIMATION, in Roman military history, a punishment inflicted upon such soldiers as quitted their post, or behaved themselves cowardly in the field. The names of all the guilty were put into an urn or helmet, and as many were drawn out as made the tenth part of the whole number; the latter were put to the sword, and the others saved.

DECLARATION of war, (*déclaration de guerre*, *Fr.*) a public proclamation of a state, declaring it to be at war with any foreign power, and forbid-

ding all and every one to aid or assist the common enemy, at their peril.

To **DECLARE war**, (*déclarer la guerre*, Fr.) to make it publicly known that one power is upon the eve of acting offensively against another.

DÉCLICQ, DÉCLIT, Fr. a rammer; a machine used to drive down piles, staves, &c. It also signifies a battering ram.

DECLIVITY, as opposed to acclivity, means a gradual inclination or obliquity reckoned downwards.

DÉCOIFFER, Fr. to uncap.

DÉCOIFFER une fusée, Fr. to take off the wax, or mastic composition, by which the inflammable matter is confined. This term is also used with regard to shells. The French sometimes say, *grater la fusée des bombes*, to scrape off the fuse of a bomb.

DÉCOLLER, Fr. to behead. Formerly, no person under the rank of a gentleman could be beheaded in France. In Austria it is an ignominious punishment.

DÉCOMBRER, Fr. to carry away the loose stones, &c. which have been made in a breach by a besieging enemy.

DÉCOMBRES, Fr. the rubbish which is the consequence of a breach being made in a work; or any other loose ruins that may have been occasioned by time.

DÉCOMPTE, Fr. in a general sense, discount, or deduction made, on any given sum or allowance.

DÉCOMPTE also signifies a liquidation, or balance, which from time to time was made in the old French service, between the captain of a company and each private soldier, for monies advanced, or in hand.

DÉCONFIRE, Fr. discomfit; route.

DÉCOUCHER, Fr. to sleep out of quarters.

DÉCOUDRE, *être en découdre*, Fr. to be on bad terms; to be determined to fight.

DÉCOURAGER, Fr. to dishearten.

DÉCOUSU, Fr. unstitched, disorderd, from *découdre*: thus an army may be partially broken, yet not discomfited.

DÉCOÛSURE, Fr. a part unstitched, or broken, after having been sewed. *Cela n'est pas déchiré, ce n'est qu'une découzure.*

A DÉCOUVERT, Fr. exposed; not covered or protected.

Aller à DÉCOUVERT attaquer l'ennemi, Fr. to attack an enemy in open day.

DÉCOUVERTE, *aller à la découverte*, Fr. to patrol; to reconnoitre.

DÉCOUVERTE sur mer, *être à la découverte*, Fr. to be placed in the round-top, or at the mast-head, for the purpose of keeping a good look-out.

DECOY, a stratagem to carry off the enemy's horses in a foraging party, or from the pasture; to execute which, you must be disguised, and mix on horseback in the pasture, or amongst the foragers on that side on which you propose to fly: you must then begin by firing a few shots, which are to be answered by such of your party as are appointed to drive up the rear, and are posted at the opposite extremity of the pasture, or foraging ground; after which they are to gallop from their different stations towards the side fixed for the flight, shouting and firing all the way: the horses being thus alarmed, and provoked by the example of others, will break loose from the pickets, throw down their riders and their trusses, and setting up a full gallop, will naturally direct their course to the same side; inasmuch that, if the number of them was ever so great, you might lead them in that manner for several leagues together: when you are got into some road, bordered by a hedge, or ditch, you must stop as gently as possible; and without making any noise; the horses will then suffer themselves to be taken without any opposition. It is called in French *Haraux*, and Count Saxe is the only author that mentions it.

To **DECOY**, to allure, entice, or draw in.

DECOYED, an enemy is said to be decoyed when a small body of troops draws him into action, whilst the main body lies in ambush ready to act with the greatest effect.

DECRIRE un pays, Fr. to give a description of a country.

DECUPLE, in arithmetic, a term of relation or proportion, implying a thing to be ten times as much as another.

DECURION, in Roman military history, a commander of ten men in the army, or chief of a decury.

DECURY, (*décurie*, Fr.) ten Roman soldiers ranged under one chief, or leader, called the Decurion.

DECUSSION, in geometry, optics, &c. the point at which two lines, rays, &c. cross, or intersect, each other.

DEDANS d'une ville de guerre, Fr. the inside of a fortified town, i. e. all the

works which are within the line of circumvallation.

DEEP, a term used in the disposition or arrangement of soldiers that are placed in ranks before each other; hence *two deep, three deep, &c.* Troops are told off in ranks of two, or three deep, and on some occasions in four or more.

DÉFAIRE, *Fr.* to defeat.

DÉFAITE, *Fr.* defeat. The loss of a battle. An army is *vaincue* (overpowered) when the field of battle is lost; it is *défaite* when, besides the loss of the field of battle, there are a great number killed, wounded, and made prisoners. The word *défaite* is only applicable to an *army*, but never to a detachment; in the latter case it is said to have been overpowered.

DEFAULTER. See DESERTER.

DEFAULTER, a term generally used to signify any person whose accounts are incorrect, particularly with the public; as a public defaulter.

DEFEAT, (*défaite*, *Fr.*) the overthrow of an army.

DEFECTION, an abandoning of a king or state; a revolt.

DEFENCE, in fortification, consists of all sorts of works that cover and defend the opposite posts; as flanks, parapets, caesmates, and *fausse-brays*. It is almost impossible to fix the niter to the face of a bastion, till the defences of the opposite one are ruined; that is, till the parapet of its flank is beaten down, and the cannon, in all parts that can fire upon that face which is attacked, is dismounted. See FORTIFICATION.

Active DEFENCE, generally considered, means every species of offensive operation which is resorted to by the besieged, to annoy the besiegers. Such, for instance, is the discharge of heavy ordnance from the walls, the emission of shells, and the firing of musketry. A mass of water may likewise be understood to mean active defence, provided it can be increased according to the exigency of the service, and be suddenly made to overflow the outworks, or entrenchments of the besieging enemy. Mines which are carried beyond the fortifications may likewise be included under this head.

Passive DEFENCE is chiefly confined to inundations, and is effected by letting out water in such a manner, that the level ground which lies round a fortified

town or place may be entirely overflowed and become an inert stagnant pool. Mere *submersion* is, in fact, the distinguishing character of this species of defence, which does not afford any other movement than what naturally arises from the greater or lesser elevation of the waters, without the means of urging them beyond a given point.

Distant DEFENCE consists in being able to interrupt the enemy's movements by circuitous inundations; to inundate, for instance, a bridge, when a convoy is passing, or to insulate batteries, the heads of saps or lodgments which have been made in the covert-way, is to act upon a distant defence. By this species of defence, an enemy's communications may be perpetually intercepted, and his approaches so obstructed as to force him to leave dangerous intervals.

See Belidor's treatise on Hydraulic Architecture.

Line of DEFENCE represents the flight of a musket-ball from the place where the musketeers stand, to scour the face of the bastion. It should never exceed the reach of a musket. It is either *sichant*, or *razant*: the first is when it is drawn from the angle of the curtain to the flanked angle; the last when it is drawn from a point in the curtain, *razing* the face of the bastion.

Line of DEFENCE is the distance between the salient angle of the bastion and the opposite flank; that is, it is the face produced to the flank. See FORTIFICATION.

DEFENCE of rivers, in military affairs, is a vigorous effort to prevent the enemy from passing; to effect which, a careful and attentive officer will raise redoubts, and if necessary join curtains thereto: he will place them as near the banks as possible, observing to cut a trench through the ground at the windings of the river, which may be favourable to the enemy, and to place advanced redoubts there, to prevent his having any ground fit to form on, &c. See RIVERS.

To be in a posture of DEFENCE is to be prepared to oppose an enemy, whether in regard to redoubts, batteries, or in the open field.

To DEFEND, to fortify, secure, or maintain a place, or cause.

DÉFENDANT, *Fr.* a synonymous word for *flanquant*.

DÉFENSE, *Fr.* prohibition. An order issued by some superior officer forbid-

ding the troops of a garrison, or camp, to do certain things.

DÉFENSES d'une place, Fr. the works of a fortified place. See DEFENCE in FORTIFICATION.

Relative to the defence of fortified places, the reader may be gratified by referring to the *Réveries* or *Mémoires* of Marshal Saxe, and to a work entitled *Réflexions*, by Baron D'Espagnac, in his Supplement to these *Réveries*, page 91.

DEFENSIVE, serving to defend; in a state, or posture, of defence.

DEFENSIVE-War. See WAR.

DÉFERLER, Fr. to unfurl; to spread out. This term is only used by the French in a naval sense, as *Déferler les voiles*, To let go the sails, or sheets.

DEFIANCE. See CHALLENGE.

DEFICIENT, wanting to complete, as when a regiment, troop, or company has not its prescribed number of men.

DEFICIENT numbers, in arithmetic, are such whose parts added together make less than the integer. Thus 8, whose quota parts are 1, 2, and 4, which together make only 7.

DÉFI, Fr. a challenge.

DÉFI d'armes, Fr. a challenge, or provocation, to fight, much in practice some centuries back.

DÉFIER, Fr. to set at defiance.

To **DEFILADE**, to move, or pass off by files; also to march through narrow passes.

DEFILE, (*défilé*, Fr.) in military affairs, a narrow passage, or road, through which the troops cannot march, otherwise than by making a small front, and filing off; so that the enemy may take an opportunity to stop or harass their march, and to charge them with so much the more advantage, because the rear cannot come up to the relief of the front.

DEFILE, among the French is also called *filière*.

To **DEFILE**, (*défiler*, Fr.) is to reduce divisions or platoons into a small front, in order to march through a defile; which is most conveniently done by facing to either the right or left, and then wheeling to either right or left, and marching through by files, &c. It has been mentioned by a writer on military manœuvres, that defiling should be performed with rapidity, for this obvious reason, that a body of men which advances towards, or retires from an approaching enemy, may get into line, or into columns, prepared for action, with-

out loss of time. There may, however, be exceptions to this general rule. For instance, if the regiment is passing a bridge, either retreating or advancing, and the bridge is not firm, the pressure upon it must be as little as possible; because if it should break down, the regiment is suddenly separated, and the remainder may be cut to pieces. In passing a common defile, the pace must be proportioned to the nature of the ground.

DEFILEMENT, the art of disposing all the works in a fortress so that they may be commanded by the body of the place. See FORTIFICATION.

DEFILING a lodging. See ENFILADE.

DÉFORMER, Fr. in a military sense, signifies to break: as *déformer une colonne*, to break a column.

DEFY. See CHALLENGE.

DÉGAGEMENT, Fr. the absolute discharge of a soldier.

DÉGAGEMENT, Fr. a small passage, or staircase, belonging to a suite of apartments, through which a person may go, without being obliged to return the same way he came.

DÉGAGER un soldat, Fr. to give a soldier his discharge.

DÉGAINER, Fr. to draw one's sword.

DÉGAINEUR, Fr. a hector; a bully.

DÉGARNIR une forteresse, une ligne, un poste, Fr. &c. to dismantle a fortress, a line of fortification, a post, by withdrawing the troops, and sending away the cannon.

DÉGAST, Fr. the laying waste an enemy's country, particularly in the neighbourhood of a town which an army attempts to reduce by famine, or which refuses to pay military exactions.

DÉGAT, Fr. waste; spoil; devastation.

DÉGAUCHIR, Fr. to plane; to level; to make smooth and even, as carpenters do wood, and masons stone; also to level a talus by a slope of earth.

DÉGORGEOR, Fr. a sort of steel pricker used in examining the touch-hole of a cannon.

DÉGORGER, Fr. to clear out some obstruction.

DÉGORGER une embrasure, Fr. to lower the earth in an embrasure, so as to have a perfect view of any object against which a piece of ordnance is to be pointed.

DÉGOURDI, *Fr.* polished. It is said proverbially of a soldier who understands his duty well, that he is a man *dégourdi*; in the like manner it is said of a clumsy, awkward recruit, that he must be *dégourdi*, that is to say, that he must be properly drilled.

DÉGOUTER, *Fr.* to disgust; to set against any thing.

Cheval DÉGOUTÉ, a horse that is off his feed.

DEGRADATION, (*dégradation*, *Fr.*) in a military life, the act of depriving an officer for ever of his commission, rank, dignity, or degree of honour; and taking away, at the same time, title, badge, and every other privilege of an officer; also a sentence passed on non-commissioned officers only, who before they can receive any corporal punishment, except imprisonment, must be degraded to the ranks, or station of a private soldier. So late as the reign of Charles I. private soldiers, for misbehaviour in action, were degraded to pioneers.

DÉGRADATION sur les OUVRAGES par le FEU de l'ENNEMI, *Fr.* See **OUVRAGES dégradés**.

DÉGRADÉ, *Fr.* This is said of a building, when, from want of the necessary repairs, it becomes uninhabitable. The term also applies to a wall, when the plaster or mortar is fallen off, and the shards, or bricks, are without any cement, or connexion.

To **DEGRADE**, to lessen; to lower in the estimation of others.

DÉGRADER, *Fr.* to degrade. In France, military criminals were never delivered over to the charge of the civil power, or sent to be executed, without having been previously degraded; which was done in the following manner:

As soon as the serjeant of the company to which the culprit belonged had received orders from the major of the regiment, to degrade and render him incapable of bearing arms, he accoutred him cap-a-pee, taking care to place his right hand upon the butt end of the musket, while the soldier remained tied. He then repeated the following words: "Te trouvant indigne de porter les armes, nous t'en dégradons." *Finding thee unworthy to bear arms, we thus degrade and render thee incapable of them.* He then drew the musket from his arm backwards, took off his cross-belt, sword, &c. and finally, gave him a kick upon the posteriors. After which, the serjeant

retired, and the executioner seized the criminal. See **DRUM-OUT**.

DÉGRADER une muraille, *Fr.* to beat down a wall.

Terre à DÉGRAISSER, *Fr.* fuller's earth; the use and application of which are well known.

DÉGRAVOYER, *Fr.* to wash away the gravel, &c. to loosen; to undermine.

DÉGRÉ, (*degré*, *Fr.*) a division of a circle, including a 360th part of its circumference. Every circle is supposed to be divided into 360^o, parts called degrees, and each degree into 60', other parts, called minutes; each of these minutes being divided into 60" seconds, each second into thirds, and so on.

DÉGREE of latitude, (*degré de latitude*, *Fr.*) a portion of land between two parallels.

DÉGREE of longitude, (*degré de longitude*, *Fr.*) a portion of land between two meridians.

DÉGROSSER ou DÉGROSSIR, *Fr.* to take off the rough or outside of any thing; to chip; to clear up; to fashion.

DEHARNACHIER, *Fr.* to unsaddle a horse, and take off every part of his harness and armour.

DEHORS, in the military art, are all sorts of out-works in general, placed at some distance from the walls of a fortification, the better to secure the main places, and to protect the siege, &c. See **FORTIFICATION**.

DÉJETTER, *Fr.* to open; to give; as wood will when it has not been thoroughly dried before it is used.

DÉLABRER, *Fr.* to tear to pieces; to rend; to ruin; to destroy.

DÉLATION, *Fr.* information, such as is given by a reporter, tale-bearer, or spy.

DELATOR, (*délateur*, *Fr.*) an informer. Under the Roman emperors these contemptible creatures were very common. Tacitus informs us, that the tyrants encouraged them to carry on that infamous trade by granting them rewards. *Caligula* allowed them one-eighth of the property of the accused person. As the informers consulted only their own interest, they invariably lodged their informations against the most respectable citizens, so that tranquillity and personal safety were entirely out of the question; till at last *Titus* and *Trajan* put an end to that public nuisance, and had the informers put to death. The same infamous system was

revived in France in the espionage practised under Robespierre, and throughout the French Revolution.

DÉLIAISON, *Fr.* See LIAISON.

DELINEATION, an outline, or sketch. See DESIGN.

DELIVER. See SURRENDER.

To DELIVER up, to surrender; to give up. Thus Charles I. was delivered up to Oliver Cromwell's army.

To DELIVER battle, (a term taken from the French *Livrer bataille*,) to attack an enemy, and come to blows.

DELIVRER *une troupe, une ville assiégée*, *Fr.* to relieve a body of men, or besieged town, by forcing the enemy to withdraw.

DELLIS, *Fr.* select men from Albania, who volunteer their services for the armies of the Grand Signor, and receive no pay: their undaunted courage is superior to that of any other nation. No man is admitted into that body unless he be of a proper height, robust, and of a martial countenance. Previous to their being embodied, they must give proofs of their valour. The *Sanjacs* and *Beylerbeys* select their guard from amongst these Albanians, on account of their courage and fidelity. They are armed with a sabre, a lance, a battle-axe, and sometimes with pistols; but they prefer other weapons to fire-arms, as they may, in their opinion, acquire more glory by making use of the former.

DÉLOGÉR, *Fr.* to dislodge; to march off. This term is used among the French both to signify the act of withdrawing one's self, and that of forcing another to quit a position. Hence, *déloger l'ennemi*, to dislodge an enemy.

DÉLOGEMENT, *Fr.* the act of suddenly quitting a town or village upon which troops have been quartered, or of breaking up camp. *Décamper* is a more appropriate term.

DÉLOYAL, *Fr.* disloyal; regardless of all faith and honour; perfidious.

DÉMANTELER, *Fr.* to dismantle; to destroy the works of a fortified place.

DEMARCATIION, (*démarcation*, *Fr.*) a stipulated separation, or division of territory, &c. See LINE of DEMARCATIION.

DEMENTI, *Fr.* the lie. A young soldier must know, from the moment he embraces the profession of arms, that this word can never escape with impunity from the lips of a man of honour, and especially of a soldier; in short, upon no occasion whatever must he use the ex-

pression; for, amongst civilized nations, to give the lie is a very gross insult; amongst military men it is reckoned the greatest offence: and the satisfaction required is not so easily given as it was among the Romans, when the offender had only to say to the affronted person, *Nollem dictum, I am sorry for what I said.*

DEMEURER, *Fr.* to lodge; to remain; to stay. This word is used figuratively among the French, to signify possession of any thing, as *le champ de bataille m'est demeuré*, the field of battle was mine.

DEMEURER *sur la place*, *Fr.* to be left dead on the spot.

DEMI-BASTION is a work with only one face and one flank. See FORTIFICATION.

DEMI-CANNON. See CANNON.

DEMI-CULVERIN. See CANNON.

DEMI-DIAMÈTRE, *Fr.* See SEMI-DIAMETER.

DEMI-DISTANCE *des polygones*, *Fr.* is the distance between the exterior polygons and the angles.

DEMI-DISTANCES, *Fr.* half-distances; as *serrez la colonne à demi-distances*, close the column at half-distances.

DEMI-FILE, *Fr.* is that rank in a French battalion, which immediately succeeds to the *serre-demi-file*, and is at the head of the remaining half of its depth.

DEMI-GORGE is half the gorge, or entrance into the bastion, not taken directly from angle to angle, where the bastion joins the curtain, but from the angle of the flank to the center of the bastion; or the angle which the two curtains would make by their prolongation. See FORTIFICATION.

DEMI-LANCE, a light lance, or spear.

DEMI-LUNE, in fortification, is a work placed before the curtain to cover it, and prevent the flanks from being discovered sideways. It is made of two faces, meeting in an outward angle. See FORTIFICATION.

DEMI-lunes détachées, *Fr.* These works are constructed like bastions, either level, flat, or elevated, according as circumstances require, and which depends upon the elevation, or depth, of the covert-way.

DEMI-parabole, *Fr.* a curved line, but less so than that of the parabola. Vide Parabola.

DEMI-parallèles, or Places d'armes,

Fr. parts of trenches conducted in parallel lines in front of the place between the second and third *parallel*, with a view of protecting from a shorter distance, the head of the *saps*, until the third parallel be completed. Their length and depth are the same as those of the parallels: they are from forty to fifty toises long.

DEMI-pique, Fr. a long javelin, or spontoon.

DEMI-revêtement, Fr. a revêtement made of brick-work, which supports the rampart from the bottom of the ditch, to a foot above the level of the country. The *demi-revêtement* costs less than the *revêtement entier*, and is equally as advantageous in every respect.

DEMI-tour à droite, Fr. See RIGHT ABOUT.

DEMI-tour à gauche, Fr. See LEFT ABOUT.

DÉMISSION, Fr. resignation; the act of giving up any place of trust, &c.

DEMOISELLE, Fr. a pavior's instrument; a rammer. It is also called a *hie*.

DÉMOLIR une place, Fr. to destroy the fortifications of a fort, that it may no longer be in a state of defence.

DÉMOLITION, the act of overthrowing buildings.

DÉMONTER une pièce d'artillerie, Fr. to dismount a piece of artillery; to take it off its carriage.

DÉMONTER une troupe à cheval, Fr. to wound or lame the horses of a troop of cavalry, so as to render them unfit for service.

DÉMUNIR, Fr. to take away from a place the provision and ammunition it contained.

DÉMURER, Fr. to unwall; also to drain a place of stones.

DENISON, a free man, or native of a country or state, as opposed to alien. It is also written Denizen.

DENOMBREMENT, Fr. list; survey; the complement of a troop or company; also the number of battalions, &c. which compose an army, or of inhabitants that dwell in a town.

DÉNONCER un soldat, Fr. to give notice to the captain of a troop or company, or to the regiment, of a soldier's intention to desert.

DÉNONCER une troupe, Fr. to give intelligence of the movement of an armed body of men, of its strength, proposed route, &c.

DÉNONCIATEUR, Fr. an infor-

mer; or, to speak in the courteous language of government, a reporter.

DÉNONCIATEUR d'un déserteur, Fr. the person who discovers and gives up a deserter for a specific reward.

DENRÉE, Fr. commodity; ware; provisions.

DENSITY of bodies. See MOTION.

DEPARTMENT (*département*, Fr.) separate allotment; province or business assigned to a particular person or place; hence Civil or Military Department; Home or Foreign Department, signifying the same as office. Also, in French, any particular district.

DÉPASSER, (or **DÉBORDER**,) Fr. to over-run.

Se laisser DÉPASSER, Fr. to suffer yourself to be overtaken.

DÉPECHES, Fr. dispatches, letters, &c. which are carried by a special messenger.

DÉPENSES secrètes, Fr. imply secret service money.

DÉPÉRIR, Fr. to waste away; an army is said to be in this state when it is afflicted with a pestilential or epidemical disorder; when it is short of provisions; when the troops do not enter into cantonments as the season requires it, or if they suffer from any other accident.

DÉPEUPLER, Fr. to depopulate.

DEPLOY, (*déployer*, Fr.) to display, to spread out; a column is said to deploy, when the divisions open out, or extend to form line on any given division.

DEPLOYMENT, (*déploiement*, Fr.) or *flank march*, in a military sense, the act of unfolding or expanding any given body of men, so as to extend their front.

DEPLOYMENT into line on a front division, the *right in front*, is effected by halting that division in the alignment, and all the others in their true situations, parallel and well closed up to it; and then by taking a point of forming upon, and dressing by the prolongation of that division. For a minute explanation of the deployments on a rear and central division, see Rules and Regulations, p. 186.

Oblique DEPLOYMENTS differ from those movements which are made when a battalion stands perpendicularly to the line on which it is to form. These *deployments* are frequently made on an oblique line advanced, on an oblique line retired; and when the close column halted is to form in line in the prolongation of its flank, and on either the

front, rear, or central division. See Infantry Regulations, p. 192.

DÉPORTATION, *Fr.* the act of transporting or sending away; what we call transportation.

DÉPORTER, *Fr.* to transport; to send away.

DÉPOSTER un ennemi, ou une troupe, *Fr.* to oblige an enemy to quit his position; to drive him out of a fortified place, &c.

DÉPOT, (*depôt*, *Fr.*) any particular place in which military stores are deposited for the use of the army. In a more extensive sense, it means several magazines collected together for that purpose. It also signifies an appropriate fort, or place for the reception of recruits, or detached parties, belonging to different regiments. The barracks near Maidstone are *dépôts* for the British cavalry, and the Isle of Wight is allotted for the infantry.

During hostilities, the greatest attention should be given to preserve the several *dépôts* which belong to the fighting army. Hence the line of operation should be invariably connected with them; or rather, no advance should be made upon that line, without the strictest regard being paid to the one of communication.

DEPOT is also used to denote a particular place at the tail of the trenches, out of the reach of the cannon of the place. It is here that the besiegers generally assemble, who are ordered to attack the outworks, or support the troops in the trenches, when there is reason to imagine the besieged intend making a vigorous sally.

DÉPOUILLE, *Fr.* *Mettre en dépouille* is an expression made use of in the casting of cannon, and signifies to strip it of the matting, clay, &c.

DÉPOUILLES de l'ennemi, *Fr.* See **SPOILS**.

DÉPOUILLEMENT, *Fr.* the act of stripping another. In the French army this crime is punished most severely, and is thus distinguished in the last military code.

DÉPOUILLEMENT d'un mort sans ordre, *Fr.* the stripping of the dead without any authority for so doing; punished by five years imprisonment in irons.

DÉPOUILLEMENT d'un vivant, *Fr.* the stripping of the living; ten years imprisonment in irons.

DÉPOUILLEMENT par un vivandier, *Fr.*

the robbing or stripping of any person by a victualler or camp follower; twenty years imprisonment in irons.

DÉPOUILLEMENT avec mutilation, ou assassinat, *Fr.* the stripping of an individual, accompanied by blows or mutilation, or with assassination, death.

DÉPOUILLER, *Fr.* to strip. The French say figuratively, *Jouer au Roi dépoillé*, to strip one of all his property.

DEPRESSION, the placing of any piece of ordnance, so that its shot be thrown under the point blank line.

DEPRESSED gun, any piece of ordnance having its mouth depressed below the horizontal line.

DEPTH, a technical word peculiarly applicable to bodies of men drawn up in line or column.

DEPTH of a battalion or squadron, the number of ranks, or the quantity of men. Infantry were formerly drawn up 6 or 8 deep, that is, it consisted of so many ranks; but now troops are generally drawn up only 3 deep, and in defence of a breast-work but 2 deep; also in line of battle.

DEPTH of formation. The fundamental order of the infantry in which they should always form and act, and for which all their various operations and movements are calculated, is *three ranks*. The formation in *two ranks* is to be regarded as an occasional exception that may be made from it, where an extended and covered front is to be occupied, or where an irregular enemy, who deals only in fire, is to be opposed. The formation in two ranks, and at open files, is calculated only for light troops in the attack and pursuit of a timid enemy, but not for making an impression on an opposite regular line, which vigorously assails, or resists.

DEPTH is also applicable to an army marching towards any given object, in desultory columns.

DEPUTY, a person appointed by commission to act instead of another.

DEPUTY barrack-masters.

DEPUTY commissaries.

DEPUTY judge-advocate.

DEPUTY lieutenants, civil officers belonging to the militia of Great Britain, and appointed by the several county lieutenants. His Majesty may authorise any three to grant commissions, and to act when the county-lieutenant is abroad, or when there is none. If twenty qualified persons can be found, it is usual to

appoint that number for each county. For specific qualifications, see the 20th of George III.

DEPUTY *muster-masters*.

DÉRIVE, *Fr.* a marine term, signifying the driving of a ship; the angle of lee-way, or drift; also the stray line, or allowance made for stray line; likewise lee-board.

Belle DÉRIVE, *Fr.* a good offing.

DÉROBER *une marche*, *Fr.* to steal a march.

DÉROULLER, *Fr.* to take of the rust; as *dérouiller des armes*, to clean and new-furbish arms.

DÉROUTE, *Fr.* the total overthrow of an army, battalion, or of any armed party.

DÉROUTER *l'ennemi*, *Fr.* to disconcert an enemy; to get him into such a precarious situation, that he can form no judgment of the issue of an engagement.

DÉSACOTER, *Fr.* to take down the props, or stays by which any thing has been supported.

DÉSARÇONNER, *Fr.* to dismount a horseman: the same as *Démonter*.

DÉSARMEMENT, *Fr.* the act of disarming, or reducing troops.

DÉSARMER, *Fr.* to reduce any given number of troops, by taking away their arms, &c.

DÉSARMER *une pièce d'artillerie*, *Fr.* to draw the charge out of a piece of artillery; it also signifies to dismount it wholly.

DÉSARROI, *Fr.* disorder; confusion.

DÉSASSIÉGER, *Fr.* to cause a siege to be raised. (This word is become obsolete; it is not to be found in the *Dictionnaire de l'Académie Française*; but it is a military expression.)

DÉSAVANTAGE, *Fr.* disadvantage; a state not prepared for defence.

To DESCEND signifies to leave any position on an eminence for immediate action.

To DESCEND upon, to invade. When an enemy from surrounding heights suddenly marches against a fortified place, he is said to *descend upon* it. The term is also applied to troops debarking from their ships for the purpose of invasion.

DESCENDRE *la garde*, *Fr.* to come off guard, after being regularly relieved.

DESCENDRE *la tranchée*, *Fr.* to quit the trench, on being regularly relieved.

DESCENDRE *une rivière*, *Fr.* to follow the stream of a river.

DESCENT, (*descente*, *Fr.*) hostile in-

vasion of any state or kingdom; the debarkation of troops on any coast, for the purpose of acting offensively.

DESCENTE *de fossé*, *Fr.* a hollow passage which is made by the besiegers, to get under the glacis of a fortress into its fosse.

DESCENTE *de fossé souterraine ou couverte*, *Fr.* a hollow passage which may have been effected under ground.

DESCENTE *de fossé à ciel ouverte*, *Fr.* a passage towards the ditch or fossé of a fortified place, which has not been effected under cover.

DESCENTS *into the ditch*, (*descentes dans le fossé*, *Fr.*) cuts and excavations made by means of saps in the counter-scarp beneath the covert-way. They are covered with thick boards and hurdles, and a certain quantity of earth is thrown upon the top, in order to obviate the bad effects which might arise from shells, &c. See FORTIFICATION.

DÉSCLIQUER, *Fr.* This word is expressive of the action of the ancients when throwing stones at the besiegers.

DESCRIBENT, in geometry, a term expressing some line, or surface, which by its motion produces a plane figure, or a solid.

DÉSEMPARER *un camp*, *Fr.* to break up camp; to strike the tents.

DÉSEMPRISONNER, *Fr.* to take out of prison.

DÉSENBRAVER, *Fr.* to unskid a wheel.

DÉSENCLOUER, *Fr.* to take the nail out of a cannon that has been spiked; it also signifies to remove obstructions from any passage that has been incumbered.

DÉSENCLOUER *un cheval*, *Fr.* to take out the nail that pricks a horse.

DÉSENRAYER, *Fr.* to unskid a wheel; to take off the chain, or cord, by which it is kept fast.

DÉSENNOLER, *Fr.* to give a soldier his discharge, to strike him off the muster-roll.

To DESERT, (*désertir*, *Fr.*) to go away by stealth after having been regularly enlisted; to abandon any person, or cause.

DESERTER, in a military sense, a soldier who, by running away from his regiment, troop, or company, abandons the service.

DESERTERS from the militia may be apprehended by any person in the same manner that deserters are from the

regular army. And every person who shall be discovered in the act of concealing, or assisting a deserter, is to forfeit 5l. Persons apprehending a deserter are entitled to 20s.

Penalty of DESERTION. All officers and soldiers, who, having received pay, or having been duly enlisted in our service, shall be convicted of having deserted the same, shall suffer death, or such other punishment as by a court-martial shall be inflicted.

Any non-commissioned officer or soldier, who, shall, without leave from his commanding officer, absent himself from his troop or company, or from any detachment with which he shall be commanded, shall, upon being convicted thereof, be punished according to the nature of the offence, at the discretion of a court-martial.

No non-commissioned officer or soldier shall enlist himself in any other regiment, troop, or company, without a regular discharge from the regiment, troop, or company, in which he last served, on the penalty of being reputed a deserter, and suffering accordingly: and in case any officer shall knowingly receive and entertain such non-commissioned officer or soldier, or shall not, after his being discovered to be a deserter, immediately confine him, and give notice thereof to the corps in which he last served, he, the said officer so offending, shall by a court-martial be cashiered.

Whatsoever officer or soldier shall be convicted of having advised any other officer or soldier to desert our service, shall suffer such punishment as shall be inflicted upon him by the sentence of a court-martial.

Justices may commit DESERTERS. And whereas several soldiers being duly enlisted, do afterwards desert, and are often found wandering, or otherwise absenting themselves illegally from his Majesty's service; it is further enacted, that it shall and may be lawful to and for the constable, headborough, or tything-man of the town or place, where any person, who may be reasonably suspected to be such deserter, shall be found, to apprehend, or cause him to be apprehended, and to cause such person to be brought before any justice of the peace, living in or near such town or place, who hath power to examine such suspected person: and if by his confession, or the testimony of one or more witness or wit-

nesses upon oath, or by the knowledge of such justice of the peace, it shall appear, or be found, that such suspected person is a listed soldier, and should be with the troop or company to which he belongs; such justice of the peace shall forthwith cause him to be conveyed to the gaol of the county or place where he shall be found, or to the house of correction, or other public prison, in such town or place where such deserter shall be apprehended; or to the Savoy, in case such deserter shall be apprehended within the city of London or Westminster, or places adjacent; and transmit an account thereof to the secretary at war for the time being, to the end such person may be proceeded against according to law: and the keeper of such gaol, house of correction, or prison, shall receive the full subsistence of such deserter or deserters, during the time that he or they shall continue in his custody, for the maintenance of the said deserter or deserters; but shall not be entitled to any fee or reward, on account of the imprisonment of such deserter or deserters, any law, usage, or custom to the contrary notwithstanding.

Reward for taking up DESERTERS. And for the better encouragement of any person or persons to secure or apprehend such deserters as aforesaid; be it further enacted by the authority aforesaid, that such justice of the peace shall also issue his warrant in writing to the collector or collectors of the land-tax money of the parish or township where such deserter shall be apprehended, for paying, out of the land-tax money arising or to arise in the current year, into the hands of such person who shall apprehend, or cause to be apprehended, any deserter from his majesty's service, the sum of 20s. for every deserter that shall so be apprehended and committed; which sum of 20s. shall be satisfied by such collector to whom such warrant shall be directed, and allowed upon his account.

Penalty for concealing DESERTERS, or buying their arms, clothes, &c. Provided always, that if any person shall harbour, conceal, or assist any deserter from his Majesty's service, knowing him to be such, the person so offending shall forfeit, for every such offence, the sum of 5l. or if any person shall knowingly detain, buy, or exchange, or otherwise receive, any arms, clothes, caps, or other furniture belonging to the king, from

any soldier or deserter, or any other person, upon any account or pretence whatsoever, or cause the colour of such clothes to be changed; the person so offending shall forfeit for every such offence the sum of 5*l.* and upon conviction by the oath of one or more credible witness or witnesses, before any of his Majesty's justices of the peace, the said respective penalties of 5*l.* and 5*l.* shall be levied by warrant under the hands of the said justice or justices of the peace, by distress and sale of the goods and chattels of the offender; one moiety of the said first mentioned penalty of 5*l.* to be paid to the informer, by whose means such deserter shall be apprehended; and one moiety of the said last-mentioned penalty of 5*l.* to be paid to the informer; and the residue of the said respective penalties to be paid to the officer to whom any such deserter or soldier did belong: and in case any such offender, who shall be convicted, as aforesaid, of harbouring or assisting any such deserter or deserters, or having knowingly received any arms, clothes, caps, or other furniture belonging to the king, or having caused the colour of such clothes to be changed, contrary to the intent of this act, shall not have sufficient goods and chattels, whereon distress may be made, to the value of the penalties recovered against him for such offence, or shall not pay such penalties, within 4 days after such conviction; then, and in such case, such justice of the peace shall and may, by warrant under his hand and seal, either commit such offender to the common gaol, there to remain without bail or mainprize for the space of three months, or cause such offender to be publicly whipped, at the discretion of such justice.

DÉSERTEUR, *Fr.* See DESERTER.

DÉSHONNEUR, *Fr.* dishonour, loss of character.

Se DÉSHONORER, *Fr.* to disgrace one's-self.

DESIGN, (*dessein*, *Fr.*) in a general sense, implies the plan, order, representation or construction of any kind of military building, chart, map, or drawing, &c. In building, the term *Ichthyography* may be used, when by design is only meant the plan of a building, or a flat figure drawn on paper: when some side or face of the building is raised from the ground, we may use the term *orthography*; and when both front and

sides are seen in perspective, we may call it *scenography*.

DESIGNING, the art of delineating, or drawing the appearance of natural objects, by lines on a plan.

DESIGNS, (*desseins*, *Fr.*) premeditated plans, schemes for execution, &c.

DÉSOMBÉISSANCE, *Fr.* disobedience of orders. During the war in Italy, (as may be seen in the *Histoire de France*, vol. 37, by *Garnier*,) an act of laudable disobedience (if it may be so called) is said to have been committed by a private soldier, whilst an expedition of great moment was taking place under the command of *Maréchal de Brisac*.

DÉSOLER, *Fr.* to ravage, to ruin a country by heavy exactions, to destroy it by sword and fire.

DÉSORDRE, *Fr.* disorder; confusion, such as occurs among troops when they are defeated; the licentious conduct manifested among troops when entering a conquered place. A general has it always in his power, when his troops enter a conquered town, to prevent their committing any disorder.—*Marshal Saxe* having taken *Prague* in 1741, previous to his entering the town, gave the most positive and strict orders, that not the least disorder should be committed. These orders were so punctually obeyed, that most of the inhabitants did not perceive, till the following day, that they had changed their sovereign. The magistrates, through gratitude, went in a body to present to the marshal, a diamond worth 40,000 livres, on a magnificent gold dish: there had been engraved in the setting an inscription relative to the transaction: they likewise caused rich presents, and large bounties to be distributed amongst the French officers and soldiers. When war is carried on in this way, half its calamities are softened down; it secures immortality to the conqueror, at the same time that he acquires the love and the esteem of the conquered. Conquerors of this cast experience to the very last a pleasing retrospect, which those who only think of filling their pockets, are ever strangers to. The discipline established by *Charles XII.* was so severe, that even those towns, which were taken by storm, after having been summoned three times, were not plundered without a particular permission proclaimed by the trumpeters of the army, and the pillage was carried on in such good or-

der, that it subsided the instant the second signal was given.

DESSELLER, *Fr.* to unsaddle.

DESSINATEUR, *Fr.* a draftsman; or the person who sketches out and finishes the plans, profiles and elevations of works intended to be made by direction of a chief engineer.

DESTINATION, (*destination*, *Fr.*) the place, or purpose, to which any body of troops is appointed, in order to do, or attempt, some military service.

To DETACH, to send out part of a greater number of men on some particular service, separate from that of the main body.

DETACHED *pieces*, (*pièces détachées*, *Fr.*) in fortification, are such out-works as are detached, or at a distance from the body of the place; such as half-moons, ravelins, bastions, &c.

DETACHMENT, (*détachement*, *Fr.*) an uncertain number of men drawn out from several regiments, or companies, equally, to be marched or employed as the general may think proper, whether on an attack, at a siege, or in parties to scour the country. Detachments are sometimes made of entire squadrons and battalions. One general rule, in all military projects which depend upon us alone, should be to omit nothing that can ensure the success of our detachment and design; but in that which depends upon the enemy, to trust something to chance.

DETAIL *of duty*, a roster or table for the regular and exact performance of duty, either in the field, garrison or in cantonments. The general detail of duty is the proper care of the majors of brigade, who are guided by the roster of the officers, and by the tables for the men to be occasionally furnished. The adjutant of a regiment keeps the detail of duty for the officers of his regiment, as does the serjeant-major that for the non-commissioned, and the latter that for the privates.

To beat an enemy in DETAIL, (*battre l'ennemi en détail*, *Fr.*) to destroy one corps after another; to drive an enemy from his several positions by desultory warfare.

An officer of DETAIL, one who enters minutely into the whole interior of a corps, troop, or company.

DETAIL. This word is sometimes used for detachment; hence, *to send out small details*.

DÉTAIL, *Fr.* *Faire le détail d'une armée, d'une compagnie, ou d'un corps de gens de guerre*, is to keep a strict eye upon every part of the service, and to issue out instructions or orders, that every individual belonging to a military profession may discharge his trust with accuracy and fidelity. *Faire le détail d'une compagnie* likewise means to make up a company's reports, &c.

DÉTAIL *de fortification*, *Fr.* a private account of the materials and expenses attending a work.

DÉTENDRE, *Fr.* This word literally means to stretch. The French say, *détendre un camp*, to strike the tents of a camp.

DÉTENTE, *Fr.* a trigger.

DÉTENU, *Fr.* detained; kept against one's will. A term adopted, and enforced beyond its legitimate meaning, by the French government, at the continuation of hostilities between France and England in 1803; when, for reasons best known to himself, Bonaparte, then First Consul, judged it expedient to detain and imprison all British subjects who were found about the French dominions after the departure of their ambassador. It is not within the limits of our undertaking to discuss this question; but, viewing it, as we must, in a military point of view, we do not hesitate to say, that the sudden and unexpected seizure of so many innocent and unoffending travellers is an indelible stain in the character of a powerful enemy. The act has certainly a precedent; but where and when is that precedent to be found? In civil discord and convulsion, and at a period when humanity was a crime, and death and carnage were the order of the day. It has been said, that this measure was embraced to reconcile the Irish to their probable destiny, if ever it should be found necessary to make use of them, as *enfants perdus*, against their native country, and that these *détenus* (we are borne out by the public prints for using the term) would remain as hostages to secure to men in open rebellion all the rights and privileges of fair warriors. So much for the new-fangled law of nations *quoad France*.

DÉTERMINER *une action, ou un mouvement*, *Fr.* to put into motion a project or design which has been previously weighed and concerted; it also means to force the enemy to come to action.

DETONATION, (*détonation*, Fr.) a sudden and violent inflammation and explosion, such as occur in the ignition of gunpowder and of nitre.

DÉTRAQUER, Fr. a French expression which is peculiarly applicable to bad horsemanship. It literally signifies, *to put out of order*; to spoil. A French military writer very properly observes on the subject, that many young riders imagine themselves extremely clever and expert, if they can make their horses exhibit a fine curved neck, &c. by suddenly applying the spurs, and checking on the bit; the consequence of which is, that the poor animal reaches the spot of destination heated and almost gored to death.

DÉTREMPE, Fr. water colours.

Peindre en DÉTREMPE, Fr. to paint in water colours.

DÉTRIER, Fr. a led horse.

DÉTRIPLER *les files*, Fr. to take some files out of a battalion, troop, or company, when the men are drawn up three deep.

DÉTROIT, Fr. any narrow arm of the sea; a canal; a narrow passage, &c.

DÉTROIT, *ou Détresse*, Fr. the critical state into which an army may be brought by having its line of communication cut off.

DÉVANCER *une armée, une troupe*, Fr. to take an advantageous position in front of an army, or of any other armed body of men, by means of a forced march, &c.

DEVANS, Fr. places in front of an army. The King of Prussia, in his Art of War, says—“*Placez pour sûreté des corps sur vos devans.*” Vide his *Art of War*.

DEVANT, Fr. before; in front. *Avoir le pas devant*, to take precedence.

DÉVANTURE, Fr. a fore work.

DÉVASTATEURS, Fr. a term applied by the French to the Spaniards, on account of their barbarous and inhuman conduct in Mexico and Peru. It now generally signifies soldiers who are not disciplined, and pillage every country they enter.

DÉVASTATION, the act of destroying, laying waste, demoliſhing or unpeopling towns, &c.

DÉVASTER, Fr. to lay waste.

DÉVELOPPÉE, Fr. a curve formed by the opening, or unfolding of another curve.

DÉVELOPPEMENT *de dessein*, Fr. the representation of all the plans, faces

and profiles of works constructed or projected.

DÉVELOPPER, Fr. to unfold, to unravel; as *Se développer sur la tête d'une colonne*, to form line on the head of a column.

DÉVELOPPER *une armée*, Fr. to draw up an army in regular array.

DÉVERSOIR, Fr. any place into which water empties itself; as from a sluice, &c.

DEVICE, (*devise*, Fr.) a motto; the emblems on a shield or standard. The origin of *mottos* is connected with that of heraldry. The study of *mottos* will help us to trace back the military expeditions of the remotest antiquity. The standards, the banners, the pennons, the coats of mail, the shields of the ancients, discover historical facts under an unknown cypher, or a *motto* composed only of a few words. *Parables* were the *mottos* of the Hebrews, and *hieroglyphics* those of the Egyptians. The Greeks, Athenians, Carthaginians, in short, all the European nations had their *mottos* and emblematical figures; and we may venture to say, that military institutions gave rise to the civil ones.

DEUIL *militaire*, Fr. military mourning. The Author of the Dictionnaire Militaire makes the following singular remark respecting military mourning:

“With regard to the military mourning which is worn by British officers, it appears, perhaps, singular and not sufficiently dignified in a Frenchman's eye, because the French peasants, out of economy, adopt the same; it is, however, in my opinion, noble and impressive. Whereas the mourning which our officers observe, is too fantastic and courtier-like, without a sufficient indication of martial sentiment, by which alone it ought to be suggested.”

DEVIS, Fr. estimate, plan, &c. of a building.

DEVISE, Fr. motto. See **DEVICE**.

DEVOIR *Militaire*, Fr. a strict and correct observance of military duty.

DEVON. The tinnens belonging to that county may be arrayed by the warden of the stannaries.

DEVOTEDNESS, (*dévouement*, Fr.) such as a good army manifests towards able generals.

DÉVOYER, **DESVOYER**, Fr. to turn any thing from its straightforward direction; figuratively to mislead.

DÉVUIDER, Fr. in the *manège*, is

applied to a horse that, upon working upon volts, makes his shoulders go too fast for the croupe to follow easily.

DEY, the chief of the government of Tunis, a vassal to the Grand Turk.

DIA, *Fr.* a noise which is made by the French drivers of carriages to make their horses turn to the left. They use the word *hu-hau*, to make them go to the right. The French say, figuratively, of an obstinate man, who will not hear reason—*Il n'entend ni à Dia, ni à hu-hau.*

DIABLE, *Fr.* See CHAT.

DIABLESSE *de Bois le Duc*, *Fr.* a piece of ordnance so called from having first been used at Bois le Duc, a strong town of Dutch Brabant, in the Netherlands.

DIADEM, (*diadème*, *Fr.*) the mark of royalty worn round the head.

DIAGONAL, (*dingonale*, *Fr.*) reaching from one angle to another; so as to divide a parallelogram into equal parts.

DIAGONAL movements. See ECHELON.

DIAMETER, (*diamètre*, *Fr.*) in both a military and geometrical sense, implies a right line passing through the center of a circle, and terminating at each side by the circumference thereof. See CIRCLE.

The impossibility of expressing the exact proportion of the diameter of a circle to its circumference, by any received way of notation, and the absolute necessity of having it as near the truth as possible, has put some of the most celebrated men in all ages upon endeavouring to approximate it. The first who attempted it with success was the celebrated Van Cuelen, a Dutchman, who, by the ancient method, though so very laborious, carried it to 36 decimal places: these he ordered to be engraven on his tomb-stone, thinking he had set bounds to improvement. However, the indefatigable Mr. Abraham Sharp carried to 75 places in decimals: and since that, the learned Mr. John Machin has carried it to 100 places, which are as follows:

If the diameter of the circle be 1, the circumference will be 3.1415926535, 89 7932846, 2643383279, 5028841971, 69 39937510, 5820974944, 5923078164,

0523620899, 8628034825, 34211706 79, + of the same parts; which is a degree of exactness far surpassing all imagination.

But the ratios generally used in the practice of military mathematics are these following. The diameter of the circle is to its circumference as 113 is to 355 nearly.—The square of the diameter is, to the area of the circle, as 452 to 355.—The cube of the diameter is, to the solid content of a sphere, as 678 to 355.—The cubes of the axes are, to the solid contents of equi-altitude cylinders, as 452 to 355.—The solid content of a sphere is, to the circumscribed cylinder, as 2 to 3—.

How to find the DIAMETER of shot or shells. For an iron ball, whose diameter is given, supposing a 9-pounder, which is nearly 4 inches, say, the cube root of 2.08 of 9 pounds is, to 4 inches, as the cube root of the given weight is to the diameter sought. Or, if 4 be divided by 2.08, the cube root of 9, the quotient 1.923 will be the diameter of a 1-pound shot; which being continually multiplied by the cube root of the given weight, gives the diameter required.

Or by logarithms much shorter, thus: If the logarithm of 1.923, which is .233979, be constantly added to the third part of the logarithm of the weight, the sum will be the logarithm of the diameter. Suppose a shot to weigh 24 pounds: and the given logarithm .2839 79 to the third part of .460070 of the logarithm 1.3802112 of 24, the sum .7440494 will be the logarithm of the diameter of a shot weighing 24 pounds, which is 5.5468 inches.

If the weight should be expressed by a fraction, the rule is still the same: for instance, the diameter of a $1\frac{1}{2}$ pound ball or $\frac{3}{2}$, is found by adding the logarithm .2839793, found above, to .0586 971 $\frac{1}{3}$ of the logarithm of $\frac{3}{2}$, the sum .3426764 will be the logarithm of the diameter required, i. e. 2.2013 inches.

As the diameter of the bore or the caliber of the piece is made $\frac{1}{20}$ part larger than that of the shot, according to the present practice, the following table is computed.

DIAMETERS of the shots and calibers of English guns.

lb.	0	1	2	3	4	5	6	7	8	9	
0	0	1.923	2.423	2.775	3.053	3.288	3.498	3.679	3.846	4.000	Diam.
	0	2.019	2.544	2.913	3.204	3.568	3.668	3.861	4.038	4.200	Calib.
1	4.143	4.277	4.403	4.522	4.635	4.743	4.846	4.945	5.040	5.131	Diam.
	4.349	4.490	4.623	4.748	4.866	4.981	5.088	5.192	5.292	5.368	Calib.
2	5.220	5.305	5.388	5.409	5.547	5.623	5.697	5.769	5.839	5.908	Diam.
	5.480	5.570	5.661	5.742	5.821	5.893	5.982	6.057	6.129	6.203	Calib.
3	5.975	6.041	6.105	6.168	6.230	6.290	6.350	6.408	6.465	6.521	Diam.
	6.273	6.343	6.410	6.475	6.541	6.604	6.666	6.707	6.788	6.846	Calib.
4	6.576	6.631	6.684	6.737	6.789	6.840	6.890	6.940	6.989	7.037	Diam.
	6.904	6.962	7.018	7.076	7.128	7.182	7.234	7.287	7.338	7.383	Calib.

EXPLANATION.

The numbers in the first horizontal lines are units, and those in the first vertical column tens; the other numbers under the one, and opposite to the others, are the respective diameters of shot and calibers. Thus, to find the diameter of the shot, and the caliber of a 24 pound-

der, look for the number 2 on the left-hand side, and for 4 at top; then the number 5.547, under 4, and opposite 2, will be the diameter of the shot, in inches and decimals, and the number 5.824, under the first, the caliber of a 24 pounder, &c.

DIAMETERS of leaden bullets from 1 to 39 in the pound.

	0	1	2	3	4	5	6	7	8	9
0	0	1.671	1.326	1.158	1.05	.977	.919	.873	.835	.803
1	.715	.751	.730	.711	.693	.677	.663	.650	.637	.626
2	.615	.605	.596	.587	.579	.571	.564	.557	.550	.544
3	.538	.536	.526	.521	.517	.514	.506	.501	.497	.493

The diameter of musket bores differs about 1-50th part from that of the bullet. The government allows 11 bullets in the pound, for the proof of muskets, and 14 in the pound, or 29 in 2 pounds, for service; 17 for the proof of carbines, and 20 for service; 23 in the pound for proof of pistols, and 34 for service.

DIAMETER of powder measures. See POWDER measures.

La DIANE, Fr. the Réveillée.

DICTATOR, a magistrate of Rome, elected in times of exigence and public distress, and invested with absolute authority.

DIET, (*Diète*, Fr.) an assembly of princes or estates; particularly so called in Germany, Poland, and Sweden.

DIFFERENCE, the sum paid by an officer in the British service, when he exchanges from half to full pay. It like-

wise means the regulation price between an inferior and a superior commission. Officers who retire upon half-pay, and take the difference, subject themselves to many incidental disadvantages, should they wish to return into active service.

DIFFERENCES among officers of a town, &c. (*Différences entre les officiers d'une place*, Fr.) Whenever any differences, disputes, &c. occur between the staff officers of a town and those of a garrison, in case they do not come under any specific military code, all such differences must be settled by the governor or commandant.

DIFFÉRENTIEL, Fr. an epithet given in geometry to that species of calculation, whose object is to ascertain quantities infinitely small, and their reciprocal differences. See INTEGRAL.

DIGÉRER un projet, Fr. to weigh well every thing which may conduce to the good success of an enterprize.

DIGGING. See MINING.

DIGLADIATION, a combat with swords.

DIGUE, Fr. See DYKE.

DIGUON, Fr. a staff, at the end of which is suspended a vane or streamer. This term is properly marine.

DIKE or **DYKE**, a channel to receive water, also a mound or dam to prevent inundation.

DILAPIDATION, Fr. embezzlement, misapplication of public monies.

DIMACHÆ, in ancient military affairs, were a kind of horsemen, answering to the dragoons of the moderns.

DIMICATION. See BATTLE.

To **DIMINISH** or *increase the front of a battalion*, is to adopt the column of march or manœuvre according to the obstructions and difficulties which it meets in advancing. This is one of the most important movements; and a battalion, which does not perform this operation with the greatest exactness and attention, so as not to lengthen out in the smallest degree, is not fit to move in the column of a considerable corps.

DIMINUÉ, Fr. diminished. A term used in fortification. See ANGLE diminished.

DINATOIRE, Fr. the hour, or circumstance of dining, or going to mess. Hence *heure dinatoire*, the dining hour, or dinner time. The French also say, *heure soupatoire*, supper time; and of a very late breakfast or dinner—such as the

mess dinner at St. James's, *Déjeûné dinatoire*, *souper dinatoire*.

DIRECTEUR Général, Fr. a military post of nominal importance, which was originally instituted by Louis XIV. This charge was entrusted to eight lieutenant-generals, four to command and superintend the infantry, and four the cavalry.

DIRECTION, in military mechanics, signifies the line or path of a body in motion, along which it endeavours to force its way, according to the propelling power that is given to it.

Angle of DIRECTION, that formed by the lines of direction of two conspiring powers.

Quantity of DIRECTION, a term used by military mathematicians for the product of the velocity of the common center of gravity of a system of bodies, by the sum of their quantities of matter; this is no ways altered by any collisions among the bodies themselves.

DIRECTOR (*directeur*, Fr.) The chief officer belonging to the late corps of Royal Engineers in Ireland was so called.

DIRECTLY, in geometry, a term used of two lines which are said to be *directly* against each other, when they are parts of the same right line.

In mechanics, a body is said to strike *directly* against another, if it strike in a right line, perpendicular to the point of contact.

A sphere is said to strike *directly* against another, when the line of direction passes through both their centers.

DIRECTORY, (*Directoire*, Fr.) a government which prevailed in France after the death of Robespierre; also a civil or military tribunal.

DIRK, a kind of dagger used by the Highlanders in Scotland, which they generally wear stuck in their belts.

To **DISALLOW**, in a military sense, not to admit charges which may be made against the public by officers and agents.

DISALLOWANCES, deductions made from military estimates, when the charges against the public do not appear correct.

To **DISARM**, to deprive a soldier of every species of offensive, or defensive weapon.

DISARMED, soldiers divested of their arms, either by conquest, or in consequence of some defection.

DISBANDED, the soldiers of any regiment, who are in a body dismissed from the conditions of their military service.

DISBARK. See **DISEMBARK.**

DISCHARGE, remission of service. There are three different sorts of discharge made use of, according to the merit or demerit of the individual to whom it may be granted. See *General Regulations and Orders*, pages 47, 50, 187 to 203; 219, 268, 283, 323 to 325.

This term is also applied to the firing of cannon or muskets; as, a discharge of cannon, or small arms.

DISCIPLINARIAN, an officer who pays particular regard to the discipline of the soldiers under his command.

DISCIPLINE, in a military sense, signifies the instruction and government of soldiers.

Military DISCIPLINE, } By *military*
Military Constitution. } *constitution*
is meant, the authoritative declared laws for the guidance of all military men, and all military matters; and by *discipline* is meant, the obedience to, and exercise, of those laws. As health is to the natural body, so is a sound military constitution to the military one; and as exercise is to the first, so is discipline to the last. Bravery will perchance gain a battle; but every one knows that by discipline alone the long-disputed prize of a war can be ultimately obtained.

DISCIPLINE is the right arm of a general, and *money* is his *shield*; without those two ingredients, it would be better to be a drum-boy, or a fifer, than the general of an army.

Marine DISCIPLINE is the training up soldiers for sea-service, in such exercises and various positions as the musket and body may require; teaching them likewise every manœuvre that can be performed on board ships of war at sea, &c.

DISCOBOLOS, (*discobole*, Fr.) a person who threw the disk; an athletic exerciser. The range of the *discus* thrown from a vigorous arm was considered as a measure which served to name a certain distance, the same as we say, within *muskets-shot*, or *cannon-shot*.

DISCORD, (*Discorde*, Fr.) according to heathen mythology, an ill-tempered goddess, whom Jupiter turned out of heaven, on account of her continually setting the gods at variance with one

another. She was represented as having serpents instead of hair, holding a lighted torch in one hand, and a snake and dart in the other; her complexion was olive colour, her looks wild, her mouth foaming with rage, and her hands stained with gore. Ever since she was driven from the heavens, she has resided on earth, and is chiefly visible in courts and cabinet councils. She is continually travelling from the one to the other, in order to excite all sovereigns to wage war against one another; and in the course of her excursions, she often disturbs the peace of private individuals. This description is figurative, and ought to convince young military men, that the slightest differences between the members of a corps may become epidemical, and ruin the whole body. Discord among troops in a garrison town may be attended with fatal consequences; for the garrison are interested in obtaining the esteem and attachment of the inhabitants, whose assistance they may chance to be in great need of, should a long siege take place.

DISCOVERER, a scout; one who is set to descry the enemy.

DISCRETION, *Fr.* discretion. *Se rendre à discrétion*, to surrender at discretion, implies to throw one's-self upon the mercy of a victorious enemy. The French likewise say, *les soldats vivent à discrétion dans un pays*; which, in familiar English, signifies, soldiers live *scot-free* in a country.

DISCRETION, (*discrétion*, Fr.) Under this term are comprehended circumspection, prudence, wisdom, and activity; qualities which essentially contribute to the ultimate success of an undertaking.

DISCUS, a *quoit*, made of stone, lead, or some other metal, one foot long, and eight inches wide. It was used among the Greeks and Romans at their public games and festivals. He who threw it highest, or to the greatest distance, carried the prize. *Discus* was also the name of a *round shield* which was consecrated to the memory of some hero, and was suspended in a temple. There was one to be seen at the *Cabinet des Antiques* in Paris, which had been found in the Rhone.

DISEMBODIED. See **DISBANDED.**
To DISEMBODY, when applied to the British militia, signifies to disarm

that body, and to dispense with their military services for a stated period.

To **DISEMBARK**, (*débarquer*, Fr.) to land troops from any vessel.

DISEMBARKATION, (*débarquement*, Fr.) the disembarking or landing of troops.

To **DISENGAGE**, (*dégager*, Fr.) to clear a column or line, which may have lost its proper front by the overlapping of any particular division, company, or section, when ordered to form up. To do this, ground must be taken to the right or left. It is, however, a dangerous operation when the army or battalion gets into a line of fire. In that case the files that overlap must remain in the rear, and fill up the first openings.

To **DISENGAGE** is also to extricate yourself and the men you command from a critical situation. A battalion, for instance, which may have advanced too far during an action, and got between two fires, may, by an able manœuvre, disengage itself.

To **DISENGAGE the wings of a battalion**. This is necessary when the battalion countermarches from its center, and on its center by files. The battalion having received the word "by wings, inward face," is next ordered "by wings, three side steps to the right, march," by which the wings are disengaged from each other. In countermarching, &c. the leading files must uniformly disengage themselves.

To **DISENGAGE**, in fencing, to quit that side of your adversary's blade, on which you are opposed by his guard, in order to effect a cut or thrust where an opportunity may present.

DISETTE, Fr. scarcity. The want of some article of the first necessity; i. e. some article of life.

DISGARNISH, (*dégarnir*, Fr.) to take guns from a fortress.

DISHONOUR, (*deshonneur*, Fr.) loss of character and reputation.

DISLOCATION, Fr. out of joint. In a military sense this word signifies distribution. Hence the dislocation of an army, or the distribution of its component parts into cantonments, camps, garrisons, &c.

DISLODGE, to drive an enemy from their post or station.

To **DISLODGE a camp**, (*décamper*, Fr.) to strike the tents, &c. and march away.

DISLOYAL, (*déloyal*, Fr.) perfidious; unfaithful.

DISMANTLE, (*démanteler*, Fr.) to

strip a town or fortress of its outworks. The French say likewise, *dégarnir*.

To **DISMANTLE a gun**, to render it unfit for use, by capsizing it, &c.

To **DISMISS**, to discard.

To **DISMISS the service**, (*congédier*, Fr.) to take an officer's commission, or warrant from him.

DISMISSED. An officer in the British service may be dismissed generally or specifically. When an officer is dismissed generally, it is signified to him, that his Majesty has not any further occasion for his services. When an officer is dismissed specifically, it is expressly notified, that he is rendered incapable of ever serving again. Sometimes, indeed, this species of dismissal is attended with public marks of extreme disgrace and degradation. In the Austrian service, a colonel has been dismissed at the head of his regiment, and has had his sword broken before him, &c. During the war of 1793, the colonel of a militia regiment was not only rendered incapable of ever serving again, but was also expelled the House of Commons for military misconduct. The charges against him, together with the circumstantial proofs of his guilt, and the King's approbation of the sentence, were read in the circle of every regiment throughout Great Britain, in 1795; and nothing but a plea of severe indisposition saved the culprit from having the minutes publicly communicated to him at the Horse Guards.

DISMOUNTING, in a military sense, is the act of unhorsing. Thus, to dismount the cavalry, &c. is to make them alight.

To **DISMOUNT cannon**, (*démonter un canon*, Fr.) is to break their carriages, wheels, axle-trees, or any thing else, so as to render them unfit for service. It also implies dismounting by the gin, &c.

DISOBEDIENCE of orders, (*désobéissance*, Fr.) any infraction, by neglect, or wilful omission, of general or regimental orders. It is punishable by the 5th art. of the 2d Sect. of the Articles of War.

To **DISPART**, in gunnery, is to set a mark on the muzzle-ring, so that it may be of an equal height with the base-ring: hence a line drawn between them, will be parallel to the axis of the concave cylinder, for the gunner to take aim by it, to hit the mark he is to fire at; for the bore and this imaginary line being parallel, the aim so taken must be true.

This exactness cannot be made use of in an engagement, and but very seldom at a siege; for in those cases practice and the eye must be the only guides.

To **DISPART** a piece of ordnance, (*calibrer un canon*, Fr.) See **DISPART**.

DISPART, *frontlet*. See **FRONTLET**.

DISPENSATION, exclusive privilege to do or omit something. Hence a dispensation to receive half-pay, together with the emoluments of some place or office.

DISPENSE *d'age*, Fr. a dispensation given on account of old age.

To **DISPERSE**, in a military sense, may be variously understood. In an active one, it signifies to disperse any body of men, armed, or unarmed, who may have assembled in an illegal, or hostile manner. The cavalry are generally employed on these occasions.

To **DISPERSE** likewise means to break suddenly from any particular order, in line or column, and to repair to some rallying point. Hence to *sound the disperse* is to give notice that the battalion, or battalions, are to retreat from their actual position, in a loose and desultory manner, and to reassemble according to the natural line of formation; taking the colours as their central points to dress by.

To **DISPERSE** the enemy, (*disperser l'ennemi*, Fr.) to force him to fly in various directions. The French also say, *disperser des soldats*, to separate soldiers and distribute them in different quarters.

DISPLACED. Officers in the British service are sometimes displaced from a particular regiment in consequence of misconduct proved upon the minutes of a general court-martial; but they are at liberty to serve in any other corps. The power of displacing an officer is vested in the King only.

To **DISPLAY**, (*déployer, étendre*, Fr.) in a military sense, is to extend the front of a column, and thereby bring it into line. See **DEPLOY**.

DISPOSE. To dispose cannon is to place it in such a manner, that its discharge may do the greatest mischief. For instance, to *dispose cannon along the front of the line*.

DISPOSITION, in a general sense, is the just or proper placing of an army, or body of men, upon the most advantageous ground, and in the strongest situation for a vigorous attack, or defence.

DISPOSITION *de guerre*, Fr. warlike arrangement, or disposition. Under this

head may be considered the mode of establishing, combining, conducting and finally terminating a war, so as to produce success and victory.

Wisdom and discretion in council point out the form necessary for the first establishment of a warlike enterprize, or disposition, afford the means of bringing it to a conclusion, and assimilate all the various parts so as to unite the whole.

The following maxims are in the Memoirs of General Montecuculi.

Deliberate leisurely, execute promptly.

Let the safety of your army be your first object.

Leave something to chance.

Take advantage of circumstances.

Use all the means in your power to secure a good reputation.

The disposition, or arrangement, of a warlike enterprize may be universal, or particular.

An universal disposition, or arrangement, of war implies every thing which relates to that system upon an extensive scale; such as the combination of many parts for the ultimate benefit of the whole, &c.

A particular disposition, or arrangement, of war signifies the detail of minute objects, and the appropriation of various parts, one with another, for the purpose of effecting a general combination. This disposition (without which the other must prove abortive) consists in an observance of the strictest discipline by every individual that belongs to a troop, or company. To this end, general officers should be scrupulously exact in attending to the inspection of particular corps; specific instructions for regimental economy and discipline should be given, and the strictest regard paid to the execution of orders.

Faire des DISPOSITIONS, Fr. to make the necessary arrangements for a battle; or to adopt such measures, that every thing may be in a good state to meet the enemy.

To **DISPUTE** the ground, (*disputer le terrain*, Fr.) to fight foot to foot.

DISSIPER *une armée*, Fr. to attack an army in such a manner, that the several battalions are obliged to disperse, and retreat by different routes.

DISTANCE, in military formation, signifies the relative space which is left between men standing under arms in rank, or the interval which appears between those ranks, &c.

DISTANCE of files. Every soldier when in his true position under arms, shouldered and in rank, must just feel with his elbow the touch of his neighbour with whom he dresses; nor in any situation of movement in front must he ever relinquish such touch, which becomes in action the principal direction for the preservation of his order, and each file as connected with its two neighbouring ones, must consider itself a complete body, so arranged for the purpose of attack, or effectual defence. Close files must invariably constitute the formation of all corps that go into action. The peculiar exercise of the light infantry is the only exception. See *Infantry Regulations*, p. 75.

DISTANCE of ranks, open distances of ranks are two paces asunder; when close, they are one pace: when the body is halted and to fire, they are still closer locked up. Close ranks, order or distance, is the constant and habitual order at which the troops are at all times formed and move; open ranks, order, or distance, is only an occasional exception, made in the situation of parade, or in light infantry manœuvres.

DISTANCE of files and ranks relates to the trained soldier; but in the course of his tuition, he must be much exercised at open files and ranks, and acquire thereby independence and the command of his limbs and body.

DISTANCE of the bastions, in fortification, is the side of the exterior polygon. See FORTIFICATION.

DISTANCE in fencing. See FENCING.

DISTANCE, (*distance*, Fr.) is properly the shortest line between two points.

Line of DISTANCE, in perspective, is a right line drawn from the eye to the principal point.

Point of DISTANCE, in perspective, is a point in the horizontal line, at such distance from the principal point as is that of the eye from the same.

To **DISTINGUISH one's self,** (*se distinguer*, Fr.) to do some extraordinary feat of valour in the field, or to discover great talents in the management and execution of an office, &c.

A **DISTINGUISHED officer,** (*officier distingué*, Fr.) a person who, in his military capacity, has given proofs of extraordinary skill and valour.

To **DISTRESS an enemy,** (*mettre un ennemi aux abois*, Fr.) to cut off his line of communication; to deprive him

of his means of subsistence, ammunition, &c. See *ABOIS*, Fr.

DISTRIBUTION, (*distribution*, Fr.) in a military sense, generally applies to any division, or allotment, which is made for the purposes of warfare. Thus an army may be distributed about a country. In a more confined sense it means the minute arrangements that are made for the interior economy of corps; as distribution of pay, or subsistence, distribution of allowances, &c.

DISTRIBUTION de plan, Fr. the distribution, or division of the several pieces which compose the plan of a building, and which are placed and proportioned according to their different uses.

DISTRICT, in a military sense, one of those parts into which a country is divided, for the convenience of command, and to secure a ready co-operation between distant bodies of armed men. Great Britain and Ireland are divided into districts; each being under the immediate superintendence of general officers.

DITCH. See FORTIFICATION, MOAT.

DITCH of the counterscarp, a wet or dry ditch, which is made under the counterscarp.

DIVAN, a particular private council of war among the Turks, held by the *Capucly* infantry, in the palace of the *Zanizeragazy* in order to discuss the military operations of the corps, &c. There is another *Divan* held by the supreme council of the Grand Signor, at which all the generals attend.

This term is also applied to a grand council, or court of judicature, held in each province among the Turks and Persians.

DIVERGENT, } in geometry,
DIVERGING lines, { are such lines whose distance is continually increasing. Lines which converge one way, and diverge the opposite way.

DIVERSION, (*diversion*, Fr.) in military history, is when an enemy is attacked in one place where he is weak and unprovided, in order to draw off his forces from making an irruption somewhere else; or where an enemy is strong, and by an able manœuvre he is obliged to detach part of his forces to resist any feint, or menacing attempt of his opponent. To derive advantage from a diversion, taken in an extended acceptation of the term, it is necessary that one state should have greater resources than

another; for it would be absurd to attack the territories of another before you had secured your own.

It is likewise requisite, that the country your attack by stratagem or diversion should be easy of access, and the invasion you make must be prompt, vigorous and unexpected, directed against a weak and vulnerable quarter. A little good fortune is however essential to render a diversion perfectly successful, as all the ways and means by which it ought to be made cannot be reduced to rule.

The most memorable instance of a diversion well executed, which we meet with in history, was performed by Scipio in Africa, whilst Hannibal carried the war in Italy. In 1659, a diversion, no less remarkable, was practised by the imperial and allied armies against the Swedes.

Faire DIVERSION, *Fr.* to oblige an enemy to divide his forces: it also signifies to draw off his attention.

DIVIDEND, (*dividende, Fr.*) is the number divided into equal parts by another number. In a fraction, the *dividend* is called the *numerator*.

DIVISION, (*division, Fr.*) a certain proportion of an army consisting of horse and foot together, or of horse and foot separately, which is under the order of a brigadier, or other general officer.

DIVISION, (*division, Fr.*) a certain proportion of a troop or company, which is under the command of its respective officers. It also means any given number which is detached on military duty, from an established body of men: hence a division of artillery, wagon-corps, pioneers, &c.

DIVISIONS of a *battalion* are the several platoons into which a regiment or battalion is divided, either in marching or firing; each of which is commanded by an officer.

DIVISIONS of an *army* are the number of brigades and squadrons it contains.—The advance, the main and the rear guards are composed out of the several brigades, and march in front, in the center, and in the rear of an army. Each army has its right wing, its center, and its left wing. When armies march, they advance in column, that is, they are divided into several squadrons and battalions of a given depth, successively formed upon one another. If an army be drawn out or displayed in order of battle, it is usually divided into the first

line, which constitutes the front, the second line, which makes the main body, and the third line, or reserve.

DIVINE *service*, in the army, is, or should be, performed every Sunday. All officers and soldiers, not having just impediment, shall diligently frequent divine service and sermons in the places appointed for the assembling of the regiment, troop, or company, to which they belong: such as wilfully absent themselves, or, being present, behave indecently or irreverently, shall, if commissioned officers, be brought before a court-martial, there to be publicly and severely reprimanded by the president: if non-commissioned officers or soldiers, every person so offending, shall, for his first offence, forfeit 12d. to be deducted out of his next pay; for the second offence, he shall not only forfeit 12d. but be laid in irons for 12 hours, &c. *Articles of War.*

DOCK. See TROUSSEQUEUE, *Fr.*

DOCKET, a small note or bill containing the substance of something written elsewhere more largely.

DOCUMENT, (*document, Fr.*) precept; instruction; direction; voucher.

Death-bed DOCUMENT. Officers have sometimes delayed sending in their resignation, or signing the same, until their lives have been actually despaired of; in this case even the original purchase of their commissions has not been allowed. The official term is, a *death-bed document*; for a remarkable case see *Regimental Companion*, vol. iv. p. 263, 6th edit.

DODECAGON, in geometry, is a regular polygon, consisting of 12 equal sides and angles, capable of being regularly fortified by the same number of bastions.

DODECAHEDRON is one of the platonic bodies, or five regular solids, and is contained under 12 equal and regular pentagons.

The solidity of a *dodecahedron* is found by multiplying the area of one of the pentagonal faces of it by 12; and this latter product by 1-3d of the distance of the face from the center of the *dodecahedron*, which is the same as the center of the circumscribing sphere.

The side of a *dodecahedron* inscribed in a sphere, is the greater part of the side of a cube inscribed in that sphere, cut into extreme and mean proportion.

If the diameter of the sphere be 1.0000,

the side of a *dodecahedron*, inscribed in it, will be .35682 nearly.

All *dodecahedrons* are similar, and are to one another as the cubes of the sides; and their surfaces are also similar, and therefore they are as the squares of their sides; whence as .509282 is to 10.51462, so is the square of the side of any *dodecahedron* to the superficies thereof: and as .3637 is to 2.78516, so is the cube of the side of any *dodecahedron* to the solidity of it.

DOG-nails. See **NAILS.**

DOLLAR, a foreign coin worth from 4s. to 4s. 6d., according to the mint from which it is issued.

DOLMAN, DOLIMAN, a robe of Thessonica cloth, of which the Grand Signor makes a present to the janizaries on the first day of their *Ramazan*, or Lent.

DOLON, a long hollow stick, containing a pointed iron, which is thrown at discretion.

DOLPHINS. See **CANNON.**

DOVE, (*dome*, Fr.) in architecture, a spherical roof, or a roof of a spherical form, raised over the middle of a building, as a church, hall, pavilion, vestibule, staircase, &c. by way of crowning.

Domes are what the Italians call *cupolas*, and we *cupolas*; Vitruvius calls them *tholi*.

DOMMAGE, Fr. in a general acceptation of the term, signified, in the old French service, the compensation which every captain, of a troop, or company, was obliged to make in consequence of any damage that their men might have done in a town, or on a march. If any disagreement occurred between the officers and inhabitants, with respect to the indemnification, a statement of losses sustained was sworn to by the latter before the mayor, or magistrates of the place, who determined the same. But if the officers should refuse to abide by their decision, a remonstrance was drawn up and transmitted to the secretary at war, with a copy of the same to the intendant of the province. Officers have frequently been displaced, or degraded, on this account. Hence the term *dommage* is supposed to have been derived from the Latin words *damnum, jactura*, and signifies the loss, or privation of a step.

DONDANE, Fr. a machine which was used by the ancients to cast round stones and pebbles on their enemies.

DONJON, Fr. a turret; a dungeon.

DONJON, Fr. in fortification, a secure spot, generally bomb-proof, in a place of arms, or in a citadel, to which the garrison sometimes retires, in order to offer terms of capitulation.

DONJON, Fr. in architecture, a small wooden pavilion, which is raised above the roof of a house, in order to take the air, or to enjoy a fine view of the country, or adjacent parts.

DONNÉE, Fr. given; a term generally used in mathematics, with respect to any thing which we suppose to be known.

DONNER, Fr. to charge an enemy, to fire upon him.

DONNER, Fr. is to charge the enemy as soon as the signal for battle is given. Thus it is said, *les troupes donnèrent tête baissée*, the troops rushed headlong.

DONNER de l'inquiétude à l'ennemi, Fr. to march in various directions, and by other manœuvres to disconcert an enemy.

DONNER, Fr. This word is used in the same sense as *marcher*. As *donner, ou marcher contre l'ennemi*.

DOOLIES, Ind. palanqueens of a simple construction, for the conveyance of the sick. On a march, each company of sepoys is allowed one dooly, and of Europeans ten.

DONS militaires, Fr. military rewards.

DORMANT, Fr. a sleeper, or piece of timber laid horizontally in wooden quays and dikes, in order to keep fast the extremities of the keys which form the assemblage.

DORMANT, Fr. also a frieze, or frame at the top of a square, or arched door.

DORMANT de fer, Fr. an aperture made of iron bars, over a wooden or iron door, to give light.

DORYPHORI, the body guards of the Roman emperors; they were armed with a pike, and were forced to take a particular oath; they were held in high consideration, and were promoted to the first military ranks.

DOS, Fr. back; rear.

Dos d'âne, Fr. This term is applicable to all bodies that have two inclined surfaces which terminate in one line; such, for instance, as the head of a *bardean*.

DOSSER, in military matters, is a sort of basket carried on the shoulders of men, used in carrying the earth from one part of a fortification to another, where it is wanted.

DOSSÉS, *Fr.* planks, sitches of wood. The same as *madriers*, which are thick beams laid to secure a foundation.

DOUBLEAU, *Fr.* joist; the chief arch which reaches from one pile to another.

DOUBLEMENT, *Fr.* the augmentation of the rank and file of a battalion.

DOUBLER *un bataillon*, *Fr.* to extend the front of a battalion, so that it covers twice the ground it did in line; or to reduce it in such a manner that it does the same in column.

The French also say, *doublez les rangs*, *dédoublez les rangs*, and *redoublez les rangs*.

DOUBLING, in the military art, is the placing two, or more, ranks or files into one.

DOUBLE *your ranks*, is for the 2d, 4th and 6th ranks (when so drawn up) to march into the 1st, 3d, and 5th; so that of 6 ranks they are made but 3; which is not so when they double by half-files, because then 3 ranks stand together, and the 3 other come up to double them; that is the 1st, 2d, & 3d are doubled by the 4th, 5th, & 6th, or the contrary.

DOUBLE *your files* is for every other file to march into that which is next to it, on the right or left, as the word of command directs; and then the 6 ranks are doubled into 12, the men standing 12 deep; and the distance between the files is double what it was before. By this method, 3 files may be doubled into 6, &c.

To DOUBLE round, in military movements, is to march by an inversion of a second line, on the extremity of a first line, thereby to outflank an enemy.

DOUBLE-armed man, a soldier armed with a pike and a bow. During the reign of Charles I., in the year 1625, one William Nead caused a soldier to perform this exercise before the King in St. James's Park.

Le DOUBLE, *Fr.* This term is used in French diplomacy, to signify a species of secret intelligence which is conveyed by one person to an opposite interest. Hence *double espionnage*.—It is also familiarly said by the French, *L'Anglais ne connaît pas le double*; that is, to use a vulgar phrase, an Englishman does not know how to hold with the hare and run with the hounds. And yet characters of this sort are necessary in state affairs; but they ought to be well watched.

DOUBLE tenaille. See **TENAILLE**.

To be DOUBLED up. This term is applied to the circumstance of two officers being put into one barrack-room, or one tent, as is the case with the subalterns, or of sharing the several allowances.

DOVETAIL, (*queue d'aronde*, *Fr.*) a form of joining two bodies together, when that which is inserted has the form of a wedge reversed.

DOUILLE, *Fr.* a small iron socket which is at the heel of the bayonet, and receives the extreme end of the musket, so as to be firmly united together.

DOUILLE likewise signifies the cavity which belongs to the round piece of iron that is fixed to the end of the ramrod, by means of two nails through two small holes, called *yeux* or eyes, and to which the worm is attached.

DRABANTS, a company of two hundred select men, of which Charles IX. of Sweden was captain. They were a fine body of men, and of tried courage. Charles XII., with one hundred and fifty *Drabants*, has been known to vanquish one thousand Russians.

DRAFTSMAN, (*dessinateur*, *Fr.*) a person who can draw sketches of fortifications, take the profile of a country, and describe upon paper, positions, &c. Every officer, intended for the staff especially, ought to be more or less a draftsman.

DRAG-ropes. See **ROPES**.

DRAGON, *et DRAGON volant*, *Fr.* some old pieces of artillery were anciently so called. The *Dragon* was a 40-pounder; the *Dragon volant* a 32. But neither the name, nor the size, of the caliber of either piece is now in use.

DRAGON also signifies a piece, which Markham, in his *Soldier's Accidence*, published in 1643, thus describes—"A *layre dragon*, fitted with an iron work, to be carried in a belt of leather, which is buckled over the right shoulder, and under the left arm; having a turnell of iron with a ring through which the piece runneth up and downe, and these dragons are short pieces, of sixteen inches the barrell, and full musquet bore, with firelocks, or snaphaunces."

DRAGONNADE, *Fr.* a term given by the Calvinists to the barbarous usage which was exercised against them in France, in 1684.

DRAGONNE, *Fr.* a sword-knot, at the extremity of which hangs a tassel.

The sword-knot was originally worn by the Germans, and is (with them) the distinction of an officer when in plain clothes; no other person being permitted to wear a gold or silver one. In Austria, the sword-knot is gold lace, edged with a black stripe, in commemoration of the loss of Jerusalem; the British sword-knot is made of crimson and gold.

DRAGONNER, *Fr.* According to the French acceptation of the term, is to attack any person in a rude and violent manner; to take any thing by force; to adopt prompt and vigorous measures; and to bring those people to reason by hard blows, who could not be persuaded by fair words. We say to *dragon*.

DRAGOON-horse. This term was formerly applied by the Americans to all regiments that were mounted, from their ignorance of the meaning of the word dragoon.

To **DRAGOON**, to abandon a place to the rage of the soldiery; to give it up to rape and plunder.

DRAGOONS, (*dragons*, *Fr.*) in military affairs, are a kind of cavalry, who serve both on horseback and foot; being always ready on every emergency, as being able to keep pace with the horse, and to do infantry duty. In battle, or on attacks, they generally fight sword in hand after the first fire. In the field they encamp on the right and left of the lines. They are divided into brigades, regiments, and squadrons. Their martial music consists of drums and trumpets. The first regiment of dragoons in England was raised in 1631, and called the Royal Regiment of Dragoons of North Britain. This name is derived from the Latin word *Draconarii*, used among the Romans.

DRAIN, (*rigole*, *Fr.*) the channel through which liquors are generally drawn; a water-course; a sink. In the military art, it is a trench made to draw water out of a ditch, which is afterwards filled with hurdles and earth, or with fascines, or bundles of rushes, and planks, to facilitate the passage over the mud. See **TRENCH**.

DRAKE, a small piece of artillery.

DRAPEAU, *Fr.* flag; colours.

Etre né au DRAPEAU, *Fr.* to be born in the regiment.

Battre les DRAPEAUX, *Fr.* See **BATTRE**.

DRAUGHT, a plan or delineation of any place; a body of troops selected from others.

To **DRAUGHT**, to draw forces from one brigade &c. to complete another; to select a portion from brigades, regiments, or companies for any particular service.

DRAUGHT-hooks, in a gun carriage, are fixed to the transom-bolts on the cheeks of artillery carriages, near the trunnion holes and trails: they are used to draw the guns backwards and forwards by men with drag-ropes fixed to those hooks.

DRAUGHT of soldiers, (*détachement*, *Fr.*) any given number of armed men, selected from the different component parts of a regiment, brigade or army, for some specific service.

DRAUGHT, or *draft compasses*, are compasses with several moveable points, to draw draughts in architecture.

DRAUGHTSMEN, a body of men educated at the Tower, to assist the engineers in drawing plans, fortifications, and surveying.

To **DRAW**, to delineate, or make a sketch.

To **DRAW**, to pull a sword from the sheath.

To **DRAW**, to entice; as to *draw an enemy into ambuscade*.

DRAW ramrod! a word of command used in the drill exercise, on which the soldier draws his ramrod half from the pipes, and seizing it back-handed by the middle, waits for the signal for the next motion, when he turns it round, and with an extended arm places the butt of the rod about one inch in the muzzle of the firelock; in which position he waits for the command *ram down cartridge!*

DRAW swords! a word of command in the sword exercise of the cavalry.

The drawing of swords is performed in 3 motions: 1st. Bring the right hand smartly across the body to the sword-knot, which being placed on the wrist, and secured by giving the hand a couple of turns inwards, seize the hilt of the sword. 2d. Draw the sword with an extended arm; sink the hand till the hilt of the sword is immediately under the chin, the blade of the sword perpendicular and the back of the hand outwards. 3d. Bring down the hilt till in a line with the bridle-hand, the blade perpendicular, the edge turned towards the horse's left ear.

Officers of infantry, when the men are under arms, draw their swords without waiting for any command.

DRAW; charge! a word of command

in the cavalry, when a body of that arm are ordered to charge the enemy.

To **DRAW off**, to retire; also to abstract or take away; as to *draw off your forces*.

To **DRAW on**, to advance; also to occasion: as, to *draw an enemy's fire*.

To **DRAW over**, to persuade to revolt; to entice from a party.

To **DRAW out**, to call the soldiers forth in array for action.

To **DRAW up**, to form in battle array.

To **DRAW out a party**, to assemble any particular number of armed men for military duty. The French say, *faire un détachement*.

To **DRAW together**, (*assembler*, Fr.) to bring any given number of persons or bodies of men into one quarter, district or country.

To **DRAW the guns**, to convey them from one situation to another. The word *drag*, though seemingly applicable from the circumstance of drag-ropes, is not technically correct, as, in the artillery, they always say *draw*.

DRAW-bridge. See **BRIDGE**.

DRAWING, in a military sense, is the art of representing the appearances of all kinds of military objects by imitation, or copying, both with and without the assistance of mathematical rules.

DRAWN, pulled out, as a *drawn sword*; assembled, collected, as an *army drawn together*.

DRAWN-battle, (*combat égal de part et d'autre*, Fr.) a battle which has been fought and in which both sides claim the victory, or retire upon equal terms; either resuming their original positions, or taking fresh ground for the purpose of renewing the contest, or making peace.

DREGS, any thing by which purity is corrupted: also persons of the lowest class, as *dregs of the people*.

DRESS, military. The clothing of the army is generally called regimentals, every part of which should facilitate, and not hinder, the various motions of the manual exercise. A soldier, without regard to fashion or taste (to use the words of a modern author) should be dressed in the most comfortable and least embarrassing manner possible; and the keeping him warm, and leaving him the entire use of his limbs, are objects always to be had in view. See **STOCK**.

To **DRESS**, in a military sense, is to keep the body in such a relative position,

as to contribute to, and make a part of an exact continuity of line, upon whatever front, or in whatever shape the battalion may be formed. Soldiers dress by one another in ranks, and the body collectively dresses by some given object.

To **DRESS the line**, (*dresser la ligne*, Fr.) to arrange any given number of soldiers, so as to stand perfectly correct with regard to the several points of an alignment that have been taken up. This is done by the adjutant, or brigademajor.

DRESS, a word of command which is given when troops are arrived at any prescribed point of alignment, as *halt, dress*.

To **DRESS a wound**, to cover a wound with medicaments.

DRESSERS, in military dispositions, are those men who take up direct, or relative points, by which a corps is enabled to preserve a regular continuity of front, and to exhibit a straight alignment. In every operation of this sort, the dresser must be particularly alert, especially when a general line is to be formed to give battle to the enemy. Under this circumstance, every thing will depend upon the activity, skill and aptitude of eye in the two center dressers of each battalion. No line, indeed, can be said to be in a proper situation to meet, or march up to, the enemy, whilst there is the least interval from center to flanks. Solid, compact and straight lines in forward movements are the nerves and sinews of immediate conflict; whereas unconnected movements produce confusion, are naturally weak, and always tend to give a superiority to the enemy.

DRESSER, Fr. See **To DRESS**.

DRESSER une batterie, Fr. to dispose pieces of artillery in a battery for the purpose of acting against an enemy.

DRESSER, Fr. to place anything upright, or in a perpendicular state.

DRESSER d'alignement, Fr. to erect or build a wall according to lineal measure.

DRESSER de niveau, Fr. to level.

DRESSING of a battalion after the halt, is to bring all its relative parts in a line, with the point, or object, towards which it was directed to move. Whatever correction is necessary, must be made by advancing or retiring the flanks, and not by moving the center;

which, having been the guide in the march, has properly stopped at the point where it has arrived.

DRESSING of a battalion when it is to retire, is to have some intelligent officer placed thirty paces in the rear, so as to stand perpendicular to the front directing serjeant, by whom the direction of the march is to be ascertained, as the officer will of course be in the line, or nearly so, of the directing serjeants.

To DRILL, to teach young recruits the first principles of military movements and positions, &c.

To be sent to DRILL, to be placed under the command of the drill-officer, or non-commissioned officer, and made to join the recruits in performing the manual and platoon exercises, &c. This is sometimes ordered as a punishment to those who are perfect in their exercise, when a battalion, company, or individual has done something to merit exposure. The French call the drill, *école du soldat*.

Knapsack DRILL, a punishment inflicted upon soldiers for minor offences. On this occasion, they are marched round the barrack-yard, or camp-ground, &c. for several hours successively, with a 6 or 12lb. shot tied to the knapsack.

DRILLE, Fr. signified formerly a soldier; thence it is that an old soldier who knows his duty is called a *bon drille*.

DRINKING to excess in the army is at all times highly criminal, but upon service it ought never to be overlooked; and the consequence will be a trial by a court-martial. It has been productive of almost innumerable mischiefs, and is a most detestable and horrid practice. See *DRUNKENNESS*.

DRINKING of horses, immediately after hard riding or driving, is extremely dangerous; and therefore they should not be suffered to drink, until they be thoroughly cooled, and have eat some oats.

A horse after violent labour will not suffer by being kept half a day from water; but may die by drinking an hour too soon.

To DRIVE, to expel by force, as to drive out an enemy.

To DRIVE, to guide, or regulate, a carriage.

To DRIVE in, to force back; as to drive in the enemy's piquets, &c.

DRIVERS, pieces of bone or wood made in the shape of a musket-flint are so called.

DRIVERS of baggage or artillery, men who drive the baggage artillery and stores, having no other duty in the army.

Royal Artillery DRIVERS. See *ARTILLERY*.

Bone DRIVERS, a nick-name which was originally given to one of the battalions of Foot Guards, owing to their long residence in London, and absence from active service; alluding to the little use which was made of their flints, and the substitution of Bone Drivers.

DROITE, Fr. the right.

DROITE d' une rivière, Fr. that side of a river which lies upon your right when you take a front view of its source.

DROITS, a French term in peculiar use amongst us, signifying certain rights and advantages which are exclusively enjoyed by the crown, when ships, &c. are taken from the enemy; hence *Admiralty Droits*.

DROWNING, (noyade, Fr.) an ancient military punishment; also an infamous mode of destruction, which was resorted to under the reign of Robespierre in 1793, and 1794.

DRUGGERMAN, a linguist; one who speaks and interprets several languages.

DRUM is a martial musical instrument in the form of a cylinder, hollow within, and covered at the two ends with vellum, which is stretched, or slackened, at pleasure, by means of small cords and sliding leathers. This instrument is used both by foot and dragoons; which is done in several manners, either to give notice to the troops of what they are to do, or to demand liberty to make some proposal to an enemy. Every troop of dragoons, and every company of foot or artillery, has two or more drums, according to the effective strength of the party. The drum was first invented by Bacchus, who, as Polyenus reports, fighting against the Indians, gave the signal of battle with cymbals and drums; and the Saracens, who invaded Christendom, introduced the drum into the European armies.

The author of an old work entitled *A Treatise of the Arms and Engines of War, &c.* speaks of drums in the following manner:

"Though drums and kettle-drums were not in use among the Romans, yet other nations, and especially the Indians, used them. *Indi tympana suo more pulsantes*. *CURTIVS*, lib. viii. And *SUIDAS, Tubis*

Indi non utuntur, sed pro iis sunt flagella, et tympana horribilem quandam bombum emittentia.

“The Parthians made use of them also, but, in all appearance, (according to the description we have of them in Suidas and Plutarch,) the instruments of these people were rather kettle-drums than drums, because they were made of palm-tree wood, hollow and filled with little brazen bells, the mouth whereof was covered with a bull’s hide. Isidorus defines the word (*tympanum*) in these terms: *Tympanum est pellis vel corium ligno ex unâ parte extensum.* And that is the very shape and figure of our kettle-drums.

“He describes also another instrument which he calls *symphony*, which can be nothing else but our drums. *Symphonia*, he observes, *vulgo appellatur lignum curvum ex utraq; parte pelie extensa, quam virgulis hinc et inde musici feriunt.* That instrument resembles the little tabors or drums which the Turks carry before them, and which they beat on both sides with sticks. However it be, there is no doubt but that the invention of drums is as ancient as that of trumpets: I build not only on the authority of prophane history, but on the testimony of the royal prophet, who says: *Let them praise his name with the flute; let them sing praises to him with the timbrel and harp.* Psal. 149. *Praise him timbrel and flute, &c.* Psal. 150.”

Drums are made of a chesnut wood, hollow, and covered at both ends with skins of parchment, which are braced with cords and with snares underneath. The drums are sometimes made of brass. Those belonging to the Blues are silver.

Drums are used when religious ceremonies are performed in a camp or in the field, one being placed on the other, and serving for a desk.

The various beats are as follow: viz.

The General to give notice to the troops that they are to march.

The Assembly, } to order the troops to

The Troop, } repair to the place of rendezvous, or to their colours.

The March, to command them to move, always with the left foot first.

Tat-too or *Tap-too*, to order all to retire to their quarters.

To Arms! for soldiers who are dispersed, to repair to them.

The Réveillé always beats at break of

day, and is to warn the soldiers to rise, and the sentinels to forbear challenging, and to give leave to come out of quarters.

The Retreat, a signal to draw off from the enemy. It likewise means a beat in both camp and garrison a little before sun-set, at which time the gates are shut, and the soldiers repair to their barracks, &c.

The Alarm, to give notice of sudden danger, that all may be in readiness for immediate duty.

The Parley, } a signal to demand

The Chamade, } some conference with the enemy.

Long March, a beat which was formerly used in England; on the sound of which, the men clubbed their firelocks, and claimed and used the liberty of talking all kind of ribaldry.

The Church Call, called also *beating the bank*; a beat to summon the soldiers of a regiment, or garrison, to church.

The Pioneers’ Call; known by the appellation of *Round Heads* and *Cuckolds!* come dig; this is beaten in camp to summon the pioneers to work.

The Serjeants’ Call, a beat for calling the serjeants together in the orderly-room, or in camp, to the head of the colours.

The Drummers’ Call, a beat to assemble the drummers at the head of the colours, or in quarters at the place where it is beaten.

The Preparative, a signal to make ready for firing.

The Warning Drum, a beat to give officers and soldiers time to assemble for their meals in camp or quarters.

The Roast-beef of Old England, a beat to call officers to dinner.

DRUM, or **DRUMMER**, the person who beats the drum.

Kettle-DRUMS are two sorts of large basins of copper or brass, rounded at the bottom and covered with vellum or goat-skin, which is kept fast by a circle of iron, and several holes, fastened to the body of the drum, and a like number of screws to stretch it at pleasure. They are used among the horse. The *kettle-drum* formerly belonging to the royal regiment of artillery was mounted on a most superb and pompous wagon, richly gilt and ornamented, and drawn by four white horses elegantly caparisoned, with a seat for the drum-major-general.

DRUM-major, a person in the regiment who has the command over the other drums, and teaches them their duty. Every regiment has a drum-major.

DRUM-major-general of England. There was formerly in the King's household an officer so called, without whose licence no one could, except the King's troops, beat a drum.

DRUM-sticks, the sticks with which the drummer beats his drum.

DRUNGARIUS, a Roman captain who had the command of 1000 men.

DRUNGE, a body of Roman troops, composed of from 1000 to 4000 men.

DRUNGUS, a flying Roman camp, which was composed of a particular body of men that kept very close to one another when in battle.

DRUNKENNESS, according to Dr. Johnson, intoxication with strong liquor.

The Articles of War say respecting this vice: Whatsoever commissioned officer shall be found drunk on his guard, party, or other duty, under arms, shall be cashiered for it; any non-commissioned officer or soldier so offending shall suffer such corporal punishment as shall be inflicted by the sentence of a court-martial. Sect. xiv. Art. v.

DUAL, a weapon used by the inhabitants of New Holland.—See GRANT'S *Voyage of Discovery*.

DUC de la nation, Fr. Under the second race of the French kings, the armies were headed by a duke, who was called *Duc de la nation*, as long as he retained the command. Thus it happened that *Robert le Fort* became duke of the French.

DUCHIS-BASCY, the captain of the Turkish founders, who is to provide all necessary materials.

DUEL, (from the Italian *duello*, signifying a rule of duelling,) is a single combat, at a time and place appointed, in consequence of a cartel or challenge. Duelling was anciently authorized; but the motive of the duellists was the good of their country, when one, or a small number of combatants was chosen to save the blood of a whole army, and decide, by victory or death, the quarrels of kings or nations. Thus it was with Goliath and David, the Horatii and Curiatii, and several others.

DUELLING was so general a method of determining differences among the nobles, that even ecclesiastics were not excused; only, to prevent their being

stained with blood, they procured champions to fight for them. None were excepted from combat, but sick people, cripples, and such as were under twenty-one years of age, or above sixty. Justs and tournaments, doubtless, rendered duels more frequent.

In the seventeenth century, duelling was much discountenanced, as will appear by the following extract from the History of Gustavus Adolphus, King of Sweden, surnamed the Great.

“Duels were not extremely fashionable in those days; we hardly find half a dozen in the space of thirty years continued war; every hour affording better proofs for valour, than such irrational appeals to public opinion. Nor were superior commanders ill thought of by their adherents and followers, in case they refused to refer themselves to such sort of decisions. Cratz, in the transports of resentment, challenged Walestein when he was generalissimo and absolute; yet nothing resulted from the provocation; it was passed by with neglect. John de Wert killed Merodé, but the affair was purely a rencounter. Young Pappenheim, it is true, lost his life in a real duel, but that happened merely because he had eluded the vigilance of his general, who had locked the city gates, and planted spies to watch the combatants. Aldringer never forgave Sirot for drawing his sword in his presence, though he himself set the example, and insisted upon making his life the forfeiture for the offence. Greater cautions were still taken in the Swedish service: Count de Sonches challenged General Stalhaus, but first resigned his commission. Duels before this time had been severely prohibited in France, and the French King declared, with an oath, that he would reward such military persons as had spirit enough to refuse a challenge. By Gustavus's laws all private quarrels were decided by the officers of the regiment, and all challenges referred to a court-martial: and if an inferior officer allowed the common soldiers to engage hand to hand, he was to be cashiered, *ipso facto*, and serve as a private man, being answerable also for the mischiefs that should be committed in such engagements. The best and most remarkable swordsman in the course of these wars was the Count de Forgatz; yet we find nothing concerning him in the public field of action. A

to the custom of seconds, I think it appeared as early as the year 1570."—See *Harte's History of Gustavus Adolphus*, page 45. in the *Essay on the Military State*, &c. &c.

No officer or soldier shall pretend to send a challenge to any other officer or soldier, to fight a duel: if a commissioned officer, on pain of being cashiered; if a non-commissioned officer or soldier, of suffering corporal punishment, at the discretion of a court-martial. *Articles of War*.

For a very singular deviation from this article, as far as relates to officers, see the first volume of the *Regimental Companion*, 5th edition.

DUELLING was authorized before the Normans came into England, but the practice was not so frequent as after the Conquest.

DUELLIST, (*daelliste*, Fr.) a man who makes it his profession to fight, and sometimes to insult, other persons. Duelling is not the true test of valour; for it will happen, that a man may individually fight well, although he be a cheat at play, and an arrant coward in the hour of battle.

The fate of Major Campbell of the 21st regiment of foot, who was executed in Ireland for the murder of his brother officer, Captain Boyd, ought to be a solemn warning to those intemperate men who act up to the first impulse of anger and revenge; most especially, when the common forms of duelling are abandoned. If this *lex ultima honoris* must be resorted to, let usage, at least, and the common decencies of life be observed. During the reign of Louis the XIVth, every man who fought a duel and killed his adversary, without the evidence of seconds, (or, as the French more properly say, *témoins*, witnesses,) was condemned to death. The Irish, who are naturally a brave and generous people, felt all the weight and efficacy of this wise law, when they brought in their verdict at Armagh.

DUKIGI-BACHI, the second officer of the Turkish artillery.

DULEDGE, a peg of wood which joins the ends of the felloes, forming the circle of the wheel to a gun-carriage; and the joint is strengthened on the outside of the wheel by a strong plate of iron, called the *duledge plate*.

DUMB-BELLS, weights which are used in drilling the soldier, who holds

one in each hand, which he swings backwards and forwards to open his chest, increase muscular strength, throw back his shoulders, and accustom him to that freedom of action in the arms, and to that erect position of body which are so essentially necessary to a soldier.

The following method of exercising recruits with the dumb-bells, is extracted from a work entitled *Military Instruction*.

The dumb-bells being placed one on each side of the recruit, and himself in an erect, steady posture—on the word,

Raise bells—he will take one in each hand, and by a gentle motion raise them, as high as his arm will suffer him, above his head; then gradually sinking them with stretched arm, as much behind him as possible, he will form a circle with them, making the circle complete by causing the backs of his hands to meet behind his body; this will be repeated, according to his strength, 5 or 6 times.

Extend bells.—The bells being raised to the shoulder, they will be forced forwards, keeping the same height, then brought back in the same manner; this will throw the chest forward, and force back the neck and shoulders:—this must be frequently repeated.

Swing bells.—The top part of the bells to be made to meet together in front, the height of the breast; then forced backwards with an extended arm, and be made to touch behind; in doing this, the palm of the hand must be uppermost, and the elbows well down: this circle must be repeated fourteen or fifteen times: Time, the circle performed in, two seconds.

Ground bells.—The recruit will let fall the bells by his sides, and remain steady and firm.

DUNES, Fr. sand hills, commonly called downs. As, *les dunes sur la côte de Flandres*, the downs, or sand-hills, along the coast of Flanders. Hence also, Dunkirk, from a church first built in the sand-hills.

DUNGEON, } in *fortification*, is
DONJON, } commonly a large tower or redoubt of a fortress, whither the garrison may retreat, in case of necessity, and capitulate with greater advantage. Also a place in which prisoners were kept.

DUNNAGE, as used in the ordnance, consists of fir deals or other light timber to raise the dead weight in the hold,

for the purpose of preventing a ship from labouring too much in a heavy sea. In ships coming from China, dunnage is used about a foot above the ceiling to prevent the water in a ship's hold from damaging teas, or other dry goods. The laths, &c. which are placed in trunks serve also as dunnage to secure clothes and linen from rubbing together.

DUPLE, *dupla ratio*, that is, *double ratio*, in architecture, is where the antecedent term is *double* the consequent; or where the exponent of the ratio is 2; thus 6 : 3 is in a double ratio.

Sub-DUPLE, or *double sub-duple ratio*, is where the consequent term is *double* the antecedent, or the exponent of the ratio is $\frac{1}{2}$; thus 3 : 6 is a *sub-duple ratio*.

DUPLICATION, (*duplication*, Fr.) the art or science of doubling a thing, or any given quantity.

DUPLICATION of the cube, (*duplication du cube*, Fr.) a term used to express the invention of a number which is twice as great as any other proposed.

DUTY, (*devoir*, Fr.) in a military sense, is the exercise of those functions that belong to a soldier; yet with this nice distinction, that duty is counted the mounting guard, &c. where no enemy is directly to be engaged; for when any body of men marches to meet the enemy, this is strictly called *going upon service*.

On all duties, whether with or without arms, piquets, or courts-martial, the tour of duty begins with the eldest downwards. An officer who is upon duty cannot be ordered for any other before that duty is finished, except he be on the inlying piquet, as then he shall be relieved, and go on the duty ordered.

Military DUTIES may be divided into two general classes, under the heads of *Brigade and Regimental duties*.

Brigade duties are those which one regiment does in common with another, collectively or by detachments, and of which the brigade-major keeps a regular roster.

Regimental duties are those which the several companies of a regiment perform among themselves, and of which the adjutant keeps a regular roster.

DUTIES of Honour are, 1. the king's guard; 2. those of the royal family; 3. the captain-general's, or field-marshal's commanding the army; 4. detachments

of the army, or out-posts; 5. general officers' guards; 6. the ordinary guards in camp or garrison; 7. the piquets; 8. general courts-martial, and duties without arms, or fatigue.

The following *general regulations* are to be observed, respecting duties in general:

When field or other commissioned officers are given out at head-quarters, for one *duty*, they cannot be taken off to be put on any other *duty*.

No officer is allowed to exchange his *duty* with another, after he has been put in orders for it, without leave of the commanding officer of his regiment.

Guards, or detachments which have not marched off from the parade, are not to be reckoned as for a *duty* done; but, if they should have marched from the parade, it stands for a *duty* done, though they should be dismissed immediately.

If any officer's tour of *duty* for the piquet, general court-martial, or *duty* of fatigue, happen when he is on *duty*, he shall not make good such *duty* when he comes off.

No regiment can demand a tour of *duty*, unless it has marched off the place of parade, and beyond the main guard.

General courts-martial that have assembled, and the members sworn in, shall be reckoned for a *duty*, though they should be dismissed without trying any person.

Whenever the piquets are ordered to march to any parade, it is not to be accounted a *duty*, unless they march off that parade.

All commands in the regular forces fall to the eldest officers in the same circumstances, whether of cavalry or infantry, entire, or in parties. In case two commissions of the same date interfere, a retrospect is to be had to former commissions.

Officers, in all duties under arms, are to have their swords drawn, without waiting for any word of command for that purpose.

DUTY also signifies, in a moral and noble sense of the word, not only a religious observance of orders, but a zealous and undaunted execution of them. Thus our immortal Nelson: ENGLAND EXPECTS THAT EVERY MAN WILL DO HIS DUTY.

DYE. See **DIE**.

DYKE. See DIKE.

DYNAMICS, (*dynamique*, Fr.) the science of moving forces, or of moveable causes.

DYNASTY, (*dynastic*, Fr.) This word is frequently found in the History of the Monarchies and Empires of the

East; it signifies a series of princes who have reigned successively. When a new family succeeds to the throne, it is a new dynasty that begins. The house of Nassau Orange began a new dynasty of the Kings of England in 1633.

E

EAGLE. *Black-Eagle*, an order of military knighthood in Prussia, instituted by the elector of Brandenburg, in 1701, on his being crowned king of Prussia. The knights of this order wear an orange-coloured ribbon, from which is suspended a black eagle.

White-Eagle, a like order in Poland, instituted in 1325, by Uladislaus V. on occasion of the marriage of his son Casimer, to the daughter of the great duke of Lithuania. The knights of this order wear a chain of gold, to which a silver eagle, crowned, is suspended.

EAGLE, the standard of the ancient Romans. In a general sense, it formerly meant the standard of the Roman armies; in a more limited acceptation the sign or flag of the several legions.

At present it is the standard of the German empire.

The difference between the Roman and the Imperial eagle consists in this, that the first were eagles of gold or silver, fixed at the end of a pike, having their wings extended, and holding the lightning in their claws; the second are eagles painted upon the colours and standards of the emperors. The eagle likewise signifies, in a figurative sense, the German empire. On the accession of Bonaparte to the imperial throne, the eagles were introduced among the standards of France, in imitation of the Romans.

EARL-MARSHAL, an officer who has the care and direction of military

solemnities. The dukes of Norfolk are, by hereditary right, earls-marshal of England; but they must be protestants to exercise the functions of that high office.

EARS of a horse should be small, narrow, straight, and the whole substance of them thin and delicate: they ought to be placed on the very top of the head, and their points, when styled, or pricked up, should be nearer than their roots.

When a horse carries his ears pointed forwards, he is said to have a bold, hardy, or brisk ear; also when a horse is travelling he should keep them firm, and not (like a hog) mark every step by the flapping of his ears.

EARTH-bags. See BAGS.

EASE, in a military sense, signifies a prescribed relaxation of the frame, from the erect and firm position which every well dressed soldier should observe.

To stand at EASE, in a technical acceptation of the term, is to draw the right foot back about six inches, and to bring the greatest part of the weight of the body upon it. The left knee must be a little bent, and the hands brought together before the body, the right hand in front. But the shoulders must invariably be kept back and square, the head to the front, and the whole carriage of the person be unconstrained.

In cold weather, when standing at ease, the men are permitted, by command, to move their limbs without quitting their ground.

Stand at EASE, (from the *support*.) On this command, the soldier retires his right foot six inches, bends his left knee, and carrying the right hand smartly across the body, seizes the firelock by the small of the butt, and raises it sufficiently to slope it over his left shoulder, and relieve the left arm from the pressure of the cock. In some regiments, instead of seizing the small of the butt with the right hand, they only place the hollow of the hand below the left elbow.

EASE arms, a word of command given immediately after the order to *handle arms*, by which the soldier is directed to drop his right hand to the full extent of the arm, from the top of the ramrod, on the front of the sling, with his fingers spread along it.

EAU, *Fr.* water, is a principal object to be considered, whenever an army advances, retreats, or encamps. It is the quarter-master-general's business, through his subordinate deputies, to secure this indispensable necessary of life. Small running rivulets are preferable to large rivers, because the latter cannot be so easily turned for the convenience of the army; whereas the former may be always stopped, or diverted from their natural course.

Wells are never resorted to but in cases of absolute necessity. Stagnant or pond water is in general unwholesome, and never limpid or clear.

Buvage d'EAU, *Fr.* a punishment in the French service, corresponding with our *bread and water* system.—Drunken soldiers were treated in this manner. This chastisement is also much practised in our corps in India, where it is called *congée*, signifying rice and water.

Eaux Mères, ou *AMÈRES*, *Fr.* the water which remains after the first boiling of saltpetre. It has a bitter salt taste, and is used to fill the tubs a second time.

Petites EAUX, *Fr.* the water which remains after the saltpetre has been boiled to a certain degree. See *SALTPETRE*.

ÉBAUCHE, *Fr.* the first sketch, or outline of a plan.

ÉBAUCHER, *Fr.* to prepare any thing in the rough so that it may be shaped or made smooth.

ÉBOULEMENT, *Fr.* the crumbling

of a wall or rampart, which is occasioned either by violence, or by waste of time. It also means the rubbish, &c. that is caused by the explosion of a mine.

ÉBOULIS, *Fr.* rubbish,

ÉBRANLER, *Fr.* to shake.

ÉBRANLER une troupe ennemie, *Fr.* to cause a hostile body of men to give way, or become unsteady, by the frequent and well directed discharge of cannon, or musketry.

S'ÉBRANLER, *Fr.* to make a first movement towards an enemy, for the purpose of bringing him to battle; to prepare to mount an assault. It also signifies to retire in order to avoid the enemy.

ÉBRILLADE, *Fr.* a sudden jerk with the bridle.

ÉBUARD, *Fr.* a wooden wedge.

ÉCARTER l'ennemi, *Fr.* to oblige an enemy to abandon his position and to give up some premeditated plan. This is done by intercepting his convoys, by harassing engagements, and by keeping him in continual alarm.

ÉCHAFAUD, *Fr.* a scaffold.

ÉCHAFAUDAGE, *Fr.* the different planks and poles, &c. which are used to erect a scaffold.

ÉCHALIER, *Fr.* a fence.

ÉCHANCRURE, *Fr.* a slope.

ÉCHANGER, *Fr.* to exchange, to barter.

ÉCHANSON, *Fr.* a cup-bearer.

ÉCHANSONNERIE, *Fr.* the king's wine cellar.

ÉCHANTILLON, *Fr.* means literally a pattern or model. In a military sense, it signifies a plank, which is covered on one side with iron, and serves to finish the mouldings, &c. of a piece of ordnance.

ÉCHAPPÉE de vue, *Fr.* a vista.

ÉCHAPPER, *Fr.* to escape. *S'échapper belle*, to escape a thing narrowly.

ÉCHAPPES, *Fr.* the breed of a stallion.

ÉCHARDE, *Fr.* a splinter.

ÉCHARPE, *Fr.* a scarf; a sling for the arm; in mechanics, a pulley. It also signifies a particular mark of distinction which has been worn by military men to denote different nations or parties. It is sometimes thrown across the body, and at others round the waist. The French wear white silk; the Spaniards red.

Changer d'ÉCHARPÉ, Fr. to change sides; to be a turn-coat.

En ÉCHARPÉ, in the military art. To batter *en écharpé*, is to fire obliquely, or sideways. See BATTERY.

ÉCHARPÉ, Fr. a person that has been severely wounded with a sabre or cutlass. It is said of a regiment that it has been *écharpé*, by which is meant that it has lost nearly all its men, or been cut to pieces.

ÉCHARPER, Fr. to cut across with a sabre.

ÉCHARS, (Vents, Fr.) shifting winds.

ÉCHASSÉS, Fr. stilts; poles. This word also means wooden rulers by which the breadth and length of stones are measured.

S'ÉCHAUDER, Fr. to burn one's fingers by ill success in some affair.

ÉCHAUFFOURIE, Fr. This word is become obsolete. It meant formerly the unexpected meeting of two bodies of troops that engaged immediately.

ECHAUGETTE, a watch-tower, or kind of sentry-box built in the walls of fortified places.

ÉCHAUFFOURÉE, Fr. a rash undertaking; a wild scheme.

ÉCHEC, Fr. a check; a repulse; such as is experienced by an army, or body of armed men, who are either driven back when they advance, or are prevented from so doing by a superior force, or by military skill.

ÉCHELIER, ou rancher, Fr. a long piece of timber which is crossed by a number of steps, and which is placed perpendicularly for the purpose of going down into quarries, &c.

ÉCHELLE, Fr. scale, in a mathematical sense, is a straight line drawn double, which is divided into a certain number of parts, each part containing as many toises or yards, &c. as the size of the chart or paper will admit, which are again reduced into feet.

ÉCHELLE, Fr. ladder; in civil and military architecture, means a machine, which is made of two side pieces or arms, that receive a certain number of small steps, at equal distances from one another. These *échelles*, or ladders, are of two kinds: large and small. The small ladders are used to descend into the ditches of fortified places, and the large ones for scaling the walls, &c. See SCALING LADDERS.

ÉCHELLE, Fr. any spot or place of

trade in the Mediterranean, is so called by the French.

ÉCHELLES, Fr. President Fauchet in his *Book 11, de la milice et des armées*, tells us, that by this word were meant several troops of horse. Each *échelle* had a particular standard with the motto and armorials of its captain.

ÉCHELLETTE, Fr. a small ladder.

ÉCHELON, from échelon, Fr. the step of a ladder. A position in military tactics, where each division follows the preceding one, like the steps of a ladder; and is convenient for removing from a direct to an oblique, or diagonal line. When troops advance in *échelon*, they almost invariably adopt the ordinary time. Hence to march in *échelon*, may not improperly be said to approach towards any given object by a gradual movement.

ÉCHELON movements and positions are not only necessary and applicable to the immediate attacks and retreats of great bodies, but also to the previous oblique or direct changes of situation, which a battalion, or a more considerable corps already formed in line, may be obliged to make to the front or rear, or on a particular fixed division of the line.

The oblique changes are produced by the wheel less than the quarter circle of divisions from line which places them in the echelon situation. The direct changes are produced by the perpendicular and successive march of divisions from line to front, or rear. See *Infantry Regulations*, p. 105.

En ÉCHIQUIER, Fr. alternately.

Faire la retraite en ÉCHIQUIER, Fr. to retreat by alternate companies, &c. columns.

ÉCHOUER, Fr. to fail in an undertaking; or enterprize.

ÉCLAIRCIR, Fr. to thin. Hence to thin the ranks by cannon-shot, or musketry.

ÉCLAIRCIR des armes, Fr. to polish arms, or make them bright.

ÉCLAIRCISSEMENT, Fr. explication; explanation.

Officier à ÉCLAIRCISSEMENT, Fr. a quarrelsome officer.

ÉCLAIRER, Fr. according to the translator of the French military tactics, signifies to keep an eye on, to watch, to observe. It literally means to enlighten.

ÉCLAIRER une marche, Fr. to detach,

in front of an army, small or large detachments of troops, who are preceded by sharp-shooters or light infantry, for the purpose of ascertaining the position of the enemy, &c.

ÉCLAIRER *ce que font des assiégés*, Fr. to throw inflammable balls or pots filled with combustibles into the works of a fortified place, for the purpose of knowing the strength of a garrison, &c.

ÉCLAIRER *une tranchée*, Fr. to throw balls of fire, &c. towards the trenches of an enemy, in order to discover what the operations of the besiegers are during the night.

ÉCLAIREUR, Fr. according to the translator of the French military tactics, a trooper, a flanker.

ÉCLAIREURS, Fr. a corps of grenadiers raised by Bonaparté, when chief consul of France, for the immediate protection of Paris.

ECLAT, Fr. shew; gorgeous appearance.

ÉCLAT de bois, Fr. a shiver of wood.

ÉCLAT de pierre, Fr. a shard of stone.

ÉCLAT d'armes, Fr. clang of arms.

ÉCLOPPÉS, a French military term, to express those soldiers who, though invalided, are yet well enough to follow the army. Among these may be classed dragoons, or horsemen, whose horses get suddenly lame, and cannot keep up with the troop or squadron. They always march in the rear of a column.

ÉCLUSE à tambour, Fr. a dam, or sluice, which fills and empties itself by means of two arched drains.

ÉCLUSE à vannes, Fr. a dam, or sluice, which fills and empties itself by means of floodgates.

ÉCLUSE en éperons, Fr. a dam, or sluice, whose double floodgates join each other.

ÉCLUSE de chasse et de fuite, Fr. two sluices by means of which water is brought in and carried out of fortified places from the sea. When the water runs in, it flows through what is called the *écluse de chasse*, and when it runs out, it does so from the *écluse de fuite*. Sluices of this kind run under the town of Calais, from the sea-side to the outward ditch.

ÉCLUSE de décharge, Fr. a dam, or sluice, where the back-water is kept, or let out, for the purpose of filling, or emptying any ditch or fosse, &c.

ÉCLUSE provisionnelle, Fr. a sluice which serves to inundate, or fill up, the

fosse of a fortified place or town; particularly so when a river may happen to run close under the glacis. This is the case at Gravelines, where there is a provisional sluice in the covert-way, opposite to the royal bastion, by which any quantity of water can be brought into the ditch from the river Aa.

ÉCLUSE quarrée, Fr. a dam, or sluice, which has one floodgate, whose doors shut squarewise.

ÉCLUSÉE, Fr. the water which is let out of a sluice or dam.

ÉCLUSES, Fr. See SLUICES.

ÉCOLES d'artillerie, Fr. military schools, where the pupils are taught every thing that relates to the profession of arms: whether they be officers, cadets, or private soldiers.

ÉCOLES du génie, Fr. military schools for the education of engineers. Before an officer can be admitted he must have attended the several lectures, and have undergone a general examination upon mathematics, the art of drawing, tracing plans of military architecture, of defence, attack, &c. &c. See SCHOOL.

ÉCOLIER, Fr. a student; a scholar. The French say figuratively, *Ce général à fait une faute d'écolier*, that general has acted with great incapacity; literally like a school-boy.

ECONOMY, in a military sense, implies the minutæ, or interior regulations of a regiment, troop, or company. Hence regimental economy.

ÉCORCER, Fr. to impose upon.

ÉCORE, Fr. steep shore. *Côte en écore* signifies a very steep descent.

ÉCORNIFLEUR, Fr. a spunger.

ÉCOT, Fr. scot; club; company; reckoning. The French say, *Payer bien son écot*, to be a lively companion, to make a society merry.

ÉCOUER, Fr. to crop; to duck; to cut short.

ÉCOUÉ, Fr. crop-tailed.

ÉCOUPE, Fr. a broom, such as is used by pioneers. It is also called *Balai*.

ÉCOUTE, Fr. a private place for listening; such as is generally found attached to public offices where persons are examined.

Etre aux ÉCOUTES, Fr. to be on the watch.

ÉCOUTES, Fr. small galleries made at equal distances in front of the glacis, of the fortifications of a place, the whole of which correspond with a gallery parallel to the covert-way: they serve to

annoy the enemy's miners and to interrupt them in their work.

ÉCOUVETTE, *Fr.* a brush.

ÉCOUVILLON, *Fr.* a maulkin or drag; the sponge made use of to clean and to cool the inside of a cannon, when it has been discharged.

ÉCOUVILLONER, *Fr.* to clean, or cool a piece of ordnance.

ÉCRETER, *Fr.* to batter or fire at the top of a wall, redoubt, epaulement, &c. so as to dislodge or drive away the men that may be stationed behind it, in order to render the approach more easy. *Ecréter les pointes des palissades*, to blunt the sharp ends of the palisades. This ought always to be done before you attack the covert-way, which is generally fenced by them.

ÉCRIN, *Fr.* a jewel-box.

ÉCRIRE *en chiffres*, *Fr.* a particular method of writing in certain figures, marks, &c. upon interesting matters which must be kept secret. The present telegraph is a kind of *writing in figures*, and was much in use amongst the Persians, Greeks, Egyptians, Tyrians, and Romans.

ÉCROU, *Fr.* the nut of a screw. It likewise signifies the jailor's book. Hence the term *écroué*.

ÉCROUÉ, (*soldat*, *Fr.*) a soldier that was confined and reported as such during the old French monarchy. When this happened by the command of his officer he could not be removed to another place of confinement in consequence of any sentence of a civil court. With us all military regulations are subordinate to civil law.

ÉCROULEMENT, *Fr.* the decay or fall of the earth, or mason-work, belonging to a rampart, which is occasioned by the waste of time, or by the force of ordnance.

ÉCU, *Fr.* a large shield which was used by the ancients, and carried on their left arms, to ward off the blows of a sword or sabre. This instrument of defence was originally invented by the Samnites. The Moors had *écus* or shields, sufficiently large to cover the whole of their bodies. The *clipei* of the Romans, only differ from the *écu* in shape; the former being entirely round, and the latter oval.

Écu de campagne, *Fr.* a certain sum of money which is given to the cavalry during one hundred and fifty days that the troops are in winter-quarters.

EDGE, the thin, or cutting part, of a sword or sabre.

EDICT. See PROCLAMATION.

EDUCATION, in a military sense, implies the training up of youth to the art of war. The first object to be considered is, whether nature has given the young man the talents necessary for the profession, or not; for here sense, parts, courage, and judgment, are required in a very eminent degree. The natural qualities of an officer are, a robust constitution, a noble open countenance, a martial genius, fire to produce activity, phlegm to moderate his transports, and patience to support the toils and fatigues of war, almost without seeming to feel them. Acquired qualities of an officer consist in moral virtues and sciences; by the first is meant a regular good conduct, economy, prudence, and a serious application to what regards the service. Military sciences indispensably demand the reading of ancient and modern historians; a good knowledge of military mathematics, and the study of the chief languages of Europe.

It is in ancient authors we find all that is excellent, either in politics or war: the make and form of arms are changed since the invention of gunpowder; but the science of war is always the same. On one side, history instructs us by examples, and furnishes us with proofs, of the beautiful maxims of virtue and wisdom, which morality has taught us: it gives us a kind of experience, beforehand, of what we are to do in the world; it teaches us to regulate our life, and to conduct ourselves with wisdom; to distrust mankind; ever to conduct ourselves with integrity and probity, never to do a mean action: and to measure grandeur with the level of reason, that we may despise it, when it becomes dangerous, or ridiculous.

On the other hand, history serves to give us a knowledge of the universe, and the different nations which inhabit it; their religions, their governments, their interests, their commerce, their politics, and the law of nations. It shews us the origin of the illustrious houses who have reigned in the world, and given birth to those who still subsist.

The knowledge of military mathematics regards the operations of war in general; every thing there consists in proportion, measure and motion: it treats of marches, encampments, battles,

artillery, fortification, lines, sieges, mines, ammunition, provisions, fleets, and every thing which relates to war; but no just notion can be acquired without geometry, natural philosophy, mechanics, military architecture, and the art of drawing.

The study of languages is most useful to an officer, and he feels the necessity of it, in proportion as he rises to higher employments. Thus the Latin, German, and French languages are very necessary for an English officer; as are the English, French, and Italian, for a German.

EEL-backed horses, such as have black lists along their backs.

EFFAUTAGE, *Fr.* refuseship-timber.

EFFECTIONS (in geometry) sometimes signify geometrical constructions, sometimes problems, so far as they are reducible from general propositions.

EFFECTS, the goods of a merchant, or tradesman. Also the goods and property belonging to a deceased officer, or soldier.

EFFECTIVE, (*effectif*, *Fr.*) fit for service; as an army of 30,000 effective (fighting) men.

EFFECTIVE, a word used in military returns, signifying the actual and *bonâ fide* presence of an officer, or soldier.

Homme EFFECTIF, *Fr.* a man of his word.

EFFEMINATE, (*efféminé*, *Fr.*) addicted to excessive pleasure, sloth and luxury, all of which are detrimental to military courage. Such were the real causes of the decay and fall of the Romans: the relaxation was universal among the civil, the military and the body politic: discipline had raised them to the highest pitch of glory and splendour, whilst riches became their ruin. The Roman soldiers with their eagles, their bracelets, clasps of solid gold, &c. were less great than the former *adventurers*, the soldiers of Romulus, carrying a *bundle* of hay on their pikes.

EFFORT du canon, *Fr.* the effect or impression made by a piece of ordnance.

EFFRONDRÉ, *Fr.* burst open; thrust through, &c.

Chemin EFFRONDRÉ, *Fr.* a way full of holes, or miry sloughs, &c.

EFFRONDRER une porte, *Fr.* to burst open a door.

EFFRONTERY, boldness, impudence, malapertness, sauciness; the opposite to real dignified courage and intrepidity, which are modest and unassuming, without descending to meanness, or pusillanimity.

ÉGORGER, *Fr.* to cut the throat; to slaughter.

EGOUT, *Fr.* a drain; a sewer. It also signifies the spout at the gable end, from which the water runs off the roofs of houses.

EGREGII, persons among the ancient Romans, who, by military exploits, obtained the government of a province.

ÉGUILLETES, shoulder-knots. See *NOEUDS d'épaules*, &c.

ÉLANCÉ, *Fr.* thin; lank.

Cheval ÉLANCÉ, *Fr.* a horse backswayed.

To ELANCE, to throw darts, &c.

S'ÉLANCER, *Fr.* to dart, to rush forward; to go with violence. *S'élançer parmi les ennemis*, to rush into the thickest of the enemy.

ELDER battalion. A battalion is counted elder than another, by the time since it was raised. See *SENIORITY*.

ELDER officer, he whose commission bears the oldest date. See *SENIORITY*.

ELEMENTS, (*éléments*, *Fr.*) the first rudiments of an art, or a science.

ELEPHANTS, (*éléphants*, *Fr.*) animals well known among Eastern nations who employ them in their armies.

ELEVATION, (*élévation*, *Fr.*) in *gunnery*, that comprehended between the horizon and the line of direction of either cannon, or mortar; or it is that which the chace of a piece, or the axis of its hollow cylinder, makes with the plane of the horizon.

ELEVATION, (*élévation*, *Fr.*) In a military sense, with regard to plans, or drawings, of fortification, elevation signifies the representation of a work when completed.

ELF-arrows, flint stones sharpened and jagged, like arrow heads, used in war by the ancient Britons.

ÉLITE de troupes, *Fr.* the chosen troop of an army. We have adopted the term.

ELLIPSIS, an oval figure made by the section of a cone, by a plane, dividing both sides of a cone: and though not parallel to the base, yet meeting with the base when produced; a defect; a chasm.

ELM is of peculiar use in water works, mills, ladles, and soles of wheel pipes, aqueducts, pales, and ship planks beneath the water-line. Some of this wood, which has been found in bags, has turned like the most polished and the hardest ebony.

Elm is of great use to wheel-wrights.

It serves to make handles for single saws; the knotty parts for naves and nubbs; the straight and smooth for axle-trees; and the very roots for curiously dappled works, kerbs of coppers, feather-edge, and weather-boards, trunks, coffins, and shovel board tables. The tenor of the grain makes it also fit for all kinds of carved work, and for most ornaments belonging to architecture.

Vitruvius particularly recommends it for tenons and mortises.

ÉLOIGNEMENT *permis au soldat*, Fr. the bounds, or limits, within which a soldier is allowed to walk for his amusement.

ÉLOIGNER l'ennemi, Fr. to oblige an enemy to quit his position, by giving him battle, and thus forcing him to retreat.

EMANCIPATION, (*émancipation*, Fr.) the act of setting free.

S'EMANCIPER, Fr. to emancipate one's-self, or to regain what has been unjustly taken from us; figuratively, to take too much liberty.

EMARGEMENT, Fr. the act of putting any thing down upon the margin of a paper; the casting up of a balance.

EMARGER, Fr. to put down upon the margin.

EMBARGO, a prohibition for any ships to leave a port: generally enforced on the rupture of any two or more nations.

EMBARKATION, the act of putting troops on board of ship, when destined to be conveyed on an expedition.

In arranging and proportioning the ordnance carriages, with all their appropriate stores and ammunition, great judgment and experience are requisite, not only for the purpose of embarking the stores systematically, but also that the transports may be loaded and put in proper trim for sea, and especially when heavy guns, shot and shells are on board. More than ordinary care is then necessary in raising the dead weight by means of dunnage to a height sufficient to prevent the vessel from being stranded or labouring at sea in bad weather.

EMBARRAS, Fr. embarrassment; trouble; perplexity; a cheval de frise.

Vent d'EMBAS, Fr. the western wind.

EMBASEMENT, Fr. a continued basis, or bottom laid at the foot of a building.

EMBASER, Fr. to give a basis, or bottom to any thing.

EMBATAILLONNER, Fr. to form into battalions, as is the case when the grenadiers, or light companies, are taken from their respective regiments and cast into separate battalions.

EMBATER, Fr. to put on a pack-saddle.

EMBATONNÉ, Fr. armed with cudgels, as mobs generally are.

EMBATTAGE, Fr. the covering of the streaks, or fellies of a wheel.

EMBATTIS, Fr. the easterly winds, which generally prevail about the dog days.

EMBATTLE. See *BATTLE-array*.

EMBATTRE, Fr. to cover the fellies of a wheel with bars of iron.

EMBATTRER les bandages des roues, Fr. to nail or fasten the streaks unto wheels.

EMBAUCHAGE, Fr. the act of seducing away from any thing; as a soldier from the regiment, &c.

EMBAUCHER, Fr. to persuade young men to enlist.

EMBAUCHEUR, Fr. a term which corresponds with crimp; what we vulgarly term a *decoy*.

EMBEZZLING, } the act of ap-
EMBEZZLEMENT, } propriating, by
breach of trust; which, with respect to military stores, is punishable by the Articles of War, but not at the discretion of a general court-martial, as the offender must be sentenced to be cashiered.

EMBLÉE, Fr. a prompt, sudden, and vigorous attack made against the covert-way and out-works of a fortified place. This military operation is executed by means of a rapid march, and an unexpected appearance before a town, followed by an instantaneous assault upon the out-posts of the enemy; who is thereby thrown into so much confusion, that the assailants force their way at the same time, and endeavour to get possession of the town.

Insulter d'EMBLÉE, Fr. to insult a place with promptitude and vigour.

EMBOÏTEMENT, Fr. the closing up of a number of men, in order to secure the front rank from any injury they might sustain by the firing of the rear.

EMBOÏTER, Fr. to lock up, to joint, to let in. It is used in the artillery to signify the fastening of a piece of ordnance.

EMBOÏTURE, Fr. an iron box screwed over the nave of the wheels, and which covers the axle-tree; also a joint.

EMBOLON, *Fr.* a military disposition of troops, which was used among the ancients, for the purpose of presenting a narrow front. The shape was that of a salient angle on the center.

EMBOUCHER, *Fr.* to bit a horse.

S'EMBOUCHER, *Fr.* to discharge, as a river does.

EMBOUCHOIR, *Fr.* a boot-tree; boot last.

EMBOUCHURE, *Fr.* the mouth of a river; a horse's bit; mouth piece; socket.

EMBOUCHURE du canon, *Fr.* the muzzle of a cannon. According to Béliidor this word is improperly applied to the mouth of a cannon. It should be *bouche du canon*.

EMBRANCHEMENS, *Fr.* pieces of timber belonging to the roof of a house.

EMBRASER, *Fr.* to set fire to.

EMBRASSER, *Fr.* to comprehend; to embrace; to encompass.

EMBRASSURE, *Fr.* a piece of iron, which grasps the trunnions of a piece of ordnance, when it is raised upon the boring machine, to widen its calibre.

EMBRASURE, in *fortification*, an opening, hole, or aperture in a parapet, through which cannon is pointed to fire at the enemy. Embrasures are generally made from 10 to 12 feet distant from one another, every one of them being from 6 to 9 feet wide without, and 2 or 2½ within: their height above the platform is 2½ or 3 feet towards the town, and 1½ foot on the other side towards the field, so that the muzzle of the piece may be sunk occasionally, and brought to fire low. See **BATTERY**.

EMBRIGADER, *Fr.* to brigade. See **BRIGADE**.

EMBROCHER, *Fr.* a vulgar term used among French soldiers, to signify the act of running a man through the body—literally, to *spit him*.

EMBUSCADE, *Fr.* See **AMBUSCADE**.

S'EMBUSQUER, *Fr.* to lie in ambush.

ÉMÉRILLON, *Fr.* a merlin, or small piece of brass, or cast iron, which does not exceed a pound weight.

EMERY, a ground iron ore: each British soldier is allowed a certain quantity for cleaning his arms.

EMERY, *oil, and brickdust or crocus*, articles used by soldiers to keep their firelocks in constant good order; and for which a limited half yearly allowance, not exceeding 2s. 9d. per annum, is paid

through the ordnance to the captains of troops and companies.

EMEUTE, *Fr.* insurrection.

EMIGRANTS, ÉMIGRÉS, persons who have quitted their native country, either from cowardice, or from civil and religious persecution.

ÉMILLÉS, *Fr.* stones and shards rough hewn and squared only, to fill up the massy parts of a wall.

EMINENCE, high or rising ground, which overlooks and commands the low places about it. Such places, within cannon-shot of any fortified place, are a great disadvantage; for if the besiegers become masters of them, they can thence fire into the place.

EMIR, a title or surname which the Mahometans give to all persons who are presumed to be the immediate, or collateral, descendants of Mahomet. This title is very much respected by the inhabitants of that part of the world, and authorizes the bearer to wear the green turban. When emir is connected with another term, it becomes an official one, and signifies, among the Turks, a *commandant*.

EMIRALEM, (*gonfalonier*, *Fr.*) the general of the Turks, or keeper of all their colours; he marches immediately before the Grand Signor.

EMISSARY, (*émissaire*, *Fr.*) a person sent by any power that is at war with another, for the purpose of creating disaffection among the subjects of the latter, of obtaining intelligence, &c. in other words, a spy.

EMMAGASINER, *Fr.* to store; to lay up.

EMMANCHEUR, *Fr.* a hafter.

EMMORTAISER, *Fr.* to mortoise.

EMOUCHETTE, *Fr.* a horse-cloth, or net, to keep off flies.

EMOLUMENTS, (*émolumens*, *Fr.*) perquisites; fair profits. Every general, and other public officer, if men of honour, ought to be satisfied with the *emoluments* allowed them. Whatsoever they get beyond, is injurious to the state and to the nation.

ÉMOUSSER, *Fr.* to blunt, to dull. In a military sense, it signifies to take off the four corners of a battalion, which has formed a square, and to give it, by those means, an octagon figure; from the different obtuse angles of which it may fire in all directions.

EMPAILLER, *Fr.* to pack up in straw.

EMPALE. See **FORTIFY.**

To **EMPALE**, (*empaler*, Fr.) to put to death by spitting on a stake fixed upright.

EMPANACHER, Fr. to plume; to adorn with feathers; as *empanacher une casque*.

EMPANONS, Fr. See **CHEVRONS du croupe**.

S'EMPARER, Fr. to take possession. *S'emparer d'une éminence*, to take possession of a height.

EMPASTING, in painting, the act of laying on colours thick and bold; or of applying several lays of colours, to the end that they may appear thick.

EMPATTEMENT, in *fortification*.

See **TALUS**.

EMPERATURE, Fr. joining together.

EMPEIGNE, Fr. the upper leather of a shoe; the vamp.

EMPEROR, (*empereur*, Fr.) a title given to the Sovereigns of Germany. It is derived from the Latin *imperator*, and signifies the chief in command. The term is, however, variously used; for although *empire* means a certain extent of country, which comprehends several provinces, and many different states, and should consequently give the honorary title of emperor to its principal chief, there are instances in which the person so invested is only called king. Hence the British empire is under the chief magistracy of George the Third, King, &c. It is, in fact, more suitable to a military government, than to one, whose vital formation consists of a happy mixture of King, Lords and Commons.

EMPIÉTER, Fr. to take advantage of.

EMPIÉTER sur l'ennemi, Fr. to take advantage of the enemy.

EMPILEMENT, Fr. from *empiler*, to pile up; the act of disposing balls, grenades, and shells, in the most secure and convenient manner. This generally occurs in arsenals and citadels.

EMPIRANCE, Fr. deficiency of coin.

EMPIRE, (*empire*, Fr.) imperial power; supreme dominion; sovereign command; also command over any thing. The French say, *avec empire*, imperiously.

L'EMPIRE des lettres, Fr. the commonwealth of the learned, or the empire which the only valuable aristocracy (that of talents) is supposed to possess over mankind; and which seldom exists, except in the posthumous works of neglected worth and genius.

EMPLACEMENT, Fr. the spot upon which a body of armed men is posted.

EMPLOIS militaires, Fr. military employments, such as commissions, &c. in the army.

EMPLOYÉS, Fr. persons employed in the service, to supply the necessary subsistence, &c. for an army. Of this description are commissaries, purveyors, &c.

Petty EMPTIONARY, a contract term used by the Board of Ordnance, signifying the purchase of small stores.

EMPRISE. See **EXPEDITION.**

EMULATION, a noble jealousy, without the slightest tincture of envy, whereby gentlemen endeavour to surpass each other in the acquisition of military knowledge.

ENAMBUSII. See **AMBUSII.**

ENCAMPMENT, the pitching of a camp. See **CAMP.**

In the Regulations published by Authority, are particularly enjoined the following points:

Attentions relative to ENCAMPMENTS.

On the arrival of a brigade or a battalion, on the ground destined for its camp, the quarter and rear guards of the respective regiments will immediately mount; and when circumstances require them, the advanced piquets will be posted. The grand guards of cavalry will be formed, and the horses picketed. The men's tents will then be pitched, and till this duty is completed, the officers are on no account to quit their troops, or companies, or to employ any soldier for their own accommodation.

Privies are to be made in the most convenient situations, and the utmost attention is required in this, and every other particular, to the cleanliness of the camp.

If circumstances will allow the ground on which a regiment is to encamp to be previously ascertained, the pioneers should make these and other essential conveniences, before the corps arrives at its encampment.

Whenever a regiment remains more than one night in a camp, regular kitchens are to be constructed.

No tents, or huts, are to be allowed in front of, or between, the intervals of the battalions. A spot of ground for this purpose should be marked by the quar-

ter-master, with the approbation of the commanding officer.

On arriving in a camp which is intersected by hedges, and ditches, unequal or boggy ground, regiments will immediately make openings of communication, of 60 feet in width.

The ground in front of the encampment is to be cleared, and every obstacle to the movement of the artillery and troops is to be removed.

Commanding officers of regiments must take care, that their communication with the nearest grand route be open, and free from any impediments.

ENCASTELÉ, *Fr.* hoof-bound.

ENCASTELURE, *Fr.* the being hoof-bound.

ENCASTRER, *Fr.* to interlace one stone within another.

ENCEINTE, in *fortification*, is the interior wall or rampart which surrounds a place, sometimes composed of bastions or curtains, either faced or lined with brick or stone, or only made of earth. The *enceinte* is sometimes only flanked by round, or square, towers, which is called a Roman wall.

ENCHÉVAUCHURE, *Fr.* the junction of one thing with another, as of tiles or slate in covering houses.

ENCLAVE, *Fr.* bound, or boundary; limit.

ENCLAVER, *Fr.* in carpentry, to mortoise, or set one thing within another; as the ends of beams and rafters are in a floor.

ENCLAVER, *Fr.* also generally to enclose.

ENCLOS, *Fr.* any wall which surrounds a magazine, or garden, is so called.

ENCLOSURE. This word is used in epistolary correspondence and official communications to signify any paper which is enclosed in another. The French use the word *sous-enveloppe*, i. e. under cover.

ENCLOUER *le canon*, *Fr.* to spike the cannon. See *To NAIL*.

ENCLOUEURE, *Fr.* this term is used in the artillery, to signify the actual state and condition of any thing that has been spiked.

ENCLOUEURE, *Fr.* a prick in a horse's foot.

ENCLUME, *Fr.* an anvil.

ENCOIGNURE, *Fr.* the gable ends of a building.

ENCOLURE, *Fr.* the chest of a horse.

ENCOMBRER, *Fr.* in fortification, to fill up any hollow space, such as a stagnant lake, &c. with rubbish.

ENCORBEILLEMENT, *Fr.* any thing built beyond the wall, as a buttress.

ENCOUNTERS, in military affairs, are combats, or fights, between two persons only. Battles, or attacks by large or small armies are figuratively so called. The Marquis de Feuquières mentions four instances of particular encounters brought on by entire armies, with a design to create a general engagement.

ENCOURAGE. See *ANIMATE*.

ENCOURAGEMENT, (*encouragement*, *Fr.*) excitement to action, &c.

ENCROACHMENT, the advancement of the troops of one nation on the rights or limits of another.

ENCYCLOPÆDIA, (*encyclopédie*, *Fr.*) the whole circle of sciences; also a title given to some elaborate works, such as the *Encyclopédie Méthodique* in France, and *Encyclopædia* in England and Scotland; to which works we refer our readers for a fuller detail of many scientific articles that are slightly touched upon in this compilation.

ENDECAGON, a plain figure of 11 sides and 11 angles.

ENDORMI, *Fr.* asleep. *Soldat endormi*, a soldier asleep on guard. See the Articles of War, which direct that any sentinel who is found asleep during the period of his duty, shall be punished with death.

ENDUIT, *Fr.* a composition which is made of plaster, lime, or sand, or of lime and cement to cover the outside of walls.

ENDURCI, *Fr.* hardened; enured.

ENDURCI, *ou fait à la fatigue*, *Fr.* hardy; enured to hardships.

ENEMY, (*ennemi*, *Fr.*) In a comprehensive meaning, this term signifies any power, or potentate, with whom we are at war, together with his subjects, by sea and land; it also includes his allies, all persons adhering to and favouring his cause and undertaking; his troops, the inhabitants of his cities and villages. It more particularly applies to armed bodies of men that are acting against each other.

ENFANS *perdus*, *Fr.* forlorn hope, which consists of soldiers detached from several regiments, or otherwise appointed to give the first onset in battle, or in an attack upon the counterscarp, or the

breach of a place besieged; so called (by the French) because of the imminent danger to which they are exposed.

S'ENFERRER, *Fr.* to run upon an adversary's sword.

ENFILADE, in *fortification*, is used in speaking of trenches, or other places, which may be scoured by the enemy's shot along their whole length. In conducting the approaches at a siege, care must be taken that the trenches be not *enfiladed* from any work of the place. See *TRENCHES*.

To *ENFILADE*, is to sweep the whole length of any work, or line of troops, with the shot of artillery or small arms.

ENFILER, *Fr.* to *enfilade*; to batter and sweep with cannon-shot, the whole extent of a straight line.

S'ENFILER, *Fr.* to expose yourself to the enemy's fire by being posted within reach of his point blank shot; or by getting into narrow passes, whence you can with difficulty retreat, after having sustained a galling discharge of musketry.

ENFONCEMENT, *Fr.* the depth of the foundations of any building or structure.

ENFONCER, *Fr.* to break; to throw into disorder by piercing the ranks of a battalion, &c.

ENFONCER, *Fr.* to break open; to thrust in; to sink; to rout.

ENFONCER un bataillon, *Fr.* to throw a battalion into disorder by forcibly breaking through its ranks.

ENFONCER un escadron, *Fr.* to break through a squadron.

ENFONCER les rangs, *Fr.* to break the line, or to throw the ranks of an armed body into confusion.

S'ENFONCER, *Fr.* to rush into; to push forward with impetuosity.

ENFONCER une porte ouverte, *Fr.* a figurative expression, signifying to make much of nothing.

ENFONCEUR de portes ouvertes, *Fr.* a great talker; a vaunter; a boaster of feats which are inconsiderable.

ENFONCER les ennemis, *Fr.* to plunge into the thickest of a body of armed men, who are combating against you.

ENFOUR, *Fr.* to hide, or bury in the ground; as

ENFOUR ses talens, *Fr.* to hide one's talents, not to exert them.

ENFOURCHEMENT, *Fr.* the first declivities of the angles in Gothic vaults, whose *voussoirs* are diagonalwise.

ENGAGEMENT, *Fr.* See *ENLISTMENT*.

ENGAGEMENT. See *BATTLE*.

ENGAGER une affaire, *Fr.* to bring the enemy to a general engagement, by having previously attacked him in a variety of ways.

ENGAGER le combat, *Fr.* to bring to action; to force another to fight.

ENGAGER un soldat, *Fr.* to enlist a soldier.

S'ENGAGER, *Fr.* to enlist one's-self; also to promise, to pass one's word; also to be security.

S'ENGAGER dans un parti, *Fr.* to join or side with any particular party, or faction.

To *ENGARRISON*, to protect any place by a garrison.

ENGERBER, *Fr.* to place barrels of gunpowder in a magazine in rows, one over the other.

ENGINE, (*engin*, *Fr.*) a machine which is used for lifting up stones or beams in building houses.

ENGINES, in military mechanics, are compound machines, made of one or more mechanical powers, as levers, pulleys, screws, &c. in order to raise, project, or sustain, any weight, or produce any effect which could not be easily effected otherwise.

ENGINE to drive fuzes consists of a wheel with a handle to it, to raise a certain weight, and to let it fall upon the driver, by which the strokes become more equal.

ENGINE to draw fuzes has a screw fixed upon a three-legged stand, the bottom of which has a ring to place it upon the shell; and at the end of the screw is fixed a hand-screw, by means of a collar, which being screwed on the fuze, by turning the upper screw, draws out or raises the fuze.

ENGIN à verge, also called in ancient time, *engin à verge et bombardes*, a projectile machine which was served with cannon, and which remained in use after several other warlike machines had been laid aside.

ENGINEER, commonly applied to an officer who is appointed to inspect and contrive any attacks, defences, &c. of a fortified place, or to build or repair them, &c.

The art of fortification is an art which stands in need of so many others, and whose object is so extensive, and its operations accompanied with so many vari-

ous circumstances, that it is almost impossible for a man to make himself master of it by experience alone; even supposing him born with all the advantages of genius and disposition possible for the knowledge and practice of that important art. We do not pretend to deny that experience is of greater efficacy than all the precepts in the world; but it has likewise its inconveniences as well as its advantages; its fruits are of slow growth; and whoever is content with pursuing only that method of instruction, seldom knows how to act upon emergencies of all kinds, because old age incapacitates him from exercising his employment. Experience teaches us, through the means of the errors we commit ourselves, what theory points out at the expense of others. The life of man being short, and opportunities of practice seldom happening, it is certain nothing less than a happy genius, a great share of theory and intent application joined to experience, can make an engineer one day shine in his profession. Whence it follows, that less than the three first of the four necessary qualities, should not be a recommendation for the reception of a young gentleman into the corps of engineers.

The fundamental sciences, and those absolutely necessary, are arithmetic, geometry, mechanics, hydraulics, and drawing. Without arithmetic it is impossible to make a calculation of the extent, and to keep an account of the disbursements made, or to be made; nor without it can an exact computation be made upon any occasion whatsoever.

Without geometry, it is impossible to lay down a plan, or map, with truth and exactness, or settle a draught of a fortification, or calculate the lines and angles, so as to make a just estimation, in order to trace them on the ground, and to measure the surface and solidity of their parts.

Mechanics teach us the proportions of the machines in use, and how to increase, or diminish, their powers as occasion may require; and likewise to judge whether those which our own imagination suggests to us, will answer in practice.

Hydraulics teach us how to conduct waters from one place to another, to keep them at a certain height, or to raise them higher.

How fluently soever we may express

ourselves in speaking, or writing, we can never give so perfect an idea as by an exact drawing; and often in fortification both are wanted; for which reason the art of drawing is indispensably necessary for engineers.

To the qualities above mentioned, must be added activity and vigilance, both which are absolutely necessary in all operations of war, but especially in the attack of such places as are in expectation of succours. The besieged must have no time allowed them for consideration; one hour lost at such a juncture often proves irreparable. It is by their activity and vigilance, that engineers often bring the besieged to capitulate, much sooner than they would have done, if those engineers had not pushed on the attack with firmness and resolution. Want of vigilance and activity often proceed from irresolution, and that from weakness of capacity.

As the office of an engineer requires great natural qualifications, much knowledge, study, and application, it is but reasonable, that the pay should be proportioned to that merit which is to be the qualification of the person employed. It ought always to be remembered that he must be at an extraordinary expense in his education, and afterwards for books and instruments for his instruction and improvement, as well as for many other things; and that he may be at liberty to pursue his studies with application, he must not be put to shifts for necessaries. It should likewise be considered, that if an engineer do his duty, be his station what it will, his fatigue must be very great; and, to dedicate himself wholly to that duty, he should be divested of all other cares.

Amongst us the word engineer is of modern date, and was first used about the year 1650, when one Capt. Thomas Rudd had the title of chief engineer to the king. In 1600 the title given to engineers was trench-master; and in 1622, Sir William Pelham, and after him Sir Francis Vere, acted as trench-masters in Flanders. In the year 1634, an engineer was called camp-master-general, and sometimes engine-master; being always subordinate to the master-general of the ordnance.

At present the corps of *Royal Engineers in England*, consists of 1 colonel in chief, 1 colonel en second, 3 colonels commandant, 6 colonels, 12 lieutenant-

colonels, 30 captains, 30 second captains, 60 first lieutenants, 30 second lieutenants, and 1 brigade major.

The establishment of the corps of *Invalid Engineers* comprises a colonel, 2 lieutenant-colonels, 4 captains, 1 second captain, first lieutenant and second lieutenant.

The corps of *Royal Engineers in Ireland* consists of a director, colonel, lieutenant-colonel, major, captain, captain-lieutenant and captain, and two first lieutenants.

ENGINEERY, the act of managing artillery; also engines of war.

ENGORGEMENT, *Fr.* the stoppage of any communication.

ENGORGER, *Fr.* to fill up with combustible materials. This term is applied to artificial fire-works.

ENGUARD. See GUARD.

ENHARDIR, *Fr.* to embolden; to encourage; as *enhardir les soldats*, to encourage the soldiers.

EN-JOUE, *Fr.* a word of command among the French, which corresponds with *present* in platoon firings. It literally means *to your check*.

ENLARGÈMENT, the act of going, or being allowed to go, beyond prescribed limits; as the extending the boundaries of an arrest, when the officer is said to be enlarged, or under arrest at large.

ENLEVER *un convoi, un détachement*, *Fr.* to take a convoy or detachment, by surprize, and in spite of any resistance which might be made.

ENLIER, *Fr.* to fit; to fasten together.

ENLISTMENT, the act of taking a bounty and enlisting for a soldier, on limited or unlimited service.

ENNEAGON, (*ennéagone*, *Fr.*) in *geometry* or *fortification*, is a figure consisting of nine angles, and as many sides, capable of being fortified with the same number of bastions.

ENRANK, to place in orderly or regular rows.

ENRAYER, *Fr.* to put the spokes to a wheel; to trig a wheel; to make the first furrow.

ENRAYOIR, *Fr.* a trigger.

ENRAYURE, *Fr.* the first furrow. For gun-trigger, see DÉTENTE.

ENRÉGIMENTER, *Fr.* to enrol; to form several companies into a regiment.

ENROCHÉMENT, *Fr.* the making marshy ground solid.

ENROLEMENT, *Fr.* enrolment.

This term, according to the military acception of it in the French service, differs from the words *engagement, enlistment*, inasmuch as in some instances, the officer enrolls or enlists a soldier without his consent; whereas in others the soldier is enrolled, after having declared that he voluntarily enlisted.

ENROLEMENT *par argent*, *Fr.* the act of recruiting soldiers by means of bounties.

ENROLLED, } See INLISTED.
ENROLEMENT, }

ENROULEMENT, *Fr.* This term is applied to every thing which is made with a spiral inclination.

ENSANGLANTER, *Fr.* to make bloody; to imbrue; to bedrench in blood.

ENSCONCE, to cover as with a fort.

ENSEIGNE, *ou porte enseigne*, *Fr.* the colours, originally derived from the Latin word *insignire*. The French designate all warlike symbols under the term *enseigne*; but they again distinguish that word by the appellations of *drapeaux*, colours, and *étendards*, standards. *Drapeaux*, or colours, are particularly characteristic of the infantry; *étendards*, or standards, belong to the cavalry. We make the same distinctions in our service. See COLOURS.

Porte-ENSEIGNE, ou Porte-drapeau, *Fr.* This term is also used among the French, to signify the soldier who is entrusted with the standard or colours, for the purpose of relieving the officer occasionally.

ENSEIGNE *de vaisseau*, *Fr.* the lowest commissioned officer in the French navy.

ENSEMBLE, *Fr.* together; the exact execution of the same movements, performed in the same manner, and by the same motions; it is the union of all the men who compose a battalion, or several battalions or troops of cavalry, who are to act as if put in motion by the same spring, both wings as well as the center. Upon the strict observation of this *ensemble* every success depends, but it is not to be acquired except by constant practice.

Tout ENSEMBLE (in architecture) of a building, the whole work and composition considered together, and not in parts.

ENSHIELD, to cover from the enemy.

ENSIFORM, having the shape of a sword.

ENSIGN, in the military art, a banner, under which the soldiers are ranged according to the different regiments they belong to. See COLOURS.

ENSIGN, or *ensign-bearer*, is an officer who carries the colours, being the lowest commissioned officer in a company of foot subordinate to the captain and lieutenant. The word *ensign* is very ancient, being used both by the Greeks and Romans, and amongst both foot and horse. *Ensigns* belonging to the foot were either the common ones of the whole legion, or the particular ones of the manipuli. The common *ensign* of the whole legion was an eagle of gold or silver, fixed on the top of a spear, holding a thunderbolt in his talons, as ready to deliver it. That this was not peculiar to the Romans, is evident from the testimony of Xenophon, who informs us, that the royal *ensign* of Cyrus was a golden eagle spread over a shield, and fastened on a spear, and that the same was still used by the Persian kings. In the rustic age of Rome, the *ensign* was nothing more than a wisp of hay carried on a pole, as the word *manipulus* properly signifies. The *ensign* of the horse was not solid, as the others, but consisted of a cloth, somewhat like our colours, distended on a staff; on which the names of the emperors were generally inscribed. The religious care the soldiers took of their *ensigns* was extraordinary: they worshipped them, swore by them, (as at present several European powers do,) and incurred certain death if they lost them. The Turks and Tartars make use of horses tails for their *ensigns*, whose number distinguishes the rank of their commanders: for the sultan has 7, and the grand vizier only 3, &c.

ENTABLATURE, (*entablement*, Fr.) a term used in civil architecture. It is that part which is supported by the column and the capital. The *entablature* is composed of three chief members, the *architrave*, the *frize*, and the *cornice*.

ENTAMÉ, Fr. This word is applied to a person who has suffered any imputation, as *Un officier entamé*, an officer upon whose character some imputation rests.

Se laisser ENTAMER, Fr. to bear a slur.

ENTAMER *une troupe, une armée, un ouvrage*, Fr. to rout a body of armed men, to overthrow an army. It also means to destroy a work by blowing it up, or by battering it with cannon.

ENTAMER *des opérations de guerre*, Fr. to commence warlike operations.

ENTAMER *la paix*, Fr. to make proposals of peace.

ENTAMURE, Fr. the first cut.

ENTAMURES *de carrières*, Fr. the rough pieces of stone which are taken out of a quarry, when first discovered.

ENTASSER, Fr. to heap up. *Entasser les morts sur le champ de bataille*, to collect the dead on the field of battle, previous to their being committed to the earth.

ENTENDU, Fr. knowing; well performed; skilful; ordered.

ENTERPRISE, in military history, an undertaking attended with some hazard and danger.

ENTERPRISER, an officer who undertakes or engages in any important and hazardous design. This kind of service frequently happens to the light infantry, light horse, and hussars.

To ENTERTAIN, to receive for the purpose of taking into consideration; as to entertain a memorial.

ENTERTAINMENT, an obsolete word signifying the state of being in pay, as soldiers or servants, &c.

ENTHUSIASM, heat of imagination; violence of passion; confidence of opinion.

Military ENTHUSIAST, one of elevated fancy, or exalted ideas, who despises all domestic comfort, and sacrifices life either for a reputation in the breath of others, or from pure devotion to his king and country, as was the case of many of our bravest officers at the battle of Waterloo.

ENTIRE, (*entier*, Fr.) whole; not mutilated.

ENTIRE, or rank ENTIRE, a line of men side by side. When behind each other they are said to be in file. See INDIAN files.

ENTOISER, Fr. to collect raw, or coarse, materials together, such as shards, rubbish, &c. and to square them, so that they may be measured by the foot and toise.

ENTONNOIR, Fr. the cavity, or hole, which remains after the explosion of a mine. It likewise means the tin-case, or port-feu, which is used to convey the priming-powder into the touch-hole of a cannon. It also signifies a funnel.

ENTORSE, Fr. a wrench; a sprain.

ENTOURS, Fr. the adjacent parts.

ENTOURER, Fr. to surround; as

Entourer l'ennemi, to surround the enemy.

S'ENTR'ACCUSER, *Fr.* to accuse one another; to recriminate.

S'ENTRAIDER, *Fr.* to assist one another.

ENTRAINER, *Fr.* to drag. The French say figuratively,

ENTRAINER les suffrages du peuple, *Fr.* to carry the votes of the people.

ENTRAINER les cœurs, *Fr.* to gain over the hearts, or affections.

ENTRAVER, *Fr.* to shackle.

ENTRAVES, *Fr.* shackles; fetters; restraints; also obstacles; difficulties thrown in the way of any thing.

ENTRÉE d'honneur des gouverneurs, & lieutenans généraux des provinces, *Fr.* the solemn entry of governors, general officers, &c. into the towns, citadels, castles and forts, within the district of which they have the command.

ENTREPAS, *Fr.* a half-canter.

ENTREPOTS, *Fr.* magazines and places appropriated in garrison towns, for the reception of stores, &c. In a mercantile sense it means an intermediate public ware-house, where goods are deposited, and whence they may be forwarded to different quarters within or beyond the immediate confines of a country.

ENTREPRENDRE, *Fr.* to undertake any thing from one's own mind, or in consequence of a superior order.

ENTREPRENDRE une guerre, un siège, une bataille; to put the armed strength of a country in action by marching different bodies of troops against fortified places, by embarking them for foreign service, or by rendering them subservient to military purposes in any other way.

ENTREPRENDRE sur des quartiers, *Fr.* to appear in force against an enemy's quarters, with the intention of driving him from them.

ENTREPRENEUR, *Fr.* See CONTRACTOR.

ENTREPRISE, *Fr.* See ENTERPRISE.

S'ENTREQUERELLER, *Fr.* to quarrel together; to disagree.

ENTRETENIR une armée, *Fr.* to provide the necessary clothing, pay, and subsistence of an army.

ENTRETENIR la paix, *Fr.* to keep up the bonds of national amity, by a strict observance of treaties, &c.

ENTRETENIR la guerre, *Fr.* to make the best use of military resources, for the support of national glory, &c.

ENTRETENIR des liaisons secrètes chez l'ennemi, *Fr.* to keep up, by means of corruption and bribery, a secret communication with one or more persons in the service of an enemy.

ENTRETIEN, *Fr.* maintenance; keeping in repair.

ENTRETOISE, *Fr.* a cross quarter of timber.

ENTRETOISE de couche, *Fr.* the piece of wood which is placed between the cheeks of a gun-carriage, and upon which its breech rests.

ENTRETOISE de lunette, *Fr.* a piece of wood which is placed between the cheeks, and under the lower end, of a gun-carriage. It has a hole in the middle for the purpose of receiving an iron pin, which is used in advancing the cannon.

ENTRETOISE de mire, *Fr.* a piece of wood which is placed between the cheeks of a gun-carriage; that which is directly underneath the breech.

ENTRETOISE de volée, *Fr.* a piece of wood which is placed at the upper end of a cannon, between the two cheeks of its carriage.

ENTREVOUX, *Fr.* space between two joists, or two posts.

ENTREVUE, *Fr.* interview.

First ENTRY, a record, or first written notice, which is taken of a transaction; particularly in money concerns. Paymasters of regiments, and other public accountants, cannot be too circumspect on this head; for if a first entry be wrong, all the accomptants in Christendom could not make the statement correct.

ENVELOPE, in fortification, a work of earth, sometimes in form of a single parapet, and at others like a small rampart: it is raised sometimes in the ditch, and sometimes beyond it. Envelopes are sometimes *en zig zag*, to enclose a weak ground where that is practicable, with single lines, to save the great charge of horn-works, crown-works, and tennailles, or where room is wanting for such large works. These sort of works are to be seen at Besançon, Douay, Luxemburg, &c. Envelopes in a ditch are sometimes called sillons, contre-gardes, conserves, lunettes, &c. which words see.

ENVELOPPER, *Fr.* to surround.

ENVELOPPER une armée, *Fr.* to surround an army.

ENVOYÉ, *Fr.* The French use this term to signify an officer or trumpeter,

who is sent from one army to another, either to settle an exchange of prisoners, or to make a communication of any kind.

To ENVIRON, to surround in a hostile manner; to hem in; to besiege.

EPANCHOIR, *Fr.* a machine made of planks put together, and enclosed round, to assist the draining out of water from a foundation.

EPARGNE, *Fr.* the royal, or public, treasury.

EPAULE, in fortification, denotes the shoulder of a bastion, or the place where its face and flank meet, and form the angle, called the angle of the shoulder. See FORTIFICATION.

EPAULEMENT, in fortification, is a kind of breastwork to cover the troops in front, and sometimes in flank. In a siege, the besiegers generally raise an epaulement of 8 or 10 feet high, near the entrance of the approaches to cover the cavalry, which is placed there to support the guard of the trenches. These works are sometimes made of filled gabions, or fascines and earth. This term is frequently used for any work thrown up to defend the flank of a post, or any other place. It is sometimes taken for a demi-bastion, and at other times for a square orillon to cover the cannon of the casemate. See FORTIFICATION.

EPAULER, *Fr.* to support.

EPAULER *une batterie, un travail, une tranche, une troupe, Fr.* to raise a parapet, or any other high fence for the security of a battery, a work, trench, or troop, &c. This parapet, or fence, must be so constructed, that the view of the object is cut off from the enemy, and protected against an enfilade.

EPAULETTES, military marks of distinction, which are worn upon the shoulders of commissioned and warrant officers. Those for the serjeants and rank and file are of the colour of the facing, with a narrow yellow or white tape round it, and worsted fringe; those for the officers are made of gold or silver lace, with rich fringe and bullion. They are badges of distinction, worn on one, or both shoulders. When a serjeant or corporal is publicly reduced, the shoulder-knot is cut off by the drum-major in the front, or circle, of the battalion.

EPEE, *Fr.* a sword.

Mourir d'une belle EPEE, Fr. to be defeated by a man of superior talents, &c.

Traineur d'EPEE, Fr. a bully; also an officer of inferior capacity; a creature that wears a sword, but does not know how to use it.

Avoir l'EPEE trop courte, Fr. a figurative phrase, signifying not to have sufficient interest to carry a point.

Etre l'EPEE de chevet à quelqu'un, Fr. to be at the command of another.

Faire tout blanc de son EPEE, Fr. to boast of great interest.

Presser un homme l'EPEE dans les reins, Fr. to press a man hard; or to put home questions.

Faire un beau coup d'EPEE, Fr. to make a fine job.

Passer au fil de l'EPEE, Fr. to put to the sword.

ÉPERON, *ou contre-fort, Fr.* a sort of buttress, which is built against a wall in order to support it: or the better to enable it to bear a weight of earth; *éperon* also means a spur.

ÉPERONNER, *Fr.* to spur.

ÉPERONNIER, *Fr.* a spurrier.

ÉPERONNIERE, *Fr.* a spur-leather.

EPHATIS, a purple glove, which, among the Romans, was always worn by their warriors, or by their comedians on the stage, when they performed the part of a warrior.

EPIBATE, Roman seamen, who sometimes did soldiers' duty.

ÉPICU, *Fr.* a weapon in the shape of a halbert, with a sharp pointed iron. The shaft was four or five feet long.

EPICYCLOID, a curve formed by the revolution of the periphery of a circle along the convex, or concave, part of another circle.

ÉPIER, *Fr.* to watch; to observe.

ÉPIER *l'ennemi, Fr.* to obtain intelligence relative to the movements, &c. of an enemy. A French author very properly observes, that able generals can always obtain information concerning the designs of their adversaries, without entrusting the source, or sources, of that information to a third person: he concludes by saying, *Happy is that chief who writes more himself, than he has occasion to dictate to his secretary!*

ÉPIGNARE, *Fr.* a small piece of ordnance which does not exceed one pound in caliber.

EPIGRAPH, (*épigraphe, Fr.*) inscriptions mentioning when, and by whom a building has been erected, are so called.

ÉPINGLETTE, *Fr.* an iron needle with which the cartridge of any large

piece of ordnance is pierced before it is primed.

ÉPIS, *Fr.* jetties made of fascine work and stones along the banks of a river to prevent the current from wearing them away. These jetties are also thrown out along the sea-shore, as is the case at Ostend and Calais. They are sometimes made of mason-work, as at Dover, on the S. E. side.

EPIZYGES, two bars of iron, which were used in the catapulta.

ÉPONGE, *Fr.* a sponge.

S'ÉPOUFFER, *Fr.* to steal away; to sculk.

EPOUVANTE, *Fr.* a sudden panic with which troops are seized, and by which they are induced to retreat without any actual necessity for so doing.

Donner l'ÉPOUVANTE, *Fr.* to force an enemy to retreat precipitately, leaving his baggage, &c. behind. This is effected by means of a sudden march, by surprize, and by some ingenious manœuvre.

Prendre l'ÉPOUVANTE, *Fr.* to be seized with a sudden panic; to retreat in disorder.

ÉPREUVE, *Fr.* proof; trial. See **PROOF**.

Homme à toute ÉPREUVE, *Fr.* a man who may be trusted and depended upon.

ÉPROUVETTE, a machine to prove the strength of gunpowder. There are different sorts of epreuves, according to the fancy of different nations who use them. Some raise a weight, and others throw a shot, to certain heights and distances. Among the French, for gunpowder to pass proof, it was required that it should carry a shot sixty pounds weight to the distance of fifty toises.

EPTAGON. See **HEPTAGON**.

ÉPUISES volantes, *Fr.* mills of a simple construction, which serve to raise, or drain, the water, so as to make a solid foundation for such works as are to be erected on a marshy soil.

EPULÆ militares, military banquets. It was customary amongst the Romans, when a general was saluted *imperator*, or when an officer was promoted to the generalship, to give a feast to the soldiers, in order to gain their support. The generals would do the same before a battle to encourage the men, and after the action to refresh them. This is not the practice of modern generals.

ÉPURE, *Fr.* the large plan of a building.

EQUAL, (*égal*, *Fr.*) is a term of re-

lation between two, or more, things of the same magnitude, quantity or quality.

EQUAL circles are those whose diameters are equal.

EQUAL angles are those whose sides are inclined alike to each other, or that are measured by similar parts of their circles.

EQUAL figures are those whose areas are equal, whether the figures be similar, or not.

EQUAL solids are such as comprehend, or contain, each as much as the other, or whose solidities and capacities are equal.

EQUAL geometrical ratios, are those whose least terms are similar aliquot, or aliquant parts, of the greater.

EQUAL arithmetical ratios are those wherein the difference of the two less terms is equal to the difference of the two greater.

EQUALITY, (*égalité*, *Fr.*) emblematically has been represented by a lady lighting two torches at once; and practically, by a mob seizing both torches and setting fire to every species of property, under a wild conception, that all men are equal, and have consequently a right to one another's goods and chattels. This was the case in France at the commencement of her revolution.

To EQUALIZE, in a military sense, to render the distribution of any number of men equal as to the component parts.

To EQUALIZE a battalion, to tell off a certain number of companies in such a manner, that the several component parts shall consist of the same number of men. In this case the grenadier and light infantry companies are squared with the rest of the battalion.

EQUANGULAR, having equal angles.

EQUARRER, *Fr.* to make a piece of stone, or wood, perfectly square.

EQUATION, an expression of the same quantity in two dissimilar terms, but of equal value. See **ALGEBRA**.

ÉQUELÉ, *Fr.* a word generally applied to any piece of ordnance, or musketry, but chiefly to the former, when, by frequent use, its mouth has been widened, and the direction of the ball, or bullet, is consequently affected.

ÉQUERRE, *Fr.* an instrument made of wood, or metal, which serves to trace and measure right angles, and to obtain a perpendicular line upon an horizontal one. This instrument is absolutely necessary to miners.

EQUERRY, the master of the horse. It likewise means any person who is appointed to attend the King, or Prince of Wales, in that capacity.

EQUESTRIAN *statue*, the inanimate resemblance, in bronze, stone, or marble, of any person mounted on horseback.

EQUESTRIAN *order*, among the Romans, signified their knights or equites; as also their troopers, or horsemen, in the field; the first of which orders stood in contradistinction to the senators, as the last did to the foot; each of these distinctions was introduced into the state by Romulus.

EQUIANGLE, in geometry, any two figures whose angles are equal. Similar triangles, for instance, are equiangles, and have their sides proportionate to each other.

EQUICRURAL *triangle*, an *isosceles*, or a triangle having equal legs.

EQUIDISTANT, in geometry, is a term of relation between two things which are, every where, at one equal, or the same, distance from each other: thus parallel lines are said to be *equidistant*, as they neither approach nor recede; and parallel walls are equidistant from each other.

EQUILATERAL, (*équilatre*, Fr.) in geometry, equally sided, or whose sides are all equal. Thus an *equilateral triangle* is one whose sides are all of an equal length. All regular polygons and regular bodies are *equilateral*.

EQUILIBRIUM, equality of weight, or power.

EQUINOMES, Fr. in geometry. This term is applied to the angles and sides of two figures which follow each other in the same order.

To **EQUIP**, (*équiper*, Fr.) to furnish an individual, a corps, or an army, with every thing that is requisite for military service; such as arms, accoutrements, uniforms, &c. &c.

EQUIPAGE, in a military sense, is all kinds of furniture made use of by the army; such as

Camp-EQUIPAGE, } tents, kitchen-fur-
Field-EQUIPAGE. } niture, saddle-
horses, baggage-wagons, bat-horses,
&c.

ÉQUIPAGES, *ou bagages d'une armée*, Fr. Under this term are comprehended military stores, camp equipage, utensils, &c. with which an army is usually furnished. This word is used

as to any particular department, or component part, of an army, viz. *équipages d'artillerie*, stores, ammunition, tumbrils, cannon-ball, &c. for the use of the artillery.

ÉQUIPAGES *d'un régiment, d'une troupe*, Fr. arms, accoutrements, &c. belonging to a regiment, or armed body.

Gros ÉQUIPAGES, Fr. four-wheeled wagons, caissons, &c.

Menus ÉQUIPAGES, Fr. Under this term are comprehended led horses, mules, and other beasts of burthen; carriages with two wheels, &c.

L'ÉQUIPEMENT *des soldats*, Fr. the equipment or complete dress, including accoutrements and arms, &c. of soldiers.

Petit ÉQUIPEMENT, Fr. half-mountings.

EQUIPMENT, the act of getting completely equipped, or supplied with every requisite for military service.

EQUITATION, the art of managing horses. According to *Diodorus Sicilianus*, the Thessalians were the first who trained horses and rendered them fit for human service. The Athenians and Greeks, who paid great attention to *equitation*, were indebted to them for their first notions of that art. The latter especially made great progress in it, not only with regard to the training, &c. but they also discovered remedies for their several diseases.

EQUITES, an order of equestrian knights introduced among the Romans by Romulus.

EQUITES *singulares*, a particular corps of cavalry raised by order of Augustus, for his body guard. They were called *equites singulares*, on account of their being selected from other corps.

EQUI TRIUMPHALES, four white horses abreast that drew the triumphal car, when a general made his entry into Rome.

ERIGER, Fr. to raise; to build.

S'ÉRIGER, Fr. to invest one's-self with any particular authority, as *S'ériger en juge*, to assume the tone and character of a judge.

ESCADRON, Fr. squadron. This term is derived from the Italian *scara* or *scadra*, corrupted from the Latin quadrum. Froissart was the first French writer that made use of the word *escadron* to signify a troop of horse drawn out in order of battle. The term *escadron* is more ancient than *bataillon*. See SQUADRON.

ESCADRONNER, *Fr.* to form squadron.

ESCALADE, *Fr.* See SCALADE.

ESCALADE *d'un soldat* was used in the old French service to express the act of a soldier who got into a town, camp, or quarters, by scaling the ramparts, &c. When discovered in the act of so doing, the sentinels had orders to fire at him; and if apprehended, he was tried and condemned to death.

ESCALADER, *Fr.* to scale a place.

ESCALE, *Fr.* a machine used to apply the petard.

ESCAPADE, *Fr.* irregular motion of a horse.

ESCARMOUCHE, *Fr.* See SKIRMISH.

ESCARPE, *Fr.* the outward slope, or talus, of the rampart.

ESCARPER, *Fr.* in cutting a rock or any natural soil, to give as little slope as possible.

ESCARPMENT. See DECLIVITY.

ESCARPOLETTE, *Fr.* a swing.

ESCAUPILLE, *Fr.* a kind of quilted blanket, cut in the shape of a cassock, or long gown. This armour was suggested by necessity, when the Spaniards under Fernand Cortez invaded Mexico. They had no wire to make coats of mail with, to protect themselves against the arrows of the Indians; but they were taught, by experience, that a wadding between two pieces of cloth, well quilted, was a better safeguard than knitted brass wire.

ESCHARPE, (*more correctly* ÉCHARPE, *Fr.*) a scarf. In ancient times, a military mark to distinguish officers and soldiers from the rest of the people. Before a regular clothing was adopted among the nations in Europe, officers and soldiers appeared with two scarfs of different colours, which crossed each other before and behind, in order to point out the country and the corps to which the wearer of them belonged. The scarf was preserved among the French, as late down as the reign of Louis the XIVth. It consisted of a piece of white silk. Scarfs, however, were continued much later among other nations, particularly among the Germans, who wear them to this day across their uniforms.

ESCLISSES, *Fr.* splents bound about a broken leg.

ESCOMPTE, *Fr.* discount; deduction made from a principal sum of money.

ESCOPÈCHES, *Fr.* large pieces of

wood, or rafters, which are used in scaffolding.

ESCOPERCHE, *Fr.* an engine which serves to raise weights.

ESCOPEPTE, *Fr.* a kind of pike three feet and a half long, formerly used by the *carabiniers*. There is also a firearm called *escopette* which resembles a small rifle piece; it carries five hundred paces. The French cavalry had *escopettes* so late as under Lewis XIII.

ESCOPETTERIE, *Fr.* a volley.

ESCORE, *Fr.* a steep rock or coast.

ESCORT, (*escorte*, *Fr.*) safe-guard. See CONVOY.

ESCORT *of deserters* consists in general of a corporal and three rank and file, unless the number exceed four, or five. Deserters are conducted by them a certain distance, and either delivered over to the next military station, or lodged in some county gaol.

ESCOUADE, *Fr.* in the old French service, generally meant the third part of a company of foot, or a detachment. Companies were divided in this manner for the purpose of more conveniently keeping the tour of duty among the men.

ESCOUT. See SPY.

ESCRIME, *Fr.* the art of fencing; tilting.

ESCRIMEUR, *Fr.* a fencer; one who understands the sword.

ESCUAGE, an ancient fental tenure, by which the tenant was bound to follow his lord to war, or to defend his castle.

ESKY-BAS, the Turkish soldier who carries the colours: in general he is the senior man in the company.

ESPACES, *Fr.* regulated intervals between the battalions, the companies, and the tents in a camp, between the ranks in a manœuvre, on a march, or in battle.

ESPADON, in old military books, a kind of two-handed sword, having two edges, of great length and breadth; formerly used by the Dutch.

ESPADONNER, *Fr.* to fight with the back-sword.

ESPÈCES, *Fr.* coin. Hence *payer en espèces sonnantes*, to pay in cash, or ready money.

ESPION, *Fr.* a spy.

ESPIONNAGE, *Fr.* the act of obtaining and giving intelligence; which is as dangerous to the employer as it is to the person who undertakes it.

Double ESPIONNAGE, *Fr.* the art of

obtaining intelligence from both sides, and of betraying both. A sound government has no occasion for either, especially under a free constitution like that of England. It may suit the rottenness of foreign courts, and agree with Machiavelian duplicity. A wise general must, however, sometimes run the hazard of being betrayed by making use of such detestable means. *Espionnage*, even among the French, is called, *Un métier infame*, an infamous trade.

ESPLANADE, in fortification, the sloping of the parapet of the covert-way towards the field, and is therefore the same as the glacis of the counterscarp; but begins to be antiquated in that sense, and is now only taken for the empty space between the glacis of a citadel, and the first houses of the town.

ESPONTON, *Fr.* a sort of half pike.

ESPRINGAL, in the ancient art of war, a machine for throwing large darts, generally called *muchetta*.

ESPRINGARDE, not ESPRINGALE, *Fr.* a machine for throwing stones. In the *Dictionnaire de l'Académie Française*, it is written ESPRINGALE, and by some ESPRINGOLDE; but Monstrelet, Fauchet, and Froissart have it as above.

ESPRIT, *Fr.* mind; genius; sense, &c.

ESPRIT *de corps*, *Fr.* This term is generally used among all military men in Europe. It may not improperly be defined a laudable spirit of ambition which produces a peculiar attachment to any particular corps, company, or service. Officers, without descending to mean and pitiful sensations of selfish envy, under the influence of a true *esprit de corps*, rise into an emulous thirst after military glory. The good are excited to peculiar feats of valour by the sentiments it engenders, and the bad are deterred from ever hazarding a disgraceful action through a secret consciousness of the duties it prescribes. Grenadiers and light infantry men are peculiarly susceptible of this impression. What a common battalion man might do with impunity, would entail dishonour and reproach upon either of the flanks. The same observation holds good with respect to regiments. There are some corps in the British army whose uniform good conduct and behaviour before the enemy have, from the first of their establishment, secured to them an enviable reputation; the consequence of which is, that every young

man who gets a commission in a corps of this cast, naturally feels anxious, not only to support, but to add, if possible, to the fame it possesses. Such a sentiment creates an *esprit de corps*. The Highland regiments, and the Fusileer corps, and also the Guards, possess this feeling to a high degree.

ESQUADE. See SQUAD.

S'ESQUICHER, *Fr.* to avoid coming to blows.

ESQUILLE, *Fr.* splinter of a broken bone.

ESQUINE, *Fr.* literally, a horse's hack. *Un cheval fort d'esquine*, a horse strong in the loins. *Un cheval foible d'esquine*, a horse weak in the loins.

ESQUIRE, (*écuyer*, *Fr.*) in the general acceptation of the term, a gentleman who bears arms, a degree of gentry next below a knight. In the British service the rank of captain, whether in the line, militia, or volunteers, entitles the person to be called esquire; that of lieutenant, cornet, or ensign, makes the individual a gentleman, i. e. the king's sign manual or the signature of the lord lieutenant authorizes him to be so distinguished.

ESQUIRES *of the king's body*, certain officers belonging to the court. See ARMIGER.

S'ESQUIVER, *Fr.* to steal away: to go off as a thief does. It is not always used in a bad sense.

ESQUISSE, *Fr.* the first sketch or outlines of a drawing; it is also called *griffonnement*.

ESSAI *des armes à feu, de la poudre à tirer*, *Fr.* the act of proving fire-arms, and of ascertaining whether gun-powder be fit for service.

ESSAY-hatch, among miners a term for a little trench, or hole, which they dig to search for ore.

ESSEDAIRES, *Fr.* a kind of warriors in old times, who were conveyed in wagons, but fought on foot, and when pressed, retired again to their wagons.

ESSES, in the train of artillery, are fixed to draught-chains, and made in the form of an S; one end of which is fastened to the chain, and the other hooks to the horses harness, or to a staple: they serve likewise to lengthen, and piece, chains together.

ESSIEU, *Fr.* a piece of solid timber which runs across the carriage, enters the wheel at both ends, and is fastened by means of an S. The word is some-

times written *aissieu*, and signifies literally an axle-tree.

ESSUYER le feu, *Fr.* to remain exposed to the fire of cannon, or musketry.

ESSUYER le premier feu, *Fr.* to receive the enemy's fire without attempting to fire first.

ESSUYEZ la pierre, *Fr.* a word of command in the platoon exercise, which signifies to try the flint.

ESTABLAGE, *Fr.* the harness which is between the two shafts of a cart, and serves to support them.

ESTRAC, *Fr.* an old word used in the manège to signify a narrow chested lank horse; at present the French say—*Un cheval étroit*.

To ESTABLISH, to fix, to settle. It is likewise a technical phrase, to express the quartering of any considerable body of troops in a country. Thus it is common to say, the army took up a position in the neighbourhood of —, and established its head-quarters at —.

ESTABLISHMENT, in the military sense, implies the quota of officers and men in an army, regiment, troop, or company.

Peace-ESTABLISHMENT is the reduction of corps to a certain number, by which the aggregate force of a country is diminished, and its expenditure lessened.

War-ESTABLISHMENT is the augmentation of regiments to a certain number, by which the whole army of a country is considerably increased.

Military-ESTABLISHMENT, an establishment so called in India, comprehending the allowances for tent, camels and drivers, which must always be kept in readiness, as no officer knows when and where he may be ordered to march, at a minute's notice. Serious disturbances were occasioned in that part of the British empire by a retrenchment of some of these allowances.

ÉTABLISSEMENT, *Fr.* an advantageous position, in which a body of troops, well supplied with provisions, will make a successful stand.

ESTACADE, *Fr.* a dyke constructed with piles, in the sea, a river, or morass, to oppose the entry of troops, or of succours.

ESTAFETTE, a military courier, sent express from one part of an army to another.

ESTAFFE, *Fr.* contribution money.

ESTAFILADE, *Fr.* a cut across the face.

The three ESTATES (of the realm) are three orders of the kingdom of England, viz. the lords spiritual, the lords temporal, constituting the peers or Upper House, and the Commons who make the Lower House. The Mutiny Bill is annually discussed in the latter, and, with the consent of the lords, passes into a code of laws for the government of the army; subject, nevertheless, to the king's approbation.

ESTERLING. See **STERLING**.

ESTIMATE, computation; calculation. Army estimates are the computation of expenses to be incurred in the support of an army for a given time.

ESTOC, *Fr.* the point of a sword or sabre, or of any other weapon.

D'ESTOC et de TAILLE, *Fr.* to push and thrust vigorously at one's antagonist, in every direction.

ESTOCADÉ, *Fr.* a long rapier, (called, in derision, *brette*, or *flamberge*,) used by duellists.

ESTOILE. See **ÉTOILE**.

ESTRADE, *Fr.* a road, or way. This word is derived from the Italian *strada*, which signifies road, street, or way. Some writers take its etymology from *Estradiotes*, a class of men on horseback, who were employed in scouring the roads, and in procuring intelligence respecting the movements of an army. See **BATTEUR d'estrade**.

ESTRADE, ou retraite, *Fr.* the retrograde movement which an armed body makes in order to avoid an engagement, or to secure a retreat after having been unsuccessful.

ESTRADIOTES, *Fr.* brave warriors, who, like the Turks and Arabs, are very expert in managing their horses. They formerly made themselves extremely formidable in that part of Italy which is called the *Apennine mountains*; for, being more hardy than the Turks, they could keep the field the whole year round. Their favourite weapon was the *zugaye*.

ESTRAMAÇON, *Fr.* a kind of sword or sabre, formerly in use. It also means the edge of a sabre.

ESTRAMAÇON, Fr. a cut over the head.

ESTRAMAÇONNER, *Fr.* to play, or fight with a sabre.

ESTRAN, *Fr.* a beach; a flat sandy shore.

ESTRAPADE, *Fr.* strappado. See **ESTRAPADE**.

ESTRAPADER, *Fr.* to give the strappado; to put to the rack.

ESTRAPASSER, *Fr.* to ride a horse beyond his strength.

ESTRAPONTIN, *Fr.* a cricket, or loose seat for the fore-part of a carriage.

ESTROPIÉ, *Fr.* maimed; lame.

Cervelle ESTROPIÉE, *Fr.* a crack-brained person.

ESTUARY, any ditch or pit where the tide comes, or is overflowed by the sea, at high water.

ÉTABLIES, *Fr.* companies, squadrons, or battalions of soldiers: so called in old times, because they were appointed together to certain places or standings, which they were to hold or make good. The term *garrison* has since been adopted.

ÉTABLIR, *Fr.* to establish.

ÉTAGE, *Fr.* See **FLOOR**.

ÉTAGE souterrain, *Fr.* the underground floor.

ÉTAGE au rez-de-chaussé, *Fr.* the ground floor.

ÉTAGE quarré, *Fr.* an even floor which has no slope, &c.

ÉTAGE en galetus, *Fr.* a garret.

ÉTAGES de batteries, *Fr.* the different stages, or small eminences, (forming sometimes a species of amphitheatre,) upon which batteries are erected, as at the flanks of bastions, &c. or in other quarters. Their use, or object, is to protect every thing in front by a considerable range of artillery. The battery which is least elevated on a bastion is called *batterie inférieure*, ou *flanc bas*, lower battery, or under flank. The next is termed *seconde batterie*, second battery, whether it consists of two or more pieces; and the highest is named *batterie supérieure*, superior, or upper battery. Advantage is often taken of the ground upon which a fortress is erected, in order to dispose artillery in this manner; and the declivity of a mountain is equally useful towards covering an army in the day of battle.

ÉTAGES de fourneaux, ou de mines, *Fr.* the various chambers, or excavations, which are made, one over the other, for the defence, or attack, of fortified places.

ÉTAIM or **ÉTAIN**, *Fr.* tin; a white metal of a consistency less hard than silver, but firmer than lead. It is used in the casting of cannon. The best quality is found in Cornwall.

ÉTALON, *Fr.* a stallion; a horse used for covering mares.

ÉTALON, *Fr.* the regulated weight, or measure, of things that are sold; as the assize of bread, &c.

ÉTALONNER, *Fr.* to take the just quantity, scantling, pattern, or size of things; to assize measures; to adjust weights, &c.

ÉTAMPER, *Fr.* a term used in farriery to signify the act of piercing a horse shoe in eight places.

Mettre en ÉTANCHE, *Fr.* to dry up; in sluices to draw off the waters, in order to examine the bottom.

ÉTANCHE, *Fr.* This word is also used with respect to flood-gates: signifying that they do not let the water out.

ÉTANÇONNER, *Fr.* In mining, and in other works of fortification, to put up stays, &c.

ÉTANÇONS, *Fr.* stays, supporters; large pieces of wood fixed vertically in the cavities of mines, for the purpose of sustaining the weight of earth that is laid upon the galleries.

ÉTANG, *Fr.* a pond; a lake; also a reservoir for water; hence probably our word *tank*.

ÉTANT, *Fr.* standing; *arbres en étant*, standing trees.

ÉTAPE, *Fr.* subsistence, or a soldier's daily allowance; a storehouse.

ÉTAPE also signifies halting day.

ÉTAPIERS, *Fr.* military purveyors, who accompany the French armies, or are stationed in particular places to supply the troops on their march.

ÉTAT, *Fr.* state; condition; roll, or list of names, &c. such as a muster-roll. *Etat* likewise means the pay list. It is also called, *état nominatif*.

ÉTAT-Major, *Fr.* staff. *Etat-major* in the French service is a more comprehensive term than staff appears to be, in our acceptance of the word. As we have in some degree adopted the term, it cannot be superfluous to give a short account of its origin, &c. Among the French, according to the author of the *Recueil Alphabétique de tous les termes propres à l'art de la guerre*, *état-major* signifies a specific number of officers who are distinguished from others belonging to the same corps. It did not follow, that every regiment was to have its staff, as the king had the power of appointing, or suppressing, staff officers at pleasure.

The *état-major général de l'infanterie*, or the general staff of the infantry, was

created under Francis I. in 1525. That of the light cavalry under Charles IX. in 1565. That of the dragoons under Louis XIV. in 1669.

The *état-major* of an infantry regiment was composed of the colonel, the major, the aid-major, quarter-master, the chaplain, the provost-marshal, the surgeon, and the attendant commissary, who was called *le commissaire à la conduite*. To these were added the lieutenant of the provostship, the person who kept the regimental register, or the greffier, the drum-major, six archers, and the executioner. By this establishment it is presupposed, that a provostship was allowed in the regiment, which was not a general regulation, but depended upon the king's pleasure.

The *état-major*, or staff of an old French regiment of *cavalry*, according to the *Ordonnance*, or military regulation, which was issued on the 4th of November, in 1651, consisted of the *mestre de camp*, or colonel of the horse, the major and the aid-major. It is therein particularly stated, that the *état-major* of a cavalry regiment shall not have a provostship, a chaplain, a surgeon, nor any other subordinate officer under that denomination.

Every fortified town or place had likewise its appropriate *état-major*, consisting of a certain number of officers, who were subject to specific and distinct regulations.

By an order dated the 1st of August, 1733, the officers belonging to the *état-major* of a garrison town, or citadel, were strictly forbidden to absent themselves more than four days from their places of residence, without especial leave from the king, not even for four days, unless they obtained permission from the governor, or commandant, of the town, or citadel. See *STAFF-CORPS*.

ÉTAT de la guerre, Fr. the necessary dispositions and arrangements agreed upon between a government, the commander in chief, and such officers as the latter may think proper to consult, in order to carry on a campaign with advantage. Properly speaking, it is the plan which is to be followed relative to the nature and number of the troops that are to be employed.

Faire ÉTAT, Fr. to presume; to think; suppose. *Je fais état qu'il y a là vingt mille hommes*, I presume there may be twenty thousand men in that place. *Faire*

état d'une chose, to be certain of a thing to depend upon having it.

LES ÉTATS, Fr. the Dutch Provinces were formerly so called; as *les états de Hollande*, the States of Holland.

ÉTENDARD, Fr. standard. This word derives its name from the circumstance of its application; being constantly stretched out, (*étendu*), or displayed. *Étendard* is more particularly applied to the standards of cavalry. It signifies, in a general sense, any mark under which men rally; also, figuratively, to take a decided part, as *lever l'étendard*.

ÉTENDRE une armée, Fr. to extend the front, or advanced posts, of an army, for the purpose of appearing formidable to the enemy, or of outflanking him. This is a most critical manœuvre, and requires the nicest judgment. The battle of Marengo would probably never have been lost by the Austrians, had not their général, Melas, weakened his center, by the extension of his flanks. This ill-judged movement gave the opening which was so dexterously seized upon by General Dessaix; to whom the French were chiefly indebted for the victory.

ÉTENDRE une tranchée, Fr. to prolong the parallels, or places of arms, either on one side only, or to the right and left of a trench.

ÉTENDRE un homme sur le carreau, Fr. to kill a man; literally to lay him flat upon the ground.

ÉTENDUE, Fr. in geometry, extent, space, size, that is, the length, breadth, and depth, or thickness, of any body or surface whatsoever.

ÉTERCILLON, *ou arcbutant*, Fr. buttress; a piece of wood which is placed transverse, or horizontally in the galleries of a mine, in order to sustain the earth on both sides; but must especially to keep the chamber well closed, and to support the corners of the gallery. See *ÉTRÉSILLOX*.

ETERNITY, (*éternité*, Fr.) infinite duration; a gulph that lies beyond that bourn from which (to use the expression of our immortal poet) no traveller returns, but into which the soldier plunges with undaunted mind. I am aware that the insertion of this article will be liable to the pert observation of unthinking coxcombs, or to the gloomy censure of unprincipled deists. It is not addressed to either of these characters; and the following anecdote will rescue it from

the imputation of not being of a military cast.

On the eve of the battle of Roucou near Liège, it was found expedient by the celebrated Marshal Saxe to give out in orders, that a body of Forlorn Hope should be ready to attack a particular battery which had been erected on a neighbouring height by the Dutch. The gentleman to whose turn of duty the forlorn hope fell, being sensible of the irregularities of his life, applied to Colonel Fenelon, a descendant of the Archbishop, and a person remarkable for piety and good order, to exchange duties; observing, that as *he* must be prepared for eternity, he could not have any objection to the proposal. The colonel cheerfully assented; the exchange of duties was allowed, and in the morning, Fenelon led the forlorn hope up to the battery, which was instantly carried by his followers; having himself been killed by the first discharge of the enemy's artillery. See RELIGION.

Cheval ÉTIQUÉ, *Fr.* a raw bone horse.

ÉTIQUETER, *Fr.* to write, or put a note, or title to; to ticket.

ÉTIQUETTE, a French term, primarily denoting a ticket or title affixed to a bag or bundle of papers, expressing its contents. It is also used, when applied to the Spanish and some other courts, to signify a particular account of what is to be done daily in the king's household. See DOCKET.

ÉTIQUETTE, from the French, a rule of conduct which is to be observed among the privileged orders of mankind, particularly at courts and at head-quarters; hence *military etiquette*.

ÉTOFFE bigarrée, *Fr.* plaid; such as is worn by the Scotch, and by Highland soldiers.

ÉTOILE, *Fr.* a small and bright artificial fire-work which is sometimes attached to sky-rockets. When it explodes it is called *étoile à pct*.

ÉTOILES, *Fr.* small star redoubts, which are constructed by means of angles rentrant and angles sortant, and have from five to eight salient points. Each one of their sides, or faces, may contain from 12 to 25 toises. This species of fortification has fallen into disuse, not only because *étoiles* do not possess the advantage of having their angle rentrant effectually flanked, but because they have been superseded by square re-

doubts, which are sooner built, and are applicable to the same purposes of defence.

ÉTOUPE, *Fr.* in pyrotechny, a thread, or match, which is prepared in a particular way, in order to light fire-works; principally such as are destined not to take fire until a given lapse of time.

ÉTOUPILLE, *Fr.* an inflammable match, composed of three threads of very fine cotton, which is well steeped in brandy mixed with the best priming gunpowder.

ÉTRANGERS, *Fr.* strangers.

Règlements militaires relatifs aux ÉTRANGERS qui arrivent aux portes d'une ville de guerre, *Fr.* rules and regulations to be observed in all garrison towns with respect to strangers. It is customary in all garrison towns abroad, not to suffer a *stranger* to enter the place without being asked, at the outward gate, his name, the place he comes from, whither he is going, and at what inn, or private house, he intends to alight. He next is brought to the officer of the guard, who has him conducted before the governor or commandant, who suffers him to proceed, if his papers are correct; if not, he is put under arrest. The inhabitants and inn-keepers are obliged to send in, within twenty-four hours, the names of their lodgers. It were to be wished that more circumspection could be observed in our own sea-ports on this head.

ÉTRANGLER, *Fr.* to strangle. This word is used among artificers in France, and signifies to tighten, or bind fast, the head, or orifice, of a cartouch, or fuse.

ÉTRAPADÉ, *Fr.* a sort of crane with a pulley. This machine was formerly used among the French to punish military delinquents; it was hence called *l'étrapade*. The unfortunate wretch had his hands tied behind his back, with ropes fastened to them; he was then hauled up, and suddenly let down within one foot of the ground; so that by means of the jerk, and through the weight of his body, every limb must instantly be dislocated. This barbarous and inhuman mode of torturing the human frame was repeated more than once, according to the degree of guilt with which the culprit stood accused or convicted. This punishment was formerly in use at Rome, for the purpose of correcting disorderly conduct at the opera, &c.

ÉTRÉSILLONS, *Fr.* in mining,

Pieces of timber which are laid cross-wise, or horizontally, in the galleries of mines in order to support the earth on each side, particularly to close up the chamber of a mine, &c.

ÉTRIER, *Fr.* stirrup; also an iron band.

ÉTRILLE, *Fr.* a curry comb; also a spunging house.

ÉTRIVIÈRES, *ou courroies*, *Fr.* stirrup leathers.

ÉTUI *mathématique*, *Fr.* a case for holding mathematical instruments.

To EVACUATE, (*évacuer*, *Fr.*) in military history, a term made use of in the articles of capitulation granted to the besieged at the time they surrender to the besiegers, and signifying to quit.

EVACUATION, (*évacuation*, *Fr.*) the evacuation of a town, or post, in consequence of a treaty between the belligerent or neutral powers, in pursuance of superior orders, or from obvious necessity.

To EVADE, to escape; to shift off.

S'ÉVADER, *Fr.* to go off clandestinely; to retreat in the night, or under any other cover.

EVAGINATION, an unsheathing, or drawing out, from a sheath, or scabbard.

EVASEMENT, *Fr.* width, extent.

Evasement d'une embrasure, *Fr.* that part of an embrasure that is facing the rampart.

EVASION, (*évasion*, *Fr.*) clandestine retreat; an escape; also a shift or trick. A quality (never of an amiable sort) which, like chicanery, is current among politicians and lawyers, but is always beneath the dignified and open character of a soldier.

EVASIVE, crafty, deceitful. It is always spoken in a bad sense.

ÉVEILLER, *Fr.* to awake; to rouse.

The French say figuratively *éveiller le lion qui dort*, to rouse, or to wake, the sleeping lion, i. e. to disturb, or provoke, a person who has another in his power.

ÉVENS, *Fr.* in fortification, ventilators, or holes that are made in the principal gallery of a counter-mine, for the circulation of air.

ÉVENT, *Fr.* vent. This word is particularly applicable to the vent or cavity which is left in cannon, or other fire-arms, after they have been proved and found defective. The vent is sometimes round and sometimes long. Vents are frequently so exiguous, that they appear like lines of a small fibre, through which

water will ooze and smoke evaporate. These pieces, whether of ordnance, or of musketry, are of course rejected.

EVERSION, *Fr.* the ruin, the overthrow of a state, occasioned by a long war, or by continual internal disturbances and seditions.

EVIDENCE, a declaration made *in voce* of what any person knows of his own knowledge relative to the matter in question. Military men are obliged to attend and give evidence before courts-martial, without any expense to the prosecutor or prisoner.

Hearsay EVIDENCE, the declaration of what one has heard from others. As in all other courts of British judicature, this species of evidence is not admissible in courts-martial.

EVOCATI were a class of soldiers among the Romans, who, after having served their full time in the army, entered as volunteers to accompany some favourite general. Hence they were likewise called *emeriti* and *beneficarii*.

EVOCATION, a religious ceremony which was always observed among the Romans at the commencement of a siege, wherein they solemnly called upon the gods and goddesses of the place to forsake it, and come over to them. When any place surrendered, they always took it for granted that their prayer had been heard, and that the *Dii Penates*, or the household gods of the place, had come over to them.

EVOLUTION, from the Latin *evolvere*, I roll out; I unravel. In the art of war, the motion made by a body of troops, when they are obliged to change their form and disposition, in order to preserve a post, occupy another, to attack an enemy with more advantage, or to be in a condition of defending themselves the better. That evolution is best, which, with a given number of men, may be executed in the least space, and consequently in the least time possible.

EVOLUTION of the *moderns* is a change of position, which has always for its object either offence or defence. The essentials in the performance of an evolution are, order, directness, and the greatest possible rapidity.

EVOLUTIONS may be divided into two classes, the simple and the compound; simple evolutions are those which consist in simple movements, which do not alter the shape or figure of the battalion, but merely afford a more or less extended

front or depth; keep it more or less closed to its flank, or center, turn its aspect to flank or rear, or break it into divisions, sub-divisions, sections or files, in order that it may unfold itself, or defile and resume its proper front, or order of battle. All the various ways of defiling, forming line, opening to right and left, closing, or deploying, doubling the ranks or files, or changing front upon either of the flanks by conversion, are called simple evolutions.

Compound evolutions are those which change the shape and figure of battalions, break them into divisions or companies, separate the companies from the main body, and again replace, or rejoin them; in a word, which afford the means of presenting a front at every direction.

Compound evolutions are practised either by repeating the same simple evolution several times, or by going through several simple evolutions, which ultimately tend to the same object.

The *EVOLUTIONS of the ancients* were formed and executed with uncommon good sense and ability. Considering the depth and size of the Grecian phalanx, it is astonishing how the different parts could be rendered susceptible of the most intricate and varied evolutions. The Roman legion, though more favourable to such changes and conversions, from being more loose and detached, did not execute them upon sounder, or better principles.

EVOLUTION (in geometry). The equal evolution of the periphery of a circle, or any other curve, is such a gradual approach of the circumference to rectitude, as that all its parts meet together, and equally evolve, or unbend: so that the same line becomes successively a less arch of a reciprocally greater circle, till at last they turn into a straight line.

EVOLUTION of powers (in algebra), extracting of roots from any given power, being the reverse of involution.

EVUIDER, Fr. to gutter; to groove; to cut in small hollows: a term used among locksmiths.

EXAGON. See *HEXAGON*.

EXAMILIAN, a famous wall two leagues long, which one of the Grecian Emperors caused to be erected on the isthmus of Corinth. Amurat II. ordered it to be demolished, but the Venetians had it erected again in 1463, in a fortnight's time.

EXAMINER, one who scrutinizes.

EXAMINER of the army accounts, a person in office, under whose inspection all claims made by the regimental agents fall; to whose office they are transmitted of course, in virtue of a general delegation of that duty to him by the secretary at war. After his examination and report, the secretary at war, in many instances, orders partial issues of money by letter to the pay-master general. No final payment is made, except under the authority of a warrant countersigned by the secretary at war, and in most instances by three lords of the treasury. The regimental agents account finally to the secretary at war.

EXAMPLE, (exemple, Fr.) any act, or word which disposes to imitation—The example of a superior officer has considerable influence over the mind of an inferior; but in no one instance does it appear more important than in the good, or bad, behaviour of a non-commissioned officer or corporal. These characters, therefore, should be particularly correct in their duties, tenacious of every principle of military honour, and remarkable for honesty. Old soldiers should likewise direct their attention to the strict observance of rules and regulations, as young recruits always look up to them for example.

EXAMINATION, a scrutiny, or investigation of abilities, conduct, &c. All officers of artillery and engineers are obliged to undergo an examination in mathematics, fortification, and gunnery, prior to their having commissions. Surgeons and assistant surgeons are examined before the medical board.

EXARCH, (exarque, Fr.) an officer formerly under the Roman emperors of Constantinople, who managed the affairs of Italy; a viceroy. The Exarchs of Ravenna possessed great powers; so much so, that Italy was balanced between them, the Lombards, and the Popes.

EXAUCTORATIO, in the Roman military discipline, differed from the *missio*, which was a full discharge, and took place after the soldiers had served in the army twenty years; whereas the *exauctoratio* was only a partial discharge: they lost their pay indeed, but still kept under their colours or vexilla, though not under the aquila or eagle, which was the standard of the legion; whence, instead of *legionarii*, they were called *sub-*

signani, and were retained till they had either served their full time, or had lands assigned to them. The *exauctoratio* took place after they had served seven-teen years.

EXCAVATION, the act of cutting, or otherwise making hollows; also the cavity formed. In military matters, it is generally applied to the place from which the earth, or other substance, has been taken by mining.

EXCELLENCY, a title anciently given to kings and emperors, but now chiefly confined to ambassadors, generals, and other persons who are not entitled to that of highness, and yet are to be elevated above the other inferior dignities.

It is likewise applicable to persons in high command; as his Excellency the Commander in Chief, &c.

EXCHANGE, in a military sense, implies the removal of an officer from one regiment to another, or from full to half-pay, and *vice versa*. It is usual on these occasions for individuals belonging to the latter class to receive a pecuniary consideration. See **DIFFERENCE**.

EXCHANGE of prisoners, the act of giving up men that have been taken in war, upon stipulated conditions which are subscribed to by contending powers.

EXCHANGE, in a general sense, signifies any contract or agreement whereby persons, or things, are exchanged for others.

EXCHANGE in money, the balance of the money of different nations, as the exchange between England and Ireland, which, notwithstanding the union, is invariably against the latter.

EXCHEQUER, the public office from which all monies are issued for the use of the army. With respect to the militia, it is enacted that the money paid for that particular service, shall be kept apart from all other money.

Officers belonging to the exchequer are not to take any fees for receiving, or issuing, such money.

To **EXCITE**, (*exciter*, Fr.) to urge one, or more persons to do certain acts, either by persuasion, or other means.

EXCITATION, (*excitation*, Fr.) the act of exciting, &c.

False EXCITATION, the act of urging one or more persons to do certain acts, by illusive means, or false reasoning.

EXCUBIÆ, in antiquity, the watches and guards kept in the day by the Roman

soldiers. They differed from the *vigila*, which were kept in the night.

EXCURSION, Fr. irruption, or incursion of one nation into another, for hostile purposes.

EXÉCUTER, Fr. The French use this verb technically. They say, *exécuter et servir une pièce*. See the particular method of so doing, under **TIRER le canon**, to fire a gun, or cannon.

EXÉCUTER, Fr. to execute, to put to death.

EXECUTION. *Military EXECUTION*, (*exécution militaire sur pays ennemi*, Fr.) the plunder and waste of a country, whose inhabitants refuse to submit to the terms imposed upon them.

Military EXECUTION also means every kind of punishment inflicted on the army by the sentence of a court-martial; which is of various kinds, such as tying up to three halberts, and receiving a number of lashes with a whip, composed of nine whip-cord lashes, and each lash of nine knots, from the drummer: or running the gantlope through the parade at guard-mounting, drawn up in two lines for that purpose; when the provost marches through with twigs or switches, and every soldier takes as many as there are prisoners to be punished: the prisoner then marches through the two lines, and each soldier gives him a hard stroke, the major riding up and down to see that the men lay on properly. When a soldier is to be punished with death, a detachment of about 200 men from the regiment to which he belongs, form the parade, when a file of grenadiers shoots the prisoner to death.

Every nation has different modes of punishment. The cat with nine tails is to punish foot soldiers; dragoons and cavalry men are generally picketed.

EXECUTORS, persons authorized by will to manage the affairs of one deceased. Paymasters, agents, or clerks, not accounting with the executors of officers or soldiers, forfeit their employment and 100*l*. See *Mutiny Act*, sect. 71.

EXEMPT, not subject; not liable to. Men of 45 years of age are exempt from serving in the militia. An aide-de-camp and brigade-major are exempt from all regimental duties while serving in these capacities. Officers on courts-martial are sometimes exempt from all other duties until the court is dissolved.

EXEMPTION, the privilege to be free

from some service, or appearance. Thus officers and principals in the militia who have served during the war according to prescribed regulations, are exempted from being balloted for. Men who have enlisted for a limited period, on the expiration of the term may claim exemption from service.

EXEMTS, *Fr.* so called, originally, from being exempted from certain services, or entitled to peculiar privileges. The exons of St. James's derive their appellation from exemts. In France they consisted of three classes, viz.

EXEMTS du ban et arrière ban, persons exempted from being enrolled for that particular service were so called. They consisted of the domestic attendants belonging to the palace, those attached to the princes and princesses of the blood, all persons actually serving his majesty, together with the sons of officers who were in the army.

EXEMTS des gardes du corps, exons belonging to the body guards. They were twelve in number, and held the rank of captains of cavalry, taking precedence of all captains whose commissions were of a younger date to the brevet of the exempts.

These brevet commissions were given away under the old government of France. The exons purchase their places at St. James's, but they do not rank with the army.

EXEMTS des Maréchaussées, certain persons employed to keep the public peace. *Maréchaussée* means, in a literal sense, marshalsey. But the functions of the exempts were of a nature peculiar to France. They held their situations under commissions bearing the great seal, which were forwarded to them by the secretary at war. The privileges they enjoyed were, to be exempted from all taxes, &c. but they could not institute any species of criminal information without the concurrence of the greffier, or sheriff.

EXERCISE, in military affairs, is the practice of all those motions and actions, together with the whole management of arms, which a soldier is to be perfect in, to render him fit for service, and make him understand how to attack and defend. Exercise is the first part of the military art; and the more it is considered, the more essential it will appear. It disengages the human frame from the

stiff rusticity of simple nature, and forms men and horses to all the evolutions of war. The honour, merit, appearance, strength, and success of a corps depend wholly upon the attention which has been paid to the drill and exercise of it, according to prescribed rules and regulations; while, on the other hand, we see the greatest armies, for want of being exercised, instantly disordered, and that disorder increasing in spite of command: the confusion oversets the art of skilful masters, and the valour of the men only serves to precipitate the defeat: for which reason it is the duty of every officer to take care, that the recruits be drilled as soon as they join the corps.

The greatest advantage derived from this species of exercise, is the expertness with which men become capable of loading and firing, and their learning an attention to act in conformity with those around them. It has always been lamented, that men have been brought on service, without being informed of the uses of the different manœuvres they have been practising; and that having no ideas of any thing but the uniformity of the parade, they instantly fall into disorder and confusion when they lose the step, or see a deviation from the straight lines they have been accustomed to at exercise. It is a pity to see so much attention confined to show, and so little given to instruct the troops in what may be of use to them on service. Though the parade is the place to form the characters of soldiers, and to teach them uniformity, yet when confined to that alone, it is too limited and mechanical for a true military genius.

The great loss which our troops sustained in Germany, America, and the West Indies, during a former war, from sickness, and not from the enemy, was chiefly owing to a neglect of exercise. An army whose numbers vanish after the first four months of a campaign, may be very ready to give battle in their existing period; but the fact is, that although fighting is one part of a soldier's business, yet bearing fatigue, and being in health, is another, and full as essential as the first. A campaign may pass without a battle; but no part of a campaign can be gone through without fatigue, without marches, without an exposure to bad weather; all of which have

exercise for their foundation: and if soldiers are not trained and inured to these casualties, but sink under them, they become inadequate to bodily fatigue, and eventually turn out a burthen to their country.

It is not from numbers, or from inconsiderate valour, that we are to expect victory; in battle she commonly follows capacity, and a knowledge of arms. We do not see that the Romans made use of any other means to conquer the world, than a continual practice of military exercises, an exact discipline in their camps, and a constant attention to cultivate the art of war.—Hence, both ancients and moderns agree, that there is no other way to form good soldiers, but by exercise and discipline; and it is by a continual practice and attention to this; that the Prussians once arrived at that point of perfection which has been so much admired in their evolutions, and manual exercise.

Formerly, in the British service, every commander in chief, or officer commanding a corps, adopted or invented such manœuvres as he judged proper, excepting in the instance of a few regulations for review: neither the manual exercise, nor quick and slow marching were precisely defined by authority.—Consequently, when regiments from different parts of the kingdom were brigaded, they were unable to act in line till the general officer commanding had established some temporary system to be observed by all under his command.

These inconveniences were, in some degree, obviated by the Rules and Regulations compiled by General Dundas, on the system of the Prussian discipline, as established by Frederick the Great.

By his Majesty's orders first issued in 1792, this system is directed to be "strictly followed and adhered to without any deviation whatsoever; and such orders before given, as are found to interfere with, or counteract their effect and operation, are to be considered as cancelled and annulled."

Infantry EXERCISE includes the use of the firelock and practice of the manœuvres for regiments of foot, according to the Regulations issued by authority.

When a regiment of foot is drawn up, or paraded for exercise, the men are placed two, and sometimes three, deep,

which latter is the natural formation of a battalion. The grenadiers are on the right, and the light infantry on the left. In order to have the manual exercise well performed, it is in a particular manner requisite, that the ranks and files be even, well dressed, and the file-leaders well covered: this must be very strictly attended to both by the major and his adjutant: all officers also on service in general, where men are drawn up under arms or without, must be careful, that the ranks and files are exactly even; and the soldiers must learn to dress themselves at once, without the necessity of being directed to do it. The beauty of all exercise and marching consists in seeing a soldier carry his arms well, keep his firelock steady and even in the hollow of his shoulder, the right hand hanging down, and the whole body without constraint. The muskets, when shouldered, should be exactly dressed in rank and file; the men must keep their bodies upright and in full front, not having one shoulder too forward, or the other too backward. The distances between the files must be equal, and not greater than from arm to arm, which gives the requisite room for the motions. The ranks are to be two paces distant from each other. Every motion must be done with life; and all facings, wheelings, and marchings, performed with the greatest exactness. Hence, a regiment should never be under arms longer than two hours. See FIRINGS, MANUAL and MANŒUVRES.

Cavalry EXERCISE is of two sorts, on horseback, and on foot. The squadrons for exercise are sometimes drawn up three deep, though frequently two deep; the tallest men and horses in the front, and so on. When a regiment is formed in squadrons, the distance of 24 feet, as a common interval, is always to be left between the ranks; and the files must keep boot-top to boot-top. The officers commanding squadrons must, above all things, be careful to form with great celerity, and, during the whole time of exercise, to preserve their several distances. In all wheelings, the flank which wheels must come about in full gallop. The men must keep a steady seat upon their horses, and have their stirrups at a fit length.

Cavalry Sword EXERCISE. See SWORD EXERCISE.

Artillery EXERCISE is the method of teaching the regiments of artillery the use and practice of all the various machines of war, viz.

EXERCISE of the *light field pieces* teaches the men to load, ram, and sponge the guns well; to elevate them according to the distance, by the quadrant and screw; to judge of distances and elevations without the quadrant; how to use the port-fire, match, and tubes for quick firing; how to fix the drag-ropes, and use them in advancing, retreating, and wheeling with the field-pieces; how to fix and unfix the trail of the carriage on the limbers, and how to fix and unfix the boxes containing the ammunition upon the limbers of the carriages.

EXERCISE of the *garrison and battering artillery* is to teach the men how to load, ram, and sponge; how to handle the hand-spikes in elevating and depressing the metal to given distances, and for ricochet; how to adjust the coins, and work the gun to its proper place; and how to point and fire with exactness, &c.

Mortar EXERCISE is of two different sorts, viz. with powder and shells unloaded, and with powder and shells loaded; each of which is to teach the men their duty, and to make them handy in using the implements for loading, pointing, traversing, and firing, &c. See PRACTICE.

Howitzer EXERCISE differs but little from the mortar, except that it is liable to various elevations; whereas that of the mortar is fixed to an angle of 45°; but the men should be taught the method of ricochet-firing, and how to practise with grape shot; each method requiring a particular degree of elevation. See PRACTICE.

EXERCISES are also understood of what young gentlemen, or cadets, learn in the military academies and riding schools, such as fencing, dancing, riding, the manual exercise, &c. The late establishments at Sandhurst and Farnham are calculated to render young officers perfectly competent to all the duties of military service, provided they have been previously instructed in the first rudiments. Officers are there taught and exercised in the higher branches of tactics and manœuvres.

To EXHIBIT, to bring forward; to publish; to lay before others; as to exhibit charges against an officer.

EXHORT. See ANIMATE.

EXHUMER, *Fr.* to dig out of the earth. This term is chiefly applicable to the taking of a dead body out of the earth, as *Exhumer un corps mort*.

EXPATRIÉ, *Fr.* a person who has been forced to leave his native country.

EXPATRIER, *Fr.* to force one to leave his country.

S'EXPATRIER, *Fr.* to quit one's country voluntarily. To become an emigrant either from fear, or for political purposes.

EXPÉDIER, *Fr.* to dispatch; to forward; as *expédier un courier*, to dispatch a messenger. *Expédier un acte*, to draw up a deed.

EXPEDITION, (*expédition*, *Fr.*) in a general sense, signifies haste, speed, rapidity. In a military sense, it is chiefly used to denote a voyage or march against an enemy, the success of which depends on rapid and unexpected movements. It is out of the nature of the thing itself to lay down fixed rules for the minute conducting of small expeditions; their first principles only can be with certainty fixed, and men will often disagree about preparations, and differ in their conduct, though they acknowledge the same principles.

One of the principles of many small expeditions is surprize; and six battalions, without much accompaniment, may sometimes do that which twenty-four, and a great fleet, would not succeed in.

There is no part of war so interesting to an insular soldier as an expedition; nor can there be any part more worthy of attention.

EXPEDITIONS hitherto have had no rules laid down for their conduct, and that part of war has never been reduced to a system. The slow rules of a great war will not do in expeditions; the blow must be struck with surprize, and intimidation be produced in the invaded enemy, before succours can arrive. Debate is out of season, and all slow proceedings are ruin. Not to advance, is to recede; and not to be on the road to conquest, is to be already conquered. There must be that glance, which sees certainly, though instantly; that rapidity, which executes on the surest rules, when it seems least to act on any.

In all small expeditions, such as expeditions of surprize, or *coups-de-main*, the favourable side of the proposed action must ever be viewed; for if what *may*

happen, what *may* arrive, what *may* fall out, is chiefly thought upon, it will, at the very best, greatly discourage, but, in general, end in total failure. Hence the very name of an expedition implies risk, hazard, precarious warfare, and a critical operation.

An expedition is governed by five principal maxims.

1st, A secrecy, if possible, of preparation, and a concealment of design, &c.

2dly, That the means bear proportion to the end.

3dly, A knowledge of the state and situation of the country, where the scene of action is, or the place, or object, that is to be attacked.

4thly, A commander who has the particular turn of mind, which is most adapted to such particular sort of warfare.

Lastly, The plan of an expedition, great or small, is ever to be arranged as much as possible before setting out, and then any appearances that may vary a little from what might have been expected, will not perplex.

EXPEDITION-money. See MONEY.

EXPÉDITION, *Fr.* See EXPÉDITION. The French likewise use this word, to express any particular military quality which an officer, or soldier, may possess. As, *cet officier est un homme d'expédition*; this officer is a man of enterprize, is courageous and daring.

EXPÉDITIONS, *Fr.* dispatches.

EXPÉDITIONNAIRE, *Fr.* an officer formerly at the Pope's court, whose duty was to attend to the dispatches. The French also use this term as an adjective, viz. *Armée expéditionnaire*, an army collected together for an expedition.

EXPERIMENTS, in a military sense, are the trials, or applications, of any kind of military machines, in order to ascertain their practical qualities and uses.

EXPERT, *Fr.* a surveyor, or person skilled in the art of building, who values the quality of materials belonging to a work, and fixes their prices, when no previous written agreement has taken place between the contracting parties. We also use the word expert in several cases; as, an *expert* in ascertaining the similitude of hand-writing, &c. such as is employed at the Bank of England; an *expert* in decyphering diplomatic dispatches; secret correspondence, &c.

EXPLOIT, (*exploit, Fr.*) See ACHIEVEMENT.

EXPLOIT *d'assignation*, *Fr.* a summons; a subpoena; such as is served for courts-martial, &c.

To EXPLODE, to burst, or blow up.

EXPLORATURE, *Fr.* in a military sense, a person sent out to reconnoitre. In plain English, an authorized or rather pensioned spy. According to Mr. Sheridan, a general reporter. It was usual among the French, (and is probably so at this moment,) to give a certain rank with adequate allowances, to divers ingenious men, in order to afford them an introduction at the several courts, for the specific purpose of observing what passed, &c. The French are great adepts in this art.

EXPLOSION, the discharge of a gun, the blowing up of a mine, or the bursting of a shell.

EXPONENT, in arithmetic, or, *exponent of a power*, the number which expresses the degree of the power; or which shews how often a given power is to be divided by its root, before it be brought down to unity.

EXPONENTIAL, (*exponentiel, Fr.*) expounding; laying open to view.

EXPOSANT, *Fr.* the number, or quantity, which expresses the power to which a quantity is raised.

EXPOSÉ, *Fr.* preamble; suggestion of a petition.

Faux Exposé, Fr. a false pretence.

S'EXPOSER, *Fr.* to expose one's-self to the fire of the enemy, and to all manner of danger.

EXPOSITION *de bâtiment, Fr.* the particular manner in which a building is placed with respect to wind or sun; commonly called *aspect*.

EXPRESS, a messenger sent with direct and specific instructions.

To send by EXPRESS, to send any thing by extraordinary conveyance.

To EXPRESS, (*exprimer, Fr.*) to shew, or make known in any manner. As to express by numbers, or figures.

EXPRESSION, a technical term used in mathematics, signifying the solution, or manifestation, of any rule, &c.

EXPUGN, } the taking any

EXPUGNATION, } place by assault.

EXPUNCTUS, a Roman soldier who had been discharged, or degraded, and consequently struck off the muster-roll.

EXTEND. When the files of a line, or

the divisions of a column are to occupy a greater space of ground, they are said to extend their front, or line. Extended order is applicable to the light infantry.

EXTENT, execution; seizure. Hence to issue an *extent*. Officers, civil and military, who are public accountants, should never lose sight of the formidable powers with which government is invested. An extent goes to every species of property, and has precedence of all other claims. It visits, in fact, not only the accountant himself, but his heirs and executors, and all succeeding generations, until the quietus be obtained. See **ACCOUNTANT**.

EXTENT in aid, a seizure made by the crown when a public accountant becomes a defaulter, and prays for relief against his debtors.

To **EXTENUATE**, (*exténuer*, Fr.) to lessen; to degrade; to diminish in honour. Also to palliate.

EXTENUATION, (*exténuation*, Fr.) the act of representing things less ill than they are. Thus, partial excesses, or crimes, in a disturbed country, may admit of extenuation, but not of vindication.

EXTERMINATION, Fr. a term used in transcendent geometry, signifying the art of extinguishing in an equation an unknown quantity.

EXTORTION, the act of obtaining money or property by violence, or unjust means; taking advantage of the ignorance, or peculiar circumstances, of a purchaser, to demand more than a fair price for an article. All sutlers, or camp followers, who are guilty of extortion in the sale of necessaries, are punishable by a general, or regimental, court-martial.

EXTRACTION of the root (*extraction de racine*, Fr.) the art of finding the root of any number, or quantity, whatsoever.

EXTRADOS, Fr. the exterior surface of a regular arch.

EXTRADOSSE, Fr. an arch is said to be so, when the exterior surface is smooth, and the ends of the stones are cut even, so that the outside finishing is as smooth as the inside.

EXTRAORDINAIRE des guerres, Fr. a fund which is collected for the extraordinary expenses of a war.

Trésorier de l'EXTRAORDINAIRE, Fr. the paymaster-general of an army.

Procédure EXTRAORDINAIRE, Fr. criminal process.

Procéder EXTRAORDINAIREMENT, Fr. to prosecute criminally.

EXTRAORDINARIES of the army. The allowances to the troops beyond the gross pay in the pay-office come under the head of extraordinaries to the army; such as the expenses for barracks, marches, encampments, staff, &c.

EXTRAORDINARI, among the Romans, were a body of men consisting of a third part of the foreign horse, and a fifth of the foot, which body was separated from the rest of the forces borrowed from the confederate states, with great caution and policy, to prevent any design that they might possibly entertain against the natural forces. A more choice body of men was drawn from amongst the extraordinarii, under the name of *ablecti*. See **ABLECTI**.

EXTRAORDINARY, something out of the common course.

EXTRAORDINARY couriers, persons sent with some information or order of great importance.

EXTRAORDINARY guards, guards out of the common routine of duty. They are frequently given as a punishment for military offences.

EXTREME-UNCTION, (*extrême onction*, Fr.) the holy oils which are applied to the five senses of persons dying according to the forms of the Roman Catholic religion. The chaplains of foreign corps attend dying officers and soldiers for this purpose.

EXTREMES, (*extrêmes*, Fr.) in geometry, is when a line is divided so, that the whole line is to the greater segment, as that segment is to the less. It is demonstrated that in every proportion, the product of the extremes is equal to the product of the mean.

Conjoint EXTREMES, (*extrêmes conjoints*, Fr.) in a spherical rectangled triangle, two circular portions which touch each other, or which immediately follow the mean.

Disjunctive EXTREMES, (*extrêmes disjoints*, Fr.) two circular portions or parts, which, on the contrary, are distant from that taken as the mean.

EXTREMITY, (*extrémité*, Fr.) strait; utmost distress. When a besieged town is entirely destitute of provisions and of means of defence, it is said to be reduced to the last extremity.

EYES center! a word of command given when the battalion is advancing in line, denoting, that the men are to look to the center, in which the colours are placed, and dress by them.

EYES right! Words of command de-

EYES left! Noting the flank to which the soldier is to dress. In casting his eyes to either flank, care must be

taken that the shoulders are kept square to the front.

EYES front! a word of command given after the dressing in line is completed, on which the soldier is to look directly forward, which is the habitual position of the soldier.

EYE-bolts. See BOLTS.

F

FABRICK, the structure, or construction, of any thing, particularly a building, as a house, hall, church, &c. This word is also applied to imaginary things, as the fabrick of a constitution, &c.

FAÇADE, in military fortification. See **FACE**.

FACE, in fortification, is an appellation given to several parts of a fortress; as the

FACE of a bastion, the two sides, reaching from the flanks to the salient angle. These in a siege are commonly the first undermined, because they extend most outwards, and are the least flanked; consequently the weakest.

FACE prolonged, that part of the line

FACE extended, of defence razant, which is terminated by the curtain and the angle of the shoulder. Strictly taken, it is the line of defence razant, diminished by the face of the bastion.

FACE of a place, (*face d'une place, ou d'un ouvrage, Fr.*) is the front comprehended between the flanked angles of the two neighbouring bastions, composed of a curtain, two flanks, and two faces; and is sometimes called the *ténaille of the place*.

FACE of a gun is the superficies of the metal at the extremities of the muzzle of the piece.

FACE! (*to the right, left, &c.*) a word of command on which the soldiers individually turn to the side directed; in performing which, the left heel should never quit the ground, the knees must be kept straight, and the body turned smoothly and gracefully.

To the right, FACE! 2 motions.—1st. Place the hollow of the right foot smartly against the left heel; 2d. Raise the

toes, and turn a quarter of the circle to the right on both heels.

To the right about, FACE! 3 motions.—1st, Place the ball of the right toe against the left heel; 2d, Raise the toes and turn half of a circle to the right about on both heels; 3d, Bring the right foot smartly back in a line with the left.

To the left, FACE! 2 motions.—1st, Place the right heel against the hollow of the left foot; 2d, Turn a quarter of the circle to the left on both heels.

To the left about, FACE! 3 motions.—1st. Place the right heel against the ball of the left foot; 2d, Raise the toes and turn half of a circle to the left about on both heels; 3d, Bring up the right foot smartly in a line with the left.

Great precision must be observed in these facings; otherwise the dressing will be lost in every movement.

FACE to face, (*face en face, Fr.*) when both parties are present.

To FACE the enemy, to meet him in front; to oppose him with confidence.

In FACE of the enemy, (*en face de l'ennemi, Fr.*) within the limits of his offensive operations, under his line of fire.

FACES of a square. The different sides of a battalion, &c. when formed into a square, are all denominated faces, viz. the *front face*, the *right face*, the *left face*, and the *rear face*. See **SQUARE**.

FACE du bataillon, Fr. See **Front d'une armée**.

FACE, ou pan de bastion, Fr. See **FACE of a bastion**.

FACINGS are the different movements of a battalion, or of any other body of men, to the right, to the left, or right and left about. All facings must be executed with a straight knee: and the body must be kept firm, and turn

steadily, without dropping forward or jerking. The plant of the foot, after facing about, must be sharp.

FACINGS likewise signify the lappels, cuffs, and collar of a military uniform, and are generally different from the colour of the coat, or jacket.

FACT, (*fait*, Fr.) a thing done; an effect produced: reality, not supposition; action; deed. The French use the word *fait* variously, viz. *tout à fait*, entirely, wholly; *fait à fait*, in proportion, or according to given dimensions; *de fait*, in reality; *au fait*, to the point.

Guerre FACTICE, Fr. an imaginary contest.

Bataille FACTICE, Fr. a sham fight. It is also called *guerre simulée*, *guerre de convenance*.

FACTION, Fr. the duty done by a private soldier when he patrols, goes the rounds, &c. but most especially when he stands sentry. The French usually say, *entrer en faction*, to come upon duty; *être en faction*, to be upon duty; *sortir de faction*, to come off duty.

FACTIONNAIRE, Fr. *Soldat factionnaire*, a soldier that does every species of detail duty.

The term *factionnaire* was likewise applicable to the duty done by officers, in the old French service. *Premier factionnaire du régiment* implied, that the officer so called was the fourth captain of a battalion; as the colonel, lieutenant-colonel, major, and the captain of grenadiers did not mount the ordinary guards.

FAGOTS, in military history, are men hired to muster by officers whose companies are not complete; by which means they cheat the sovereign of so many men's pay, and deprive the country of its regular establishment. See *False return*.

FAGOTS. See FASCINES.

FAGOT *ardent*, Fr. a species of fascine which is made of dry sticks steeped in pitch. The *fagot ardent*, or burning fascine, is used in the defence of fortified places, and serves to annoy the besiegers.

FAGOTS *de sappe*, Fr. fascines instead of bags to fill up the spaces between the gabions; they are at most three feet long and eighteen inches in diameter.

FAGOTS *goudronnés*, Fr. pitched sticks of wood, or branches, tied together, which are first set on fire, and then

thrown into the ditches in order to see what is going on.

FAILLON, a kind of standard which was formerly made use of in the army for assembling the baggage. An old author observes: "Every regiment ought to have one of its colour, which conducts the baggage to the *faillon general*." We presume the camp colours have been adopted in its stead.

FAILURE, (*irréussite*, Fr.) an unsuccessful attempt; as the failure of an expedition.

Cardinal de Retz maintained as a maxim, that every man ought to contrive his projects and undertakings so as to derive some advantage, even from their failure.

FAIRE, Fr. literally to make; to do; to frame; to fit. This word is used by the French in a variety of significations. We shall briefly state those that may be applicable to military intercourse.

FAIRE *son cours*, Fr. to finish one's course.

FAIRE *part*, Fr. to communicate; to make known.

FAIRE *des hommes*, Fr. to raise men for military service.

FAIRE *un régiment*, Fr. to raise a regiment.

FAIRE *des recrues*, Fr. to raise recruits; we sometimes say to make recruits.

FAIRE *de beaux hommes*, Fr. to raise a fine body of men.

FAIRE *son équipement*, Fr. to equip one's self.

FAIRE *tête à quelqu'un*, Fr. to make head against a person; to oppose him with firmness.

FAIRE *gloire*, Fr. to glory in any thing.

FAIRE *honneur*, Fr. to do honour to any body, or thing. In the latter sense it signifies to act up to one's engagements, especially in pecuniary matters; as *faire honneur à sa traite*, to discharge one's note of hand, or bill.

FAIRE *une grâce*, Fr. to do a favour, or kindness.

FAIRE *accueil*, Fr. to receive politely.

FAIRE *des réprimandes*, Fr. to reprimand.

FAIRE *parade*, Fr. to parade.

FAIRE *la loi*, Fr. to give the law; to act with one's own will.

FAIRE *quartier*, Fr. to give quarters.

FAIRE *diligence*, Fr. to act with dispatch.

FAIRE *beaucoup de chemin*, Fr. to go a great way; to get on at a great rate.

FAIRE aiguade, Fr. to take in fresh water. Applied only in the Mediterranean.

FAIRE une faute militairement, Fr. to act contrary to a true military system.

FAIRE semblant de se battre, Fr. to be engaged in sham fighting; to pretend to go to blows.

FAIRE la quarantaine, Fr. to perform quarantine.

FAIRE le chien couchant à son colonel, Fr. to cringe, in an unmanly way, to one's colonel.

FAIRE flèche de tout bois, Fr. to make any shift; to live, as soldiers frequently must, upon any thing.

FAIRE l'office, Fr. to perform divine service.

FAIRE une chose, tambour battant, Fr. to act openly.

FAIRE la garde, Fr. to be upon guard.

FAIRE son coup, Fr. to succeed in an undertaking.

FAIRE le fendant, Fr. to bully; to hector.

FAIRE le fin, Fr. to act cunningly.

FAIRE le mulade, Fr. to sham illness.

FAIRE des armes, Fr. to fence.

FAIRE un métier, Fr. to carry on a trade. The French say, *faire le métier des armes*, to belong to the army. We call *métier*, in this sense, profession, as the profession of arms. Perhaps the French may be more correct; for although the real knowledge of this profession embraces a great deal of learning, it is nevertheless more mechanical than physic, divinity, or law. It comprehends, in fact, like surgery, the exercise of the hand, as well as that of the mind. See **MÉTIER**.

FAIRE mine de, Fr. to feign; to affect to do something.

FAIRE fonds sur, Fr. to depend upon.

FAIRE des vivres, de l'eau et du bois, Fr. to take in fresh provisions, water, and wood.

FAIRE main basse, Fr. to fall upon with violence.

FAIRE sentinelle, Fr. to stand sentry.

FAIRE feu, Fr. to fire.

FAIRE raison, Fr. to give satisfaction.

FAIRE cent milles par jour, Fr. to go one hundred miles every day.

FAIRE foi et hommage, Fr. to do fealty.

FAIRE carême, Fr. to keep Lent.

FAIRE fortune, Fr. to make one's fortune.

Se FAIRE un devoir, Fr. to make a point; to insist upon:

Se FAIRE un devoir, Fr. to make a point that something specific shall be done.

Se FAIRE un état, Fr. to embrace, to chuse any particular line of life.

Se FAIRE soldat, Fr. to become a soldier; to enlist.

Se FAIRE valoir, Fr. See **VALOIR**.

FAIRE ses études, Fr. to be educated; to be taught the first rudiments of learning.

FAIRE, Fr. to spread a report; to publish. *On fait monter la perte des ennemis à tant*; they make the loss of the enemy amount to so many.

FAIRE grand bruit, Fr. to make a great noise; excite much conversation, &c. *La convention en Portugal, en 1808, a fait un grand bruit*, the convention in Portugal, in 1808, made a great noise.

FAIRE faux feu, Fr. to miss fire; to flash in the pan.

FAIRE la ronde, Fr. to go the rounds.

FAISCEAU d'armes, Fr. a pile of arms; a sort of wooden rack, or machine, which is used for the different stands of arms belonging to a troop, or company. The stakes which support the colours are also called *faisceaux*.

FAISEURS de plans, Fr. plan-makers; schemers; speculators. It also signifies persons who are continually harassing ministers and official persons with plans of campaigns and civil insurrections, &c.

Au FAIT et au prendre, Fr. a figurative expression, signifying the being put to the proof.

FAITAGE, Fr. the covering of a building; roof-timber; ridge-lead.

FAITE, Fr. top; ridge; pinnacle.

FAITIÈRE, Fr. a gutter tile.

FAITS guerriers, Fr. warlike deeds; feats of personal valour and discretion.

FALACQUE, a bastinade given to the janizaries and other Turkish soldiers on the sole of the foot.

FALAISE, Fr. any part of the sea-coast is so called by the French, when it is extremely steep, and broken into precipices.

FALAISER, Fr. to break upon. *La mer fulaise*, the sea breaks upon the shore.

FALAISES, Fr. those borders of the sea which are formed of high steep rocks, mountains, or sand-hills.

FALCADE, a term in the manège. A horse is said to make *falcades* when he throws himself upon his haunches two or three times, as in very quick curvets.

FALCHION, a short crooked sword.
FALCON, or *Faucon*, an ancient name given to a piece of ordnance. See **CANNON**.

FALCONET, an ancient name given to a $1\frac{1}{2}$ pounder. See **CANNON**.

FALDSTOOL, a kind of stool placed at the south side of the altar at which the kings of England kneel at their coronation.

FALERIQUE, *Fr.* a kind of dart composed of fire-works, which the ancients shot against the towers of the besieged, in order to set them on fire; the real *falerique*, however, was a beam loaded with fire-work, contained within iron, pointed on all sides, and which was thrown against the towers of the enemy, by means of the *catapulta* or *ballista*.

FALL, (*chûte*, *Fr.*) death; destruction. A brave man always feels for the fall of a great man; even if he had been his enemy.

FALL, the fall of a place after it has been besieged. See **SURRENDER**.

To FALL. A town, or fortified place, is said to *fall* when it is so completely invested, that the garrison can no longer be subsisted, and must surrender.

To FALL back, to recede from any situation in which you are placed. This phrase is frequently, indeed always, made use of in the drill, or exercise of soldiers; particularly during the formation of a line, when individuals, or whole divisions, are apt to overstep their ground and get beyond their dressing point.

FALL in! a word of command for men to form in ranks, as in parade, line, or division, &c.

To fall in likewise means the minute arrangement of a battalion, company, guard or squad, by which every man is ordered to take his proper post. The long roll, a peculiar beat of the drum, is the usual signal for soldiers to assemble and fall in.

To FALL into, to become the property of another, as, we fell in with a large convoy of the enemy, which, after a short resistance made by the escort, *fell into our hands*.

To FALL into, to be within the power of a person; as to fall into the hands of an enemy. The French use the verb *tomber* in the same sense, viz. *tomber entre les mains de l'ennemi*. It also signifies to get into a dangerous situation,

as to fall into an ambush laid by the enemy.

To FALL in with, a military technical phrase, signifying any sudden or unlooked for encounter of an enemy. As, *our light cavalry patroles fell in with a party of foragers belonging to the enemy's army*.

To FALL off, to desert; to fail; to relax in exertion.

To FALL out, to quit the rank, or file, in which you were first posted. Dirty soldiers on a parade are frequently ordered to fall out, and remain in the rear of their companies. The phrase is applicable in a variety of other instances.

To FALL upon, to attack abruptly. According to the celebrated General Monk, it is very fit, that a general should often command his horse and dragoons to *fall upon* an enemy's outermost horse quarters; which mode, he says, is one of the easiest, readiest, and securest ways to break an enemy's army.

FALOTS, *Fr.* small lanterns fixed upon the end of a stick or pole. Small lamps are likewise used, attached in the same manner, for the purpose of carrying them readily about to light a camp, or besieged town, as occasion may require.

FALSE alarm, (*fausse alarme*, *Fr.*) an alarm, or apprehension, which is either designedly or unintentionally created by noise, report, or signals, without being dangerous.

FALSE attack, (*fausse attaque*, *Fr.*) an approach which is made as a feint for the purpose of diverting your enemy from the real object of attack.

FALSE fires, any fire, or light, which is made use of for the purpose of deceiving an enemy. False fires, or lights, are frequently resorted to when an army finds it necessary to retreat from an advanced position. On this occasion, large fires are lighted in different parts of the camp, and round the lines, previous to the departure of the troops, which generally happens in the night.

FALSE intelligence. This consists principally of statements which are not founded in facts, or deduced from a positive concurrence of circumstances, whereby the general of an army may be enabled to act against an enemy with confidence; or in erroneous communications given, by design, through the medium of a spy, or foolishly furnished by over-heated zeal and credulity.

FALSE lights, in debarkations under cover of the night, may likewise be used as signals of deception, when it is found expedient to attract the attention of the invaded country towards one part of the coast, or territory, whilst a real attack is meditated against another.

FALSE muster, an incorrect statement of the effective number of men, or horses, by which government is defrauded. By the Articles of War every officer, paymaster, or commissary, found guilty of false mustering, is ordered to be cashiered.

FALSE report. A false report in military matters may be truly said to be the groundwork of a false return and a false muster, and consequently the primary cause of imposition upon the public. The strictest attention should, therefore, be paid to the most trilling report which is made in a troop or company respecting the presence or absence of men or horses, the state of clothing, accoutrements or necessaries. This can only be done by the commanding officer of such troop or company having constantly the general good of the service at heart, in preference to his own convenience, or to that of others. Every serjeant or corporal of a squad should be severely punished when detected in making a false report.

FALSE return, a wilful report of the actual state of a brigade, regiment, troop, or company, by which the commander in chief, or the War-office, is deceived, as to the effective force of such regiment, troop, or company.

FAMINE, (*famine*, Fr.) scarcity of food; dearth. The French say, *prendre une ville par famine*, to take a town by famine. They also say figuratively, *prendre quelqu'un par famine*, to take a person by famine; meaning thereby, to deprive him of the necessaries or gratifications of life, in order to reduce him to a prescribed line of conduct.

FAMOUS, (*fameux*, Fr.) renowned; celebrated.

FANAL, Fr. a ship's lantern; a light-house; any thing illuminated along the coast for the use of ships at sea.

FANAM, a small Indian coin.

FANAUX, Fr. lights at the top of a high tower, at the entrance of a seaport. The appellation of *feux* is given to those that light a camp in certain cases; either to deceive the enemy, or to discover his movements by night.

FANFARE, Fr. a particular military tune. It in general is short, but very expressive, and executed on the trumpet.

FANFARON, Fr. a bully; a man who affects a courage he is not possessed of, and who is inwardly conscious of being a coward.

FANFARONNADE, } Fr. the act
FANFARONNERIE, } of bullying.

FANION, Fr. corrupted from the Italian word *gonfanone*, a particular standard which was carried in the front of the ordinary baggage belonging to a brigade in the old French service. It was made of serge, and resembled in colour the uniform, or livery, of the brigadier, or of the commandant of any particular corps.

FANON, Fr. the diminutive of *gonfanone*. A banner of less width than that worn by a baron. Also a horse's fetlock.

FANONS, Fr. the dressings of broken limbs.

FANTASSIN, Fr. a foot soldier. The word is derived from the Italian *fante*. See INFANTRY.

FARAILLON, Fr. a light-house.

FARCY, (*farcin*, Fr.) a disease in horses; a leprosy.

FARIAL, Fr. a light-house, also a watch light.

FARINE, Fr. meal; flour.

Folle FARINE, Fr. mill dust.

FARINIÈRE, Fr. meal or flour warehouse.

FAROUCHE, Fr. stern; wild; savage-looking.

FARRIER, in a general acceptance of the term, any person who shoes horses, or professes to cure their diseases. In a practical military sense, a man appointed to do the duty of farriery in a troop of dragoons. Troop farriers are under the immediate superintendance and controul of a veterinary surgeon, to whom they must apply whenever a horse is ill or lame, that he may report the same to the officer commanding the troop. No farrier is to presume to do any thing without having first received directions from his superior.

When the farrier goes round, after riding out, or exercise on horseback, he must carry his hammer, pincers, and some nails, to fasten any shoe that may be loose.

When horses at out-quarters fall particularly ill, or contract an obstinate lameness, the case must be reported to

the head-quarters of the regiment; and if the veterinary surgeon cannot prescribe for him at a distance, he must, if time and distance will permit, be personally sent to examine the horse.

No farrier must presume to make up any medicine, or any external application, contrary to the receipt given him by the veterinary surgeon.

If any farrier, through carelessness or inattention, lames a horse belonging to another troop, he ought to be at all the expense in curing the horse so lamed. In some well-regulated dragoon corps this forms one of the standing regimental orders.

Farriers are in every respect liable to be tried according to the Articles of War. They may be ordered to inflict punishments; and they must constantly recollect, that the circumstance of being a farrier is no extenuation for dirty appearance, or excuse for drunkenness. The guilt of the latter vice, indeed, is aggravated by the responsibility of their situation.

FARRIER-Major, a person who was formerly appointed by the colonel of a dragoon regiment, to superintend the farriers of troops, who are named by the several officers commanding them. He has since been superseded or replaced by a veterinary surgeon, who (as the farrier-major was formerly directed) is to have free access to every stable of the regiment whenever he chuses. It is his duty to go frequently into the cantonments of the different troops, and examine the horses' feet; and if he find a shoe contrary to the regimental pattern, or discover any thing amiss in the management of the troop horses, he is to report it immediately to the officer commanding the regiment. In the exercise of his duty he is to receive the utmost support from every officer and quartermaster; and any farrier that dares to act contrary to his instructions, should be punished. There ought, in fact, to be a chain of mutual support and co-operation from the veterinary surgeon up to the commanding officer of every cavalry regiment; each farrier looking to the veterinary surgeon for correct instructions relative to the preservation of every horse's health.

To *FARRIER*, an old word signifying to practise physic, or chirurgy, on horses. At present, the functions of a farrier, as far as regards the cure of a

horse, are exercised by the veterinary surgeon.

FARRIERY, formerly the practice of physic, or surgery, on horses; but the term is now applied to shoeing, &c. the scientific branch being called *veterinary art*.

FARSANNE, *Fr.* horseman; knight.
FASCINAGE, *Fr.* any bed, or floor, which is made of fascines.

FASCINES, in fortification, are a kind of fagots, made of small branches of trees or brushwood, tied in 3, 4, 5, or 6 places, and are of various dimensions, according to the purposes intended. Those that are to be pitched over, for burning lodgements, galleries, or any other works of the enemy, should be 1½ or two feet long. Those that are for making epaulements or chandeliers, or for raising works, or filling up ditches, are 10 feet long, and 1 or 1½ feet in diameter. They are made in the following manner; 6 small pickets are stuck into the ground, 2 and 2, forming little crosses, well fastened in the middle with willow bindings. On these trestles the branches are laid, and are bound round with withes at the distance of every two feet. Six men are employed in making a fascine: 2 cut the boughs, 2 gather them, and the remaining 2 bind them. These six men can make 12 fascines every hour. Each fascine requires five pickets to fasten it.

FASTES, *Fr.* records; calendars; annals.

FASTNESSES, strong places not easily forced.

FATHOM, in fortification, originally denoted that space which a man could reach when both his arms were extended; but now it means a measure of 6 feet or 2 yards, equivalent to the French word *toise*.

Lettres de FAVEUR, *Fr.* letters of recommendation.

Jours de FAVEUR, *Fr.* days of grace.

FAUCHER, a scythe, a sword.

FAUCHION. See *FALCHION*.

FAUCON. See *FALCON*.

FAUCON or *FAUCONNEAU*, *Fr.* a small piece of ordnance.

FAUCONET. See *FALCONET*.

FAULDES, *Fr.* the places where charcoal is made.

FAULX, *Fr.* an instrument nearly resembling a scythe. It is often used to defend a breach, or to prevent an enemy from scaling the walls of a fortified

place. This weapon was first resorted to with some success, when Louis the XIVth besieged Mons. On the surrender of that town, the besiegers found large quantities of scythes in the garrison.

FAUSSES *attaques*, Fr. false attacks. See **ATTACK**.

FAUSSE-BRAYE, (*fausse-braic*, Fr.) in fortification, is a low rampart, encircling the body of the place; its height is about 3 feet above the level ground, and its parapet about three or four toises from that of the body of the place. These works have been entirely rejected by modern engineers, excepting M. Vauban, who makes them only before the curtains; and then they are called more properly *tenailles*.

FAUSSE ÉQUERRE, Fr. an instrument in the shape of a square, or a rule, with two branches, which move round one point and describe two angles that are not straight. The stone-mason's rule is also so named.

FAUSSE-LANCE, Fr. a wooden piece of ordnance; what is vulgarly called a sham gun.

FAUSSE-MARCHE, Fr. a feigned march.

FAUTEAU, Fr. a sort of battering ram, which was used in ancient times.

FAUTEUR, Fr. a person who connives at seditious practices.

FAUX, Fr. See **FAULX**.

FAUX-BOURG, Fr. suburb.

FAUX-FUYANT, Fr. a shift; an evasion.

FAUX-FOURREAU, Fr. a pistol case.

DATER FAUX, Fr. to put a wrong date.

PORTER À FAUX, Fr. to argue upon false grounds; to be ill supported.

FAUX BRAVE, Fr. See **FANFARON**.

FAUX FEU, Fr. a flash in the pan; signal made with scintillations of gunpowder.

FAUX SOLDATS, Fr. See **FAGOT**, or **PAS-SEVOLANT**.

FEATHERS are ornamental marks worn by officers and soldiers in their caps or hats. The following distinctions are made, and directed by authority to be observed, in the British service. In the royal artillery, both officers and men have white feathers. The cavalry and battalion corps scarlet and white; the grenadiers all white, and the light infantry all green.

HACKLE-FEATHER, a round feather taken from a cock or hen, in its natural state.—Hackle, according to Dr. John-

son, signifies raw silk; any flimsy unspun stuff. This feather may be properly called the regulation feather. It is worn by the subalterns of the army, and must be eight inches long. The officers of the foot guards wear it in their caps. It is sometimes imitated by being made of horse-hair.

FLASH-FEATHER, a straight smooth feather, ten inches long, which is worn by officers on the staff, hanging over their hats.

OSTRICH-FEATHER, a soft valuable feather, well known in fashionable life.—In the year 1812, the Regent directed, that all general officers should wear, round the rims of their cocked hats, an ostrich feather, one yard thirty-four inches long. This order has since been cancelled.

WHITE-FEATHER, a term usually applied to a coward; signifying that he turns his back, and has a white feather in his tail.

FEDERATE. See **CONFEDERATE**.

FEED, a certain proportion of corn and hay which is given to the cavalry.

A **SHORT FEED**, a portion of hay or corn under the regulated quantity.

HEAVY HORSE FEED, a larger proportion of hay and corn which is given to the heavy dragoons than to the light horse.

LIGHT HORSE FEED, a smaller proportion of hay and corn which is given to the hussars and light cavalry than to the heavy dragoons.

FÉES are specific sums of money, which are occasionally claimed by persons in office, and to the payment of which every British officer is subject. Fees are paid at the War-Office, for different commissions, and are charged against their respective owners by the army agents. See **OFFICE-FUND**.

FEINT, (*feinte*, Fr.) a mock attack, or assault, generally made to conceal the true one.

FELLOES, in artillery, are the parts of a wheel which form its circumference, whose dimensions are as follow: for a 21-pounder, 5 inches thick, and 6.5 inches broad; for a 12-pounder, 4.5 inches thick, and 6 inches broad; for a 6-pounder 4 inches thick, and 5.5 inches broad, &c. made of dry elm. There are generally 6 in each wheel. See **WHEEL**.

FELLOW SOLDIER, one who fights under the same commander; a comrade. Dr. Johnson very properly calls this term

an endearing appellation used by officers to their soldiers. The toils and perils, in fact, of a real military life, are so many, that an army fighting under the same banners may be truly called one family; and every officer should look upon himself as the father, the guardian, and the protector of his men.

FELTRE, a piece of defensive armour. It was a kind of cuirass made of wool, well pressed, and dipped in vinegar, to impede the effect of cutting weapons. It was in use among the Romans.

FENCE, a guard, security, outwork, &c.

To FENCE, to practise with foils; to fight with swords; to secure any place by palisades, &c.

FENCIBLE, any thing capable of defence. Such regiments as are raised for limited service, and for a limited time, are called fencible regiments. They rank junior to the line.

FENCING is the art or science of making a proper use of the sword, as well for attacking an enemy, as for defending one's self. Fencing is a genteel exercise, of which no military gentleman should be ignorant.

Fencing is either simple, or compound. Simple is that which is performed singly, and off-hand, on the same line. In this the principal intention, in respect to the offensive part, should be to attack the enemy in the most unguarded quarter; and in the defensive, to parry or ward off the enemy's thrusts, or blows.

Attitude, in FENCING, the head upright, though the body hath a forward inclination on a longe; and all the weight resting on the left haunch when on guard. The feet, hand, body, arm and sword, must be to the line.

Appel, in FENCING, is a sudden beat of your blade, on the contrary side to that you join your adversary on, and a quick disengagement to that side again.

Beating, in FENCING, is when you parry with a sudden short beat, to get a quick riposte; or when you beat with your foot, to try if you are firm on it, or on both feet.

Battering, in FENCING, is to strike the feeble of your adversary's blade on the side opposite to that you join, &c.

Back-quarte, is a parade of late invention, and is a round quarte over the arm.

Cave, in FENCING, is a tierce on a

quarte side, also the thrust of a prime, or a seconde, at the low quarte side.

Darting, in FENCING, to defend a blow with some contraction of your arm, and to dart a thrust right forward.

Feint forward, in FENCING, made by advancing your point a little from its line, and coming to it again.

Guard, in FENCING, is any of the parades you stand on.

On Guard is being placed properly on your feet, and well covered with your weapon.

Lurching, in FENCING, to make an opening, to invite your adversary to thrust at you, when you, being ready, may find a favourable riposte at him.

Locking, in FENCING, is to seize your adversary's sword-arm, by twining your left arm round it, after you close your parade, shell to shell, in order to disarm him.

Guard in { carte, } implies the putting of the body and sword in such a state of defence, as to prevent the antagonist from wounding you, by either of the thrusts so denominated. These are the principal positions on which to engage. The others, viz. prime, seconde, quinte, half-circle, &c. are termed parades, when used with the small sword.

Hang-guard, one of the broadsword guards. See **BROADSWORD**.

Thrusts are of various denominations, according to the direction of the point, and position of the wrist.

The thrusts directed at the inside of the body are called prime, carte, and low-carte: those at the outside, are seconde, tierce, carte over the arm, quinte and flaconade.

In teaching, the thrusts are not arranged according to the above order; it is usual to begin with carte (or quarte) and tierce, the names of which prove them to have been originally the 4th and 3d positions in the art; but which are now justly considered as the chief and most elegant.

Parrying, in FENCING, the action of warding off the blows aimed at each other.

Flanconade, in FENCING, is the action of dropping the point of your sword under your adversary's hilt, in seizing with force the feeble of his blade; which binding, without quitting it, form the parade in octave, and then throw in your thrust.

Glissade, in FENCING, is performed by dexterously making your sword slip along your adversary's blade, and forming at the same time your extension, &c.

FENDU, *Fr.* a word used among the French to signify long-legged, or well formed to sit on a horse. *Homme bien fendu.*

FER, *Fr.* iron. Figuratively, this word is used for a sword, or dagger; as *manier le fer*, to wear the sword, to follow the profession of arms. *Battre le fer*, to fence. For the various kinds of iron, as specified under *Fer*, see *Belidor's Dictionnaire Portatif*. See also IRON.

FER à glace pour les chevaux. See FROSTNAIL.

FER à cheval, *Fr.* a horse-shoe. It further means, according to the French acceptance of the term, a work constructed for the purpose of covering a gate, by having a guard-house within it, to prevent the town from being surprized.

FERDWIT, in ancient military history, a term used to denote an exemption from serving upon any military expedition; or, according to some, the being quit of manslaughter committed in the army.

FÉRIR, *sans coup*, *Fr.* to obtain any thing without striking a blow.

FERME, *Fr.* in carpentry, an assemblage of timber which is put together to support the roof of a house.

Maîtresse FERME, *Fr.* that assemblage which bears upon the beams.

Faire FERME, *Fr.* to stand your ground; not to give way.

FERMER, *Fr.* to shut; to close.

FERMER une ville de murailles, *Fr.* to wall a town.

FERMEZ le bassinet! *Fr.* Shut pans! a word of command in the platoon exercise.

FERRAILLER, *Fr.* to fence; to tilt.

FERRAILLEUR, *Fr.* a person who, without any provocation whatever, delights in fighting, and is always in quest of provocation.

FERRANT *maréchal*, *Fr.* a farrier.

Chemin FERRÉ, *Fr.* firm stony way.

FERRER un cheval, *Fr.* to shoe a horse.

FERRER à glace, *Fr.* See FROSTNAIL. The French also say, figuratively, *Etre ferré à glace*, to be master of a subject.

FERRER un cheval à cuir, *Fr.* to shoe

a horse with leather, in order to prevent all noise.

FERRÈTE, *Fr.* the original term to express a sword.

FERRIES, water conveyances, made use of to cross rivers, or branches of the sea. At the regular ones in Scotland, officers may, at their option, hire the boat for themselves and parties only, or pass as passengers; in either case paying no more than half the ordinary rate. See Mutiny Act, sect. 53.

FERRURE, *Fr.* the shoeing of a horse.

FERRY, (*passage*, *Fr.*) the place where men, horses, carriages, are carried over a river, or branch of the sea. See FERRIES.

FERRY-boat, (*bac*, *Fr.*) an open boat, or water conveyance, in which things are carried over a river, &c.

FERRY-man, (*passeur*, *battelier*, *Fr.*) the person who ferries over.

To FERRY over, (*passer dans un bac*, *Fr.*) to carry across in a ferry-boat.

FERS, *Fr.* irons for culprits.

Punition de FERS, *Fr.* the punishment of being put in irons.

FERTÉ, *Fr.* which has the same meaning as *fermeté*, was the original appellation of a fortified place, and signified a fortress.

FERTIL or FORTIL. See ARMY.

FETLOCK, (*funon*, *Fr.*) a tuft of hair that grows behind the pastern joint of a horse.

FEU, *Fr.* fire. *Faire feu*, to discharge any sort of fire-arms.

FEU, *Fr.* fire, is also understood to mean any lighted combustible, which is kept up in the front of a camp, and at each post during the night, to keep the soldiers alert, and to prevent them from being surprized.

Lights are likewise resorted to on various other occasions. See LIGHTS.

FEU de joie, *Fr.* a bonfire. See RUNNING-FIRE.

FEU de billebaude, *Fr.* a fire of musketry which was practised by order of Frederick the Great, King of Prussia. On recovering their firelocks, the men of the center rank turning round, delivered their pieces to those of the rear, and received their muskets in exchange; thus saving the time of loading.

FEU rasant, *Fr.* a grazing fire, or a discharge of ordnance or musketry, so directed, that the shot shall run parallel with the ground they pass over, within 3 or 4 feet of the surface.

That is likewise called *feu rasant*, or grazing fire, which is sent in parallel directions with the faces of the different works belonging to a fortification.

FEU de canon, Fr. the discharge of heavy ordnance, or artillery.

FEU de chemin couvert, Fr. the musketry shots which are fired by armed men that are posted in various parts of the covert-way.

FEU par compagnie, Fr. the discharge of musketry by companies.

FEU direct, Fr. a discharge of musketry, or ordnance, against the face of a work, trench, or company.

FEU fichant, ou oblique, Fr. oblique firing.

FEU de mousqueterie, Fr. musket-firing.

FEU de peloton, Fr. platoon-firing.

FEU de rampart, Fr. a discharge of musketry, or ordnance, from the ramparts of a fortified town, or place.

FEU roulant, Fr. the continued alternate firing of a battalion from flanks to center, or from center to flanks.

FEU de tranchée, Fr. any discharge of cannon, or musketry, which takes place from the trench of a fortified town, or place, or from the besieging army's works against a fortified town, or place.

Faire FEU violet, Fr. to make much ado about nothing.

FEU de courtine, ou second flanc, Fr. a firing from that part of the curtain which is contained between the prolongation of the face of the bastion, and the angle of the flank. It is only applicable in fortifications where the line of defence is fichant.

FEU d'artifice, Fr. a fire-work.

Faire long FEU, Fr. to hang fire, or to go off slowly.

Coup de FEU, Fr. gunshot wound.

S'exposer au FEU des ennemis, Fr. to expose one's self to the fire of the enemy.

Etre sous le FEU de l'ennemi, Fr. to be under the fire of the enemy.

Soutenir le FEU d'une place assiégée, Fr. to support the fire of a besieged place.

Essuyer le FEU du canon, Fr. to endure, to undergo, the fire of ordnance.

Entre deux FEUX, Fr. between two fires.

FEU St. Elme, Fr. wild-fire; ignis fatuus. Such as is sometimes seen round the masts, &c. of ships at sea.

FEUX follets, Fr. exhalations of light which are sometimes seen over marshy

grounds, and which we vulgarly call Jack-a-lantern, and Will-o-the-whisp. Night patrols, in time of service, should be cautioned respecting these lights.

Donner le FEU à un cheval, Fr. to } fire a horse.
Mettre le FEU à un cheval, Fr. }

FEU d'enfer, Fr. hell fire. The French say, *Cette attaque on fit un feu d'enfer*, a most tremendous fire was kept up at that attack.

FEU is also used, as fire, flame, or blaze with us, to signify the agitated state of the public mind. *Toute la ville est en feu*, the whole town is in a flame.

FEUILLE, Fr. exfoliation of a diseased bone.

FEUILLE d'une épée, Fr. the blade of a sword.

FEUILLE volante, Fr. a loose or fly sheet; an open cover.

FEUILLE de route, Fr. a pass given to a soldier for the purpose of joining his corps, going on furlough, or of reaching any particular spot.

FEUILLE de signalement, Fr. description-roll, or pass.

FEURTRE, Fr. straw, such as grows with every sort of grain.

FEUTRE, Fr. the stuffing of a saddle.

FEUTRER une selle, Fr. to stuff a saddle.

FEVER, (*fièvre*, Fr.) from the Latin *febris*. A disease, according to Dr. Johnson, as quoted from Locke, in which the body is violently heated, and the pulse quickened, or in which heat and cold prevail by turns. It is sometimes continual, sometimes intermittent. The following just observations have been furnished by a friend of the author's, upon this important article. Physicians put together in their synoptical tables of classification, so many diseases, diametrically different in their nature, and in the plan of cure they require, under the class *fevers*, that no general definition can be given which will apply to every particular species of fever. Many of the methodical arrangements are, without doubt, productions of great ingenuity; but more of art than of nature appears in their composition. They are crowded with synonyms; and with frivolous distinctions, tending to embarrass and not to promote the progress of science, or of practice. The plan of the justly celebrated *Dr. Brown* of Edinburgh may be mentioned as the most simple, comprehensive, and useful, in

dividing all diseases into *sthenic* and *asthenic*. Dr. Frank, of Vienna, is excellent on fevers, in his work "*De Curandis Hominum Morbis*," and indeed all the minor distinctions, in the catalogue of fevers, may be referred to the three general heads of *inflammatory*, *nervous*, or *putrid*, as they assume either the *continued*, *remittent*, or *intermittent* form. The enumerations and descriptions alone, of the particular species, would be sufficient to fill a moderate volume.

The dreadful devastation of human beings from fevers in camps and in armies is seldom to be entirely prevented, though it may be sometimes mitigated by the salutary regulations of a judicious and humane general, in co-operation with a skilful physician. How is a soldier landing in North Holland, in St. Domingo, or on the pestilential shores of Syria and Egypt, continually exposed to the causes of fevers, to be screened from the action of those causes on his body? Infections, contagious, marsh miasmata, rising under extremes of heat or cold, whether in Zealand, the Campania di Roma, in the tropical climes, or other parts, baffle human skill, and in a few hours pull down the strongest men. The ague, the yellow fever, and the plague will appear; and all that human ingenuity has hitherto suggested in prevention, or in mitigation, of these dreadful maladies amounts but to very little. This consideration should not, however, be offered, or admitted, in exculpation of any criminal ignorance or neglect on the part of a commander, naval, military, or medical.

FEUX, *Fr.* fires which are frequently lighted up along the front of an encampment, in order to impress the enemy with an idea that every thing is on the alert, and in a state of activity.

FEUX *Grégeois*, *Fr.* See GREEK FIRE.

FEUX, *ou signaux*, *Fr.* fires which serve as signal lights in various parts of a country.

FIACRE, *Fr.* a hackney coach; so called because vehicles of this description first put up at the sign, St. Fiacre.

FICHANT. See LINE OF DEFENCE, FORTIFICATION.

FICHER, *Fr.* to stick in. This word is used in masonry, when mortar or any other cement is put between bricks or stones.

FICHES, *Fr.* small sticks, or pieces of iron which serve to mark out the height of angles, and the direction of an alignment; by means of which a fortress or a trench may be traced, and the relative position of each troop or company ascertained.

FICHEUR, *Fr.* According to Belidor, the workman who puts mortar, or cement, in crevices, &c.

FIDD, in gunnery, a little oakum put in the touch-hole of a gun, and covered with a piece of lead to keep the powder dry.

FIEF *de humber*, *Fr.* a certain estate in France, the possession of which entitled persons to wear a hanberk, which was the armour of a knight. Esquires could only wear a simple coat of mail, without the hood or hose.

FIELD, the ground of battle. A battle, campaign, or the action of an army while it keeps the field.

FIELD-bed, a folding-bed used by officers in their tents.

FIELD-staff, a weapon carried by the gunners, about the length of a halbert, with a spear at the end, having on each side ears screwed on like the lock of a matchlock; where the gunners screw in lighted matches when they are upon command; and then the field-staffs are said to be armed.

FIELD-	}	Colours,	} See	Camp colours.
		Officers,		Officers.
		Pieces,		Cannon.
		Staff, Works,		Lintstock. Field-fortification.

FIELD-fort. See FORT.

FIELD-marshal, a modern military rank in England, but superior to all others, (except the captain general,) having the chief command of the whole army in the field.

FIENTE, *Fr.* dung, or excrement from an animal of the brute creation. This word is pronounced *fiente*.

FIER, *Fr.* to trust. *Fier son honneur*, to trust one's honour.

FIER, *Fr.* proud; haughty; fierce. The French say: *faire le fier*, to affect much importance; to be very lofty.

FIER *de sa personne*, *Fr.* proud of his person, or outward appearance. *C'est un militaire sans talens, mais il est très fier de sa personne*, he is an officer void of talents, but extremely proud or vain

of his person; in plain English, an empty coxcomb.

FIÈRE *alerte*, Fr. a smart or warm alert.

Courage FIER, Fr. high courage.

Démarche FIÈRE, Fr. high, exalted deportment.

FIER is sometimes used as a substantive, and signifies the same as *fierté*, viz. *se tenir sur son fier*, to be very positive and obstinate.

FIER à bras. See **FANFARON**.

Une noble FIERTÉ, Fr. a dignified pride; a nobleness of mind, such as every real soldier possesses, who is above all the low tricks and mean cabals of mankind in general.

FIERTÉ, Fr. a shrine where relics are deposited in Roman Catholic countries. This word is particularly applicable to the shrine of St. Romain, archbishop of Rouen, out of respect to whose memory, a free pardon is given, once a year, (on the day of the Lord's Ascension,) to some criminal who has been sentenced to die, and who is ordered to lift up the shrine of St. Romain. Hence the figurative phrase, of a man who has been condemned, but pardoned: *Il a levé la fierté*, he has lifted up or raised the shrine.

FIFE, a military instrument of the wind kind, generally used as an accompaniment to the drum. This instrument is of high antiquity, as appears from pictures and from sculpture, from the poets and historians; and chiefly (as in the Argonautic expedition, *memoratrix pugna*) for martial use.

On our own authorities, the **FIFE** appears in the English army, till the time of James I. After that, it was disused; and so continued till the year 1747; when it was resumed, in the foot-guards, by the Duke of Cumberland at the siege of Maestricht. He took it probably from a corps of German Swiss, with whom the *fife* is a favourite instrument.

In the reign of Elizabeth, the *fife* is supposed by some to have been curved; from her great poet having the expression, "the wry-necked fife". But this perhaps might allude to the man who plays the *fife*. Yet, shrill and dissonant as the *fife* in common hands may be, it is not so with Handel. With Handel, (whose inspiration reached almost over every thing,) it inspires (as in the Dead March of Saul) to tenderness and woe: so as to respond to the "que-

rule tibia" of the poet. Yet that, probably, was more like our German flute.

FIFER, (*fifre*, Fr.) In French this word likewise means *fife*.

FIG, (*fic*, Fr.) a disease in horses; a tumour which is sometimes soft, and sometimes hard and callous.

To **FIG**, to excite; also to play a common trick with a horse in order to shew him off; this is done by applying ginger under the tail.

FIGHT. See **BATTLE**.

Running-FIGHT, that in which the enemy is continually chased.

To **FIGHT** it out, to continue a contest until the object in dispute be finally determined, one way or other. The French say, *se battre à outrance*; also *vuider une querelle*.

FIGHTING-men, such as are effective, and able to bear arms.

FIGURE, in fortification, the plan of any fortified place, or the interior polygon. Of these there are two sorts, regular, and irregular: a regular figure is that where the sides and angles are equal; an irregular one, where they are unequal.

FIL, Fr. thread; wire.

FIL also signifies *edge*; hence *passer au fil de l'épée*, to put to the sword.

FIL, the stream or current of a river. *Aller contre le fil de l'eau*, to go against the stream.

FILADIÈRE, Fr. a flat bottomed boat which is used on small rivers, particularly the Garonne in France.

FILANDRES, Fr. streaks like white thread in the wounds of horses.

FILE, in the art of war, is an unlimited term, comprehending any number of men drawn up in a direct line behind each other; as a rank on the other hand includes any number drawn up beside each other; whether, in either respect, they be in close or in open order. Or rather, by *file* is meant the line of soldiers standing one behind another, which makes the depth of the battalion; and is thus distinguished from the rank, which is a line of soldiers drawn up side by side, forming the length of the battalion. A *file* is 2 or 3 deep; hence a battalion or regiment drawn up, consists of 2 or 3 ranks, and of as many files as there are men in a rank.

The files of a battalion of foot were formerly 12 and 6 deep; but now only 2 and sometimes 3, which latter is its natural formation. Those of the cavalry are generally but 2 deep.

A FILE on horseback occupies in the ranks about 2 feet 8 inches; thus 3 file 8 feet. A file on foot occupies in the ranks 22 inches.

Close FILES in cavalry are at the distance which was taken before dismounting, when each man's boot-top touches, but does not press, that of his neighbour.

Loose FILES, in cavalry movements, are 6 inches distant from boot-top to boot-top, being calculated for the gallop as well as the walk of a squadron.

Open FILES in cavalry are the full breadth of a horse from boot-top to boot-top. They contain the distance which is left, when from close files, the left files rein back to dismount. Recruits and horses must be frequently exercised at this distance.

Flank FILE, the extreme file on the right or left of a squadron or troop, battalion or company, &c.

Forming from FILE in cavalry movements, is when the front file halts, and the rest ride up at a very smart gallop, taking care to halt in time, and not to over-run the ground. If the formation is by doubling round the front file (for instance, when a formation is made to the rear of the march, or to the right, when marched from the right) the files must double round as close and as expeditiously as possible.

In all formations from file, the leaders of ranks instantly cover each other, take the ordered front, and halt.

In the covering of files on horseback, the same directions hold good as on foot. In addition, it must be scrupulously observed, that every man's horse stands exactly straight to the same front as that of a man before him. Both in the horse and foot drill, the men should be often practised in covering. The former are thereby taught to place their horses straight under them.

Close FILES of infantry are soldiers standing in rank, contiguous to one another, upon any given depth of line or column. Whenever a regiment marches in front, every man should feel his next man which ever way he dresses; but he must not lean on him, nor must he move his arm from the body to feel him. So that close files mean nothing more than that soldiers in the ranks should touch lightly each other, without crowding or pressing.

Open FILES are soldiers standing in rank at given distances without touch-

ing one another. The formation at open files is only practised as a preparatory drill for forming at close files, (which is the order for action,) in order that every man may be taught to stand and move in a proper position, without getting a habit of leaning upon his neighbour. On this account every intelligent officer, who has the management of recruits, will form them sometimes at open files, and march in that order. Soldiers that have been regularly drilled, should likewise be occasionally practised in advancing by open files.

Double FILES are formed by the left files in each rank stepping to the rear of the right files.

Indian FILES, a line of men advancing or retreating from either of the flanks, from the center, or from any proportion of a line in succession to one another. They are sometimes called goose files; but the term is only familiarly, or rather vulgarly used among soldiers, and derives its appellation from a flock of geese generally following a leader, one by one. A foreign military writer, the Prince de Ligne, says, that men march forward in file, or *en ordre mince, par un instinct moutonnier*, meaning, that they follow each other like so many sheep, who move by instinct. The blood thirsty Murat used to say, *tout peuple est moutonnier*, the mass of people is gregarious.

FILE-leader is the soldier placed in the front of any file, or the man who is to cover all those that stand directly in the rear of him, and by whom they are to be guided in all their movements.

File leaders must be particularly careful to preserve their proper distances from which ever hand they are to dress to, and the followers of each file must only be attentive to cover, and be regulated by their proper file leaders. In file the rear rank invariably dresses by, and is regulated by the front rank.

To double the FILES, is to put 2 files into 1, making the depth of the battalion double to what it was, in number of men. Thus four deep are double files.

FILE marching on foot. According to the printed regulations, all recruits must first face, and then be instructed to cover each other exactly in file, so that the head of the man immediately before may conceal the heads of all the others in front. The principal points to be attended to are, that the men move

with the lock step, that the front rank men cover exactly, and that the rear rank men keep closed and dressed to the front rank.

File marching may be practised to the front, to the rear, and to either flank; in all which cases the men must be taught to cover well. When recruits are at drill, on the word *march*, the whole are to step off together, gaining at the very first step 30 inches, and so continuing each step without increasing the distance betwixt each recruit, every man locking or placing his advanced foot on the ground, before the spot from which the preceding man had taken up his.

Marching by ranks in front, open files, is when any body of men advances by rank at open order, and dresses to some given object without touching one another. The flank man of the flank the soldiers dress to, must be a non-commissioned officer, and he must take especial care not to incline to one hand or the other. His head must be kept quite straight to the front, his body must be erect, and he must advance without deviating in the most trifling manner to the right or left. In order to execute this essential part of the drill with any degree of accuracy, two persons should be present, one in the front, and the other on the flank, to observe the dressing. Young officers should be ordered to attend, and sometimes should be exercised themselves in the presence of a superior officer; for upon them hereafter will greatly depend the movement of the battalion in line or column.

Marching by ranks in front, close files, is when any number of men advances by ranks at close order, and dresses to some given object, each man lightly touching his next man, without crowding or pressing. The march in front at close files is much easier than that at open files, because every man feels his next man, which ever way the rank dresses, and into whatever direction the line or column moves.

FILE à file, Fr. file after file, or in succession.

FILE de pieux, Fr. a row of square piles or rails, which are placed on the sides of a river, &c. in order to keep up the banks, and to preserve the road.

To *FILE*, is to advance to, or from, any given point by files; as to file to the front, to file to the rear, to file from

the right or left flank, or to file from any given company. In some of which cases, the leading files must disengage themselves according to the directions given.

To *FILE off*, } (*défiler*, Fr.) to wheel
To *defile*, } off by files from moving in a spacious front, and march in length. When a regiment is marching in full front, or by divisions or platoons, and comes to a defile or narrow pass, it may file from the right or left as the ground requires, &c.

To *FILE papers*, to string them on a thread or wire. The French say *enfiler des papiers*.

FILER, Fr. to file, or march in succession.

FILER derrière, Fr. to follow the last file of a division.

Faire FILER, Fr. to make troops, &c. file off, or march in regular order.

FILER la corde, Fr. a figurative phrase among the French, signifying to go the way to the gallows.

FILER doux, Fr. to give fair words; to be submissive; to concede.

FILET, Fr. a term used in architecture, signifying fillet, listel, or a small line which runs along a larger moulding.

FILET, Fr. a snaffle-bridle.

FILET de couverture, Fr. a small ridge of plaster which runs along the top of a roof, and keeps the tiles or slates together.

FILEY, (in Yorkshire,) is deemed part of the East Riding, and is subject to the county lieutenant with respect to the raising of the militia.

FILIÈRE, Fr. a narrow pass.

FILIÈRE, Fr. a wire-drawing iron.

FILIÈRE de grade, Fr. succession or rotation of rank.

FILIÈRES, Fr. small veins or crevices through which the water runs and divides the solid masses of stone that are in quarries.

FILINGS are movements to the front, rear, or flank by files. These movements must be executed with great quickness. The files in cavalry must go off, at a smart gallop, and continue so till all are in file, the rear rank men dressing well to their front rank; the front rank covering well, and keeping close to the croup. If the filings are to be made from a flank to the front or rear, the whole must keep passaging up to the ground from which the first file went, before they go off; if to a flank, the

horses must be turned as soon as there is room. If the filings are from a flank to march along the front or rear, past the other flank, every file must come off from its own ground as the next gets into file.

General and necessary FILINGS, according to the system published by authority, for the British cavalry, are: filings from either, or both flanks of the squadron to front, flank or rear; filing from the center of the squadron to the front, or to the flank. Filing single men by ranks, or by front or rear rank men alternately, from either flank of the squadron.

In the filings of the squadron, the serre-files take their places in the rear of the files, unless the ground will allow them to remain on the flanks of the rear flank; but their general and proper position is in the rear of the files.

In cavalry filing, the greatest attention must be paid to keep the squad or troop as compact together as the nature of the movement will permit. It is a situation in which horses move free, and without confinement, but in which the parts of a squadron are apt to lengthen out, and take up much more ground than what they stand upon in line, and is therefore to be adopted only from necessity, in broken or embarrassed ground. When the word *file* has been given, and the heads of the horses have been turned ready to move off without loss of distance, the leaders of files must go off short and quick in their ordered direction. They are followed close by each man as it comes to his turn, so as to leave no unnecessary interval from one to another, and instantly to get off the ground. After being once in file, a distance of a yard from head to tail may be taken, so as to trot or gallop the easier if required. Every alteration of pace ought to be made as much as possible by the whole file at once; if this is not observed, a crowding and stop in the rear will always attend such alteration.

FIN, *Fr.* cunning; sly; subtle.

FIN *mot*, *Fr.* the real state of the case; the main point; the mind's view.

TINAGE, *Fr.* extent of a jurisdiction.

FINANCE, *Fr.* duty; tax. The French say figuratively:

Court de FINANCE, *Fr.* low in pocket, which is generally the case with military men.

FINANCES, (*finances*, *Fr.*) coin in general, which constitutes the metallic currency of countries.

FINANCES *of an army*, (*finances d'une armée*, *Fr.*) the pay and allowances which every army requires in offensive or defensive operations.

To FIND, to supply; to furnish; as, parliament *finds* the army in money and victuals, by means of taxes levied on the people.

To FIND, (*juger; déclarer; décider en justice*, *Fr.*) to determine by judicial verdict.

To FIND *guilty*, (*condamner*, *Fr.*) to pronounce an accused person guilty of the crimes alleged.

To FIND *a bill*, (*recevoir l'accusation*, *Fr.*) a law term signifying to establish grounds of accusation; which is done by a grand jury in this country. In military matters a court of inquiry embraces the same object.

The FINDING, a term used in Courts-Martial, signifying the proofs being brought home to a culprit, so that sentence may be pronounced.

FINISHED, completed; brought to the ultimate point of the original intention.

FIRE! in the art of war, a word of command to soldiers of all denominations to discharge their fire-arms, grenades, cannon, &c.

FIRE is also used to denote the discharge of all sorts of fire-arms against the enemy. The fire of the infantry is by a regular discharge of their firelocks, by platoons, divisions, &c. that of the cavalry, with their carbines and pistols; and that of a place besieged, from their artillery.

FIRE *of the curtain*, or *second flank*, is from that part of the curtain comprehended between the face of the bastion prolonged and the angle of the flank: frequently called the line of defence *sichant*.

FIRE *razant* is produced by firing the artillery and small arms in a line parallel with the horizon, or parallel with those parts of the works you are defending.

FIRE-arms are all kinds of arms charged with powder and ball, every one of which is mentioned under its respective head.

Running-FIRE is when a rank or ranks of men, drawn up, fire one after another; or when the lines of an army

are drawn out to fire on account of a victory; when each squadron or battalion takes it from that on its right, from the right of the first line to the left, and from the left to the right of the second line, &c.

FIRE-balls. See BALLS.

FIRE-cross, an ancient token in Scotland for the nation to take up arms.

FIRE-ship, a ship filled with combustibles, to set fire to the vessels of the enemy.

FIRE-MASTER. The fire-master of the Royal Laboratory at Woolwich is employed under the direction of the comptroller, and his business is to attend to the making up of all kinds of ammunition, whether for practice or service, at home or abroad, and account to the Board of Ordnance for all the tools and materials used in the laboratory. The person occupying this situation is usually an officer in the artillery selected for the express purpose of performing the important duties attached to the employment, and ought to be a person of great abilities. The whole of the artificers and labourers in the different workshops and store-houses in the laboratory are under the direction of the fire-master.

FIRE-MASTER'S mate, now styled *assistant fire-master*, is an officer subordinate to the fire-master, and appointed to assist him in the discharge of the duties above described. There are two assistant fire-masters at Woolwich, one at Portsmouth, and one at Plymouth.

FIRE-pan of a gun is the receptacle for the priming powder.

FIRE-pot, in the military art, a small earthen pot, into which is put a charged grenade, and over that, powder enough to cover the grenade; the whole covered with a piece of parchment, and two pieces of quick match across lighted; it breaks, and fires the powder, as also the powder in the grenade, which has no fuze, that its operations may be quicker.

FIRE-works are particular compositions of different sorts, made with sulphur, salt-petre, and charcoal. They are used in war, and on rejoicing days.

FIRE-workers were formerly subordinate to the fire-master and his mate; had afterwards the rank of youngest lieutenant to the royal regiment of artillery; but now that rank is abolished, and they are all second lieutenants.

They were supposed to be well skilled in every kind of laboratory work; which knowledge is an essential qualification in every officer of that regiment.

FIREBRAND, a piece of wood kindled. It signifies figuratively any person who excites others to sedition. The French say in the first instance *tison*, in the second *boute-feu*.

FIRELOCK, (*fusil, arquebuse, Fr.*) an instrument of modern warfare, so called from producing fire of itself, by the action of the flint and steel; the arms carried by a foot soldier. The private soldier familiarly calls his firelock *brown bess*; although the term is little applicable to the weapon, considering that it is absurdly polished in almost every regiment of the British army. This practice not only gives unnecessary trouble to the soldier, but ultimately injures the piece; especially when the ramrod is used to give a high polish. Firelocks were formerly 3 feet 8 inches in the barrel, and weighed 14lb. at present the length of the barrel is from 3 feet 3 inches to 3 feet 6 inches, and the weight of the piece only 12lb. They carry a leaden bullet, of which 29 make 2lb. its diameter is .550 of an inch, and that of the barrel 1-50th part of the shot. Firelocks were first made use of in 1690, when match-locks were universally disused; but when invented we cannot ascertain. A firelock is called, by writers of about the middle of the last century, *asnaphan*, which, being a low Dutch word, seems to indicate its being of Dutch invention. Formerly, both in the manual and platoon exercises, the term firelock was always adopted—as, *Shoulder your firelock, Present your firelock.*—At present a more simple and brief mode of expression prevails throughout the army—as, *Shoulder arms, Present arms, &c. &c.* except in the funeral parties, when the term *firelock* is directed to be used instead of *arms*, until after firing over the grave, bayonets are ordered to be fixed, and then the term *arms* is adopted.

FIRELOCKS, in the plural, signify men or soldiers equipped and actually under arms; as, there were 10,000 effective firelocks in the field.

FIRING in line. According to the Regulations, the following principal heads constitute firing in line.

The object of fire against cavalry is to keep them at a distance, and to deter

them from the attack: as their movements are rapid, a reserve is always kept up. But when the fire commences against infantry, it cannot be too heavy or too quick while it lasts, and should be continued till the enemy is beaten or repulsed. This may not improperly be called offensive fire.

Defensive fire belongs principally to infantry, when posted on heights which are to be defended by musketry. As soldiers generally present too high, and as fire is of the greatest consequence to troops that are on the defensive, the habitual mode of firing should therefore be rather at a low level than a high one.

On these occasions the men are generally drawn up 3 deep; in which case the front rank kneeling, being the most efficacious, as being the most razing, should not be dispensed with when it can be safely, and usefully, employed.

FIRING by half battalions, the line advancing. The left wings *halt*, and the right ones continue to march 15 paces, at which instant the word *march* being given to the left wings, the right at the same time are ordered to *halt, fire*, and load, during which the left march on and pass them, till the right wings, being loaded and shouldered, receive the word *march*, on which the left ones *halt, fire, &c.* and thus they alternately proceed.

FIRING by half battalions, the line retiring. The right wings are ordered to *halt, front*, and when the left wings have gained 15 paces and have received the word *halt, front*, the right wings are instantly ordered to *fire, load, face about*, and march 15 paces beyond the left ones, where they receive the word, *halt, front*, on which the left wings *fire, &c.* and thus alternately proceed.

It is observed in the official Rules and Regulations, that in addition to the battalion directions, there must be a regulating battalion named, by the half battalions of which each line will move, *halt*, and *fire*; the commander of each line will be with such half battalion, and in giving his several commands must have an attention to the general readiness of the line, especially after loading, that the whole are prepared to step off together at the word, *march*. The firing of the advanced wing succeeds the *march*, or the *halt, front*, of the retired wing, instantly; and each half battalion fires independent and quick, so that no unne-

cessary pauses being made betwixt the firing words, the fire of the line should be that of a volley as much as possible; and the whole being consequently loaded together, will be ready for the next command of movement. In these firings of the line, advancing or retiring, the two first ranks will fire standing, and the rear rank support their arms.

In this manner also may the alternate battalions of a line advance or retire, and when the whole are to form, and that the last line moves up to the first, every previous help of advanced persons will be given to ensure its correctness.

Fire in line advancing is when the infantry marches in line to attack the enemy, and in advancing makes use of its fire. On these occasions it is better to fire the two first ranks only, standing, reserving the third, than to make the front rank kneel and to fire the whole; but when it is necessary to fire at a considerable distance, or on a retiring enemy, volleys may be given by the three ranks, the front one kneeling.

FIRING by platoons is practised when a line is posted, or arrives at a fixed situation. In this position, battalions fire independent of one another, and the fire generally commences from the center of each. The first fire of each battalion must be regular, and at established pauses and intervals; after which each platoon may continue to fire as soon as it is loaded, independent and as quick as possible.

FIRING by files is generally used behind a parapet, hedge, or abattis. In this situation the two first ranks only can fire, and that must be by the 2 men of the same file always firing together, with coolness and deliberation. When however, the parapet, hedge, or abattis is but a little raised, platoon firing may be resorted to.

Oblique FIRING by battalions, or otherwise, according to the ground, is extremely advantageous when it is found expedient to give an oblique direction to part of a line, or when it is discovered that their fire can, in this manner, be thrown against the opening of a *défilé*, the flanks of a column, or against cavalry or infantry that direct their attack on some particular battalion or portion of the line.

Oblique firing is either to the right and left, or from the right and left to

the center, depending entirely on the situation of the object to be fired against. The Prussians have a particular contrivance for this purpose: if they are to level to the right, the rear ranks of every platoon are to make two quick but small paces to the left, and the body of each soldier to turn 1-3th of a circle; and are to take the same distance to the right, if they are to level to the left.

When a line halts at its points of firing, no time is to be lost in scrupulous dressing, and the firing is instantly to commence. But when a line halts, and is not to fire, the usual dressings must be attended to; and every thing will depend upon the coolness and attention of the officers and non-commissioned officers.

It should be observed, with respect to firings in general, that after the march in front, and halt of the battalion, company or platoon firing ought invariably to begin from the center, and not from the flank. In other cases, and in successive formations, it may begin from whatever division first arrives and halts on its own ground.

Square FIRING is that method of firing where either a regiment or any body of men is drawn up in a square, each front of which is generally divided into 4 divisions of firings; and the flanks of the square, as being the weakest part, are sometimes covered by 4 platoons of grenadiers who flank the angles. The first fire is from the right division of each face; the second fire from the left division of each face, and so on; the grenadiers making the last fire.

Street FIRING is the method of firing adapted to defend or scour a street, lane, or narrow pass of any kind; in the execution of which the platoon must be formed according to the width of the place; leaving sufficient room on the flanks for the platoons, which have fired, successively to file round to the rear of the others.

Street FIRING advancing. When the column has arrived at the spot where the firing is to commence, the commanding officer from the rear gives the word *halt!* and the officer commanding the platoon orders it to *make ready, p'sent, fire, recover arms, outwards face,* (by half platoons,) *quick march.*

At the instant the men in the first platoon recover their arms, after firing, the second platoon *makes ready,* and

waits in that position till the front is cleared by the first platoon having filed round the flanks toward the rear, when the second advances, with recovered arms, until it receives the words *halt, p'sent, fire.*

As soon as the platoon which has fired, has got down the flanks, it must form in front of the colours, and prime and load.

Street FIRING retiring is conducted on the same principles, except that the platoons fire without advancing, on the front being cleared by the former platoon filing round the flank.

Another method of *street firing advancing*, generally esteemed more eligible, is, after firing, to wheel out by subdivisions, (the pivots having taken a side step to right and left outwards,) prime and load, and as soon as the last platoon has passed, file inwards and form.

FIRMNESS, (*fermeté*, Fr.) steadiness; constancy; resolution. There are not any situations in life, where the exercise of this enviable quality is found so essentially necessary as in those of a military nature. Brutal courage is so often mistaken for dignified manliness, that a bully sometimes gains a reputation which a brave man seldom has. It has been reported of an officer, that being once insulted by a person of the above description, who said, *Then, sir, you are a coward;* he replied with a firm, but disdainful look, *No, sir! I am not a coward, for I have resolution enough not to feel myself insulted by a fool, or a coxcomb.*

FISSURE, a narrow chasm where a small breach has been made.

FIT, qualified, proper; adapted to any purpose of undertaking.

FIT for service, capable of undergoing fatigue. Strong healthy men, from 18 to 45 years of age, of a certain height, and not subject to fits, are considered fit objects for service, and may be enlisted into any of his Majesty's regiments. The principal heads under which every recruit should be rejected, or made soldier be discharged, consist of rupture, venereal lues or incurable pox, habitual ulcers, sore legs, scurvy, scald head, and fits.

FIT, a paroxysm; any violent affection of the body, by which a man is suddenly rendered incapable of going through the necessary functions of life.

FITS, habitual affections of the body, to which men and women are subject, and by which they may be frequently attacked without any other immediate consequences than a temporary suspension of the mental powers, accompanied by a disordered and painful action of the frame. When recruits are examined, particular inquiry should be made with respect to this complaint.

Fix bayonets! a word of command in the manual exercise. See **MANUAL**.

FLACHE, *Fr.* a hole made in the pavement.

FLACHE, *Fr.* a species of stone used for smooth pavement; and round the platforms of ordnance.

FLAG of truce, (*pavillon parlementaire*, *Fr.*) See **TRUCE**.

FLAG, the colours or ensign of a ship, or land force. See **COLOURS**, **STANDARDS**, &c.

FLAGS, in the British navy, are either red, white, or blue, and they are hoisted either at the heads of the main-mast, fore-mast, or mizen-mast.

FLAGS when displayed from the top of the main-mast are the distinguishing marks of admirals; when from the fore-mast, of vice-admirals, and when from the mizen-mast, of rear-admirals.

The highest flag in the British navy, is the *anchor and cable*, which is only displayed when the lord high admiral, or lords commissioners of the Admiralty are on board; the next is the *union*, the distinction peculiar to the second officer, called admiral of the fleet; and the lowest flag is the *blue* at the mizen-mast.

FLAG-officer, a naval officer commanding a squadron. For the compliments paid him, see **HONOURS**.

FLAG-ship, the ship in which the commander of a fleet is.

FLAG, commonly called flag-stone. See **FLACHE**.

FLAGSTAFF, the staff on which the flag is fixed.

FLAM, a word formerly made use of in the British service, signifying a particular tap or beat upon the drum, according to which each battalion went through its firings, or evolutions. The practice is laid aside, as it is particularly ordered by the last Regulations, that every battalion, troop, or company shall be exercised by specific words of command, delivered in a distinct and audible tone of voice.

Flam is also used as a signal to pitch

tents; after a ruffle the flam is beat, and the men instantly erect their poles.

FLAMBÉ, *Fr.* desperate; lost. *Affaire FLAMBÉE*, *Fr.* a desperate case.

FLAMBEAU, *Fr.* a wax torch.

FLAMBER un canon, un mortier, *Fr.* to burn powder in a cannon or mortar, for the purpose of cleansing it, or of destroying dampness; also to scale a gun.

FLAMBERGE, *Fr.* a word used, by way of ridicule, to signify the useless drawing, or flourishing, of a sword, viz. *Jeus l'assurance de mettre flamberge au vent*, I had the boldness to unsheath my sword.

FLAMME, *Fr.* in the old French marine establishment, was a mark of distinction which exclusively belonged to the king's ships, consisting of a long streamer.

FLAMME, ou pendant, *Fr.* bolting cloth, or ticking. It is a long streamer which generally hangs either from the yards or scuttle of a mast, and serves for ornament or to give signals.

FLAMME, *Fr.* in farriery, a steam.

FLAMMÉE, *Fr.* a spark of fire; a particle of kindled matter.

FLANC, *Fr.* a flank.

FLANC $\left\{ \begin{array}{l} \textit{bas,} \\ \textit{couvert,} \\ \textit{retiré.} \end{array} \right\}$ See *Retired FLANK*.

FLANC de bastion, *Fr.* See **FLANK of the bastion**.

Prendre en FLANC, *Fr.* to take in flank.

Préter le FLANC, *Fr.* to expose the flanks of a regiment, or wings of an army, &c.

Être pris en FLANC, *Fr.* to be attacked by an enemy in flank.

FLANDRIN, *Fr.* a large slim lath-back fellow, unfit to be a soldier.

FLANKS, in the art of war and in fortification, are of several denominations, according to their uses, viz.

FLANKS of an army, (*les flancs d'une armée*, *Fr.*) certain proportions of offensive, or defensive, forces which are extended to the right and left of a main body, and ought to be posted in such a manner, that it would be certain ruin to the enemy were he to attempt any impression between them:—in a more confined sense, the troops which are stationed on the right and left of each line of encampments. See **WINGS**.

FLANK-files are the two first men on the right and the two last men on the

left, telling downwards from the right, of a line, battalion, company, division, subdivision, or section. When a battalion is drawn up three deep, its flank files consist of three men, or, as the French call it, file and demi-file. When four deep, the flank files are termed double files; so that a column formed from any of these alignments will have all its relative flank files, be the depth of formation what it will.

Inward FLANK in manœuvring, the first file on the left of a division, subdivision, or section, when the battalion stands at close, or open column, with the right in front.

Outward FLANK of a line or battalion, the extreme file on the right or left of a division, subdivision, or section, according to the given front, when the battalion is at close, or open, column, and which is the farthest wheeling point from line into column, or from column into line. It is likewise called the *reverse flank*.

FLANK-company, a certain number of men drawn up on the right, or left, of a battalion. Thus the grenadiers compose the right, and the light infantry, the left flank company. When these are detached, the two extreme battalion companies become such.

The grenadiers and light infantry are generally called flank companies, whether attached, or not, to their several battalions.

FLANKING-party, a select body of men on foot or on horseback, whose object is to harass and perplex the enemy, to get upon his wings, or by any manœuvre to hang upon the flank of an opposing force.

FLANK en potence is any part of the right or left wing formed at a right angle with the line. See *POTENCE*.

Leading FLANK. When the line breaks into column in order to attack an enemy, it is the flank which must almost always preserve the line of appui in all movements in front. The first battalion, division, or company, of every column which conducts, is called the head or leading flank of that column. All the writhings and turnings to which it must unavoidably be subject, are followed by every other part of the body, and such head becomes a flank, right or left, when formed into line. The commander must therefore be on which ever flank directs the operations of the line, and by which

he proposes to attack, or to counteract the attempts of the enemy.

Passing FLANK, the flank of a squadron, troop, battalion, or company, which is next to the general when troops march by. Both in cavalry and infantry movements, at open order, a non-commissioned officer invariably steps up to fill the vacancy occasioned, on the passing flank, by the officer going to the front of his squadron, troop or company, in order to salute the reviewing general. At closed ranks, when troops march past, the passing flank must always have an officer.

FLANK in fortification, *in general*, is any part of a work that defends another work, along the outside of its parapet.

FLANK of a bastion, (*flanc d'une bastion*, Fr.) in fortification, that part which joins the face to the curtain, comprehended between the angle of the curtain and that of the shoulder. It is the principal defence of the place. Its use is, to defend the curtain, the flank, and face of the opposite bastion, as well as the passage of the ditch; and to batter the salient angles of the counter-scarp and glacis, whence the besieged generally ruin the flanks with their artillery; for the flanks of a fortification are those parts which the besiegers endeavour most to destroy, in order to take away the defence of the face of the opposite bastion.

Oblique, } *FLANK*, { that part of the
Second, } { curtain from
 which the face of the opposite bastion may be discovered, and is the distance between the lines rasant and fichant, which are rejected by most engineers, as being liable to be ruined at the beginning of a siege, especially when made of sandy earth. The second parapet, which may be raised behind the former, is of no use; for it neither discovers nor defends the face of the opposite bastion: besides, it shortens the flank, which is the true defence; and the continual fire of the besiegers' cannon will never suffer the garrison to raise a second parapet. This second flank defends very obliquely the opposite face, and is to be used only in a place attacked by an army without artillery.

Retired FLANK, (*flanc retiré*, Fr.) Low flank, (*flanc bas*, Fr.) Covered Flank, (*flanc orillon, ou couvert*, Fr.) the platform of the casemate, which lies hid in the bastion. These retired flanks

are a great defence to the opposite bastion and passage of the ditch, because the besiegers cannot see, nor easily dismount, their guns.

FLANK prolonged, (*flanc prolongé*, Fr.) in fortification, is the extending of the flank from the angle of the epaulement to the exterior side, when the angle of the flank is a right one.

Concave FLANK, (*flanc concave*, Fr.) is that which is made in the arc of a semi-circle bending outwards.

FLANKS of a frontier are the different salient points of a large extent of territory, between each of which it would be impolitic for any invading army to hazard an advanced position. The late celebrated General Lloyd (whose accuracy of observation and solidity of conclusion with respect to the old iron frontier of France have been universally acknowledged) has furnished military men with a full and succinct account of the relative positions upon it. He divides this long line (which begins at Basil in Switzerland, and runs in various directions from thence to Dunkirk in French Flanders) into three parts, and considers each of them separately. The first part goes from Basil to Landau, and covers Alsatia; it is near 130 miles in length. The second part goes from Landau to Sedan on the Moselle, covers Lorraine on the side of the Electorate of Treves, the Duchies of Deux-Ponts, Luxemburgh, and Limburg; it is 190 miles in length. From Sedan down the Meuse to Charlemont in French Flanders, and thence to Dunkirk, goes the third part, and is about 150 miles; so that the whole natural frontier of France is 470 miles. The greatest part, if not the whole, of which is in the shape of a horse shoe, and presents impregnable flanks. An anonymous writer, (See Better late than never, published in 1793,) after referring the reader to General Lloyd for a specific account of the first and second lines of the French frontier, has made the following observations relative to the third and last, which runs from Sedan down the Meuse to Charlemont, from thence to Dunkirk, and is 150 miles in length. His words are—While the duke of Brunswick and the king of Prussia were ruining the most formidable armies in Europe by endeavouring to penetrate a few miles into Lorraine and Champagne through the first and second line, (without having previously secured the two

flanks,) the French with redoubled activity operated upon the third, and finally subdued all Flanders. Those very difficulties, in fact, which presented themselves to oppose the progress of the allied army into France, facilitated every excursion on her part, as *the direction of the line which goes from Sedan to Landau is CONCAVE towards that part of Germany.*

The remainder of this line (within which so many faults were committed, or rather could not be avoided, because the impression itself was founded in error) runs to Dunkirk. "It has been the scene of successive wars for nearly two centuries, the most expensive, bloody, and durable, of any recorded in the annals of mankind." This line, continues General Lloyd, is stronger by art than nature, having a prodigious number of strong fortresses and posts upon it; moreover it projects in many places, so that an enemy can enter no where, without having some of them in front and on his flanks.

Hence the impolicy of taking Valenciennes, or marching towards Quesnoy, without having previously secured *Dunkirk, Lisle, &c.*

FLANKS, in farriery, a wrench, or any other grief in the back of a horse.

To FLANK, in fortification, is to erect a battery which may play upon an enemy's works on the right or left without being exposed to his line of fire. Any fortification, which has no defence but right forward, is faulty; and to make it complete, one part ought to flank the other.

To FLANK, in evolutions, to take such a position in action as either to assist your own troops, or to annoy those of your enemy, by attacking either of his flanks, without exposing yourself to all his fire.

To OUT-FLANK, a manœuvre by which an army, battalion, troop, or company, outstretches another, and gets upon both, or either, of its flanks.

To OUT-FLANK, in an extensive acceptation of the term, when applied to locality, means to possess any range of opposite parts, or territory, whence you might invade your neighbour.

FLANKER, a fortification jutting out so as to command the side, or flank, of an enemy marching to the assault, or attack.

FLANKERS, in cavalry manœuvres, the

most active men and horses who are selected to do the duty of flankers. The men, of course, must be perfect masters of their horses. One complete file of each four must be a file of flankers; it does not signify which file, but if it can conveniently be done, the center file should be taken, as in that case neither the flank men, nor the telling off of the squadron or division will be affected.

When you manœuvre by *whole* squadrons, six or eight flankers are sufficient in general for the whole squadron.

The word of command, when the flankers come out to the front, is, *flankers forward!*

In *flanking*, a great deal depends upon the officer or serjeant; he must be extremely active, and not only attend to the movements of the division from which he is detached, but likewise to his flankers.

As horses frequently refuse to quit the ranks and hang back obstinately, the men indiscriminately should be often called out of the ranks one by one, and practised as flankers.—Grenadiers and light infantry are also called flankers.

To **FLANKER**, (in French *flanquer*,) to fortify the walls of a city with bulwarks or countermines.

FLANKING is the same in fortification as defending.

FLANKING party, any body of men detached from the main army to get upon the flanks of an enemy, so as to secure a line of march. See **FLANKERS**.

FLANKING angle, in fortification, that composed of the two lines of defence, and pointing towards the curtain. See **TENAILLE**.

FLANKING line of defence. See *line of defence*.

FLANKING-POINT. See **POINT**.

FLANNEL, (*flanelle*, Fr.) a soft nappy stuff or wool. It is also called *molleton* by the French. Whenever the government of a country can afford any extra clothing for soldiers on service, particularly in cold countries, or even in hot climates, it is sound policy to make an allowance for flannel; indeed, it ought to form a principal part of the necessities of a soldier.

FLANQUÉ, Fr. to be defended in such a manner that no attack can be successfully made against a work.

FLANQUER, Fr. to flank.

FLAP, a disease in horses, by which

the lips are swollen on both sides of the mouth.

FLAQUIÈRE, Fr. part of a mule's harness.

FLASH, the flame which issues from any piece of ordnance, or fire-arm, on its being fired.

FLASH in the pan, an explosion of gunpowder without any communication beyond the touch-hole. When a piece is loaded, and upon the trigger being drawn, nothing but the priming takes fire, that piece is said to flash in the pan.

FLASK, a measure made of horn, used to carry powder in, with the measure of the charge of the piece on the top of it.

FLASQUES, Fr. in the artillery, are two cheeks of the carriage of a great gun. See **AFFUT**.

FLASQUE, Fr. likewise means a gunpowder flask.

FLAT, a level; an extended plane.

FLAT-bottomed boats, in *military affairs*, are made to swim in shallow water, and to carry a great number of troops, artillery, ammunition, &c. They are constructed in the following manner: a 12-pounder, low chace, an 18 ditto, stern chace; 90 to 100 feet keel; 12 to 24 ditto beam; 1 mast, a large square main-sail; a jib-sail: they are rowed by 18 or 20 oars, and can each carry 400 men. The gun takes up one bow, and a bridge the other, over which the troops are to march. Those that carry horses have the fore parts of the boats made open.

FLAT-bottomed, (*fait à fond de cuve*, Fr.) not having any keel; as flat-bottomed boats are built. The French call these boats *prames*.

FLATTOIR, Fr. a flattening hammer.

FLAW, (*fente*, Fr.) any crack or small opening in a gun, or its carriage, is so called.

FLÉAU, Fr. the beam, or balance, of a pair of scales.

FLÉAU de Porte, Fr. an iron, or a strong wooden bar, which falls across the inside of the gates of a town, when shut, so as to prevent their being broken open.

FLÉAU, Fr. a scourge. The French use this word figuratively in most cases, as we do, viz *La guerre, la peste, et la famine sont trois fléaux de Dieu*, war, pestilence and famine, are three scourges of God. They also say, *La calomnie est*

le *fléau de la vertu*, calumny is the scourge of virtue.

FLÈCHE, *Fr.* an arrow.

FLÈCHE, *Fr.* in geometry, a perpendicular line raised upon the center of the chord of an arc or segment of a circle, and terminated by the circumference.

FLÈCHE, in *field fortification*, a work of two faces, usually raised in the field, to cover the quarter guards of a camp or advanced post.

FLÈCHE ardente, *Fr.* a particular kind of artificial firework, which is thrown into the works of the enemy; literally a blazing arrow.

FLÈCHE quarrée, *Fr.* a quarrel of a cross-bow.

FLÈCHES de pont-levis, *Fr.* pieces of timber collected at the counterpoise of a *draw-bridge*, to which are fixed two chains, that raise the apron of the bridge.

FLÈCHES d'arpenteur, *Fr.* piquets, or long equal poles which land-surveyors use to measure land.

FLÈCHES pour le pétard, *Fr.* sticks of iron fixed together by means of iron rings, the last of which is armed with strong iron points; to this is fixed the *pétard*, which is to burst upon the gates: these engines go upon wheels, and are pushed forward like flying bridges.

FLÉCHIR, *Fr.* to subinit; to truckle under; to buckle to.

FLEECE, (*toison*, *Fr.*) Golden fleece, (*toison d'or*, *Fr.*) See **ORDERS**.

FLEET, (*flotte*, *Fr.*) The French also use the word *armée*, to signify fleet or armament at sea, viz. *le vaisseau amiral porte tous ses feux allumés la nuit, pour marquer la route au reste de l'armée*, the admiral's ship has all its lights out, during the night, in order to mark, or shew, the course to the rest of the fleet. They also say, *armée navale*, naval army. See **NAVAL**, *Fr.*

To **FLESH**, according to Dr. Johnson, to initiate; from the sportsman's practice of feeding his hawks and dogs with the first game that they take; or training them to pursuit by giving them the flesh of animals.

To **FLESH a sword**, to draw blood by means of a sword. It is also used figuratively—Thus Junius, under the signature of Atticus, says of the Duke of Grafton—*His Grace had honourably fleshed his maiden sword in the field of opposition.*

FLETCHER. See **BOWYER**.

FLETRIR, *Fr.* to brand; to disgrace;

also to mark with a hot iron, as is practised upon criminals.

La FLEUR des troupes, *Fr.* choice or picked men: the flower of an army.

FLEURET, *Fr.* a foil used in learning to fence.

FLIBUSTIERS, *Fr.* pirates in the West Indies: they cruise in bottoms called *flibots*. Hence *flibuster* is to go out to plunder.

FLIBOT, *Fr.* a fly boat; a pirate's boat.

FLIGHT, used figuratively for the swift retreat of an army, or any party, from a victorious enemy.

To *put to FLIGHT*, to force your enemy to quit the field of battle.

FLIGHT is likewise applicable to missile weapons, or shot, as a flight of arrows, a flight of bombs, &c.

FLIGHT-shot, (*coup de flèche*, *Fr.*) the motion of an arrow shot from a bow.

FLINT, (*caillou*, *Fr.*) a hard semi-pellucid stone of the chrysal kind, well known to strike fire with steel. As various accidents happen from the want of proper attention to the method of fixing and enclosing flints in firelocks, particularly among volunteers and raw troops, we think it right to warn every soldier against the use of paper for this purpose. Paper, being naturally absorbent, must necessarily receive, in the course of one or two discharges of the musket, several particles of gunpowder, and become inflammable. To soldiers, (such as light troops and rifle-men who prime from a powder-horn,) this mode is peculiarly hazardous. Instances, indeed, have occurred, in which the hand has been blown off. We would recommend sheet lead, or leather. But sheet lead, such as may be got from every tea-dealer, is preferable to leather. Leather is elastic, and does not wrap round the flint so well as lead, which collapses at every pressure; and in process of time leather will become dry, and of course susceptible of ignition. Captains of companies might easily afford their men a sufficient quantity of sheet lead, out of the allowance for emery, oil, and brickdust.

To **FLOAT**. A column is said to float when it loses its perpendicular line in march, and becomes unsteady in its movements.

FLOAT-boat, (*radeau*, *Fr.*) a raft upon which persons, or things, may be conveyed by water.

FLOATING-batteries, (*batteries flot-*

tantes, Fr.) vessels used as batteries, to cover troops in landing on an enemy's coast.

FLOGGING, the punishment in general use among the British foot soldiers. It is inflicted with a whip having several lashes; generally nine.

FLOODGATE, in fortified towns, is composed of 2 or 4 gates, so that the besieged by opening the gates may inundate the environs, and keep the enemy out of gun-shot.

FLOOR. See **PLATFORM**.

FLOTSON, goods that swim without any owner on the sea.

FLOTTEMENT, Fr. an undulation or floating in the movements of a battalion whilst marching. See to **FLOAT**.

To **FLOURISH**, in a general musical acceptation of the term, is to play some prelude, or preparatory air, without any settled rule.

A **FLOURISH**, (*fanfare*, Fr.) any vibration of sound that issues from a musical instrument.

The trumpet **FLOURISH**, in drawing swords, is used regimentally by corps of cavalry on their own ground, and is the sounding used in receiving a major-general. It is repeated twice for a lieutenant-general. Whenever his Majesty, the Commander in Chief, or any of the royal family appear before a body of cavalry, the trumpet flourish is always used.

FLOWER, (*élite*, Fr.) a word in common military phraseology to signify the choicest troops of an army. The French say also *la fleur des troupes*.

FLOWER de luce, } the original arms
FLEUR de lis, } of France. They consist in three flowers de lis or, in a field of azure. These arms were superseded in 1789, by the cap of liberty, and the three-coloured flag, when the Bastille was taken and destroyed by the inhabitants of Paris. They were restored in 1815, through the united efforts of the allied armies, against the Emperor Napoleon.

FLUGEL-man, a well drilled intelligent soldier advanced in front of the line, to give the time in the manual and platoon exercises. The word *flugel* is derived from the German, and signifies a wing; the man having been originally posted in front of the right wing.

FLUSHED, a term frequently applied when men have been successful, as, flushed with victory, &c.

FLUTE, a wind instrument which is sometimes used in military bands.

FLUTE, Fr. a rank: a flute.

FLUX, (*flux*, Fr.) an extraordinary evacuation of the body, to which soldiers are frequently subject on service. Towards the fall of the year this disorder is particularly prevalent, especially in camps. It is of a contagious nature, and the greatest care should be taken to prevent the healthy men in a regiment from frequenting the privies to which those infected by this cruel disorder are permitted to resort. A sentry should always be posted in the vicinity of every hospital for that specific purpose.

FLY, the upper part of a tent or marquee, that from which the shell and walls may be detached.

To **FLY** (*fuir*; *s'enfuir*; *se sauver*, Fr.) to make a precipitate retreat; to run away.

To **FLY in a battle**, (*tourner le dos*, Fr.) to turn tail and run away. To abandon the standard, or colours, of a regiment.

To **FLY one's country**, (*quitter sa patrie*; *émigrer*, Fr.) to abandon the country in which one was born, and to go into some other; to emigrate. This can seldom happen without the party incurring the imputation of cowardice, dishonour, or guilt.

To **FLY for refuge**, (*se réfugier*, Fr.) to seek some particular country, quarter, or place, where one may be out of the reach of persecution, or justice.

To **FLY the kingdom**, (*vuider*, Fr.) to escape out of the limits of a regulated dominion.

To **FLY back**, as a horse does, (*ruer*, Fr.) to fall suddenly into a retrograde movement; to discover manifest symptoms of fear.

To **FLY from one's colours**, to abandon the regiment with which one is acting, or a cause which one has espoused.

FLYING-camp, (*camp volant*, Fr.) See **CAMP**.

FLYING - } *army*. See **ARMY**.

} *bridge*. See **BRIDGE**.

FLYING-report, (*bruit qui court*, Fr.) a vague and uncertain communication, which is made by one, or more, persons.

FLYING-colours, (*enseignes déployées*, Fr.) colours unfurled, and left to wave in the air. Hence to return, or come off, with flying colours; to be victorious, to get the better.

FOAL, (*poulain*, *pouline*, Fr.) the

offspring of a mare, or other beast of burthen.

FOCUS, in *mining*. See **MINE**.

FODDER, (*fouirage, pâture*, Fr.) hay, &c. given to horses and other animals for food.

Green FODDER, (*fouirage vert, pâture verte*, Fr.) grass growing in the meadows, &c. or brought thence, for the food of horses. Tares, vetches, &c. may also be so called.

Dry FODDER, (*fouirage sec*, Fr.) food of horses, consisting of corn, oats, barley, and beans.

FOE. See **ENEMY**.

FOI, Fr. faith; credit; belief. The French say, *n'avoir ni foi ni loi*, to have neither religion nor probity.

Foi also signifies testimony; evidence: *En foi de quoi*, in testimony whereof.

FOIBLE d'une place, Fr. the weak side of a fortified place.

FOIBLESSE, Fr. See **WEAKNESS**.

FOIBLESSE d'une place de guerre, Fr. those parts of a fortified town, or place, where they are most vulnerable.

FOIL, in *fencing*, a long piece of steel of an elastic temper, mounted somewhat like a sword, which is used in fencing for exercise. It is without a point, or any sharpness, having a button at the extremity covered with leather.

To FOIL, to defeat.

FOIN, Fr. hay. *Foin d'arrière saison*, Fr. after-math, or latter-math.

FOLLES (*pièces*) *d'Artillerie*, Fr. those pieces of ordnance, the bore of which is not exactly straight.

To FOLLOW, (*suivre*, Fr.) to go after any thing; to pursue; as to follow the enemy.

To FOLLOW up, (*poursuivre*, Fr.) to pursue with additional vigour some advantage which has already been gained. As to follow up a victory, *poursuivre une victoire*. There is not, perhaps, in military strategy, or in military tactics, a more difficult part to act than that of following up a victory. Every quality which constitutes a good general must be exerted on this occasion.

FOLLOWERS of a camp, officers' servants, sutlers, &c. All followers of a camp are subject to the Articles of War equally with the soldiery.

FONCIÈREMENT, Fr. thoroughly; to the bottom. The French say *il est foncièrement bon officier*, he is a thorough good officer.

FONCTIONS militaires, Fr. the relative duties and occupations to which military men are subject.

FOND d'affût, Fr. the sole or bottom of a gun-carriage.

De FOND en comble, Fr. utterly; entirely. *L'armée est ruinée de fond en comble*, the army is ruined, or undone, to all intents and purposes.

FOND de cale, Fr. hold of a ship.

FONDELFE, Fr. an instrument used in the same manner as a sling to throw stones; it was likewise called *bricolle*, owing to the stones when round taking an oblique direction.

FONDEMENS, Fr. foundation.

FONDERIE, Fr. forge; furnace; casting-house. See **FOUNDRY**.

FONDEUR d'artillerie, Fr. the person who casts the pieces of ordnance.

FONDRE, Fr. to fall upon; to rush upon. *La cavalerie alla fondre sur l'aile gauche de l'ennemi*, the cavalry, or horse, fell upon the left wing of the enemy.

FONDRE, Fr. to draft; as, *fondre les régimens de Butler et de Fielding dans ceux de Montcassel, Obrien et Dillon*, to draft the regiments of Butler and Fielding into those of Montcassel, Obrien and Dillon.

FONDRIÈRE, Fr. an opening in the surface of the earth occasioned by earthquakes, fire, rain; or a marshy ground, the waters of which growing stagnant are dried up in summer time, and freeze in cold weather—A bog.

FONDS destinés pour le paiement des troupes, Fr. monies issued for the service of the army.

FONTE des pièces d'artillerie, Fr. the metal used in the casting of cannon, which consists of three sorts well mixed together, viz. copper, tin, and brass.

FOOLHARDINESS, courage without discretion; inconsiderate rashness.

FOOLHARDY, daring without judgment; inconsiderately bold; foolishly adventurous.

FOOT, the lower part; the base. As the foot of the alps, *le pied des Alpes*.

The FOOT, the marching army of the line that goes on foot; the *infantry* in contradistinction to cavalry, which is called the *Horse*.

Foot-boy, a low menial; an attendant in livery. It is contrary to the Articles of War to put any soldier, or enlisted person, in livery; the duty of a soldier

being always considered as superior to every badge of degradation.

Foot-soldier, an armed man who serves on foot.

Foot is also a long measure, consisting of 12 inches. Geometricians divide the foot into 10 digits, and the digits into 10 lines; but we divide the foot into 12 inches, and an inch into 12 lines, and a line into 12 points.

A *square Foot* is the same measure, both in length and breadth, containing $12 \times 12 = 144$ square or superficial inches.

A *cubic Foot* is the same measure in all the three dimensions, length, breadth, and thickness; containing $12 \times 12 = 144 \times 12 = 1728$ cubic inches. The foot is of different lengths in different countries. The Paris royal foot exceeds the English by 9 lines; the ancient Roman foot of the Capitol consisted of 4 palms $= 11 \frac{1}{10}$ English inches; and the Rhineland or Leyden foot, by which the northern nations go, is to the Roman foot as 950 to 1000. The proportions of the principal feet of several nations are as follow. The English foot divided into 1000 parts, or into 12 inches, the other feet will be as follow :

PLACES.	1000 parts	feet.	inch.	lines
London foot - -	1000	—	12	—
Amsterdam - -	942	—	11	3
Antwerp - - -	946	—	11	2
Bologna - - -	1204	1	2	4
Berlin - - - -	1010	1	—	2
Bremen - - - -	964	—	11	6
Cologne - - - -	954	—	11	4
Copenhagen - -	965	—	11	6
Dantzic - - - -	944	—	11	3
Dort - - - - -	1184	1	2	2
Frankfort on the Main	948	—	11	4
The Greek - - -	1007	1	—	1
Mantua - - - -	1569	1	6	3
Mechlin - - - -	999	—	11	—

Madrid - - - -	899	—	10	7
Lisbon - - - -	1060	1	—	6
Turin - - - - -	1062	1	—	7
Venice - - - - -	1162	1	1	9

On Foot. When any given number of armed men are called out for actual service, the aggregate body is said to be *on foot*.

To be on the same footing with another, is to be under the same circumstances in point of service; to have the same number of men, and the same pay, &c.

To gain or lose ground foot by foot, is to do it regularly and resolutely; defending every thing to the utmost extremity, or forcing it by dint of art or labour.

Foot-bank, in fortification. See **BANQUETTE**.

FORAGE, (*fouirage*, Fr.) in the art of war, implies hay, straw, and oats, for the subsistence of the army horses. This forage is divided into rations, one of which is a day's allowance for a horse, and contains 14lb. of hay, 10lb. of oats, and 6 or 8lb. of straw.

Dry FORAGE, (*fouirage sec*, Fr.) See **FODDER**.

Green FORAGE, (*fouirage vert*, Fr.) See **Green FODDER**.

When cavalry are stationed in barracks in Great Britain, the number of rations of forage to be issued to the horses of the officers, non-commissioned-officers, and soldiers, is not to exceed the Regulations, and is to be confined to those which are actually effective in the barracks.

FORAGE-Master-General, in former times, an officer who was a principal dependant upon the Lord Marshal; to his charge was delivered the disposing of all manner of horse provisions. This situation has merged into that of quarter master-general.

To FORAGE, (*fouirager*, Fr.) to scour a country in order to get provender and provisions for an army. It also signifies to pillage, *piller*, Fr.

FORAGER, (*fouirageur*, Fr.) one who forages.

FORBAN, Fr. a pirate; a lawless wretch that plunders indiscriminately at sea. He is also called *Ecumeur de mer*.

FORÇAT, Fr. a galley slave.

FORCE, an armament or warlike preparation.

FORCE, in a military sense, any body of troops collected together for warlike enterprize.

In FORCE, (*en force*, Fr.) to be collected together and prepared for combat. As the enemy were *in force* behind the mountains.

Effective FORCES. All the efficient parts of an army that may be brought into action are called effective, and generally consist of artillery, cavalry, and infantry, with their necessary appendages, such as hospital staff, wagon-train, artificers and pioneers: the latter, though they cannot be considered as effective fighting men, constitute so far a part of effective forces, that no army could maintain the field without them.

Effective FORCES of a country, all the disposable strength, vigour and activity of any armed proportion of native or territorial population. The navy of Great Britain must be looked upon as the effective bulwark of Old England: to which the body of marines adds no inconsiderable weight and importance, from tried courage and unquestionable fidelity. The superiority of our navy sufficiently proves its effective value.

Distribution of the effective FORCES of a country. Under this head may be considered, not only the effective forces which might engage an enemy, but likewise those included in the several returns that are made from home or foreign stations to the War office, and out of which a grand total is formed to correspond with the estimates that are annually laid before the House of Commons, by the Secretary at War.

To *FORCE* is to take by storm; also to man the works of a garrison.

To *FORCE an enemy to give battle,* to render the situation of an enemy so hazardous, that whether he attempt to quit his position, or endeavour to keep it, his capture or destruction must be equally inevitable. In either of which desperate cases, a bold and determined general will not wait to be attacked, but resolutely advance and give battle, especially if circumstances should combine to deprive him of the means of an honourable capitulation. This can only be safely effected, by having previously disposed your own forces so as to defy any impression on his part, and by subsequent able manœuvres to have it in your power to foil his attack.

To *FORCE a passage,* to oblige your enemy to retire from his fastnesses, and thus open a way into the country which he had occupied. This may be done either by a *coup de main*, or renewal of assaults. In either case, the advancing body should be well supported, and its

flanks be secured with the most jealous attention.

FORCE d'une armée, Fr. the sinews of an army. According to the French, and indeed according to the experience of all ages, *argent*, or money, constitutes the strength of every army. Hence *point d'argent, point de Suisse*, no pay no soldier.

Prendre une place de FORCE, à force ouverte, Fr. to storm a fortified place.

FORCER, Fr. to take by main force; to carry a fortified town or place, &c.

FORCER, Fr. to take advantage of superior strength; to levy contributions, &c.

FORCER une ligne, Fr. to act offensively against any line of defence; to break through it.

FORCER une troupe, Fr. to act vigorously against armed troops; and by means of repeated attacks to get the better of them.

FORCING an adversary's guard or blade, a term used in the science of broad-sword.

"If at any time your antagonist appears languid and weak on his guard, and barely covers his body on the side he is opposed; by stepping well forward and striking the fort of your sword smartly on his blade, you may be enabled to deliver a cut without risk even at the part he intends to secure; taking care to direct your blade in such a manner, that the plate or cross bar of your hilt shall prevent his sword from coming forward." See *Art of Defence on Foot*.

FORCEPS, an instrument used in chirurgery, to extract any thing out of wounds, or take hold of dead or corrupt flesh, for the purpose of amputation. It is made somewhat in the shape of a pair of tongs or pincers, with grappling ends. Every regimental surgeon, or assistant surgeon, is directed to have a pair among his set of instruments.

FORD, the shallow part of a river where soldiers may pass over without injuring their arms.

FORE-HAND of a horse, (bout de devant d'un cheval, Fr.) That part of a horse which is before a rider.

FORE-RANK, first rank; front.

FOREIGN, not domestic; alien; extraneous.

FOREIGN service, in a general sense, means every service but our own. In a more confined acceptation of the term,

It signifies any service done out of the limits of Great Britain, Ireland, the islands of Guernsey, Jersey, &c.

FOREIGN troops, in an English acceptation, regiments or companies which are composed of aliens. Before the late war, no foreigner could bear a commission in the British service, or be enlisted as a soldier.

FOREIGN corps. In the month of August, 1794, a department of foreign corps was instituted, intended to consist of 10 regiments, each of two battalions, which, if completed, would have amounted to 15,000 men. All the foreign corps attached to the British army, together with the German Legion, were disbanded in 1815; the officers being placed upon half-pay.

Foreigners in the East India service, bounty to. When foreigners enlist, or are entertained, in the service of the East India Company, it is ordered, that they shall serve one year without bounty; at the expiration of which time, if they have behaved well, they may be enlisted for 3 or 5 years, and receive bounty accordingly.

FORELAND, in fortification, called by the French, *pas de souris, relais, retraite, berme* or *lisière*, a confined space of ground between the rampart of a town or fortified place, and the moat. Whenever a fortification can be completed without having recourse to this substitute for stone, (with which the rampart ought to be faced,) it certainly is advisable to go to the expense. For a bold enemy, who has once made his way over the moat, will derive considerable advantage from having this path to stand on. It is generally from 3 to 8 or 10 feet wide. This space serves to receive the demolished parts of the rampart, and prevents the ditch from being filled up. In Holland the foreland is planted with thickset, but it is generally faced with palisades.

FORELAND, } any point of land
or **FORENESS**, } which juts out into the sea, so called from *nez*, nose.

North FORELAND, a head-land, or promontory which juts out into the sea from the isle of Thanet.

South FORELAND, a head-land, or promontory, which juts out into the sea towards the south at Walmer Castle, and forms a part of that extent of coast which outflanks Dover. The North and South Foreland are two flanking points

to the Downs, having a convex surface of water, between Ramsgate and Walmer, towards the coast.

FORET, *Fr.* a steel instrument used to bore the touch-hole of a piece of ordnance. The same name is given to a very large instrument used by the miners when they want to establish furnaces, or chambers, &c. in a rock, or any stony substance.

FORFANTE & FORFANTERIE, *Fr.* See **FANFARON**.

FORGE, in the *train of artillery*, is generally stiled a *travelling forge*, and may not be improperly called a portable smith's shop: at this forge all manner of smith's work is made, and it can be used upon a march, as well as in camp. Formerly these forges were very ill-contrived, with two wheels only, and wooden supporters to prop the forge for working when in the park. Of late years they are made with 4 wheels, which answers the purpose much better.

The cavalry have portable forges as well as the artillery. See **CART**.

FORGE for red hot balls is a place where the balls are made red-hot before they are fired off: it is built about 5 or 6 feet below the surface of the ground, of strong brick work, and an iron grate, upon which the balls are laid, with a very large fire under them. See **RED-HOT BALLS**.

FORGE de campagne, *Fr.* a moveable forge which accompanies the artillery, or cavalry.

FORKHEAD. See **BARB**.

FORLORN-hope, in the military art, signifies men detached from several regiments, or otherwise appointed to make the first attack in the day of battle; or at a siege, to storm the counterscarp, mount the breach, &c. They are so called from the great danger they are unavoidably exposed to.

To FORM, in a general acceptation of the term, is to assume, or produce, any shape or figure, extent or depth of line or column, by means of prescribed rules in military movements, or dispositions.

To FORM from file among cavalry. The front file halts at a given point; the rest, or remaining files successively ride up at a very smart gallop, taking care to halt in time, and not to over-run the ground. If the formation is by doubling round the front file, (in a formation, for instance, to the rear of the march, or to the right when marched from the right,)

the files must double as close round as possible, and with the utmost expedition. In forming from file, particular attention should be given, to make the men put their horses quite straight as they come in. They must keep their bodies square, dress by a slight cast of the eye towards the point of formation, and close and dress in an instant.

To FORM to the front, to move nimbly up from file into ranks, and close to the leader, whether on foot or horseback.

To FORM to the rear, to double round the leaders, who have themselves turned and faced.

To FORM to a proper flank, to turn and close in to the leader.

To FORM to a reverse flank, to pass, turn, and successively close to the leaders.

In all formations from file, the whole, till otherwise directed, dress to the hand to which the squadron or division forms.

To FORM by moving in front, and successively arriving in line, is by divisions, or distinct bodies, to advance forward by word of command towards any given point of alignment.

To FORM line is to wheel to the right or left from open column of divisions, subdivisions, or sections, according to prescribed rules, so as to present one continued front or straight line; or to deploy from close column for the same end, or to file to the front.

To FORM rank entire is to extend the front of a battalion, or company, by reducing it to the least possible depth, from any existing number of ranks.

To FORM two deep is, from rank entire or from three deep, to produce a regular line of files.

To FORM three deep is to add the depth of one half file to two deep, and to produce the natural formation of a battalion in line.

To FORM four deep is to diminish the natural extent of a battalion formed in line, by adding one half-file to its depth.

To FORM echelon is, from line, or open column, to wheel a given number of paces forward or backward, so as to produce a diagonal or oblique direction in the different proportions of a line; the outward flank of each succeeding division, company or section, constantly preserving a perpendicular direction, at a regulated distance, from the inward

flank of its leader, until it arrive at its point of junction.

To FORM line by echelon is to advance in column towards any given object by a diagonal movement, so as eventually to produce a regular continuity of front. See *ECHOLON*, or *DIAGONAL movement*.

To FORM close column is to march by files in detached proportions of a line, till each proportion shall arrive in front, or in rear of any given body.

To FORM open column is to wheel backwards or forwards, or to march out by files, so that the several proportions of a line may stand in a perpendicular direction to one another, with intervals between them equal to the extent of their front.

To FORM circle is to march a battalion or company, standing in line, from its two flanks; the leading files bringing their right and left shoulders forward, so as to unite the whole in a circular continuity of files.

To FORM on is to advance forward, so as to connect yourself with any given object of formation, and to lengthen the line.

To FORM on a front division is from close, or open column, or by the march in echelon, to arrive by a parallel movement at the right or left of any given division, by which means a prolongation of the line is produced.

To FORM on a rear division is to face all the preceding divisions which are in column to the right, (the point of forming having been previously taken in that direction, as far as the prolongation of the head division will extend, and just beyond where the right of the battalion is to come,) and to uncover the rear one, so as to enable it to advance forward to a given point on the left, and take up its place in the alignment.

To FORM on a central division. To execute this manœuvre, the front and rear divisions must deploy, or open, so as to uncover the named division, and enable it to move up to a given point of alignment. A forming point must be given to both flanks in the prolongation of the head division.

To FORM line on a rear company of the open column standing in echelon, that company remains placed; the others face about, wheel back on the pivot flanks of the column, as being those which afterwards first come into line. On the word *march*, they move forward,

and then *halt, front*, successively in the line of the rear company.

To FORM line on the rear company facing to the rear of the open column standing in echelon, the whole column must first countermarch, each company by files, and then proceed as in forming on a front company.

To FORM line on a central company of the open column, that company stands fast, or is wheeled on its own center into a new required direction. Those in front must be ordered to *face about*. The whole, except the central company, must wheel back the named number of paces. Those in front, on the proper pivot flanks of the column, and those in its rear on the reverse flanks, such being the flanks that first arrive in line. The whole then marches in line with the central company.

To FORM line from close column on a rear company facing to the rear, the whole of the column changes front by countermarching each company by files. The rear company stands fast, and the remaining companies face to the right, deploy, successively *halt, front*, and move up into the alignment.

To FORM line from close column on a central company facing to the rear, the central company countermarches and stands fast; the other companies face outwards, countermarch, deploy, and successively march up to the alignment.

Whenever the column is a retiring one, and the line is to front to the rear, the divisions must each countermarch before the formation begins. In which case the head would be thrown back, and the rear forward.

To FORM *en potence*, to wheel the right or left flank of a body of men, or to march them forward by files, so as to make that proportion of a line face inwards, and resemble a potence or gibbet. A double potence may be formed by running out both flanks, so that they stand in a perpendicular direction facing towards each other. This formation is not only extremely useful on actual service, but it conduces greatly to the accommodation of any body of men which may be marched into a place that has not sufficient extent of ground to receive it in line.

FORMATION, in a military sense, the methodical arrangement, or drawing up, of any given body of men mounted,

or on foot, according to prescribed rules and regulations.

Cavalry FORMATION, in conformity to His Majesty's orders, consists of the following proportions, viz.

Squadrons of cavalry are composed each of two troops; regiments are composed each of two, three, or more squadrons; and a line is composed of two, or more regiments. The squadron is formed two deep.

FORMATION of a troop is the drawing out of a certain number of men on horseback on their troop parade, in a rank entire, sized according to the size-roll.

FORMATION of the squadron is the military disposition of two troops that compose it closed into each other, from their several troop parades.

Formation, considered as to general circumstances, admits of a few deviations from the strict letter of the term. It is observed in the official Regulations, that in order to preserve each troop entire, it is not material, if one division be a file stronger than another. The flank divisions indeed, both in cavalry and infantry regiments, will be strongest from the addition of officers. Officers, in the formation of squadrons, are recommended to be posted with their troops. Corporals not wanted to mark the divisions, or to cover officers or serjeants, will be in the ranks according to their size, or be placed in the outward flank file of their troops. Farriers are considered as detached in all situations of manœuvre.

All these general circumstances of formation apply and take place, whether the squadron be composed of two, or more troops, and whether the troops be more or less strong.

General modes of FORMATION are when a regiment broken into and marching in open column, must arrive at and enter on the ground on which it is to form in line, either in the *direction* of that line, *perpendicular* to that line, or in a direction more or less *oblique* betwixt the other two.

Infantry FORMATION is the arrangement or disposition of any given number of men on foot according to prescribed rules and regulations.

FORMATION of close order is the arrangement of any given number of men in ranks at the distance of one pace, except where there is a fourth, or supernumerary rank, which has three paces.

In firing order the ranks are more closely locked in.

FORMATION *at open order* is any open disposition or arrangement of men by ranks at straight lines parallel to each other.

FORME, *Fr.* See **SPAVIN**. A complaint among horses.

FORMER, *Fr.* to form, to put in order.

FORMER *une troupe*, *Fr.* to drill and discipline any number of men, so as to enable them to act in troops, or companies.

FORMER *une siége*, *Fr.* to lay a formal siege.

FORMERS, round pieces of wood that are fitted to the diameter of the bore of a gun, round which the cartridge paper, parchment, or cotton is rolled before it is sewed.

FORMERS were likewise used among officers and soldiers to reduce their clubs to an uniform shape, before the general introduction of tails. Both are now rendered useless by the hair of the officers and soldiers being cropped; except in one or two regiments of heavy horse.

FORMATION of *Guards*. See **GUARDS**.

FORMIDABLE, (*formidable*, *Fr.*) to be dreaded.

FORS, *Fr.* except. *Tous les soldats furent tués fors deux ou trois*, *Fr.* the soldiers were all killed, except two or three. It also signifies, in old French, *outside*; hence *Fourbourg*, outside the town.

FORT, (*fort*, *Fr.*) a small fortified place, environed on all sides with a ditch, rampart, and parapet. Its use is to secure some high ground, or the passage of a river, or to make good an advantageous post, to defend the lines and quarters of a siege, &c.

Forts are made of different figures and extents, according to the exigency of the service, or the peculiar nature of the ground. Some are fortified with bastions, others with demi-bastions. Some are in form of a square, others of a pentagon. Some again are made in the form of a star, having 5 or 7 angles. A fort differs from a citadel, the last being built to command some town. See **CITADEL**.

Royal Fort, one whose line of defence is at least 26 toises long.

Triangular Forts are frequently made with half-bastions; but they are very imperfect, because the faces are not seen

or defended from any other part. If, instead of being terminated at the angle, they were directed to a point about 20 toises from it, they would be much better, as then they might be defended by that length of the rampart, though but very obliquely. The ditch ought to be from 8 to 10 toises. Sometimes instead of half bastions at the angles, whole ones are replaced in the middle of the sides. The gorges of these bastions may be from 20 to 24 toises, when the sides are from 100 to 120; the flanks are perpendicular to the sides, from 10 to 12 toises long; and the capitals from 20 to 24. If the sides happen to be more or less, the parts of the bastions are likewise made more or less in proportion. The ditch round this fort may be 10 or 12 toises wide.

The ramparts and parallels of these works are commonly made of turf, and the outside of the parapet is fraised: that is, a row of palisades is placed about the middle of the slope, in an horizontal manner, the points declining rather a little downwards, that the grenades or fire-works thrown upon them may roll down into the ditch; and if the ditch be dry, a row of palisades should be placed in the middle, to prevent the enemy from passing over it unperceived, and to secure the fort from any surprise.

Fort de campagne, *Fr.* a field fortification. See **FORTIFICATION**.

FORTIFICATION is the art of fortifying a town or other place; or of putting it in such a posture of defence, that every one of its parts defends, and is defended by some other parts, by means of ramparts, parapets, ditches, and other out-works; to the end that a small number of men within may be able to defend themselves for a considerable time against the assaults of a numerous army without; so that the enemy, in attacking them, must, of necessity, suffer great loss.

The term *fortification*, which comes from the Latin word *fortificatio*, a derivative of *fortifico*, that is compounded of *fortis* and *facio*, and signifies to fortify or strengthen, is made use of to denote not only the science or art of fortifying, as in the phrases, *he has studied fortification*, *he understands fortification well*, but also a place fortified and the works themselves.

Fortification may be divided into an-

cient and modern; offensive and defensive; regular and irregular; natural and artificial, &c.

Ancient FORTIFICATION at first consisted of walls or defences made of the trunks and branches of trees, mixed with earth, for security against the attacks of an enemy.

Whoever has been in North America may have seen *fortification* in its infancy.

There are abundance of Indian villages fenced round by long stakes driven into the ground, with moss or earth to fill the intervals; and this is their security (together with their own vigilance) against the cruelty of the savage neighbouring nations.

Nor is *fortification* much less ancient than mankind; for Cain, the son of Adam, built a city with a wall round it upon Mount Liban, and called it after the name of his son Enoch, the ruins of which, it is said, are to be seen to this day; and the Babylonians, soon after the deluge, built cities, and encompassed them with strong walls.

At first people thought themselves safe enough with a single wall, behind which they made use of their darts and arrows with safety: but as other warlike instruments were continually invented to destroy these feeble structures, so on the other hand persons acting on the defensive were obliged to build stronger and stronger, to resist the new contrived forces of the desperate assailants.

What improvements they made in strengthening their walls many years ago, appear from history. The first walls we ever read of, and which were built by Cain, were of brick; and the ancient Grecians, long before Rome was ever thought of, used brick and rubble stone, with which they built a vast wall, joining Mount Hymettus to the city of Athens. The Babylonian walls, built by Semiramis, or, as others will have it, by Belus, were 32 feet thick, and 100 feet high, with towers 10 feet higher, built upon them, cemented with bitumen or asphaltus. Those of Jerusalem seem to have come but little short of them, since, in the siege by Titus, all the Roman battering-rams, joined with Roman art and courage, could remove but 4 stones out of the tower of Antonia in a whole night's assault.

After *fortification* had arrived at this height, it stopped for many ages, until the discovery of gunpowder, the inven-

tion of guns, and the application of both to military purposes; and then the round and square towers, which were very good flanks against bows and arrows, became but indifferent ones against the violence of cannon; nor did the battlements any longer offer a hiding place, when the force of one shot both overset the battlement, and destroyed those who sought security from it.

Modern FORTIFICATION is the way of defence now used, turning the walls into ramparts, and square and round towers into bastions, defended by numerous outworks; all which are made so solid that they cannot be beat down, but by the continual fire of several batteries of cannon. These bastions at first were but small, their gorges narrow, their flanks and faces short, and at a great distance from each other, as are those now to be seen in the city of Antwerp, built in 1545, by Charles V. emperor of Germany; for the invariable practice then, and for some time after the introduction of them, was to attack the curtains and not the faces of the bastions. But since that time they have been greatly improved and enlarged, and are now arrived to that degree of strength, that it is almost a received opinion, that the art of fortification is at its height, and incapable of being carried to a much greater perfection. According to Mr. Glenie, p. 9. *Military Construction*, this opinion does not seem founded in truth.

Offensive FORTIFICATION shows how to besiege and take fortified places; it further teaches a general how to take all advantages for his troops; the manner of encamping, and method of carrying on either a regular, or irregular, siege, according as circumstances may direct. Offensive fortification may be properly called the *war of sieges*.

Defensive FORTIFICATION shows a governor how to make the most of a garrison committed to his care, and to provide all things necessary for its defence, against a besieging army; in this latter sense it may also be called *offensive*.

Regular FORTIFICATION is that which is erected according to the rules of art, on a construction made from a figure or polygon, that is regular or has all its sides and angles equal. The flanked or salient angles in such a fortification are equal to one another, equally distant from one another, and are each of them

at the distance of about that of serious musket shot from the flanks, which defend it. For an irregular fortification having the flanked angles, as also the flanks and lines of defence, unequal, may be constructed from the sides of a regular polygon as well as from those of an irregular polygon, by drawing the perpendiculars to the regular polygon from points different from those of their bissections. See *Glenie's General Rule for Irregular Construction*.

Irregular FORTIFICATION, on the contrary, is that where the sides and angles are not uniform, equi-distant, or equal; which is owing to the irregularity of the ground, vallies, rivers, hills, and the like.

Natural FORTIFICATION is the strength and security, which nature herself has afforded to places by the advantages of their situations and the difficulties in approaching them. Of this description are the summits of mountains, steep rocks, marshes, &c.

Artificial FORTIFICATION consists in works contrived and erected to increase the advantages of a natural situation, and to remedy its defects.

Elementary FORTIFICATION, by some likewise called the *theory of fortification*, consists in tracing the plans and profiles of a fortification on paper, with scales and compasses; and examining the systems proposed by different authors, in order to discover their advantages and disadvantages. The elementary part is likewise divided into Regular and Irregular Fortification, which see.

A *Front* of a fortification is composed of those parts that are constructed from one side of a figure or polygon, which in regular construction consists of a curtain, two flanks and two faces, or of a curtain and two demi-bastions.

Practical FORTIFICATION consists in forming a project of a fortification, according to the nature of the ground, and other necessary circumstances, to trace it on the ground, and to execute the project, together with all the military buildings, such as magazines, store-houses, barracks, bridges, &c.

Permanent, or Durable FORTIFICATION, (*fortification durable*, Fr.) that which belongs to a strong town, or place.

Temporary, or casual FORTIFICATION, (*fortification passagère*, Fr.) works thrown up for the defence of a camp, or temporary positions; it is also called *field fortification*.

The following are the names of every part of a FORTIFICATION; and first of lines, which are divided into right lines, and curve lines.

Line of defence is the distance between the salient angle of the bastion, and the opposite flank; that is, it is the face produced to the flank. Common experience, together with some of the greatest artists in fortification, unanimously agree, that the *lines of defence* may extend (though not exceed) 150 fathom. Some indeed will affirm, that, as a musket does not carry more than 150 fathom point blank, the angle of the bastion should be no farther removed from its opposite flank. We agree that a musket carries no farther point-blank; but we are sure it will do execution, and kill, at 180 fathom. The enemy generally makes his breaches near the middle of the face; which, if granted, the line of fire from the flank to the breach, scarcely exceeds 150 fathom; besides, the cannon of the flank does less execution upon a short *line of defence* than on a long one.

Line of defence fichant—when a right line drawn from the angle of the flank and curtain to the salient angle of the opposite bastion makes an angle with the face instead of running along the same, or coinciding with it, the defence is said to be *fichante*, and that line is called *la ligne de défense fichante*, or *linea defensionis figens*.

Line of defence rasante—but when a right line drawn from the salient angle along a face of a bastion meets, when produced, the angle formed by the opposite flank and curtain, the defence is said to be *rasante*, and that line is called, *la ligne de défense rasante, ou flanquante*, or, *linea defensionis stringens*.

Line of circumvallation. See SIEGE. See CIRCUMVALLATION.

Line of contravallation. See CONTRAVALLATION.

Line of counter-approach. See APPROACHES.

Capital-line is an imaginary right line, which divides any work into two equal and similar parts, and of a bastion is the right line supposed to be drawn from the salient angle to its center or the angle of the gorge.

Line of defence prolonged, or lengthened line of defence, is the line of defence, together with the *enforcement* or depth of the casemate, or of the retired

flank or flanks. In the square, and most polygons of the lesser fortification, you prolong the line of defence; but in the polygons of the greater and meaner, you draw a line from the angle of the opposite shoulder to the angle of the curtain, upon which you raise a perpendicular, which serves for the first line of the flank.

For the names of the angles in a Fortification, see ANGLE.

Names of the solid works of a Fortification.

Advanced foss, } or ditch, made at the
Avant fosse, } foot of the glacis; it is but very seldom made, because it is easily taken, and serves for a trench to the besiegers.

Apparville is that slope or easy ascent which leads to the platform of the bastion, or to any other work, where the artillery, &c. are brought up, and carried down.

Approaches are roads or passages sunk in the ground by the besiegers, whereby they approach the place; being covered from the fire of the garrison by the excavated earth thrown towards the place besieged.

Arca, the superficial content of a rampart, or other work.

Arrow is a work placed at the salient angle of the glacis, and consists of two parapets, each above 40 fathoms long; this work has a communication with the covert-way, of about 24 or 28 feet broad, called *caponnière*, with a ditch before it of about 5 or 6 fathom, and a traverse at the entrance, of 3 fathom thick, and a passage of 6 or 8 feet round it.

Banquette, whether single or double, is a kind of step, made on the rampart of a work near the parapet, for the troops to stand upon, in order to fire over the parapet; it is generally 3 feet high when double, and $1\frac{1}{2}$ when single, and about 3 feet broad, and $4\frac{1}{2}$ feet lower than the parapet.

Barriers are pointed stakes to stop the horse or foot from rushing in upon the besieged with violence. In the middle of this kind of defence there is a moveable bar of wood, which opens or shuts at pleasure.

Bastion is a part of the inner inclosure of a fortification, making an angle towards the field, and consists of two faces, two flanks, and an opening towards the center of the place called the gorge; or it is rather a large mass of earth,

usually faced with sods, sometimes with brick, but rarely with stone; having the figure described.

With regard to the first invention of bastions, there are many opinions amongst authors. Some have attributed this invention to Zisca, the Bohemian; others to Achmet Bashaw, who, having taken Otranto in the year 1480, fortified it in a particular manner, which is supposed to be the first instance of the use of bastions. Those who wrote on the subject of fortification 200 years ago, seem to suppose, that bastions were a gradual improvement in the ancient method of building, rather than a new invention that any one person could claim the honour of. It is certain, however, that they were well known soon after the year 1500; for in 1546, Tartalea published *Quesiti & Invenzioni diverse*, in the 6th book of which he mentions, that whilst he resided at Verona (which must have been many years before) he saw bastions of a prodigious size; some finished, and others building. There is besides, in the same book, a plan of Turin, which was then fortified with 4 bastions, and seems to have been completed some time before.

The great rule in constructing a bastion is, that every part of it may be seen and defended from some other part. Mere angles are therefore not sufficient, but flanks and faces are likewise necessary. Neither face of a bastion ought to exceed a fourth part of the exterior side unless some peculiar circumstances of ground render the making of it longer. See *Glenie on Military Construction*, p. 116. The longer the flanks are the greater is the advantage which can be derived from them. They must therefore stand at right angles with the line of defence. At the same time, the disposition of the flanks makes the principal part of a fortification, as on them the defence chiefly depends; and it is this that has introduced the various kinds of fortifying.

The angle of the bastion must exceed 60° ; otherwise it will be too small to give room for the guns, and will either render the line of defence too long, or the flanks too short. It must therefore be either a right angle, or some intermediate one between that and 60 degrees.

Full Bastions are best calculated for intrenchments, which are thrown up at the gorge, or by means of a cavalier, whose faces are made parallel to those of

the bastion at the distance of 15 toises; having its flanks at the distance of 12 toises, and a ditch measuring 5.

Large bastions have the advantage of small ones, for this palpable reason; the bastion being considered the weakest part of the body of a place, is always attacked; when there is room for troops, cannon and mortars, its natural weakness is greatly remedied.

Gorge of a bastion is the interval between the extremity of one flank and that of the next.

Flat bastion. When a bastion upon a right line is so constructed, that its demi-gorges do not form an angle, it is called a flat bastion.

Gorge of a flat bastion is a right line, which terminates the distance between two flanks.

Solid bastion, } a bastion is said to be

Full bastion, } solid or full, when the level ground within is even with the rampart; that is, when the inside is quite level, the parapet being only more elevated than the rest. Solid bastions have this advantage over others, that they afford earth enough to make a retrenchment, in case the enemy lodge themselves on the top of the bastion, and the besieged are resolved to dispute every inch of ground.

Hollow bastion, } is that where the

Empty bastion, } level ground within is much lower than the rampart, or that part next to the parapet where the troops are placed to defend the bastion. The disadvantage of these kinds of bastions is the earth being so low, that when an enemy is once lodged on the rampart, there is no making a retrenchment towards the center, but what will be under the fire of the besiegers.

Detached bastion is that which is separated, or cut off, from the body of the place, and differs from a half moon, whose rampart and parapet are lower, and not so thick as those of the place, having the same proportion with the works of the place. Counter-guards with flanks are sometimes called detached bastions.

Cut bastion is that whose salient angle or point is cut off, instead of which it has a re-entering angle, or an angle inwards. It is used, either when the angle would, without such a contrivance, be too acute, or when water, or some

other impediment, prevents the bastion from being carried to its full extent.

Composed bastion is when two sides of the interior polygon are very unequal: which also renders the gorges unequal: it may not improperly be called a *forced bastion*, being, as it were, forced into that form.

Deformed bastion is when the irregularity of the lines and angles causes the bastion to appear deformed, or out of shape.

Demi-bastion is composed of one face only, has but one flank, and a demi-gorge.

Double bastion is that which is raised on the plane of another bastion, but much higher; leaving 12 or 18 feet between the parapet of the lower, and the foot of the higher; and is sometimes in the nature of a cavalier.

Regular bastion is that which has its true proportion of faces, flanks, and gorges.

Irregular bastion is that wherein the above equality of just proportion is omitted.

Berm is a little space, or path, of 6 or 8 feet broad, between the ditch and the talus of the parapet; it is to prevent the earth from rolling into the ditch, and serves likewise to pass and repass. As it is in some degree advantageous to the enemy, in getting footing, most of the modern engineers reject it.

Bonnet is a work placed before the salient angle of the ravelin to cover it: it consists of 2 faces, parallel to the ravelin, or perpendicular to those of the lunette. They are generally made 10 fathom broad at the ends, with a ditch of the same breadth, the covert-way 6, and the glacis 20 fathom.

Breach is an opening or gap made in a wall or rampart, with either cannon or mines, sufficiently wide for a body of troops to enter the works, and drive the besieged out of it.

Practical breach is that where men may mount, and make a lodgment, and should be 15 or 20 feet wide.

Capital of a work is an imaginary line which divides that work into two equal parts.

Capital of a bastion, a line drawn from the angle of the polygon to the point of the bastion, or from the point of the bastion to the center of the gorge. These capitals are from 35 to 40 toises in

length, from the point of the bastion to the place where the two demi-gorges meet; being the difference between the exterior and the interior radii.

Caponnière is a passage made in a dry ditch from one work to another: when it is made from the curtain of the body of the place to the opposite ravelin, or from the front of a horn or crown-work, it has a parapet on each side, of 6 or 7 feet high, sloping in a glacis of 10 or 12 toises on the outside to the bottom of the ditch: the width within is from 20 to 25 feet, with a banquette on each side. There is a brick wall to support the earth within, which only reaches within $1\frac{1}{2}$ foot of the top, to prevent grazing shot from driving the splinters amongst the defendants.

Caponnières with two parapets may properly be called double; as there are some made with one parapet only, in dry ditches of the ravelin, and in that of its redoubt, towards the salient angles, and to open towards the body of the place.

Caponnières, made from the body of the place to the outworks, are sometimes arched over, with loop-holes to fire into the ditch. The single ones in the ditch of the ravelin and redoubt are likewise made with arches open towards the place; for, by making them in this manner, the guns which defend the ditch before them, can no other way be dismounted than by mines.

Casques, in fortification, a kind of cellars made under the capital of a fortification; also subterraneous passages or galleries to discover the enemy's mines.

Casemate, in fortification, is a work made under the rampart, like a cellar or cave, with loop-holes to place guns in it.

Cavaliers are works raised generally within the body of the place, 10 or 12 feet higher than the rest of the works. Their most common situation is within the bastion, and they are made much in the same form. They are sometimes placed in their gorges, or on the middle of the curtain, and then are in the form of a horse-shoe, only flatter.

The use of cavaliers is, to command all the adjacent works and country round them: they are seldom or never made but when there is a hill or rising ground which overlooks some of the works.

Center, the middle point of any work. From the *center* of a place are drawn

the first lines to lay down the form of a *fortification*.

Center of the bastion is that point where the two adjacent curtains produced intersect each other.

Citadel is a kind of fort, or small fortification, of 4, 5, or 6 sides; sometimes joined to towns, &c. Citadels are always built on the most advantageous ground. They are fortified towards the city, and towards the country; being divided from the former by an esplanade, or open place; and serving in one case to overawe the inhabitants; and in the other, not only to hinder the approach of an enemy, but to become a retreat to the garrison, should the town be taken.

Coffers. See COFFER.

Command is when a hill or rising ground overlooks any of the works of a *fortification*, and is within reach of cannon shot; such a hill is said to command that work. See COMMAND.

Complement of the curtain is that part of the interior side which forms the demi-gorge.

Complement of the line of defence is that part of it which remains after the tenaille is taken away from it.

Cordon is a round projection made of stone, in a semi-circular form, whose diameter is about 1 foot, and goes quite round the wall, and within 4 feet from the upper part.

The cordon being placed on the top of the revetement of the escarp, is a considerable obstacle to the besiegers, when they attempt to storm a place by applying scaling ladders to the escarp.

Covert-way is a space of five or six toises broad, extending round the counterscarp of the ditch, and covered by a parapet from six to seven feet and a half high, having a banquette. The superior part of this parapet forms a gentle slope towards the country, which terminates at the distance of twenty to twenty-five toises; this slope is called the glacis.

Sometimes the covert-way is sunk 2 or 3 feet below the horizon of the field; for, as such works are never made to discover the enemy in their trenches, so this method of lowering the covert-way will give room for the fire of the lower curtain (in works that have one) to scour the esplanade; and the expense of it should be the most material objection against it.

Counter-forts are, by some, called *buttresses*. They are solids of masonry, built behind walls, and joined to them at 18 feet distance from center to center, in order to strengthen them, especially when they sustain a rampart or terrace.

Counter-guard is a work placed before the bastions to cover the opposite flanks from being seen from the covert-way. It is likewise made before the ravelins.

When counter-guards are placed before the collateral bastions, they are esteemed of very great use, as the enemy cannot batter them without having first secured the possession of the counter-guards. They were first invented by Pasino, in 1579, and greatly improved by Speckle, in 1589.

Counterscarp is properly the exterior talus of the ditch, or that slope which terminates its breadth, and is the further side from the body of the place. It is so called from being opposite to the escarp.

Crown-work is a work not unlike a crown; it has 2 fronts and 2 branches. The fronts are composed of 2 half bastions, and 1 whole one: they are made before the curtain or the bastion, and generally serve to inclose some buildings which cannot be brought within the body of the place, or to cover the town-gates, or else to occupy a spot of ground which might be advantageous to an enemy. They are so expensive, that they are rarely adopted. The best use this work can possibly be put to, is to cover 2 joining curtains, when the sides of it will be parallel to the sides of the place, and it should be fortified with the same strength and in the same manner.

The authors who have written on the subject, have never thought of this useful part; and we often see 2 horn-works put in practice to cover 2 curtains, where one crown-work would do it much cheaper, and much better. The crown-work is adopted for the same purposes as the horn-work.

Crowned horn-work is a *horn-work* with a *crown-work* before it.

Curtain is that part of the body of the place, which joins the flank of one bastion to that of another. The straight curtains have always been preferred to the different designs which have been proposed, of which some have diminished the expense, and, at the same time, the strength of the

place; others have somewhat augmented the strength, but greatly diminished its area.

Cunette, } is a small ditch from 15
Cunette, } to 20 feet broad, (more or less,) made in the middle of a large dry ditch, serving as a retrenchment to defend the same, or otherwise to let water into it, when it can be had during a siege.

When there is a cunette, there should be a caponnière to flank it.

Defilement is the art of disposing all the works of a fortress in such a manner, that they may be commanded by the body of the place. It also includes the relative disposition of the works, and the ground within cannon shot, so that the one may be discovered, and the other not observed.

Demi-gorge is the rectilinear distance on the curtain, produced from the angle of the flank to the angle of the gorge, or the center of the bastion.

Demi-luc. See RAVELIN.

Descents, in fortification, are the holes, vaults, and hollow places made by undermining the ground.

Descents into the ditch, or foss, are boyaux or trenches effected by the means of saps in the ground of the counterscarp, under the covert-way. They are covered with madders, or hurdles, well loaded with earth, to secure them against fire. In ditches that are full of water, the descent is made even with the surface of the water; and then the ditch is filled with fagots, fast bound, and covered with earth. In dry ditches the descent is carried down to the bottom; after which, traverses are made either as lodgments for the troops, or to cover the miner. When the ditch is full of water, the descent must be made over its surface; which is done by securing it with blinds or chandeliers, from being enfiladed, or by directing the course of the descent from the point of enfilade in the best way you can.

Detached bastion. See BASTION.

Detached redoubt. See REDOUBT.

Ditch is a large deep trench made round each work, generally from 12 to 22 fathom broad, and from 15 to 16 feet deep. The earth dug out of it serves to raise the rampart and parapet. Almost every engineer has a particular depth and breadth for ditches; some are for narrow ones and deep, others for broad ones and shallow; and it is most certain

that ditches should be regulated according to the situation. In regard to wet and dry ditches, almost all authors have given it in favour of the latter; and we shall only add, that the best of all are those which can either be filled, or kept dry at pleasure.

Wet ditches, which have stagnant waters, are liable to great inconveniences. They are said to be well calculated to prevent sudden surprizes and assaults; but we are convinced of the contrary; especially during a hard frost. Some again assert, that they stop all communication between ill-disposed persons in the garrison and the besiegers. Every man with the least experience must be of a different opinion.

Wet ditches might certainly be so constructed, as to let the surface of the water remain 12 or 15 feet above the level of the adjacent country; in which case they would serve as large reservoirs, and not only contribute to the defence of a fortified place, but enrich the grounds by being occasionally let out. The additional value which the neighbouring meadows would bear from these seasonable overflowings, might in some degree compensate for the expense of the fortification. During a siege, these waters, with proper management, must give considerable uneasiness to the enemy that invests the place.

To answer this double purpose, the ditch must be separated into several large basons, which might be filled or emptied, as often as circumstances would require.

Dry ditches, ditches that have no water in them. There are also some ditches which may be filled at will; and others which cannot, except by extraordinary means. If they should be intended to answer the purpose of agriculture, aqueducts might be constructed, or the waters poured in through artificial channels. In which case the ditches would not require much depth. The glacis might be raised in such a manner as to serve to dam the body of water, and to afford a second glacis whence the besiegers might be considerably embarrassed.

Ditches that are lined, ditches whose counterscarp is supported and kept up by a stone or brick wall.

Ditches that are not lined, ditches whose counterscarp is supported by

earth covered with sods. These ditches are not so secure as the former, on account of the breadth which must be given to the talus, and by which an enemy might easily surprize a place.

So that ditches in fortification may be briefly distinguished under three separate heads, viz.

Dry ditches, which, from the facility with which they may be repaired, and their capability of containing other works proper for their security, are, in most instances, preferable to any others.

Wet ditches, that are always full of water, and consequently must have bridges of communication which are liable to be destroyed very frequently during a siege.

Wet ditches are subject to many inconveniences, are ill calculated to favour sallies, and have only the solitary advantage of preventing a surprize.

The third sort of ditch has all the advantages of the other two kinds; if, as we have just observed, it can be so contrived, as to admit occasionally water into the different basons by means of aqueducts, and be drained, as circumstances may require.

Draw-bridge. See BRIDGE.

Embrasures. See EMBRASURE.

Envelope is any work that covers, surrounds, or envelopes either another work or a spot of ground, and therefore may be of any form or figure. The term is frequently applied to a counter-guard, though by this word, called also *sillon*, be most commonly meant an elevation of earth made in the ditch for defending it when it is rather too broad.

Epaulement. See EPAULEMENT.

Epaule, or the shoulder of the bastion, is the angle made by the union of the face and flank.

Escarp is, properly speaking, any thing high and steep, and is used in *fortification* to express the outside of the rampart of any work next to the ditch.

Exterior side of a fortification is the distance, or imaginary line drawn from one point of the bastion to that of the next.

Faces of the bastion. See BASTION.

Faces of any work, in fortification, are those parts where the rampart is made, which produce an angle pointing outwards.

Face prolonged, that part of the line

of defence razant, which is terminated by the curtain, and the angle of the shoulder.

Fascine. See FASCINES.

Fausse-bruy is a low rampart going quite round the body of the place: its height is about 3 feet above the level ground, and its parapet is about 3 or 4 fathom distant from that of the body of the place. These works are made at a very great expense: their faces are very easily enfiladed, and their flank of course is seen in reverse: the enemy is under cover the minute he becomes master of them; and a great quantity of shells which may be thrown into them, and must of necessity lodge there, will go near to make a breach, or at worst to drive every one out. Hence, they are liable to do more harm than good, and contribute no way to the defence of the place. Mr. Vauban only makes them before the curtains, and, as such, calls them *tenailles*.

Flanks are, generally speaking, any parts of a work, which defend another work along the outsides of its parapets.

Flanks of the bastion are the parts between the faces and the curtain. The flank of one bastion serves to defend the ditch before the curtain and face of the opposite bastion.

Flanking is the same thing in fortification as defending.

Retired flanks are those made behind the line which joins the extremity of the face and the curtain, towards the capital of the bastion.

Concave flanks are those which are made in the arc of a circle.

Direct, or grazing flank, is that which is perpendicular to the opposite face produced, and oblique or *schant*, when it makes an acute angle with that face.

Second flank. When the face of a bastion produced does not meet the curtain at its extremity, but in some other point, then the part of the curtain between that point and the flank, is called the second flank. Modern engineers have rejected this method of fortifying. See FLANK.

Fliche, a work of two faces, which is often constructed before the glacis of a fortified place, when threatened with a siege, in order to keep the enemy as long at a distance as possible.

Gallery is a passage made under ground, leading to the mines: galleries

are from $4\frac{1}{2}$ to 5 feet high, and about $3\frac{1}{2}$ or 4 feet broad; supported at top by wooden frames, with boards over them.

Galleries, in the counterscarp of the ditches, or under the covert-way, are generally arched with brickwork or masonry, with loop-holes in them for musketry to fire through into the ditches. There are some of this description in the new works round the dock-yard and common at Portsmouth.

Genouilliers, the undermost part of a battery, or that part from the platform to the embrasures.

Glacis is the part beyond the covert-way, to which it serves as a parapet, and terminates towards the field in an easy slope at about 20 fathoms distance. Sometimes double glacis are made parallel to the esplanade, and at the distance of 16 or 20 fathoms.

Some authors think these works never answer the expense: however, M. Vauban was so sensible of their goodness, that he never failed to make them when the ground suited; because, when such works are defended by a skilful governor, they will afford the means of being valiantly supported.

Gorge of a bastion is the interval between the extremity of one flank and that of the other.

Gorge of any work, is that part next to the body of the place, where there is no rampart or parapet: that is, at the counterscarp of the ditch.

Half-moon, (demi-lune, Fr.) is an out-work that has two faces which form a salient angle, the gorge of which resembles a crescent. It owes its original invention to the Dutch, who use it to cover the points of their bastions. This kind of fortification is, however, defective, because it is weak on its flanks. Half-moons are now called ravelins: which species of work is constructed in front of the curtain. See RAVELINS.

Gorge of a half-moon is the part of it at the counterscarp, or the widest part of it, or the space contained between the two extremities of its faces, that are next to the body of the place.

Head of a work, its front next the enemy, and farthest from the place.

Hornwork is composed of a front and 2 branches: the front is made into 2 half bastions and a curtain: this work is of the nature of a crown-work, only smaller, and serves for the same pur-

poses. The use of horn-works in general is to take possession of some rising ground, advanced from the fortification; the distance of which determines that of the horn-work; and they are placed either before the curtain, or before the bastions, according to circumstances.

Horse-shoe is a small round or oval work, with a parapet, generally made in a ditch, or in a marsh.

Interior side of a fortification, an imaginary line drawn from the center of one bastion to that of the next, or rather the curtains produced till they meet.

Loop-holes are either square, or oblong holes, made in the walls, to fire through with muskets. They are generally 8 or 9 inches long, 6 or 7 inches wide within, and 2 or 3 without; so that every man may fire from them direct in front, or oblique to right or left, according to circumstances.

Lunettes are works made on both sides of a ravelin: one face of each is perpendicular, when produced to a face of the ravelin, at the distance of one half, or of one third part of the length of the same from the salient angle, and the other nearly so to a face of the adjacent bastion.

There are likewise lunettes, whose faces are drawn perpendicular to those of the ravelin, within 1-3d part from the salient angle; whose semi-gorges are only 20 fathoms.

These kinds of works make a good defence, and are not very expensive: for as they are so near the ravelin, the communication with it is easy, and one cannot well be maintained till they are all three taken.

Lunettes are also works made beyond the second ditch, opposite to the places of arms. They differ from the ravelins only in their situation.

Lunettons are small lunettes.

Merton is that part of the breast-work of a battery, which is between the embrasures.

Orillon is a part of the bastion near the shoulder, which serves to cover the retired flank from being seen obliquely. It is sometimes faced with stone, on the shoulder of a casemated bastion, to cover the cannon of the retired flank, and hinder them from being dismounted by the enemy's cannon.

Of all the works in a fortification, there is none more capable of defending

the passage of the ditch, and of destroying the miner, wheresoever he may enter, than the orillon. Experience has shewn us of what vast advantage it is to have 2 or 3 reserve pieces of cannon, which command the ditch, and the face of the opposite bastion, in such a manner as to destroy the attempts of the miners, and see the breach in reverse. Hence the great advantages of a double flank, thus concealed, weigh so very much with us, and convince us so entirely of their usefulness, that we affirm no place to be well fortified without the orillon, and that the straight flank is fit for nothing but field-works.

The orillon is as old as the bastion, and was first made use of about the year 1480. We find it frequently mentioned in the works of Pasino and Speckle, first published in 1579.

In the appendix, containing a true and short account of M. Vauban's manner of fortifying, taken from a French book, published by Abbé du Fay, with M. Vauban's approbation, with his new system of towers, is the following observation relative to orillons.

"We must take notice, that his orillon is square on the inside, for the conveniency of the musketeers; and that of his four flanks, (viz. that of the place, that of the orillon, that of the tenaille, and that of the caponnière,) the two last are the best, because they command without being commanded."—*Treatise on Fortification*, written originally in French, by Monsieur Ozanam, professor of mathematics at Paris, p. 193.

Out-works. See WORKS.

Palisades are stakes made of strong split wood about 9 feet long, fixed 3 deep in the ground, in rows about 6 inches asunder. They are placed in the covert-way, at 3 feet from, and parallel to the parapet of the glacis, to secure it from being surprized.

Parapet is a part of the rampart of a work, 18 or 20 feet abroad, and raised 6 or 7 feet above the rest of the rampart. It serves to cover the troops placed there to defend the work against the fire of the enemy.

Parallels. See SIEGE.

Port-cullice is a falling gate or door, like a harrow, hung over the gates of fortified places, and let down to keep out the enemy.

Place is commonly used in fortification instead of a fortified town.

Regular place, one whose angles, sides, bastions, and other parts are equal, &c.

Irregular place, one whose sides, angles, &c. are unequal, &c.

Place of arms is a part of the covert-way, opposite to the re-entering angle of the counterscarp, projecting outward in an angle. It is generally 20 fathoms from the re-entering angle of the ditch on both sides, and the faces are found by describing a radius of 25 fathoms.

Places of arms. See SIEGE.

Pits, or ponds, are little holes dug between the higher and lower curtains, to hold water, in order to prevent the passing from the tenailles to the flanks.

Profiles are representations of the vertical sections of a work, and serve to shew those dimensions which cannot be described in plans, and are yet necessary in the building of a fortification; they may be very well executed and constructed upon a scale of 30 feet to an inch. By a profile are expressed the several heights, widths, and thicknesses, such as they would appear were the works cut down perpendicularly from the top to the bottom.

Rampart is an elevation of earth raised along the faces of any work, 10 or 15 feet high, to cover the inner part of that work against the fire of an enemy: its breadth differs according to the several systems upon which it may be constructed: for De Ville makes them $12\frac{1}{2}$ fathoms, M. Vauban 6, and others 10 fathoms.

Rams-horns are low works made in the ditch, of a circular arc. They were first invented by M. Belidor, and serve instead of tenailles.

Ravelin is a work placed before the curtain to cover it, and prevent the flanks from being discovered side-ways: it consists of 2 faces meeting in an outward angle. Some ravelins are counter-guarded, which renders them as serviceable as either the cunettes, or tenailles.

Gorge of a ravelin is the distance between the two sides or faces towards the place.

Gorges, of all other out-works, are the intervals or spaces which lie between their several wings, or sides, towards the main ditch.

Redans, in fortification, are indented works, consisting of lines or facings that form sallying, or re-entering angles, flanking one another, and are generally used on the sides of a river running through a

garrisoned town. They are used before bastions. Sometimes the parapet of the covert-way is carried on in this manner.

Redoubt is a work placed beyond the glacis, and is of various forms. Its parapet, not being intended to resist cannon, is only 8 or 9 feet thick, with 2 or 3 banquettes. The length of the sides may be from 10 to 20 fathoms.

Redoubt is also the name of a small work, made sometimes in a bastion, and sometimes in a ravelin, of the same form.

Redoubt is likewise a square work without any bastions, placed at some distance from a fortification, to guard a pass, or to prevent an enemy from approaching that way.

Detached redoubt is a kind of work much like a ravelin, with flanks placed beyond the glacis. It is made to occupy some spot of ground which might be advantageous to the besiegers; likewise to oblige the enemy to open their trenches farther off than they would otherwise do. The distance of a redoubt from the covert-way should not exceed 120 toises, that the latter may thence be defended by musket-shot.

Redoutes en crémaillère, so called from their similitude to a pot-hook; the inside line of the parapet being broken in such a manner, as to resemble the teeth of a saw; whereby this advantage is gained, that a greater fire may be brought to bear upon the défilé, than if only a simple face was opposed to it, and consequently the passage is rendered more difficult.

Retrenchment is any work raised to cover a post, and fortify it against an enemy; such as fascines loaded with earth, gabions, sand-bags, &c.

Revetement is a strong wall built on the outside of the rampart and parapet, to support the earth, and prevent its rolling into the ditch. When the revetement of a rampart goes quite up to the top, 4 feet of the upper part is a vertical wall of 3 feet thick, with a square stone at the top of it, projecting about 5 or 6 inches, and a circular one below, or where the slope begins, of 8 or 10 inches diameter. They go quite round the rampart, and the circular projection is called the *cordou*.

Rideau is a small elevation of earth, extending lengthways on a plain, and serving to cover a camp, or to give an advantage to a post. It is also conve-

nient for the besiegers of a place, as it serves to secure the workmen in their approaches to the foot of the fortress.

Rideau is also used sometimes for a trench, the earth of which is thrown up on its sides, to serve as a parapet for covering the men.

Sap. See SIEGE.

Sillon, a work raised in the middle of a ditch to defend it when too broad. This work has no particular construction; but, as it runs, forms little bastions, half-moons, and redans, which are lower than the rampart of the place, but higher than the covert-way. It is not much used at present. *Sillon* means literally a furrow.

Scallow's-tail, an out-work, only differing from a single tenaille, in that its sides are not parallel as those of the tenaille, but narrower towards the town than towards the country.

Talus signifies a slope made either on the outside or inside of any work, to prevent the earth from rolling down. It is of various denominations, viz.

Talus of the banquette is, that gentle slope from the top of the banquette to the horizontal line.

Interior talus of the parapet, the slope from the top of the parapet to the banquette.

Talus of the top of the parapet, that slope which lessens the height of the parapet towards the berm; by which means the troops firing from the banquette can defend the covert-way.

Exterior talus of the parapet, the slope of the parapet from the top to the berm.

Interior talus of the ditch, the slope from the top of the ditch to the bottom, within.

Exterior talus of the ditch, the slope from the top of the ditch to the bottom, without.

Tenailles are low works made in the ditch before the curtains; of which there are three sorts. The first are the faces of the bastion produced till they meet, but much lower; the second have faces, flanks, and a curtain; and the third have only faces and flanks. Their height is about 2 or 3 feet higher than the level ground of the ravelin. Their use is to defend the bottom of the ditch by a grazing fire, as likewise the level ground of the ravelin, and especially the ditch before the redoubt within the ravelin,

which cannot be defended from any other quarter so well as from them.

Tenaillons are works made on each side of the ravelin, much like the lunettes; with this difference, that one of the faces in a tenaillon is in the direction of the ravelin; whereas that of the lunette is perpendicular to it.

Terre-pleine, in fortification, the horizontal superficies of the rampart, between the interior talus and the banquette. It is on the *terre-pleine* that the garrison pass and repass; it is also the passage of the rounds.

Tower-bastions are small towers made in the form of bastions; first invented by M. Vauban, and used in his second and third methods; with rooms or cellars underneath, to place men and artillery in them. As these towers are almost a solid piece of masonry, they must be attended with much expense, though their resistance cannot be great; for it has been found by experience, that the casemates are but of little use, because as soon as they have fired once or twice, the smoke will oblige the defenders to leave them, notwithstanding the smoke-holes. It may, therefore, be concluded, that the strength of these tower-bastions does by no means answer their expense; and that, if small bastions were made instead of them, without casemates, they would be much better, and less expensive.

Traditore signifies the concealed or hidden guns in a fortification, behind the reverse of the orillon.

Traverses are parapets made across the covert-way, opposite to the salient angles of the works, and near the places of anas, to prevent enfilades; they are 18 or 20 feet thick, and as high as the ridge of the glacis. There are also traverses made in the caponnières, but then they are called *tambours*.

Traverses are likewise made within other works, when there are any hills or rising grounds from which the interior parts of these works may be observed. Traverses that are made to cover the entrances of redoubts in the field, need not be above 8 or 10 feet thick.

Trous-de-loup, or wolf-holes, round holes made about 5 or 6 feet deep, with a stake in the middle: they are generally dug round a field redoubt, to obstruct the enemy's approach; circular at top, and about $4\frac{1}{2}$ feet diameter: pointed at

the bottom like an inverted cone. Two or three rows of them are dug chequer-wise, about 6 paces from the edge of the ditch, viz. two rows of holes exactly opposite to each other, and a third row in the middle, covering the intervals. Wolf-holes are very useful in preventing the approach of cavalry.

Wicket, a small door in the gate of a fortified place at which a man on foot may go in, and which may be opened, though the gate itself be kept shut.

Works. All the fortifications about a place are called the *works* of a place.

Out-works. All detached *works* in a fortification are so called. See *Dehors*.

Enceinte. By the *enceinte* of a place is meant not only the curtains, flanks, and faces of the bastions, with the rampart and its parapet, but also all the other works round it, as ditches, ravelins, counterguards, horn-works, crown-works, &c.

There are three kinds of *enceinte*. The *first*, or *simple enceinte*, consists of a rampart, a ditch, and an *esplanade* or *glacis*; the *second enceinte* has, independently of these, a wall, which, when it is not very thick, is called *chemise*, with a *chemin des roudes*, covered by a small parapet for the watch or rounds to go about in at night; and the *third*, or *basse enceinte*, is what was called *fausse-braie*. This last was much used by the Dutch; but Vauban retained only so much of it as formed a *tenaille* with flanks opposite to the curtain.

Zig-Zag. See *SIEGE*.

The *principal maxims of fortification* are these, viz. 1. That every part of the works be seen and defended by other parts, so that the enemy cannot lodge any where without being exposed to the fire of the place.

2. A fortress should command all places round it; and therefore all the outworks should be lower than the body of the place.

3. The works farthest from the center should always be open to those that are nearer.

4. The defence of every part should always be within the reach of musket-shot, that is, from 120 to 150 fathoms, so as to be defended both by ordnance and small fire-arms: for if it be only defended by cannon, the enemy may dismount them by the superiority of their own, and then the defence will be de-

stroyed at once; whereas, when a work is likewise defended by small-arms, if the one be destroyed, the other will still subsist.

5. All the defences should be as nearly direct as possible; for it has been found by experience, that the soldiers are too apt to fire directly before them, without troubling themselves whether they do execution or not.

6. A fortification should be equally strong on all sides; otherwise the enemy will attack it in the weakest part, where by its strength will become useless.

7. The more acute the angle at the center is, the stronger will be the place.

8. In great places, dry ditches are preferable to those filled with water, because sallies, retreats, succours, &c. are necessary; but, in small fortresses, wet ditches that can be drained are the best, as standing in need of no sallies.

The following maxims, in addition to those usually delivered by the writers on fortification, are extracted from a recent publication by James Glenie, Esq.

1. The flanked or salient angle of the bastion ought never to be less than about 71 degrees and a half, or greater than 120°. But in both Count Pagan's and Marshal Vauban's mean fortification, when the angle of the polygon approaches towards 180°, the flanked angle approaches towards 143° 7' 48", which is upwards of 23° greater than it ever ought to be.

2. In regular construction the face of the bastion ought not to exceed a fourth part of the exterior side, unless the circumstances of the ground, or situation, render it necessary to give it a greater length in some particular front, or fronts.

3. The perpendicular to the exterior side of a polygon of a given number of sides, ought to be of a different length from the perpendicular to the exterior side of any other figure or polygon of either a greater or smaller number of sides. For every figure or polygon has, in reality, a perpendicular of its own in proportion to its capability of resistance, and the difficulty of embracing it.

4. Consequently the magnitudes of the angle *diminué*, the flanked angle, the angle of the *épaule*, the outward flanking angle, &c. in any figure or polygon of a given number of sides ought to be different from the magnitudes of the angles of the same denominations in any

other figure or polygon of either a greater or smaller number of sides.

5. Neither the flanked angle ought to continue invariable whilst the angle *diminué* varies, nor the angle *diminué* to continue invariable whilst the flanked angle varies, as in all polygons in Pagan's mean fortification, and in all above the pentagon in Vauban's.

6. The magnitude of the angle of the *épaule*, or shoulder, ought to vary with the number of the sides of the polygon, and not to remain constant or invariable, as Count Pagan makes it in every polygon, and Vauban in the hexagon, and all higher polygons. The magnitude of the flank ought also to vary with that of the angle of the polygon, and the number of its sides, and not to continue invariable as it does by Count Pagan's construction in all polygons, and by Delichius's and Vauban's in the hexagon, and all higher polygons.

Lastly. The flanks ought not to be perpendicular to the faces of the bastions, or to the curtains, or to be on right lines drawn from the center of the polygon through the extremities of the demi-gorges. For not only the defences of the body of the place ought to be direct, but also the mutual or reciprocal defences of the outworks, as well as those they receive from the body of the place should be so.

Field Fortification is the art of constructing all kinds of temporary works in the field, such as redoubts, field-works, star-forts, triangular and square-forts, heads of bridges, and various sorts of lines, &c. An army intrenched, or fortified in the field, produces in many respects, the same effect as a fortress; for it covers a country, supplies the want of numbers, stops a superior enemy, or at least obliges him to engage at a disadvantage.

The knowledge of a field-engineer being founded on the principles of *fortification*, it must be allowed, that the art of fortifying is as necessary to an army in the field, as in fortified places; and though the maxims are nearly the same in both, yet the manner of applying and executing them with judgment, is very different.

A project of fortification is commonly the result of much reflexion; but in the field it is quite otherwise: no regard is to be had to the solidity of the works; every thing must be determined

on the spot; the works are to be traced out directly, and regulated by the time and number of workmen, depending on no other materials than what are at hand, and having no other tools than the spade, shovel, pick-axe, and hatchet. It is therefore in the field, more than any where else, that an engineer should be ready, and know how to seize all advantages at first sight, to be fertile in expedients, inexhaustible in inventions, and indefatigably active.

Quantity and quality of the materials which are required in the construction of field-fortification.

1. Every common fascine made use of in the construction of field works or fortification, should be 10 feet long and 1 foot thick. A fascine is raised by means of 6 pickets, which are driven obliquely into the earth, so that 2 together form the shape of a cross. These pickets are tied with willows, or birch twigs. It is upon supporters or tressels of this kind, that fascines are made, which are properly faggots bound together with rods, at intervals of 1 foot each in breadth. Six men are required to complete each fascine; viz. 2 to cut the branches, 2 to gather them up, and 2 to bind the fascines. Six men may, with great ease, make 12 fascines in an hour. The smaller sort of willows, or birch twigs, are best calculated for this work. The fascines are fastened to the parapet, which would otherwise crumble and fall down. A redoubt constructed *en crémaillère* must have fascines 8 feet long.

2. There must be five pickets for each fascine, and each picket must be 3 or 4 feet long, an inch and a half thick, and sharp at one end; they serve to fasten the fascines to the parapet.

3. When wood cannot be procured for the fascines, the parapet must be covered or clothed with pieces of turf, 4 inches thick, and a foot and a half square; these are fastened to the parapet with 4 small pickets 3 inches long.

4. The fraises, or pointed stakes, must be 8 feet long, 5 inches thick, and be sharp at the top. The beams upon which they are laid must be 12 feet long and 6 inches thick. These beams are spread horizontally along the parapet, and fraises are fixed to them, with nails 7 inches long; after which the beams are covered with earth. Two men will make 12 fraises in an hour.

5. The palisades, by which the ditch

or fossé of a work is fortified, must be 9 or 10 feet long, and 6 inches thick; they must, likewise, be sharpened at the end. If they cannot be procured of these dimensions, smaller ones must be used; in which case a few large stakes must be mixed.

6. The pickets, which are fixed in wolf-holes, must be 6 feet long, 4 inches thick, and sharp at the top.

7. The beams belonging to a *chevaux-de-frize*, must be 12 feet long, and 6 inches broad. The spokes which are laid across, must be 7 feet long, 4 inches thick, and placed at the distance of 6 inches from each other. These *chevaux-de-frize* are made use of to block up the entrances into redoubts, to close passages or gates, and sometimes they serve to obstruct the fossé.

8. Gabions are constructed of various sizes. Those which are intended for field-works must be 3 or 4 feet high, and contain 2 or 3 feet in diameter. These gabions are made by means of long stakes, 3 or 4 feet long, which are placed so as to form a circle, which is 2 or 3 feet in diameter. The pickets must be covered and bound in the same manner as hurdles are. Gabions are chiefly of use in embrasures. They are fixed close to each other, and are afterwards filled with earth. There are also gabions of one foot, with 12 inches diameter at the top, and 9 at the bottom. The bank of the parapet is lined with gabions of this construction, behind which troops may be stationed, so as to fire under cover through the intervals. A quantity of large wooden mallets, rammers, hatchets, axes, and grappling-irons, is required for this work.

Names of all works used in Field Fortification.

Bridge heads, or *têtes de pont*, are made of various figures and sizes, sometimes like a redan or ravelin, with or without flanks, sometimes like a horn or crown-work, according to the situation of the ground, or to the importance of its defence. Their construction depends on various circumstances; for, should the river be so narrow, that the work may be flanked from the other side, a single redan is sufficient; but when the river is so broad, that the salient angle cannot be well defended across the river, flanks must be added to the redan; but should a river be 100 toises, or more across, half a square may be made, whose

diagonal is the river side; and where the river is from 3 to 500 toises broad, a horn, or crown-work should be made. All the different sorts of *heads of bridges* are to be esteemed as good works against a sudden onset only, and their use is almost momentary, as they sometimes serve but for a few days only, and at most during a campaign.

Dans are generally made of earth, but sometimes of other materials, as occasion may require: their use is to confine water.

Flèche, in field fortification, a work consisting of two faces, terminating in a salient angle of 90°; the faces are generally 75, or 80 feet long, the parapet 9 feet thick, and the ditch 7 feet broad.

Forts, in field fortification, are of various sorts, viz.

Field forts may be divided into two kinds; the one defending itself on all sides, as being entirely closed; the other, bordering on a river, &c. remains open at the gorge. They have the advantage of redoubts, in being flanked, and the disadvantage in containing less within, in proportion to their extent.

Star forts are so called, because they resemble that figure. They were commonly made of 4 angles, sometimes of 5, and very rarely of 6; but we find them now made of 7 and 8 angles. Let their figure, however, be what it will, their angles should be equal; if formed of equilateral triangles, so much the better; for then the flanking angle being 120°, the fires cross better and nearer; and as the two flanks are on the same line, the space not defended before the salient angle is reduced to a parallelogram, whose smallest side is equal to the gorge.

Bastioned forts differ in nothing from that of places, except that the figure is less, and the attack supposed of another kind. It is reckoned sufficient to flank them with half bastions.

Triangular forts, forts that have only three sides. As these kinds of *forts* contain less in proportion than any other, they are consequently used as seldom as possible.

Square forts are in many respects preferable to the triangular ones. See *Fort*.

Lines, in field fortification, are of several sorts, viz. the front of a fortification, or any other field-work, which, with regard to the defence, is a collection of lines, contrived so as reciprocally to flank each other.

Lines of intrenchment are made to cover an army; or a place indifferently fortified, and which sometimes contains the principal magazine of an army; or to cover a considerable extend of ground, to prevent an enemy from entering into the country to raise contributions, &c.

Lines, of whatever form or shape, should be every where equally strong, and alike guarded.

Maxims. 1st. To inclose with the work as much ground as possible, having regard to circumstances. This attention chiefly concerns redoubts and small works.

2d. If there are several works near each other, their lines of defence should be so directed, as to defend each other without being annoyed by their own fire.

3d. Not to depend on the defence of small arms, but where they can fire at right angles; as they generally fire without aim, and directly before them.

4th. Not to have recourse to the second flank or fire of the curtain, but when there is an absolute necessity.

5th. That the flanking angle be always a right one, or more obtuse, but never to exceed 100° , if possible; there being no fear here, as in a fortification, of the flank being too much exposed. Besides, it is not necessary to graze the faces, or even to fire obliquely on them; since there is no danger of being exposed to the defence of a breach, or lodgement of the miners. The only thing to be apprehended, is a sudden attack.

6th. That the flanking parts be sufficiently extended, so that the interior of their parapets at least may rake the whole breadth of the opposite ditch.

7th. Never to make an advanced ditch in dry ground, unless it can be enfiladed throughout, and under a proper angle be defended by the work which it covers, or surrounds.

8th. Not to allow more than from 60 to 80 toises for the lines of defence, when they proceed from two flanks separated by two branches, forming a salient angle, or when they are not made to cross, though produced.

9th. That the parts most extended, and consequently the weakest in themselves, be as much defended as possible, and have at least the fire of two flanks, besides their own direct fire.

Redans are a sort of indented works, consisting of lines and faces, that form salient and re-entering angles, flanking

one another. Lines are often constructed with redans: their salient angles are generally from 50 to 70° .

Indented redans are when the two faces are indented; in that case the face of each indented angle is $8\frac{1}{2}$ feet only.

Tambour, a kind of work formed of palisades, 10 feet long, and 6 inches thick, planted close together, and driven 2 or 3 feet into the ground; so that when finished it has the appearance of a square redoubt cut in two. Loop-holes are made 6 feet from the ground, and 3 feet asunder, for the soldiers to fire through, who are placed on scaffolds 2 feet high. They have often been used by the French with great advantage.

Têtes-de-pont. See *Bridge-heads.*

Subterraneous FORTIFICATIONS.

These consist of the different galleries and branches which lead to mines, to the chambers belonging to them, or to fougasses, and which are required whenever it is found necessary to explode for the purposes of attack or defence. A subterraneous fortification may be of a permanent or temporary construction, offensive or defensive nature. Whenever this sort of work is adopted to strengthen and secure a fortified place, it is generally built of stone or brick, and made sufficiently solid to last a long time; it is then called permanent and defensive. Any place which is put in a state to withstand the subterraneous attacks of a besieging enemy, is said to be countermined.

When the besieger wishes to make an impression on a fortification of this sort, he must first construct galleries which he covers with wood, &c. He then practises offensive and temporary fortifications of the subterraneous sort. These works are well calculated to aid him in securing a lodgment for his subterraneous artillery, and in establishing chambers, fougasses, &c.

With respect to fortification in general, different authors recommend different methods; but the principal are those of Pagan, Blondel, Vauban, Coehorn, Belidor, Scheiter, and Muller.

It must, however, be constantly recollected by every engineer, that his views are not to be confined to the mere art of fortification. He ought further to know the use which different generals, in different periods, have made of natural strength and position; without an attention of this sort, he will fall very

short of that extensive knowledge, which every military man, who aims at military fame, must be ambitious of acquiring. Chains of mountains, and volumes of water, together with the influence which different climates have upon the latter element, should always constitute a part of the natural system that ought to form an essential portion of his application. Hydrography will likewise assist him in this pursuit. To enlarge upon this important branch of geography, and to point out the great means which it affords of natural defence and offence in fortification, would exceed the limits of our present undertaking. We shall, therefore, refer our military readers to Belair's *Elémens de Fortification*, and

content ourselves with submitting a short account of the different authors who have either given original systems, or have greatly improved those that were already known. Independent of whom, may be named the following writers, who have likewise contributed to the general knowledge of fortification, viz. Muller, Robins, Belidor, Cormontagne, Folard, Clairac, Le Blond, Dedier, Marshal Saxe, Cugnot, Tielke, Landsbergen, Trincano, Fallios, Rosard, Belair, &c.

FORTIFICATION, according to the method of Pagan, consists in three different sorts, viz. the *great*, the *mean*, and the *little*, whose principal dimensions are contained in the following

TABLE.

	The great FORTIFICATION.		The mean.		The little.	
	for squares	for all polygons	for squares	for all polygons	for squares	for all polygons
Exterior side . . .	200	200	180	180	160	160
The perpendicular	27	30	24	30	21	30
The face	60	60	55	55	45	50
The flank	22	24 2	19 1	24	18 3	23 2
The curtain	73 2	70 5	63 4	60 4	63 5	50 4
The line of defence	141 4	141 2	126 1	126 5	115 5	112 3

For other dimensions in his different methods, such as the magnitudes of the diminished angles, the flanked or salient angles, the angles of the tenailles or outward flanking angles, and the exact lengths expressed in toises of the lines of defence, of the complements of these lines, of the tenailles, of the flanks of the curtains, the perpendicular distances from the intersections of the lines of defence to the curtains, and the perpendicular distances from the exterior sides to the curtains, see Genie's *Military Construction*.

Blondel fortifies within the given polygon: he establishes two sorts of fortification; the great one, whose exterior

side is 200 toises, and the lesser one 170; because he will not have the line of defence exceed 140 toises, which is the greatest musket-shot, nor less than 120 toises, not to increase the number of bastions. He begins by the diminishing angle, which may be found by taking 90 degrees from the angle of the polygon, and by adding 15 degrees to the third of the remainder. For exact general expressions of the magnitudes of the angles diminués, the flanked angles, the outward flanking angles, and the angles of the épaules or shoulders, in these methods, &c. see Genie's *Military Construction*.

Vauban's method is divided into *little*,

mean, and *great*; the *little* is chiefly used in the construction of citadels; the *mean*, in that of all sorts of towns; and the *great*, in particular cases only.

TABLE.

Side of polygon	Forts.						Little.				Mean.		Great.	
	80	90	100	110	120	130	140	150	160	170	180	190	200	260
Perpendicular	10	11	12½	14	15	16	20	21	23	25	30	31	25	22
Faces bastion	22	25	28	30	33	35	40	42	45	47	50	53	55	60
Cap. of Ravel.	25	28	30	35	38	40	45	50	50	52	55	55	60	50

In the first vertical column are the numbers expressing the lengths of the exterior sides from 80 to 260.

In the second, the perpendiculars answering to these sides.

In the third, the lengths of the faces of the bastions; and in the fourth, the lengths of the capitals of the ravelins.

For the exact magnitudes generally expressed of the angles diminués, the flanked angles, the outward flanking angles, the angles of the épaules or shoulders, the angles of the flanks or curtain, and the precise lengths of the lines of defence and their complements, the tenailles, the distances between the opposite épaules, the curtains, the flanks, &c. &c. see *Glenie's Military Construction*. Vauban borrowed his perpendicular from Pagan and the length of the face of his bastion from Delichius.

Belidor's method is divided also into

little, *mean*, and *great*: and in all three the exterior side is 200 toises; the perpendicular of the *little* is 50, that of the *mean* 55, and the *great* 40: the faces of the first 70, the second 70, and the third 55 toises. For the magnitudes of the different angles in these methods, see also *Glenie's Military Construction*.

Scheiter's method is divided into the *great*, *mean*, and *small* sort. The exterior side of the polygon for the *great* sort is 200 toises, the *mean* sort 180, and the *small* 160. The line of defence in the first is 140 toises, the second 130, and the third 120. This line is always razant. All the other lines are fixed at the same length for all polygons, whose structure chiefly depends upon the knowledge of the exterior side of the capital or of the flanked angle, the rest being easily finished.—See the TABLE.

TABLE of Capitals and flanked Angles.

Polygons.	IV	V	VI	VII	VIII	IX	X	XI	XII
The flanked angles in the 3 sorts of fortification.	deg. 64	76	84	90	95	97	99	101	103
Capital for the <i>great</i> sort.	toises 46	49	51	52	53	54½	56½	58	59
Capital for the <i>mean</i> sort.	42	44½	46½	48½	50	51	52½	54	54
Capital for the <i>small</i> sort.	39	41½	42½	45	46	47½	48½	50	50½

Errard, of Bois-le-Duc, who was employed by Henry IV. and was the first that laid down rules in France respecting the best method of fortifying a place so as to cover its flank, constructs that flank perpendicular to the face of the bastion; but by endeavouring to cover it effectually, he makes the gorges too exiguous, the embrasures too oblique, and leaves the ditch almost defenceless.

Errard fortified inwards; and in the square, pentagon, hexagon, heptagon, and octagon he makes the flank perpendicular to the face of the bastion; but in the enneagon and in all polygons of a greater number of sides he makes it perpendicular to the curtain.

The Chevalier de Ville, who succeeded Errard, draws the flank perpendicular to the curtain; but here again the embrasures are too oblique, especially in the polygons, and the ditch is necessarily ill guarded. This engineer's method of fortifying is styled by most authors, the *French method*; by others the *composed draught*, from its being composed of the Italian and Spanish methods, the latter of which differs from it only in having no second flanks and sissant lines of defence, and in not confining the magnitude of the flanked or salient angle of the bastion to 90° . His favourite maxims are, to place his flanks perpendicular to the curtain, to make them equal to the demi-gorges and each of them equal to a sixth part of the side of the interior polygon, and to confine the flanked angle in the hexagon and all higher polygons to 90° . For the magnitudes of the different angles in this and in Errard's method, see Glenie's *Military Construction*. His favourite maxim is to make the flank angle right, and the flank equal to the demi-gorge.

Count Pagan makes the flank perpendicular to the line of defence, by which means the flank so raised covers as much as possible the face of the opposite bastion; but notwithstanding this apparent advantage, the flank becomes too small, and is too much exposed to the enemy's batteries. This engineer acquired great reputation during the several sieges which he assisted in conducting under Louis XIII. His system has been improved upon, as some conceive, by *Allain Manesson Mallet*, whose construction in fortification is to this day esteemed the most perfect. It differs very little from

Marshal Vauban's first system. Count Pagan has pointed out the method of building casemates in a manner peculiar to himself. Vauban borrowed from Pagan the length of his perpendicular.

The following is the construction of *Allain Manesson Mallet*.

He constructs outwards, making in every figure or polygon the demi-gorge equal to a fifth part of the side of the interior polygon or figure, the capital of the bastion equal to a third part of it, the curtain equal to three-fifths of it, or to thrice the demi-gorge, and the angle of the flank always equal to 98° . The faces of the bastions and the flanks are determined by the lines of defence, which are razant. From these data all the other lines and angles are easily found. This construction, for instance on a hexagon, of which the interior side is equal to 120 toises, gives the line of defence equal to about $120\frac{1}{2}$ toises, the flank to about $22\frac{1}{2}$ toises, and the face of the bastion to about $24\frac{1}{2}$ toises. It gives the angle *diminué*, or interior flanking angle, equal to about $16^\circ 37'$, the outward flanking angle to about $146^\circ 46'$, the flanked angle to about $86^\circ 46'$, and the angle of the *épaule* to about $114^\circ 37'$.

It cannot be disputed but that large and extensive flanks and demi-gorges are superior to short and confined ones. The more extensive the flank is, the better calculated will it prove for the disposition of a formidable train of artillery. From this conviction many writers, in their proposed systems of fortification, have added a second flank, in order to augment the line of defence; but they did not foresee, that this second flank is not only incapable of covering the face of the opposed bastion, except in a very oblique and insecure direction, but that the right flank, or the flank of the bastion, is thereby more exposed to the enemy's batteries; which, it must be acknowledged on all sides, is a great fault.

The prevailing system of the present day is to make the flanks of the bastion as long as possible, without having recourse to a second flank, unless it be absolutely necessary. Those gorges are likewise best which are most capacious, because they afford space and ground in the bastion for the construction of entrenchments within, should the enemy have effected a practicable breach.

All parts of a fortification which stand

exposed to the immediate attacks of a besieging enemy must be strong enough to bear the boldest attempts, and the most vigorous impressions. This is a self-evident maxim, because it must be manifest to the most common understanding, that works are erected round a place for the specific purpose of preventing an enemy from getting possession of it. It consequently follows, that flanked angles are extremely defective when they are too acute, since their points may be easily flanked and destroyed by the besieger's cannon.

The Dutch construct at sixty degrees; but according to Vauban's method, no work should be under seventy-five degrees, unless circumstances and situation should particularly require it. The flanked angle even in a square is not less than $61^{\circ} 55'$.

A place to be in a state of defence, should be equally strong in all its relative directions; for the enemy would of course make the weak part his object of attack, and finally succeed in getting possession of the town. The body of the place must have a command towards the country, and no quarter in the outward vicinity of it must overlook, or command either the place itself, or its outworks, as has been the case for several years (and during the whole of the last war), on the North-East side of Dover Castle. Those works which are nearest to the center of the place must have a greater elevation than the more distant ones.

The first regular system of fortification which appeared and was adopted in France, owed its origin to Errard of Bois-le-duc, whom we have just mentioned. His method, however, has been uniformly rejected by able engineers; and if we may give credit to the report of Ozanam, Errard himself never put his own system in practice.

Next to Errard of Bois-le-Duc, came the Chevalier Antoine de Ville, who was engineer under Louis XIII. and published an excellent treatise upon fortification. His method is styled by most authors, the *French method*. Others call it the *Compound System*, or *Système à trait composé*, because it united the Italian and Spanish methods. He was, indeed, by no means an advocate for new systems; for he generally observed, that any new method, or invention, was extremely easy, so long as it was confined

to the mere alteration of something in the measure, or in the disposition of those parts of fortification which have been discussed by other authors.

The Count de Pagan followed after, and had the good fortune to propose a system which entirely superseded the other two. We have already mentioned the principal features in his method.

Marshal Vauban, whose extensive experience procured him a high reputation, and gave him a decided superiority over the general run of those who had written on fortification, likewise employed three methods, viz. the great, the mean, and the little.

The great method, according to Vauban, contains on its exterior side from 200 to 230, or 240 toises. This extent is not uniformly the same throughout all the sides of a place, but is confined to that side which lies along the banks of a river, where he uniformly erects considerable outworks.

Vauban made use of his second method in fortifying Bèfort and Landau. On account of the bad local situation of Bèfort, and the impossibility of fortifying it with common bastions that would not be exposed to an enfilade in almost every direction, in spite of the traverses or *réchutes* which might be made, he invented arched bastions that were bomb proof, which he called *tours bastionées*, or *towers with bastions*. These arched bastions are covered by counter-guards, the height of whose parapet almost equals the elevation of the towers themselves. Although strictly speaking, both these places are irregularly fortified, nevertheless a method of regular defence may be established from the construction of their works.

Vauban's third system grows out of the second; and for that reason it is called *ordre renforcé*, the *reinforced order*, or *method*. It was adopted in the fortifications of Neuf-Brisach. Vauban left nothing untried to bring this system to perfection, and he had the ingenuity to execute his plan at a less expense than it would otherwise have been effected, by means of half revetements which he threw up in the outward works called the *dehors*.

The reinforced order was first proposed by La Treille.

Vauban's constructions have not escaped the censure of some writers, who, however, were not sensible of their

greatest defect, which consists in his giving the same length of perpendicular to every polygon above the pentagon.

Among many other subordinate errors or mistakes, which a writer of the present day has committed in delivering the constructions of Vauban's methods, the following inconsistent and demonstrably impossible things, which the gentlemen cadets are officially directed to perform in constructing them, may not be useless to the profession, or uninteresting to the army at large.

In page 16, for instance, this writer takes the exterior side equal to 180 toises, and supposes it to be bisected by a perpendicular equal to 30 toises or a sixth part thereof, through the inner extremity of which he draws the lines of defence, taking on them the faces of the bastions equal respectively to two sevenths of the exterior side. This is all very well. But in the very next sentence he directs them to make the flanked angles equal each to 110°. Now the truth is this, that there is no polygon in existence, that by Vauban's first method will give the flanked or salient angle of the bastion equal to 110°, which is demonstrable in the following manner.

Let n denote the number of the sides of any polygon whatsoever from the hexagon inclusive upwards, then the magnitude of the flanked or salient angle of the bastion will by that method be generally and truly expressed to within a second by $143^\circ 7' 48'' - \frac{360^\circ}{n}$,

which expression cannot in any case whatever be equal to 110°. For if they be equated we shall get $143^\circ 7' 48'' - \frac{360^\circ}{n} = 110^\circ$ or $33^\circ 7' 48'' = \frac{360^\circ}{n}$,

which give $n = \frac{360^\circ}{33^\circ 7' 48''}$. But it is evident, that $\frac{360^\circ}{33^\circ 7' 48''}$ is not equal to

any integer or whole number whatsoever, and that of course there does not exist a polygon, which by Vauban's first method can give the flanked angle equal to 110°. To construct then with a perpendicular equal to a sixth part of the exterior side, and at the same time to make the flanked angles, as he directs, equal to 110°, is utterly impossible.

In page 34, he in like manner constructs from an exterior side of 180 toises with a perpendicular of 30 toises,

and at the same time directs them to make the flanked angles of any suitable number of degrees, as, for instance, of 98 degrees; as if the lines of defence did not in every polygon determine positively the magnitude of each of the flanked angles. Now if 95° be equated to the general expression $143^\circ 7' 48'' - \frac{360^\circ}{n}$ we

shall get $45^\circ 7' 48'' = \frac{360^\circ}{n}$ or $n = \frac{360^\circ}{45^\circ 7' 48''}$

and consequently n not equal to an integer or whole number, it is supposed to be and must be.

To construct therefore with a perpendicular equal to a sixth part of the exterior side, and at the same time to make, as this writer directs, the flanked angles equal to 98° is altogether impossible. In other places he falls into similar blunders.

The construction of Vauban's method is by means of right lines, not by angles, and the very attempt to introduce an angle into it, is an immediate and absolute departure from it.

Vauban's system, however, (ingenious and unrivalled, as it certainly is), has not escaped the censure of some writers. It must nevertheless be acknowledged, that their remarks are either generally founded in envy, or that they proceed from ignorance.

There are other systems of fortification which have been proposed by the writers of other countries besides France. We shall give a brief detail of them, and leave the inquisitive to go more at length into the nature of their methods, by referring them to the different treatises.

The Italians have furnished several authors who have written variously on the subject of fortification. The method proposed by Sardinia has been generally esteemed the best.

The Spaniards, in their methods of fortifying, never adopt that which adds a second flank. The obtuse flanked angle is not looked upon by their best engineers as a defective system in fortification.

Both the Italians and the Spaniards speak frequently of the reinforced order, which was originally invented to lessen the number of bastions in a great town or fortified place, and to render consequently the line of defence equal to the range of musketry.

The reinforced order was invented by La Treille, an Italian writer.

The Chevalier St. Julien, a very able engineer, has published a method, by which, he asserts, that works may be constructed not only at a less expense than others require, but in a manner that must render his defence or attack more formidable. He has likewise invented a new method for the defence of small places, which is preferable to the first, although it is not without faults. According to his system, the reach of the musket is taken from the center of the curtain. To this end he directs, that a covert lodgment, 7 feet high, and 10 toises wide, be constructed from that spot to the gorge of the half-moon, or ravelin. Cannon is disposed along the faces, and a gallery is erected for the musketry, which likewise serves as a passage to the ravelin.

Francis Marchi, a gentleman of Bologna, in his folio edition, has furnished us with upwards of 160 different methods of constructing fortifications.

The Dutch uniformly pursue the system published by Marollois.

Bombelle has likewise established three sorts of fortification, the great royal, *grand royal*; the mean, *moyen royal*; and the little royal, *petit royal*.

Blondel has published a system of fortification, which he divides into two principal heads; the *great*, whose exterior side contains 200 toises; and the *little*, where the side does not exceed 170 toises. His reason is, because he objects to the line of defence having more than 140 toises, which is the furthest reach of musketry, or less than 120 toises, to prevent an unnecessary increase of bastions. The invention has certainly great merit, but its adoption must prove expensive in all its practical branches. It must, moreover, be manifest, that the four long batteries which are supported by flanks of his construction, must serve as so many scaling ladders, or steps, to the besiegers, the instant they have effected a breach by cannon shot, or by shells.

In 1689 a work was published, entitled:

Nouvelle manière de fortifier les places, tirée des méthodes du Chevalier de Ville, du Comte de Pagan, et de M. Vauban, avec des remarques sur l'ordre renforcé, sur les desseins du Capitaine Marchy, et sur ceux de M. Blondel, suivies de deux nouveaux desseins, which are described by James Glenie, Esq. page 79, in his

Succinct Account. This work is full of strong reasoning, from the result of which the author has formed a new method, containing, indeed, nothing original, but giving references to what has already appeared, and disposing the different parts in so judicious a manner, as to shew how a place may be rendered stronger, and be subject at the same time to a less expense. This writer divides fortification into three parts, the great, the mean, and the little.

There is a second and third method proposed anonymously, and containing mere simple designs. That method to which a modern author gives the preference over the system of Neuf Bri-sach, contains little useful information, and contributes less to the real art of fortifying places.

Donato Rosetti, a Canon belonging to Livourna, professor of mathematics in the academy at Piedmont, and mathematician to the Duke of Savoy, has written upon a method of constructing works in what he calls *fortification à rebours*, or fortification in reverse; so called not only because the re-entering angle of the counterscarp is opposite to the flanked angle; but because, in his idea, it will be necessary to attack it from the reverse side of other works. His system is very simple, and does not require a sacrifice of much money, or stand in need of many men to defend the works: although he can, on his side, pour as much fire upon the enemy, as could be furnished by more complicated methods.

Antonio de Herbart, major of artillery in the Duke of Wurtemberg's service, in 1735, published a treatise on fortifications with square angles, which he calls *angular polygons*.

Monsieur de Montalembert has lately endeavoured to bring arches, which are so much condemned by the Chevalier de Ville, into repute. He treats the subject in a manner, and upon principles so similar to those proposed by Antonio de Herbart, that it is almost impossible to separate the two systems. M. de Montalembert asserts, that the science of fortification, as it is established and taught at present, can only be valued by the public on account of its illusion. He looks upon the use of bastions as the effect of prejudice; he rejects them wholly, and substitutes in their room a front of *angular tenailles*, *polygons with*

small wings, and angular polygons. The engineers of the present day assert with confidence, that the chief security to be derived in works that are supported by bastions, must depend upon cross and reverse firing directed against the enemy's lodgments on the glacis. Large half-moons are made, not only for the purpose of covering the curtains and the flanks of bastions, but principally to obtain a reverse firing, which effectually prevents the enemy from maintaining his ground on the glacis of a bastion, before he has taken the two collateral half-moons. See a particular examination of this method, and a comparison of it with Vauban's, or the customary one, by Mr. Glenie.

M. Minno, Baron of Coehorn, who was general of artillery in the Dutch service, lieutenant-general of infantry, director-general of all the fortified places belonging to the United Provinces, and governor of Flanders and all the fortresses that lay along the Scheldt, has been justly esteemed for his extensive knowledge in the art of fortifying places. He was contemporary with Vauban. This intelligent and sagacious officer being thoroughly convinced, that, however expensively the rampart of a town may be constructed, it could not long sustain the shock of heavy ordnance, invented three different systems, by which he throws so many obstacles in the way of a besieging enemy, that although the place be not in reality rendered impregnable, it is nevertheless so far secured as to make its conquest a business of considerable hazard and expense. We must however acknowledge, that the three methods which have been pointed out by this Dutch general, can only suit places and grounds that are nearly on a level with the surface of the water; that is to say of 3, 4, or 5 feet; which circumstance plainly indicates, that his attention has been chiefly directed to the soil and ground of the United Provinces; so that his instructions are peculiarly applicable to low and aquatic situations. There is much skill discovered in his manner of treating the subject, and considerable ingenuity in the treatise he has published, which certainly contains several improvements that are exclusively his own. It would be impossible to force a passage, or to penetrate into any of his works, without being exposed on all sides to the fire of

the besieged, who are under cover, and from whose discharge of ordnance and musketry it is scarcely possible for an assailing enemy to secure himself. He published his work before he had much experience, and did not follow it in fortifying Bergen-op-zoom.

Scheiter, a German writer, describes two kinds of fortification, the *great* or the *superior*, and the *small* or the *inferior species*. It has been erroneously and unjustly stated, that the celebrated Vauban only copied after Scheiter, at Neuf Brisach.

Every man of the least knowledge or penetration must see, that the whole system of that illustrious engineer differs essentially from the author we have quoted.

Mr. *Belidor* has also delivered three methods, all of which he applies to an octagon of 200 toises.

In his first method the perpendicular to the exterior side is equal to 50 toises, the angle formed by the line of defence and exterior side is very nearly equal to $26^{\circ} 33' 54''$, the flanked angle to $81^{\circ} 52' 12''$, and the outward flanking angle to $126^{\circ} 52' 12''$.

In this second method the perpendicular is equal to 55 toises, the angle formed by the line of defence, and exterior side is very nearly equal to $28^{\circ} 48' 39''$, the flanked angle to $77^{\circ} 22' 42''$, and the outward flanking angle to $122^{\circ} 22' 42''$.

In his third method the perpendicular is equal to 40 toises, the angle formed by the line of defence, and exterior side is very nearly equal to $21^{\circ} 48' 5''$, the flanked angle to $91^{\circ} 23' 50''$, and the outward flanking angle to $136^{\circ} 23' 50''$.

The face of the bastion in the first and second of these methods is equal to 70 toises, and in the third to 55 toises.

Scheiter also delivers three methods, which he distinguishes into great, mean and little, and in imitation of Count *Pagan*, he makes the exterior side of the polygon in the great equal to 200 toises, in the mean to 180, and the little to 160.

Simon Stevin, a Fleming, wrote a book on fortification; in the second chapter of which he exemplifies his method of construction on a hexagon. He constructs outwards, and supposes each side of the hexagon, from which he makes his construction, to be equal to 1000 feet. On each side and from each extremity thereof he sets off 180 feet.

At the points on each side, which these lengths of 180 feet reach to, he draws two right lines perpendicularly to it, and each of them equal to 140 feet for the lengths of the two flanks. From each of these flanks he takes on the side and towards each of its extremities 20 feet, which distances he bisects, and from the points of bisection draws the lines of defence through the outer extremities of the flanks, which produced form the faces of the bastions and the flanked angles. His lines of defence are rasant, and the angle *diminué*, or the angle which each of them makes with the interior side, is about $12^{\circ} 9' 18''$.

The following are the methods of *Adam Fritach*, a Polander. In both he makes the curtain equal to 36 rods or two toises each, or to 72 toises, and a face of the bastion equal to 24 such rods, or 48 toises. He constructs outwards, and places his flanks perpendicularly to the curtain. In his first method he makes the flank equal to as many rods of two toises each as the figure has sides, and two more up to the decagon inclusive, which by this rule will have its flank equal to 12 rods or 24 toises, which he makes the length of the flank also in every polygon of a greater number of sides than ten. By this method then the length of the flank in the square is equal to 6 rods or 12 toises; in the pentagon to 7 rods or 14 toises; in the hexagon to 8 rods or 16 toises; in the heptagon to 9 rods or 18 toises; in the octagon to 10 rods or 20 toises; in the enneagon to 11 rods or 22 toises; and in the decagon, and all higher polygons, to 12 rods or 24 toises.

In his second method he supposes the flank in the square to be equal to 3 rods or 6 toises; in the pentagon to be equal to 9 rods or 18 toises; in the hexagon to 10 rods or 20 toises; in the heptagon to 11 rods or 22 toises; and in the octagon, and all higher polygons, to 12 rods or 24 toises.

Matthias Dogen, a Hollander, published a large volume on fortification.

After enumerating various modes employed by different writers for determining the flanked or salient angle of the bastion, he selects three as the most approved, at the time he wrote on the subject, and delivers three methods of construction.

In the first, he adds 15° to half the angle of the figure or polygon for the flanked or salient angle of the bastion till it

becomes equal to 90° , which it does in the dodecagon, and keeps it at 90° in all higher polygons. It is therefore expressed in all regular figures up to the dodecagon inclusive by $105^{\circ} - \frac{180^{\circ}}{n}$ and

in all higher polygons by 90° . The angle therefore formed with the rasant line of defence and either the curtain or the exterior side of the polygon is equal to $37^{\circ} 30' - \frac{180^{\circ}}{n}$ up to the dodecagon inclusive, and in all higher polygons is equal to $\frac{90^{\circ}}{2} - \frac{360^{\circ}}{2n} = 45^{\circ} - \frac{180^{\circ}}{n}$

In his second method he takes two-thirds of the angle of the polygon for the flanked angle, or salient angle of the bastion, which in the octagon is equal to 90° , the angle that he assigns to all higher polygons. The angle therefore formed by his rasant line of defence with either the curtain, or the side of the exterior polygon, is in all regular figures up to the octagon inclusive equal to $30^{\circ} - \frac{60^{\circ}}{n}$, and in all higher polygons equal to $45^{\circ} - \frac{180^{\circ}}{n}$.

In his third method, he adds (like *Fritach*) 20° to half the angle of the polygon for the flanked, or salient angle of the bastion, in all regular figures up to the enneagon inclusive, in which it is equal to 90° , the magnitude he retains it at in all higher polygons. In this method the angle formed by his rasant line of defence with either the curtain or the side of the exterior polygon, and the angle of the *épaule*, &c. are the same as in *Fritach's*. Like him he makes the curtain equal to 36 rods of two toises each, or 72 toises, and always places the flanks perpendicularly to it. He also makes, like *Fritach*, the face of the bastion equal to two thirds of the curtain, or to 24 rods of two toises each or equal to 48 toises. In the square he also, like him, makes each flank equal to 6 rods or 12 toises; in the pentagon to 7 rods or 14 toises; in the hexagon to 8 rods or 16 toises; in the heptagon to 9 rods or 18 toises; in the octagon to 10 rods or 20 toises; in the enneagon to 11 rods or 22 toises; and in the decagon and all higher polygons to 12 rods or 24 toises.

Pierre Sardi, the Italian's method of construction on a hexagon, is this:—He supposes the side of the interior polygon

to be equal to 800 geometrical feet. From the angles of this polygon or the central points of the bastions he sets off for each of the demi-gorges on the sides 150 of these feet; and at the points, which the demi-gorges reach to on the sides, he erects the flanks perpendicularly to them, and each also equal to 150 such feet. From each flank he sets off on the curtain, which is equal to 500 such feet, an eighth part thereof, or $62\frac{1}{2}$ such feet; and from the points, which these lengths reach to, he draws right lines through the outer extremities of the flanks, to meet right lines drawn from the center through the angles of the polygon, and thereby determines the flanked angles and faces of the bastions.

By this construction we have $437\frac{1}{2}$ feet to 150 feet as radius to the tangent of the angle *diminué*, or the angle which his rasant line of defence makes either with the curtain or the side of the exterior polygon. Hence the complement of this angle to 90° is known, as well as the angle of the *épaule*, the flanked angles, &c.

Le Sieur de la Fontaine finds the flanked angle or salient angle of the bastion, by adding 15° to half the angle of the figure from the square up to the dodecagon inclusive, in which it becomes equal to 90° , at which he continues it in all higher polygons.

He constructs outwards, and in every regular figure makes the curtain equal to 72 toises, the face of the bastion equal to 48 toises, and the flank, which he places perpendicularly to the curtain, to 18 toises, or a fourth part of the curtain. Each demi-gorge is equal to half the excess of the side, from which he constructs outwards, above the curtain.

The ingenious Mr. Ozanam has delivered four different methods of construction, in all of which he places the flanks on right lines drawn from the center of the figure or polygon through the extremities of the demi-gorges, and constructs outwards.

In the first he makes the demi-gorge equal to 24 toises in the square, 25 in the pentagon, 26 in the hexagon, 27 in the heptagon, 28 in the octagon, 29 in the enneagon, and 30 in the decagon, and all higher polygons. Hence, as he always supposes the inward side to be equal to 120 toises, the curtain and lengthened curtain are both known. He allows as many toises for the flank as are equal to

$+n$, a multiple by 4 of n the number of the sides of the figure or polygon up to the decagon inclusive, when it becomes equal to 40 toises, which length he retains it at in all higher polygons. The points of the bastions are by this method always determined by the intersections of rasant lines of defence with the lengthened radii drawn from the center of the figure or polygon through its angles, till the flanked angle becomes equal to a right angle, at which magnitude he afterwards keeps it, by describing a semicircle on the right line joining the outer extremities of the two flanks of the bastion. From these *data* all the lines and angles belonging to this method of construction are easily found or ascertained.

In his second method he allows the same length for his interior side and demi-gorge as in his first. But calling n the number of the sides of the figure, he makes his flank equal to $2n + 10$ toises, up to the decagon inclusive, when $2n + 10$ becomes equal to 30, equal to which number of toises he continues the flank in all higher polygons. And when the flanked angle becomes equal to a right one, he keeps it so by describing a semi-circle on a right line joining the *épaules* of the bastion, thereby occasioning a second flank on the curtain, and two lines of defence, one rasant, and the other *fichant*, instead of a rasant defence only by allowing that angle to become obtuse. His flanks are on right lines, drawn from the center of the figure through the extremities of the demi-gorges.

In his third method he allows the same lengths to the flanks and demi-gorges that he does in his second. But in order to have a greater second flank on the curtain, and to keep the flanked angle in every polygon under 90° , he makes the capital of the bastion equal to the gorge-line, or the line joining the inner extremities of its two flanks. The inward side, as in his first and second methods, is equal to 120 toises, and the flanks are on right lines, drawn from the center of the figure through the extremities of the demi-gorges. Thus the demi-gorge, flank, capital, curtain, and lengthened curtain are given, by means of which all the other lines, and the angles are easily determined.

In his fourth method, which is certainly the best, he also makes the inward or interior side equal to 120

toises, from the center of the figure to the middle of which he supposes a perpendicular to be drawn, and to be divided into $n+1$ parts (n being the number of the sides), two of which he allows for each of the demi-gorges, and three for each of the capitals, from the outer extremities of which last, rasant lines of defence, drawn to the extremities of the demi-gorges or curtain, determine the lengths of the flanks, which are on right lines, drawn from the center of the figure, and the positions and lengths of the faces of the bastions.

Mr. Muller has also delivered four methods of construction. In the first he constructs inwards from an exterior side of 180 toises, and as the perpendicular is altogether undetermined, he says, it may be taken of any length, as the 6th, 5th, or 4th part of the side, according to the expense or importance of the place; but supposes it to be equal to a sixth, or to 31 toises, as in Vauban's mean fortification, in his first method. He makes the face of the bastion equal to $\frac{2}{7}$ of the exterior side. From Vauban's, indeed, it differs in but few particulars as to the body of the place.

In 1751, Charles Bisset, who was an engineer extraordinary in the brigade of engineers that served with the Duke of Cumberland in the Netherlands, and was present during the siege of Bergen-op-zoom by Marshal Lowendal, published a Treatise on the Theory and Construction of Fortification, in which there are many sensible and judicious remarks. In it he delivers not less than nine methods, without describing particularly the lineal constructions of their different parts. The principal circumstances of construction, however, common to all, or most of them, are the following.

1st. He makes the straight flank of the bastion, in each of them, perpendicular to the line of defence, in imitation of Count Pagan.

2dly. In each flank he makes both the convex and concave portion thereof an arch of 60', having for its chord half the straight flank.

3dly. He allows 15 toises only for the breadth of the great ditch at the salient angles, whether it be wet or dry.

4thly. He places the interior lines of the demi-gorges of the redoubts in the

ravelins on right lines, joining the epaules of the bastion and "the salient angles of the counterscarp of the great ditch;" or, to speak perhaps more correctly, on right lines drawn from the epaules through the extremities of the rounding or circular parts of the great ditch in front of the flanked angles.

5thly. He makes the face of the ravelin produced meet the face of the bastion 3 or 4 toises from the epaule or shoulder, except in the eighth method, in which he makes it meet the face at the distance of 10 toises from the shoulder.

Lastly. In all these methods he proposes to give the wall of the rampart a slope equal to one third part of its perpendicular height, in order to save masonry and expense.

In 1755 an anonymous writer published an essay or dissertation entitled "*Essai sur la Fortification, ou Examen des Causes de la grande Supériorité de l'Attaque sur la Défense*;

Des Moyens de déterminer la Disposition et la Construction des Ouvrages par les Opérations de l'Attaque;

Des Changemens que cette Observation produiroit dans la Méthode de fortifier;

Des Avantages qui en résulteroient pour la Défense."

After observing, that all the operations to which the efforts of the besieged on one side, and the labours of the besiegers on the other, may be reduced, are, in the first place, to defend the country to a certain distance round the place, and to hinder the besiegers from approaching it, and constructing their batteries: secondly, to defend the border of the ditch, and to prevent the besiegers from establishing themselves there, or extending themselves along it; thirdly, to defend the passage of the same ditch, and to hinder the besiegers from attacking the body of the place; and, lastly, to defend the breach, and to prevent the besiegers from making a lodgement in it and rendering themselves masters of the town, he considers the attack of a place fortified according to the method of Marshal de Vauban, and proposes some improvements.

An anonymous writer in the Sardinian service proposes two new methods of fortification, in a work entitled *Science de la Guerre*, which was published at Turin in 1744. He discusses, a considerable length, the art of fortification in general, its utility, the different sciences

which must be acquired towards obtaining any degree of perfection in that art, the various systems in it, regular and irregular, and the construction of palisades, gates, mines, casemates, magazines, &c. &c. he concludes with this extraordinary sentence: "It is not my intention to propose any alteration in the general system, but merely to suggest, that the style be rendered more intelligible." It must be noticed, that this Italian writer in his preface frankly confesses his deficiency in the French language. We shall pass over what he says relative to the approbation which his proposed systems, or rather his explanation of methods already known, has met with from scientific men.

The construction which is proposed in this new method, is simple, and easily understood. The principal objects to be attended to are these; that there be mines under all the works, and that a regular communication be kept up with the chambers, by means of subterraneous galleries, which must be resorted to in proportion as the enemy approaches.

The above writer has added to Vauban's and Coehorn's systems. We refer the reader to the publication itself, leaving the subject to the consideration of those professional men who have made the art of fortification their peculiar study; they must determine whether the theory of the proposed method be susceptible of practice, and if so, whether it can be rendered so generally useful, as the author seems to promise it would.

On a general view of the subject it must, however, be acknowledged, that a situation is not always found which will admit of the improvements and additions that might otherwise be made. There are some old places in which the figure of the fortifications erected for their defence is so strange and whimsical, that the least correction of its errors must be attended with an enormous expense.

A town may be irregularly fortified, and owe that irregularity either to the figure of the works only, by the angles not being equally distant from the center, (although every one may admit of a good bastion, and the lines be tolerably extensive;) or by the figure and the angles differing, from some being too acute, and the others being reentrant; or by the inequality of the figure and its

sides; some being too long and others too short; or finally, by a disparity all together in the figure, in its sides and angles.

If the three first kinds of irregularity are judiciously corrected, the correction of the fourth follows of course, as it is only the natural consequence of the others. Those irregularities may be occasioned by a neighbouring river, by the entrance into a creek or harbour, or by steep rocks beyond which it is impossible to carry the works.

It is a sound and general maxim in the art of fortifying, to reduce the irregular proportions of its lines, &c. of defence, to as much regularity as the ground and situation will permit; for, by so doing, their strength becomes equally great throughout. If you should not be able to surmount the natural obstacles which may be thrown in your way, you must never deviate from the general rules that are laid down in regular fortification. These are, that all the parts be well flanked, that the angles of the bastions do not fall under 70° , that the line of defence be within musket-shot, or that outworks be established to bring it within that range; and, finally, that the means of resistance be distributed in as many equal proportions as the irregularity of the works will suffer.

You must, however, be careful to avoid an error into which many have fallen. You must not weaken the collective means of defence, in order to strengthen any particular vulnerable quarter; since you are sacrificing a great line of defence, to the security of a small part which might be strengthened by outworks.

The author of *Œuvres Militaires*, in his 3d volume, page 45, has given observations and maxims relative to irregular fortification.

Baron d'Espagnac, in consequence of the remarks which are made by Marshal Saxe, in his *Réveries*, has, in his supplement to that work, amply discussed the subject of fortification, and described the different means of attack and defence. We refer the inquisitive officer to those works. Before we conclude these interesting remarks upon an art, which is certainly equal to any invention that has employed the skill and ingenuity of man, we must observe that in all periods, productions on that head have been as

numerous as the subject has hitherto proved inexhaustible. It must, however be acknowledged, with some regret, that the tendency of the greater part, if not of all, seems to be an indiscriminate and bold attack upon the works of the immortal Vauban, without any advertence to their real defects. That able, successful, and celebrated engineer had a great deal of practice, without possessing a sufficiency of science for improving radically the commonly received principles of the art he professed. These writers censure the methods of that great engineer by proposing something of their own, which only differs in appearance, and which they think proper to call a *superior system*. Assertions, and promises to afford new lights upon the science of fortification, have always, in fact, been profusely given by authors of this description. Their labours, however, are only so far to be regarded and esteemed, in as much as their different systems tend to point out the necessary calculations which are required to shew the expense attending their construction, and to prove the effects they might produce. The memoirs upon perpendicular fortification, written by M. M. engineer, will throw considerable light upon these observations.

With respect to the knowledge of fortification, it must be manifest to every thinking man, that from a sovereign prince, or head of a country, down to the lowest infantry officer, the acquirement of it is more or less indispensably necessary.

A prince, or chief magistrate of a country, should be well versed in the science of fortification, in order to examine the plans that are laid before him, and to determine upon the execution of proposed projects.

A minister should know it, in order to explain the nature of the plans when questioned by a superior power, to calculate the expenses which will attend the construction of works, and to distinguish good ones from those which might be useless and expensive.

Every governor of a town, or fortified place, should be well acquainted with the subject, because it may fall to his peculiar share to construct works in cases of emergency, or to add to those already erected for the defence of the place entrusted to his care. He likewise ought, at all times, to be able to ascer-

tain how far such a place is capable of holding out.

Every director of fortification should be master of it, in order to discriminate between what is proper, or what is defective, and make his report accordingly.

Every infantry officer, in a word, should be conversant in field fortification at least, if not acquainted with the general system. For without some knowledge of its branches, how will he, in cases of emergency, be capable of throwing up a temporary redoubt, of fortifying a spot of ground which he is ordered to maintain, or of securing a common out-post?

For the dimensions of the principal angles and lines in the methods delivered by the above authors, see Glenie's *Military Construction*.

Field Fortifications, (*fortifications de campagne*, Fr.) consist in the art of fortifying, constructing, attacking, and defending all sorts of temporary field works during a campaign.

Although an engineer may be perfectly master of the different methods by which a town can be strengthened and secured by permanent works, he should not remain satisfied with that acquisition, but carefully direct his attention to the distribution of ground, for field fortification. He should be able to ascertain, with geometrical precision, all the relative divisions and corresponding points of any situation in which it might be judged expedient to construct that species of fortification which consists in entrenched lines, fortins or small forts, and in redoubts of various denominations. The shape or figure of these works is exactly similar to those of the permanent kind. Ditches, ramparts, and parapets, must be dug and thrown up, to secure the former, in the same manner as they are practised for the protection of the latter. They only differ in their measurement and proportions. Entrenched lines are made for the purpose of covering a camp from any sudden insult of the enemy, which should always, on this account, be pitched in the most advantageous manner. Contiguous to and facing that quarter where it is probable the attack will be made, a ditch must be dug, having three toises at least in width and two in depth. This must be defended by a parapet *en redans*, or be occasionally flanked with small

bastions, two toises thick, consisting of solid good earth well pressed together, covered and supported with fascines, having likewise banquettes behind them sufficiently high to conceal the soldiers' tents. If water could be conveyed, or drawn into the ditch from any adjacent rivulet, or river, the security would be greater. When the lines of entrenchment are thrown up with an intention to maintain the ground any length of time, a covert-way must be made, which should be regularly fenced with palisades.

There is another species of field fortification, which is resorted to in order to keep up a communication between two places; in which case great care must be taken to prevent the lines from being enfiladed in any quarter; and if they should be exposed in that manner, no time ought to be lost in strengthening the weak points by constructing redoubts, or small forts. The defence of these redoubts and forts must be entrusted to small arms and musketry, but not to cannon; as the range of the latter is always too extensive to prevent an enemy's close approaches to the lines of communication from their field works, or forts. Necessary drains must be made to let out the water that collects, as it would otherwise destroy the works, drown the sentries, and cut off all communication with the main body.

When a position is taken upon a steep rock, or eminence extremely difficult of access, the lines which surround it do not absolutely require ditches for their safety, as the parapet and banquette may probably be sufficient; but if any vulnerable or weak part be observed, every effort should be used to get at a spring, and to fill up an excavation in front of it, to prevent surprizes. An able engineer will be particularly careful, in drawing his plan of communication, to ascertain the exact points whereby they may be protected by an enfilade from one fort to another; so that if the enemy should make a lodgment any where, he will not be able to maintain his position, on account of his being flanked by other works.

Field works, or small forts, are generally constructed in places, the preservation of which is judged to be indispensably necessary. Such, for instance, are necks of land that stretch into a marsh, and are surrounded by it; the passage of a road, *têtes de ponts*, or

heads of bridges, and other objects of similar importance in offensive or defensive operations. On these occasions the shape and size of the construction must depend upon the nature of the ground, the importance of the undertaking, and on the number of men by which the works are to be garrisoned.

Many forts in field fortification are built in triangular forms; some are square, some starred, or *en étoile*, some as redoubts, in the shape of demi-lunes, others in crown, or horn-work, and others again in the figures of tenailles, or *queues d'hirondelle*.

When the object of defence is a wind-mill, a castle, or a small dwelling-house, the first step to be taken is to select a spot of ground upon which you are to build the field-work, so as to check and prevent the enemy's approaches. In order to do this effectually, the shape and adjacent parts of the building must be closely attended to, and the work be thrown up without exposing it to a rear attack; but if the place to be defended, stand alone, and be not supported by any ditch or eminence on its flanks, or in its rear, you must then fortify it all round. The earth which is dug out of the ditch will serve to raise the rampart, or parapet. Salient angles, distributed at equal distances in the shape of bastions, must be erected with good flanks to protect and cover the intrenchment. If, on account of the ground, the work should not be much raised, the parapet must be fraised, in order to prevent the enemy from attempting an easy assault.

An engineer from Piedmont, who has proposed some new methods in field fortification, is decidedly against stone and masonry, in the construction of parapets and field works. His reason is self-evident; for, as he justly observes, the scattered pieces which must naturally be thrown about in all directions by the demolishing of the walls in the discharge of heavy cannon, would do more mischief than the cannon itself.

It is frequently found necessary to fortify a bridge; the means adopted for this purpose must depend entirely upon the size and current of the river. If the stream should be broad and navigable, and so far from the fortress, that it cannot be defended by the ordnance of the town or fortified place, in that case, a large retrenchment, resembling a place of arms, must be constructed, with strong

bastions to support and cover it, curtains and half-moons, a broad and deep ditch, and covert-way that must be well secured by palisades. This retrenchment, or place of arms, must be made sufficiently capacious to hold a garrison that would be capable of opposing the attack of a large detachment from the main army of the enemy. A half-moon must be constructed within the lines, with a ditch in front, to serve as a work behind which the garrison might retreat with its artillery, disputing every inch of ground, and by that means affording sufficient time to cut down the bridge.

If the river should be narrow, yet wide enough to prevent any sudden interruption into the country behind it, the bridges, that are across, must be fortified by works made of earth, which are to be covered by ditches dug in front. Half-moons, tenailles, crown and horn-works, and similar constructions, provided they be well fenced with palisades, will answer all the purposes required in such cases. The engineer, by the first glance of his eye, will be able to ascertain the situation of the country, and to fit his plans accordingly. Small lodgments, or wooden recesses, must be made as guard-houses, in which detached parties of men should be stationed to meet the first attacks of the enemy, and to keep him in check while the whole army passes over the river, or is drawn up in order of battle to dispute the passage. These intrenchments must invariably be well furnished with light artillery, for the purpose of annoying the approaching enemy. But the disposition and arrangement of these pieces must always be such as to admit of their being instantly removed, when the intrenchments are carried, under the cover of heavier ordnance, which is kept playing upon the enemy from the opposite side of the river.

Much depends on the knowledge, contrivance, and judgment of an engineer, who acts with an army in the field. For, after all that has been said, it may with truth be asserted, that there is really no good treatise on field fortification in existence. Almost every field work of consequence to suit the ground it occupies, must be more or less irregular. But no general rule for irregular constructions seems hitherto to have been given. Mr. Glénie has delivered one in his concise observations on military con-

struction, which is exceedingly simple, and applicable also to regular constructions.

To FORTIFY, (*fortifier*, Fr.) to put a town, or post, &c. in a state of defence, so as to bid defiance to any meditated attack, or insult.

To FORTIFY *inwards*, (*fortifier en dedans*, Fr.) is to represent the bastion within the polygon proposed to be fortified, and then that polygon is called the *exterior polygon*, and each of its sides the *exterior side*, terminating at the points of the two nearest bastions.

To FORTIFY *outwards*, (*fortifier en dehors*, Fr.) is to represent the bastion without the polygon proposed to be fortified, and then the polygon is called the *interior polygon*, and each of its sides the *interior side*, terminating in the centers of the two nearest bastions.

FORTIN, FORTLETT, or FORTILAGE. See FIELD-FORT.

FORTIN, Fr. a species of field fortification, which is made of fascines and saucissons, for the purpose of securing a post, &c.

FORTRESS, (*forteresse*, Fr.) any strong place rendered so by art, or originally so by local advantages, or by means of both nature and art. Places which are strong by nature generally stand upon mountains, precipices, in the middle of a marsh, on the sea-coast, in a lake, or on the banks of some large river. Places which are strong by art owe their strength to the labour of man, whose ingenuity and perseverance substitute ditches and ramparts where mountains and rivers are wanting.

FORTUNE, (*Fortune*, Fr.) chance; luck; good or bad contingencies in life. The French say, *chacun est artisan de sa fortune*, every man is the carver of his own fortune.

The FORTUNE of war, (*fortune de la guerre*, Fr.) the chances and vicissitudes of human contests.

A soldier of FORTUNE, (*soldat de fortune*, Fr.) a military man who has risen from the ranks by his own merit.

FORVETU, Fr. literally an outside fellow; a paltry mean creature finely dressed; a character sometimes found among military pretenders.

FORURE, Fr. a key-hole.

FORWARD! a word of command, which is given when a regiment, troop, or company has been interrupted in its regular movement, and the march is

continued. On this occasion every succeeding division must preserve its proper distance, and mark time until the word *Forward* is given. This frequently occurs in the passage of obstacles, and in the windings of roads, streets, &c. The French say, *En avant ! A droite, A gauche, En avant !*

Right } *shoulders FORWARD*, a word
or } of command, by which sol-
Left } diers are directed to wheel to the right or left, without halting, when a corps is on its march. Whole regiments in open column may move round the different windings of a town or country without losing their relative distances, provided each leading officer and his covering serjeant pay the requisite attention to his preceding division, and at the wheeling point give the words, right (or left) *shoulders forward !* with accuracy and firmness.

FOSSE, *Fr.* any deep excavation in the earth, made so by art, or left by nature. A gulph or particularly deep part in a river. It also signifies a den. *Daniel a été jeté dans la fosse aux lions*, Daniel was cast into the den to be devoured by lions. This word is always of the feminine gender.

FOSSE, *Fr.* a ditch. This word is always of the masculine gender. See **FORTIFICATION**.

FOSSE *sec*, *Fr.* dry ditch.

FOSSE *plein d'eau*, *Fr.* wet ditch. } See

FORTIFICATION.

FOSSE *de la contrescarpe*, *Fr.* See **DITCH** of the *counterscarp*.

FOSSES *revêtus*, *Fr.* ditches that are lined.

FOSSES *non revêtus*, *Fr.* ditches that are not lined.

FOSSEWAY, one of the great Roman roads in England, so called from the ditches on both sides.

FOUCADE, **FOUGADE**, a small mine.

FOUDRE *de guerre*, *Fr.* this term is used among the French to signify a general who has gained many victories, and who has given repeated proofs of uncommon valour.

FOUDROYER, *Fr.* to play incessantly against a fortified town or place, troop or company, with heavy ordnance or musketry.

FOUET, *Fr.* This word is pronounced *foît*, and signifies a whip, such as drivers use in the exercise or guidance of their horses, and hangmen for punishment.

FOUETTER, *Fr.* to whip; to beat violently against any thing. *La grêle fouette dans le camp*, the hail beats violently in the camp. The French say, figuratively, in a neutral sense, *Le canon rouette tout le long de la courtine*, the cannon plays all along the curtain.

FOUGASS, in *mining*, a small mine, from 6 to 8 feet under ground: it is generally placed under the glacis, or dry ditches.

FOUGETTE, or *Baguette à feu*, *Fr.* Indian sky-rocket; a species of fire-work which is frequently used by the Indians who inhabit the western peninsula of the Ganges. The author of a late military production in France makes the following observations relative to advantages which might be derived from this weapon against cavalry, and for the defence of fortified places or intrenchments. He observes, that the *fougette*, in shape, resembles a sky-rocket, whose flight is gradually brought to run along an horizontal direction. By throwing several *fougettes* into parks of artillery, and upon the caissons, &c. considerable damage might be occasioned from the fire which would inevitably be communicated to some part. A *fougette* forces itself immediately forward, cuts as it penetrates, by the formation of its sides, which are filled with small spikes, becomes combustible and on fire at all its points, and possesses within itself a thousand different means by which it can adhere to whatever object it is destined to set on fire or to destroy. This weapon would be more effectual, because it might be more variously applied, to defend the mouth of a harbour against an enemy's shipping, than red-hot balls can ever prove. *Fougettes* might be used on board ships of war, but there would certainly be some danger in the experiment; although, in my humble opinion, a little experience might effectually remove that difficulty; in which case, ships might run along a coast, and easily destroy the wooden forts that are sometimes erected upon it. They would in the first place occasion more havoc than red-hot balls; and in the next, they might be used whilst the vessel was in full sail, which cannot be done in the first instance. By means of their natural velocity, they would do more execution, in a less space of time, than the most active piece of ordnance could effect; and they would require fewer

hands, as the only necessary operation would be to light and dart them forward. As a defensible weapon, it must naturally be allowed, that, where a small body of men is attacked, the fougette might be adopted with considerable advantage.—The writer of this article, who, we find, is likewise the inventor of a fougette which has been submitted to the French government, continues to argue much in favour of its adoption. If, adds he, our enemies should imitate the invention, we must then have recourse, especially in sea-fights, to those pieces of ordnance that are calculated to do more execution at a distance; and it will then be our business to contrive fougettes that shall reach their shipping, by means of a greater degree of force and velocity which might be given to them, than they would be capable of attaining. See ROCKETS.

FOUGON, *Fr.* the cook-room in a ship.

FOUGUE, *Fr.* heat; impetuosity.

FOUGUEUX, *Fr.* fiery; unruly.

FOUILLE, *Fr.* trenching.

FOUILLE de terre, *Fr.* any excavation that is made in the earth for the foundation of a building, or for a canal.

FOUILLE couverte, *Fr.* the opening which is made through a solid piece of earth, in order to effect the passage of an aqueduct.

FOUILLER, *Fr.* to search. In military movements, it signifies to detach small bodies of infantry round the flanks of a column that is marching through a wood, for the purpose of discovering an ambuscade, and of giving timely notice, that it may be avoided. The same precaution is necessary when a body of men advances towards, or enters, a village.

FOUILLER un cheval, *Fr.* to over-ride a horse.

FOUILLER un bois, *Fr.* to scour a wood, &c.

FOULE, *Fr.* commonalty of mankind. *Se tirer de la FOULE*, to distinguish one's-self from the vulgar.

Jambes FOULÉES, *Fr.* in farriery, bad feet, made so from hard usage.

FOULOIR, *Fr.* an instrument used by gunners to cleanse the inside of a piece as soon as it has been fired. The *fouloir* has a button at the other extremity of its shaft; it is used to ram down the powder.

FOULURE, *Fr.* the surbating of a horse.

FOUNDATION, that part of a building which is under ground, or the mass of stone, brick, &c. which supports a building, or upon which the walls of a superstructure are raised: or it is the coffer, or bed, dug below the level of the ground, to raise a building upon; in which sense, the *foundation* either goes to the whole area or extent of the building, as when there are to be vaults, galleries, casemates, or the like; or is drawn in cuts or trenches, as when only walls are to be raised. Sometimes the *foundation* is massive, and continued under the whole building, as in the antique arches and aqueducts; but it is more usually in spaces, or intervals; in which latter case, insulated pillars, bound together by arches, should be used.

There are several things to be well considered in laying the *foundation* of a military building. We must first examine the bed of the earth upon which we are to build, and then the under-fillings or substruction. We are not to rest upon any seeming solidity, unless the whole mould through which we cut has likewise been solid; and in such cases, allow 1-6th part of the height of the building for the hollowing or under-digging, unless there be cellars under-ground, in which case it may be something less. There are many ways to try the firmness of the ground; but the following, in our opinion, is the best. Take an iron crow, or such a borer as well-diggers use, which at once will point out the goodness and tenacity of the ground.

Engineers should use the utmost diligence in this point; for, of all the errors that may happen in building, those are the most pernicious which are committed in the foundation, because they bring with them the ruin of the whole building; nor can they be amended without very great difficulty.

FOUNDATIONS are either natural, or artificial: natural, as when we build on a rock, or very solid earth; in which case we need not seek for any other strengthening; for these, without digging, or other artificial helps, are of themselves excellent *foundations*, and most fit to uphold the greatest buildings. But if the ground be sandy or marshy, or have lately been dug, in such case recourse must be had to art. In the former case, the engineer must adjust the depth of the *foundation* by the height,

weight, &c. of the building: 1-6th part of the whole height is looked upon as a medium; and as to the thickness, double that of the width of a wall is a good rule. If you build upon mossy and loose earth, then you must dig until you find sound ground. This sound ground, fit to support a building, is of divers kinds: in some places so hard, as scarcely to be cut with iron; in other places very stiff; in others places blackish, which is accounted the weakest; in others like chalk, and in others sandy: but of all these, that is the best which requires most labour in cutting or digging, and when wet, does not dissolve into dirt.

If the earth to be built upon is very soft, as in marshy grounds, or such that the natural *foundation* cannot be trusted, then you must get good pieces of oak, whose length must be the breadth of the trench, or about 2 feet longer than the wall; these must be laid across the foundation about 2 feet asunder, and being well rammed down, lay long planks upon them; which planks need not lie so broad as the pieces are long, but only about four inches on a side wider than the basis or foot of the wall is to be. But if the ground be so very bad, that this will not do, then you must provide good piles of oak, of such a length as will reach the good ground, and whose diameter must be about 1-12th part of their length. These piles must be driven down by an engine for that purpose, and must be placed as close as one can stand by another; then lay planks upon them, and pin them fast. But if the ground be faulty in some parts, and firm in others, you may turn arches over those loose places, which will discharge them of their weight. You must not forget to place the piles under the inner, as well as the outer walls; for if these should sink, it would be a means to make the outer walls crack, and so ruin the whole building.

Having thus far considered the bed of the earth on which the building is to be erected, we shall next consider the substruction, as it was called by the ancients; but our modern engineers call it the *foundation*. This is the groundwork of the whole edifice, which must sustain the walls, and may be termed artificial, as the other was natural; with regard to which, the following things are most necessary to be observed: 1. That the bottom be exactly level; therefore

lay a platform of good boards. 2. That the lowest ledge or row be all of stone, the broader the better, laid closely without mortar; which is a general caution for all parts of a building that are contiguous to board or timber, because lime and wood are utter enemies to one another, and, if unfit confiners any where, they are more especially so in the foundation. 3. That the breadth of the *foundation* be at least double the breadth of the wall which is to be raised upon it: but even in this case, art should give way to discretion: and the *foundation* may be made either broader, or narrower, according as the ground and the ponderosity of the edifice require. 4. That the *foundation* be made to diminish as it rises, but yet so that there may be as much left on the one side as on the other; so that the middle of that above may be perpendicularly over the middle of that below, which should, in like manner, be observed in diminishing the walls above ground; for by this means the building will become much stronger than it would be if the diminution were made by any other way. 5. That you should never build on the ruins of an old foundation, unless you are well assured of its depth, and that its strength is sufficient to bear the building.

The stones in the *foundation* should be laid as they naturally lie in the quarry, for they have the most strength in their natural position. This should be observed in all parts of a building, because all stones have a cleaving grain; consequently, if the horizontal position of the stones in the quarry should be placed vertically in the building, the super-incumbent weight would be apt to cleave them, and so render the building ruinous.

FOUNDER, a person who casts cannon, &c.

FOUNDING, a disorder in horses, which may be considered under two heads, viz.

FOUNDING in the feet, which is an universal rheumatism, or defluxion of humours upon the sinews of a horse's feet; so that in the course of time the hoofs become stiff and callous, and the horse has no sense or feeling of them. This disorder is generally brought on by hard riding. Sometimes it proceeds from sudden heats and colds; and frequently from the horse being watered when he is very hot. Too tight a shoe, or fre-

quent travelling upon hard flinty ground, will likewise produce this disorder.

FOUNDERING in the chest, a disorder which may be occasioned by crudities collected in the stomach, or by other infirmities which obstruct the free action of the lungs. It is discovered by the horse not being able to bend his joints, and, when once laid, by not being able to rise again. A swelling in the legs is likewise symptomatic of it.

FOUNDERY, } in military matters,

FOUNDRY, } the art of casting all kinds of ordnance, such as cannon, mortars, howitzers, &c. It likewise signifies the place or work-house wherein these operations are performed. At present, all pieces of artillery are cast solid, and bored afterwards. Formerly guns were bored perpendicularly, but at present in a horizontal position: the boring instrument is fixed immovably, and forced into the gun or mortar by a mechanical power. The piece of artillery is turned round by a large wheel and horses; and at the same time the gun is bored, the outside is turned and polished, by another very curious machine for that purpose, invented by the very ingenious Messrs. Verbruggen, founders at Woolwich. Guns were first founded in England in 1587. The iron ordnance are supplied principally by contract by the Carron Company, and other founders in the north of England and Scotland. The cannon for merchant-ships are supplied in the same way.

FOUR, *Fr.* literally, an oven; a place of confinement in Paris, to which vagabonds and persons who could not give a satisfactory account of themselves, were committed; and when once shut up, had their names enregistered, and were enlisted for the service of the French government. A *four*, in this acceptation of the term, means a room arched over without having the least aperture to receive day-light. There were several such places of confinement in Paris. They owed their invention to a Monsieur D'Argenson, and were supposed to add annually two thousand men at least to the king's regular army; by which means the capital was relieved from a multitude of thieves, pick-pockets, &c.

Four de campagne, *Fr.* a field oven.

FOURBISSEUR, *Fr.* a sword-cutler. The French familiarly say of two persons who are extremely intimate, *Ces*

gens sont tête à tête comme des FOURBISSEURS, meaning, that, like sword-cutlers, (who, when they work, sit closely opposite to each other,) they are putting their heads together.

FOURBU, *Fr.* foundered; a term used in farriery.

FOURBURE, *Fr.* the foundering of a horse.

Les FOURCHES Caudines, the Caudine Forks, or passes, from the Latin, *Furcæ Caudinæ*, situated about four miles from Calatia (now Cajazza) and ten from Beneventum, memorable in history for the ignominious surrender of the Roman army under the two consuls T. Veturius and Sp. Postumius. The terms of the convention were, that the Romans should evacuate the Samnite territory, should recal their colonies, and that the army, in proof of their subjugation and submission, should pass under the yoke. The senate and the Roman people determined that the state was not bound by the capitulation, and directed that the two consuls and the principal officers of the army should be surrendered into the hands of the Samnites, to be treated as they should judge most expedient. The Samnites refused to receive them, and the war was renewed.

The phrase, *Les Fourches Caudines*, has, in the French language, passed into a proverb: it is used whenever a general, by the superior skill of his adversary, is decoyed into such a situation, that he cannot extricate himself, but with the loss of his military reputation and the destruction of the greater part of his army. It is even sometimes applied in common life, whenever an honest simpleton is the dupe of the treachery and art of a skilful and cunning knave. See *CAUDINE Forks*.

FOURCHETTE *du pied d'un cheval*, *Fr.* the frush of a horse's foot.

FOURCHETTE à mousquet, *Fr.* a rest for a musket. Rests are sometimes used to relieve men who do duty on the rampart of a town.

FOURCHIER, *Fr.* a cord untwisted in the middle, and (a stone being put thereinto) used as a sling.

Chemin FOURCHU, *Fr.* a cross way.

FOURGON, *Fr.* a sort of wagon. It likewise signifies a poker.

FOURMILLER, *Fr.* to be full of; to swarm with. *La France fourmille*

en soldats ; — France swarms with soldiers.

FOURMILLIÈRE *de soldats*, Fr. a throng or mob of soldiers.

FOURNEAU, Fr. furnace; kiln; stove.

FOURNEAU, Fr. This word generally signifies the chamber of a mine, but it also means a small mine; such as is practised under a work that is not tenable.

FOURNIMENT, Fr. a horn which holds about one pound of gunpowder to prime cannon. It is likewise used by cavalry and infantry soldiers, who hang it across their shoulder. The cannoncers keep it in a belt.

FOURNIR, Fr. to supply.

FOURNITURE *d'une armée*, &c. Fr. the necessary stores and provisions for an army.

FOURNITURES *des vivres*, Fr. See STORES, &c.

FOURRAGE, Fr. forage. In the artillery, it is used generally to signify hay, straw, or any thing else of vegetable growth, which is used to ram into the bore of a cannon for the purpose of cleansing it.

Aller au FOURRAGE, Fr. to go a foraging.

FOURRAGER, Fr. to forage, or look about for provender and provision.

FOURRAGER likewise means, among the French, to ravage, desolate, pillage, and waste a country, for the purpose of throwing the inhabitants into disorder. The word is derived from *foras agere*, to seek for forage in the fields.

FOURRAGER au sec, Fr. to seize upon the granaries, hay-stacks, &c.

FOURRAGER au vert, Fr. to mow the fields, &c. for the purpose of obtaining stores and provisions.

FOURRAGEURS, Fr. The French say also *Faucheurs*, foragers, or men employed to procure forage, &c. for an army.

FOURREAU *de pistolet*, Fr. a holster.

Fauc **FOURREAU** *de pistolet*, Fr. a pistol bag.

FOURREAU *d'épée*, Fr. the scabbard of a sword.

Pays FOURRÉ, Fr. a country thick set with hedges, &c. properly called a close country.

Paix FOURRÉE, Fr. a peace suddenly patched up.

Coups FOURRÉS, Fr. blows given and received at the same time by two antagonists.

FOURRIER, Fr. a quarter-master belonging to a cavalry or infantry regiment. In France there were *fourriers-majors* of cavalry, who composed a part of the cavalry staff.

FOURRIER d'armée, Fr. a non-commissioned officer who is attached to the quarter-master general of an army.

FOURRIER de campement, Fr. a quarter-master-serjeant, who is assisted by a private, and fixes the different racks for the stands of arms in the front of an encampment.

FOURRIÈRE, Fr. a wood yard; also a pound.

FOUTEAU, Fr. the beech tree.

FOUTOIR, Fr. a battering ram; also, a rammer; or, a rammer-head for a piece of ordnance.

FOUTOUER, Fr. an old word for *Fouteur*. The quick motion which was given to the ram, that battered the walls of a besieged town.

FOYER, Fr. in geometry, a point in the axis of the parabola.

FOYER, Fr. focus, or center of the chamber. See MINE.

FOYER, Fr. hearth. This word is used figuratively to signify our houses, places of habitation, &c. Hence *combattre pour ses propres foyers*, to fight for one's own dwelling, for one's property, children, &c.

Le FOYER d'une arquebuse, Fr. the fire-pan, or touch-hole, of an arquebuse.

FOY-mentie, Fr. a breach of trust, a base surrender of any thing. In ancient times, when a governor in trust, a general, or a commandant, surrendered shamefully, he was degraded in the following manner: The delinquent was armed *cap-à-pee*; he next mounted on a scaffold; and as soon as his sentence had been read to him, by which he was declared guilty of a breach of trust, traiterous, and disloyal, twelve priests began to sing the psalms of All Souls day. At the conclusion of each psalm, the priests paused, when the herald at arms stripped the *criminal* of one part of his armour, crying aloud, "This is the helmet, this is the shield of the traitor, &c." When the last psalm was over, a basin of warm water was poured over his head, a rope tied under his arms, and he was let down from the scaffold. He next was laid on a hurdle, covered with a shroud, and carried to the church, where the priests concluded the cere-

mony of the degradation, by singing the psalm, *Deus laudem meam ne tacueris*, which contains imprecations against traitors. When he had undergone this humiliating ceremony, he was dismissed the service.

FRAGMENT *de bombe, de grenade*, Fr. any piece of a shell or grenade that has burst.

FRAIS, Fr. expenses.

FRAIS de guerre, Fr. the general expenses to which a country is subjected for the support of an army in time of war.

FRAISE, Fr. a drill.

FRAISE, in *fortification*, a kind of stakes or palisades placed horizontally on the outward slope of a rampart made of earth, to prevent the work being taken by surprise. They are generally 7 or 8 feet long, and about five inches thick. When an army entrenches itself, the parapets of the retrenchments are often fraised in the parts exposed to an attack.

To **FRAISE** a battalion (*fraiser un bataillon*, Fr.) is to line or cover it every way with pikes, or bayonets, that it may withstand the shock of a body of horse.

FRAISER, Fr. to plait, knead, or drill; in a military sense to fraise, or fence.

FRAISER un retranchement, Fr. to fraise an entrenchment by placing palisades horizontally towards the enemy.

FRAISI, Fr. cinders.

FRAMEA, a kind of javelin formerly used by the Germans.

FRANC, Fr. open; plain; downright. The French say of a person who is always easy with mankind, *il est franc du collier*. It also signifies *brave, free*, as a free horse, *cheval franc du collier*.

FRANC, Fr. a nominal French money of account, value 10*d.* English; 24 francs, or livres, are equal to 20*s.* English.

FRANC is also used as an adverb, and signifies freely, plainly, flatly.

FRANC-alleu, Fr. in a general sense, free-hold; free tenure; allodial lands.

FRANC-alleu, Fr. free allegiance, a custom in force under the first kings of France. Every individual who was free, and had no chieftan over him, was at liberty to choose the prince and chieftan under whom he wished to live. Instances of the kind are recorded under the reign of Louis I. in 317.

Une FRANÇHE désaite, Fr. a downright

evazion.

FRANCHES, Fr. unattached; independent. *Les compagnies franches*, free companies, were bodies of men detached and separated from the rest of the French army, having each a chief or commandant

FRANCHIR, Fr. to cross hardily.

FRANCHIR un fossé, une palisade, un ravin, Fr. to get over a fossé, palisade, or ravine.

FRANCHIR des obstacles, Fr. to overcome difficulties with prudence and resolution.

FRANCISQUE, Fr. an offensive weapon used by foot-soldiers under the reign of *Cotaire*, besides the bow, lance, and javelin. It was made in the shape of a double hatchet, with a short handle.

FRANC-taupin, Fr. A soldier who was employed in excavating the earth, in working at the trenches and mines, &c. &c. was so called. It comes from *taupe*, a mole.

FRANQUE (la Langue), Fr. a language used in the Levant, commonly called *Lingua Franca*.

FRATER, an old term applied to military surgeons' mates, in the French army, from the Latin signifying *brother*.

FRAY, a battle, combat, or duel.

FRAYER le chemin à une brèche, Fr. to be foremost in an assault; to be first in entering a breach.

FREEBOOTER, (*flibustier*, Fr.) a robber; a plunderer; a marauder; one who takes what he can get, by force or artifice.

FREEDOM, liberty; exemption from servitude; independence; privileges; franchises; immunities. England is, perhaps, the only country in which the soldier may be said to enjoy these enviable blessings, more or less.

FREIN, Fr. bit; horse-bit. The French say, *Prendre le frein aux dents*; to run away, as a horse may.

FREIN, Fr. an iron hoop which is placed round a windmill, for the purpose of stopping it by means of a swipe.

FRELUQUÉT, Fr. an inconsiderate light character; a puppy.

FRÈRE, Fr. brother. The French say *Frères d'armes*, brethren in arms.

Faux FRÈRE, Fr. a false brother, one who betrays a society with which he is connected.

FRESTELER, Fr. to play on the flagelet.

Le FRET, to be in commotion; to

be agitated. A horse is said to *fret* when he champs angrily upon the bit, and works himself into uncomfortable motion. This frequently happens through the ignorance of the rider.

FRETE, *Fr.* iron hoop or band.

FRETILLER, *Fr.* to be impatient to proceed; to keep the feet in perpetual motion, as a lively horse is apt to do, before he starts.

FRETTES, *Fr.* iron ferrils fastened to the ends of sticks, beams, &c. to secure them from impression.

FRICTION, in *mechanics*, the rubbing of the parts of engines and machines against each other, by which a considerable part of their effect is destroyed.

It is hardly possible to lay down general rules for computing the quantity of friction, because it depends upon a multiplicity of circumstances, as the structure, firmness, elasticity, &c. of bodies rubbing against each other. Some authors make the friction upon a horizontal plane, equal to 1-3d of the weight to be moved; while others have found it to be considerably less. But however this may be, the doctrine of friction, as ascertained by the latest experiments, may be summed up in the following manner.

1. When one body rests on another upon a horizontal plane, it presses it with its whole weight, which being equally reacted upon, and consequently the whole effect of its gravity destroyed by the plane, it will be absolutely free to move in any horizontal direction by any the least power applied thereto, provided both the touching surfaces be smooth.

2. But since we find no such thing as perfect smoothness in the surfaces of bodies, arising from their porosity and peculiar texture, it is easy to understand, that when two such surfaces come together, the prominent parts of the one will, in some measure, fall into the concave parts of the other; and therefore, when an horizontal motion is attempted in one, the fixed prominent parts of the other will give more or less resistance to the moving surface, by holding and retaining its parts; and this is what we call friction.

3. Now since any body will require a force equal to its weight, to draw it over a given obstacle, it follows that the friction arising to the moving body will al-

ways be in proportion to its weight only, and not to the quantity of the surface, by which it bears upon the resisting plane or surface. Thus if a piece of wood 4 inches wide, and 1 thick, be laid upon another fixed piece of the same wood it will require the same weight to draw it along, whether it be laid on its broad or narrow side.

4. For, though there be 4 times the number of touching particles on the broad side, (*cæteris paribus*,) yet each particle is pressed with only 1-4th of the weight that those are on the narrow side, and since 4 times the number are multiplied by one-fourth of the weight, it is plain the resistance is equal in both places, and so requires the same force to overcome it.

5. The reason why friction is in proportion to the weight of the moving body, is, because the power applied to move the body must raise it over the prominent parts of the surface on which it is drawn; and this motion of the body, as it is not upright, will not require a power equal to its whole weight; but being in the nature of the motion on an inclined plane, it will only require a part of its own weight, which will vary with the various degrees of smoothness and asperity.

6. It is found by experiment, that a body will be drawn along by nearly 1-3d of its weight; and if the surfaces be hard and well polished, by less than 1-3d part; whereas, if the parts be soft or rugged, it will require a much greater weight.

The ingenious Mr. Emerson, in his principles of *Mechanics*, has given us the following rules deduced from experiments; but they require some variation under different circumstances, which must be left to the judgment of the artist.

1. Wood and all metals, when greased, have nearly the same friction; and the smoother they are, the less friction they have; yet metals may be so far polished as to increase friction by the cohesion of their parts.

Wood slides easier upon the ground in wet weather than in dry, and easier than iron in dry weather; but iron slides easier than wood, in wet weather. Lead makes a great deal of resistance. Iron, or steel, running in brass, makes the least friction of any. In wood acting against wood, grease makes the motion twice as easy, or rather 2-3ds easier.

Wheel-naves, greased or tarred, go 4 times easier than when wet.

Metals oiled make the friction less than when polished, and twice as little as when unpolished.

In general, the softer or rougher the bodies, the less or greater their friction.

2. As to particular cases: a cubic piece of soft wood of 8 pounds weight, moving upon a smooth plane of soft wood, at the rate of 3 feet per second,—its friction is about 1-3d of the weight of it; but if it be rough, the friction is little less than 1-half of the weight.

Upon the same supposition, other soft wood upon soft wood very smooth, the friction is about 1-4th of the weight.

Soft wood upon hard, or hard wood upon soft, 1-5th or 1-half of the weight. Hard wood upon hard wood, 1-7th or 1-8th of the weight.

Polished steel moving upon steel or pewter, 1-4th of the weight; moving on copper or lead, 1-5th of the weight; on brass, 1-5th of the weight. Metals of the same sort have more friction than different sorts.

The friction, *ceteris paribus*, increases with the weight almost in the same proportion. The friction is also greater with a greater velocity, but not in proportion to it, except in very few cases. A greater surface also causes somewhat more friction, with the same weight and velocity; yet friction may sometimes be increased by having too little surface to move on; as upon clay, &c. where the body sinks.

3. The friction arising from the bending of ropes about machines, differs according to their stiffness, the temper of the weather, degree of flexibility, &c. but, *ceteris paribus*, the force or difficulty of bending a rope is as the square of the diameter of the rope, and its tension, directly; and the diameter of the cylinder or pulley it goes about, reciprocally.

A rope of 1 inch diameter, whose tension, or weight drawing it, is 5 pounds, going over a pulley 3 inches diameter, requires a force of 1 pound to bend it.

4. The resistance of a plane moving through a fluid is as the square of the velocity; and putting $v =$ velocity in feet in a second, it is equal to the weight of a column of the fluid, whose base is the plane, and height $\frac{v^2}{b^4}$. And in a globe it is but half so much.

5. As to the mechanic powers, the single lever makes no resistance by friction; but if, by the motion of the lever in lifting, the fulcrum, or place of support, be changed further from the weight, the power will be increased thereby.

6. In any wheel of any machine, running upon an axis, the friction on the axis is as the weight upon it, the diameter of the axis, and the angular velocity. This sort of friction is but small.

7. In the pulley, if p, q , be 2 weights, and q the greater; and $w = \frac{4pq}{p+q}$, then w is the weight upon the axis of the single pulley; and it is not increased by the acceleration of the weight q , but remains always the same.

The friction of the pulleys is very considerable when the sheaves rub against the blocks: and by the wearing of the holes and axles.

The friction of the axis of the pulley is as the weight w , its angular velocity, the diameter of the axis directly, and the diameter of the pulley inversely. A power of 100 pounds, with the addition of 50 pounds, will only draw up 500 with a tackle of 5; and 15 pounds over a single pulley will draw up only 14 pounds.

8. In the screw, there is a great deal of friction: those with sharp threads have more friction than those with square threads; and endless screws have more than either. Screws with a square thread, raise a weight with more ease than those with a sharp thread.

In the common screw the friction is so great, that it will sustain the weight in any position given, when the power is taken off; and therefore the friction is at least equal to the power. From whence it will follow, that in the screw, the power must be to the weight or resistance, at least as twice the perpendicular height of a thread to the circumference described by one revolution of the power; if it be able to raise the weight, or only to sustain it. This friction of the screw is of great use, as it serves to keep the weight in any given position.

9. In the wedge, the friction is at least equal to the power, as it retains any position it is driven into; therefore in the wedge, the power must be to the

weight at least as twice the base to the height, to overcome any resistance.

10. To find the friction of any engine, begin at the power, and consider the velocity and the weight at the first rubbing part; and estimate its quantity of friction by some of the foregoing articles; then proceed to the next rubbing part, and there do the same, and soon through the whole.

And note, that something more is to be allowed for increase of friction by every new addition to the power.

FRIMAS, *Fr.* rime; hoar frost.

FRILL, an ornamental appendage to the shirt, which all officers and soldiers belonging to the British army generally exhibit whenever they appear in regimentals. A small aperture is usually made at the top to admit the hook and eye of the regimental coat. Detached frills for the privates are certainly preferable to those which are fixed to the shirts, as two per week, at the regular times allotted for a change of linen, would answer every purpose of cleanliness.

FRISE, *Fr.* See CHEVAL *de Frise*.

FRISER *la corde*, *Fr.* to be within a hair's breadth of the gallows.

FRISRUTTER, an instrument made of iron, and used for the purpose of blocking up an haven, or a river. The following description of it is among General Monk's observations on political and military affairs.

The beams through which the upright bars pass must be twelve feet in length, and the upright bars that go through the beam must be of that length, so that when one of these iron frisrutters is let down into an haven, or river, the perpendicular bars of this iron instrument shall be deep enough to reach, at high water, within five feet of the surface.

FRITH, a strait of the sea, where the water, being confined, is rough; as the Frith of Forth in Scotland.

FROCK, the undress regimental coat is generally so called.

FROG, the hollow part of a horse's hoof. When horses are shod, very particular attention should be paid to their frogs, as lameness may be the consequence of too much pressure, or unskillful paring.

FRONDE, *Fr.* a sling. This weapon was used in France by the Huguenots at Sancerre, as late as the year 1572, in order to save their powder. There were

two sorts, one which was used in throwing a stone from the arm, and the other that was fixed to a lever, and was so contrived that a large quantity of stones might be thrown out of a machine, either from a camp into a besieged town, or from a town into the enemy's camp. This machine has been used since the invention of cannon.

The fronde or sling was used by the Romans on three different occasions, viz. when they sent their light-armed men, called *velites*, forward to skirmish before a general engagement; when they wished to drive the enemy from under the walls of a town which they were preparing to storm, and finally to harass and wound the men in the enemy's works. This weapon, in fact, together with the bow and arrow, may be numbered among the primitive arms of mankind.

FRONDER, *Fr.* to blame, to find fault with.

FRONDER, *Fr.* to throw stones out of a sling.

FRONDER *une entreprise, une manœuvre, un projet*, *Fr.* a figurative expression, which signifies, to render any project or plan abortive, and by such conduct to deprive the author of the merit which might be attached to its execution.

FRONDEURS, *Fr.* slingers. These composed a part of the Roman militia. There were some in the French service under the reign of Philip I.

FRONDEUR, *Fr.* an oppositioist; a real or affected patriot, who finds fault with the government of a country. During the minority of Louis the XVth, there was a party in France distinguished by the name of *Fronde*, or opposition to the court.

FRONT, a word of command, signifying, that the men are to turn to their proper front; this movement is performed at once by revolving on the left heel, without first planting the right foot, as in the facings.

FRONT, (*front*, *Fr.*) the face as opposed to the enemy; also an extent of ground, &c. which faces something opposite: as the front of a camp, the front of a line of action, the space in a fortification which is comprehended between the capitals of two bastions.

FRONT *of a regiment*, the foremost rank of a battalion, squadron, or any other body of men. To front every way, is when the men are faced to all sides.

FRONT of a fortification. See **FACE**.

FRONT-give-point, a movement of the sword used by the cavalry. See **WORD EXERCISE**.

Rear-FRONT is the disposition of a body of men in line, or column, so that the natural formation of the battalion is changed with regard to aspect, but not to shape. Those files, which in the first telling off were leaders, become followers. It sometimes happens, that to save time a column is ordered suddenly to face about and retire; in this case the different companies march rear front. In the conversion of a regiment, and during the various manœuvres, the divisions, &c. frequently appear *rear front*. They are restored to their natural order by the countermarch. Thus a battalion standing in open column, the right in front, when faced about, stands rear front; when countermarched, it resumes its original or natural formation, and stands left in front with its proper leading files. When a battalion retiring in line, fires by wings or alternate companies, every retrograde movement is made *rear front*.

Quatre hommes de FRONT, *Fr.* four men in front.

Faire FRONT, *Fr.* to face.

FRONT à FRONT, *Fr.* face-to-face.

FRONT d'un bataillon, *Fr.* the front of a battalion, consisting of the leading man of each file. This term is variously used in the French service, as *un bataillon qui fait front de tous côtés, et présente les armes par tout*, a battalion which is fronted towards every quarter, and presents arms in every direction. *Un bataillon est sur son front*, signifies, that a battalion is drawn up so that it presents its natural front in line.

De FRONT, *Fr.* in front. The French say, *attaquer l'ennemi de front*, to attack the enemy in front, or along his line of fire.

De FRONT, *Fr.* a defile where only two persons can pass a-breast.

FRONT d'une armée, *Fr.* the front of an army. Its extent from the right to left. It also signifies the whole line of communication which an army occupies, whether by divided camps, cantonments, &c. or by columns of troops posted in a country.

FRONT d'attaque, *Fr.* that part against which an enemy directs his immediate operations.

FRONT d'attaque, *Fr.* in artillery, that part of a fortress against which an enemy opens his works, &c.

FRONT de bandière, *Fr.* the front rank of a battalion; the advanced line upon which a camp, &c. may be formed.

FRONT couvert, *Fr.* any space which serves to cover a town or army against the immediate approaches of an enemy.

FRONT découvert, *Fr.* any space of ground in front of a fortified place or army, which is exposed to the immediate approaches of an enemy.

FRONT hérissé, *Fr.* any space of ground in front of a fortified place or army, which is defended by a range of ordnance, line of troops, &c. so as to render it inaccessible.

FRONTAL, *Fr.* a frontlet. We also say *frontal*; any thing tied round the head.

FRONTAL, *Fr.* a rope with several knots: a kind of rack tied round a man's forehead, to make him confess something.

FRONTEAU, *Fr.* a head-stall of a bridle.

FRONTEAU de mire, *Fr.* a wedge of wood which is placed under a piece of ordnance to raise it to a proper point of elevation.

FRONTIER, (*frontière*, *Fr.*) the limit, confine or boundary of any kingdom. The frontier towns are generally guarded by troops of two or more nations. See **BARRIER Towns**.

FRONTISPIECE, (*frontispice*, *Fr.*) the chief side of a building.

FRONTON, *Fr.* in architecture, a pediment.

FROSTNAIL, a nail with a prominent head, driven into the horse's shoes, that it may pierce the ice.

FROSTNAILED, shod to be able to stand and move upon the ice.

FROTTEMENT, *Fr.* friction; rubbing; the collision of two objects coming in contact.

FRUSII, a sort of tender horn which grows in the middle of the sole of a horse.

FRUSTUM, in mathematics, a piece cut off, and separated from a body. Thus the frustum of a *pyramid*, or *cone*, is a part, or piece of it cut off, usually by a plane parallel to the base.

FUEL, the matter or aliment of fire; any thing capable of ignition.

There is a certain and regulated allowance of coals made by government;

through the Barrack Office, to regiments of cavalry and infantry stationed in Great Britain. At the Cape of Good Hope, and in our other colonies, the allowance of fuel is generally regulated by the general officer commanding in those quarters.

FUGEL-man, an incorrect method of pronouncing *flugel-man*. See **FLUGEL MAN**.

FUGITIVE, one who runs from his post, station, or duty.

Légion FULMINANTE, *Fr.* The Romans had a legion of this name, composed of Christian soldiers, who rendered essential services to the Emperor *Marcus Aurelius*, in his expedition against the *Sarmatii*, the *Quades*, and the *Marcomani*.

To FUMIGATE, in a general acceptation of the term, to medicate or heal by vapours; to correct any infected building, or limited circumference of atmosphere, by smoke impregnated with antiputrescent particles of heat. Hospitals are strictly ordered to be attended to on this head; especially when any contagious disorder has prevailed. But in no instance ought this important precaution to be so scrupulously observed as when troops are embarked for any space of time. The subsequent regulations have been published by authority, under the following word:

FUMIGATION, the act of fumigating or conveying smoke into any confined place.

The frequent fumigation of every ship on which troops, or prisoners of war are embarked, is deemed highly material, in order to prevent mischief from confined air. The materials for fumigation may be brimstone with saw-dust, or the brimstone may be thrown over hot coals; nitre, to which a little vitriolic acid is added; or common salt, with the same addition of vitriolic acid; gunpowder wetted; or the heated loggerhead in the pitch pot.

This operation should always be performed under the immediate eye of the medical officer on board, to prevent improper quantities of the articles being used.

FUND. See **STOCK PURSE**.

Office FUND, a particular fund which is established at the War-Office for the purpose of supporting a certain number of clerks, that are paid out of the con-

tribution of individuals, in the shape of fees.

FUNERALS. See **BURIALS**.

FUNIN, *Fr.* the rigging of a ship.

FUNNEL, any pipe, or passage of communication from one place to another.

To FURBISH, (*fourbir*, *Fr.*) to polish; to burnish.

FURBISHIER, (*fourbisseur*, *Fr.*) one who burnishes, or polishes.

To FURI, in regard to military flags, or colours, is opposed to their exposure; and is used to express the act of folding them, so as to be cased.

FURLOUGH, a leave of absence. Every non-commissioned officer and soldier, who obtains leave of absence from his regiment, must be provided with a proper voucher to satisfy the commanding officer of any place or party, that he has the sanction of his superiors to pass and repass within a given period.

All soldiers found half a league from a camp or garrison, going towards an enemy's country, or quarters, without a pass, are deemed and treated as deserters.

FURNACE, in a general acceptation of the term, any vessel or utensil for maintaining a strong and searching fire, either of coal or wood.

FURNACE is sometimes applied, but improperly so, to that used in the melting of iron, and by some authors it is confounded with iron forges; although there is a considerable difference between them. See **FOUNDRY**.

FURNACE, in mining, signifies a hollow, or excavation which is made in the earth, and is charged with gunpowder, for the purpose of blowing up a rock, wall, or any part of a fortification.

Mine FURNACES must be made under that part of the glacis belonging to the covert-way, which faces the quarter whence the besiegers will make their principal attacks, the instant they can be ascertained by the opening of the trenches. Several small ones must likewise be sunk under the glacis of the outworks, in order to blow up the lodgments which the enemy may have made when he has carried the advanced posts. Mine furnaces are moreover extremely useful in the defence of the covert-way, especially to overthrow the saps and lodgments, together with the batteries that may have been erected by the be-

sieging army. For a scientific explanation of this article, see Foissac's late edition of *Traité de la défense des places par le Maréchal Vauban*, tom.ii. pages 202, 224, 240.

Reverberatory FURNACES, (*fourneaux à réverbère*, Fr.) These furnaces were originally invented by the celebrated Meunier, an engineer in the old French service. They are made wholly of iron, and can render 24 pounder balls red hot in fifteen minutes.

In 1798, these furnaces were successfully used, on board a gun-boat, for the defence of the Tagus, by Chevalier de Montpezat, an artillery officer in the Portuguese service.

They are constructed in a peculiar manner, to accelerate combustion. It is well known, that ignition becomes vivid, in proportion as the current of air is rendered rapid; and the way of obtaining such a current of air is, to keep the diameter of the air-pipe in accurate proportion with the mouth, or focus, of the furnace, and to take care that the pipe enters the furnace at a proper height: the works of modern chemists ought to be consulted upon these points, and particularly the writings of Lavoisier. One circumstance, however, must be remembered, viz. that the current of air increases only as it passes up to a certain part of the pipe, beyond which it decreases, so that ignition may be forced to a degree, to make the cannon balls pass into fusion. This maximum is obtained from about sixteen feet pipes; by dividing the pipe into pieces of twelve or eighteen inches each, and by adding or removing these pieces, successively, the degree of heat may be somewhat regulated.

It will require an hour to heat the first balls to redness, but when the furnace is once warm, if the fire be well kept up, as much heat will be imparted to the ball on the second heating in one quarter of an hour, as will enable it to set fire to any combustible body on which it may fall. The air-pipe is connected with the furnace almost immediately over the aperture by which the balls are introduced, and opposite to the focus; the furnace is composed of two oblong chambers which meet at nearly a right angle. Six or nine feet of air-pipe may be allowed on the first trial; it may be lengthened at discretion

by the successive application of the additional pieces.

The following circumstance is well worthy of attention:—*Meunier*, a distinguished officer of French engineers charged with the construction of the forts which defend the roadstead of Cherbourg, not having fresh water at command, endeavoured to deprive the sea water of its salts, and thereby to render it fit for the purposes of masonry; he effected the *decomposition* of water, at the very time that *Monge* succeeded in its *composition*, and though they did not enter into any correspondence upon this subject, each of these gentlemen found the exact proportion of the different gases of which water is composed: it may be well to notice that *Meunier* had, as a part of his apparatus, or recipient, the cylinder of an old cannon, in which he submitted the sea water to the heat of a reverberating furnace. After his experiment, he examined the cylinder and found it covered with what appeared as a layer or coating of varnish; but of a nature which set all instruments at defiance, for none could make any impression upon it. He intended to have instituted further researches concerning this, and persuaded himself he should find a mode of covering, particularly, the inner surfaces of all cannon whether made or making, with this species of varnish; from which, considerable advantages would result, by artillery's being rendered both capable of longer duration, and considerably lighter than before; whereby ordnance of large calibre might easily be added to the field train, or considerable reduction might take place in the numbers of draft horses, and in the forage. Premature death prevented this learned officer from following up his first experiments; but it is beyond doubt, that since his discovery of this new phenomenon, the touchholes or vents of pieces of ordnance might have been choked so as to have been rendered wholly unserviceable; which is not the case in spiking or nailing.

The terms of the original papers from which we have made this extract, do not convey any accurate idea of the principles upon which *reverberating furnaces* are constructed. In these, when the fuel is kindled, and the furnace well heated, a current of air flows

strongly through the fuel; the rarefaction of the air in the fire place will solicit a considerable draught of air, which will keep the fuel inflamed to a great degree. But these furnaces owe their powers to another cause, not even hinted at in the preceding paper, viz.

“ *The heat being reflected from every part of the furnace upon the body submitted to it, becomes very intense.*”

While we are ready to allow all the credit, that is due for the original observations of the new metallic varnish, and for the suggestion of the uses to which it might be applied in the improvement of pieces of ordnance, and a means too of rendering them unserviceable when required, we cannot pass over this article without paying a just tribute of respect to our distinguished countryman Dr. Black, whose ingenuity has been particularly displayed in the construction of the furnaces, and whose doctrine of heat remains to this day the subject of general admiration.

FURNITURE, in a general sense, means all sorts of moveables made use of for the comfort or decoration of a house. In a military sense, it applies to certain articles which are allowed in barracks, to which are added household utensils, according to the number of rooms.

Horse-FURNITURE, ornaments and embellishments which are adopted by military men when they are mounted for service or parade, consisting chiefly of housings, saddle-cloth, &c.

FURTHER, something beyond the present. This word is frequently attached to instructions and orders which may be altered, as: *until further orders*. The French say, *jusqu'à nouvel ordre*.

FUSE, a tube generally made of very dry beech wood, and sometimes of horn-beam, taken near the root. Fuses are turned rough and bored at first, and then kept for several years in a dry place. The diameter of the hole is about $\frac{1}{4}$ of an inch; the hole does not go quite through, having about $\frac{1}{4}$ of an inch at the bottom; and the head is made hollow in the form of a bowl.

The composition for fuses is, saltpetre 3, sulphur 1, and mealed powder 3, 4, and sometimes 5. This composition is driven in with an iron driver, whose ends are capped with copper, to prevent the composition from taking

fire, and to keep it equally hard; the last shovel-full being all mealed powder, and 2 strands of quick match laid across each other, being driven in with it, the ends of which are folded up into the hollow top, and a cap of parchment tied over it until it be used.

When these fuses are driven into the loaded shell, the lower end is cut off in a slope, so that the composition may inflame the powder in the shell. The fuze must be of such length as to continue burning all the time the shell is in its range, and to set fire to the powder as soon as it touches the ground, which occasions the shell instantly to burst into many pieces.

When the distance of the battery from the object is known, the time of the shell's flight may be computed to a second or two; which being ascertained, the fuze may be cut accordingly, by burning two or three, and making use of a watch, or of a string, by way of pendulum, to vibrate seconds.

FUSÉE, *Fr.* according to the French acceptation of the word, is applied to various purposes, and belongs to various instruments of destruction which are used in war. The fusée is differently made by different artificers. Some make it consist of one pound of gun-powder, and two or three ounces of charcoal well mixed together; others of four pounds of gun-powder, two of saltpetre, and one of sulphur. It must be generally remarked, that the time a bomb, or grenade, will take to burst after it has been thrown out of the mortar, must depend entirely upon the length and quality of the fusée.

Fusées à bombes, *Fr.* bomb fuses. The intent and object of these fuses are to communicate fire to the gun-powder, with which the bomb is filled, in order to force it to burst and separate in broken pieces on any given spot. These fuses are usually made in the shape of a wooden pipe, or tap, out of the linden tree; the alder, or any other dry and solid wood, and are afterwards filled with a slow combustible composition. The materials are increased, or diminished, according to the nature of their application. Fuses are sometimes made of copper; and they must not have the least aperture or fissure.

There are fuses for bombs of 12, of 10, and of 8 inches diameter. Fuses for bombs of 12 inches diameter, are 8

inches 4 lines long, being 1 inch 8 lines broad at the thick, and 1 inch 2 lines broad at the thin end; the breadth, or diameter of the light, or aperture, is 5 lines. Fuses decrease nearly 1 inch in length and two lines in diameter, according to the caliber of the bomb. The diameter of the lights, or apertures, only diminish one half line.

The composition for bomb fuses consists of seven parts of priming powder to four of salt-petre, and three of sulphur. These different materials are (each separately) first passed through a silk sieve; and after they have been well mixed together, the whole mass is thrown into a moderate sized hair sieve, and again passed through.

The fuse is gradually filled with this composition, each proportion being well pressed in, without violence; iron ramrods, fitted to the bore of the fuse, are used for this purpose. Every time the materials are poured in, the ramrod is inserted, and by means of a small mallet, with which it is struck 14 or 15 times, the composition is pressed into a hard consistency.

When fuses have been well loaded, and the materials have previously been properly mixed, they will naturally burn with an equal steady fire, preserving in general an even length of flame, without spitting, or irregularly shaking.

In order to preserve fuses for a length of time, the composition, when thoroughly prepared, must be covered with a mastic, or cement, made of 2-3ds bees-wax and 1-3d rosin, well mixed together. Bomb-fuses prepared in this manner will burn either in water, or in earth, nearly 70 seconds, without being extinguished.

The usual method of priming fuses, is to grate about one-third of a French inch of composition. Two small matches about 5 or 6 inches long, with the ends bent inwards, are then well fixed with pounded composition to the eye of the fuse, by which last operation it is completely filled and closed. This part is finally covered over with cartridge paper, which is tied, and remains so till there is occasion to use it. Before the fuse is driven into the bomb, the thin or small end must be cut off, in order that the fire may be easily communicated to the mass of gunpowder which is lodged in the bomb.

In Colonel Shrapnel's invention of the spherical case-shot, the seasonable use of

the fuse constitutes one of its principal virtues.

FUSÉES à bombes à feu-mort, Fr. bomb-fuses with dead light. There is a species of bomb-fuse, which is distinguished by the term *feu-mort*, or dead-light. The difference between these fuses and the ordinary ones consists in this, that the eye, instead of being pierced and hollow, is full, and of a half-spherical shape. In both cases, however, the composition is introduced through the small end.

The composition for fuses *à feu-mort* consists of 16 parts of pounded gunpowder, and $9\frac{1}{2}$ parts of ashes. The ashes must be baked over again, and run through a silk sieve. Potter's earth, or clay, will produce the same effect as ashes.

In proceeding to charge a bomb-fuse that is made of ordinary wood, the eye, or aperture, is first closed with pipe-clay, which is well beaten and pressed against the fuse in a small platter; the thin end of the fuse being held upwards. Three lines (or 3-12ths of a French inch) of this earth, will be sufficient to stop the communication of any fire. A tube, or trundle, filled with pounded gunpowder for the purpose of setting fire to the composition called *feu-mort*, is thrust into the fuse, by which it is finally charged. If this charge of pounded gunpowder were to be omitted, the fuse might not be susceptible of ignition; but the quantity never ought to exceed three lines, as the fuse would split by the explosion.

When the grains of gunpowder have been well pounded, a trundle, or tube, filled with the aforementioned composition, must be applied, and it is finally loaded like the rest.

It must be recollected, that 2 inches of this composition will last as long as one of the quality with which common fuses are charged. Before the fuse is driven into the bomb, it must be pierced through with a gimlet of one line diameter, taking care, that the hole is made precisely through the charge of pounded gunpowder. One end of a priming match must be forced in, and three others be tied to it, which three are to fall upon the bomb when it lies in the mortar.

The particular object to be obtained from this sort of fuse, is to prevent the least trace of fire or light being visible in

its projection; so that the enemy may remain ignorant of the range, or direction of the bomb, and not be able, of course, to get out of the way when it falls, or to avoid the effects of its explosion.

These fuses were made use of at the siege of Ham in 1761. The experiments which were made in 1792, with this composition, by an artificer belonging to the ordnance board, at Douay, have proved, that it answers every purpose for which it was invented.

The author of the *Manuel de l'Artillerie*, from whose treatise these observations are taken, concludes this article by stating, that the advantages to be derived from this invention are not so great as they at first appear.

He remarks, that with respect to the real utility of the fuse à feu-mort, if it be considered as tending materially to the defence of any besieged place, the argument cannot be very forcible, when we reflect, that to gain time constitutes one of the principal means of defence, and that the only way to obtain it, is by retarding the besieger's operations. These ends are gained by various expedients. Among others, the common lighted fuse conduces not a little: since during the whole direction of the bomb against the works of the assailants, the attention of the workmen is diverted from their immediate labour; and as long as it continues in its range, much uneasiness is created, because its ultimate explosion and concomitant destruction are unknown.

Add to this, that independent of the confusion which is occasioned among the assailants by repeated projectiles, the bombardier, by means of the lighted fuses, is enabled to correct his aim during the darkest night. The same principles must certainly hold good in attacks; and from a conviction of their solid utility in both instances, the common fuses have been hitherto adopted, although the kind in question has been known for several years.

Chaux FUSÉE, Fr. slaked lime.

FUSÉE, Fr. a composition of glue and saw-dust which is used by carpenters to fill up the chinks of defective wood, &c.

FUSÉES à grenades, Fr. fuses for grenades. These fuses are made of the same quality of wood as those adopted for bombs. Their length is 2 inches 6 lines; their diameter at the head is 10

lines; 7 lines in diameter 1 inch from the head, and 2 lines in diameter to the sight, or aperture. The composition of these fuses consists of 5 parts of priming gunpowder, 3 parts of sulphur, and 2 of saltpetre; or 3 parts of priming powder, 2 of saltpetre, and 1 of sulphur.

These fuses must be loaded with the same care and precision as are required in bomb-charges; that is, the thick end of the fuse must be placed downwards, so that it stands upright; the composition must then be introduced by means of a trundle, which the French call *lanterne*, made for that specific purpose; the composition must, after that, be well pressed in with an iron ramrod, fitted to the bore of the fuse, and gradually forced in by gentle taps with a mallet. Great precaution must be observed during this operation, as too much violence might split the fuse. When the fuse has been half filled, a shorter ramrod must be used, with which the charge is completed. In making bomb-fuses, great care must be taken to strike equal blows with the mallet, until you get to the three last, when the strength of each blow must be increased.

FUSÉES d'obus, Fr. howitzer fuses. These are generally made of the same composition and wood as serve for bombs, and are loaded in a similar manner. They have the same dimensions when applied to calibres of 8 or 6 inches diameter; that is, they contain 5 inches 4 lines in length; 15 lines diameter at the small end, 3 lines diameter at the thick end; 13 lines diameter 1 inch from the head; the eye, or vent, is 10 lines. These fuses do not exceed the vent of an howitzer, so much as bomb fuses do the vent of bombs. They are, in fact, shorter.

FUSÉES volantes, Fr. sky-rockets. These fuses are made of various dimensions, and serve for signals in time of war. They are sometimes 2 inches and more in diameter. The cartridges with which they are loaded, contain in thickness the sixteenth part, or more, of the diameter.

The composition which is used for fuses of this description, consists of 16 parts of saltpetre, 7½ of charcoal, and 4 of sulphur; or of 16 parts of saltpetre, 6 of charcoal, 4 of sulphur, and 2 of priming gunpowder. The materials must be carefully pounded and well mixed together. Hollow rods of various

lengths are used to charge these fuses. They must have cavity enough to admit the stick.

Fuses are tied to long sticks, or rods, made of very light wood, such as hazel-tree, which must have been cut some time, and be perfectly dry. They must likewise be straight, and contain from 7 to 8 feet in length; the thick end of the rod, in which two notches are made to fix it to the fuse, must be 7 or 8 lines in diameter, and at the small end 3 or 4 lines diameter. When the rod is rather heavy, it takes a more upright direction than when it is light; but it does not require so many degrees of elevation.

It must be generally remarked, that as soon as a fuse is fixed to a grenade which is not intended for immediate use, you must melt some pitch and immerse the head of the fuse, instantly dipping it into cold water, by which precaution the composition will remain unaltered; unless the wood be rotten.

FUSIL, *Fr.* a light musket.

FUSIL, *Fr.* steel which strikes fire out of a flint.

Pierre à Fusil, Fr. a flint.

FUSIL, *Fr.* a tinder-box.

FUSIL, *Fr.* the piece of steel which covers the pan of a fire-arm.

FUSIL *sur épaule!* *Fr.* a word of command in the French manual exercise, *Shoulder arms!*

FUSILLER *quelqu'un, Fr.* to shoot some body.

FUSILS *à l'épée, Fr.* fusils with long bayonets, shaped like a cut and thrust sword. These weapons have been proposed by the writer of *Mélanges Militaires*, as being extremely useful in the rear rank of a battalion, or in detached bodies that are stationed for the defence of baggage, &c.

Something similar to this invention has been adopted by the dismounted light horse volunteers in London, who have temporary sword-hilts made to fit the sockets of their bayonets.

FUSIL *mousquet, Fr.* a sort of fusil which was invented by Marshal Vauban, and which was so contrived, that in case the flint did not strike fire, the powder might be inflamed by means of a small match which was fixed to the breech.

FUSILS *à chevalets, Fr.* fusils upon rests, which are recommended by Marshal Vauban to be used at the coin-

menagement of a siege, about 50 or 100 toises in front of the glacis, at the entrances of narrow passes, &c.

FUSILEERS, in the British service, are soldiers armed like the rest of the infantry, with this difference only, that their muskets are shorter and lighter than those of the battalion and the grenadiers. They wear caps which are somewhat less in point of height than common grenadier caps. There are three regiments in the English service; the 7th regiment of foot, (or Royal Fusileers,) raised in 1685; the 21st regiment of foot, (or Royal N. British Fusileers,) raised in 1678; and the 23d, (or Royal Welch Fusileers,) raised in 1688.

It is always presumed, that these corps, like the Guards, possess an *esprit de corps*, which is peculiar to themselves.

As the fusileer regiments upon the British establishment are distinguished from other corps by some peculiarities, we shall briefly state what has occurred to us on the subject. In former times the officers of these regiments did not carry spontoons, but had fusils like the officers of flank companies throughout the line. At present they wear swords. It is necessary to remark, that there are not any ensigns in fusileer regiments; their junior officers rank as second-lieutenants, taking precedence of all ensigns, and those of the 7th, or Royal Fusileers, have no second lieutenants; so that they rank with the rest of the army according to the dates of their several commissions, as lieutenants. On account of this difference, the first commission in the fusileers was, by a regulation issued from the War-Office, in 1773, rated 50*l.* higher than that of an ensign; whilst the first commission in the 7th, having the pay of lieutenant attached to it, was rated at 550*l.* that of the other two, having only the pay of ensign annexed, was 450*l.*

When the estimates of the British army were made out for the year 1755, the extra sum of 164*l.* 5*s.* per annum was charged against the 7th regiment. This surplus however was easily explained when it came to be understood, that that regiment being a fusileer corps, had 20 lieutenants, instead of 11 lieutenants and 9 ensigns. The difference between these commissions amounted to 9*s.* per diem, and the sum total to 164*l.* 5*s.* per annum. The 23d, or royal regiment of Welch fusileers, wear helmets; and

all officers belonging to fusileer corps have two epaulets.

FUSILIERS, *Fr.* are men armed with fusils, or light muskets.—When pikes were in use among the French, each regiment had only four fusileers, exclusive of ten grenadiers who carried the fusil or musket. At present fusils, or muskets, are universally adopted in the European armies. Among the French, there was a distinct regiment of fusileers, under the immediate command of the grand master of the ordnance. The length of a French fusil was directed to consist of three French feet eight inches from the touch-hole to the muzzle, and the caliber to have the diameter of a ball taking twenty to the pound.

FUSKIBALAS, a machine used by

the ancients in the defence of their walls, to throw stones and darts at the enemy.

FUSTIGATION, *Fr.* the act of whipping at a cart's tail, for theft.

FUSTIGIER, *Fr.* to punish, or chastise, with a whip. This is the sense given in the Dictionnaire de l'Académie; but we conceive that the word, coming from the Latin *Fustis* and *Fustigo*, strictly taken, means to beat with a staff, stick or cudgel.

FUT, *Fr.* the stock of a musket; any piece of wood upon which portable fire-arms are mounted.

FUYARD, *Fr.* a person that is apt to run away, a coward.

Un corps FUYARD, *Fr.* a regiment that has been in the habit of running away.

FUZE. See **FUSE**.

G

GABION, in fortification, is a kind of basket made of osier twigs, of a cylindrical form, having different dimensions, according to the purpose for which it is used. Some gabions are 5 or 6 feet high, and 3 feet in diameter; these serve in sieges to carry on the approaches under cover, when they come pretty near the fortification. Those used in field-works are 3 or 4 feet high, and $2\frac{1}{2}$ or 3 feet diameter. There are also gabions about 1 foot high, 12 inches in diameter at top, and from 8 to 10 at bottom, which are placed along the top of the parapet, to cover the troops in firing over it. They are filled with earth.

In order to make them, some pickets, 3 or 4 feet long, are stuck into the ground, in form of a circle, and of a proper diameter, wattled together with small branches, in the manner of common fences. Batteries are often made of gabions. See **BATTERY**.

Stuffed-GABIONS, in fortification, are made in the same manner as the former: they are only filled with all sorts of branches and small wood, and are 4 or 6 feet long: they serve to roll before the workmen in the trenches, to cover them in front against musket-shot.

GABION farci, *Fr.* a stuffed gabion.

GABIONNADE, *Fr.* a term made use of when a retrenchment is suddenly thrown up and formed of gabions, for

the purpose of covering the retreat of troops, who may be obliged to abandon a work, after having defended it to the last extremity. Every parapet that is made of gabions is generally called *gabionnade*.

GABIONNER, *Fr.* to cover or secure with gabions.

GADARA, a Turkish sabre, with a large blade, somewhat curved.

GAFFLES, the steel lever with which the ancients bent their cross-bows.

GAGE, *Fr.* the gauntlet. The glove that was thrown in defiance at the person one intended to fight, was formerly called *gage de combat*, or *gage de bataille*.

GAGES, *Fr.* wages. Among the French this phrase signifies the fruits or compensations which were derived by individuals from appointments given by the crown, whether of a military, civil, or judicial nature, or for service done at sea or by land.

GAGEURE, *Fr.* a bet; a wager. The French say figuratively—*soutenir la gageure*, to persist in an undertaking.

Un GAGISTE, *Fr.* a person who receives wages, or is in the pay of another; the same as *stipendiare*.

GAGNER, *Fr.* to come at; to reach.

GAGNER du terrain, *Fr.* to gain

GAGNER pays, } ground.

GAGNER le dessus, *Fr.* to get the better of.

GAGNER bataille, Fr. to overcome an enemy, or gain a battle.

GAGNER une marche, Fr. to reach some particular point or position before the enemy, by means of a more active and skilful movement.

GAIBON, Fr. See **GABION**.

To **GAIN**, to conquer; to get the better: as, *They gained the day*, &c.

To **GAIN ground**. See **GROUND**.

GAIN d'une bataille, Fr. the successful issue of an engagement; the act of conquering an enemy.

GAINÉ, Fr. a sheath.

GAINÉ de flamme, Fr. a sort of linen sheath or cover, into which the staff of a flag or pendant is put.

GAINÉ de pavillon, Fr. a cloth, or linen band, which is sewed across the flag, and through which the different ribbons are interlaced.

GAINES de giroettes, Fr. bands or pieces of linen, with which the vanes are tied to the staff.

GAIT is the going, or pace of a horse. Hence horsemen say, this horse has a good gait, but the other has a broken gait; that is, one goes well, but the other does not.

GAITERS, a sort of spatter-dashes, usually made of cloth, and are either long, as reaching to the knee, or short, as only reaching above the ankle; the latter are termed half-gaiters.

GALERIEN, Fr. a galley slave. In order to carry as many men as possible into the field, Bonaparte, in the year 1815, armed all the galley slaves, and threw them into such towns as were remarkable for their attachment to the cause of the Bourbons. Thus Calais was garrisoned by these miscreants.

GALERIES capitales, Fr. are those galleries which lie under the capitals in works of fortification.

GALERIE de pourtour, Fr. a corridor, or gallery, which is constructed in the inside or outside of a building.

GALERIE transversale, Fr. is a gallery in fortification which cuts the capital in a perpendicular direction.

GALERIE meurtrière, ou de première enveloppe, Fr. a gallery which runs under the whole extent of the covert-way, and is frequently carried close to the counterscarp, in order to afford a circulation of air.

GALERIE d'enveloppe, Fr. a gallery which is constructed at the extremity of the glacis, and is commonly made

parallel to the magistral or principal line of fortification. The *enveloppe* is the chief gallery in a fortress, or garrison town, and serves as a path of communication or covered way to all the rest. It is of the utmost consequence to the besieged to secure this gallery from every approach of the enemy; and if any impression should be made, to repair the injury without delay. From this gallery the garrison always direct their attacks, whenever it is necessary to keep the assailants out of the covert-way.

GALERIE d'écoute, Fr. a gallery in front of the *enveloppe*. *Ecouter*, which signifies to listen, sufficiently explains the purpose for which these galleries were erected.

Petites GALERIES, ou rameaux, Fr. small galleries, branches, or *arraignées*, in fortification, which issue from the countermine, and at the extremities of which the furnace or chamber for the lodgment of gunpowder is constructed. There is not any established or fixed rule to direct the height to which small galleries, branches, or *arraignées* ought to be carried; in general they should have the least possible elevation.

When galleries are built of mason-work, their height is from five to six feet, their breadth from three to four, and sometimes only three.

GALERIES de mines, Fr. Galleries in mining differ from countermines, in as much as they are supported by coffers resting upon frames, which are covered with earth three feet in depth; that is, two feet and a half from one frame to another. These galleries are usually built three feet and a half high, and two and a half broad; and whenever there is a necessity to work in the *rameau* or *arraignée*, the galleries in that case are reduced to smaller proportions.

GALERIE magistrale, Fr. in mining, signifies any covered avenue or gallery, which is parallel to the magistral or principal line of the place, and exists under the whole or part of the front of the fortifications. This gallery is usually as thick as the enemy's mason work against which the countermine is directed. By means of this work the besieged generally endeavour to interrupt every attempt which the besiegers may make in the passage of the fossé or ditch.

GALERIE à passer un fossé, Fr. a gallery constructed for the purpose of crossing a ditch. It is a small passage

made of timber-work, having its beams or supports driven into the bottom of the ditch, and being covered at the top with boards that are again covered with earth, sufficiently strong to bear the miner, and to withstand the effects of artificial fire, or the weight of stones which the enemy might direct against them. This sort of gallery is sometimes called the traverse or cross-way.

These galleries have been out of use for some years. The miner gets at the body of the place which is attacked, either through a subterraneous gallery that is practised under the ditch, when the nature of the ground will permit the attempt, or under cover of the epaulement, which covers the passage of the ditch. When the ditch is full of water, and the miner has made considerable progress in it, he instantly makes the best of his way to the breach, either by swimming, or by supporting his body on a raft of timber; as soon as he has reached the spot, he works into the earth among the ruins of the wall, and completes the object of the enterprize.

GALERIES de communication, Fr. are subterraneous galleries, by means of which the garrison of a besieged town or place may, without being perceived by the enemy, communicate from the body of the place, or from the counter-scarp, with the different outworks.

GALERIES souterraines des anciens, Fr. subterraneous galleries as originally invented by the ancients. The author of the *Dictionnaire Militaire*, in his last edition of that work, enters upon the explanation of these galleries, by the following curious assertion.

"I must," he observes, "in this place, assert with the Chevalier Folard, that it would be absurd to deny the superiority which the ancients possessed over us in the essential knowledge and requisites of war, and that they pushed the different branches of that science to as high a pitch of perfection as it was possible to raise it.

"The only inventions which the moderns can boast of, are those of fire-arms, mines and furnaces. But then on the other hand, we stand indebted to them for our lines of circumvallation and of contravallation, our approaches or trenches, which are effected from a camp to its different batteries, together with the construction of those batteries; our parallel entrenchments or places of

arms, the descent into or the filling up of the ditch, our covered saps in mining, and our open galleries; we owe to them, in fact, the original art of throwing up works, and of creating obstacles, by which we are enabled to secure ourselves, or by various stratagems to annoy our enemies. The ancients were indeed superior to us in the means of defence.

"The origin of subterraneous galleries or passages in mining, is totally unknown to us; a circumstance which proves their antiquity. We read in the History of Josephus, that the Jews frequently made use of them; so that neither the Greeks nor the Romans, who in many instances arrogate to themselves the exclusive glory of invention, were the authors of this discovery.

"The method which was pursued by the ancients in their passages of mines, resembled the one that is invariably followed by the moderns. But the latter possess a considerable advantage over the former in this sort of attack and defence, which advantage consists wholly in the invention of gunpowder.

"The ancients, it is well known, could only undermine in one way; namely, under the terraces or cavaliers, or under the towers and battering testudo-machines, (*tortues bélières*,) and in order to do any execution, they were obliged, in the first place, to construct a spacious high subterraneous chamber to carry away and raise the earth, to support the remainder by powerful props, and afterwards to fill the several chambers with dry wood and other combustible materials, which were set fire to, in order to reduce them, together with the towers and various machines that were placed above, into one common heap of ruins. But this attempt did not always succeed; for, owing to the magnitude of the undertaking and the time it required, the enemy might either trace the miners, cut off their communication with the main body of the place, or get into the chambers before they could be finished, or be properly prepared for inflammation.

"The ancients constructed their galleries on a larger scale than we adopt. They were wider, but less elevated; whereas those that we use require less trouble; our chamber mines being more contracted, and having an advantage of access by means of the different branches.

One or two small chambers are sufficient with us to blow up the whole face of a bastion. But the ancients only sapped in proportion to the extent of wall which they were determined to demolish. This was a tedious operation; for when the besieger had reached the foot of the wall, it became necessary to run a gallery along the whole extent of what he proposed to demolish. Subsequent to this, he had to operate upon the entire front, during which the besieged found time and opportunities to open subterraneous passages, and to discover those which the assailants were practising against them. In the latter, indeed, they seldom failed.

“The Romans were extremely partial to subterraneous galleries. By means of these secret passages they took Fidenæ and Veïæ; and Darius, king of Persia, by the same method, took Calcedon. That species of gallery which is run out under the soil of an encampment, and pushed forward into the very body of a town, has been known from time immemorial. The Gauls were likewise very expert in their management of subterraneous galleries. Cæsar mentions the use of them in five or six places of his Commentaries.”

GALERIE de pourtour, Fr. in architecture, a sort of gallery which is raised either in the inside, or on the outside, and surrounds the whole or part of a building.

GALEA, } a low built vessel for the

GALIOT, } conveyance of troops and stores, having both sails and oars.

GALION, Fr. a name which was formerly given to French ships of war, that had three or four decks. The term, however, is in disuse, except among the Spaniards, who call vessels *galions*, that sail to South America, for hullion, Santa Marguerita, Terra Firma, Carthagena, Porto-Bello, &c.

GALIOTE à bombes, Fr. a bomb-ketch; a vessel built of very strong timber, with flat ribs and half decks. It is used for the carriage of mortars, that are placed upon a false deck which is made in the hold.

To *GALL*, to harass; to keep in a state of uneasiness.

A *GALLING fire*, an uninterrupted and destructive discharge of cannon or musketry which is kept up against an enemy.

GALLERY, a passage of communi-

cation to that part of a mine where the powder is lodged. See *GALERIE*.

GALLET, Fr. See *JALET*.

GALLIVATS are large row-boats, used in India. They are built like the grab, but of smaller dimensions, the largest rarely exceeding 70 tons; they have two masts, of which the mizen is very slight; the main-mast bears only one sail, which is triangular, and very large, the peak of it, when hoisted, being much higher than the mast itself. In general the gallivats are covered with a spar deck, made, for lightness, of bamboos split, and these carry only petteraroes, which are fixed on swivels in the gunnel of the vessel; but those of the largest size have a fixed deck, on which they mount six or eight pieces of cannon, from two to four pounders; they have forty or fifty stout oars, and may be rowed four miles an hour. See *History of Hindostan*, vol. i. p. 408, 409.

GALLOGLASSES, Fr. a corps of Irish cavalry so called under the French monarchy.

GALLOPER, a piece of ordnance of small caliber.

GALLOSHES, (*galoches*, Fr.) large shoes without straps or buckles, into which the common wearing shoes or boots may go, to preserve the feet from wet.

GALLOW. See *POTENCE*, Fr.

GALLOWAY, (*bidet*, Fr.) a horse not more than fourteen hands high, called so, according to Dr. Johnson, because it is much used in the north; as coming originally from Galloway, a shire in Scotland.

GALLOWGLASSES, shirts formerly worn by footmen under their coats of mail; soldiers among the wild Irish, who serve on horseback. See Johnson.

GALLOWSES, (*brételles*, Fr.) braces; straps used for the purpose of keeping up the breeches or pantaloons of men, and the petticoats of Highlanders and women.

GALON, Fr. gallon; gold and silver lace.

GAMACHE, Fr. spatterdash.

GAMBADOES, (*gamaches*, *guêtres*, Fr.) a sort of covering of leather or cloth, for the legs; spatterdashes.

GAMBÉSON, Fr. a term which the French formerly applied to a coat of mail worn under the cuirass. It was likewise called *cotte gamboisée*. It consisted of worsted, quilted between two pieces of stout linen.

GAMBLING, every species of chance

play, such as hazard, &c. It is strictly forbidden in the British army. The non-commissioned officers and private soldiers are severely punished when found guilty of this mischievous practice; and in some services the officers are treated with equal severity. See *JEU de hasard*.

GAMBOISEE, Fr. See *Gambeson*.

GAME. Officers or soldiers killing game without leave of the lord of the manor, are punishable by fines according to the 54th section of the Mutiny Act.

GAMELLE, Fr. a wooden or earthen bowl used among the French soldiers for their messes. It generally contained the quantity of food which was allotted for three, five, or seven men belonging to the same room. The porridge-pots for the navy were made of wood, and held a certain allowance. During the monarchy of France, subaltern officers and volunteers were frequently punished for slight offences by being sent to the *gamelle*, and excluded their regular mess, and put upon short allowance, according to the nature of their transgression.

GANGES, a considerable river of India in Asia. It rises in the mountains which border on Little Thibet, in 82 degrees of east longitude, and 32 degrees, 45 minutes, of north latitude. According to the ingenious author of the History of Indostan, it disembogues itself into that country, through a pass called the straits of Kupele, which are distant from Delhi about 30 leagues, in the longitude of 96, and in the latitude of 30° 2'. These straits are believed by the Indians, who look very little abroad, to be the sources of the Ganges; and a rock 15 miles distant from them, bearing some resemblance to the head of a cow, has joined, in the same part of the kingdom, two very important objects of their religion; the grand image of the animal which they almost venerate as a divinity, and the first appearance of that immense body of holy water, which is to wash away all their sins.

Jeter le GANT, Fr. to challenge. Hence

GANTLET, } in ancient military
GAUNTLET, } history, a large kind
GANTELET, } of glove, made of iron, and the fingers covered with small plates; it was formerly worn by cavaliers, or single knights of war, when armed at all points, but is now in disuse.

GANTLET, or gantelope, denotes a kind

of military punishment, in which the criminal running between the ranks receives a lash from each man. See *RUN the gantlet*.

GAOLER, or JAILER, (g olier, Fr.) the keeper of a prison.

GAOLERS are obliged by act of parliament to receive the subsistence of deserters while in custody, but they are not entitled to any fees. They are likewise directed to receive into their custody deserters on their route to their regiments; in default whereof they are subject to a penalty of 20 shillings.

GAP. See *BREACH*.

GAR, the general term used by the Saxons, for a weapon of war.

Se rendre GARANT, Fr. to become responsible.

GARANTIR, Fr. See *WARRANT*.

GARCON-Major, Fr. an officer so called in the old French service. He was selected from among the lieutenants of a regiment, to assist the aid-majors in the general detail of duty.

GARDE, Fr. watch; guard; protection.

GARDE d'une place, Fr. the garrison of a place. See *GARRISON*.

De GARDE, Fr. on guard. It also signifies in waiting.

GARDE de l'arm e, Fr. the grand guard of an army. Guards in the old French service were usually divided into three sorts: *Guard of Honour, Fatigue Guard,* and *the General's Guard*. That was called a *guard of honour* in which the officers and men were most exposed to danger; for the quintessence of military honour is to be often in peril, and either to fall courageously in the discharge of duty, or to return from the field after having exhibited proofs of valour, prudence, and perseverance. A *fatigue guard* belonged to a garrison or to a camp. A *general's guard* was mounted before the door or gate of the house in which the commanding officer resided. For a more specific account of guards in general, see *GUARD*.

GARDES du corps, Fr. the body guards. Under the old government of France they consisted of a certain number of gentlemen or cavaliers whose immediate duty was to attend the King's person. They were divided into four companies, under as many captains, whose tour of duty came every quarter. They took rank above the gensdarmes and the King's light cavalry.

The first and most ancient of the four companies was called the *Scotch company*.

In 1423, Charles VII. established this body of gentlemen, or cavaliers, for the purpose of shewing the great confidence which he placed in the Scots; who were not a little indebted for this mark of distinction to the service which their countryman, Lord Buchan, eldest son of the Duke of Albany, rendered the French in 1421 at the battle of Banjé in Anjou, where the English army was completely routed. In order to preserve the remembrance of their behaviour, and in token of their gratitude to the Scotch nation, the French king gave orders that whenever the roll-call took place in the Scotch company, each individual, instead of answering *Me voilà!* should say *I am here!* or *Here!*

During the French monarchy, there was a distinction made between the designation of the four troops or companies of the horse guards, and those of the foot guards. In the former it was said *compagnies des gardes* and *capitaine des gardes*, whereas, in speaking of some of the companies which composed the corps of French guards, it was said *COMPAGNIE aux Gardes*, *CAPITAINE aux Gardes*, *LIEUTENANT aux Gardes*.

GARDE du consulat, Fr. the consular guard. The only guard of honour which existed in France, in 1802, before the assumption of the empire by Bonaparte.

GARDE du général, Fr. a general's guard.

GARDE-général d'artillerie, Fr. A king's officer was so called under the old government of France, who had charge of all the ordnance and stores belonging to his majesty for the land service. He gave receipts for all ammunition, &c. and his bills were paid by the treasurer general of the artillery.

GARDE magasin d'une arsenal de marine, Fr. an officer in France appointed to take charge and to keep a register of all warlike stores, &c. for the service of the navy.

GARDES-feux, Fr. wooden cases or boxes used to hold cartridges.

GARDES-fous, Fr. the rails of a bridge.

GARDES Françaises, Fr. the French Guards. In 1563, Charles IX. King of the French, raised a regiment for the immediate protection of the palace. The colonel of the *Gardes Françaises* was on duty throughout the year, and was en-

titled to the *bâton de commandement* in common with the four captains of the body guards. Peculiar privileges were attached to every officer belonging to this body. No stranger, not even a native of Strasburg, Savoy, Alsace, or Piedmont, could hold a commission in the French guards. The age at which men were enlisted was above 18 and under 50 years. The height 5 French feet 4 inches and upwards. The serjeants were strictly forbidden to exercise any trade or business, and many of them got the *Croix de St. Louis*.

GARDES Nationales, Fr. National Guards. They were originally formed out of the inhabitants of Paris, during the existence of the National Assembly in 1790. The command of them was given to the Marquis de la Fayette. At present, they constitute one of the strongest props of the Bourbon dynasty, and are extended over France.

GARDE Bourgeoise, or *GARDE Urbane*, Fr. a guard composed of the inhabitants of a town or place. A guard of this description was formed in France, upon the expulsion of Bonaparte, and during the dissolution of his army of the line.

GARDES provinciaux, Fr. Provincial guards were persons appointed to superintend, take charge of, and be responsible for the artillery belonging to Paris, Metz, Chalons, Lyons, Amiens, Narbonne, and Calais.

GARDES-magasins, Fr. In the old French service there were two sorts of magazine guards:—one for the military stores, and the other for the artillery. The first was subject to the grand master, and the second was appointed by the secretary at war.

GARDES particuliers des magasins d'artillerie, Fr. officers appointed by the grand master of the ordnance for the specific purpose of attending to the ammunition, &c. Their pay was in proportion to the quantity of stores with which they were entrusted. They enjoyed some particular privileges, and were lodged at the expense of government.

GARDES de la porte, Fr. a company so called during the monarchy of France, and of so ancient a date, indeed, with respect to original institution, that it appears to have been coeval with it. Mention is made of the *Gardes de la porte* in the oldest archives or records belong-

ing to the king's household, in which service they were employed, without being responsible to any particular treasurer, as other companies were.

This company consisted of one captain, four lieutenants, and fifty guards. The captain and officers received their commissions from the king. The first took an oath of fidelity to the king in person, and received the *bâton* from his hands. The duty he did was purely discretionary, and depended upon his own will. The lieutenants served by detachment, and took their tour of duty every quarter. Their specific service consisted in guarding the principal gate belonging to the king's apartments. Their guard-house was within the palace, which they occupied from six o'clock in the morning until six in the evening; when they were relieved by the body guards. They delivered the keys to a brigadier belonging to the Scotch garrison.

GARDES Suisses, Fr. the Swiss guards. This body originally consisted of a certain number of companies which were taken into the French service in consequence of the close alliance that subsisted between the Swiss Cantons and France; but they were not distinguished from other troops by the appellation of guards, until a considerable period had elapsed from their first establishment. The zeal, fidelity, and attachment, which they uniformly evinced whenever they were entrusted with this distinguished part of the service, induced the crown in 1616 to bestow upon them this additional name.

The regiment was composed of twelve companies of two hundred effectives each. Some consisted of half companies complete in men. They were commanded by the three following officers, subordinate to each other, and created in 1689, viz. One colonel general of the nation, one particular colonel of the regiment, and one lieutenant-colonel. The Swiss guards received double the pay which was given to the French guards. It is somewhat remarkable, that one hundred and three years after the regular establishment of the regiment under the three mentioned field officers, this brave body of men should have fallen victims to their attachment to the monarchy of France. On the 10th of August, 1792, they withstood the Parisian populace, aided by a desperate set of men from Marseilles, and defended the

palace in the Louvre until almost every man was killed. During the resistance which the Swiss guards made, Louis the XVIth with his family escaped, and took shelter in the National Assembly.

GARDES (cent) Suisses du corps du Roi, Fr. one hundred Swiss guards immediately attached to the king's person. They were a select body of men who took an oath of fidelity to the king, and were formed into a regular troop. Louis XIV. during several sieges which he personally attended, gave directions, that the head of the trench should be guarded by a detachment of this troop; so that the hundred Swiss guards might properly be ranked as military men, although their officers did not wear any uniform, and in the last periods of the monarchy of France, the principal duties of the hundred Swiss guards consisted in domestic and menial attendance.

GARDE qui monte, Fr. the new guard.

GARDE qui descend, Fr. the old guard.

GARDES ordinaires, Fr. See *Ordinary GUARDS*.

GARDE de la tranche, Fr. guard for the trenches. Among the French, this guard usually consisted of four or six battalions. It was entrusted to three general officers, viz. one lieutenant-general on the right, one major general on the left, and one brigadier general in the center. All general officers, when on duty for the day in the trenches, remained the succeeding night, and never left them until they were regularly relieved by others of their own rank.

When it came to the tour of any particular battalion to mount the trench guard, it was the duty of the major of that battalion to examine the ground on which it was to be drawn up, to look at the pickets, and to see where the grenadiers were posted, in order to go through the relief with accuracy and expedition.

The battalion was drawn up in front of the camp; the grenadiers being stationed on the right, next to them the picket, and on its left flank the body of the battalion. The latter was divided into different pickets, and formed in order of battle. So that instead of the several companies being posted together, the men were drafted out, and distributed in such a manner, that the whole battalion was separated into troops or companies, each consisting of forty-eight men, promiscuously thrown together.

The advantage which was derived from this disposition of the battalion, and from its having been previously told off according to each company's roster, is manifest; for when a second or third battalion piquet was wanted in the trenches, the different detachments were already formed without going into the small detail of companies. The officers in conformity to their roster were ordered to march, and the piquet moved out without a moment's delay.

Add to this, that whenever it was found necessary to make a sortie, the loss of men did not fall upon one company, but was divided among the whole battalion.

A general rendezvous or parade was fixed for all the regiments who were to do duty in the trenches; they assembled in that quarter, and were drawn up in line, with all the grenadiers on the right, and the whole of the piquets upon the same alignment. At the hour appointed the latter began to file off, and each regiment followed according to its seniority. The lieutenant-general, whose tour of command was in the trenches, placed himself at the head of those troops who were to attack from the right; the major-general at the head of those belonging to the left, and the brigadier-general took the center; the oldest regiment headed the right, the next in seniority stood in front of the left, and the third preceded the center.

As soon as the troops reached the tail of the trench, the men marched by Indian files, or rank entire, and each one took his post. Sentries were stationed, and the necessary detachments were made. The colours were planted upon the parapet of the trench. At night the adjutants of corps went to head quarters, to receive instructions relative to the projected attack, and got the parole and countersign from the general. The senior adjutant communicated his orders to the rest, who conveyed the same, first to their several colonels, and afterwards to the serjeants of each regiment.

When on duty in the trenches, soldiers must not, on any account, quit their fire-arms; and the instant the least noise is heard, it is their duty to throw themselves upon the back of the trench, and there remain till the order is given to march. When an attack is directed to be made, the execution of it is always entrusted to the grenadiers. These are

supported by the different piquets, and the main body of the corps follow with the colours.

When the chamade was beat by the besieged, with a view to capitulate, it was a rule among the French, that the battalions which were posted in the trenches, might refuse to be relieved, and could remain at their station until the garrison marched out. When the capitulation was signed, it fell to the oldest regiment belonging to the besieging army to take possession of the gate that was delivered up, and that corps remained in the town until a governor was named, and a regular garrison appointed.

GARDE du camp, Fr. See *Quarter-guard*.

GARDE avancée, ou Garde Folle, Fr. a small body of cavalry, consisting of 15 or 20 horsemen, under the command of a lieutenant, whose station is beyond, but still in sight of the main guard. The particular duty of those men is to watch the motions of the enemy, for the greater security of the camp.

During the famous crusade to the Holy Land, the Christians having taken the town of Damietta, and finding it impossible to make further progress, on account of the overflowings of the river Nile, effected a passage over, but neglected to retrench themselves according to the custom of those days. The consequence was, that the Arabs insulted them in their camp, and frequently murdered their sentries at their very tents. In order to prevent these incursions, advanced guards of the description just mentioned were resorted to. *Vedettes* were posted round the camp, and from hence most probably was derived their origin.

Many methods have been proposed by the military writers of all ages to secure advanced guards from surprize. *Frochetta* advises fires to be lighted during the night in one quarter, while the rendezvous and station of the guard are in another. His reason is this: if the enemy should approach the quarter which is lighted up, the soldiers belonging to the advanced guard may readily discover him, without being themselves exposed to a direct attack. *Onosander* is of the same way of thinking. Silence on these occasions is indispensably requisite. *Xenophon*, on the other hand, has proposed, that the station should be often changed, and that the guard should con-

sist of different numbers. His object is to form a considerable ambuscade in front of the spot where the guard has been usually posted, so that when the enemy approaches towards it, he may be suddenly surprized by a larger body of men than he expected, and instead of carrying off the ordinary guard, be himself taken prisoner.

GARDE du pont, Fr. guard for the security of a bridge. The same author (Frochetta) proposes, that one or two sentries be posted at each end of the bridge, if it be of any length. His motive is to prevent too heavy loads from being conveyed upon it, and to check bodies of cavalry who might be disposed to gallop or trot across it. If the bridge be constructed upon barges or boats, there must always be a certain number of wooden scoops to drain off the water as it rises, or gets through small apertures upon the surface. The commanding officer of the guard must order frequent rounds to be made, both night and day, lest the enemy should send divers to get under the boats and pierce their bottoms.

Foresti, the historian, relates, that the Emperor Henry III. having ordered several barges to be constructed and stationed in the Danube for the purpose of storming Posonio, his project was defeated by the bold and desperate act of an individual. One Zormonde, a Hungarian, having provided himself with a wimblet, swam under the surface of the water, and got beneath the boats, which he bored in several places, without the least suspicion or knowledge of the mariners. The boats gradually filled, and were finally sunk, which circumstance obliged the emperor to raise the siege.

GARDE des travailleurs, Fr. a particular guard which is kept among the workmen and artificers during a siege. In France they had a particular roster among themselves; beginning from the eldest downwards, as well among the officers as among the men.

GARDE relevée, Fr. the guard that is relieved, commonly called the old guard.

GARDES de la marine, Fr. During the existence of the old French government several young gentlemen received brevet commissions from the king, and were permitted to serve on board ships of war. They were distributed among the fleet, and when they had acquired a knowledge of their profession, were promoted to the

rank of officers. Their duty was near the admiral, when he commanded in person, and during his absence they were placed on board the different vessels, in order to assist the several officers, particularly in the discharge of their functions at the batteries.

GARDES côtes, Fr. from the Spanish *guarda costa*, signifying ships of war that cruize along the coast to protect merchantmen, and to prevent the depredations of pirates.

GARDES côtes (capitaineries), Fr. The maritime divisions, into which France was formerly divided, were so called.

Each division was under the immediate superintendance of a captain, named *capitaine gardes-côtes*, who was assisted by a lieutenant and an ensign. Their duty was to watch the coast, and to attend minutely to every thing that might affect the safety of the division they had in charge.

There were thirty-seven capitaineries *gardes-côtes* in Normandy, four in Poitou, two in Guyenne, two in Languedoc, and six in French Flanders, Picardy, Boulogne, Calais, &c.

The establishment of sea-fencibles in Great Britain, which took place during the late war, most probably owes its origin to the *gardes-côtes*.

GARDE (grande), according to the French, corps of cavalry, consisting of several troops that are detached in front of a camp, in order to keep the enemy in check while the army is preparing for battle.

GARDE de piquet, Fr. piquet-guard. It is a guard of *fatigue*, like all others that are mounted in rotation.

GARDE d'honneur, Fr. a guard given in time of war, to general officers and commanders in chief.

GARDES de la manche, Fr. two men belonging to the first company of the King of France's body guards, who upon certain occasions, stood on each side of his Majesty, dressed in a *hoqueton*, and armed with a *pertuisane*.

GARDE de pourtour, Fr. a guard or detachment which goes the rounds. It is more properly called *Garde des rondes*.

GARDES-blancs, Fr. a militia composed of the tallest and best made men that could be selected from the legions, during the time of the Roman emperors.

GARDES du corps, Fr. horsemen who composed the body-guard of the French kings, and who took rank of all the

gendarmes or light-horse of his Majesty's household. They were first created in 1425, under Charles VII. At first there was but one company, which was entirely composed of Scotchmen. The *gardes du corps* were under the immediate command of the king and of their own officers. The life-guards in England are of the same description.

GARDE du pavillon amiral, Fr. a company of gentlemen who, both at sea and in the sea-ports, were attached to the person of the high admiral of France. These are not to be confounded with the *gardes de la marine*, who are also a company of gentlemen.

GARDES de la prévôté de l'hôtel du Roi, Fr. troops which formerly belonged to the king's household. This company was created under Philip III. in 1271, and Charles VI. was pleased to distinguish it by the title of *Prévôt de l'hôtel du Roi*, in 1421.

GARDES de fatigue, Fr. See *Détachement non armés*.

GARDE d'épée, Fr. sword-hilt or guard.

GARDE des reins, Fr. see *CULETTE*.

Corps de GARDE du guet, Fr. watch-house, or rendezvous for the street patroles.

GARDE bois, Fr. a forest-keeper.

GARDE du corps, Fr. life-guard.

GARDE chasse, Fr. a game-keeper.

GARDE pluie, Fr. literally means a fence, or cover against rain. This machine was originally invented by a Frenchman, who left his native country to avoid persecution or unmerited neglect, and submitted it to the Prussians, who adopted it for the use of their infantry. Other armies, however, either seem ignorant of the invention, or do not think it worthy of imitation. Bélair, the author of *Elémens de Fortification*, in his military dictionary, (which forms a small part of that interesting work,) observes, that "these machines might be rendered extremely useful in the defence of fortresses, outposts, redoubts, or retrenchments. Under the cover of them, the besieged, or the troops stationed in the posts attacked, would be able to keep up a brisk and effectual discharge of musketry during the heaviest fall of rain, and thereby silence, or considerably damp the fire of the enemy. The *garde pluie* is capable of being much improved. Light corps ought to be particularly anxious for its adoption, as the service on which they are generally em-

ployed exposes their arms to every change of weather; and by means of this cover, both themselves and their rifles, or muskets, would be secured against rain."

Attaquer la GARDE, Fr. to make an attempt on the guard.

Une forte GARDE, Fr. a strong guard.

Un piquet de GARDE, Fr. a piquet guard.

La GARDE à pied, Fr. the foot guards.

La GARDE à cheval, Fr. the horse guards.

La GARDE Ecossoise, Fr. the Scotch guards.

La GARDE Irlandaise, Fr. the Irish guards.

Faire monter la GARDE, Fr. to set the guard.

Être de GARDE, Fr. to be upon guard.

Monter la GARDE, Fr. to mount guard.

Descendre la GARDE, Fr. to come off guard.

Relever, ou changer la GARDE, Fr. to relieve guard.

La GARDE montante, Fr. the guard that mounts, or the new guard.

La GARDE descendante, Fr. the guard that comes off, or the old guard.

GARDENS, in our *ancient military history*, were of two different kinds, viz.

Artillery-GARDEN, about the year 1650, was a place of resort in London, where vast numbers of young people practised every kind of artillery exercise, inasmuch, that it was famous through the whole world, and universally styled the great nursery, or academy of military discipline. See *ARTILLERY COMPANY*.

Military-GARDEN was likewise famous, about the year 1650, in the city of London, for the great improvement of numbers of our nobility and other gentlemen of fashion, in every kind of military exercise. The captains in chief of those academies or gardens were Major-general Skippon, and Major Tillyer.

GARDIENNERIE, Fr. the gunner's rooms.

GARE à vous, Fr. (from *Garer*, to have a care,) a cautionary phrase used in the French service. We formerly adopted the term *take care*, or *have a care*—at present we use the word *attention*, which is usually pronounced *'tention*.

GARES, Fr. creeks made in narrow rivers, to facilitate the passage of boats.

GARGOUILLIS, Fr. the powder with which cannon is charged.

GARGOUSSF, *Fr.* a cartouch, a cartridge. It is also written *Gargouge*.

GARGOUSSIERE, *Fr.* a pouch for cartridges.

GARLAND, a sort of chaplet made of flowers, feathers, and sometimes of precious stones, worn on the head in the manner of a crown. The word is formed of the French *guirlande*, and that of the barbarous Latin *garlanda*, or Italian *ghirlanda*. Both in ancient and modern times it has been customary to present garlands of flowers to warriors who have distinguished themselves. Among the French the practice is still familiar. A beautiful young woman is generally selected for the purpose.

GARNI, *Fr.* a term used in masonry. See *Remplissage*.

GARNIR d'artillerie, *Fr.* to line with artillery. *Un rempart garni de grosse artillerie*, a rampart covered, or lined, with heavy ordnance.

See **GARNIR**, *Fr.* to seize.

GARNISH-nails, diamond-headed nails, formerly used as ornaments to artillery carriages.

GARRISON, *Fr.* See **GARRISON**.

GARRISON des Janissaires, *Fr.* The élite, or flower, of the Janissaries of Constantinople is frequently sent into garrison on the frontiers of Turkey, or to places where the loyalty of the inhabitants is doubted. The Janissaries do not indeed assist in the immediate defence of a besieged town or fortress, but they watch the motions of all suspected persons, and are subject to the orders of their officers, who usually command the garrison.

GARNITURE. See **EQUIPAGE**, &c.

GARNITURE de comble, *Fr.* Under this term are comprehended not only the laths, tiles, or slates, &c. belonging to a roof, but also the leads, &c.

GAROUS! *Fr.* a syncope of the word *Garc-à-vous*, take heed; turn aside; look to yourselves.

GARRISON, a body of forces, disposed in a fortress or fortified town, to defend it against the enemy, or to keep the inhabitants in subjection; or even to be subsisted during the winter season: hence garrison and winter-quarters are sometimes used indiscriminately for the same thing; while at others they denote different things. In the latter case, a garrison is a place wherein forces are maintained to secure it, and where they keep regular guards, as a frontier town,

a citadel, castle, tower, &c. The garrison should always be stronger than the townsmen.

Winter-quarters, places where a number of forces are laid up in the winter season, without keeping the regular guards.

GARRISON-town, a strong place in which troops are quartered, and do duty, for the security thereof, keeping strong guards at each post, and a main-guard in, or near the market-place.

GARROT, *Fr.* an old word which signified the shooting of an arrow.

GARROT also signified a bolt for a cross-bow.

GARROT, *Fr.* withers of a horse; also a wring or pinch in his withers. The French say figuratively of a man whose reputation is blemished, *Il est blessé sur le GARROT*, he is hurt in the withers.

Order of the GARTER, a military order of knighthood, the most noble and ancient of any lay-order in the world, instituted by King Edward III. This famous order consists of 26 knights companions, generally princes and peers, whereof the King of England is the sovereign, or chief. They are a college or corporation, having a great and little seal.

Their officers are a prelate, chancellor, register, king at arms, and usher of the black rod. They have also a dean and 12 canons, and petty canons, vergers, and 26 pensioners, or poor knights. The prelate is the head. This office is vested in the bishop of Winchester, and has ever been so. Next to the prelate is the chancellor; which office is vested in the bishop of Salisbury, who keeps the seals, &c. The next is the register, who by his oath is to enter upon the registry, the scrutinies, elections, penalties, and other acts of the order, with fidelity. The fourth officer is Garter, and king at arms, being two distinct offices united in one person. Garter carries the rod and sceptre at the feast of St. George, the protector of this order, when the sovereign is present. He notifies the election of new knights, attends the solemnity of their installation, carries the garter to the foreign princes, &c. He is the principal officer within the college of arms, and chief of the heralds.

All these officers, except the prelate, have fees and pensions. The college of the order is in the castle of Windsor,

with the chapel of St. George, and the chapter-house, erected by the founder for that purpose. The habit and ensign of the order are, a garter, mantle, cap, George and collar. The 3 first were assigned the knights companions by the founders; and the George and collar by king Henry VIII. The garter challenges pre-eminence over all other parts of the dress, because from it the noble order is denominated; that it is the first part of the habit presented to foreign princes, and absent knights, who, together with all other knights elect, are therewith first adorned; and it is of such honour and grandeur, that by the bare investiture with this noble ensign, the knights are esteemed companions of the greatest military order in the world. It is worn on the left leg, between the knee and calf, and is enamelled with this motto, *Honi soit qui mal y pense*; that is, "Evil be to him who evil thinks." The meaning of which is, that king Edward having laid claim to the kingdom of France, retorted shame and defiance upon him that should dare to think amiss of the just enterprize he had undertaken, for recovering his lawful right to that crown; and that the bravery of those knights whom he had elected into this order, was such as would enable him to maintain the quarrel against those that thought ill of it.

The mantle is the chief of those vestments that are used upon all solemn occasions. The colour of the mantle is by the statutes directed to be blue. The length of the train of the mantle, only, distinguishes the sovereign from the knights companions. To the collar of the mantle is fixed a pair of long strings, anciently wove with blue silk only, but now twisted round, and made of Venice gold and silk, of the colour of the robe, with buttons and tassels at the end. The left shoulder of the mantle is adorned with a large garter and device *Honi soit*, &c. Within this is the cross of the order, which was ordained, by king Charles I. to be worn at all times. At length the star was introduced, being a sort of cross, irradiated with beams of silver.

The collar is composed of pieces of gold in the shape of garters, the ground enamelled blue, and the motto gold.

The garter is of blue velvet bordered with fine gold wire, having commonly the letters of the motto of the same: it

is, at the time of installation, buckled upon the left leg, by two of the senior companions, who receive it from the sovereign, to whom it is presented upon a velvet cushion by Garter king at-arms, with the usual reverence, whilst the chancellor reads the following admonition, enjoined by the statutes.—"To the honour of God omnipotent, and in memorial of the blessed martyr St. George, tie about thy leg, for thy renown, this noble garter; wear it as the symbol of the most illustrious order, never to be forgotten or laid aside; that thereby thou mayst be admonished to be courageous, and having undertaken a just war, in which thou shalt be engaged, thou mayest stand firm, valiantly fight, and successfully conquer."

The princely garter being thus buckled on, and the words of its signification pronounced, the knight elect is brought before the sovereign, who puts about his neck, kneeling, a sky-coloured ribbon, whereon is appendant, wrought in gold within the garter, the image of St. George on horseback, with his sword drawn, encountering the dragon. In the mean time the chancellor reads the following admonition: "Wear this ribbon about thy neck, adorned with the image of the blessed martyr and soldier of Christ, St. George, by whose imitation provoked, thou mayest so overpass both prosperous and adverse adventures, that having stoutly vanquished thy enemies both of body and soul, thou mayest not only receive the praise of this transient combat, but be crowned with the palm of eternal victory."

Then the knight elect kisses his sovereign's hand, thanks his majesty for the great honour done him, rises up, and salutes all his companions severally, who return their congratulations.

Since the institution of this order, there have been several emperors and kings, besides numerous sovereign princes, enrolled as companions thereof. Its origin is somewhat differently related. The common account is, that it was erected in honour of a garter of the countess of Salisbury which she dropped dancing with king Edward, and which that prince picked up; but our best antiquarians think it was instituted on account of the victory over the French at Cressy, where the king ordered his garter to be displayed as a signal of the battle.

GARUCHE, *Fr.* a torturing wheel, upon which the accused, having heavy bolts or irons on his legs, is hoisted up, until he confess.

GASCON, *Fr.* a bragger.

GASCONNADE, *Fr.* a boast or vaunt of something very improbable. The term is originally derived from the Gascons, or people of Gascony in France, who, it seems, have been particularly distinguished for extravagant stories.

GASCONNAGE, *Fr.* a lie, a *rhodomontade*, an imposition.

GASCONNER, *Fr.* to gasconade, to repeat extravagant wild stories.—Thus one of the French generals may be said to have gasconaded, when he officially announced to the Convention of France, that after a severe and bloody engagement with the Austrians, the whole amount of the loss in the French army, was a grenadier's little finger!

GASTADOURS, *Fr.* pioneers; foot soldiers so called, because they dug up, destroyed, and cut down all that opposed the progress of an army.

GASTAPHETEN, a machine used in ancient archery, which was so called because the bow was bent by the action of pushing with the belly. The catapult served for the same purpose, but it acted with greater force.

GATE, in a military sense, is made of strong planks with iron bars to oppose an enemy. Gates are generally fixed in the middle of the curtain, from which they are seen and defended by the two flanks of the bastions. They should be covered with a good ravelin, that they may not be seen or enfiladed by the enemy. The palisades and barriers before the gates within the town are often of great use. The sewer ports there are in a fortress, the more you are secured against the enemy. At the opening of a gate, a party of horse is sent out to patrol in the country round the place, to discover ambuscades, or linking parties of the enemy, and to see if the country be clear.

GAVACHE, *Fr.* a word derived from the Spanish, signifying a pitiful fellow, a wretch, a scoundrel.

GAVITEAU, *Fr.* a piece of wood that is made to float in the water. This word is used in Provence, instead of *Bouée*, a buoy, which prevails in every other part of the French coast.

GAUCHE, *Fr.* the left.

A GAUCHE, *Fr.* to the left.

GAUCHE d'une rivière, d'un ruisseau, *Fr.* The left of a river is ascertained by looking at its stream, or standing with your back to its source, and facing the quarter whence it disembogues itself. The bank on your left hand is called the left bank.

GAUCHE, *Fr.* This word is used among the French to signify the second post of honour in an army, or in regiments.

GAUCHIR, *Fr.* to turn aside; to shrink from.

GAUCHIR dans une affaire, *Fr.* to use shifts, to play fast and loose.

GAUCHIR le coup, *Fr.* to aim at one place and strike another.

GAUGE. See **STANDARD**.

GAUGES, in gunnery, are brass rings with handles, to find the diameter of all kinds of shot with expedition.

GAULE, *Fr.* a switch; it also signifies a pole.

GAULS, the name given by the Romans to the inhabitants of the country that now forms the kingdom of France. The original inhabitants were descended from the Celtes or Gomerians, by whom the greatest part of Europe was peopled; the name of Galli, or Gauls, being probably given them long after their settlement in that country.

GAUNTELOPE. } See **GAUNTLET**.

GAUNTLET.

GAZETTE, or newspaper, a printed account of the transactions of almost all the countries in the known world. This name, with us, is confined to that paper of news which is published by authority.

The word is derived from *gazetta*, a Venetian coin, which was the usual price of the first newspaper printed there, and which name was afterwards given to the paper itself.

The first gazette in England was published at Oxford, the court being there, in a folio half sheet, November the 7th, 1665. On the removal of the court to London, the title was changed to the *London Gazette*. The Oxford Gazette was published on Tuesdays, the London on Saturdays. And these have continued to be the days of publication ever since that paper has been confined to London.

All commissions in the regular army, militia, fencible and volunteer corps must be gazetted. The dates specified in the Gazette usually agree in every point

with those of the original commissions. So that by referring to the Gazette, an officer may generally know the precise day on which he is entitled to receive subsistence from the agent, and to assume rank in the British army. Should an erroneous statement, however, get into the Gazette, or a commission be wrong dated therein, a reference to the latter (i. e. commission) will always supersede any notification in the former.

GAZONNER, *Fr.* to revete or cover with sods.

GAZONS, in fortification, pieces of fresh earth or sods, covered with grass, and cut in the form of a wedge, about a foot long, and a half foot thick, to line the outsides of a work made of earth; as ramparts, parapets, banquettes, &c. The first bed of gazons is fixed with pegs of wood; and the second bed is so laid as to bind the former, by being placed over its joints; and so continued till the works are finished. Between those it is usual to sow all sorts of binding weeds or herbs, in order to strengthen the rampart.

GEAR, furniture, equipage, or capacities.

GEAT, the hole through which the metal is conveyed to the mould in casting ordnance.

GEBEGIS, armourers among the Turks are so called.

GEBELUS. Every Timariot in Turkey, during a campaign, is obliged to take a certain number of horsemen, who are called gebelus, and to support them at his own expense. He is directed to take as many with him as would annually cost three thousand aspres (each aspre being equal to two-pence farthing English) for subsistence.

GELD, in the English old customs, a Saxon word signifying *money*, or tribute. It also denoted fine, or a compensation for some crime committed. Hence *wergeld*, in the old Saxon laws, was used for the value of a man slain; and *orf-geld* for that of a beast.

GELDING, any animal castrated, particularly a horse.

GELEÉ, *Fr.* frost.

GELEÉ, *blanche*, *Fr.* hoar frost.

GELIBACH, a sort of superintendent, or chief, of the gebigis, or armourers, among the Turks. He is only subordinate to the *toppi bachi*, or the grand master of the Turkish artillery.

GENDARME, *Fr.* in the original signification of the term, a man in complete armour. His horse was also shielded by a breast-plate, head-piece, and covers for his sides. The *Gendarmes* were at first called *Hommes d'armes*, (men at arms,) and were esquires.

GENDARME, *Fr.* a word frequently used by the French to signify a virago, a vixen, a termagant. Military men are sometimes tormented by animals of this description, under the sacred character of a wife, or assumed importance of a mistress, or female attendant.

See **GENDARMER**, *Fr.* to bluster.

GENDARMERIE, *Fr.* The gendarmerie was a select body of cavalry that took precedence of every regiment of horse in the French service, and ranked immediately after the king's household. The reputation of the gendarmerie was so great, and its services so well estimated by the king of France, that when the Emperor Charles V. in 1552, sent a formal embassy to the court of Versailles to request a loan of money, and the assistance of the gendarmerie to enable him to repulse the Turks; Francis I. returned the following answer: "With respect to the first object of your mission, (addressing himself to the ambassador,) I am not a banker; and with regard to the other, as my gendarmerie is the arm which supports my sceptre, I never expose it to danger, without personally sharing its fatigue and glory."

The uniform of the gendarmerie, as well as of the light cavalry, under the old French government, was scarlet with facings of the same colour. The coat was formerly more or less laced with silver, according to the king's pleasure. A short period before the revolution, it was only laced on the cuff. The waistcoat of buff leather, and the bandoulier of the same, silver laced; the hat was edged with broad silver lace. The horse-cloths and holster-caps were red, and the arms of the captain embroidered on the corners of the saddle cloths, and on the front of the holsters. In 1762, a considerable body of men was raised by order of Louis XIV. The soldiers who composed it were called gendarmes. And in 1792 the number was considerably augmented, consisting of horse and foot, and being indiscriminately called gendarmes; but their clothing was altered to deep blue. Their pay was

greater than what the rest of the army enjoyed; and while others were paid in paper currency, they received their subsistence in hard cash (*en argent sonnant*.) They possessed these privileges on account of the proofs they were obliged to bring of superior claims to military honour, before they could be enlisted as gendarmes. It was necessary, in fact, that every individual amongst them should produce a certificate of six or eight years service.

GENDARMES de la garde, Fr. a select body of men so called during the old government of France, and still preserved in that country; but their services are applied to different purposes. They consisted originally of a single company which was formed by Henry IV. when he ascended the throne. He distinguished them from his other troops, by styling them *hommes d'armes de ses ordonnances*, men at arms under his own immediate orders. They were persons best qualified for every species of military duty, and were to constitute a royal squadron, at whose head the king himself might personally engage the enemy, as necessity should require. He gave this squadron to his son the Dauphin, who was afterwards king of France, under the name and title of Louis XIII. According to Dupain de Montesson, the *gendarmes de la garde* were a body of horse, which formed part of the household guard during the French monarchy. This body consisted of two hundred men, and was divided into two squadrons.

GENDARMES Anglais, Fr. In the establishment of the old French army, the English gendarmes formed the second troop or company of the corps.

GENDARMES d'Anjou, Fr. the eleventh troop.

GENDARMES de Berry, Fr. the thirteenth troop.

GENDARMES Bourguignons, Fr. the third troop.

GENDARMES de Bretagne, Fr. the ninth troop.

GENDARMES Dauphin, Fr. the seventh troop.

GENDARMES Ecossois, Fr. the first troop.

GENDARMES de Flandre, Fr. the fourth troop.

GENDARMES d'Orléans, Fr. the fifteenth troop.

GENDARMES de la Reine, Fr. the fifth troop.

GENERAL, in a military sense, is an officer in chief, to whom the prince or government of a country have judged proper to entrust the command of their troops. He holds this important trust under various titles, as captain-general in England and Spain; *feldt mareschal* in Germany, or *maréchal* in France.

In the British service the king is constitutionally, and in his own proper right, captain-general. He has ten aides-de-camp; each enjoying the brevet rank of full colonel in the army. Next to his majesty is the commander in chief, whom he sometimes honours with the title of captain-general. During the expedition to Holland, his Royal Highness the Duke of York was entrusted with this important charge.

The natural qualities of a GENERAL. These should be a martial genius, a solid judgment, a healthy robust constitution, intrepidity and presence of mind on critical occasions, indefatigability in business, goodness of heart, liberality, and a reasonable age; for if too young he may want experience and prudence; and if too old, he may not have vivacity enough. His conduct must be uniform, his temper affable, but inflexible in maintaining the police and discipline of an army.

Acquired qualities of a GENERAL. These should be secrecy, justice, sobriety, temperance, knowledge of the art of war from theory and practice, the art of commanding, and speaking with precision and exactness; great attention to preserve the lives and supply the wants of the soldiery, and a constant study of the characters of the officers of his army, that he may employ them according to their talents. His conduct appears in establishing his magazines in the most convenient places; in examining the country, that he may not engage his troops too far, while he is ignorant of the means of bringing them off; in subsisting them, and in knowing how to take the most advantageous posts, either for fighting, retreating or shunning a battle. His experience inspires his army with confidence, and an assurance of victory; and his quality, by creating respect, augments his authority. By his liberality he gets intelligence of the strength and designs of the enemy, and by this means is enabled to take the most successful measures. He ought to be fond of glory, to have an aversion to

flattery, to render himself beloved, and to keep a strict discipline and regular subordination.

By the last General Regulations, it is particularly directed, that all general officers commanding brigades shall very minutely inspect the internal economy and discipline of the several regiments under their order. They are frequently to visit the hospitals and guards. On arriving in camp they are never to leave their brigades till the tents are pitched, and the guards posted; they must always encamp with their brigades, unless quarters can be procured for them immediately in the vicinity of their camp. General officers must not at any time change the quarter assigned them, without leave from head quarters.

All general officers should make themselves acquainted, as soon as possible, with the situation of the country near the camp, with the roads, passes, bridges, &c. leading to it; and likewise with the out-posts, that in case they should be ordered suddenly to sustain, or defend any post, they may be able to march without waiting for guides, and be competent, from a topographical knowledge of the country, to form the best disposition for the service. They should instruct their aides-de-camp in these particulars, and always require their attendance when they visit the out-posts.

All general officers, and others in considerable command, must make themselves thoroughly acquainted with the nature of the country, the quality of the roads, every circuitous access through vallies or openings, the relative height of the neighbouring hills, and the course of rivers which are to be found within the space entrusted to their care. These important objects may be attained by maps, by acquired local information, and by unremitting activity and observation. And if it should ever be the fate of a country, intersected as Great Britain is, to act upon the defensive, a full and accurate possession of all its fastnesses, &c. must give each general officer a decided advantage over the commanding officer of an enemy, who cannot have examined the ground upon which he may be reduced to fight, and must be embarrassed in every forward movement that he makes. Although guides may serve, and ought always to be used, in the common operations of marches, there are occasions where the eye and intelligence of

the principal officers must determine the movements of troops, and enable them to seize and improve every advantage that occurs as the enemy approaches.

General officers on service abroad, or commanding districts at home, may appoint their own aides-de-camp and brigade majors. The latter, however, are to be considered as officers attached to their several brigades, not personally to the officers commanding them. The former are their habitual attendants and domestic inmates. In the selection of aides-de-camp and brigade-majors, too much attention cannot be given to their requisite qualifications; and that general would not only commit an act of injustice against the interests of his country, but deserve the severest censure, and displeasure of his sovereign, who, through motives of private convenience, family connexion, or convivial recommendation, could so far forget his duty, as to prefer an unexperienced stripling to a character marked by a knowledge of the profession, a zeal for the service, and an irreproachable conduct.

In the day of battle the station of a general is with the Reserve, where he remains so situated, that he can see every thing which is going forward; and by means of his own observation, or through the communication of his aides-de-camp, is enabled to send reinforcements, as the exigencies of the conflict may require.

The celebrated Marshal Saxe has made the following remarks on the necessary qualifications to form a good general. The most indispensable one, according to his idea, is valour, without which all the rest will prove nugatory. The next is a sound understanding, with some genius: for he must not only be courageous, but be extremely fertile in expedients; the third is health, and a robust constitution.

“His mind must be capable of prompt and vigorous resources; he must have an aptitude, and a talent at discovering the designs of others, without betraying the slightest trace of his own intentions. He must be *seemingly* communicative, in order to encourage others to unbosom, but remain tenaciously reserved in matters that concern his own army; he must, in a word, possess activity with judgment, be able to make a proper choice of his officers, and never deviate from the strictest line of military justice.

Old soldiers must not be rendered wretched and unhappy, by unwarrantable promotions, nor must extraordinary talents be kept back to the detriment of the service, on account of mere rules and regulations. Great abilities will justify exceptions; but ignorance and inactivity will not make up for years spent in the profession.

"In his deportment, he must be affable, and always superior to peevishness, or ill-humour; he must not know, or at least seem to know, what a spirit of resentment is; and when he is under the necessity of inflicting military chastisement, he must see the guilty punished without compromise or foolish humanity; and if the delinquent be among the number of his most intimate friends, he must be doubly severe towards the unfortunate man. For it is better, in instances of correction, that one individual should be treated with rigour, (by order of the person over whom he may be supposed to hold some influence,) than that an idea should go forth in the army, of public justice being sacrificed to private sentiments.

"A modern general should always have before him the example of Mælius; he must divest himself of personal sensations, and not only be convinced himself, but convince others, that he is the organ of military justice, and that what he does is irrevocably prescribed. With these qualifications, and by this line of conduct, he will secure the affections of his followers, instil into their minds all the impulses of deference and respect. He will be feared, and consequently obeyed.

"The resources of a general's mind are as various as the occasions for the exercise of them are multiplied and chequered; he must be perfectly master of the art of knowing how to support an army under all circumstances and in all situations; how to apply its strength, or be sparing of its energy and confidence; how to post all its different component parts, so as not to be forced to give, or receive battle in opposition to settled plans. When once engaged, he must have presence of mind enough to grasp all the relative points of disposition and arrangement, to seize favourable moments for impression, and to be thoroughly conversant in the infinite vicissitudes that occur during the heat of a battle; on a ready possession of which its ulti-

mate success depends. These requisites are unquestionably manifold, and grow out of the diversity of situations, and the chance medley of events that produce their necessity.

"A general, to be in perfect possession of them must, on the day of battle, be divested of every thought, and be inaccessible to every feeling, but what immediately regards the business of the day; he must reconnoitre with the promptitude of a skilful geographer, whose eye collects instantaneously all the relative portions of locality, and feels his ground as it were by instinct; and in the disposition of his troops, he must discover a perfect knowledge of his profession, and make all his arrangements with accuracy and dispatch. His order of battle must be simple and unconfused, and the execution of his plan as quick as if it merely consisted in uttering some few words of command, as; *the first line will attack! the second will support it! or such a battalion will advance and support the line.*

"The general officers that act under such a chief, must be ignorant of their business indeed, if, upon the receipt of these orders, they should be deficient in the immediate means of answering them, by a prompt and ready co-operation. So that the general has only to issue out directions according to the growth of circumstances, and to rest satisfied, that every division will act in conformity to his intentions; but if, on the contrary, he should so far forget his situation as to become a drill serjeant in the heat of action, he must find himself in the case of the fly in the fable, which perched upon a wheel, and foolishly imagined, that the motion of the carriage was influenced by its situation. A general, therefore, ought on the day of battle to be thoroughly master of himself, and to have both his mind and his eye rivetted to the immediate scene of action. He will by these means be enabled to see every thing; his judgment will be unembarrassed, and he will instantly discover all the vulnerable points of the enemy. The moment a favourable opening offers, by which the contest may be decided, it becomes his duty to head the nearest body of troops, and, without any regard to personal safety, to advance against his enemy's line.—[By a ready conception of this sort, joined to great courage, General Desaix determined the

issue of the battle of Marengo.] It is, however, impossible for any man to lay down rules, or to specify, with accuracy, all the different ways by which a victory may be obtained. Every thing depends upon variety of situations, casualty of events, and intermediate occurrences which no human foresight can positively ascertain, but which may be converted to good purposes by a quick eye, a ready conception and a prompt execution.

“ Prince Eugene was singularly gifted with these qualifications, particularly with that sublime possession of the mind which constitutes the essence of a military character.

“ Many commanders in chief have been so limited in their ideas of warfare, that when events have brought the contest to issue, and two rival armies have been drawn out for action, their whole attention has devolved upon a straight alignment, an equality of step, or a regular distance in intervals of columns. They have considered it sufficient to give answers to questions proposed by their aides-de-camp, to send orders in various directions, and to gallop themselves from one quarter to another, without steadily adhering to the fluctuations of the day, or calmly watching for an opportunity to strike a decisive blow. They endeavour, in fact, to do every thing, and thereby do nothing. They appear like men, whose presence of mind deserts them the instant they are taken out of the beaten track, or are reduced to supply unexpected calls by uncommon exertions. And whence, (continues the same sensible writer,) do these contradictions arise? from an ignorance of those high qualifications without which the mere routine of duty, methodical arrangement, and studied discipline, must fall to the ground, and defeat themselves. Many officers spend their whole lives in putting a few regiments through a regular set of manœuvres; and having done so, they vainly imagine, that all the science of a real military man consists in that acquirement. When, in process of time, the command of a large army falls to their lot, they are manifestly lost in the magnitude of the undertaking; and from not knowing how to act as they ought, they remain satisfied with doing what they have partially learned.

“ Military knowledge, as far as it regards a general, or commander in chief,

may be divided into two parts, one comprehending mere discipline and settled systems for putting a certain number of rules into practice; and the other originating in a sublimity of conception, which method may assist, but cannot give.

“ If a man be not born with faculties that are naturally adapted to the situation of a general, and if his talents do not fit the extraordinary casualties of war, he will never rise above mediocrity.

“ It is, in fact, in war as it is in painting, or in music. Perfection in either art grows out of innate talents, but it never can be acquired without them. Study and perseverance may correct ideas, but no application, no assiduity, will give the life and energy of action; those are the works of nature.

“ It has been my fate (observes the Marshal) to see several very excellent colonels become indifferent generals. I have known others, who have distinguished themselves at sieges, and in the different evolutions of an army, lose their presence of mind, and appear ignorant of their profession, the instant they were taken from that particular line, and be incapable of commanding a few squadrons of horse. Should a man of this cast be placed at the head of an army, he will confine himself to mere dispositions and manœuvres; to them he will look for safety; and if once thwarted, his defeat will be inevitable, because his mind is not capable of other resources.

“ In order to obviate, in the best possible manner, the innumerable disasters which must arise from the uncertainty of war, and the greater uncertainty of the means that are adopted to carry it on, some general rules ought to be laid down, not only for the government of the troops, but for the instruction of those who have the command of them. The principles to be observed, are: that when the line or the column advance, their distances should be scrupulously observed; that whenever a body of troops is ordered to charge, every proportion of the line should rush forward with intrepidity and vigour; that if openings are made in the first line, it becomes the duty of the second instantly to fill up the chasms.

“ These instructions issue from the dictates of plain nature, and do not require the least elucidation in writing.

They constitute the A, B, C, of soldiers. Nothing can be more simple, or more intelligible; so much so, that it would be ridiculous in a general to sacrifice essential objects in order to attend to such minutiae. His functions in the day of battle are confined to those occupations of the mind, by which he is enabled to watch the countenance of the enemy, to observe his movements, and to see, with an eagle's, or a king of Prussia's eye, all the relative directions that his opponents take. It must be his business to create alarms and suspicions among the enemy's line in one quarter, whilst his real intention is to act against another; to puzzle and disconcert him in his plans; to take advantage of the manifold openings, which his feints have produced, and when the contest is brought to issue, to be capable of plunging, with effect, upon the weakest part, and of carrying the sword of death where its blow is sure to be mortal. But to accomplish these important and indispensable points, his judgment must be clear, his mind collected, his heart firm, and his eyes incapable of being diverted, even for a moment, by the trifling occurrences of the day.

"I am not, however, an advocate for pitched battles, especially at the commencement of a war. A skilful general might, I am persuaded, carry on a contest between two rival nations during the whole of his life, without being once obliged to come to a decisive action. Nothing harasses, and eventually distresses an enemy so much as this species of warfare. He must, in fact, be frequently attacked, and, by degrees, be broken and unnerved; so that in a short time he will not be able to shew himself.

"It must not generally be inferred from this opinion, that when an opportunity presents itself, whereby an enemy may be crushed at once, the attack should not be made, or that advantage should not be taken of the errors he may commit; all I mean to prove is, that war can be carried on without leaving any thing to chance; and in this consist the perfection and highest point of ability belonging to a general. But when a battle is risked, the triumphant party ought well to know all the advantages which may be derived from his victory. A wise general, indeed, will not remain satisfied with having made himself master of the mere field of battle.

This, I am sorry to observe, is too often the custom; and, strange to say, that custom is not without its advocates.

"It is too much the practice of some governments, and as often the custom of generals, to follow the old proverb, which says, *that in order to gain your ends, you must make some sacrifices, and even facilitate the retreat of your enemy.* Nothing can be more impolitic, or more absurd. An able surgeon might as well tamper with a mortification, and by endeavouring to save an useless limb, run the hazard of destroying all the vital parts.

"An enemy, on the contrary, ought to be vigorously pushed, harassed night and day, and pursued through every winding he can make. By a conduct of this sort, the advancing army will drive him from all his holds and fastnesses, and the conclusion of his brilliant retreat will ultimately turn out a complete and total overthrow. Ten thousand well trained and disciplined troops, that are sent forward from the main army, to hang upon the rear of a retiring enemy, will be able to destroy an army of an hundred thousand men, when that army has once been forced to make retrograde movements. A want of confidence in their generals, added to many other disheartening circumstances, will naturally possess the minds of the latter, while implicit faith and warm affection must influence the former. A first defeat well followed up, almost always terminates in a total rout, and finishes the contest. But some generals do not wish to bring war to a speedy issue. Public misfortunes too frequently produce private emoluments, and the accumulation of the latter is too endearing to suffer itself to be superseded by the former."

In order to substantiate what he thus advances with much good sense, the Marshal cites the following particular instance, from among an infinity of others.

"When the French army, at the battle of Ramillies, was retiring in good order over an eminence that was rather confined, and on both sides of which there were deep ravines, the cavalry belonging to the allies followed its track leisurely, without even appearing to wish to harass or attack its rear. The French continued their march with the same composure; retreating upon more than twenty lines, on account of the narrowness of the ground.

“ On this occasion, a squadron of English horse got close to two French battalions, and began to fire upon them. The two battalions, naturally presuming that they were going to be attacked, came to the right about, and fired a volley at the squadron. What was the consequence? the whole of the French army took to its heels; the cavalry went off full gallop, and all the infantry, instead of patiently retiring over the heights, threw itself into the ravines in such dreadful disorder, that the ground above was almost instantly abandoned, and not a French soldier was seen upon it.

“ Let any military man consider this notorious event, and then praise, if he can, the regularity of a retreat, and the prudent foresight of those who, after an enemy has been vanquished in the field, relax in their exertions, and give him time to breathe. I do not, however, pretend to maintain, that all the forces of a victorious army should be employed to follow up the pursuit; but I am decidedly of opinion, that large bodies should be detached for that purpose, and that the flying enemy should be annoyed as long as the day lasts. This must be done in good order: and let it be remembered, that when an enemy has once taken to his heels in real earnest, you may drive him before you by the mere noise of empty bladders.

“ If the officer who is detached in pursuit of an enemy, begins to manœuvre according to prescribed rules and regulations, and to operate with slowness and precaution, he had better be recalled; for the sole purpose of his employment is to push on vigorously, to harass and distress the foe. Every species of evolution will do on this occasion: if any can be defective the regular system might prove so.

“ I shall conclude these observations by saying, that all retreats depend wholly upon the talents and abilities of generals, who must themselves be governed by circumstances and situations; but I will venture to assert, that no retreat can eventually succeed, unless it be made before an enemy who acts with extreme caution; for if the latter follow up his first blow, the vanquished army must soon be thrown into utter confusion.”

These are the sentiments of Marshal Saxe, as far as they relate to the qualifications, which the general of an army should indispensably possess. And no man we are persuaded was better en-

abled to form an opinion upon so important a subject: for as Baron Espagnac has justly observed in his *Supplément aux Réveries de ce Mars*, p. 166, he possessed uncommon courage, was fertile in expedients and resources; he knew how to distinguish and how to make use of the abilities of individuals; was unshaken in his determinations; and when the good of the service required chastisement or severity, was not influenced by private feelings, or hurried away by a sanguinary temper; he was uncommonly attentive to his men, watchful of their health, and provident to supply their wants; sparing of their blood in the day of battle, and always inspiring them, by the liveliness of his mind, tempered by experience, with confidence and attachment to his measures. He knew the cast of each man's character, particularly so of his officers; and whilst he directed the former with consummate knowledge and consequent success, he never lost sight of the merits of the latter when they co-operated with his designs. If the natural vivacity of his mind sometimes led him into temporary neglect—good sense, and a marked anxiety to be just, soon made amends for unintentional slights, by rendering the most important services to those whom he had apparently neglected. He was ingenious and subtle in all his manœuvres before an enemy, skilful in his choice of camps, and equally intelligent in that of posts; he was plain in his instructions previous to an engagement, simple in his disposition of the order of battle; and he was never known to lose an opportunity, through the want of prompt decision, whereby a contest might be ended by a bold and daring evolution. When it appeared necessary to give weight to his orders, and to turn the balance of fortune by personal exposure, no man became less fearful of his own destiny than Marshal Saxe. On these occasions he was daring to an extreme, heedless of danger, but full of judgment, and a calm presence of mind. Such, in our humble opinion, are the outlines of a *real* general: how well they were exemplified and filled up by the subject of this article, time and the concurrent testimony of events have proved; nor will it be considered superfluous, or too national, to add, that his Grace the Duke of Wellington is acknowledged to have possessed these rare qualities, particularly at the battle of Waterloo.

The Office of a GENERAL is to regulate the march and encampment of the army; in the day of battle to chuse out the most advantageous ground; to make the disposition of the army, to post the artillery, and, where there is occasion, to send his orders by his aides-de-camp. At a siege, he is to cause the place to be invested, to regulate the approaches and attacks, to visit the works, and to send out detachments to secure the convoys, and foraging parties.

GENERAL of artillery. See ORD-NANCE.

GENERALS of horse are officers next under the general of the army. They have an absolute command over the horse belonging to an army, above the lieutenant-generals.

GENERALS of foot are officers next under the general of the army, having an absolute command over the foot of the army.

GENERAL officers. All officers above the rank of lieutenant-colonel in the line are so called. The Board which (subject to his majesty and the commander in chief) determines every regulation respecting the clothing of the army, is composed of general officers.

All general officers belonging to the British army now receive an allowance, upon a mere certificate of existence, over and above whatever they may hold beside, (regiments excepted,) viz. major-general, 1l. 5s.—lieutenant-general, 1l. 12s. 6d.—and full general 1l. 18s. per day.

GENERAL. In the German armies, and among the sovereigns of the North, there are certain generals of cavalry, and others of infantry, who take rank of all lieutenant-generals. Those belonging to the infantry in the imperial service, and who are of this description, are called *general field zeugmeisters*. In Russia they bear the titles of generals in chief; of which class there are four belonging to the armies of that empire, two for the infantry, and two for the cavalry. They are only subordinate to field-marsals; which title, or dignity, is the same in Russia as was formerly that of marshal of France.

In the two imperial armies just mentioned, it is usual for generals, lieutenant-generals, and major-generals, to take their routine of duty, and rise progressively in the infantry or cavalry corps, to which they were originally appointed, until they arrive at a chief command; whereas in France (according to the old

military system of that country, and according to our own in England) a major general might be employed to take charge of either infantry or cavalry, without any regard being paid to the particular line of service in which he was bred.

GÉNÉRAL chez les Turcs, Fr. Turkish generals. Whatever opinion we may be disposed to entertain of the troops of the Ottoman Empire, (and we have had some experience of their manner of fighting, especially at St. Jean d'Acre which was preserved by a handful of British seamen and marines,) we shall waive our own private sentiments on the subject, and give the following curious account of their generals, as faithfully extracted out of a French work.

The Turks, observes that author, have likewise good generals. They possess experience, because from their earliest infancy they become inured to arms; because through the different stages of acknowledged service, they rise by degrees; and because their empire being very extensive, it is necessary that they should over-run several provinces for its protection, and be almost constantly engaged in skirmishes or battles. These, at least, were the original principles, upon which the military code of that country was established. But abuses, the natural consequences of corruption, have since crept in amongst them; for there have been persons suddenly raised from subordinate employments under the Porte, to the supreme command of armies. The primary cause of this abuse is to be found in the luxury and effeminacy of the grand signors; who are become heedless to the Mahometan laws, and never go to war in person.

The acknowledged valour of the Turkish generals may be attributed to the following causes: to a constitution which is naturally robust, to a practical knowledge of war, and to habitual military exercises. To these may be added the confidence with which they are inspired by the recollection of former victories; but they are influenced, above all, by the secret dictates of religion, which holds out eternal happiness to those who shall die in battle, and which teaches them to believe, that every Turk bears written on his forehead, not only the hour of his departure from this earth, but the manner of his removal.

A Turkish general possesses a power as absolute and uncontrouled as that which was entrusted to the dictators of

the Roman republic. He has no competitor, or equal, in the charge he holds, no assistants or colleagues with whom he is directed to consult, and to whose assent or dissent, in matters of consultation, he is to pay the least regard. Not only the army under his command, but the whole country into which he marches, is subject to his orders, and bound implicitly to obey them. Punishments and rewards are equally within his distribution. If an authority so absolute as this be considered in the light of executive effect, nothing most unquestionably can so readily produce it; for the tardiness of deliberation is superseded at once by a prompt decision; before which all sorts of objections, and every species of jealousy, subside. When a project is to be fulfilled, secrecy is the natural consequence of this arbitrary system, and rational plans are not interrupted by a difference of opinion, by prejudice or cabal.

GÉNÉRAL de bataille, or } a particular rank or
GÉNÉRAL major, }
 appointment, whose functions correspond with those of a *ci-devant* marshal of France. This situation is entrusted to a general officer, and is only known among the armies of Russia, and some other northern powers. He takes precedence, in the same manner that our major generals do, of all brigadier-generals and colonels, and is subordinate to lieutenant generals. The rank of brigadier general is only known in Russia, England, and Holland. It does not exist in Austria or Sweden.

GÉNÉRAL des galères, Fr. superintendant officer or general of the galleys. This was one of the most important appointments belonging to the old government of France. The officer to whom it was entrusted commanded all the galleys and vessels which bore what the French call *voiles latines* (triangle rectangular sails) in the Mediterranean. He had a jurisdiction, a marine police, and an arsenal for constructing ships under his own immediate command, without being in the least subordinate to the French admiralty board. When he went on board he was only inferior in rank to the admiral.

The privileges which were attached to his situation, and the authority he possessed with regard to every other marine or sea officer, were specifically mentioned in the king's regulations, and were distinguished by the respect and compli-

ments that were paid to the royal standard, which this general bore, not only on board his own galley, but whenever he chose to hoist it in another.

During the reign of Louis XIV. in 1669, the Duke de Vivonne, marshal of France, raised the reputation of the galley service to a considerable degree of eminence, by gaining several hard fought engagements. His son, the Duke de Mortomart, succeeded him in the appointment; and the chevalier d'Orleans, grand prior of France, was general of the galleys at his decease.

GÉNÉRAL des vivres, Fr. a chief commissary, or superintendant general of stores, whose particular functions were to provide ammunition, bread, and biscuit for the army. There were several subordinate commissaries who watched the distribution of these stores, and saw that the bakers gave bread of the quality they contracted for. It was likewise within the department of the superintendant general to attend to the collection of grain and flour, and to see that proper carriages and horses were always at hand to convey them to the several depôts or magazines. The different camps were also supplied from the same source. See *MUNITIONNAIRE*.

GENERAL and staff officers are all officers as above described, whose authority extends beyond the immediate command of a particular regiment or company, and who have either separate districts at home, or commands on foreign service.

Lieutenant GENERAL. This office is the first military dignity after that of a general. One part of the functions belonging to lieutenant generals, is to assist the general with counsel: they ought therefore, if possible, to possess the same qualities with the general himself; and the more, as they often command armies in chief, or succeed thereto, on the death of the general.

The number of lieutenant generals have been multiplied of late in Europe, in proportion as the armies have become numerous. They serve either in the field, or in sieges, according to the dates of their commissions. In battle the oldest commands the right wing of the army, the second the left wing, the third the center, the fourth the right wing of the second line, the fifth the left wing, the sixth the center, and so on. In sieges the lieutenant generals always command the right of the principal

attack, and direct what they judge proper for the advancement of the siege, during the 24 hours they are in the trenches, except the attacks, which they are not to make without an order from the general in chief. Lieutenant-generals are entitled to two aides-de-camp.

Lieutenant-GENERAL of the ordnance.
See ORDNANCE.

Lieutenant-GENERAL of artillery ought to be a very great mathematician, and an able engineer, to know all the powers of artillery, to understand the attack and defence of fortified places, in all its different branches; how to dispose of the artillery, in the day of battle, to the best advantage; to conduct its march and retreat; as also to be well acquainted with all the numerous apparatus belonging to the train, laboratory, &c.

Major-GENERAL, the next officer to the lieutenant-general. His chief business is to receive orders from the general, or in his absence from the lieutenant-general of the day; which he is to distribute to the brigade-majors, with whom he is to regulate the guards, convoys, detachments, &c. On him the whole fatigue and detail of duty of the army roll. It is the major-general of the day who is charged with the encampment of the army, who places himself at the head of it when it marches; who marks out the ground of the camp to the quarter-master-general, and who places the new guards for the safety of the camp.

The day the army is to march, he dictates to the field-officers the order of the march, which he has received from the general, and on other days gives them the parole.

In a fixed camp he is charged with the foraging, with reconnoitring the ground for it, posting the escorts, &c.

In sieges, if there are two separate attacks, the second belongs to him; but if there be only one, he takes either from the right or the left of the attack, that which the lieutenant-general has not chosen.

When the army is under arms, he assists the lieutenant-general, whose orders he executes.

If the army marches to an engagement, his post is at the head of the guards of the army, until they are near enough to the enemy to rejoin their different corps; after which he retires to his own proper post; for the major-generals are disposed

in the order of battle as the lieutenant-generals are, to whom, however they are subordinate, for the command of their divisions. The major-general has one aide-de-camp and one brigade-major.

Brigadier GENERAL, in the British service, is the next in rank to a major-general, being superior to all colonels, and having frequently a separate command. Brigadier-generals are not entitled to aides-de-camp, but they have each one brigade-major.—Several brigadier-generals have been made during the present war, in order to render the distribution of line-officers more effectually beneficial to the common cause, by investing them with commands superior to the militia and volunteer establishments. For further particulars on this head, see 6th edition of the Regimental Companion.

GENERAL of a district, a general officer who has the charge and superintendance of a certain extent of country, in which troops are encamped, quartered, or cantoned.

He receives reports, &c. from the major-general, respecting the troops in his district; reviews and inspects them, likewise orders field days of the whole brigaded, or by separate corps, when and in what part he pleases; making the necessary reports to the War-office, commander in chief, &c.

Colonel GENERAL, an honorary title, or military rank, which is bestowed in foreign services. Thus the prince of peace in Spain was colonel-general of the Swiss guards.

Brigade-major GENERAL. When England and Scotland were divided into different districts, each district under the immediate command of a general officer, it was found necessary, for the dispatch of business, to establish an office, which should be solely confined to brigade duties. The first brigade-major-general was appointed in 1797. At that period all orders relative to corps of officers, which were transmitted from the commander in chief to the generals of districts, passed through this channel of intermediate communication. No such appointment now exists.

GENERAL'S Guard. It was customary among the French, and we believe the practice still prevails, for the oldest regiment to give one captain, one lieutenant, one ensign, two serjeants, and fifty privates, as a general's guard. Whenever the marshals of France were on service

under the immediate orders of the king, or of the princes belonging to the royal household, they always retained the rank of general.

GÉNÉRAL d'armée, Fr. the commander in chief of an army.

Battre la GÉNÉRALE, Fr. to beat the general. See **DRUM**.

GENERAL court-martial. See **COURTS-MARTIAL**.

GENERAL formations of the battalion are from line into column, and from column into line; to either flank, to the front of the march, to the rear of the march.

GENERAL is also used for a particular beat of the drum. See **DRUM**.

GÉNÉRALAT, Fr. the rank of a general officer.

GENERALISSIMO, (*généralissime*, Fr.) the chief officer in command; a supreme and absolute commander in the field. This word is generally used in most foreign languages. It was first invented by the absolute authority of Cardinal Richelieu, when he went to command the French army in Italy.

GENERALSHIP, a term which is applied to the good or bad conduct of a general in warfare:—hence good or bad generalship.

GENESIS, in geometry, the formation of any plan, or solid figure, by the motion of some line, or surface; which line or surface is always called the *describent*; and that line according to which the motion is made, is called the *dirigent*.

GENETTE, Fr. a particular sort of snaffle, which is used among the Turks; it resembles a large ring, and serves to confine the horse's tongue.

A la GENETTE, Fr. with short stirrups.

GENIE, Fr. the art of engineering. It consists in a knowledge of lines, so as to be able to trace out all that is requisite for the attack or defence of places, according to established rules in fortification. Marshal Vauban and the Marquis of Louvois have particularly distinguished themselves in this art.

GENIUS, in a military sense, a natural talent or disposition to every kind of warlike employment, more than any other; or the aptitude a man has received from nature to perform well, and easily, that which others can do but indifferently, and with a great deal of pains.

From the diversity of genius, the dif-

ference of inclination arises in men, whom nature has had the precaution of leading to the employment for which she designs them, with more or less impetuosity, in proportion to the greater or lesser number of obstacles they have to surmount, that they may render themselves capable of answering this occasion. Thus the inclinations of men are so very different, because each follows the same mover, that is, the impulse of his genius. This is what renders one officer more pleasing, even though he trespasses against the rules of war; while others are disagreeable notwithstanding their strict regularity.

Vauvornagues, the French writer, who had himself been an officer, gives the following article relative to military genius.

“Ainsi la prévoyance, la fécondité, la célérité de l'esprit sur les objets militaires formeraient pas un grand capitaine, si la sécurité dans le péril, la vigueur du corps dans les opérations laborieuses du métier, et enfin une activité infatigable n'accompagnaient les autres talens.”—Page 26. Vol. I. For a more impressive description of genius—particularly with regard to music—see *Dictionnaire Musical* par J. J. Rousseau.

GENOUILLIÈRE, Fr. in fortification, that part of the parapet of a battery which lies under the embrasure, and is within the battery. The *genouillère* is about $2\frac{1}{2}$ or 3 French feet high from the platform to the opening of the embrasure. It lies immediately under the arch of the fortification. Its thickness, which usually consists of fascines well put together, is of the same dimensions that merlons bear; namely from 18 to 22 feet. The term *genouillère* is derived from *genou*, signifying the knee, to the height of which it is generally raised.

GENS, Fr. a word in much desultory use among the French, signifying, in a general acceptation of it, folks, people, servants, soldiers, &c. When followed by the preposition *de*, and by a substantive, which points out any particular profession, trade, &c. it signifies all those persons that belong to one nation, one town, &c. or who are of one specific profession or calling, as

GENS d'armes. See **GENDARMES**.

GENS d'armes, Fr. the establishment or corps of gendarmes is so called in France.

GENS de guerre, Fr. military men.

GENS de mer, Fr. sea-faring men.

GENS de terre, Fr. landmen.

GENS de cheval, Fr. men serving on horseback.

GENS de pied, Fr. men serving on foot.

GENS de sac et de corde, Fr. an opprobrious term which the French apply to men that deserve chastisement. In former times, the cord or rope, and the sack, were the common instruments and means of punishment. The rope served to hang up malefactors; and the sack was used to contain their bodies when it was ordained that they should be thrown into a river.

GENS de l'équipage, Fr. men belonging to the train of artillery.

GENS d'épée, Fr. This term is used among the French to distinguish officers, gentlemen, &c. who wear swords, from those that do not, particularly so in opposition to *gens de la robe*, or lawyers.

Les GENS d'église, Fr. churchmen.

Les GENS de robe, Fr. lawyers, or gentlemen of the long robe.

Mes GENS, Fr. an affected phrase, which is used among the French, to signify their servants or attendants. It seems to have been an arrogant and foolish imitation of *mon peuple*, *my people*. During the old monarchy of France, this term was much in vogue at Paris, and was afterwards adopted by almost all the *petits-mâîtres*, or coxcombs belonging to the church, state, and army.

GENT, Fr. nation. It is only used in poetry, viz. *La gent qui porte le Turban*, the Turkish Nation.

Le droit des GENS, Fr. the rights of nations.

GENTILSHOMMES de la garde, (commonly called *Au bec de corbin*, or the battle axe,) Fr. This company went through many alterations under the old monarchy of France. During the last years of that government, it consisted of 200 guards under the command of a captain, a lieutenant, and an ensign. The captain had the power of giving away the subaltern commissions, and had moreover the entire management of the rest; every vacancy being in his gift. They marched in file, each holding his battle-axe before the king on days of public ceremony. These were chiefly at the coronation, and the marriage of the king, or at the reception of the knights of the Holy Ghost.

When the company was first raised, its particular duty was to attend the king's person, and to be constantly near him in the day of battle.

GENTILHOMME à drapcau, *établi dans chaque compagnie des gardes Françaises*, Fr. Under the old French government, this person ranked as *officier en second*. He did duty in common with the ensigns of the French guards, and took precedence immediately under them. His name always stood upon the muster roll, but his appointment was merely honorary, as he did not receive any pay; his tour of duty in mounting guards went with that of the ensigns; he was obliged to be present at all field days, and could not absent himself without leave.

GENTILSHOMMES pensionnaires, Fr. gentlemen pensioners. See **PENSIONERS**.

GENTLEMAN, a man raised above the vulgar by his character and good conduct; also one who obtains the appellation from his post or situation in life. Thus all subalterns in the army are called gentlemen.

GENTLEMAN-attendat, (*gentilhomme à la suite*, Fr.) a situation about the person of the heir apparent to the crown of Great Britain, which corresponds with that of a lord in waiting.

GEOCENTRIC. This term is applied to any thing which has the earth for its surface.

GEODESIA, (*géodésie*, Fr.) that part of practical geometry, which contains the doctrine or art of measuring surfaces, and finding the contents of all plain figures. Among the French *géodésie* means likewise the divisions of lands. See **SURVEYING**.

GEOGRAPHY is the doctrine or knowledge of the terrestrial globe; or the science that teaches and explains the state of the earth, and parts thereof that depend upon quantity; or it is rather that part of mixed mathematics, which explains the state of the earth, and of its parts depending on quantity, viz. its figure, magnitude, place, and motion, with the celestial appearances, &c. In consequence of this definition, geography should be divided into general and special, or universal and particular.

By *universal GEOGRAPHY* is understood that part of the science which considers the whole earth in general, and explains its properties without regard to particular countries. This division is

again distinguished into three parts, absolute, relative, and comparative. The absolute part respects the body of the earth itself, its parts and peculiar properties; as its figure, magnitude, and motion; its lands, seas, and rivers, &c. The relative part accounts for the appearances and accidents that happen to it from celestial causes; and lastly, the comparative contains an explanation of those properties which arise from comparing different parts of the earth together.

Special or particular GEOGRAPHY is that division of the science which describes the constitution and situation of each single country by itself; and is two-fold, viz. chorographical, which describes countries of a considerable extent; or topographical, which gives a view of some place, or small tract of land. Hence the object or subject of geography is the earth, especially its superficies and exterior parts.

The *properties of GEOGRAPHY* are of three kinds, viz. celestial, terrestrial, and human. The celestial properties are such as affect us by reason of the apparent motion of the sun and stars. These are 8 in number.

1. The elevation of the pole, or the distance of a place from the equator.

2. The obliquity of the diurnal motion of the stars above the horizon of the place.

3. The time of the longest and shortest day.

4. The climate and zone.

5. Heat, cold, and the seasons of the year; with rain, snow, wind, and other meteors.

6. The rising, appearance, and continuance of stars above the horizon.

7. The stars that pass through the zenith of a place.

8. The celerity of the motion with which, according to the Copernican hypothesis, every place constantly revolves.

The *terrestrial properties* are those observed in the face of the country, and are 10 in number.

1. The limits and bounds of each country.

2. } figure;
3. } magnitude;
4. } Its { mountains;
5. } waters, viz. springs, rivers,
6. } lakes and bays;
7. } woods and deserts;

7. The fruitfulness and barrenness of the country, with its various kinds of fruits.

8. } { minerals and fossils;
9. } The { living creatures there;
10. } { longitude and latitude of the place.

The third kind of observations to be made in every country is called *human*, because it chiefly regards the inhabitants of the place. It consists of 10 specific branches.

1. Their stature, shape, colour, and the length of their lives; their origin, meat, and drink.

2. Their arts, and the profits which arise from them, with the merchandize they barter one with another.

3. Their virtues and vices, learning, capacities, and schools.

4. Their ceremonies at births, marriages, and funerals.

5. The language which the inhabitants use.

6. } { political government.

7. } Their { religion and church government.

8. } { cities and famous places.

9. } { remarkable histories and antiquities.

10. Their famous men, artificers, and inventions of the natives.

These are the three kinds of occurrences to be explained in *special geography*.

The *principles of GEOGRAPHY*, or those from which arguments are drawn for the proving of propositions in that science, are, according to the best authors, of three sorts:

1. Geometrical, arithmetical, and trigonometrical propositions.

2. Astronomical precepts and theorems.

3. Experience, being that upon which the greatest part of geography, and chiefly the special, is founded.

In proving geographical propositions, we are to observe, that several properties, and chiefly the celestial, are confirmed by proper demonstrations; being either grounded on experience and observation, or on the testimony of our senses: nor can they be proved by any other means. There are also several propositions proved, or rather exposed to view, by the terrestrial globe, or by geographical maps.

Other propositions cannot be so well proved, yet are received as apparent

truths. Thus, though we suppose all places on the globe, and in maps, to be laid down in the same order as they are really on the earth; nevertheless, in these matters, we rather follow the descriptions that are given by geographical writers.

GEOGRAPHY is very ancient, at least the special part thereof; for the ancients scarcely went beyond the description of countries. It was a constant custom among the Romans, after they had conquered or subdued any province, to have a map or printed representation thereof carried in triumph, and exposed to the view of the spectators. Historians relate, that the Roman senate, about 100 years before Christ, sent geographers into divers parts to make an exact survey and mensuration of the whole globe; but they scarcely ever saw the twentieth part of it. When Bonaparte went to Egypt, he had this system in view.

Before them, Necho, king of Egypt, ordered the Phœnicians to make a survey of the whole coast of Africa, which they accomplished in 3 years. Darius caused the Ethiopic sea, and the mouth of the Indus, to be surveyed; and Pliny relates, that Alexander, in his expedition into Asia, took two geographers to measure and describe the roads; and that from their itineraries, the writers of the following ages took many particulars. Indeed this may be observed, that whereas most other arts and sciences are sufferers by war, geography, artillery, mining, and fortification, alone have been improved thereby. Geography, however, must have been exceedingly defective, as a great part of the globe was then unknown, particularly all America, the northern parts of Europe and Asia, with the Terra Australis, and Magellanica; and they were also ignorant of the earth's being capable to be sailed round, and of the torrid zone being habitable, &c.

The honour of reducing geography to art and system was reserved for Ptolemy; who, by adding mathematical advantages to the historical method in which it had been treated of before, has described the world in a much more intelligible manner: he has delineated it under more certain rules, and by fixing the bounds of places from the longitude and latitude, has discovered other mistakes, and has left us a method of discovering his own.

GEOLAGE, *Fr.* belonging to a gaol or prison.

Frais de GEOLAGE, Fr. prison fees or expenses.

GEOLE, *Fr.* a gaol; a prison.

GEOLIER *des prisons militaires, Fr.* the superintendent or head jailer of military prisons. Under the old French government, this person had a right to visit all prisoners that were not confined in dungeons. He could order provisions, wood and coal to be conveyed to them; but he had not the power of permitting women to visit, or to have any intercourse with the soldiers; and when their period of imprisonment expired, he could not detain them on account of debts contracted for food, lodgings, or fees, &c. Half of the prisoner's subsistence for one day, according to his rank, was given on his release.

GEOMETRICAL *elevations*, just dimensions of ascent proportionate to a given scale, &c. See ORTHOGRAPHY.

GÉOMÈTRE, *Fr.* a geometer.

GÉOMÉTRIE, *Fr.* geometry.

GÉOMÉTRIE *composée, Fr.* compound geometry, which consists in the knowledge of curved lines, and of the different bodies produced by them. The immediate object or intent of compound geometry is confined to conic sections and to lines of that species.

GÉOMÉTRIE *sublime et transcendante, Fr.* These terms have been applied by the French to the new system of geometry, which was produced by Leibnitz, and Newton, when they found out the method of calculating *ad infinitum*.

GEOMETRY, (*géométrie, Fr.*) is the only branch of abstract science that considers different sorts of dimensions, or treats of magnitudes, that are heterogeneous, or of different kinds. The diversities, however, of dimension and magnitude even in it are, in respect of kind, only three, which we derive our ideas of from body, and the exercise of our external senses. And as every object with which we are surrounded in life partakes of all the three, it has perhaps very fitly been called *γεωμετρία*, or geometry, although one of the most extensive parts of it, viz. the doctrine of proportion or ratios knows no diversity of dimension or magnitude, in respect of kind. For all ratios are homogeneous magnitudes, and differ not in kind, but in degree. How would it otherwise be possible for the ratios of lines to be the same with or

equal to the ratios of surfaces and solids, as Euclid and almost all other writers on geometry frequently demonstrate, since no equality or similitude, in point of magnitude, can exist between things of different kinds? They never could otherwise stand to one another in the relations of greater, equal, or less. Neither could they ever be brought together by analogy without similitude and homogeneity. The similarity of nature and homogeneity indeed of ratios must always be the primary, fundamental, and leading idea in the doctrine of their measures. Were ratios, expressing the relations of lines, surfaces, and solids, to be heterogeneous like the magnitudes themselves, we never could reason from the relations of lines to those of surfaces, or from the relations of surfaces to those of solids. And as magnitudes cannot possibly exist in any other relations to one another, in respect of quantity, than those of greater, equal, and less, Euclid, after calling such relations ratios, founds his definition of proportionality amongst magnitudes on the application of this idea to their multiples; and after defining ratios in these three different relations defines analogy to be the similitude of ratios. And here it may not be improper to observe, that magnitude, taken in its general, abstracted, and metaphysical acceptation, may, with strict propriety, be defined to be *whatever admits of more or less, of increase or decrease, and quantity to be the degree of magnitude*. In algebra and arithmetic all magnitudes are homogeneous, or of the same kind. Thus 6^2 , 6^3 , 6^4 , 6^5 , &c. are all of them magnitudes of the same kind with 6 and with each other; and x^2 , x^3 , x^4 , x^5 , &c. are magnitudes of the same kind with x , and with each other. For otherwise they could no more be connected together by the signs of addition and subtraction, than a line with a surface, or a surface with a solid. And such equations as $y^5 + 3y^4 = 4y^3 + 8y$, were not y^5 , y^4 , y^3 , and y magnitudes with each other, and with 8, 4, and 3, would imply the same absurdity as the supposition of a relation of equality between a right line and a surface, or between a surface and a solid.

Geometry, then, is the only branch of abstract science that treats of heterogeneous magnitudes, or of different sorts of dimensions, which are three, viz. linear, superficial, and solid. Our ideas, in-

deed, of extension cannot furnish us with any other. And geometry is nothing else than the application of metaphysics to extension. Our reasonings, however, with regard to the different degrees of quantity in each of these three kinds of geometrical magnitudes, and particularly with respect to their properties and relations, are by no means confined to three links in the endless chain of universal comparison, or to the simple, duplicate, and triplicate ratios, as seems to have been the case both with the ancient and modern geometers, but may be extended indefinitely. And as the relations with geometrical as well as of all other magnitudes, are magnitudes of the same kind with each other, and partake not in the least of the dimensions, which go to the formation of the different sorts of extension and solidity, the general laws, that govern our reasonings respecting them, must form the basis, the principles, and ground-work of *universal metricks*, applicable to magnitudes of every kind, or whatever admits of more or less, of increase, or decrease. But geometry, when properly applied, furnishes the investigation of these laws or principles in the most unexceptionable manner, and regulates their endlessly extensive applications: thereby rendering all our reasonings, by means of them, strictly and perfectly geometrical. See GLENIE'S *Universal Comparison*.

Even algebra, or general arithmetic, is indebted to geometry for the proof and elucidations of its principles. Most writers on that branch of science give the constructions of quadratic equations by means of the circle and right lines. But this gentleman has shewn us, how all quadratic equations may easily be constructed, by the second book of Euclid, without the circle. And we understand he has a very easy method of constructing all cubic and biquadratic equations, or finding two mean proportionals between any two given right lines, and of trisecting any given angles by means of plain geometry, strictly so called, or by the circle and right lines alone, to within any assignable limit.

Geometry is an inexhaustible science, and knows no bounds, as there is always room left in it for the discovery of new theorems. It is moreover an excellent species of logic, teaches men how to reason truly, and accustoms the mind to a habit of close and correct thinking.

To it we are entirely indebted for trigonometry, which is of the greatest use in navigation, astronomy, and in many things inseparably connected with military operations. It furnishes the rule for working by in the ordinary affairs of life. The distances of places, or remote objects, and their situations, in respect of one another, can only be ascertained by measuring, and by the rules which geometry supplies. The drawing of maps or charts, as well as the measurement and division of lands, depend on it. Houses and towns cannot be built without a knowledge of their figures and dimensions. Masons, joiners, &c. have frequent occasion for parallel and perpendicular lines, and often have to deal with triangles, squares, parallelograms, circles, pyramids, cones, cubes, prisms, &c. An acquaintance with it is absolutely necessary for castramentation, for all military erections, for the proper conducting of sieges, for determining the heights of walls and revêtements, and the respective distances of an enemy's works, for tactics and the marshalling of troops. It is only by a judicious use of geometry that the true principles of military construction, both regular and irregular, can either be investigated or applied to practice. And the proper application of those principles to the whole diversity of ground, which nature (that delights in variety) presents, and instruction with regard to the prompt or expeditious combination of them with both natural and artificial objects, as hills, rivers, ravines, buildings, enclosures, ditches, &c. &c. form, unquestionably, the most essential and profitable branches of military tuition. So necessary is a knowledge of geometry, for warlike operations, that ignorance of it ought to exclude a person from the situation of a commissioned officer in the army, as it did from entrance into Plato's school. Polybius, in speaking of the knowledge necessary for a general, makes use of the following words, which deserve to be read with attention and respect by every officer.

"It will not, I think, be objected to me by any reasonable man, that I require too much, in making astronomy and geometry necessary parts of study for the general of an army. To join indeed to any profession those foreign and superfluous acquisitions, which only serve to furnish matter of ostentation and idle talk, is a labour, which I entirely disap-

prove. But as much as I condemn such superfluous diligence, so much on the other hand must I contend for the necessity of drawing, even from a distant source, some knowledge of those things which are of constant and notorious use. For is it not absurd, that persons, who profess the arts of dancing and of music, should submit to be instructed in the theory of measure and of harmony, and even to be trained in the gymnastic exercises, because these are all considered as the necessary means of obtaining perfection in their respective arts, and that those, who aspire to the command of armies, should be displeased to find, that an acquaintance, in some degree, with other sciences, is necessary in their profession? Shall the men, that exercise illiberal arts, exert greater pains, and shew a stronger emulation to excel, than those who are ambitious to obtain distinction in the noblest and most splendid of all employments? There is no man of sense that will avow such sentiments."

Plato thought the word geometry an improper name for this science, and accordingly substituted in its place the more extensive one of mensuration; and after him, others gave it the name of pantometry, as demonstrating not only the quantities of all manner of magnitudes, but also their qualities, ratios, positions, transformations, relations, &c. and Proclus calls it the knowledge of magnitudes and figures, and their limitations; also of their motions and affections of every kind.

Origin and progress of GEOMETRY.
This science had its rise among the Egyptians, who were in a manner compelled to invent it, to remedy the confusion that generally happened in their lands, from the inundations of the river Nile, which carried away all their boundaries, and effaced all the limits of their possessions. Thus, this invention, which at first consisted only in measuring the lands, that every person might have what belonged to him, was called geometry, or the art of measuring land; and it is probable, that the drafts and schemes, which they were annually compelled to make, enabled them to discover many excellent properties of these figures; which speculation has continued gradually to this day.

From Egypt geometry passed into Greece, where it continued to receive

improvements from Thales, Pythagoras, Archimedes, Euclid, &c. The elements of geometry, written by Euclid in 15 books, are a most convincing proof to what perfection this science was carried among the ancients. However, it must be acknowledged, that it fell short of modern geometry, the bounds of which, by the invention of fluxions, and the discovery of the almost infinite order of curves, are greatly enlarged.

Division of GEOMETRY. This science is usually distinguished into elementary, and higher or sublime geometry. The first, or elementary geometry, treats of the properties of right lines, and of the circle, together with the figures and solids formed by them. The doctrine of lines comes first, then that of surfaces, and lastly that of solids. The higher geometry comprehends the doctrine of conic sections, and numerous other curves.

Speculative and practical GEOMETRY. The former treats of the properties of lines and figures, as Euclid's Elements, Apollonius's Conic Sections, &c., and the latter shews how to apply these speculations to the use of mensuration, navigation, surveying, taking heights and distances, gauging, fortification, gunnery, &c.

We may distinguish the progress of geometry into three ages; the first of which was in its meridian glory at the time when Euclid's Elements appeared: the second beginning with Archimedes, reaches to the time of Descartes; who, by applying algebra to the elements of geometry, gave a new turn to this science, which has been carried to its utmost perfection by our learned countryman Sir Isaac Newton, and by the German philosopher Leibnitz.

GEORGE, or *Knight of St. George*, has been the denomination of several military orders, whereof that of the garter is one of the most illustrious. See GARTER.

The figure of St. George on horseback, worn by the kings of England and knights companions of the garter, is so called.

St. GEORGE! the English war cry.
GERBE, *Fr.* means literally a sheaf, but here it signifies a sort of artificial firework, which is placed in a perpendicular manner, and resembles a sheaf. See *JETS de feu*.

GERME, *Fr.* an open boat or bark

without hatches, used in the *Levant seas* for the transportation of goods and passengers.

GERIT, a dart which is used by the Turks when they go into action. It is about three feet in length.

GERSURE, *Fr.* in masonry, a chap, a flaw; a cleft, a crevice. This word is sometimes written *Gerçure*.

GESE, *Fr.* a weapon used in former times, resembling a javelin.

GESES and *Materes* were adopted by the Allobroges, (a body of ancient Gauls so called,) independently of the broad cut and thrust sword, which the Swiss still wear. These instruments were only one cubit long; half the blade was nearly square, but it terminated in a round point that was exceedingly keen. Virgil in his *Æneid* calls this species of blade, *alpin*, meaning, no doubt, to convey, that it was in general use among the neighbouring inhabitants of the *Alps*. Not only the Romans, but the Greeks received it into their armies. The former retained the full appellation and called it *gese*, but the latter corrupted it into *ysse*. This is the only weapon which those soldiers wore that escorted malefactors, who were condemned to death, to the place of execution. The term *gèse* was also applied to a sort of javelin.

GESSATES, a people of whom Polybius speaks in his history of the ancient Gauls, and who inhabited the countries lying adjacent to the Alps, and to the river Rhone. According to some writers, they were so called, because they constantly wore *geses*. The *gese* is said to have been a dart which the ancient Gauls exclusively used, and which some authors have since confounded with the *pertuisane* or *partisan*, a sort of halbert, called by others a *javelin*. This word was used in Provence, as late as the year 1300; for in the inventory which was taken of the goods, furniture, &c. appertaining to the Templars, we find *gessus* or *gesus* particularly specified in the list of weapons and iron instruments, which was understood to mean *gese*, and under that appellation was deposited in the king's archives at Aix. See BOUCHER, *Hist. Prov.* Liv. ii. c. 4. p. 82. This same author formerly asserts, that the *Gessi*, and the *Gessates* took their names from that weapon. He quotes Julius Cæsar's account of the word *gesi* in confirmation of his own opinion. Many

authors have mentioned the same term : among others, Justinus, Lipsus, Hugo, Cheves, Vossius, &c.

GESSATE, *ou* **GESATE**, *Fr.* a knight among the ancient Gauls, who took delight in war, and frequently volunteered his services beyond the boundaries of his native country. Whenever a neighbouring country made a levy of men, it was usual for the gessates to accompany the troops, from a conviction that it would be dishonourable in them to remain inactive at home. These adventurers, or knights-errant, were called gessates, either on account of the gessus or large dart, which they carried, or, as Polybius imagines, on account of the subsistence which was paid them, and was called by that name.

GESTES, *Fr.* (from the Latin *gestum*, or *res gestæ*.) brilliant actions, memorable deeds and exploits performed by great generals.

GESTION, *Fr.* administration.

Rendre compte de sa **GESTION**, *Fr.* to give an account of one's charge, or trust.

GESTURE, a motion of the body intended to signify some idea, or passion of the mind. All officers and soldiers who make use of any menacing gesture before a commanding or superior officer, or before a court-martial, are liable to be punished by the Articles of War.

GEZE, *Fr.* a reentrant angle, which is made with slate or lead, and forms a gutter between two roofs. It is likewise called *noue*, or *pantile*.

GHERIAH, the capital and strongest part of Angria's dominions, which consisted of an extent of coast, from whence this piratical state was a perpetual source of uneasiness to the trading ships of all the European nations in India. It cost the English East India company 50,000*l.* annually to protect their own ships. Eight or ten grabs, and forty or fifty gallivats, crowded with men, generally composed Angria's principal fleet, destined to attack ships of force or burthen. The vessel no sooner came in sight of the port or bay where the fleet was lying, than they slipped their cables and put to sea. If the wind blew, their construction enabled them to sail almost as fast as the wind; and if it was calm, the gallivats rowing towed the grabs: when within cannon shot of the chace, they generally assembled in her stern, and the grabs attacked her at a distance with their prow guns, firing first only at

the masts, and taking aim when the three masts of the vessel just opened all together to their view; by which means the shot would probably strike one or other of the three. As soon as the chace was dimasted, they came nearer, and battered her on all sides until she struck: and if the defence was obstinate, they sent a number of gallivats, with two or three hundred men in each, who boarded sword in hand from all quarters in the same instant.

The English, trusting to the report of the natives, had, until the year 1756, believed Gheriah to be at least as strong as Gibraltar, and like that situated on a mountain, which was inaccessible from the sea. For this reason it was resolved to send vessels to reconnoitre it; which service commodore James, (grandfather to the present Lord Radcliffe,) in the Protector, with two other ships, performed. He found the enemy's fleet at anchor in the harbour, notwithstanding which, he approached within cannon shot of the fort, and having attentively considered it, returned at the end of December to Bombay, and described the place, such as it truly was, very strong indeed, but far from being inaccessible, or impregnable. This place was taken by the English troops, under the command of colonel Clive. There were found in it 200 pieces of cannon, six brass mortars, and a great quantity of ammunition, and military and naval stores of all kinds; the money and effects of other kinds amounted to 120,000*l.* sterling. All this booty was divided amongst the captors, without any reserve either for the nation, or the Company. In less than a month the English, with their allies the Morattoes, got possession of all the territories wrested from the latter by Angria's predecessors, and which they had for seventy years despaired of ever being able to recover. See History of Indostan, Book v, p. 408 to 417.

GIBECIÈRE, *Fr.* pouch; bag.

GIBELIN, *Fr.* The name of a powerful faction in Italy, which opposed itself to that of the *Guelphs*, the ancestors of our present reigning family.— This faction began about the middle of the 13th century, and was occasioned by a difference which existed between the Emperor Frederick II, and Pope Gregory IX.

Demi-GIBERNE, *Fr.* a common cartouch-box.

GIBRALTAR, a strong town of Andalusia, in Spain. Gibraltar was formerly thought to be impregnable; but it was taken by Sir George Rooke in 1704, and has remained in the hands of the English ever since. It has been several times attacked by the Spaniards, who have always been unsuccessful. Their last effort to recover it was made September 13th, 1782, with floating batteries, in which were mounted 212 brass cannons and mortars. The French united with the Spaniards on this memorable occasion; and the brother to the present king of the French, (then Count d'Artois, and now Monsieur,) commanded the camp at St. Roche, whence the offensive operations were directed. General Elliott (whom the soldiers humorously called the *Cock of the Rock*, and who was afterwards created Lord Heathfield) had prepared a great number of red hot balls against the attack; and those so effectually destroyed the floating batteries, that the Spaniards were greatly annoyed, and relinquished the enterprise. For particulars see Drinkwater's *Siege of Gibraltar*.

GIN, in military mechanics, is a machine for raising great weights; it is composed of 3 long legs, 2 of which are kept at a proper distance by means of 2 iron bars fixed on one of the legs by a staple passing through a hole at one end: the other end has a hook which enters into a staple fixed into the other leg, so as to be taken off, or put on at pleasure.

At 3 feet from the bottom is a rollar, upon which the cable is wound; and the 3 legs are joined together with an iron bolt, about which they move: to this bolt is also fixed an iron half-ring to hook on a windlass: when the gin is upright, so that the legs stand at a proper distance, one end of the cable is fastened to a gun, mortar, or other weight: and the other passes through the pulleys and about the roller, which is turned round by means of handspikes passing through the holes in the ends of the roller; whilst a man holds the cable tight, the gun is raised to the height required, and the carriage is thus easily placed under it.

GINCE, a place in India, situated 35 m. N. W. of Pondicherry.

GINDI, expert horsemen among the Turks, who can ride, full gallop, standing upright upon their saddles; suddenly

throw themselves off in order to surprize a pursuing enemy, and perform various other feats.

GINJAULS, or **GINGAULS**, an Indian name, signifying large muskets used with a rest, somewhat similar to those invented by Marshal Vauban, for the defence of forts.

GIONULIS, a volunteer corps of cavalry among the Turks, who are commanded by a colonel, appointed for that purpose, called *Gionuli Agasi*. They are under the immediate orders of the visirs, and are generally distinguished from the rest of the Turkish army, by their daring and intrepidity.

GIRANDÉ, *Fr.* the chief cluster, or assemblage of an artificial firework, with which a shew or illumination is generally concluded.

The fire-works on St. Peter's day at Rome were terminated by a girande, or chest, containing no less a number than from 8 to 10,000 fusées, from which circumstance the name was adopted.

The effect, however, is not more brilliant than what has been produced in France by a smaller quantity of fusées containing larger proportions of composition.

A *girande* may be made by uniting several chests or clusters together, and securing, with a match of communication, a regular inflammation.

GIRANDOLE, *Fr.* literally a chandelier; a cluster of diamonds.

GIRANDOLES, *Fr.* circles ornamented with fusées. They are used in fire-works. See *SOLEILS tournans*.

GIROUETTE, *Fr.* This word has been used by the French to signify a sort of ornament which was exclusively placed upon the houses of the ancient nobility. The author of the *Nouveau Dictionnaire Militaire* makes the following remarks upon the subject. "It is well known, that in ancient times, and even until the last century, noblemen only could adorn the tops of their dwellings and dove-houses with weathercocks; but it is not generally known, that in order to be entitled to this privilege, each nobleman must have been the foremost man in entering at the breach of a besieged place, and have planted his banner on the rampart."

GIROUETTES, *Fr.* weathercocks, vanes. They are seldom or ever used on shore, except as weathercocks on the tops of church-steeple, &c.

GIROUETTE, in the singular number, also means, figuratively, light, inconstant, not to be depended upon. As, *ce jeune officier est aussi girouette que de coutume*, this young officer is as giddy as ever.

GIRTH, a kind of saddle, buckled on under a horse's belly; also a saddle that is buckled and complete for use.

GIRTH-web, that stuff of which the girths of a saddle are made.

GISARME, called also *Gisaring*, and by *Fleta*, *Sisarmes*; an ancient weapon of the staff kind. According to an old statute of William, king of Scotland, it was a hand-bill, appropriated to the use of the lower order of people. Some derive it from *Guisarme*, a kind of offensive long-handled and long-headed weapon; or, as the Spanish *visarma*, a staff that has within it two long pikes. *La Combe*, *Bailey*, and *Strutt* differ in opinion; and *Grosse* conceives it to be the same as black or brown bill.

GISTES, *Fr.* pieces of wood which are used in the construction of platforms to batteries, and upon which the *madiers* or broad planks are placed.

To **GIVE a blow**, to strike with the hand: it also signifies, in a figurative sense, to counteract or defeat an enemy.

To **GIVE in**, to yield to superior strength or dexterity.

GIVEN is a word often used in mathematics, and signifies something which is supposed to be known.

GIVES, an old word signifying fetters, shackles.

GLACIS, *TERREIN*, *ou* *ESPLANADE*, *Fr.* a slope made of earth, and generally covered with sod or grass, which runs from the covert way of a fortified place, towards the country. See **FORTIFICATION**.

GLACIS d'une corniche, *Fr.* an insensible slope which is made upon the *cymatium*, (a member of architecture,) whereof one half is convex, and the other concave, of a cornish.

GLADIATOR, (*gladiateur*, *Fr.*) a sword-player, or prize-fighter. The old Romans were accustomed to make their slaves fight with one another at their public festivals, and the only weapon they used was a *gladius* or sword.—This barbarous practice was abolished by the emperor *Theodoric* in the year of Christ 500; but it prevailed among the ancient Britons, and in England, to a much later date.

GLAIRE, a kind of halbert, so called by the Saxons.

GLAIS militaire, *Fr.* a military compliment which was paid to the remains of a deceased general. It consisted in a discharge of ordnance. In a civil sense, *glais* means the chiming of bells at the death of a parish priest.

GLAISE, *Fr.* clay, or potter's earth.

GLAISER, *Fr.* to do over with potter's earth or clay.

GLAIVE, *Fr.* a broad sword or falchion, anciently so called from the Latin word *gladius*. The word is seldom used, except figuratively, as, *le glaive de la justice*, the sword of justice.

GLANDERS, a distemper in horses, proceeding, according to some French writers on veterinary subjects, from corrupt humours about the lungs and heart, arising neither from the blood nor phlegm, but from the one and the other, *bile*; and therefore it is called dry.

It is discovered by the horse growing lean on a sudden; so that when you touch his flanks with your hand, they will sound hollow, or like a drum. A horse afflicted with the glanders can neither eat nor cough, although he frequently tries, and feels excruciating pains inwardly, as if he had swallowed a bone; and if all these signs appear at once, they are symptoms of approaching dissolution, and the animal ought to be instantly shot.

English farriers and horse doctors, or rather veterinary surgeons, describe the *glanders* to be such a loathsome, filthy disease, and so catching, that other horses, who may stand near a diseased one, are sure to be infected. They say it proceeds first from heats and colds, which begins with a thin rheum, and ascends up to the head, settles near the brain, and vents itself at the nose.

This humour in time grows thicker and thicker, till it becomes of a yellowish colour like butter, and then the disease becomes very obstinate.

GLANDERED, having the glanders. All glandered horses in the army are ordered to be shot.

GLIB act, a very ancient act of parliament, which directed, that the Irish nobility and gentry who were of English or Norman extraction, should forfeit the privileges of their original country, if they did not shave the upper lip. This act took place when Ireland was first

conquered, and its object was to distinguish the descendants of the invaders from the old Irish nobility that traced its origin to Milesius, who wore a long beard.

GLOBE. See **GEOGRAPHY.**

GLOBE of compression, (*globe de compression*, Fr.) a globe used in the attack and defence of places. When the chamber of a mine has been established and completed in earth of an homogeneous nature, the powder which is deposited in it, acts, on taking fire, throughout the circumference of the said chamber, and by so doing, dislodges a large quantity of earth, and throws it up to a given distance. A globe of this sort was used at the siege of Valenciennes, when that place surrendered to his Royal Highness the Duke of York.

GLOBES, ou ballons d'artifices, Fr. globes or balloons which are filled with artificial fire. They are used to set fire to an enemy's town or works, &c.

GLOBES de feu, Fr. a cartouch made of mashed paper, which is laid upon a wooden bowl, and made perfectly round. It is afterwards perforated in several places, and filled with inflammable composition that is used in the making up of *lances à feu*. The instant it catches, a very bright and lively fire issues out of the several holes.

GLOIRE, Fr. an artificial fire-work, which resembles a large sun, hence also called *Soleil*. It is made by means of an iron wheel containing four circles, each circle diminishing towards the center, and kept at equal distances from one another. Forty-eight *jets de feu*, or fire spouts, are tied to these circles; each jet is twenty French inches long, and there are twelve of them fixed to each of the four circles. The gloire or soleil is placed in the middle of the principal fire-work.

GLORIOLE, Fr. a species of vanity; which is always in pursuit of trifling objects.

GLORIOSETTE, Fr. false glory, vanity, ostentation.

Military GLORY, honour, reputation, and fame, acquired by military achievements;—that precarious splendor which plays round the brows of a warrior, and has been collected by hard service, extraordinary genius, and unblemished integrity; but which may desert the greatest hero through one unfortu-

nate failure, occasioned by the fatality of human imperfection.

GO. The verb to go is variously used in a military sense, as to march in a hostile or warlike manner.

To Go off implies to depart from any post; also to discharge itself as a fire-arm does.

To Go on, to make an attack.

To Go over, to revolt.

To Go out, to go upon any expedition, &c.

To Go out is likewise frequently used to signify the act of fighting a duel, as *he went out with a brother officer, and was slightly wounded.*

GOA, a strong town on the Malabar coast, belonging to the Portuguese. The chief trade is in arrack. This fort was taken by the English April 2d, 1756.

GOBERGE, Fr. the boarded bottom of a bedstead.

GOBETER, Fr. to throw mortar with a trowel, and then spread it with the hand, in order to fill up the chasms of walls made with plaster and rubble.

GOD, (*Dieu*, Fr.) the first and supreme Being, through whom all other beings exist, and by whom they are governed. The name of God is variously used by the French, viz.

Le bon DIEU, the consecrated host or sacrament which is administered to persons dangerously ill. This ceremony is observed in all Roman Catholic countries with great solemnity. Whilst it is passing persons remain uncovered, and the military with one knee bent rest upon their arms. Protestants cannot be too circumspect on these occasions, particularly in Italy, Spain, and Portugal; as the slightest indication of disrespect or levity is seldom forgiven, or forgotten, by the adherents to this mode of faith.

DIEU donné, a title which the French have attached to the name of a good king; intimating thereby, that the greatest blessing on earth is a virtuous first magistrate. The gift, however, is so rare, that, to use a familiar English phrase, we may not improperly call it a God-send.

GODET, Fr. a bucket, such as is used for the purpose of emptying dams or sluices, &c.

GOGGLES, glasses usually worn in warm countries, to defend the eyes from the heat of the sun, and the dust of the soil. In order to derive real be-

neft from these glasses, there should be apertures round the edges to let in the air. The term is rather vulgar, but in general acceptation, and comes from *To goggle*—*To look askint*; a derivation not thoroughly appropriate.

GOITRE, *Fr.* *hernia gutturis*, great swelling under the throat. This disease is common in Switzerland, and in the Alps, owing to the snow water which is drunk in those quarters.

GOLADAR or **GOLDAR**, an Indian term, signifying a store-keeper, or a store-house-keeper.

GOLANDAUSE, *Ind.* an artilleryman belonging to the native artillery in India. It is sometimes written *Golandaz* and *Golandaazee*.

GOLCONDAH, a province in India, comprehending the nabobships of Arcot, Canoul, Cudapa, Rajamandri, and Chicacole, &c. See *History of Indostan*, pages 158. 162.

GOLCONDAH, formerly a city, and the capital of the province. It stood at the foot of the rock and fortress of the same name; but the city has long since been deserted, and its inhabitants removed to Hyderabad; nevertheless its name is still frequently used in Indostan, when in reality the city of Hyderabad is meant.

GOLDEN Rock, a spot near Tritchinopoly in India, which has been rendered immortal by the victory that was gained by the British troops over the French and their allies in 1753. Several passages in the first volume of the *History of Indostan* cannot fail to be interesting and gratifying to every English reader. We shall refer him to pages 289, 290, 291, &c. for a detailed account.

GOND, *Fr.* a hinge.

GONDECAMA, *Gondegama*, a river in India, which makes the northern boundary of the province of Arcot; Condavir extends between this and the river Kristna.

GONDOLA, (*gondole*, *Fr.*) This word may be taken in two senses, viz. to signify a cup; or a small barge which is flat and long in its construction, and is only moved or worked by oars. Gondolas are much used upon the canals in Venice; they are very remarkable for their shape, and the great swiftness with which they glide through the water. The middle sized ones are about thirty feet long, and are only four feet broad

across the middle, gradually tapering towards each end, and rising in two sharp and narrow points to the ordinary height of a man. Upon the prow is fixed an iron of an uncommon length, which does not exceed half a finger's breadth in thickness; but which is four fingers broad, and is so disposed as to cut the air. The upper part of this iron, which is flatter than the rest, stretches out in the shape of a large hatchet, a full foot in length: so that when the gondola is on her way, it seems to menace every thing before it, and to force its passage.

GONDOLEERS, (*gondoliers*, *Fr.*) the men who have the management of the gondolas at Venice. The equipment of a gondola seldom exceeds two persons, even on board of those barges that belong to foreign ambassadors. It sometimes happens that there are four, when persons of distinction go to their country houses. The gondoleers never sit down, but row the barge standing upright, and push forward. One man always plies in the forepart of the gondola, and the other is at the poop.

GONFALON, } an ensign or stand-
GONFANON, } ard.

GONG, the Persian word for a village.

GONG WALLAS, militia in India so called; from *gong* a village, and *wallas*, a man.

GONG, an instrument of martial music used among the Indians.

GONORRHOEA, (*gonorrhée*, *Fr.*) a morbid running from venereal hurts.

GORGE, (*gorge*, *Fr.*) the entrance into any piece of a fortification which consists of the distance or space between the extremities of the two faces; as between the faces of a half moon, redoubt, or bastion.

GORGE de montagne, *Fr.* a narrow pass, or passage, between hills, defiles, straits.

GORGE de colonne, *Fr.* the gorge or gule of a column; a concave moulding in architecture.

Coupe-GORGE, *Fr.* literally a cut-throat. It is used in a military sense to signify any spot or position which affords an enemy so many advantages, that the troops who occupy it must either surrender, or be cut to pieces.

Demi-GORGE, *Fr.* half the distance between the two extreme points of the faces of a piece of fortification inwards.

GORGE d'un bastion, Fr. the space or distance between the extreme points of two flanks.

Prendre un ouvrage par la GORGE, Fr. to get round a work and take it in reverse, without having made any direct approaches in front.

Jambes GORGÉES, Fr. swollen legs; as the legs of horses sometimes are.

GORGERIN, Fr. in ancient times, that part of the armour which covered the neck of a man. Hence our word *gorget*.

GORGERIN, Fr. in architecture, a small round member, accompanied with a square one, in the foot or bottom of the Doric chapter of a pillar, &c.; a small *boutell* (with a fillet under it) in the chapter of a pillar, &c. It has been called *Collarin*.

GORGET, a piece of ancient armour which defended the neck.—It was also called *hallerce*. The *gorget*, as now worn, is merely ornamental and hangs upon the breast of an officer.

GORGONS, in military antiquity, a warlike female nation of Lybia, in Africa, who had frequent quarrels with another nation of the same sex, called *Amazons*.

GOTHS, an ancient people of *Gothia*, an island in the *Baltic sea*, eighteen miles in length, situated by Denmark, and not far from *Norway*, subject to the crown of *Sweden*. They originally came out of *Scythia*, in the northern part of Europe. From *Gothia*, or *Gothland*, they rambled into Germany, where an immense multitude of them, some say one hundred thousand, were slain before the year of Christ 314. But not long after, they brought into subjection and barbarism a great part of the christian world, and possessed themselves of a part of Italy, now called *Lombardy*, whence they were called *Lombards*. The term *Goths and Vandals* is now generally applied to all bodies of armed men, who, like the barbarians of old, overleap the boundaries of civilization, and give themselves up to blood, plunder, and devastation. Thus, during the paroxysm of the French Revolution, particularly under the iron reign of Robespierre, the French were called the *Goths and Vandals* of modern Europe, on account of their excesses.

GOTHIC, (*Gothique*, Fr.) any thing built after the manner of the *Goths*. Various works and buildings that ap-

pear to have been constructed without any particular regard to the rules of art are so called. All the old cathedrals are in the Gothic taste.

Monsieur de Fenelon has said, that Gothic architecture can support an immense vault upon the slightest pillars. The elevation of it is so wonderful, that although it seems ready to tumble, is perforated and full of windows in every part, and stands, as it were, suspended in air, it nevertheless lasts out centuries, and almost always proves more durable than the most regular buildings.

Fronon GOTHIQUE, Fr. a gothic pediment. In modern architecture, all circular or triangular gable ends are so called, when they are sculptured, or three-leaved.

GOUDRON, ou *GOUDRAN*, Fr. pitch and tar.

GOUDRONS, Fr. small fascines or faggots which are well steeped in wax, pitch, and glue, and then are lighted for the purpose of setting fire to beams, planks, traverses, galleries, pontoons, &c. They are likewise used in various shapes and ways, to convey light into the ditches or upon the ramparts.

GOVERNOR of a fortification is, or should be, a person of great military knowledge; and is a very considerable officer, representing the king, whose authority extends not only over the inhabitants and garrison, but over all troops that may be there in winter quarters, cantonments, or quarters of refreshment.

Duty of a GOVERNOR in time of peace. He is to order the guards, the rounds, and the patrols; to give the parole and countersign every night after the gates are shut; to visit the posts, to see that both officers and soldiers do their duty, and that every thing goes on regularly, and in good order.

Duty of a GOVERNOR in time of war. He should consider the place in such a manner as if the enemy were on the eve of besieging him, not omitting the least thing that may contribute to a long and obstinate defence: he should therefore take particular care to keep the fortifications in good condition; clearing the country round of all hedges, ditches, trees, hollow roads, caverns, and rising grounds, within the reach of cannon shot; not suffering any houses to be built within that distance, nor in general any thing to be done that may favour the approach of an enemy.

He should consider well with himself every minute circumstance that may be of advantage to him during the siege: he should thoroughly examine the several works, and canvass all the different stratagems that may be used, either to defend them, or to give way when overpowered, with an intent to return and dislodge the enemy, after he has got possession of them; in short, how to defend the place entrusted to his care, inch by inch, with the best advantage. He should consider how, and in what manner, the works defend each other; whether their communications are safe, or liable to be interrupted by the besiegers; how to incommode the enemy when he is at a distance, or to dislodge him when near; whether the ground be proper for mines, and when they should be made; whether any part of the country may not be laid under water, by means of dikes or sluices; if there are any already made, how to keep them in constant repair, or to make new ones if they should be wanted; taking care to construct them so that the enemy may not have it in his power to destroy them either with his cannon or mortars.

If the governor be not sufficiently skilled in the systems of attack and defence, he should frequently converse with the officers of engineers and artillery who understand them; examine the works together, see what may be done to render the defence of the place as long as the circumstances and nature of the works will admit of; and to make it familiar to himself, he should set down a project of defence on paper, and have it examined by the most skilful officers of artillery and engineers about him. This must be done in private, that spies or deserters may not discover the weak parts to the enemy. In short, nothing should be neglected on the part of the governor.

He should see that the place be well supplied with ammunition, and wholesome provisions; that the hospitals are in good order, and provided with able physicians and surgeons, as likewise with every thing wholesome and necessary, that the sick and wounded may be well taken care of.

The powder magazines, above all things, require his most special care: for though they are built bomb-proof,

yet when a great number of shells fall upon them, they seldom resist their shock; for which reason they should be covered 8 or 10 feet thick with earth, and a layer of fascines, dung, and strong planks laid over them.

GOUGE, an instrument employed by divers artificers, being a sort of round hollow chisel, used in cutting holes, channels, grooves, &c. in wood, stone, &c.

GOIJAT, *Fr.* a soldier's boy. It likewise signifies an ignorant good-for-nothing fellow.

GOJERES, according to Hanmer, the French disease. From *Gouje*, *Fr.* a camp trull.

GOJON, *Fr.* gudgeon; the pin which the truckles of a pulley run on.

GOULET, *Fr.* the narrow entrance of an harbour.

GOURDIN, *Fr.* a flat stick two fingers in breadth, which was used by the French to punish galley slaves. Also a cudgel.

GOURGANDINE, *Fr.* a strumpet of the lowest species; a soldier's trull.

GOURME, *Fr.* the strangles; a disease very common in young horses.

GOUSSET, *Fr.* a gusset; the piece of armour, or of a shirt, whereby the arm-pit was formerly covered; also a bracket in joiner's work.

GOUTIÈRE, *Fr.* a gutter; also a pipe from which water runs from the roofs of houses.

Bonnets à quatre GOUTIÈRES, *Fr.* square or four-cornered caps.

GOUTTES, *Fr.* small round ornaments resembling drops of water, or beads, in architecture.

GOVERNAIL, *Fr.* a rudder.

GOVERNEMENT, *Fr.* anciently meant a certain specific allotment of provinces, towns, &c. under the superintendance and government of one person who received his powers from the king, and had subordinate officers under him. There were twelve governments in France at the first institution of monarchy, called *grands gouvernemens généraux*, which were specifically noticed in all the general sittings of the kingdom. They were first formed by Hugues Capet, in 987. Previous to the revolution in 1789, they were subdivided into 39 general provincial governments with inferior officers, subject to their jurisdiction; such as governors of towns, and *cominandants* of fortified places.

Each governor-general was entitled to a guard of cavalry, a certain number of halbardiers and armed men on foot.

GOUVERNEMENT d'un vaisseau, Fr. the steerage of a vessel.

GOUVERNEUR d'une place de guerre, Fr. the governor of a fortified town or place. See GOVERNOR of a fortification.

GOUVIONS, Fr. iron bolts. They are much the same as goujons.

GOWA, Indian term for a witness.

GRABAT, Fr. a truckle bed.

GRABS, vessels peculiar to the Malabar coast. They have rarely more than two masts, although some have three; those of three are about 300 tons burthens; but the others are not more than 150 tons; they are built to draw very little water, being very broad in proportion to their length, narrowing from the middle to the end, where instead of bows they have a prow, projecting like that of a Mediterranean galley, and covered with a strong deck level with the main deck of the vessel, from which however, it is separated by a bulk head that terminates the fore-castle. As this construction subjects the grab to pitch violently when sailing against a head sea, the deck of the prow is not inclosed with sides as the rest of the vessel is, but remains bare, that the water which dashes upon it may pass off without interruption. On the main deck, under the fore-castle, are mounted two pieces of cannon, of nine or twelve pounders, which point forwards through the portholes, cut in the bulk head, and fire over the prow; the cannon of the broadside are from six to nine pounders.

GRACE, Fr. pardon, forgiveness.

L'an de GRACE, Fr. the year of our Lord.

Faire GRACE, Fr. to pardon, to forgive.

Demander GRACE, Fr. to ask forgiveness.

GRACE honoraire, Fr. any mark of distinction which is conferred upon military men by their sovereign.

GRACE pécuniaire, Fr. pecuniary recompenses given to a military man for long service, or good conduct.

GRADE, Fr. this word is applicable to the different ranks among officers, beginning from an ensign to the commander in chief of an army.

GRADES militaires, Fr. the different degrees by which military men rise in their profession.

GRADINS, Fr. the various small ascents, such as banquettes, &c. by which troops march from the bottom to the top of a fortified place, in order to line the parapet.

Carte GRADUÉE, Fr. a map on which the degrees of longitude and latitude are marked.

GRAFT. See DITCH or MOAT.

GRAIN, Fr. a word used in the repairing of damaged cannon.

Mettre un GRAIN à une pièce, Fr. to fill up the touch-hole of a piece of ordnance; the heating it in such a manner, that the metal which is poured in may assimilate and mix. When it becomes cold, a fresh aperture is made or bored.

GRAIN de vent, Fr. a squall of wind.

Catholique à gros GRAINS, Fr. a relaxed Roman Catholic, one that does not stick at trifles. This phrase is applicable to every other sect or opinion, as well as to every profession, particularly the military.

GRAINOIR, Fr. a term used in the French artillery, to signify a sort of sieve, in which there are small round holes for moist powder to be passed through, in order to make the grains perfectly round.

GRAIS, Fr. large stones resembling our Scotch pebbles. They are used in France to pave the high roads, and the corners of streets.

GRAISSE, Fr. fat; grease. The French say figuratively **à GRAISSE d'argent**, by dint of money.

GRAM, Ind. vetches; a sort of pea, with which the horses are fed in India.

GRAMEN, grass, in botany.

Couronne GRAMINE, Fr. a grass, or gramineous crown, which was made among the Romans. See OBSIDIONAL.

GRANADE. See GRENADE.

GRANADIER. See GRENADIER.

GRAND. This word is frequently used both in French and English as a word of title or distinction. *Les grands*, the great.

GRAND division. The battalion being told off by 2 companies to each division, is said to be told off in grand divisions; hence grand division firing is, when the battalion fires by 2 companies at the same time, and is commanded by one officer only.

GRAND maître d'artillerie, Fr. grand master of the ordnance, &c. &c. &c.

GRAND soleil brillant, Fr. a sun ex-

hibited in artificial fire-works. See GLOIRE.

GRAND *Visir*. See VIZIR.

GRANITE, (*granite*, Fr.) a sort of hard marble, which is variegated by spots and streaks, and is rather encrusted. It is very common in Egypt. There is a species of granite, that is of a white and violet colour; and another which is green mixed with white. The most ordinary kind has grey and green spots scattered over a greyish white.

Columns 40 feet high have been seen in Egypt, which consisted wholly of one piece of granite. The Egyptian pyramids are made out of that marble; such indeed is the quantity said to exist about the country, that some authors imagine the whole extent of its foundation to be a solid rock of granite. The French distinguish this sort of marble by calling it *marbre granite* and *marbre granitelle*. In natural history it is generally called *granita*, being a distinct genus of stones composed of separate and very large concretions rudely compacted together, of great hardness, and capable of receiving a very fine and beautiful polish.

GRAPE *shot*. See SHOT.

GRAPE *de raisin*, Fr. a piece of wood in which are placed musket balls; each bullet being enclosed in a small case, and the whole together forming a machine resembling a grape. This species of shot is discharged from ordnance.

GRAPHOMETER, (*graphomètre*, Fr.) among surveyors, an instrument for taking angles, and generally called a semi-circle. In mathematics it serves to measure heights and elevations, to raise plans, &c.

GRAPPIN, Fr. grappling iron; small anchor.

GRAPPLING. The French call it *grapin*, *hérisson*, *risson*, or *harpeau*; it is a sort of small anchor, with 4 or 5 flukes or arms, commonly used to ride a boat.

GRAPPLING-irons, in the art of war, are composed of 4, 5, or 6 branches, bent round and pointed, with a ring at the root, to which is fastened a rope to hold by, when the grapple is thrown at any thing, in order to bring it near, so as to lay hold of it.

Fire GRAPPLING, an instrument which nearly resembles the above, only that it is fitted with strong barbs instead of flukes, and is fixed at the yard arms of a fire-ship, to grapple her adversary,

and set her on fire. The French call this instrument *grapin de brulôt*.

GRATICULÉ, Fr. to divide with a pencil on a sheet of paper, any design or drawing into small equal squares, in order to reduce the original sketch or picture, or to enlarge it by the same process. This word is derived from the Italian, *graticola*, a gridiron.

GRATIFICATION, Fr. In a general acceptation of the term this word meant, among the French, certain rewards which generals gave to the troops, after a severe engagement, in testimony of their valour and good conduct. These rewards were distributed according to rank, and were presented in the king's name. This custom was prevalent in the most ancient times. According to Vegetius, all monies distributed by the Romans, as military gratifications or rewards, were deposited in the ensign or standard-bearer's hands, to be occasionally given to the soldiers. Sometimes the generals gave directions that a certain proportion should be sequestered or put apart. By degrees a fund was collected; and the temptations to desert lost their influence in the superior attachment which every soldier felt to his standard, whose bearer was the trustee of his little property, and to whom he was consequently bound by one of the most powerful ties of the human heart—*self-interest*.

By *gratification* was likewise meant the accumulation of a certain sum, which was deposited for the specific purpose of burying a deceased soldier. We have, indeed, several instances in our own service to prove the wisdom and expediency of a regimental subscription. In the Royal Artillery, gratifications, or voluntary subscriptions, for the relief and support of the wives of deceased officers, are conducted upon the most liberal plan; and in some other corps the serjeants and corporals provide against the accidents of human nature in the same manner.

Gratification signified, among the French, in a more extended sense of the word, a public reward given to a body of soldiers, on the recommendation of a general, for some signal act of bravery in the day of battle. When this happened the soldiers had a certain sum of money distributed amongst them, and the officers received annual pensions.

GRATIFICATION likewise means a certain allowance in money, which is made to prisoners of war.

GRATIFICATION *annuelle*, Fr. a certain pecuniary allowance which was annually given during the French monarchy, to some deserving officer, in order to increase his pay, until an opening occurred by which he might be advanced. No such provision exists in the British service. On the contrary, every officer, rich or poor, has 10 per cent. taken from his pay, when the subsistence is first issued!

GRATIFICATION *de campagne*, Fr. field allowances.

GRATIFIER, Fr. to reward an officer or soldier for having behaved gallantly.

GRATOIR, Fr. an iron instrument which is used to clear out a shell before it is charged.

GRATTER *une fusée*, Fr. to uncap or clear a fuse or shell for the purpose of explosion.

GRAVEURS, Fr. persons employed and paid by the founders of cannon for repairing damaged pieces of artillery: some individual, however, was distinguished by the name of *graveur de l'artillerie*, engraver to the artillery, and was permitted by the Grand Master of the Ordnance to exhibit over his shop-door the arms of the Royal Artillery.

GRAVIR, Fr. to get up a steep place; to scale a wall, &c.

GREAT, (*grand*, Fr.) having any quality in a high degree, as a *great officer*, a great man.

The GREAT, (*les Grands*, Fr.) persons of elevated rank and situation.

GREAT, (*grand*, Fr.) an epithet frequently used to signify large in bulk, or number, as a great army, &c. Important, weighty, as a great victory, &c. It also signifies extent, duration.

GREAT, *fortification*, one of the divisions of the first system of M. de Vauban.—It consists in a fortification whose exterior side is from 185 to 260 toises, or from 370 to 520 yards, and is seldom adopted but towards a river or a marsh.

GREAT *radius*, the whole oblique radius. See FORTIFICATION.

GREAVES, iron boots which were worn with ancient armour; also armour for the legs.

GRECIAN *fire*, (*feu Grégeois*, Fr.) a sort of artificial fire, which insinuates

itself beyond the surface of the sea, and which burns with increased violence, when it mixes with that element. Its directions are contrary to the course of natural fire: for the flames will spread themselves downwards, to the right or left, agreeably to the movement that is given. It is composed or made up of naphtha, sulphur, bitumen, gum and pitch; and it can only be extinguished by vinegar mixed with urine and sand, or with undressed leather or green hides. Some writers assert, that it was invented by an engineer, (belonging to Heliopolis, a town in Syria,) whose name was Callinicus, and who used it with so much skill and effect during a naval engagement, that he destroyed a whole fleet belonging to the enemy, upon which were embarked 30,000 men. This combustible matter has retained the name of Grecian fire, because the Greeks first practised the invention. It is asserted, indeed, that the secret of making Grecian fire, which should be unextinguishable, has been long since lost; we say *unextinguishable*, because the ancients did not know, as we do, how to repress or put out the flame. According to the author of *Œuvres Militaires*, a powerful composition, which could only be extinguished by strong vinegar (a secret unknown to the ancients) might be made of the following combustible materials; viz. pitch, rosin, tallow, camphire, turpentine, salt of nitre, liquid varnish, oil of sulphur, linseed, rock oil, flax, charcoal finely pulverized; the whole of which being boiled together, and before it grows cold, mixed with quick lime, a consistence is formed that will be susceptible of the most subtle and destructive fire.

GREFFFE, Fr. a register-office.

GREFFIER, Fr. clerk; a person who registers the minutes of a court-martial.

GRELE, Fr. hail. It is used figuratively to signify a quantity of missile weapons, balls, &c.; as, *GRELE de Flèches*, shower of arrows.

GRELUCHON, Fr. a little rash fellow; an inconsiderate puppy.

GRENADES, } in the art of war,
GRANADES, or } are hollow balls or
GRENADES, } shells, of iron or
other metal, about $2\frac{1}{2}$ inches diameter, which being filled with fine powder, are set on fire by means of a small fuse, driven into the fuse-hole, made of well seasoned beech wood, and formerly

thrown by the grenadiers into places where men stood thick, and particularly into the trenches and other lodgments made by the enemy. As soon as the composition within the fuse gets to the powder in the grenade, it bursts into many pieces, greatly to the injury of all who happen to be in its way. Grenades were first made about the time shells were invented, (see SHELL,) and first used in 1594. Grenades have unaccountably sunk into disuse; but we are persuaded there is nothing more proper than to have grenades to throw into the midst of the enemy, who have jumped into the ditch. During the siege of Cassel, under the Count de la Lippe, in the campaign of 1762, a young engineer undertook to carry one of the outworks, with a much smaller detachment than had before attempted it without success. He gained his object with ease, from the use of grenades; which is a proof, that they should not be neglected, either in the attack or defence of posts.

GRENADÉ, (*grenade*, Fr.) There is a sort of grenade which is thrown out of a mortar.

It is sometimes used for the purpose of annoying the besieging enemy; in which case quantities are rolled down the rampart into the fossé, or ditch, upon the workmen or miners.

A grenade resembles a bomb or shell, with this only difference, that the grenade has not any handles to it.

There are some grenades, called *grenades à main*, hand-grenades, whose caliber is equal to that of a four-pounder. The charge is from five or six ounces of gunpowder, or thereabouts. They are extremely serviceable on many occasions; but particularly so to throw among the men that are working in the trenches; numbers of whom they must inevitably wound. The vent of a hand-grenade contains about six lines, or half a French inch.

The following proportions belong to grenades, according to their several diameters.

Grenades whose caliber is equal to that of a 33 pounder contain about 6 French inches or more diameter, 8 lines in thickness, and 16 pounds in weight.

Grenades whose caliber is equal to that of a 24 pounder contain 5 French inches 5 lines diameter, 6 lines in thickness, and 12 pounds in weight.

Grenades whose caliber is equal to that of a 16 pounder contain 4 French inches 9 lines diameter, 5 lines in thickness, and 8 pounds in weight.

Those that weigh 6 pounds have 3 French inches 5 lines diameter, and are 5 lines thick.

Those that weigh 5 pounds have 3 French inches $2\frac{1}{4}$ lines diameter, and are 5 lines thick.

Those that weigh 3 pounds have 2 French inches 8 lines diameter, and are $4\frac{1}{2}$ lines thick.

Those that weigh 2 pounds have 2 French inches 4 lines diameter, and are 4 lines thick.

Those that weigh 1 pound have 1 French inch 10 lines diameter, and are 3 lines thick.

Those that weigh three quarters of a pound have 1 French inch 8 lines diameter, and are 3 lines thick.

Those that weigh half a pound have 1 French inch 8 lines diameter, and are 3 lines thick.

Those that weigh a quarter of a pound have 1 French inch 6 lines diameter, and are $2\frac{1}{2}$ lines thick.

These proportions were formerly attended to in the old French service, with occasional deviations from the strict measurement of the lines; as it was supposed to be of little consequence whether the grenades fitted the mortars exactly. It was, indeed, generally thought advisable to adapt their sizes so that they might be thrown out without the least resistance or compression.

Grenades were directed to be thicker at the breech than elsewhere, in proportion to their several diameters.

Theodore D'Urtubie, in his *Manuel de l'Artilleur*, gives the following succinct account of grenades. That writer observes, "that besides bombs or shells, and howitzers, hollow vessels made of iron in globular shapes, which are called grenades, are frequently used; gunpowder is poured in through the cavity, or vent, called in French *lumière*, into which a fuse loaded with a composition of combustible materials is introduced."

There are two sorts of grenades. Those distinguished by the name of *grenades de rempart* are rolled from the top of the parapet into the ditch; they are equal in caliber to that of a 33 and a 16 pounder.

The other species is called *grenades à*

main. These are thrown into the covert way, and the trenches, &c. their caliber is that of a 4-pounder, and they weigh 2 pounds. The ordinary thickness of grenades is 4 lines throughout.

It will occur to our military readers, that by this account a considerable alteration has taken place in the casting of grenades, as the intermediate differences have been consolidated; hand-grenades, instead of being thicker at the breech, are uniformly of the same consistency. It cannot, however be thought superfluous to preserve the original dimensions.

GRENADÉ-roulante, Fr. a species of hand-grenade from 15 to 20 pounds weight, which is thrown into fosses, &c.

GRENADÉS Turques, Fr. Turkish grenades; a sort of grenade which is made by the Turks. Their grenades are extremely defective, and do little execution.

GRENADIER, } a foot soldier,
GRANADIER, } armed with fire-lock, bayonet, and in some services with a hanger: grenadiers carry, besides their arms, a cartridge box that will hold 36 rounds. They are clothed differently from the rest of the battalion they belong to, by wearing a high cap, fronted with a plate of brass, on which the king's arms is generally represented, &c. and a piece of fringed or tufted cloth upon their shoulders, called a wing: in some armies they have more pay than a common soldier. They are always the tallest and stoutest men, consequently the first upon all attacks. Every battalion of foot has generally a company of grenadiers belonging to it, which takes the right of the battalion. Grenadiers were first instituted in France in 1667, by having 4 or 5 to each company; but in the year 1670, they were formed into companies, and in 1685, were first known in the British service.

Horse-GRENADIERS, called by the French, *grenadiers volans*, or flying grenadiers, are such as are mounted on horseback, but fight both on foot and horseback. They were first established in France by Louis XIV. in 1676, and formed into squadrons. We had in England two troops of horse-grenadier guards, the first raised in the year 1693, the command of which was given to lieutenant-general Cholmondeley; the second in 1701, which was commanded by Lord Forbes.

GRENADIER March, a beat on the drum which is practised with the grenadiers, or when the whole line advances to charge an enemy.

GRENADIERS auxiliaires, Fr. auxiliary grenadiers. During a siege, and when a place was closely invested, a certain number of grenadiers were chosen out of the battalions belonging to the trenches, for the purpose of making head against the besieged, whenever they might risk a sally, or insult the works. It is the peculiar duty of these men to stand forward on every occasion, to set fire to the gabions attached to the batteries, and to crush every attempt which might be made by the garrison to annoy the men that were posted in the trenches, &c.

It was customary among the French to increase the number of those grenadiers who went first into danger and did the duty of the trenches. These were called *grenadiers postiches*, or *extra grenadiers*.

GRENADIERS postiches, Fr. a body of men composed of several battalions of militia, which, during the old French monarchy, were trained and exercised for the purpose of augmenting the corps of royal grenadiers—a sort of supplementary corps.

GRENADIERS royaux, Fr. royal grenadiers. A body of troops under the old French government, which consisted of several battalions or regiments of militia, drawn out of the supplementary grenadiers, and all composed of grenadier companies.

GRENADIERS, ou GIBERNES, Fr. the bags or haversacks which hold the grenades. They are worn like powder-flasks.

GRENAILLE, Fr. small shot.

GRENIER, Fr. a granary; a store-house.

GRENIER, Fr. *Mettre en grenier*, to stow any thing loosely.

GRENOIR, Fr. a sieve through which gun-powder is passed, and formed into grains of different sizes. See *GRANOIR*.

GREVE, Fr. armour, or covers for the legs. See *GREAVES*.

GREVE, Fr. sandy strand or shore also a paved side of a river.—Hence *La Place de Grève* in Paris, situated upon the banks of the Seine. During the old government of France, criminals were generally executed on this spot. It was here that the celebrated Madaine de la Motte was exposed and marked upon the

shoulder, for being an accomplice in the fraud practised by certain persons of high rank with a diamond necklace.

GRIFFE, *Fr.* literally a *claw*, but in a military sense, as accepted by the French, an iron instrument made like a hook, and used by miners to pick out the small stones that are incorporated with cement, &c.

GRILLAGE, *ou GRILLE*, *Fr.* a sort of wooden grating which is used in dykes to render the foundation more secure. This is done by placing pieces of timber over one another, called *tangrines* and *traversines*, which see.

GRISONS, a people in alliance with Switzerland. They inhabit the mountainous parts of the Alps in Italy, and at one time supported a well organized army, called the army of the Grisons, under General Macdonald.

GROS, *Fr.* a body of soldiers. The French frequently say—*Un gros de cavalerie*, a body of cavalry; *un gros d'infanterie*, a body of infantry.

Le Gros d'une armée, *Fr.* the main body of an army; that part which remains after any detachments, &c. have been marched away.

Gros-Corps, *Fr.* a large body of armed men, consisting of horse, foot, and artillery, which are encamped, cantoned or in garrison together.

Gros équipages d'une armée, *Fr.* the heavy baggage, consisting of the train of artillery, &c. which belongs to an army.

GROSS, (*gros*, *Fr.*) the whole, before any allowances or deductions are made: hence gross off reckonings.

GROUND, the field or place of action.

GROUND-work, in military architecture. See **FOUNDATION**.

GROUND arms! a word of command on which the soldiers lay down their arms upon the ground.

This word of command has been exploded since the introduction of the new exercise. Soldiers are now ordered to *pile arms*.

To take GROUND. A battalion or company is said to take ground when it extends in any given direction. This term is likewise used in duelling, as—*They took their ground at eight or ten paces from each other*.

GRUE, *Fr.* a crane; a fool. This word is used figuratively, among the French, to signify the attendance of a poor dependent, or of an idle parasite,

on a great man, viz. *Faire le pied de GRUE*, to dance attendance.

GRUE, *Fr.* a crane. It is frequently used in the embarkation and debarkation of cannon, &c. It is also called *gruau*.

GUARANTEE, any person or power who undertakes for the performance of any stipulations agreed on between two other powers or parties.

GUARD, in the military art, is a duty performed by a body of men to secure an army or place from being surprized by an enemy. In garrison the guards are relieved every day; hence it comes that every soldier mounts guard once every 3 or 4 days in time of peace, and much oftener in time of war. See **HONOURS**.

GUARDS also imply the troops kept to guard the king's person, and consist of both horse and foot. This term is now applied to distinguish different corps in the British service, namely:—

Life-GUARDS,

Horse-GUARDS, and

Foot-GUARDS, which collectively are called Household troops. There are also Dragoon Guards, a sort of heavy cavalry; and formerly there were the horse-grenadier guards.

There is likewise a public building, called Horse Guards, close to Whitehall, in which are the several offices belonging to the military department, viz.

The Commander in Chief's.

The Secretary at War.

The Quarter-Master-General, and

The Adjutant-General.

This edifice is so called from the guard being constantly composed of light or heavy horse.

Horse-grenadier GUARDS were divided into two troops, called the 1st and 2d troops of horse-grenadier guards. The first troop was raised in the year 1693, and the command given to lieutenant-general Cholmondeley; the second in 1702, and the command given to Lord Forbes. This corps was reduced in 1788, and the officers, &c. were allowed to retire upon full pay.

Life GUARDS. In consequence of the reduction of the horse grenadier guards, two regiments have been raised for the specific purpose of guarding the metropolis, and of escorting his Majesty. They are called the First and Second Life Guards.

Although the Life Guards generally

do duty about the metropolis, it must be recollected, that they were not raised for that specific purpose only. They are enlisted for general service, like the men of the line or Foot Guards, and no stipulation of any sort is made with them. During the late war, both regiments were, by general orders, in constant readiness to march at a moment's notice; having their tents, camp-equipage, and every article fit for service.

With respect to rank, in addition to what has already been said on that subject, it is necessary to state, that the majors in the Life Guards rank as lieutenant-colonels, and by his Majesty's order, they can only exchange with lieutenant-colonels. The lieutenant-colonels rank as full colonels, and cannot exchange with any one under that rank. For the like reason that rank would not be obtained by an exchange; a major of the Life-Guards cannot exchange with a major in the line, nor a lieutenant-colonel with one of the same rank. This corps distinguished itself at the memorable battle of Waterloo in 1815. See RANK.

Royal Regiment of Horse Guards. See BLUES.

Yeomen of the GUARDS, first raised by Henry VII. in the year 1485: they are a kind of foot guards to the king's person, and are generally called by a nickname—the beef-eaters, a term derived from *Buffet*, Fr. a sideboard. They were anciently 250 men of the first rank under gentry, and of a larger stature than ordinary, each being required to be 6 feet high. At present there are but 100 on constant duty, and 70 more not on duty; and when any one of the 100 dies, his place is supplied out of the 70. They go dressed after the manner of King Henry VIIIth's time. Their first commander, or captain, was the Earl of Oxford.

Foot GUARDS are regiments of foot appointed for the guard of his majesty, and his palace, and for general service. They were raised in the year 1660, when the command of the first was given to Thomas, Lord Wentworth; that of the second to George Duke of Albemarle; and the third to George, Earl of Linlithgow. The second is always called the Coldstream, from a place named Coldstream, a small market town in Berwickshire, where the men were first raised. This regiment in point of

standing is older than the first, having been raised sooner, and commanded by General Monk, from whom it originally took its name, viz. Monk's regiment or corps; and in compliment to whom, it was made one of the three Royal regiments by Charles the second. The first regiment of French guards was raised in the reign of Charles IX. in the year 1563.

Trench GUARD only mounts in the time of a siege, and consists sometimes of 3, 4, or 6 battalions, according to the importance of the siege. This guard must oppose the besieged when they sally out, protect the workmen, &c.

Provost GUARD is always an officer's guard that attends the provost in his rounds, to prevent desertion, marauding, rioting, &c. See PROVOST.

Magazine - GUARD. See STORE-KEEPER.

Advanced GUARD, a party of either horse or foot, or both, that marches before a more considerable body, to give notice of any approaching danger. These guards are either made stronger or weaker, according to the situation or danger that may be apprehended from the enemy, or the country through which an army is to be marched.

Van GUARD. See ADVANCED GUARD.

Artillery GUARD is a detachment from the army to secure the artillery when in the field. Their *corps de garde* is in the front of the park of artillery, and their sentries are dispersed round the same. This is generally a 48-hours guard; and upon a march this guard marches in the front and rear of the artillery, and must be sure to leave nothing behind. If a gun or wagon breaks down, the officer that commands the guard is to leave a sufficient number of men to assist the gunners and mattrasses in raising it.

Artillery quarter - GUARD is frequently a non-commissioned officer's guard from the royal regiment of artillery, whose *corps de garde* is always in the front of their encampment.

Artillery rear - GUARD consists of a corporal and 6 men, posted in the rear of the park.

Advanced or Quarter - GUARD, &c. (commonly called by the French *Corps de Garde*, which also means a guard or detachment, from which sentries are posted in different directions,) are soldiers entrusted with the guard of a post,

under the command of one or more officers. This word also signifies the place where the guard mounts.

Counter-GUARD. See FORTIFICATION.

Grand GUARD. A guard composed of three or four squadrons of horse, commanded by a field officer, posted about a mile, or a mile and a half from the camp on the right and left wings, towards the enemy, for the better security of the camp.

Forage GUARD, a detachment sent out to secure the foragers, who are posted at all places, where either the enemy's party may come to disturb the foragers, or where they may be spread too near the enemy, so as to be in danger of being taken. This guard consists both of horse and foot, who must remain on their posts till the foragers are all come off the ground,

Main GUARD is that from which all other guards are detached. Those who are to mount guard assemble at their respective private parades, and march thence to the general parade in good order, where, after the whole guard is drawn up, the small guards are detached to their respective posts: then the subalterns cast lots for their guards, who are all under the command of the captain of the main guard. This guard mounts in garrison at different hours, according to the pleasure of the governor.

Piquet GUARD, a given number of horse and foot always in readiness in case of an alarm; the horses are generally saddled all the time, and the riders booted.

The foot draw up at the head of the battalion, frequently at the beating of the tat-too; but afterwards return to their tents, where they hold themselves in readiness to march upon any sudden alarm. This guard is to make resistance, in case of an attack, until the army can get ready.

Baggage GUARD is always an officer's guard, who has the care of the baggage on a march. The wagons should be numbered by companies, and follow one another regularly; vigilance and attention in the passage of hollow-ways, woods, and thickets, must be strictly observed by this guard, and flankers should be thrown out.

Ordinary GUARDS, such as are fixed during the campaign, or in garrison towns, and which are relieved daily.

Extraordinary GUARDS, or detachments, such as are only commanded on particular occasions; either for the further security of the camp, to cover the foragers, or for convoys, escorts, or expeditions.

Soldiers are sometimes ordered to take extraordinary guards, as a punishment for slight misconduct.

Quarter GUARD is a small guard, commanded by a subaltern officer, posted in the front of each battalion, at 222 feet before the front of the regiment.

Rear GUARD, that part of the army which brings up the rear on a march, generally composed of all the old grand guards of the camp.

The rear guard of a party is frequently 8 or 10 horse, about 500 paces behind the party. Hence the advanced guard going out upon service, forms the rear guard in a retreat.

Rear GUARD is also a corporal's guard placed in the rear of a regiment, to keep good order in that part of the camp.

Standard GUARD, a small guard under a corporal, which is taken out of each regiment of horse, and mounts on foot in front of each regiment, at the distance of 20 feet from the streets opposite to the main street.

To be upon GUARD. See MOUNTING GUARD.

To relieve GUARD. See RELIEVE.

Turn out the GUARD! A phrase used when it is necessary for the guard to form for the purpose of receiving a general or commanding officer; on the approach of an armed party; on the beat of drum, or sound of trumpet, or any alarm.

Port GUARD, a guard detached from the main guard. All officers on port or detached guards are to send a report, night and morning, to the captain of the main guard, and at all other times when any thing extraordinary occurs. Those who command at the ports are to draw up the bridges, or shut the barriers, on the approach of any body of armed men, of which they are to give notice to the officer of the main guard, and not to suffer any of them to come into the garrison without leave from the governor or commander.

Out-GUARDS. Under this head may not improperly be considered *out-posts,* *advanced piquets,* and *detachments.* In the last printed Regulations it is ob-

served that the duties of outposts are so various as usually to require detailed instructions according to circumstances. The following directions are therein stated to be generally applicable, and must be strictly attended to by the British army, especially if there should be any occasion for it to act upon home service. The duty of out-posts, &c. is chiefly confined to light troops, who are occasionally assisted and relieved by the line. They are always, in that case, under the immediate direction of some general. But when circumstances render it necessary, that this duty should be done from the line, the out-posts fall under the command of the general officers of the day, unless some particular officer be put in orders for that specific command.

All out-guards march off without trumpets sounding, or drums beating. They pay no compliments of any kind; neither do their sentries take any complimentary notice of officers passing near their posts. No guards are to presume to stop any persons coming to camp with provisions, (unless they be particularly ordered so to do), and are on no account to exact or receive any thing for their free passage.

Any officer, trumpeter, or other person, who comes from the enemy's camp, is to be secured by the first guard he arrives at, till the commander in chief's or the general's pleasure is known. When a deserter comes in from the enemy, the officer commanding the post, or guard, at which he arrives, is immediately to send him, under a proper escort, (without permitting him to be delayed or examined, or any questions asked him,) to the officer commanding the outposts, who, after inquiring whether he brings any intelligence immediately relating to his own post, will forward him to head-quarters.

The sentries on the outposts are always to be double. No officers, soldiers, or followers of the camp, are, on any account, to be suffered to pass the outposts, without they are on duty, or present a regular pass from head quarters.

The men on advanced piquets are to carry their provisions with them, ready cooked, when circumstances will permit. The cavalry to carry sufficient forage for the time they are to be out.

It is the duty of officers on all guards to inspect every relief of sentries, both

when they go on and come off their posts; to call the rolls frequently, and by every means in their power to keep the men under their command in the most perfect state of vigilance and preparation.

Officers commanding outposts are to send guides, or orderly men, to the major of brigade of the day, or to the brigade-major of their own brigades, as circumstances require, in order to conduct the new guards, and to carry such orders as may be necessary.

When the army is on a march, the officers must apprise the brigade-majors of the situation of their posts, as soon as they arrive at them. All detachments of brigades, which are ordered to march *immediately*, are to be taken from the piquets, and replaced directly from the line.

Whenever detachments consist of 200 men, or upwards, a surgeon or assistant-surgeon is to be sent from the corps of the officer who commands. On particular duties, the attendance of a surgeon or assistant-surgeon may be requisite with smaller detachments. Detachments of cavalry, of 50 or upwards, will be attended by a farrier.

As soon as an officer commanding an outpost, or advanced piquet, (whether of cavalry or infantry,) arrives on his ground, he must endeavour to make himself master of his situation, by carefully examining, not only the space he actually occupies, but the heights within musket-shot; the roads and paths leading to or near his post, ascertaining their breadth and practicability for cavalry and cannon. He should examine the hollow ways that cover the approach of an enemy: and, in short, consider all the points from which he is most likely to be attacked, either by cavalry or infantry. He will, by these means, be enabled to take measures to prevent the possibility of being surprized; and should he be attacked during the night, from the previous knowledge he has obtained of the ground, he will at once form a just estimate of the nature of the attack, and make his arrangements for defence with promptitude and decision. In order to convey the same alacrity to his men, and to prepare the most unexperienced for sudden and unexpected attacks, an officer upon an outpost will do well to put them upon the alert, by skilfully occasioning false alarms. But

these must not be often repeated, nor when practised be made known to his men as having proceeded from himself; since supineness and inactivity might by degrees be the consequence of such a discovery.

An intelligent officer upon an outpost, even unprovided with entrenching tools, will materially strengthen his post, when the unobserver would remain inactive. A tree felled with judgment; brushwood cut to a certain distance; pointed stakes, about breast high, placed on the points most assailable by an enemy, may be attended with the greatest advantages, and can be effected with the common hatchets which the men carry to cut fire-wood. In short, every impediment which an officer, acting on the defensive, can throw in an enemy's way, ought to be scrupulously attended to. Independently, therefore, of the means which he adopts for the immediate protection of his posts, he must look beyond that point; and as nothing checks the ardour of troops more than an unexpected obstacle, within an hundred yards, more or less, of the place attacked, he must, on his arrival at the outpost, throw up some temporary impediment at that distance.

Mounting GUARDS. It is indispensably necessary that every officer should know how to mount and come off guard. The following is the regulation to be observed on that head in the British service.

All guards are to parade with shouldered arms, and unfixed bayonets, without any intervals between them, the ranks open, and the serjeants with pikes carried. The officers with their swords drawn, and non-commissioned officers commanding guards, to be formed about forty paces in front of the center, in two ranks, facing the line, where they are to receive the old parole and such orders as may be given to them.

The major or commanding officer will give the word of command—

“Officers and non-commissioned officers, outward face!—Take post in front of your respective guards!—Quick, March!”

As soon as they have taken post, fronting their respective guards, the word of command will be given—

“Officers and non-commissioned officers—to your guards—March!—Halt!—Front!”

“Officers and non-commissioned officers, inspect your guards!”

The several officers and non-commissioned officers will then inspect their guards as quick as possible. When there is a captain's guard, each officer is to take a rank, followed by a serjeant.

As soon as the inspection is over, the adjutant will go down the line, and receive the report of each guard; the officers return to their posts; and the major or commanding officer will then—

“Order arms!—Fix bayonets!—and Shoulder!”

When the colours are brought on the parade, the troop is beat; and the drummers call on the right.

The captain will face inwards, and the lieutenant and ensign will face to the right, and march, *quick time*, to the head of the grenadiers. The captain goes to the head of the right of his remaining men. The field officer then orders the grenadiers to close their ranks, and to march off in *quick time*, the lieutenant being three paces advanced in front of his men, and the ensign one. The colours will be received as usual; and the grenadiers, on their arrival on the left flank of the guards, will file at *ordinary time*, through the ranks; the lieutenant, and the colours, in front of the front rank. The guards are to march off at *ordinary time*, and by divisions, taking care, that when they open their ranks, the front rank of each keeps its exact distance from the front rank preceding it. When there are more officers than one belonging to the same guard, the second in rank is to take post and to march past the commanding officer on the parade, at the head of the last division, instead of being in the rear of it. When there is an officer senior to the field officer of the day, on the parade, the guards are to march by and salute him; the field officer of the day, in that case, marching at their head.

GUARD-rooms, (*corps de garde*, Fr.) places where guards are stationed for a given time. Although the following articles should properly come under the heads of furniture and utensils, we do not think them entirely out of place under a more ostensible point of observation.

Cavalry and infantry **GUARD-rooms** are allowed a water-bucket, candlestick, tin can for beer, and drinking-horns; they are also allowed fire-irons and coal

tray, from the 1st of September to the 1st of May, when they are to be taken into store.

N. B. The rooms of the quarter-masters and serjeants of cavalry, and the serjeant-major and quarter-master serjeant of infantry, to be furnished with the necessary bedding and utensils in the same manner as is allowed to the soldier's rooms. For a more specific account, see the General Regulations.

GUARD-house, (*corps de garde*, Fr.) a place covered in, and generally built at the gate of a fortified town, or close to the entrance of a barrack, for the convenience of soldiers who mount guard. This sort of building is also found in the principal squares of fortified towns.

GUARD in fencing implies a posture proper to defend the body from the sword of the antagonist.

The word *guard* is seldom applied among small swordsmen to any position but those of *carte* and *tierce*; the other motions of defence are styled *parades*. See **FENCING**.

GUARDS of the broad sword. The positions of defence adopted with that weapon are generally termed *guards*, and may be comprized under the *inside-guard*, *half-circle guard*, *hanging guard*, *half-hanging guard*, *medium guard*, *outside guard*, *St. George's guard*, and *spar-droon guard*. See **BROAD-SWORD**.

Prepare to GUARD, in the cavalry sword exercise, is performed by bringing the extremity of the sword-hilt up to the pit of the stomach, with the back of the hand outwards; the blade of the sword to be carried perpendicularly, with the flat towards the face. From this position the *guard* is taken by darting the sword hand smartly forwards towards the left ear of the antagonist.

GUARD, in the cavalry sword exercise, is used to denote one particular position, which consists in holding the sabre nearly horizontal across the face, the point rather higher than the hilt, the sword-hand directed towards the left ear of the antagonist. Although this be peculiarly denominated *guard*, yet it is not to be considered as a position calculated to meet every sort of attack, or an eligible position to charge an enemy; but as the central point from which the requisite change for attack or defence may be effected. The other positions of defence

in the cavalry exercise are styled **PROTECTS**; which see.

GUARDSHIP, a King's ship to guard the coast.

GUASTADOURS, Turkish pioneers. Armenians and Greeks are generally employed in the Turkish armies, to do the fatigue-work that is necessary for the formation of a camp, or for conducting a siege.

GUDDA, an Indian term for a small fort erected upon a hill or eminence.

GUDGE, an Indian measure 24 inches long.

GUELPHIC Order. The royal Hanoverian Guelphic Order was created in December, 1815, as a reward for military services. Major-Gen. Sir Benjamin Blomfield, of the Royal Artillery, was the first Englishman who received this honorary distinction. See **ORDER**.

GUERDON, (*guerdon*, Fr.) a reward; a recompence.

GUÉRÎTE, *Fr.* This is also called *Echaugnette*, sentry box, small turret. In fortified towns there are several small turrets of this denomination, which are sometimes made of wood, and sometimes built with stone. They are generally fixed on the acute points of bastions, and sentinels are posted within them for the purpose of watching the ditch, and of preventing any surprize in that quarter.

Those used upon the continent, particularly in France, contain from 3 to 4 French feet diameter within, and are 7 or 8 feet high. Their general shape, or figure, is round, pentagonal, hexagonal, &c.

There are apertures made on every side, through which the sentinel can observe every thing that passes in the ditch. A path about 2 or 3 feet broad is cut through the parapet and the banquette, up to the entrance of the *guêrite*. Wooden *guêrites* are generally used where the rampart is lined with turf only.

The spots best adapted for *guêrites* are at the flanked angles of bastions, and at the angles of epaulements. Sometimes, indeed, they are placed in the centre of the curtains. They must jut out at the point of the angle, and the ground floor should be upon a line with the cordon, which is a sort of fillet or trace that marks the separation of the rampart from the parapet. They must

likewise project far enough to afford the sentinel who is within, a full view of the faces, the flanks and the curtains, and, if possible, a thorough command of all the ditches.

Gagner la GUERITE, Fr. a familiar phrase to express the escape of a person.

Enfiler la GUERITE, Fr. to avoid the pursuit of another.

GUERRE, *Fr.* war; which see.

The word *guerre* is indeed so frequently used among the French, that we shall not be thought too minute in specifying some general terms under that head. The principal ones are:

GUERRE civile, Fr. See CIVIL War.

Homme de GUERRE, Fr. a military man.

Nom de GUERRE, Fr. a borrowed name; an alias.

Petite GUERRE, Fr. a harassing species of warfare; a contest for plunder.

Place de GUERRE, Fr. a fortified town or place.

Faire la GUERRE à l'ail, Fr. in a figurative sense, signifies to watch steadfastly, and without taking the eye from a particular object.

A la guerre comme à la GUERRE, a familiar expression among the French, which implies that things must be taken as they come.

La guerre nourrit la GUERRE, Fr. figuratively means, that an army always subsists at the expense of the country in which it lies.

GUERRE *de secours, Fr.* war of alliance or confederacy. This term is more especially applicable to that species of contest in which neighbouring princes or countries embark to defend those, with whom they are in alliance, against the aggression or exorbitant demands of a conqueror.

If such a contest or war be entered into upon the faith of settled treaties, the parties are bound not only to supply the stipulated number of soldiers, but even to augment their quota, if necessity should require, and sometimes to march in person against the common enemy.

If the object be to prevent any adjacent country from falling into the hands of a conqueror, who might afterwards molest the contracting party, the latter should observe many precautions before he withdraws from the contest; the principal one is to demand the possession of some strong places upon the frontiers, to prevent the inhabitants of

the country that is attacked from making a separate peace.

The general selected to command an auxiliary army must be endued with wisdom and foresight. He must be wise and intelligent in order to preserve discipline and good order among his troops: and have foresight to provide for the wants of his army in a strange country, and to see that the men are not sent more into action than they ought, and that nothing is done in the prince's cabinet contrary to the interest of his employer.

GUERRE de montagne, Fr. a war which is chiefly carried on in a mountainous part of the country. This species of warfare is extremely hazardous, as it cannot be pursued without a thorough knowledge of the country, and by means of able stratagems. Marshal Saxe, in his *Rêveries*, lays it down as a rule, that no army or detachment must venture into passes or narrow ways, without having first secured the eminences round them: and if the enemy should defend the gorges or outlets, false attacks must be resorted to, in order to divert his attention from a real one which is made against a weak quarter. It frequently happens that byeways are found out, which have escaped the enemy's observation, and through which detached bodies may penetrate for the purpose of turning his flanks. In a *guerre de montagne*, or mountain-contest, it is essentially necessary, that the advancing body should keep a regular and safe communication with its rear, as well to secure a retreat if necessary, as to have a free intercourse with its convoys.

GUERRE de chicane, Fr. See WAR.

GUERRE Sainte, Fr. a romantic expedition which was made by the Christians against the infidels in Palestine, for the purpose of reconquering the Holy Land; whence it was called holy war, or *guerre sainte*. See CRUSADE.

Foudre de GUERRE, Fr. a figurative expression among the French, to mark the character of a man who has distinguished himself in battle, and is acknowledged to possess a superior degree of valour.

Flambeau de la GUERRE, Fr. the torch of war. Any person who causes war to be carried on with violence and animosity is so called.

Aller à la petite GUERRE, Fr. to go

out in detached parties for the direct purpose of plundering an enemy's country.

Faire bonne GUERRE, Fr. to carry on hostilities with as much humanity as the laws of war will permit.

Faire bonne GUERRE à quelqu'un, Fr. to treat with a man decently, but vigorously, on matters that require explanation and final arrangement.

GUERRE et pitié ne s'accordent pas ensemble, a French proverb, signifying that war and commiseration seldom go hand in hand.

GUERRE juste, Fr. a just and necessary war, generally caused by the aggression of a rival nation. Hence the contest with France has been uniformly called by the British ministers *une guerre juste*, a just and necessary war on the part of England, because they maintain, that the French revolutionists in 1792 were the first aggressors; the French, on the other hand, assert the reverse. With respect to the late contest, we can only say, that both countries must severely feel the effects of national animosity and competition, before the full blessings of peace can be mutually enjoyed.

GUERRE injuste, Fr. an unjust war.

Longue GUERRE, Fr. a long war.

GUERRE étrangère, Fr. a foreign war.

GUERRE d'outré mer, Fr. a war beyond the seas.

Gens de GUERRE, Fr. See GENS.

Le métier de la GUERRE, Fr. the profession of arms. Hence it is figuratively said, *les Français sont au fait du métier de la guerre de terre, et les Anglais sont au fait du métier de la guerre de mer.* Frenchmen are at the top of the profession of arms on land, and Englishmen are unrivalled at sea. The late contest, particularly at Waterloo, has proved, that the inhabitants of the British empire are as unrivalled on shore, as their seafaring brethren are upon the ocean.

Les lois de la GUERRE, Fr. the laws of war.

Les droits de la GUERRE, Fr. the rights of war.

Ruse de GUERRE, Fr. a warlike stratagem.

En temps de GUERRE, Fr. in time of war.

Munitions de GUERRE et de bouche, Fr. warlike stores and provisions.

Préparatifs de GUERRE, Fr. warlike preparations.

Place de GUERRE, Fr. a fortified place.

Machine de GUERRE, Fr. a warlike instrument or machine.

Conseil de GUERRE, Fr. a council of war. It likewise means a court-martial.

C'est un grand homme de GUERRE, Fr. he is a warlike character.

Les malheurs de la GUERRE, Fr. the evils, or misfortunes, of war.

Avoir GUERRE, Fr. to commence hostilities.

Avoir la GUERRE, Fr. to be in a state of warfare.

Les fruits de la GUERRE, Fr. the fruits or consequences of war.

Entreprendre la GUERRE, Fr. to enter into a war.

Déclarer la GUERRE, Fr. to declare war.

Soutenir la GUERRE, Fr. to maintain the war.

Entretenir la GUERRE, Fr. to support the war.

Ces deux princes sont en GUERRE, Fr. these two potentates are at war.

Etre en GUERRE ouverte, Fr. to be at open war.

Faire la GUERRE, Fr. to go upon active service. The French say, by way of interrogation, *Monsieur a fait la guerre?* You have been upon service, sir?

Se faire la GUERRE, Fr. to make war with one another.

Aller à la GUERRE, Fr. to go to war.

Allumer la GUERRE dans un état, Fr. to light up a war, or excite troubles in any state or country.

Porter la GUERRE dans le cœur d'un pays, Fr. to carry war into the heart of a country.

GUERRE entre les puissances égales, Fr. war between two powers which are nearly equal in point of strength, and do not act with auxiliary troops.

Qui terre a, GUERRE a, a French proverb, signifying, every man who has landed property is exposed to feuds and litigation.

GUERRES du Roi, Fr. wars entered into by the old kings of France against their powerful vassals. Before the consolidation of the French monarchy, as it remained until the revolution in 1789, &c. a distinction was made between what were called the King's forces, and those belonging to the state; so that whenever a difference occurred between the sovereign, and the powerful Seigneurs or Lords in the provinces, the contest was

called *guerre du Roi*, or the King's war. On these occasions the latter could only force his immediate dependants to accompany him; so that frequently the forces of the insurgents were more numerous than those of the King. Louis, surnamed *Le Gros*, was more than three years in continual warfare, before he could subdue *Bouchard de Montmorenci*, whom three other great lords had joined. The war with the barons, amongst us, was of this description.

GUERRIER, *Fr.* warrior.

Un grand GUERRIER, *Fr.* a great warrior.

Les plus fameux GUERRIERS, the most celebrated warriors.

It is also used as a substantive in the feminine gender, when speaking of an Amazon, as, *la vaillante guerrière*.

GUERRIER, *Fr.* as an adjective, is variously used, viz. warlike, any thing appertaining to war.

Actions GUERRIÈRES, *Fr.* warlike actions.

Travaux GUERRIERS, *Fr.* works of a military or warlike nature.

Exploits GUERRIERS, *Fr.* warlike exploits.

Courage GUERRIER, *Fr.* a warlike disposition.

Humeur GUERRIÈRE, *Fr.* a warlike spirit or temper.

Nation GUERRIÈRE, *Fr.* a warlike nation.

Il a l'air GUERRIER, *Fr.* he has a warlike look or appearance.

Il a lu mine GUERRIÈRE, *Fr.* he has a warlike aspect.

GUERRILLAS, Spanish buccaneers; also armed bodies of men who were very active against the French during the invasion of the peninsula.

GUERROYER, *Fr.* to make war.

GUERROYEUR, *Fr.* a warrior.

GUET, *Fr.* This term was particularly attached to those persons belonging to the French body guards, that did duty over the king's person during the night.

GUET, *Fr.* in a general military sense, signifies rounds, or those duties of a soldier, or patrolling party, which are prescribed for the security of a town, &c. and to prevent surprizes.

GUET de la mer, *Fr.* the watch which the inhabitants belonging to parishes, towns, or fortified places, situated on the sea coast, were bound to keep for their security. On occasions of this sort, the signal of alarm was made during the

day by smoke, and during the night by lighted combustibles.

Faire le GUET au haut du beffroi, *Fr.* to be put upon duty, or stand watch at the top of a church belfry.

Asscoir le GUET, *Fr.* to set the watch.

Poser le GUET, *Fr.* to post the watch.

Etre au GUET, *Fr.* to be upon the watch.

GUET à pied, *Fr.* foot patrol.

GUET à cheval, *Fr.* horse patrol.

Ce sont les bourgeois qui font le GUET, *Fr.* the inhabitants of the place go the rounds.

Cri au GUET, *Fr.* the hue and cry.

Le GUET vient de passer, *Fr.* the patrol has just passed.

Avoir l'œil au GUET, *Fr.* to be minutely watchful and observing. It also signifies to be listening for the direct purpose of acquiring information.

Maison de GUET, *Fr.* round-house.

Mot du GUET, *Fr.* watch-word.

Donner le mot de GUET, *Fr.* to give the watch-word.

Se donner le mot de GUET, *Fr.* to understand one another. In familiar intercourse it means likewise to play booty together.

GUET-à-peus, *Fr.* ambush; any premeditated design to injure another in a clandestine manner. The French frequently use this expression; as,

Ce n'est point une rencontre ni un duel, c'est un GUET-à-peus, *Fr.* it is neither an accidental meeting nor a duel, it is a downright plot to murder him.

Droit du GUET et garde, *Fr.* a right which was formerly enjoyed in France, by some lords of the manor, and by which they were authorized to call upon their vassals to watch and patrol for the security of their castles.

GUETRE, *Fr.* See **GAITER**.

Tirez vos GUETRES, *Fr.* Go about your business; a familiar phrase which is used among the French when a person is discarded, or turned away in a summary manner. It in some degree corresponds with our expression, *To the right about*.

Il y a laissé ses GUETRES, *Fr.* a figurative expression among French soldiers, signifying, that a person died in such a place.

GUETRER, *Fr.* to put on gaiters.

GUETTE, *Fr.* a name given by the French carpenters to a stake that is fixed sideways, and which serves for various purposes.

GUETTER, *Fr.* a familiar phrase, signifying to watch the motions of any body, for the purpose of circumvention or surprize.

GUETTER likewise means to watch for a fit opportunity to get access to any person.

Il y a des sergens qui le GUETTENT, *Fr.* there are serjeants who watch him closely.

Le soldat GUETTOIT son colonel pour lui présenter un placet, *Fr.* the soldier watched his colonel, in order to lay his petition before him.

GUETTEUR *de chemin*, *Fr.* a footpad; a fellow that lies lurking.

Fort en GUEULE, *Fr.* hard-mouthed. The French use the term figuratively, as *un homme fort en gueule*, a hard-mouthed fellow, a noisy, vociferous man.

N'avoir que de la GUEULE, *Fr.* to be all talk.

GUEUSE, *Fr.* a rough piece of iron, which has been melted, and has not gone through any further process, or purification.

GUICHET, *Fr.* the inside shutter of a window; a wicket, a small door or outlet, which is made in the gates of fortified towns. It is generally four feet high and two broad; so that a man must stoop to get through. In 1669, the high town of the city of Albuquerque in Spain escaped being surprized by means of one of these outlets. In garrison towns, the guichet is left open for the space of one quarter of an hour after the retreat, in order to give the inhabitants time to enter.

Guichet d'une porte d'écluse, *Fr.* an opening which is made in the gate of a sluice, and which closes by means of a flood-gate. It serves to let in water when wanted.

GUICHETIER, *Fr.* a turn-key.

GUIDE, *Fr.* a rein.

GUIDES, (*guides*, *Fr.*) are generally the country people in the neighbourhood where an army encamps; they are to give intelligence concerning the country, the roads by which to march, and the route by which the enemy may approach. Guides should be faithful, because in giving false intelligence, or guiding the troops wrong, they may greatly endanger the army. Several guides are requisite, as every corps that marches by night should have one at least. There is sometimes a captain or chief of the guides, who should be a man of intelli-

gence, active, and attentive to the diligence and fidelity of his people. He should always have a sufficient number with him, and who are well acquainted with the country.

In time of war, particularly in the seat of it, the guides invariably accompany head-quarters, and a certain number is allotted not only to general officers, but to all detachments made from the main body, either for the purpose of combating the advanced posts of an enemy, of protecting escorts, or securing convoys. Guides, in an army, may be justly called its principal outsets. They are to a body of men what the eyes are to the human frame. They cannot, however, be too jealously watched.

Corps des GUIDES, *Fr.* the corps of guides. This body was originally formed in France in the year 1756, and consisted of one captain, one 1st lieutenant, one 2d lieutenant, 2 serjeants, 2 corporals, one anspessade, and 20 privates, called *fusiliers-guides*. — Twelve out of the twenty-five (which was the effective number) were mounted. These consisted of one serjeant, one corporal, and ten fusiliers. Their particular duty was to carry orders that required dispatch; and on this account they were always attached to head-quarters. The twelve fusileers were mounted on small active horses, about four French feet, five or six inches high. They were supplied with a saddle, blue saddle cloth trimmed with white, holster-caps the same; and they were armed with a fusil and cut-and-thrust bayonet, a pistol, sabre, with a cartouch-box, containing 20 rounds. They wore half-boots, or bottines. Each man carried, moreover, one field utensil out of the twelve belonging to the company. These utensils consisted of four hatchets, four shovels, and four pick-axes. The thirteen *fusiliers guides* on foot were armed with a fusil six inches shorter than the regular musket, with a blade bayonet, and a cartouch box holding twenty rounds of ball-cartridges. Their uniform was a blue coat, waistcoat, and breeches, with flat white metal buttons. The hat was bordered with common white lace for the soldiers, and of a superior quality for the serjeants; which latter had three silver brandenbourgs hanging from each shoulder. The corporals had three made of white worsted, and the anspessade two ditto. In 1802

a very fine body of highly dressed soldiers, of a middle stature, was kept up by Bonaparte. They were called *Corps des Guides*.

GUIDON, Fr. See **SIGHT**.

GUIDON, in ancient military history, the name of a sort of standard carried by the king's life-guards; it is broad at one extreme and almost pointed at the other, and slit or divided into two.

GUIDON also implies the officer who carries the standard.

GUIDONS, in the French service, were exclusively attached to the *Gendarmerie*; and among them the word meant, as with us, not only the standard but likewise the officer who carried it.

GUILLAUME, Fr. a tool somewhat like a plane, which is used by carpenters, and of which there are several sorts, according to the nature of the work.

GUILLEDIN, Fr. a gelding, an ambler, a nag.

GUILLOTINE, Fr. a decapitating machine, which was supposed to have been invented by one Dr. Guillotine, during the paroxysm of the French revolution in 1792, 1793, &c. and who was himself beheaded under it; but which is only an improvement on the maiden of Halifax in Yorkshire. The difference consisted in the blade of the latter being parallel with the neck, and the former falling upon it in a diagonal direction; that is, one literally chopped off, and the other cut or sliced away the head. Louis XVI. King of France, together with his Queen and sister were executed under the guillotine in 1793. It ceased to be used under the reign of Napoleon I.

GUILLOTINE ambulante, Fr. a portable guillotine; a term given to the use which was made of this formidable machine during the reign of Robespierre, when the French army was constantly followed by commissioners who had the power of life and death.

GUILTY, justly chargeable with a crime; not innocent.

GUINDAS, Fr. All machines which by measure of a wheel and its axis serve to raise heavy loads are so called by the French.

GUINDER, Fr. to draw up any weight. Hence the term *guindage*, which is applied to the movement of loads that are raised and let down.

GUINEA, (guinée, Fr.) a gold coin valued at 21 shillings, well known in

Europe, and particularly so in Great Britain and Ireland; once in plentiful circulation, but of late years a very scarce commodity. It came first into circulation in the reign of Charles II. and was called a Guinea because it was coined out of gold brought from the coast of Guinea.

Marching GUINEA, a sum of money which is given to every soldier in the British militia when he first marches out of the county. This money is paid to the captains of companies by the agent of the regiment, who receives the same, upon their signatures, from the receiver general of the county or riding.

Expiration GUINEA, the sum of money which is paid to a militia-man when the period for which he was enlisted expires. This money ought more properly to be called the *renewal*, as it is literally given for duties to be performed; or rather for a continuation, instead of expiration of service. This is also paid by the captains of companies, who receive it from the several counties.

GUINGUETTE, Fr. a public-house, such as is generally found in the skirts of towns.

GUISARMERS, Fr. a body of free archers, or bowmen, who took their name from an offensive weapon called *guisarme* or *jusarme*, somewhat similar to the *voulgoue*, a sort of javelin which was used in hunting the wild boar. Its length was equal to that of the halbert, and it had a broad piece of sharp iron fixed to one end.

GULLY, any hollow which has been made by running water. Ambuscades are frequently laid in such places.

GULLYHOLE, the hole where the gutters empty themselves into the subterraneous sewer.

GUN, a fire-arm, or weapon of offence, which forcibly discharges a bullet through a cylindrical barrel by means of gunpowder. The term is chiefly applied to cannon.

Somnerus derives gun from *mangon*, a warlike machine which was used before the invention of guns. He establishes his derivation by taking away the first syllable.

Curricule GUNS are small pieces of ordnance, mounted upon carriages of two wheels, and drawn by two horses. The artillery-man is mounted on a box, and the whole can be moved forward into action with astonishing rapidity.—

The tumbrils belonging to curricule guns carry 60 rounds of ball cartridges. Great expectations were at one time formed of this piece of ordnance, but it is not used at present in the British service.

Great GUN. See CANNON.

Evening GUN } is generally a 6 or
Morning GUN } 12 pounder, which is fired every night about sun-set, and every morning at sun-rise, to give notice to the drums and trumpets of the army to beat and sound the retreat and the réveillé.

GUN-fire, the time at which the morning or evening gun is fired.

GUN-boat, a boat which is generally made with a flat bottom, and used to form a kind of floating battery, to cover the landing of troops.

GUNNEL, or } the lower part of any
GUNWALE, } part where ordnance is planted. It likewise means that beam in a pontoon which supports the main waste.

GUNNER, in the artillery, is the lowest rank of private men in the royal regiment of artillery.

Master GUNNER, a person selected from the non-commissioned officers of artillery from length of service and good character. In most of the forts and garrisons of Great Britain master-gunners are stationed. Their duties are to take charge of the ordnance, ammunition, and stores, and account regularly to the Board of Ordnance for all expenditures. The duties of the gunners on board His Majesty's ships are of a similar nature. Gunners in the navy are usually made from quarter-masters or foremast men.

GUNNER-DRIVERS. See DRIVERS.

GUNNERS. All gunners under the ordnance are within the meaning of the Mutiny Act. See Section 72.

GUNNERY, the art of determining the motions of bodies shot from cannon, mortars, howitzers, &c. See the article PROJECTILE.

The late ingenious Mr. Robins, having concluded from experiments that the force of fired gunpowder, at the instant of its explosion, is the same with that of an elastic fluid of a thousand times the density of common air, and that the elasticity of this fluid, like that of the air, is proportional to its density, proposes the following problem :

The dimensions of any piece of artillery, the weight of its ball, and the quantity of its charge being given ; to determine the velocity which the shot will acquire from the explosion, supposing the elasticity or force of the powder, at the first instant of its firing, to be given.

In the solution of this important problem, he assumes the two following principles: 1. That the action of the powder on the shot ceases as soon as it is forced out of the piece. 2. That all the powder of the charge is fired, and converted into an elastic fluid, before the shot is sensibly moved from its place.

These assumptions, and the conclusions above-mentioned, make the action of fired gunpowder to be entirely similar to that of air condensed a thousand times : and thence it will not be difficult to determine the velocity of the shot arising from the explosion : for the force of the fired powder diminishing in proportion to its expansion, and ceasing when it is forced out of the piece ; the total action of the powder may be represented by the area of a curve, the base of which represents the space through which the ball is accelerated, while the ordinates represent the force of the powder at every point of that space ; and these ordinates being in reciprocal proportion to their distance from the breech of the gun, because when the spaces occupied by the fired powder, are as 1, 2, 3, 4, &c. the ordinates representing it will be as $\frac{1}{1}$, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, &c. it appears that the curve will be a common parabola, and that the area intercepted between is an asymptote ; and that the two ordinates representing the force of the powder at the first explosion, and at the muzzle of the piece, will represent the total action of the powder on the shot ; but if the shot were urged through the same space by an uniform force equal to its gravity, the total action of this force would be represented by a rectangle, the base of which would be the base of the curve or intercepted portion of the asymptote above-mentioned, and the height of which would represent the uniform force of gravity. Hence the square of the velocity of the shot resulting from gravity is given, being the velocity it would acquire from a height equal to the space through which the powder accelerates it ; and the proportion between the hyper-

bola and the rectangle is given from the analogy between the hyperbolic paces and logarithms; therefore the velocity of the ball arising from the action of the fired gunpowder will be given.

Mr. Robins has also given us an ingenious way of determining, by experiments, the velocity with which any shot moves at any distance of the piece from which it is discharged.

This may be effected by means of a pendulum made of iron, having a broad part at bottom, covered with a thick piece of wood, which is fastened to the iron by screws; then having a machine like a common artillery gin, on two of its poles towards their tops are screwed sockets, on which the pendulum is hung by means of a cross piece, which becomes its axis of suspension, and on which it should vibrate with great freedom. Somewhat lower than the bottom of the pendulum there should be a brace, joining to which the pendulum is suspended; and to this brace there is fastened a contrivance made with two edges of steel, something in the manner of a drawing pen; the strength with which these edges press on each other, being diminished or increased at pleasure by means of a screw. To the bottom of the pendulum should be fastened a narrow ribbon, which, passing between the steel edges, may hang loosely down by means of an opening cut in the lower piece of steel.

The instrument being thus fitted, if the weight of the pendulum, the respective distances of its center of gravity, and of its center of oscillation from the axis of suspension, be ascertained, it may thence be found what motion will be communicated to this pendulum by the percussion of a body of a known weight, moving with a known degree of velocity, and striking it into a given point; that is, if the pendulum be supposed to rest before the percussor, it will be known what vibration it should make in consequence of such a blow; and if the pendulum, being at rest, is struck by a body of a known weight, and the vibration which the pendulum makes after the stroke is known, the velocity of the striking body may thence be determined.

Now the extent of the vibration made by the pendulum may be increased by the ribbon: for if the pressure of the steel edges on the ribbon be regulated

by the screw, so as to be free and easy, though with some minute resistance to hinder it from slipping itself; then setting the pendulum at rest, let the part of the ribbon between the pendulum and the steel edges be drawn straight, but not strained, and fixing a pin in the part of the ribbon contiguous to the edges, the pendulum, swinging back by means of the impulse of the ball, will draw out the ribbon to the just extent of its vibration, which will be determined by the interval on the ribbon between the edges and the space of the pin.

The computation by which the velocity of the shot is determined from the vibration of the pendulum, after the stroke, is founded on this principle of mechanics: that if a body in motion strikes another at rest, and they are not separated after the stroke, but move on with one common motion, then that common motion is equal to the motion with which the first body moved before the stroke; whence, if that common motion and the masses of the two bodies are known, the motion of the first body before the stroke is thence determined. On this principle it follows, that the velocity of a shot may be diminished in any given ratio, by its being made to impinge on a body of weight properly proportioned to it.

It is to be observed, that the length to which the ribbon is drawn, is always near the chord of the arc described by the ascent; it being so placed as to differ insensibly from those chords which must frequently occur: and these chords are known to be in the proportion of the velocities of the pendulum acquired from the stroke. Hence it follows, that the proportion between the length of the ribbon, drawn out at different times, will be the same with that of the velocities of the impinging shots.

Now from the computations delivered by Mr. Robins, it appears, that if the velocity of the bullet was 1641 feet in one second of time, when the chord of the arc described by the ascent of the pendulum, in consequence of the blow, was $17\frac{1}{4}$ inches, the proportion of the velocity with which the bullets impinge, to the known velocity of 1641 feet in one second, will be determined.

Mr. Robins is (till of late) the only author who has attempted to ascertain the velocity of a military projectile by

experiment; yet his conclusions seem to be unsatisfactory. Perhaps he was too much attached to the forming of a system, and warped his experiments a little in favour of it. The resisting power he assigns to the air is probably too great; and his notion of the tripling of this power when the velocity of the projectile exceeds that of sound, seems to be rather an ingenious conceit than a well-grounded fact. However, experiment alone must decide these points.

The great importance of the art of gunnery is the reason that we distinguish it from the doctrine of projectiles in general; for in truth it is no more than an application of those laws which all bodies observe when cast into the air, to such as are put in motion by the explosion of guns, or other engines of that sort: and it matters not whether we talk of projectiles in general, or of such only as belong to gunnery; for, from the moment the force is impressed, all distinction, with regard to the power which put the body first in motion is lost, and it can only be considered as a simple projectile.

Every body cast into the air moves under the influence of two distinct forces. By the one it is carried forward with an equal motion, and describes equal spaces in equal times, in the direction in which it was projected; and by the other, which we call gravity, is drawn downwards in lines perpendicular to the surface of the earth, with a motion continually accelerated, or whose velocity is always increasing. If either of these forces were destroyed, the body would move according to the direction of the other alone, so far as its motion was not hindered by the interposition of other bodies; but as both continue to act, the course of the projectile must be determined by a power compounded of those two forces.

Definitions of GUNNERY. 1. The impetus at any point of the curve is the perpendicular height to which a projectile could ascend, by the force it has at that point; or the perpendicular height from which a body must fall to acquire the velocity it has at that point.

2. The diameter to any point of the curve is a line drawn through that point perpendicularly to the horizon.

3. The points where the diameters cut

the curve are called vertexes to these diameters.

4. The axis is that diameter which cuts the curve in its highest or principal vertex, and is perpendicular to the tangent to that point or vertex.

5. The ordinates to any diameter are lines drawn parallel to the tangent at the point where that diameter cuts the curve, and intercepted between the diameter and curve.

6. The absciss is that part of the diameter which is intercepted between the ordinate and the curve.

7. The altitude of the curve is the perpendicular height of the principal vertex above the horizon.

8. The amplitude, random, or range, is the distance between the point of projection and the object aimed at.

9. The elevation of the piece is the angle its axis (produced) makes with the horizon, and the axis itself is called the direction.

10. The horizontal distance to which a mortar, elevated to a given angle, and loaded with a given quantity of powder, throws a shell of a given weight, is called the range of that mortar, with that charge and elevation.

11. The inclination of a plane is the angle it makes with the horizon either above or below.

12. The directrix is the line of motion, along which the describing line or surface is carried in the genesis of any plane or solid figure.

Laws of motion in GUNNERY.

1. Spaces equally run through with equal velocities, are to one another as the times in which they are run through, and conversely.

2. Spaces equally run through in the same or equal times, are to one another as the velocities with which they are run through, and conversely.

3. Spaces run through are in the same proportion to one another, as their times multiplied into their velocities, and conversely.

4. A body urged by two distant forces in two different directions, will in any given time be found at the point where two lines meet that are drawn parallel to these directions, and through the points in which the body could have moved to the same time, had these forces acted separately.

5. The velocities of bodies, which by

the action of gravity began to fall from the rest, are in the same proportion as the times from the beginning of their falling.

6. The spaces run through by the descent of a body which began to fall from rest, are as the squares of the times from the beginning of the fall.

7. The motion of a military projectile is in a curve.

GUN-POWDER, (*poudre à canon*, Fr.) a composition of saltpetre, sulphur, and charcoal, well mixed together, and granulated, which easily takes fire, and expands with amazing force, being one of the strongest propellants known.

Invention of GUN-POWDER is usually ascribed to one Bartholdus Schwartz, a German monk, who discovered it about the year 1320; it is said to have been first used in war by the Venetians against the Genoese in the year 1380. Thevel says its inventor was one Constantine Anelzen, a monk of Friburg. Peter Mexia says it was first used by Alphonsus XI. king of Castile, in the year 1242. Duncange adds, that there is mention made of this powder in the registers of the chambers of accounts of France, so early as the year 1338; and our countryman, friar Bacon, expressly mentions the composition in his treatise *De Nullitate Magie*, published at Oxford in the year 1216. Some indeed are of opinion, that the Arabians or the latter Greeks were the first inventors of gun-powder about the middle ages of our era; because its Arabic name is said to be expressive of its explosive quality. Considerable improvements have lately been made in the composition of gun-powder by the Chinese.

Method of making GUN-POWDER. Take saltpetre, sulphur, and charcoal; reduce these to a fine powder, and continue to beat them for some time in a stone mortar with a wooden pestle, wetting the mixture occasionally with water, so as to form the whole into an uniform paste, which is afterwards reduced to grains, by passing it through a sieve; and in this form, being carefully dried, it becomes the common gun-powder. For greater quantities mills are used, by means of which more work may be performed in one day than a man can do in a hundred. See **MILL**.

This destructive powder is composed of 75 parts nitre, 9 sulphur, and 16 of charcoal in the 100.

How to refine Saltpetre. Put into a copper, or any other vessel, 100 weight of rough nitre, with about 14 gallons of clean water, and let it boil gently for half an hour, and as it boils take off the scum; then stir it about in the copper, and before it settles, put it into your filtering bags, which must be hung on a rack, with glazed earthen pans under them, in which sticks must be laid across for the crystals to adhere to: it must stand in the pans for 2 or 3 days to shoot: then take out the crystals and let them dry. The water that remains in the pans must be boiled again for an hour, and strained into the pans as before, and the saltpetre will be quite clear and transparent; if not, it wants more refining; to effect which, proceed as usual, till it is well cleansed of all its earthy parts.

How to pulverize Saltpetre. Take a copper kettle whose bottom must be spherical, and put into it 14lb. of refined saltpetre, with 2 quarts or 5 pints of clean water; then put the kettle on a slow fire: and when the saltpetre is dissolved, if any impurities arise, skim them off; and keep constantly stirring it with 2 large spatules till all the water exhales; and when done enough it will appear like white sand, and as fine as flour; but if it should boil too fast, take the kettle off the fire, and set it on some wet sand, by which means the nitre will be prevented from sticking to the kettle. When you have pulverised a quantity of saltpetre, be careful to keep it in a dry place.

Different kinds of GUN-POWDER. It being proper that every one who makes use of gun-powder should know of what it is composed, we shall give a brief account of its origin and use. Gun-powder, for some time after the invention of artillery, was of a composition much weaker than what we now use, or than that ancient one mentioned by Marcus Græcus: but this, it is presumed, was owing to the weakness of their first pieces, rather than to their ignorance of a better mixture; for the first pieces of artillery were of a very clumsy, inconvenient make, being usually framed of several pieces of iron bars, fitted together lengthways, and then hooped together with iron rings; and as they were first employed in throwing stone shot of a prodigious weight, in imitation of the

ancient machines, to which they succeeded, they were of an enormous bore. When Mahomet II. besieged Constantinople in the year 1453, he battered the walls with stone bullets, and his pieces were some of them of the caliber of 1200lb. but they could not be fired more than 4 times in the 24 hours, and sometimes they burst by the first discharge. And Guicciardin, in the first book of his history, informs us, that so large a portion of time intervened between the different chargings and dischargings of one of those pieces, that the besieged had sufficient time to repair at their leisure the breaches made in their walls by the shock of such enormous stones.

But as mathematical knowledge increased in Europe, that of mechanics gradually advanced, and enabled artists, by making brass cannon of a much smaller bore for iron bullets, and a much greater charge of strong powder in proportion to their calibres, to produce a very material and important change in the construction and fabric of those original pieces. Accordingly, this historian, in the same book of his history, informs us, that about 114 years after the first use made of those unwieldy pieces by the Venetians, in the war which they carried on against the Genoese in the year 1380, the French were able to procure for the invasion of Italy a great number of brass cannon mounted on carriages drawn by horses; and that these pieces could always keep pace with the army.

In enumerating the advantages, which arose from this alteration, he observes, that they were pointed with incredible quickness and expedition in comparison of those formerly made use of in Italy, were fired at very small intervals of time, and could produce in a few hours an effect, which those others could not have produced in the space of many days. His words are, "Condotte alle muraglie erano piantate con prestezza incredibile, et interponandosi dall' un colpo all' altro piccolissimo intervallo di tempo, si spesso et con impeto si gagliardo percuotevano, che quello che prima in Italia fare in molti giorni si soleva, da loro in pochissime hore si faceva." And mathematical studies must have made considerable progress on the Continent by that time, since Tartalea, the inventor of the method of solving cubic

equations, which is usually ascribed to Cardan, about 43 years after this change took place, commenced author at Venice.

This change in the formation of artillery has as yet undergone no material alteration, if we except the introduction of carronades, which were first suggested by that very old and intelligent officer General Melville. Lighter pieces, indeed, are now employed, than those which were made use of at first. But they have suffered greater variations in respect of size than proportion.

Mr. Glenie was the first person who gave the theory of projectiles in vacuo by plain geometry, or by means of the square and rhombus, with a method of reducing projections on inclined planes whether elevated or depressed below the horizontal plane, to those which are made on the horizon. See Glenie's History of Gunnery published in 1776.

This author, in his said treatise, after stating in page 43 of it, the two following positions of Mr. Robins, namely, "that till the velocity of the projectile surpasses that of 118 feet in a second; the resistance of the air may be esteemed to be in the duplicate of the velocity;" that "if the velocity be greater than that of 11 or 1200 feet in a second, the absolute quantity of the resistance will be nearly three times as great as it should be by a comparison with the smaller velocities;" says that he is certain from some experiments, which he and two other gentlemen tried with a rifled piece properly fitted for experimental purposes, that the resistance of the air to a velocity somewhat less than that mentioned in the first of these propositions is considerably greater than in the duplicate ratio of the velocity; and that to a celerity somewhat greater than that stated in the second, the resistance is a good deal less than that which is treble the resistance in the said ratio. He observes, that some of Mr. Robins's own experiments seem necessary to make it so, since to a velocity no quicker than 200 feet in a second, he found the resistance to be somewhat greater than in that ratio, and expresses himself in the following words. "After ascertaining the first velocities of the bullets with as much accuracy as possible, I instituted a calculus from principles which had been lying by me for some time before, and found the resistance to approach

nearer to that, which exceeds the resistance in the duplicate ratio of the velocity, by that which is the ratio of the velocity than to that, which is only in the duplicate ratio."

In the years 1783, 1784, 1785, a very extensive course of experiments was carried on at Woolwich, by Dr. Hutton, in conjunction with several able officers of the artillery and other gentlemen, at the expense of government, by direction of the late Duke of Richmond, then master general of the ordnance.

The principal inferences derived from those experiments were the following :

That the velocity continually increases as the gun is longer, though the increase in velocity be but very small in respect of the increase in length, the velocities being in a ratio somewhat less than that of the square roots of the length of the bores, but somewhat greater than of the cube roots of the same, and nearly indeed in the middle ratio between the two.

That the charge being the same, very little is gained in the range of a gun by a great increase of its length, since the range or amplitude is nearly as the fifth root of the length of the bore, and gives only about a seventh part more range with a gun of double length.

That with the same gun and elevation, the time of the ball's flight is nearly as the range.

That no sensible difference is produced in the range or velocity by varying the weight of the gun, by the use of wads, by different degrees of ramming, or by firing the charge of powder in different parts of it.

That a great difference, however, in the velocity is occasioned by a small variation in the windage; so much so, indeed, that with the usual windage of one twentieth of the caliber, no less than between one third and one fourth of the whole charge of the powder escapes and is entirely lost; and that as the windage is often greater, one half the powder is unnecessarily lost.

That the resisting force of wood to balls fired into it is not constant, and that the depths penetrated by different velocities, or charges, are nearly as the logarithms of the charges, and not as the charges themselves, or, which comes to the same thing, as the squares of the velocities.

That balls are greatly deflected from

the directions they are projected in, sometimes indeed so much as 300 or 400 yards in a range of a mile, or almost a fourth part of the whole range, which is nearly a deflection of an angle of 15 degrees.

Powder itself was not grained, but in the form of fine meal, such as it was reduced to by grinding the materials together; and it is doubtful, whether the first graining of it was intended to increase its strength, or only to render it more convenient for the filling it into small charges, and the loading of small arms, to which alone it was applied for many years, whilst meal powder was still made use of in cannon. But at last the additional strength, which the grained powder was found to acquire from the free passage of the fire between the grains, occasioned the meal-powder to be entirely laid aside. The coal for making gun-powder is either that of willow or hazle; but the lightest kind of willow is found to be the best, well charred in the usual manner, and reduced to powder. Corned powder was in use in Germany as early as the year 1568; but it was first generally used in England in the reign of Charles I.

Government-powder, } powder which,
Ordnance-powder, } having undergone the customary proof established by the Board of Ordnance, is so called, and received into the king's magazines.

It has been recommended by a French writer to preserve gun-powder at sea by means of boxes which should be lined with sheets of lead. M. De Gentien, a naval officer, tried the experiment by lodging a quantity of gun-powder, and parchment cartridges, in a quarter of the ship which was sheathed in this manner. After they had been stowed for a considerable time the gun-powder and cartridges were found to have suffered little from the moisture; whilst the same quantity, when lodged in wooden cases, became nearly half rotted.

Proof of Gun-powder, as practised by the board of ordnance. They first take out of the several barrels of gun-powder a measure full, of about the size of a thimble, which is spread upon a sheet of fine writing paper, and then fired: if the inflammation be very rapid, the smoke rise perpendicular, and if the paper be neither burnt nor spotted, it is then judged to be good powder.

Then 2 drams of the same powder are

exactly weighed, and put into an eprouvette; which, if it raises a weight of 24 pounds to the height of $3\frac{1}{2}$ inches, it is received into the king's magazine as proof.

GUN-POWDER *prover*. See **EPROUVETTE**.

GUN-ROOM, (*Sainte Barbe*, - Fr.) the place where arms, &c. are deposited on board a ship.

GUNSHOT, (*portée de fusil*, Fr.) the reach or range of a gun. The space through which a shot can be thrown.

GUNSHOT-wound, any wound received from the discharge of cannon or fire-arms.

GUNSMITH, (*armurier*, Fr.) a man who makes fire-arms.

GUNSTICK, (*baguette*, Fr.) the rammer or stick with which the charge is driven into the gun.

GUNSTOCK, the wood to which the barrel of the gun is fixed.

GUNSTONE, such materials, chiefly stone, as were formerly discharged from artillery.

GUR, a house, or dwelling, in India.

GURRATY, cantonments, seven coss (or English miles) and a half from Calcutta.

GURRIES. Mud forts made in India are so called. These forts are sometimes surrounded with ditches.

GURRY, an Indian term to express

a certain division of time, comprehending 24 minutes; but the word among the Europeans is generally understood to mean an *hour*.

GWALLER, a fort in India, south of Jumma, 28 coss, or English miles, from Agra.

GYMNASIUM, a place in ancient Rome where athletic exercises were performed.

GYMNASTIC, (*gymnastique*, Fr.) appertaining to athletic exercises, such as leaping, wrestling, drawing the cross-bow, fencing, &c. The Greeks, among whom the art originated, were accustomed to strip whenever they performed any part of it.

GYMNASTIQUE Militaire, Fr. the art or method of exercising the body so as to render it supple and capable of much fatigue.

GYNÆOCRACY, (*gynécocratie*, Fr.) a species of government over which a female may preside; of this description is the British government. Under the old French monarchy, women were totally excluded by the Salique Law. But meretricious influence made ample amends to the sex, during several reigns, and ultimately overturned the government.

GYVE, to fetter; to shackle.

GYVES, fetters; chains for the legs.

H.

HABEAS-CORPUS. Although this term is not, strictly speaking, a military one, yet as every British soldier unites in that character all the qualifications of a British citizen, and is consequently entitled to all the benefits of our constitution, it cannot be deemed superfluous to state, that *habeas corpus*, i. e. you may have or take the body, is a writ which a man indicted of some trespass, being laid in prison for the same, may have out of the King's Bench, thereby to remove himself thither at his own costs.

HABERGEON, a small coat of mail, or only sleeves and gorget of mail, formed of little iron rings or meshes

linked together, to cover the neck and breast.

HABILIMENTS of war, in our ancient statutes, signify armour, harness, utensils, or other provisions, without which it is supposed there can be no ability to maintain a war.

HABILLEMENT des troupes, Fr. properly means the regimental clothing, or the uniform of soldiers. The clothing of the French army was not reduced to any regular system before the reign of Louis XIV. The following observations relative to this important object are too appropriate, and suit all countries too well, to be left unnoticed.

The dress of a soldier should be plain,

and made up so as to facilitate every movement of his person, to guard him against the inclemency of the weather, and to be remarkable for its collective uniformity of appearance. Next to these general requisites, the ease of each individual should be consulted; particularly with regard to the breeches, trowsers, or pantaloons. Regimental surgeons will certainly agree with us, when we say, that in some instances men have suffered as much from an inattention to this part of their dress, as from the most harassing service in the face of an enemy. The loins should invariably be covered, the stride be made easy, and the bend of the knee be left unembarrassed. Under the old French government, the whole infantry was clothed in white, with facings of various colours; but both the officers and the men were extremely plain in every part of their dress. At the Revolution, the national colour, white, was changed to blue. Not only the soldiers, but the wagon drivers, &c. had a particular dress to distinguish them from other people.

HABIT, state of any thing; dress, accoutrement; also the power in man of doing any thing acquired by frequent doing.

Military HABIT, a certain rule of conduct by which military men are generally influenced; also manners peculiar to soldiers. The French say *Mœurs soldatesques*, military habits.

Un HABIT d'ordonnance, } regimental

Un HABIT d'uniforme, Fr. } coat, or clothing.

HACHE, Fr. a hatchet.

HACHE d'armes, Fr. a hatchet or battle-axe.

In ancient times this weapon was frequently resorted to by whole armies when they engaged. At present it is only used on particular occasions, in sorties, &c.

HACHÉE, Fr. a term which was formerly used among the French to express a certain punishment that military delinquents were obliged to undergo. It consists of being loaded with a pack or saddle, which the guilty person was under the necessity of carrying a specified distance, and which entailed disgrace upon the bearer.

HACHER, Fr. to cut to pieces. This word is very frequently used among the French in a military sense, viz.

Un bataillon, ou un escadron s'est fait HACHER en pièces, a battalion, or a squadron has suffered itself to be cut to pieces.

HACHER à la plume, Fr. a drawing, or etching, to make lines that are perfectly equal and parallel to each other.

Contre-HACHER, Fr. to draw lines in a diagonal direction for the purpose of making the shades deeper.

HACHEREAU, Fr. a small hatchet.

HACHOIR, Fr. a chopping board, a knife, &c.

HACHOIR de cavalier, Fr. a chopping board or block; a knife. In the French service every troop of horse is furnished with this machine, in order to prepare or cut the straw for food. These chopping blocks or boards, &c. are always carried in separate carts, and follow the baggage.

HACKERY, an Indian two-wheeled car, drawn by bullocks.

HACQUÉTON. See **HATCHET**.

HACQUET - WAGEN, a four-wheeled wagon, which is used in the Prussian service to convey pontoons. The under-frame of this carriage is built like that of a chariot, by which means it can turn without difficulty.

HADAMACS. See **COSSACKS**.

HAIE, Fr. the disposition or distribution of troops in a straight line, either in one or more ranks.

HAIE morte, Fr. a hedge, or boundary, made of dead branches of trees, &c.

HAIE vive, Fr. quickset. Any hedge which consists of trees or branches, that interweave with each other as they grow, and thereby form a very strong defence. This sort of hedge is preferable to palisades.

HAIL-SHOT. See **GRAPE-SHOT**.

HAIR-CLOTH, a stuff made of hair. It is laid on the floor of powder-magazines and laboratories to prevent accidents of fire from the shoes of the men treading or rubbing upon nails, sand, or gravel.

HAKEM, or **HAKIM**, a term used in India to signify the governor of a city, a judge, or a king. It sometimes means the government.

HAKIN, an Indian word signifying power.

HALBERD, } a weapon formerly
HALBERT, } carried by the serjeants of foot and artillery. It is a sort of spear, the shaft of which is about 5 feet long, generally made of ash. Its

head is armed with a steel point, edged on both sides. Besides this point, which is in a line with the shaft, there is a cross piece of iron, flat and turned down at one end, but not very sharp, so that it serves equally to cut down or thrust with. This weapon has of late been exchanged for the half-pike. The halbert was first used by the Danes, afterwards by the Scotch, English, and Swiss, and, last of all, by the French.

Old HALBERD, a familiar term used in the British army to signify a person that has gone through the different gradations, and risen to the rank of a commissioned officer. This character is, in many instances, a most estimable acquisition to the service; but it can only be so, when the individual conducts himself with decent respect towards his superiors, and with humanity towards those who were once his equals. It too frequently happens, however, that men who have obtained promotion from the ranks, forget their original situation, and mistake tyranny and contempt for good order and discipline.

HALEBARDE, ou arme Danoise, Fr. halbert. This weapon, as well as the pike, was first adopted by the French, in imitation of a similar one which was carried by the Swiss troops. It was not known in that country before the reign of Louis XI. and when it fell into disuse among the rank and file, it was confined to the serjeants of infantry. The length of a French halbert was six of their feet from one extremity to the other. The handle or shaft was a long stick, with a strong, sharp, iron ferrel at the end, and the upper part had a sharp flat blade, with a cross bar attached to it.

HALECRET, a kind of corcelet of two pieces, one before and one behind; it was lighter than the cuirass.—See *HALLECRET*.

HALER, Fr. to tow; to haul; to drag along.

HALF is frequently used in military terms. Thus,

HALF-BRIGADE, (*demi-brigade*, Fr.) half the number of men of which a whole brigade is composed.

HALF-COMPANIES. The same as subdivisions, and equal to two sections.

HALF-DISTANCE signifies half the regular interval or space between troops drawn up in ranks, or standing in column.

HALF-FACED. Men are frequently half-faced to the right or left, in order to

give an oblique direction to the line. In forming echelon, the serjeant who steps out is half-faced.

HALF-FILES, half the given number of any body of men drawn up two deep.

Half-files are so called in cavalry, when the men rank off singly.

HALF-FILE leader, (*chef de demi-file*, Fr.) the foremost man of a rank entire.

HALF-BATTA, an extra allowance which has been granted to the whole of the officers belonging to the Indian army, except in Bengal, when out of the Company's district in the province of Oude. In the upper provinces double batta is allowed. All above full is paid by the Vizir, as the troops stationed in that quarter are considered as auxiliaries. The full batta is an allowance granted to both officers and men whenever they are under canvass. See *BATTA*.

HALF-CIRCLE guard, one of the guards used with the broad-sword to parry an inside cut below the wrist, formed by dropping the point of the sword outward in a semicircular direction, with the edge turned to the left, and raising the hand to the height of the face.

HALF-CIRCLE parade, a parade of the small sword used against the thrust in low carte.

HALF-HANGER, or HALF-HANGING-GUARD, a position of defence in the art of the broad-sword; differing from the hanging-guard, in the sword-hand not being raised so high, but held low enough to see your opponent over the hilt. See *BROAD-SWORD*.

HALF-MOON, or demi-lune, Fr. See *FORTIFICATION*.

HALF-PAY, a certain allowance which is made to officers who have been reduced, in consequence of some general order that affects whole corps, supernumerary companies or individuals.

HALF-PAY officers are, to all intents and purposes, out of the reach of military cognizance. They cannot be tried by martial law; nor are they liable to be called upon either as members of a court-martial, or for the purposes of actual service. Surgeons and assistant-surgeons, however, who have received their appointments subsequent to 1793, are exceptions to this rule.

HALF-PIKE, (*demi-pique*, Fr.) a small pike, which was formerly carried by officers.

HALF-SWORD, close fight, within half the length of a sword.

HALLEBARDIERS, *Fr.* men that carried halberts. In former times they were attached to the several regiments; hence *Compagnies d'hallesbardiers*.

HALLECRET, *Fr.* armour made of flat pieces of iron, which was worn by the French infantry under Francis the First, and as late as the year 1611. This was originally made of leather. It was also called *coreclet*, and afterwards *cuirasse*.

HALT, (*halte*, *Fr.*) is a discontinuance of the march of any body of men, armed or unarmed, under military directions. It is frequently practised for the purpose of easing troops during their progress through a country, or to render them fresh and active previous to any warlike undertaking.

Frequent halts are made during the passage of obstacles, and in an intersected country, in order to obviate the inconvenience and danger which must attend a column, whose head is advanced too far to preserve the regular succession of all its component parts. Nothing, indeed, can be more pregnant with mischief than such a chasm; for, if the enemy be in the neighbourhood, both front and rear are exposed. The best way in the passage of defiles, &c. is to proceed to a distance beyond it, which shall be sufficiently extensive to admit of the whole number; there to halt, and not to march forward until the rear has completely cleared the obstacle.

HALT is likewise a word of command, in familiar use, when a regiment is on its march from one quarter to another. The men are permitted to refresh themselves half-way. It should be generally observed, that to prevent soldiers from straggling about, or getting among persons who might entice them to be disorderly, a strict order ought to be given by the commanding officer of every battalion not to allow any division or detachment to halt in or near a town or village. A convenient midway spot should be chosen for the purpose, and when the men have piled their arms, (which may be done in line, or in column,) a few steady soldiers should be detached to guard the ground, and to prevent others from straggling beyond certain limits. Among the French it was usual for the commanding officer of a battalion, division, or detachment, in hot weather, to send a serjeant and a few steady grenadiers forward, in order

to secure good water for the troops. This practice, in our opinion, ought to be avoided as much as possible; for men are more exposed to suffer from drinking when overheated, than they would be by patiently enduring the thirst until they reach the spot where the day's march is to terminate. For the different modes of halting in military manœuvres, see General Regulations.

HALTE, *Fr.* See **HALT**.

Faire HALTE, *Fr.* to halt; to repose.

HALTER-CAST, in farriery, an excoriation or hurt in the pastern, which is occasioned by the horse endeavouring to scrub the itching part of his body near the head and neck, and thus entangling one of his hinder feet in the halter. The consequence of which is, that he naturally struggles to get free, and sometimes receives very dangerous hurts in the hollow of his pastern.

HALTING, in farriery, a limping, or going lame; an irregularity in the motion of a horse, arising from a lameness in the shoulder, leg, or foot, which obliges him to tread tenderly.

HALTING-days. When troops are upon the march, and there is not any particular necessity for exertion or dispatch, two days in the week have been usually allotted for repose. These are Thursday and Sunday. Well regulated corps undergo an inspection of necessaries, &c. on the former of these days, and are sometimes put through four or five of the prescribed manœuvres. During the late war, troops were seldom allowed any halting days.

HAMLET, a small village.

TOWER-HAMLETS, a particular district in the county of Middlesex, which is under the command of the constable of the Tower, or lieutenant of the Tower-hamlets, for the service and preservation of that royal fort.

In the 13th and 14th years of Charles the Second an act of parliament passed, by which the constable of the Tower, or his lieutenant, had authority, from time to time, to appoint his deputy lieutenants, and to give commissions to a proper number of officers to train and discipline the militia to be raised within and for the said division or hamlets, and to form the same into two regiments of eight companies each; and in the 26th of his present Majesty, the above act, intituled *An Act for ordering the forces in the several counties of this kingdom*, was

revived; and the said constable or lieutenant, in order to defray the necessary charges of trophies, and other incidental expensés of the militia of the same division or hamlets, were further authorized to continue to raise, in every year, the proportion of a fourth part of one month's assessment of trophy-money within the said division or hamlets, in such a manner as he hath been used to do, by virtue and in pursuance of the said act of the 13th and 14th years of the reign of Charles the Second.

Whenever the lieutenant of the Tower Hamlets shall happen to be out of the kingdom, deputy lieutenants may be appointed to act in his room; and no commissions are to be vacated by the death or removal of the lieutenant.

The constable has the power of appointing a treasurer of the trophy-money, who is to account for the same yearly; and no trophy-money for a succeeding year is to be levied till the account of the former year has been allowed.

Royal Tower HAMLETS. The militia raised in the district of the Tower is so called, and is divided into two battalions, viz. first and second, officered in the same manner that other corps are belonging to that establishment, and subject to the same rules and regulations.

HAMMER, a well-known instrument with an iron head, for driving nails, &c. Each artilleryman carries one in his belt, in order to clear the vent from any stoppage.

HAMMER, a piece of iron which stands in a perpendicular direction above the cover of the pan, being a part of the same, and serving to produce those sparks of fire that ultimately occasion the explosion of the gunpowder. The Germans call it, *pfannen decke*, the cover of the pan; but this expression does not convey a distinct and clear idea of the use that is made of it. Nothing, however, can be less appropriate than the term as used amongst us. We call the part which is struck against to produce sparks of fire the hammer; and the part which strikes, the cock; whereas that part of the cock which holds the flint is, in fact, the hammer, and the other is without a proper name. The Germans call the cock *hahn*. It is not within our province to propose new terms; we are therefore satisfied in having pointed out the contradiction.

HAMMER-SPRING, the spring on which

the hammer of a gun-lock works. It is also called *feather-spring*.

HAMMER-CAP, a piece of leather which serves to cover the hammer of the fire-lock, and to keep it dry.

HAMMOCK, (*hamac*, Fr.) a sort of bed made of cotton or canvass. Those used in America consist of a broad piece of canvass, which is suspended between two branches of a tree, or between two stakes, and in which the savages are accustomed to sleep.

Among sailors the hammock is about six feet long and three feet broad, drawn together at the two ends, and hung horizontally under the deck for the sailors to repose in. In time of battle, the hammocks are strongly fastened and laid above the rails on the quarter-deck and fore-castle, to barricade, and to prevent the execution of small shot.

HAMPE, Fr. a shaft; a long staff to which any thing else is attached; as a sharp blade to form a halbert or pike.

HANCES, the ends of elliptical arches; also falls of the fire-rails placed on bannisters on the poop and quarter-deck down to the gangway.

HAND, a member of the body; part of the arm, &c.

HAND. Among the Mysoreans the print of a hand is reckoned a form equivalent to an oath. See History of the Carnatic, Book V. p. 348.

HAND, a measure of four inches, by which the height of a horse is computed. Thus horses are said to be so many hands high. The French say *piéd*, *foot*, by which they measure horses.

HAND is also used for the division of a horse into the fore and hind parts; The parts of the fore-hand are the head, neck, and fore-quarters; and those of the hind-hand include all the other parts of his body.

HAND is likewise used for the horse-man's hand. Thus spear-hand, or sword-hand, is the horseman's right hand, and bridle-hand is his left hand.

HAND-BARROW, a machine made of light wood, of great use in fortification for carrying earth from one place to another; or in a siege, for carrying shells or shot along the trenches.

HAND-BREADTH, a measure of three inches, or a space equal to the breadth of the hand, the palm.

HAND-CANTER, or *gallop*, (*petit gallop*, Fr.) a term generally used to express the shortening or contracting of the

pace of a horse in the gallop. How far this term is appropriate must be left to others to determine. Fashion seems to have given it a currency, which cannot strictly be borne out, as the only three natural paces are a walk, a trot, and a gallop.

To HAND-CUFF, to bind the hands of a person together by means of ironlocks, so as to prevent him from using them. This is the case with deserters.

HAND-GALLOP, a slow and easy gallop, in which the hand presses the bridle to hinder increase of speed.

HAND-GRENADES, small iron shells, from 2 to 3 inches diameter, filled with powder, which being lighted by means of a fuse, are thrown by the grenadiers amongst the enemy; now out of use. See **GRENADES**.

HAND-GUN, a gun held in the hand.

HAND-MALLET, a wooden hammer with a handle, to drive fuses, or pickets, &c. in making fascine or gabion batteries.

HAND-SCREW is composed of a toothed iron bar, which has a claw at the lower end and a fork at the upper: the bar is fixed in a stock of wood about 2½ feet high, and 6 inches thick, moved by a rack-work, so that this claw or fork being placed under a weight raises it as far as the bar can go.

HAND-SPECK, } a sort of wooden lever

HAND-SPIKE, } ver for moving heavy things.

HAND-SPIKE, in gunnery, a wooden lever 5 or 6 feet long, flattened at the lower end, and tapering towards the other, useful in moving guns to their places after being fired and loaded again, or for moving other heavy weights.

HAND-TO-HAND, close fight; the situation of two persons closely opposed to each other.

Bridle-HAND, the hand which holds the bridle in riding; the left hand.

Light in HAND. A horse is said to be light in hand when he presses lightly upon the bit. We also say, easy in hand.

Heavy in HAND. A horse is heavy in hand, when he bears much upon the bit, so much so, as to occasion considerable uneasiness in the wrist and hand.

Steady in HAND. A horse is said to be steady in hand when he is perfectly quiet and obedient to the rein, or answers to the pressure of the leg, both on the road and in the field, and during the firing of cannon and musketry: in a word, who is not discomposed, or ren-

dered unruly by any noise or bustle, or by the appearance of any object whatsoever.

Tight in HAND, a term used in the management of a horse, particularly of one who may stumble, in which case the rider keeps a tight rein.

Whip-HAND, advantage over.

Upper-HAND, the better of.

HANDFUL, used figuratively, in a military sense, to denote a small quantity or number, as a handful of men.

To HANDLE, to manage, to wield.

HANDLE arms! a word of command (when the men are at ordered arms) by which the soldier is directed to bring his right hand briskly up to the muzzle of his firelock, with his fingers bent inwards. This word of command is frequently used at the private inspection of companies, and always precedes—*Ease arms*.

This term was formerly used in the manual from the *support* to the *carry*. It is, however, totally exploded, and contrary to the Regulations, except in the instance just mentioned.

To HANG-FIRE. Fire-arms are said to hang-fire when the flame is not speedy in communicating from the pan to the charge. This defect may arise from the powder being damp or the touch-hole foul. The French say, *faire long feu*.

To HANG upon, to hover, to impend.

To HANG upon the rear of a retreating enemy, to follow the movements of any body of men so closely as to be a perpetual annoyance to them.

It requires both judgment and activity in the commanding officer of a pursuing army, to execute this business without endangering his troops. For it might happen, that the retreating enemy seeing an opportunity to make a retrograde flank movement from its front, would practise a feint in its rear, and suddenly appear upon the right or left of his pursuers, especially with cavalry. To prevent a surprize of this sort, constant vedettes and side patrols must be detached, and the pursuer must never attempt to follow through any considerable length of defile, or to cross rivers, without having secured the neighbouring eminences, and been well informed as to the nature of the stream, for some extent, on his right and left. Without these precautions he might himself be taken in flank and rear.

To HANG upon the flanks of an enemy,

to harass and perplex him in a more desultory manner than what is generally practised when you press upon his rear.

Hussars, light dragoons, mounted riflemen, and light infantry detachments are well calculated for this service. Light pieces of artillery are likewise extremely useful; but they should be cautiously resorted to, as ambuscades might be laid, and their removal would require too much time. A perfect knowledge of the country in which you fight, aided by intelligent guides and faithful scouts, will be one of the best safeguards in all operations of this kind.

HANGAR, *Fr.* a coach-house; a shed for a wagon, or cart, to stand under.

HANGER, a short curved sword.

HANGIAR, *Fr.* This sword has been sometimes written *Haniare*, which is incorrect. It signifies a Turkish poniard, which is worn by the Janissaries in their cross belts or scarfs.

HANGING-GUARD, a defensive position in the art of broad-sword: it is formed by raising the sword-hand high enough to view your antagonist under your wrist, and directing your point towards his ribs. See BROADSWORD.

HANOVERIANS, troops belonging to the electorate of Hanover.

HANSE, or HANS, (*Hans Teutoniques*, *Fr.*) a body or company of merchants united together for the promotion of trade.

HANS towns, (*villes Hanséatiques*, *Fr.*) certain towns and places in Germany and the north of Europe, in which a commercial compact, or agreement, for the benefit of commerce was entered into by merchants of respectability. The four towns that first united for this purpose were Lubec, Brunswick, Dantzic, and Cologne, and on that account they bore the distinguishing title of mother-towns. After the original establishment of this company had taken place, several towns became anxious to belong to so respectable and useful a company. They were accordingly adopted, and obtained the denomination of god-daughters. The number of these associated places amounted to 81, and they were generally called the Hanseatic or Anseatic towns. In the year 1372, a treaty of alliance was entered into between Denmark and the Hans towns. Amsterdam and other Dutch cities were included, as may be seen in a copy of that treaty which has been preserved by Boxhoorn.

IANTE, and not *Hampe*, *Fr.* a well finished pike, which was formerly used, with a banner at the end.

HAQUE, a hand-gun.

HAQUEBUT, or HAG-BUT, a short hand-gun which was formerly used both in France and England. According to a statute of the 33d of Henry the VIIIth, it might not be under three quarters of a yard long, gun and stock included. This piece is supposed to have been so called from its butt end being hooked or bent like those now used; the stock of the hand-gun being nearly straight. President Fauchet says, the haquebut was in his time called a harquebuss.

Demi-HAQUES, or Half-HAG, guns formerly so called from their being less in size than the haquebut, or from having their butts less curved.

HAQUELIN, a piece of armour.

HAQUET, *Fr.* a dray; a species of wagon used in the artillery for the conveyance of pontoons, &c. These wagons differ in their sizes and dimensions according to the nature of the service.

HAQUETON, a piece of armour.

HARANES, *Fr.* a militia in Hungary, part of which served on foot, and the other on horseback.

Military HARANGUES, (*harangues militaires*, *Fr.*) It was usual among the ancients for generals, &c. to harangue their soldiers previous to an engagement. This custom, however, is too old to be traced to its origin. Short harangues, if any are adopted, will always prove the best; for that natural impulse by which the aggregate of mankind are driven into acts of peril and possible destruction is of too subtle and too volatile a nature to bear suspense.

HARASS, (*harceler*, *Fr.*) in a military sense, signifies to annoy, to perplex, and incessantly turmoil any body of men; to hang upon the rear and flanks of a retreating army, or to interrupt its operations at a siege by repeated attacks. The troops best calculated for this duty are hussars, mounted riflemen, and light dragoons. The general most celebrated among the ancients for this kind of warfare was Sertorius. By means of the most subtle and ingenious manœuvres, aided by a thorough knowledge of military tactics, he disconcerted all the plans, and finally defeated all the attempts which were made by Pompey and Metellus to subdue him. It has been shrewdly remarked by the commentator

on Polybius, that had there been one Sertorius within the walls of Lisle, when that city was besieged in 1708, the whole combined force of the allies that was brought before it would have been rendered ineffectual. This wise and sagacious officer was constantly upon the watch; no movement of the enemy escaped his notice; and by being master of his designs, every measure which was attempted to be put into execution, was thwarted in its infancy.

When he received intelligence, that a convoy was on its way to the enemy, such was his activity, that no precautions could save it from his attack; and however seemingly advantageous a temporary position might appear, every possible peril or surprize crowded upon his mind, and the instant he judged it necessary to decamp, such were his sagacity and shrewdness, that no foresight or information of the enemy could circumvent him on his march. He was full of expedients, master of military feints, and indefatigably active. When pursued in his retreats, he had always the ingenuity to avoid his enemy by getting into inaccessible places, or by disposing of his troops in such a manner, as to render it extremely hazardous to those who might attempt to harass or perplex him.

HARAUX. *Donner le haraax*, Fr. the act of carrying off troop-horses when they are at grass, or out foraging.

HARBOUR, a port or haven for shipping.

A dry HARBOUR, a port on the sea from which the tide regularly recedes, during stated periods, so as to leave it inaccessible to ships of burthen; of this description are Dover, Calais, Ostend, &c.

HARCARRAIS, in India, messengers employed to carry letters, and otherwise entrusted with matters of consequence that require secrecy and punctuality. They are commonly Bramins, well acquainted with the neighbouring countries; they are sent to gain intelligence, and are used as guides in the field.

HARCELÉ *en flanc et en queue*, Fr. harassed in flank and rear.

HARDACIUM. See **HOUBEYS**.

HARDES, Fr. See **NECESSARIES**.

HARDI, Fr. in French architecture, an epithet which is frequently attached to those sorts of works that, notwith-

standing their apparent delicacy of construction, their great extent and wonderful height, remain uninjured for a succession of years. Gothic churches are of this description.

HARRIDELLE, Fr. a jade, a sorry horse.

HARE, an old Saxon term for an army.

HARMONY, (*harmonic*, Fr.) a term used in architecture, as in music, to signify the union and concord of the different parts of a building.

HARNACHER, Fr. to harness.

HARNESS, (*harnois*, Fr.) armour, or defensive furniture of war, also the traces for horses of draught. The horse harness has of late been much improved in the field artillery service: it is now of a light description, with rope traces, and every double-draught carriage can be drawn by horses with the same harness, which was not the case formerly, as every nature of carriage for field ordnance had a different pattern harness, and caused great confusion in the movements of artillery upon foreign service. There is another description of harness used for carriages of battering ordnance upon a stronger principle, with chain traces, and these two patterns of harness are all that are in use in the artillery service.

Men's HARNESS are made of rope with straps of leather to put over men's shoulders, for the purpose of drawing carriages when horses cannot be procured, or in situations where horses cannot conveniently be taken. The harness is made in sets for twelve men to each, and any number of sets can be added together, to attach as many men as the draught of the carriage requires. Men's harness is extremely useful upon expeditions, when landing artillery in an enemy's country, where horses for the carriages cannot be had.

HARNOIS, Fr. See harness.

HARNOIS du cheval, Fr. military equipment for a horse.

Endosser le HARNOIS, Fr. to turn soldier; to go into the army.

HARO, Fr. hue and cry.

HAROL, an Indian term, signifying the officer who commands the van of an army. It sometimes means the vanguard itself.

HARPE, Fr. a species of draw-bridge, which was used among the ancients, and which obtained the name of harp from its resemblance to that in-

strument. This bridge, which consisted of a wooden frame, and hung in a perpendicular direction against the turrets that were used in those times to carry on the siege of a place, had, like the harp, a variety of ropes attached to it, and was let down upon the wall of a town by means of pulleys. The instant it fell, the soldiers left the turret, and rushed across the temporary platform upon the rampart.

HARQUEBUSS, a kind of fire-arm, of the length of a musket. It carried a ball of about 3 ounces. Not used at present.

HARQUEBUSSIER, a soldier carrying a harquebuss.

HARROW, to lay waste, to ravage, or destroy.

HART, *Fr.* the band of a faggot; a halter.

HART, or *Stag-evil*, is a sort of rheum, or defluxion, that falls upon the jaws, and other parts of the fore-head of a horse, which hinders him from eating.

HARVEST. This word is used, figuratively, to signify the battles which are fought by contending armies. Thus Pope, in his *Essay on Man*, Ep. IV. p. 127.

'Twin'd with the wreath Parnassian laurels yield,

Or reap'd in iron *harvests* of the field.

HASARD *de la guerre*, *Fr.* the chance of war. It also means the danger to which every military man is exposed in the exercise of his profession. Thus the French say, *Il a essuyé de grands hasards*—he has undergone great risk or danger.—*Il a été nourri parmi les hasards*—he was brought up from his cradle amidst dangers.

HASP, a flat staple to catch the bolt of a lock.

HASTAIRES, *Fr.* soldiers armed with spears. See HASTATI.

HASTATI, from the Latin word *hasta*, a spear; so that they may literally be called spearmen. A body of Roman soldiers who were more advanced in age, and had acquired a greater reputation in arms than the *Velites* possessed, were distinguished by this appellation. They wore a complete suit of armour, and always carried a buckler, made convex, measuring two feet and a half in breadth and four in length. The longest contained about four feet nine inches, or a Roman palm. The buckler was made

of two boards glued together. These were covered, in the first instance, with a broad piece of linen, which was again covered over with sheep's skin. The edges both at top and bottom were fenced with iron, to enable them to meet the broad sword and sabre, and to prevent them from rotting when planted on the ground. The convex part was further covered over with iron plates to resist the impression of hard blows, and to withstand the violent concussion of stones, &c.

The *hastati* likewise wore a sword, which they carried girted to their right thigh, and which was called the Spanish sword. This weapon was calculated both to cut and thrust, the blade being very broad, thick, and pointed. They had each, moreover, two pikes, a brass helmet, and half boots. One of the pikes was thick, and the other of a middling size.

The pole or staff of these pikes, whether large or small, was nearly five cubits long. The iron, which was made something in the shape of a fish-hook, and was fixed to the pole, contained the same length. It reached beyond the middle, and was so well nailed that nothing could loosen it, without at the same time breaking the pole. This iron was one finger and a half thick, both at the bottom, and at the part where it was joined to the wood.

The *hastati*, or spearmen, wore upon their heads a red or black plume, consisting of three straight feathers, each measuring one cubit in height. These, added to their other accoutrements, made them appear uncommonly tall, and gave them a bold and formidable look. The lowest class of *hastati*, or spearmen, had their chests protected by a piece of brass, containing twelve fingers breadth every way. This plate was called a *breast plate*. All that were worth 10,000 drachmæ wore a coat of mail, instead of a breast-plate.

Kennet, in his *R. Ant.* p. 190, gives a similar account of the *hastati*; and adds, that the spears were afterwards laid aside as inconvenient.

Armes d'HAST, *Fr.* long-hafted weapons.

HASTE, *Fr.* The piece of wood, or long pole, to which the standard is fixed in the royal gallery, was formerly so called in France.

HATCHET, an instrument carried

by pioneers; also a small light axe, with a hazel edge on the left side, and a short handle, used by the men for cutting wood to make fascines, gabions, pickets, &c.

To take up the HATCHET, among the Indians, to declare war, to commence hostilities, &c.

HAUBANS, *Fr.* the shrouds of a ship.

HAUBANER, *Fr.* to make fast.

HAUBERGEON, *Fr.* See HABERGEON.

HAUBERGIER, *Fr.* an individual who held a tenure by knight's service, and was subject to the feudal system which formerly existed in France, and by which he was obliged to accompany the lord of the manor in that capacity whenever the latter went to war. He was called *sief de haubert*, and had the privilege of carrying a halbert. All vassals in ancient times served their lords-paramount as squires, haubergiers, lance-men, bow-men, &c.

HAUBERK, a texture of steel rings, or rings interwoven, forming a coat of mail that sat close to the body, and yielded to every motion. Bonaparte wore one in Egypt.

HAUBERT. See HAUTBERT.

HAUBITZ, *Fr.* the same as *obus*, howitzer.

HAUNCH, or hip of a horse, is that part of the hind quarters that extends from the reins, or back, to the hough, or ham.

HAVERSACK, (*havre-sac*, *Fr.*) a kind of bag made of strong coarse linen, to carry bread and provisions on a march. It is only used in the field and in cantonments, each soldier having one.

HAVILDAR, or) a non-commission-

HAVILDAUR, } ed officer or sergeant among the Sepoys. He ranks next to the *Jemidar*.

HAVILAND, a brass machine made for the purpose of fixing a military roster. It is so called from General Haviland, who was the inventor.

HAVOCK, carnage, slaughter.

HAVRE, *Fr.* a harbour which is enclosed by means of jetties, and can be barred by a chain.

HAVRE de barre, *Fr.* a harbour which is dry at times, and has a bar, over which no vessel can pass except at high water. Of this description are Calais, Ostend and Dover harbours.

HAVRE d'entrée, *Fr.* a harbour into which vessels may sail independent of the tides.

HAUSSE-col, *Fr.* an ornamental plate similar to our gorget. It is worn by infantry officers only.

Un HAUSSE-col, *Fr.* a neck-piece.

HAUT à la main, *Fr.* with a high hand; arrogantly.

Un général haut à la MAIN, *Fr.* an imperious and haughty general.

HAUTBERT, *Fr.* a coat of mail, which covered the neck and arms; formerly worn by the *seigneurs de haubert*, or lords paramount, in France, in lieu of the *hausse-col*, *brassarts*, and *cuissarts*.

HAUTBOY, (*hautboy*, *Fr.*) a wind-instrument, now almost universally adopted by the European armies, and which invariably forms a part of the regimental bands belonging to the corps in the British service.

HAUTBOYS, a term given to the non-effective men of a regiment of dragoons, constituting a part of the emolument enjoyed by a colonel in the British service.

HAUTE-murée, *Fr.* high-water.

HAUTES-payes, *Fr.* were soldiers selected by the captains of companies to attend them personally, for which service they received something more than the common pay. Under the reign of Louis XIV. this custom was abolished. It was, however suffered to exist in the royal regiment of artillery and in the companies of miners and artificers, provided the officers received a specific order for the purpose. *Haute-paye* became afterwards a term to signify the subsistence which any body of men, superior to, or distinguished from, the private soldiers, were allowed to receive.

Thus the grenadiers and voltigeurs in the French service had what was called, amongst them, *Haute-paye*; or, extraordinary pay.

HAUTEUR, *Fr.* in geometry, signifies elevation.

HAUTEUR, *Fr.* in architecture, the extreme height of any building.

HAUTEUR d'appui, *Fr.* breast-height.

HAUTEUR de marche, *Fr.* the usual height which a man takes in stepping, being about 6 or 7 inches above ground.

HAUTEUR d'un escadron, ou d'un bataillon, *Fr.* the depth of a squadron of horse, or battalion of foot. This term is applicable to an army, collectively or separately considered, from several columns to a mere rank and file.

HAUTEURS, *Fr.* heights, or commanding eminences round a fortified place.

HAUT-LE-PIED, *Fr.* a term used to distinguish such persons as were formerly employed in the French armies, without having any permanent appointment. *Commissaires hauts-le-pied* were known in the artillery during the old monarchy of France. They were usually under the quarter-master general.

Le HAUT Rhin, *Fr.* the Upper Rhine.

La HAUTE Saxe, *Fr.* Upper Saxony.

HAUTS-officiers, *Fr.* superior officers. With respect to an army composed of several regiments, the following fall under the description of *hauts-officiers*, according to the old French system: generals, lieutenant-generals, colonels, and lieutenant-colonels. The *hauts-officiers*, or superior officers, in distinct corps, were majors, aid majors, captains, lieutenants, sub-lieutenants, and ensigns; or what we call commissioned officers.

HAWKIM, an Indian term, signifying a chief.

HAYE, *Fr.* a military disposition in which soldiers stand aside one another on a straight line. *Se mettre en haie* is to stand *rank entire*. *Faire une double haie*, to stand *two deep*. *Border la haie* is a disposition to which infantry has recourse when attacked by cavalry.

HAZAREE, an Indian term signifying the commander of gun-men. *Hazar*, in its literal interpretation, signifies a thousand.

HEAD, in gunnery, the fore part of the cheeks of a gun or howitz carriage.

To HEAD, to lead on.

HEAD of a work, in fortification, is the front next to the enemy, and farthest from the place; as the front of a horn-work is the distance between the flanked angles of the demi-bastions: the head of a double tenaille is the salient angle in the center, and the two other sides which form the re-entering angle. See **FORT**.

HEAD of an army, the person who holds the chief command. The King is called the head of the army in Great Britain and Ireland, and has an unbounded exercise of prerogative with regard to its internal arrangements.

HEAD of an army or body of men is the front, whether drawn up in lines or on a march, in column, &c.

HEAD of a double tenaille, the salient angle in the center, and the two other sides which form the re-entering angle.

HEAD-piece, armour for the head: an helmet, such as the light dragoons wear.

HEAD of a camp, the ground before which an army is drawn up.

HEAD-QUARTERS, the place where the officer commanding any army or independent body of troops takes up his residence.

To make HEAD, to oppose; to resist; to endeavour to thwart another by personal exertions.

HEADBOROUGH, a civil officer, whose functions are the same with respect to the militia, as those prescribed to constables and subordinate constables.

HEADS, tiles which are laid at the eaves of an house.

HEADSTALL, that part of the bridle which goes over the horse's head.

HEAVE, a word of command which is used in the exercise of great guns, when they are to be run up.

HEAUME, *Fr.* a word derived from the German, which formerly signified *casque*, or helmet. The *heaume* has been sometimes called among the French *salade*, *arnet*, and *celate* from the Latin word which means *engraved*, on account of the different figures which were represented upon it. The *heaume* covered the whole of the face, except the eyes, which were protected by small iron bars laid cross-ways.

The *heaume* was not only worn by the chevaliers or knights when they went to war, but also at tilts and tournaments. It serves as an ornament or helmet in coats of arms and armorial bearings. Various appellations have been given to this piece of armour, such as *habillement de tête*, covering for the head, *casque*, helmet; and under Francis I. it was distinguished by the name of *arnet*. It does not resemble the *môrion*, the *salade* or head-piece, the *pot*, or *bourguignotte*, *burganet*, which were worn only in the infantry. The *heaume*, as we have observed above, covered the face. There was an opening opposite to the eyes which was guarded by small iron bars, or lattice-work, and was a kind of visor. The *heaume*, or helmet, is still preserved in heraldry, and is a distinguishing mark of nobility. In tournaments the helmet was presented as a prize of honour to the most active champion, because it was the principal piece of defensive armour; but a sword was given to the assailants, as that was an offensive weapon.

Au HEAUME! *Fr.* a term formerly used among the French, in the same

manner that they now use the expression *les armes!* to arms!

HEAUMIER, *Fr.* an armourer, or helmet-maker.

HEBDOMADIER, *Fr.* the person whose week it is to be on duty.

HEGOMENE, *Fr.* a chief leader.

HEIDUQUE, *Fr.* an Hungarian foot soldier. See **HEYDUC**.

St. HELENA, an island in the Atlantic ocean, belonging to the English East India Company, to whom it was given by King Charles the Second, soon after it had been taken from the Dutch by Admiral Munden in 1672. This rock has been selected as a place of security and detention for Bonaparte, who surrendered himself to the British in 1815.

HELEN, (*Hélène*, *Fr.*) a woman celebrated in history for the fatal influence of her charms over Paris, the son of Priam, King of Troy; and the consequent cause of its destruction. A French writer very justly remarks, that many a young officer is exposed in his outset in military life, to the fascinations of the sex, and is liable to fall into the snares of women, whose sole object is to create passions and rivalry among gallant men, without feeling one spark of honest affection themselves—hence the many feuds and quarrels that so often deprive the country of brave and meritorious men.

HELEPOLIS, (*hélpole*, *Fr.*) in the ancient art of war, a machine for battering down the walls of a place besieged. The invention of it is ascribed to Demetrius the Poliorcete. Diodorus Siculus says, that each side of the helepolis was 450 cubits broad, and 90 in height; that it had 9 stages or floors, and was carried on 4 strong solid wheels, 3 cubits in diameter; that it was armed with huge battering rams, and had 2 roofs capable of supporting them; that in the lower stages there were different sorts of engines for casting stones; and in the middle, they had large catapults for lancing arrows.

HELICOMETRY, an art which teaches how to draw or measure spiral lines upon a plane, and shew their respective properties.

HELIOD *parabola*, a curve arising from the supposition of the axis of the Apollonian parabola being bent into the periphery of a circle, and is then a line passing through the extremities of

the ordinates, which converge towards the center of the circle.

HELIOSCOPE, a prospect-glass to view the sun. The glass is coloured in order to weaken the radiance of light.

HELIX, (*hélis*, *Fr.*) a term used in geometry. See **SPIRAL**. In mechanics, it signifies the motion of a screw.

HELIX, also a machine invented by Archimedes, by means of which a loaded vessel could be easily put to sea.

HELLANODICES, according to *Pis-ticus*, judges who presided at the Grecian games; they were also called *Agonothetes*.

HELM, or } an ancient defensive ar-
HELMET, } mour, worn both in war
and at tournaments. It covered both the head and face, only leaving an aperture in the front, secured by bars, which was called the visor. The Carians first invented the boss of shields, and the crest of helmets. In remembrance of this, a small shield and a crest were always buried with them.

HELMET-CAP, } a cap, or-hat, the
HELMET-HAT, } crown of which is
shaped like the dragon helmet.

HELOTS, slaves; men in bondage; not having any constitution to secure.

HELVE, or } the wooden handle of
HAFT, } a hatchet, hammer, or
pick-axe.

To HEM in, to surround.

HEMAGUM, an emperor of India. The word means August.

HEMERESCOPI, in ancient history, men detached and posted upon different heights, &c. to watch the movements of an army. According to Herodotus, they were first formed among the Persians. They, in some degree, correspond with our vedettes.

HEMERODROMES, a French term taken from the Greeks, signifying sentries or guards, which were employed among the ancients to protect and watch over fortified towns and places. As soon as the gates were opened they went out, and continued to patrol round the skirts of the town during the whole of the day. Frequently, indeed, they advanced considerably into the country, in order to discover whether any hostile body of men was approaching in order to surprize the garrison.

HEMICYCLE, (*hémicycle*, *Fr.*) half round, demi-circle.

HEMISPHERE, (*hémisphère*, *Fr.*)

the half of the globe, when it is supposed to be cut through its center in the plane of one of its greatest circles.

HENDECAGON, a figure that has 11 sides and as many angles, each capable of a regular bastion.

HENDOO, the name by which the natives of India distinguish themselves from the inhabitants of other countries.

HENNIR, *Fr.* See **NEIGH**.

HENNISSEMENT, *Fr.* See **NEIGHING**.

HEPTAGON, a figure consisting of 7 sides and as many angles. If the sides be all equal, it is called a *regular heptagon*.

HEPTAGONAL numbers are a sort of polygonal numbers, wherein the difference of the terms of the corresponding arithmetical progression is = 5. One of the properties of these numbers is, that if they be multiplied by 40, and 9 be added to the product, the sum is a square number.

HEPTARCHY, a government which consists of seven kings or sovereign princes. Such was the government under which England was ruled by the Saxon kings.

HERALD, an officer at arms, whose duty is to declare war, to proclaim peace, or to be employed by the king in martial messages. The heralds in England are judges and examiners of gentlemen's coats of arms. They marshal all solemnities at the coronation of kings, funerals of princes, &c. The origin of heralds is extremely ancient. It is reported that the Greek herald, Stentor, possessed such a powerful voice that it exceeded the united clamour of fifty men.

There are three kings at arms in England, each bearing a name peculiar to himself, and six heralds. The first king at arms is that of Garter, created by Henry V.; next that of Clarenceux, created by Edward IV. and that of Norroy, so called, from the exercise of his function North of the river Trent.

The heralds extraordinary are those of Windsor and Chester, created by Edward III. those of Somerset by Henry VIII. and those of York and Lancaster, created by the children of Edward III.

Thomas Tonge was the first Richmond herald, in the time of Henry VI.

HERALDS' College, a corporation in England which consists of kings at arms,

heralds and pursuivants. The college, or office, is on Bennett-hill, St. Paul's.

HÉRAUT, *Fr.* herald. During the old monarchy of France there were thirty heralds, each distinguished by the name of some particular province. The first of these, who was king at arms, bore the title of *Montjoy St. Denis*; he had the privilege of wearing a royal coronet over the fleur-de-luce. On solemn occasions, the king and the heralds at arms appeared in their coats of arms made of violet-coloured crimson velvet, with three golden fleurs-de-luces before and behind, and as many on each sleeve where the name of the province stood, to which the herald belonged. They wore a black velvet cap ornamented with golden strings, and half boots, when they appeared on peaceable occasions, and with whole boots on warlike or martial ones. In solemn funerals they had a long robe of black velvet. The only difference between the king at arms and the heralds, with respect to dress, consisted in the richness of the embroidery; that of the former being very expensive. The coats of arms which were peculiar to the heralds were called *Plaques*, those of the king's at arms were distinguished by the name of *Tunics*. They carried a stick called *Caduceus* (such as Mercury is represented to have borne in ancient history.) But this stick was not ornamented by a crown with fleurs-de-luces, it was only covered with crimson velvet, having a few fleurs-de-luces interspersed.

There was likewise a herald, whose particular functions were to carry the king's orders. He was entitled to a coat of arms upon violet-coloured velvet interspersed with fleurs-de-luces and gold embroidered flames, or pendants, together with the arms and collars both before and behind. He likewise wore the cross belonging to the order, which was attached to a black silk cord worn cross-ways.

The author of the *Dictionnaire Militaire* derives the French term *Héraut* from the German *Herald*, which signifies a man at arms, *un Gendarme*. *Verstegan* derives it from the Saxon. Other French writers derive it from an old Gallic word *harou*, or *hara*, which was used as a challenge, a notification of fresh hostilities, a ban or general assembling of the people, a loud and public proclamation of battles fought, and vic-

ories obtained; on which account heralds, according to Ducange, were formerly called *Clarigarvis* as well as *Heraldus*.

HERCOTECTONIQUE, *Fr.* a term in fortification signifying that branch of military architecture which specifically points out the best means of defence, and the surest method of providing stores. This word is derived from the Greek.

HERE, a word used in regimental details of duty, when soldiers answer to their names at a roll-call. The French say *Ici*.

HEREFARE, an old term from the Saxon, signifying the same as warfare.

HEREGELD, a term derived from the Saxon, signifying a tax which was formerly levied for maintaining an army.

HERESILIA, } a term derived from

HERESLITA, } the Saxon, signifying a soldier who abandons his colours, or quits the army without leave.

HERETEG, } a term derived from

HERETOG, } the Saxon, signifying the leader of an army, a duke, the same as *dux* in the Latin.

HERETUM, a court in which the guards or military retinue that usually attended the old British nobility and bishops were accustomed to parade or draw up.

HERGATE, a term derived from the Saxon, signifying a tribute which was paid in ancient times to the lord of the soil, to enable him to carry on a war.

HÉRISSON, *Fr.* a turnpike which is made of one stout beam that is fenced by a quantity of iron spikes, and which is fixed upon a pivot, in the manner that our turnstiles are, so that it can turn in every direction.

HÉRISSON foudroyant, *Fr.* a sort of artificial firework which has several sharp points attached to it on the outside, and is filled with inflammable composition within. It is frequently used in breaches and intrenchments.

HERM-HARPOCRATES, a demigod, in the heathen mythology, that is represented, like Mercury, with wings at his feet, and with his finger on his mouth. This allegorical figure indicates to young officers, that they must in all things, and on all occasions, execute the orders of their superiors in command with dispatch, zeal, and secrecy, and without betraying the least symp-

toms of disgust or backwardness, be the orders ever so arduous or unpleasant.

HERO, (*héros*, *Fr.*) This name was given by the ancients to those men who became illustrious in war, and who were styled demi-gods, from a general notion that their actions entitled them to a place in heaven immediately after their decease. The heroes of antiquity were divided into two classes, the one of mortal genealogy, the other of heavenly descent; being the offspring of some god or goddess who had had connexion with the human species.

Modern authors make a distinction between a hero and a great man; the former appellation being given to one who distinguishes himself by feats of hardihood in military enterprize, and the latter to a person eminent for his virtues and extraordinary talents in civil life.

HEROINE, a term generally applied to a woman who has given exemplary proofs of courage and virtue.

HERRISON. See **HÉRISSON**.

HERSE, in fortification, a grated door, formed by strong pieces of wood, joined cross-ways like a lattice or harrow, and struck full of iron spikes. It is usually hung by a rope and fastened to a moulinet, which is cut in case of a surprize, or when the first gate is suddenly forced with a petard, to the end that it may fall and stop the passage of a gate or other entrance of a fortress.

These herse are also often laid in the roads, with the points upwards, instead of the *chevaux-de-frize*, to incommode the march of both horse and foot. Common harrows are sometimes made use of in cases of emergency, with their points upwards.

HERSILLON, a strong beam, whose sides are struck full of spikes, which is thrown across the breach made by an enemy, to render it impassible.

HÉSSIANS, troops belonging to the Prince of Hesse-Cassel in Germany. They have been frequently hired by Great Britain, and are never known to serve except as auxiliaries to other powers, who pay a stipulated price for each man to the Landgrave of that part of Germany.

HÉTÉRIENNES, *Fr.* See **MÉGCHÉTÉRIARQUE**.

HETMAN, *Fr.* sometimes called

ATTAMAN, a word derived from the German, which signifies the chief of a troop. The chief general or grand general in Poland is called *Hetman Wielki*, and the second general *Hetman Polny*.

The chief or general of the Cossacks is likewise invested with this title by the sovereigns of Russia.

HEURTEQUINS, *Fr.* two pieces of iron resembling a knocker, which are placed upon the axis of the frame of a cannon.

HEURTOIR *de soutien*, *Fr.* See **HURTER**.

HEXAEDRON, (*hexaedre*, *Fr.*) a solid geometrical figure, consisting of six equal sides.

HEXAGON, a figure of 6 sides and as many angles, capable of being fortified with 6 bastions. If the sides and angles be equal, it is called a regular hexagon. The side of a regular hexagon inscribed in a circle is equal to the radius of that circle; hence a regular hexagon is inscribed in a circle, by setting the radius of 6 times upon the periphery: as 1 to 1.672, so is the square of the side of any regular hexagon to the area thereof, nearly.

HEYDUC, originally a Hungarian soldier, who was armed with a long sabre and small hatchet. The French kings were accustomed to have men, who were dressed in their livery, placed at the gates of their palaces. These were called heyducs. At Vienna and Berlin, as well as at the subordinate courts in Germany, the princes and noblemen have persons of this description, who are richly clothed, and constantly attend their carriages.

HIDES (*tanned*) are always carried along with an army, especially in the laboratory's stores, to protect powder or shells from rain; they are also used in batteries and in laboratories.

HIE, *Fr.* a paving beetle, or rammer, called also **DEMOISELLE**, **MOUTON**.

HIEMENT, *Fr.* the noise which is made by pieces of wood that are agitated by the wind; also that which proceeds from the exercise of the rammer, or from large weights which are lifted up.

HIERARCHY, church government.

HIERNHUTT. Three missionaries are so called at the Cape of Good Hope. They have considerable influence over a large body of the Hottentots, whom they have in some degree civilized, and

over whose minds they possess great power. The Hiernhutt missionaries are considered by the English as well-meaning men, rendering the situation of some hundreds of that degraded race much more tolerable than it can possibly be to the aggregate of their oppressed countrymen, who are under the lash and tyranny of the Dutch boors. Should a military corps be established in the colony to consist chiefly of Hottentots, the Hiernhutt missionaries may be made the means of attaching those people to the British government.

HIEROGLYPHICS, (*hiéroglyphes*, *Fr.*) certain mysterious characters of creatures or letters used among the Egyptians, by which they explained to one another the principles of their religion and their maxims of philosophy, without divulging them to strangers.

HIERONICÆ, a name given among the Romans to those who conquered in holy contests.

HIEROGRAMMATES. See **HIEROGLYPHICS**.

HIGHLANDER, according to Johnson, any person from a mountainous country.

HIGHLANDERS, a robust, warlike body of men from the north of Scotland.

They wear a dress peculiar to themselves, which is too generally known to require a minute description here. It may not, however, be superfluous to give the following regulation respecting their clothing when they serve abroad. Each serjeant, corporal, drummer, and private man, is, in that case, to have annually, a scarlet coat, a waistcoat of white serge, a bonnet, and four pair of hose; six yards of plaid once in two years, and a purse every seven years.

HIGHWAYS *of the kingdom*. As in every country where a military force has been kept on foot, the soldiers have constantly been employed upon public works, it has appeared singular, that the roads of Great Britain should not have experienced the same speedy and useful aid.

HILT, the handle of a sword.

HINDOOSTANEE, the prevailing language in India, a knowledge of which, together with that of the Persian and the Arabic, is indispensably necessary, to every officer who serves in that country.

HINGES are two iron bands, with a joint, nailed to the doors or lockers of

gun-carriages to fasten or to move them backwards and forwards.

HINGUET, *Fr.* See **GINGUET**.

HIPPODROME, a French term derived from the Greek, signifying a spot where horses used to run, properly speaking a race-ground. The Hippodrome, or course, at Constantinople was much celebrated in ancient days. The spot still exists under that name.

HIPPORCHIA, an officer of high rank among the Athenians, who had the command of all their cavalry.

HIRCARRAH, or **HIRCARRA**, an Indian term for a messenger, guide, footman, or spy.

HISTORY, a narration or description of the several transactions or events of a state, king, or private person, in the order in which they happened.

Military History, a narrative of military transactions, campaigns, battles, sieges, marches, &c. of an army; likewise a relation of the heroic actions of great generals, &c.

HIVER (*quartier d'*), *Fr.* winter quarters.

HIVERNER, *Fr.* to winter.

HOBITS. See **HOWITZ**.

HOCHE, *Fr.* a notch or cut made in a piece of timber.

HOCKEBOS, and not **HOCHEBOS**, *Fr.* pikeman, formerly so called. It also signifies the pike itself, particularly among the inhabitants of Picardy in France. The Flemish people call it *godenhoi*.

HOG-MANE. When the mane of a horse is cut short, it is said to be hog-maned, from its resemblance to the upper part of the neck of a pig or hog, whose bristles are short and upright.

HOGSHEAD, a vessel capable of containing 63 gallons. Hogsheads filled with earth, sand, &c. are sometimes used in lieu of gabions to cover men.

HOLD. See **FASTNESSES**.

To HOLD out, to maintain any place, ground, &c. resolutely against an enemy.

HOLLOW square, the form in which a body of foot is drawn up, with an empty space in the middle for the colours, drums, baggage, &c. See **SQUARE**.

HOLLOW tower, a rounding made of the remainder of two brisures, to join the curtain to the orillon, where the small shot are played, that they may not be so much exposed to the view of the enemy.

HOLLOW way, any pass or road, both sides of which are commanded by heights.

HOLSTERS, cases for a horseman's pistols, affixed to the pommel of the saddle.

Order of the HOLY GHOST, the principal military order in France, instituted by Henry III. in 1569. It consisted of 100 knights, who were to make proof of their nobility for three descents. The king was the grandmaster, or sovereign, and as such, took an oath on his coronation-day, to maintain the dignity of the order. The knights wear a golden cross hung about their necks by a blue silk ribband, or collar: but before they received this order of the Holy Ghost, that of St. Michael was conferred, as a necessary degree; and for this reason their arms are surrounded with a double collar.

HOME-SERVICE consists in military operations and arrangements for the immediate defence of our native country, should it be threatened by invasion, or by domestic broils, or insurrections.

Home-Department, a place at Whitehall, where every thing relating to the interior regulations of the country is transacted. It is often called the Home Office. The Secretary of State for the Home Department has his signature affixed to commissions in the army, for which he receives a certain portion of the fees.

HOMME d'armes, a military phrase among the French, signifying a gentleman or cavalier who belonged to one of the old companies, was armed cap-à-pee, and always fought on horseback. In ancient times, every man of this description was accompanied by two horsemen independent of his servants. One of the mounted attendants was armed with a cross-bow, and the other with a common bow or battle-axe: so that one hundred *hommes d'armes* composed a body of three hundred horse. It was a species of cavalry, which existed from the reign of Louis XI. until the reign of Henry II. Charles VII. had begun to form the French nobility into regular corps of cavalry, dividing them into different troops. Out of these he established a body of fifteen hundred *hommes d'armes*, or armed bowmen, and he gave the troops or companies, according to their sizes, to the princes, and most experienced captains in his kingdom.

For particulars we refer the curious to *Le Gendre and Gaia, Traité des Armes, L. 14,* and to *Fauchet, L. 2. C. 1. de son Traité de la Milice et des Armes.*

HOMMES de cheval, Fr. In all military descriptions which relate to cavalry, the French usually say, *cinquante, cent, deux cents, deux mille, &c. hommes de cheval,* fifty, one hundred, two hundred, two thousand horse, or cavalry.

Etre HOMME de cheval, a term in French equitation, signifying, that a man is completely master of his horse, or knows how to manage him thoroughly, and according to prescribed rules and regulations. Thus, *Il est suffisamment homme de cheval pour n'être point embarrassé de celui qu'il monte, en commandant sa troupe.* He is sufficiently master of his horse, or he is horseman enough, to be perfectly at ease on the one he rides in exercising his troop.

HOMME de corps, Fr. See **SERF.**

HOMME fidèle, Fr. an individual who, according to the old feudal system, was attached to some lord, to whom his goods and chattels devolved, in case he died without heirs in the line direct. *Homme feudataire* signifies the same.

HOMMES de pied, Fr. in all accounts of infantry, the French say *cinquante hommes de pied, &c.* fifty foot or infantry.

HOMOGRAPH, invented by Lieutenant Spratt of the royal navy.

This new, easy, and useful code of signals is to be performed with a white pocket handkerchief, to be held in different positions of the body. For particulars see page 165, vol. 27, of *Transactions of the Society for the Encouragement of Arts, Manufactures, and Commerce, 1809.*

HONDEAAN or **HUNDYVEANN,** an Indian term signifying commission on bills of exchange.

HONEY-COMB, (rayon de miel, Fr.) in a general acceptation of the term, cells of wax, in which the bee stores her honey. Hence **HONEY-COMB, (fente, Fr.)** in gunnery, which is a cavity or flaw resembling one of those cells.

HONEY-COMBED, having a flaw.

HONEY-Combs in cannon, flaws in the metal, a fault in casting, which renders it extremely dangerous in firing. The Board of Ordnance rejects all guns (on proof) having an honey-comb of 1-9th of an inch deep, as being unfit for service.

HONGRELINÉ, a kind of short

waistcoat stiffened like jumps or stays, worn by the Hungarian ladies; its composition to us is unknown. It was supposed to resist a pistol ball, or the point of a sword. Marshal Saxe always wore one. There was another sort, of small chain-work. See *Index to the Life of Gustavus Adolphus.*

HONI soit qui mal y pense, Fr. Evil be to him who evil thinks. The motto of the most noble order of the Knights of the Garter. It appears in all the royal arms of Great Britain. See **ORDER.**

HONNEUR, Fr. honour.

HONNEURS Militaires, Fr. military honours. It was directed by a general instruction in the French service, that whenever an officer saluted or paid a military honour to a general officer, he should make his troop or company invariably face towards the enemy. The same practice prevails in our service.

HONNEURS funèbres, Fr. funeral honours. See **BURIALS.**

HONOUR, in a *military sense,* is an expression to which custom has given different meanings. Real Honour consists in the constant practice of virtue. Aristotle calls it the recompense of virtue: the testimony of the excellence of a man who distinguishes himself by virtue. An Italian writer calls it a state of inviolable dignity, above all calumny and all suspicion. Honour gives many advantages; it procures us the consideration of the public; it advances our fortunes. The best recompense of an action is, undoubtedly, the satisfaction of having done it; but nevertheless, the honour resulting to us from it is a real good, which should be dear to us.

HONOUR, in a general acceptation, may be properly called susceptibility. As a term it is variously used in military life, and frequently misunderstood by young and inexperienced officers in their first outset. As a quality of the mind, it cannot be too much encouraged, or too much cultivated among officers of all ranks and descriptions. The possession of it is a guarantee for good conduct, a bond of fidelity, and a certain barrier against military corruption. Most men are excited to deeds of valour and enterprise by a sense of honour, who would otherwise remain inactive, or only perform the mere drudgery of service. This species of Honour is, in fact, the root of that *Espit de Corps* which makes a whole body of officers tenacious of repu-

tation, and solicitons to preserve it unsullied, from the colonel down to the lowest drum boy.

This term may likewise be considered as esteem, reputation, the glory which is attached by mankind to talents and virtues.

No term, perhaps, has ever been so much misunderstood or misapplied as the word honour, especially among persons who assume importance from the adventitious circumstances of birth, or situation. It frequently happens that an individual having occasion to enter into pecuniary engagements, will not only give his honour, but sign his name to deeds for the punctual discharge of them, yet on the day of liquidation this phantom of honour not only forfeits his word, but cavils and disputes about his signature. We could exemplify our observation by a variety of instances in private and public life, were not the existence of the fact too notorious to stand in need of exemplification, *even among military men*; who ought to be not only honourable, but honest men.

Affair of Honour. We have already given a general outline of this term under DUELLING. The propriety or impropriety, as well as the legality or illegality of which mode of terminating human differences is too well explained by the celebrated English lawyer John Selden to be omitted here. His words are under the head *Duel*; we shall quote them under that of *Affair of Honour*.

“A duel may still be granted in some cases by the law of England, and only there. That the church allowed it anciently appears by this: In their public liturgies there were prayers appointed for the duellists to say, the judge used to bid them go to such a church and pray, &c. But whether this is lawful? If you make any war lawful, I make no doubt but to convince you of it. War is lawful, because God is the only judge between two that are supreme. Now if a difference happen between two subjects, and it cannot be decided by human testimony, why may they not put it to God to judge between them, by the permission of the prince? Nay, what if we should bring it down, for argument's sake, to the sword-men; one gives me the lie; it is a great disgrace to take it; the law has made no provision to give remedy for the injury, (if you can suppose any thing an injury for which the

law gives no remedy,) why am not I, in this case supreme, and may therefore right myself?

“*A Duke ought to fight with a gentleman; the reason is this: the gentleman will say to the duke, it is true, you hold a higher place in the state than I; there is a great difference between you and me, but your dignity does not privilege you to do me an injury; as soon as ever you do me an injury, you make yourself my equal; and as you are my equal, I challenge you; and, in sense, the duke is bound to answer him.*”

In addition to what our learned countryman has said upon duelling, we shall quote a passage from Dr. Robertson's History of the Reign of Charles the Vth, which will shew, that this mode of terminating private disputes is extremely ancient.

“It is evident,” observes that author, “from Velleius Paterculus, lib. ii. c. 118, that all questions which were decided among the Romans by legal trial, were terminated among the Germans by arms. The same thing appears in the ancient laws and customs of the Swedes, quoted by Jo. O. Stiernhöök de Jure Suenum et Gothorum vetusto, 4to. Holmiæ, 1682, lib. i. c. 7. It is probable, that when the various tribes which invaded the empire were converted to Christianity, their ancient custom of allowing judicial combats appeared so glaringly repugnant to the precepts of religion, that for some time, it was abolished, and by degrees, several circumstances which I have mentioned led them to resume it.

“It seems likewise to be probable, from a law quoted by Stiernhöök in the treatise which I have mentioned, that the judicial combat was originally permitted in order to determine points respecting the personal character, or reputation, of individuals, and was afterwards extended not only to criminal cases but to questions concerning property. The words of the law are, ‘If any man shall say to another these reproachful words, ‘You are not a man equal to other men,’ or ‘You have not the heart of a man,’ and the other shall reply; ‘I am a man as good as you,’ let them meet on the highway. If he who first gave offence appear, and the person offended absent himself, let the latter be deemed a worse man even than he was called: let him not be admitted to give evidence in judgment either for man or woman,

and let him not have the privilege of making a testament. If he who gave the offence be absent, and only the person offended appear, let him call upon the other thrice with a loud voice, and make a mark upon the earth, and then let him, who absented himself, be deemed infamous, because he uttered words which he durst not support. If both shall appear properly armed, and the person offended shall fall in the combat, let a half compensation be paid for his death. But if the person who gave the offence shall fall, let it be imputed to his own rashness. The petulance of his tongue hath been fatal to him. Let him lie in the field, without any compensation being demanded for his death.' *Lex Uplandica* ap. *Stiern*. p. 76. Martial people were extremely delicate with respect to every thing that affected their reputation as soldiers. By the laws of the Salians, if any man called another a *hare*, i. e. a runaway, or accused him of having left his shield in the field of battle, he was ordained to pay a large fine. *Leg. Sal.* tit. xxxii. § 4. 6. By the law of the Lombards, if any one called another *arga*, i. e. a good-for-nothing fellow, he might immediately challenge him to combat.—*Leg. Longob.* lib. i. tit. v. § i. By the law of the Salians, if one called another *cenitus*, a term of reproach equivalent to *arga*, he was bound to pay a very high fine, tit. xxxii. § i. Paulus Diaconus relates the violent impression which this reproachful expression made upon one of his countrymen, and the fatal effects with which it was attended. *De Gestis Longobard.* lib. vi. c. 24.—Thus the ideas concerning the point of honour, which we are apt to consider as a modern refinement, as well as the practice of duelling, to which it gave rise, are derived from the notion of our ancestors, while in a state of society very little improved." See Robertson's *History of Charles V.* pages 271, 272.

We shall not take leave of our learned author, without giving two or three instances, out of his proofs and illustrations, relative to the termination of private feuds by judicial, or private combat.

This mode of trial was so acceptable, that ecclesiastics, notwithstanding the prohibitions of the church, were constrained not only to connive at the practice, but to authorize it. A remarkable instance of this is produced by Pasquier, *Recherches*, lib. iv. chap. i. p. 250. The

abbot Wittikindus considered the determination of a point of law by combat as the best and most honourable mode of decision.

In the year 978, a judicial combat was fought in the presence of the Emperor. The Archbishop Aldebert advised him to terminate a contest which had arisen between two noblemen of his court, by this mode of decision. The vanquished combatant, though a person of high rank, was beheaded on the spot. *Chronic. Ditmari. Episc. Mersb. chez Bouquet, Recueil des Hist.* tom x, p. 121. Questions concerning the property of churches and monasteries were decided by combat. In the year 961, a controversy concerning the church of St. Medard, whether it belonged to the abbey of Beaulieu or not, was terminated by judicial combat. *Bouquet, Recueil des Hist.* tom. iv. p. 729, *ibid.* p. 612, &c. The Emperor Henry I. declares, that this law, authorizing the practice of judicial combats, was enacted with the consent and applause of many faithful bishops. *Ibid.* p. 231. So remarkably did the martial ideas of those ages prevail over the genius and maxims of the canon law, which in other instances was in the highest credit and authority with ecclesiastics. A judicial combat was appointed in Spain by Charles V. A. D. 1522. The combatants fought in the presence of the Emperor, and the battle was conducted with all the rites prescribed by the ancient laws of chivalry. The whole transaction is described at great length by Pontus Heuterus, *Rer. Austriac.* lib. viii. c. 17. p. 205.

The last instance which occurs in the history of France, of a judicial combat authorized by the magistrate, was the famous one between M. Jarnac and M. de la Chastaignerie, A. D. 1547. A trial by combat was appointed in England, A. D. 1571, under the inspection of the judges in the court of Common Pleas; and though it was not carried to the same extremity with the former, (Queen Elizabeth having interposed her authority, and enjoined the parties to compound the matter,) yet in order to preserve their honour, the lists were marked out, and all the forms, previous to the combat, were observed with much ceremony. *Spelm. Gloss. Voc. Campus*, p. 103. In the year 1631, a judicial combat was appointed between Donald Lord Rea, and David Ramsay, Esq. by

the authority of the Lord High Constable and Earl Marshal of England; but that quarrel likewise terminated without bloodshed, being accommodated by Charles I. Another instance occurs seven years later. Rushworth in observation on the Statutes, &c. p. 266.

It manifestly appears from these extracts, that, in former times, not only the property of individuals was considered, but their feelings, as men of honour, were consulted. Law, however, soon obtained the entire ascendancy, and judicial, or private combats, were not only laid aside, but were moreover strictly forbidden. The military character alone seems to have retained a sort of innate privilege to make appeals to the sword, in cases where the nice sensibility of the heart breaks through the trammels of legal disquisition, and establishes points of honour which can only be determined by personal exposure. Thus we find that although premeditated duels were severely punished in France, *Rencontres*, or accidental quarrels, were always overlooked, whatever their issue might be. Frederick the Great of Prussia seems to have set his face against duelling altogether. Yet it is singular, that notwithstanding his severe prohibition, a Prussian officer was under the necessity either of vindicating his wounded honour by an appeal to the sword or pistol, or was disgraced for having suffered a personal affront. This happened in 1782. With us the same hardship exists. Lord Kenyon once declared from the bench, that he would personally interfere as expounder of the British laws, should any minister recommend mercy to his Majesty on the conviction of an individual who had murdered his fellow creature in a duel: and we have lately had a most convincing proof, that the practice is not only discountenanced by the King and Commander in Chief, but that every transgression must entail displeasure on the officer.

Word of Honour, (*parole d'honneur*, Fr.) a promise or engagement that is made or entered into by word of mouth, the breach of which entails disgrace upon the violator.

Point of Honour, (*point d'honneur*, Fr.) a delicacy of feeling, which is generally acquired by education, and strengthened by an intercourse with men of strict integrity and good conduct. It is likewise very frequently the offspring

of peculiar habits, received notions, and established etiquettes. The French familiarly say, *Ils se sont battus pour un point d'honneur*, they fought for a point of honour; they likewise say, *Il y va de son honneur*, his honour is at stake. As young Norval emphatically exclaims in Douglas,

Honour! sole judge and umpire of itself!

To die upon the bed of Honour, (*mourir au lit d'honneur*, Fr.) is a term particularly applied to military men, who die in battle fighting in their country's cause.

A Court of Honour. Although a court of honour may be said, in some degree, to resemble a board of inquiry, nevertheless it cannot be strictly so; for a court of honour has not only the power of ascertaining the degree of guilt which may be attached to misconduct, but it can entail ignominy upon the guilty persons; whereas a court of inquiry only investigates the matter and circumstances, and determines whether there be sufficient ground to try the accused before a general court-martial; which is the last resort of military jurisdiction, and unites within itself all the qualities and powers of the other two courts.

A debt of Honour, an obligation which, among honourable men, especially officers, is more binding than those engagements or contracts that are guaranteed by law. The reason is manifest.

Honours by Guards, as a compliment to general officers, &c. with the detail of officers and men they are entitled to in the English army.

The commander in chief, if a field-marshal or captain general, has 1 captain, 1 lieutenant, 1 ensign, 2 serjeants, 2 drummers, 2 fifers, and 50 privates, with colours.

A general of horse and foot has 1 captain, 1 subaltern, 2 serjeants, 2 drummers, 2 fifers, and 50 privates.

A lieutenant-general of horse and foot has 1 lieutenant, 1 serjeant, 1 drummer, 1 fifer, and 30 privates.

A major-general of horse and foot has 1 ensign, 1 serjeant, 1 drummer, 1 fifer, and 20 privates.

A quarter-master general has 1 serjeant and 12 privates.

A brigadier has 1 serjeant and 12 privates.

Majors of brigade, encamped together, have 1 serjeant and 2 privates.

A judge advocate has 1 serjeant and 7 privates.

A provost-marshal has 1 serjeant and 18 privates.

A provost-marshal, when he has prisoners, has 1 lieutenant, 2 serjeants, 1 drummer, 1 fifer, and 48 privates.

Military Honours. All armies salute crowned heads in the most respectful manner, colours and standards dropping and officers saluting. Their guards pay no compliment except to princes of the blood, and that by courtesy in the absence of crowned heads.

A field-marshal is to be saluted with the colours and standards of all the forces, except the horse and foot-guards, and excepting when any of the royal family shall be present; but in case a field-marshal is colonel of any regiment, or troop of horse or foot-guards, he is to be saluted by the colours or standards of the regiment or troop he commands.

Generals of cavalry and infantry, upon all occasions, are to have the march beat to them, and to be saluted by all officers; those bearing the colours excepted.

Lieutenant-generals of cavalry and infantry are, upon all occasions, to be saluted by all officers. They are to have 3 ruffles given them, with presented arms.

Major-generals are to have two ruffles with presented arms.

Brigadier-generals are to have one ruffle with presented arms.

To colonels their own quarter-guards in camp turn out, and present their arms, once a day, after which they only turn out with ordered arms.

To majors their own guards turn out with ordered arms once a day; at other times they stand by their arms.

When a lieutenant-colonel or major commands a regiment, their own quarter-guards pay them the same compliment as is ordered for the colonel.

The master-general of the ordnance is to have the same respect and honours paid to him as the generals of horse and foot.

Honours to be paid by the cavalry.—A general of cavalry or infantry is to be received with swords drawn, kettle-drums beating, trumpets sounding the march, and all the officers to salute, except the cornet bearing the standard.

A lieutenant-general is to be received with swords drawn, trumpets sounding twice the trumpet flourish, as in draw-

ing swords, and all the officers to salute except the cornet bearing the standard; but the kettle-drums are not to beat.

A major-general is to be received with swords drawn, one trumpet of each squadron sounding once the trumpet flourish, as in drawing swords; no officer to salute, nor kettle-drum to beat.

A brigadier-general is to be received with swords drawn; no trumpet to sound, nor any officer to salute, nor kettle-drum to beat.

All officers in the command of forts or garrisons, have a right to the complimentary honours from the troops under their command, which are due to the rank one degree higher than the one they actually possess.

Manner of paying honours.—The king's standard or colour in the guards is never to be carried by any guard, except that which mounts on his Majesty's person.

The first standard, guidon, or colour of regiments, which is the union colour, is not carried by any guard, but that on the King, Queen, Prince of Wales, or commander in chief being of the royal family; and, except in those cases, it shall always remain with the regiment.

When general officers, or persons entitled to a salute, pass in the rear of a guard, the officer is only to make his men stand shouldered, and not to face his guard to the right about, or beat his drum.

All sentries are to pay a due respect to every officer who passes by their posts; but are to keep their proper front while paying the compliment.

All governors, whose commissions in the army are under the degree of general officers, shall have, in their own garrisons, all the guards turn out with rested arms: the drummers to beat one ruffle; and though the main guard turns out with rested arms every time he passes, yet they give him the compliment of the drum but once a day; but all the other guards beat as often as he appears near them.

If they are general officers likewise, they are then to have the further compliments paid them, by the several beatings of the drum, as practised in the army.

Regulations of honours to be paid to admirals.—Admirals, with their flags on the maintop, are to have the same respect from the troops as generals of

cavalry and infantry; that is, upon all occasions to have a march beat to them, and to be saluted by all the officers, those bearing the colours excepted.

Vice-admirals are to have the same respect as lieutenant-generals of cavalry and infantry; that is, upon all occasions be saluted by all the officers in the garrison, the drummers beating 3 ruffles.

The rear-admirals are to have the same respect as major-generals, who have two ruffles, and not to be saluted by any officer.

Commodores with broad pendants have the same respect as brigadier-generals; which is, to have one ruffle.

Rank and precedence between sea and land officers.—The admiral, or commander in chief, of his Majesty's fleet, is to rank with a field-marshal of the army.

The admirals with their flags on the main-top-mast-head are to have rank with generals.

Vice-admirals are to have rank as lieutenant-generals.

Rear-admirals are to have rank as major-generals.

Commodores with broad pendants are to have rank as brigadier-generals.

Captains commanding post ships, after three years from the date of their first commission for a post ship, are to have rank as colonels.

All other captains commanding post ships, are to have rank as lieutenant-colonels.

Captains of his Majesty's ships or vessels, not taking post, are to have rank as majors.

Lieutenants of his Majesty's ships are to have rank as captains.

The rank and precedence of sea officers, in the classes above-mentioned, are to take place according to the seniority of their respective commissions.

Post captains commanding ships or vessels that do not give post, rank only as majors during their commanding such vessels.

No land officer is to command any of his Majesty's squadrons or ships, nor any sea officer to command at land: nor shall either have a right to demand military honours due to their respective ranks, unless they are upon actual service.

All guards and sentinels are to pay the same compliments to the officers of the royal navy, as are directed to be

paid to the officers of the army, according to their relative ranks.

The compliments above directed are to be paid by the troops to officers in the service of any power in alliance with his Majesty according to their respective ranks.

Turning out of the line. The line turns out without arms, whenever any part of the royal family, or the general commanding in chief, comes along the front of the camp.

When the line turns out, the private men are to be drawn up in a line with the colours and standards; the corporals on the right and left of their respective companies, the piquet forms behind the colours, accoutred, but without arms.

The officers and non-commissioned officers are to be drawn up with their respective companies. The field officers in their proper posts in battalion, two ensigns taking hold of the colours.

When the commander in chief comes along the line, the camp colours on the flanks of the parade are to be struck, and planted opposite to the bells of arms, and the drums piled up behind the colours; the halberts are to be planted between, and on each side of the bells of arms, the hatches turned from the colours.

Honours of war, in one sense, are stipulated terms which are granted to a vanquished enemy, and by which he is permitted to march out of a town, from a camp or line of entrenchments, with all the insignia of military etiquette. In another sense they signify the compliments which are paid to great personages, military characters, &c. when they appear before any armed body of men; or such as are given to the remains of a deceased officer. The particular circumstances attending the latter are well known, and depend greatly upon the usages of different countries; those which regard our own service may be seen under *Burials*. With respect to the former, we think it necessary to observe, that it is extremely difficult, and much beyond the limits of our undertaking, to describe them specifically; as much, indeed almost every thing, depends upon the disposition of the general who grants the capitulation. In some instances, the troops of a besieged garrison are permitted to march out with drums beating, colours flying, &c. others are only allowed to advance silently in

front of their works, ground or pile their arms, face to the right and return within their line of entrenchments. Others again (as was the case with lord Cornwallis, at York town, in Virginia) are permitted to march out, with drums beating, to a given spot, there pile their arms, face to the right about, and march back to their works. In the instance quoted, the officers retained their side arms and baggage, with such horses as they had lawfully obtained by purchase, &c. A sloop of war was allowed to proceed to New York with dispatches from the British general to Sir Henry Clinton, who was commander in chief of the forces acting against America; which vessel passed and repassed without being searched. This indulgence proved extremely fortunate to a small number of American loyalists, who were peaceably transported into the British lines, instead of being sacrificed to the fury of their countrymen in arms.

When the town of Valenciennes surrendered to the commander in chief, Field Marshal his Royal Highness the Duke of York, the garrison under the orders of General Ferrand was permitted to march out by the gate of Cambray with the honours of war. It was however, specifically stated, that the troops should lay down their arms at a named spot, viz. at a house called *le Briquet*, where they were to leave their colours and field-pieces without damaging them in the least. They were likewise directed to leave their troop-horses, artillery, provisions, and other military effects. Those belonging to the officers were restored to them, with their swords. It was further agreed, that the garrison should march out on the 1st of August, in the manner mentioned; and as the troops were prisoners of war, their route to return into France was to be communicated to them 24 hours previous to their departure, in order to receive their parole of honour. The officers and soldiers engaged not to serve during the whole course of the war against the armies of his Majesty the emperor, and of his allies, without having been exchanged conformably to the cartels, under pain of military punishment.

General Ferrand had demanded, that the garrison should march out from the place on the 6th day after the signature of the capitulation, to repair to such

part of the French republic as he should judge proper, with arms and baggage, horses, drums beating, matches lighted at both ends, colours flying, and with all the cannon they could carry away. These articles were refused by the Duke of York; and on the 28th of July, 1793, Valenciennes surrendered to the British arms, in trust for the Emperor of Germany.

As soon as the capitulation was signed, hostages were sent into the town, namely, a colonel, a major, and a captain, who were exchanged against officers of an equal rank of the garrison; which hostages were restored immediately after the execution of the articles of capitulation.

When Mantua surrendered to Bonaparte, the veteran general Wurmsur, in consideration of his brave defence of the town, was allowed to leave the place with all the honours of war.

Several emigrants, on this occasion, escaped in the covered wagons.

Signatures upon Honour, instruments, such as declarations of officers, respecting the sale, purchase, or exchange of commissions; vouchers for allowances, &c. that are guaranteed by the names of individuals, without oath.

HONOURABLY acquitted, a term used in naval and military courts-martial. See observations respecting this usage, vol. i. Regimental Companion.

HOOF, part of a horse's foot.

Hoor-boney, a round boney swelling growing on a horse's foot.

Hoof-bound, a shrinking of the top of a horse's hoof.

Hoof-cast, when the coffin or horn falls clear away from the hoof.

Hoof-loosened, a loosening of the coffin (or hollow part of a horse's hoof) from the flesh.

HOOK, (*crochet*, *croc*, Fr.) a bended iron to hang things upon.

HOOKS, pieces of bent iron fixed to the transom plates of a field-carriage are so called. They serve to fix the drag-ropes for drawing it occasionally backward or forward.

Hooks and EYES, (*agraffe*, Fr.) small pieces of bent wire, by which garments are fastened together.

Armour Hooks, small utensils, generally made of brass, which serve to have arms laid upon.

HOOKUM, an Indian word, signifying order or command.

HOKUMNAUMAI, in India, signifies instruction.

HOOP of iron, a circular iron band. Several sorts of hoops are used in the construction of artillery carriages, as nave and axle-tree hoops, &c.

HOPITAL, *Fr.* hospital. During the old French government, there existed 80 military hospitals under the immediate sanction of the king. These hospitals were subject to the war-minister. There were likewise other hospitals, which were under the care of the intendant of each province. They chiefly consisted in those erected on the frontiers and of garrison towns.

HOPITAL sur mer, *Fr.* hospital-ship. A particular vessel which is always attached to a naval armament, and is provided with the necessary accommodations for the sick and wounded belonging to the ships of war.

HOPLITAI, foot soldiers among the Greeks, who bore heavy armour, and engaged with broad shields and long spears. These took precedence of all other foot soldiers.—Potter's *Greek Ant.* vol. ii. c. 3.

HOQUETON, *Fr.* a sort of garment, which was worn during the old government of France by gentlemen belonging to the king's body guard, who were called *gardes de la manche*. It sometimes signifies a serjeant; but the term is obsolete.

HOOQUU, an instrument much used in India for smoking. The several parts of a hooqu are, the chilum, or ash pit, for the fire and tobacco; its sur posh, or cover; the ab nue or water tube, which supports the chilum, and connects it with the water in the hooqu; the moonhal, or mouth-piece; the nue or flexible tube, which penetrating with the ab nue, opens short above the water, whence the smoke is extracted and conveyed to the mouth; the nue and ab nue, together form the nuechu, or snake; nothing remains now but the zen-undar, or cloth, placed under the hooqu bottom, more for ornament than use, unless we may add the tuwa, or *plate*, used for separating the gool (a ball of charcoal, prepared with rice and sugar, &c.) from the tobacco below. The man who has charge of the hooqu is called the hooqu burdar.

HORD, (*horde*, *Fr.*) a crowd or assemblage of people, who have not any fixed or certain habitation. The term was originally applied to a body of Tar-

tars, who followed a roving life, encamped in different countries, and chiefly lived with their flocks.

HORDEARIUM, the money which the Romans gave their cavalry for the sustenance of their horses.

HORDEUM, barley. In ancient Rome the horses were fed with barley; and the soldiers were sometimes punished by being confined to that allowance.

HORION, *Fr.* a term which formerly signified a helmet, and which in the vulgar acception of it now, among the French, means a blow upon the head.

HORIZON, (*horizon*, *Fr.*) a circle which divides the invisible from the visible part of the globe.

HORIZONTAL, parallel to the horizon; on a level.

HORIZONTAL superficies, the plain field lying upon a level, without any rising or falling.

HORIZONTAL plane, that which is parallel to the horizon of the place.

In levelling, the chief object to be considered is, whether two points be in the horizontal plane; or whether they deviate; and in what degree.

HORIZONTAL range, or *level range of a piece of ordnance*, is the line it describes, when directed parallel to the horizon.

The following useful theorems come from the pen of the ingenious Dr. Halley:—

1. A shot being made on an inclined plane, having the horizontal distance of the object it strikes with the elevation of the piece, and the angle at the gun between the object and the perpendicular, to find the greatest horizontal range of that piece loaded with the same charge of powder, that is, half the latus rectum of all the parabolas made with the same impetus.—Take half the angle contained between the object and the nadir, and the difference of the given angle of elevation from that half; subtract the versed sine of that difference from the versed sine of the angle made by the object and zenith. The difference of those versed sines will be to the sine of the angle last mentioned, as the horizontal distance of the object struck to the greatest range at 45°.

2. Having the horizontal range of a gun, the horizontal distance and angle of inclination of an object to the perpendicular, to find the two elevations

necessary to strike that object.—Take half the angle contained between the object and nadir; this half is equal to half the sum of the two angles of elevation sought. Then say, as the horizontal range is to the horizontal distance of the object, so is the sine of the angle of inclination to a fourth proportional; which fourth, being subtracted from the versed sine of the angle formed by the object and zenith, leaves the versed sine of half the difference of the angles of elevation, whose half sum was before obtained; therefore, by adding and subtracting half the difference of the angles of elevation to and from the said half sum, the elevations themselves will be found.

HORN, (*corne, cor, cornet, Fr.*) See **BUGLE horn**.

HORN-work, (*ouvrage à corne, Fr.*) See **FORTIFICATION**.

HORS de combat, a French military phrase, signifying that an individual or body of men are so completely beat by superior skill, &c. as not to be able to maintain the field of battle.

Mettre Hors de combat, Fr. to drive your opponent before you; to press him so closely, that he cannot make a stand against you—To put him out of the lists of contest.

Hors de portée, Fr. (in fencing) out of distance.

Hors de mesurc, Fr. (in fencing) out of measure.

Hors de la loi, Fr. See **OUTLAWED**.

HORSE, in a military sense, a body of horse. See **CAVALRY**.

Field Officer's and Adjutant's HORSE. Every field officer in the British army is directed to have one horse, at least, for the purpose of doing military duty. No allowance whatever is made for the purchase; and should the animal die of any disorder, except the glanders, or be killed any where, or any how, except in action, no compensation whatever is allowed. We consider this case extremely hard indeed, particularly with regard to adjutants, who are not always blessed with riches. It ought to be considered that this purchase is not optional, but enjoined; and an officer might as well be ordered to return the bounty money, because his recruit had died of some particular disorder, as the horse not be allowed for, except in the cases just specified. See **WAR OFFICE REGULATIONS**.

HORSE-doctor, a person who understands the disorders of horses, and un-

dertakes to cure them. The word is obsolete, having yielded to the more modern appellation of veterinary surgeon.

HORSE-picker, a small piece of iron which is used to extract pebbles, &c. that get between the horse's shoe and hoof.

HORSE-shoe. See **FORTIFICATION**.

HORSE-shoe, a circular or semi-circular piece of iron, which is fitted and nailed to the hoof of a horse.

HORSE-shoe. The frontiers of Spain towards France are so called, from their resemblance to one; Galicia and Arragon forming the two extremities.

Associated-HORSE, a body of cavalry so called in the days of Cromwell. At the famous battle of Naseby, (fought on the 25th of June, 1645,) which decided the fate of Charles I. the associated horse were posted in the rear of the right wing of the republican army, and formed a part of the reserve.—There were troops of the association stationed in the rear of the left. Oliver Cromwell commanded the cavalry on the right of the whole, and the associated horse were under his immediate orders.

HORSE near-side protect, a guard used in the cavalry sword exercise. See **WORD Exercise**.

HORSE off-side protect. See **WORD Exercise**.

HORSE, a wooden machine, which soldiers ride by way of punishment. See **CHEVAL DE BOIS**.

HORSE. See **PORTCULLIS**.

HORSE-GUARDS, a public building situated in Parliament-street, Westminster, which is so called from a guard having been originally mounted there by the Horse-Guards, whose duty is now performed by the Life-Guards.

The Commander in Chief's office, that of the Secretary at War, Adjutant General, Muster Master General, &c. are at the Horse-Guards; to which place all official communications relating to the British army are transmitted. All applications, personal or otherwise, to the Commander in Chief, are likewise made there.

HORSE-GUARDS. See **BLUES**.

HORSE-GUARDS-general, a term applied to those officers who have obtained rank by an assiduous and persevering attention to the etiquette at the commander in chief's office, and who have never seen service.

HORSE-LEECH, a great leech that

bites horses; a farrier; one who bleeds horses.

HORSEMAN. See **CAVALRY**.

HORSEMANSHIP, (*équitation*, Fr.) the art of riding; the art of managing a horse.

HORSEHAM-stone is a kind of thin broad slate, of a greyish colour, formerly much used, especially in Sussex, to cover churches and great houses, &c.

HORSING. A mare is said to be horsing when she discovers an inclination to be covered.

HOSE, breeches, or stockings. It is generally taken in the latter sense when mentioned as part of a soldier's necessities.

Over-HOSE, men's breeches and stockings together, or leggings. Dragoons generally wear them when they appear in their watering dress.

HOSPITAL, a place appointed for the sick and wounded men, provided with physicians, surgeons, nurses, servants, medicines, beds, &c.

HOSPITALS with military superintendants.—There are four general hospitals of this description, viz. at Plymouth, Deal, Gosport, and Portsmouth, and York Hospital at Chelsea.

The Surgeons at Portsmouth and Deal have not any rank attached to the situation, but they receive five shillings per day extra allowance in addition to their nett pay of ten shillings. At Plymouth a physician has charge of the hospital; he receives twenty shillings per day, but has no extra allowance. York Hospital at Chelsea is attended by an assistant surgeon, being under the immediate direction of the surgeon general.

The military superintendants have five shillings over and above their nett pay, according to the rank they hold in the army.

At Gosport the military superintendant has one guinea allowed per week for lodging money, together with coals, candles, &c.

A fifth military superintendant was appointed in 1800 to take charge of the temporary hospital at Colchester. See James's Regimental Companion.

These are the principal permanent Hospitals in England, for a specific description of whose regulations, &c. as well as for instructions relative to military hospitals in general, see the last directions which have been published by authority. We cannot, however, dismiss the subject entirely without ob-

servating, that the cause of humanity, in the course of the late war, was espoused by the belligerent powers abroad, in a manner which reflects credit on the enlightened age we live in. The following two articles, were agreed upon by the Austrians and French.

Hospitals ought to be considered as inviolable.

Art. 1. The military hospitals shall be considered as so many inviolable azyla, where valour shall be respected, shall be assisted, and shall be free, whatever the army may be to which these hospitals belong, and upon whatever ground they may be established.

Art. 2. These hospitals shall be marked out by writings placed on the adjacent roads, in order that the troops may not approach, and that in passing they may observe silence, and cease beating the drums, or sounding the trumpets.

Camp HOSPITALS are either general or regimental. The general hospitals are of two kinds, viz.

Flying-HOSPITALS, } The first
Stationary-HOSPITALS. } attends the camp at some convenient distance, and the latter is fixed at one place. In the choice of both Dr. Pringle thinks it better to have them in towns than villages, as the former will afford larger wards, besides more of other conveniencies. These wards should be as airy as possible.

Regimental-HOSPITALS are frequently in barns, stables, granaries, and other out-houses; but above all, churches make the best hospitals from the beginning of June to October; these hospitals are solely for the use of the regiments they belong to.

Regimental surgeons are enjoined to take under their care any non-commissioned officers or soldiers of other regiments, (upon the commanding officer's authority for so doing being obtained,) who, from the absence of the corps to which they belong, from there being no general hospital in the neighbourhood, or from other unavoidable circumstances, are under the necessity of applying to them for relief and assistance.

It cannot be superfluous to remark in this place, that in the French service there was, and we believe there still is, a specific regulation, which directs, that all soldiers who have contracted a venereal disorder should be received into one of the Royal or Public Hospitals, without exception or distinction. They

are attended to in a particular quarter or ward, without expense to themselves or to their corps. Particular care is taken not to mix their linen or clothes with others, and they are always washed apart. No soldier, whose disorder has been pronounced incurable, was or is received into any of the public hospitals. The physician, or surgeon only, gives the incurables a certificate of their state and condition.

It is very desirable, that in every regimental hospital, there should be an apartment appropriated to convalescents, whose diet and mode of living must remain under the direction of the surgeon, and who must themselves be, in every respect, subject to the hospital regulations. A trusty non-commissioned officer must be appointed to the superintendance of the messing and conduct of this particular ward.

Convalescents, on coming out of the hospital, are not to be put on duty till the surgeon certifies to the adjutant, that they are perfectly recovered; for which purpose the surgeon, or assistant surgeon, must make a particular inspection of these men, at morning parade, to prevent any remaining longer exempted from duty, than the state of their health renders absolutely necessary. On a march, when circumstances will permit, the packs of such convalescents, as have not yet received certificates of their being fit for duty, should be carried for them.

Convalescents, when discharged from the hospital, should not be put immediately on public duties, but should be employed for a certain time, on regimental guards only, where they are not liable to be so much exposed to the weather, or to fatigue.

It is most positively ordered, that the surgeon, or assistant-surgeon, shall attend all parades and field days. No punishment is to be inflicted, but in the presence of the surgeon or assistant-surgeon.

In cantonments and barracks, the quarters of the surgeon must be near the hospital; and the assistant surgeon's tent must be pitched in its vicinity when a regiment is in camp.

The instructions for the economy and management of regimental hospitals, framed by the army medical board, having received the approbation of the Commander in Chief, are to be considered as proceeding immediately from

that quarter; and all generals commanding brigades and regiments are enjoined to give them full effect, and by their authority to enforce the strictest observance of them, within their respective commands.

Chelsea HOSPITAL. See CHELSEA.

Greenwich HOSPITAL, a magnificent building, originally instituted by King Charles II. for decayed seamen and mariners. It stands upon the banks of the river Thames, has a delightful park annexed to it, with an astronomical observatory. It is situate 5 miles East of London, in the county of Kent.

HOSPITAL at *Hereford*. Besides the national provisions for officers and soldiers, there is, in the city of Hereford, an hospital of private endowment for superannuated non-commissioned officers and private soldiers, and ancient servants of good character. It was founded about the year 1614, by Sir Thomas Coningsby, of Hampton-court, in the county of Hereford, on the site and out of the ruins of the convent of Blackfriars.

Kilmainham HOSPITAL. See KILMAINHAM.

HOSPITAL-mate, in recruiting districts. According to the last printed regulations, it is directed that an hospital mate should be placed under the orders of each field officer, to examine the recruits when brought for inspection, and to give such medical assistance as may be in his power, to the several recruiting parties in the district he belongs to.

HOSPITAL-fever, a name given to the malignant catarrhal fever, as being the most frequent in hospitals.

HOSPODAR, a dignitary title, which is given to the Prince of Walachia, who is tributary to the Grand Signor, and from whom he receives the investiture.

HOST, (*armée*, Fr.) an army; any large body of men assembled together in arms.

To HOST, to encounter in battle. It also signifies to review a body of men; to muster.

HOSTAGE, (*ôtage*, Fr.) in the art of war, a person given up to an enemy, as a security for the performance of the articles of a treaty.

HOSTILE, inimical; suitable to an enemy.

HOSTILITIES, (*hostilités*, Fr.) in a military sense, may imply a rupture between the inhabitants of the same country, town, or place; and the first

outrage that is committed by either party, as in general matters of warfare, is considered to be the first commencement of hostilities. Between nations, the first act of hostility presupposes a declaration of war. There are, however, certain established laws and regulations by which acts of hostility are governed. Without the intervention of these restrictions, war would be conducted upon the most brutal and ferocious principles.

HOSTILITY denotes a state of war or enmity between two nations. During a truce all acts of hostility are to cease on both sides.

HOSTING, an obsolete term, formerly signifying the mustering of men in arms.

HOTEL des Invalides, Fr. a spacious building which was erected by Louis XIV. in Paris, at the extremity of the Fauxbourg St. Germain, upon the river Seine, as a public monument of his charity and munificence. All disabled, infirm, and wounded officers and soldiers were received, lodged, and subsisted during the remainder of their lives, within its walls.

HOTTE, Fr. a sort of hand-basket, which is often made use of in the construction of batteries and other works, and serves to carry earth from one part to another. It is carried on the shoulders.

HOTTENTOTS, the aborigines, or native inhabitants of a settlement which took place in 1800, at the Cape of Good Hope. They possessed the whole of the colony, containing a large tract of country to the eastward and northward of Cape Town, until they were subdued and reduced to a wretched state of subjection by the Dutch boors.

HOUCKIEN, or *Hackien*, Fr. the name given to a faction which rose in the Low Countries, and was opposed to that of *Kabeljauw*. The latter term signifies a fish which devours others, and *Houckien* means a hook, whence the faction in question used to say, that they could catch their enemies with the same ease that fish are caught.

To **HOUGH**, to hamstring; to disable, by cutting the sinews of the ham. This has frequently been practised upon horses; particularly in Ireland.

HOUCLE, Fr. a surgeon's instrument wherewith the mouth of a wound is drawn and stitched together.

HOUGUINES, Fr. flat pieces of iron

with which the ancient warriors covered their thighs, legs, and arms.

HOUILLE, Fr. sedge, or fen-grass; also a kind of mineral in the principality of Liege, which makes very good fires.

HOULLIER, Fr. an obsolete French term, which meant what is now expressed by *Picoreur des armées*, or a free-booter.

HOUN, a gold coin of the Mysore country, value about four rupees.

Blood HOUND, a particular species of the canine kind, which has been employed to hunt down men, women, and children; particularly in the West-Indies.

HOUPPE, Fr. a small tuft or bunch of worsted, worn in the corners of three-cocked regimental hats.

HOUREDEYS, Fr. an old French term which signified, first, hurdles with which the tops of the walls belonging to a fortified town were covered, in order to shield them against the concussion of warlike machines; and secondly a machine formerly used, which was called in Latin *hordecium*.

HOUSARDER, Fr. to fight with hussars, or after their method.

HOUSE. See **HOUSING**.

The House, a general term used in England to signify both Houses of Parliament, from whose annual vote the army derives its existence, and by which it is paid.

Lock-up-House, (commonly called a spunging house, from the exorbitance of its charges,) a place to which unfortunate debtors are taken before they are committed to prison.

HOUSEHOLD troops. The Life-Guards, Royal Regiment of Horse-Guards, and the three regiments of Foot-Guards are so styled. It is a peculiar privilege of these regiments, that no officer of the line, fencibles, or militia, can sit upon a court-martial which may be assembled for the trial of any person belonging to them. They have also a brevet rank, which gives them a step over the marching army.

King's HOUSEHOLD, in England, the domestic establishment of the King.—The French say, *Maison du Roi*.

HOUSING, or *saddle-HOUSING*, cloth, skin, or other ornaments added to saddles, by way of distinction; frequently embroidered with gold or silver, or edged with gold or silver lace.

HOUSSE, **HOUSSEAUX**, Fr. See **HORSE-cloth**.

HOWITZ, a kind of mortar mounted upon a field-carriage like a gun: the difference between a mortar and a howitz is, that the trunnions of the first are at the end, and of the other in the middle. The invention of howitzers is of much later date than mortars, as from them they had their origin.

The construction of howitzers are as various and uncertain as those of mortars, excepting the chambers, which are all cylindrical. They are distinguished by the diameter of the bore; for instance, a ten inch howitz is that, the diameter of which is ten inches; and so of the larger or smaller ones.

Howitzers, in the British service, are of the nature of 10, 8, and $5\frac{1}{2}$ inch, heavy and light, also 4 two-fifth inch. The calibres of howitzers differ in most foreign countries. Carronades are general in the service, both for land and sea, of the natures of 68, 42, 32, 24, 18, and 12 pounds. The charge of powder for a carronade is one-twelfth part of the weight of the round shot.

HOWITZ-BATTERY is made the same as a gun-battery, only the embrasures are at least a foot wider on account of the shortness of the howitz. See **BATTERY**.

Field HOWITZER. The modern French use 6-inch howitzers in the field, which can throw a grenade at 6 degrees elevation, to a distance of 600 toises. The 6 inch howitzer can likewise throw, to a smaller distance, a cartridge with 61 balls of seventeen lines diameter. In both instances the effects are extremely fatal. The cavalry, in particular, can be annoyed by the former in so galling a manner, as to be rendered almost useless.

HUE AND CRY, an official gazette so called, which is published at the expiration of every third week in the year, and serves to advertise deserters from His Majesty's service. That part which immediately relates to deserters, is divided into several columns, viz. names, corps, age, size, coat, waistcoat, breeches, hair, complexion, eyes, marks and remarks, trade, &c. parish born, county born, time, from what place, agent's names, agent's abode.

HUGHLY WACCA, *Ind.* a newspaper or chronicle which is kept by the officers of the Moors' government.

HUISSIER d'armes, *Fr.* tipstaff; an officer formerly so called in France, who was attached to the royal household.

They were at first distinguished by the name of *sergens d'armes*, or serjeants at arms. Some were directed to bear the mace before the king during the day, and obtained on that account the appellation of *huissiers d'armes*; in later times while the old monarchy subsisted, they were called *huissiers de la chambre*, or tipstuffs of the king's chamber. Others were kept within the king's bed-chamber during the night, and were sworn to expose their lives for the safety of his person, whence they obtained the name of *archers de garde*, which term was changed into *gardes du corps*, or body guards.

Death HUNTERS, followers of an army, who, after the engagement, look for dead bodies, in order to strip them. They chiefly consist of soldiers' wives, &c. who, in general, have less feeling than their husbands.

HUNGARIAN battalion, a body of men belonging to the Austrian army, whose dress consists in a white jacket, the buttons straight down to the waist, with blue coloured collar, cuffs and skirts, before and behind, like the rest of the Austrian infantry; with this difference, that the latter have white breeches and long black gaiters, and the former wear light blue pantaloons and half-boots.

HUNS, GOTHs, and VANDALS, barbarous tribes that inhabited the various provinces of Germany which had never been subdued by the Romans, or were scattered over those vast countries in the North of Europe, and North West of Asia, which are now occupied by the Danes, the Swedes, the Poles, the subjects of the Russian empire, and the Tartars.

HURDLES, in *fortification*, are made of twigs of willow, or osiers, interwoven close together; sustained by long stakes. They are made in the figure of a long square; the length being 3 or 5 feet, and breadth 3 or $3\frac{1}{2}$. The closer they are wattled together, the better. They serve to render batteries firm, or to consolidate the passage over muddy ditches; or to cover traverses and lodgments for the defence of the workmen against the fire-works, or the stones that may be cast at them.

HURDLE batteries. These are the invention of the late General Sir William Congreve of the Royal Artillery, and are admirably adapted for tempo-

rary fortifications. They consist of hurdles fixed in the ground in a triangular form, the intermediate space being filled with sand or earth, &c. and are constructed in a few minutes, and in any figure.

HURKARU, *Ind.* a gazette; as the Bengal Hurkaru.

HURTER, a flatted iron fixed against the body of an axle-tree, with straps to take off the friction of the naves of the wheels against the body.

HURTOIR, *Fr.* a piece of timber, about 6 inches square, placed before the wheels of a carriage, against the parapet of a battery, to prevent the wheels from doing damage to the parapets.

HURTLE. See **SKIRMISH**.

To **HURTLE**, (*heurter*, *Fr.*) to skirmish; to jostle; also to move with violence or impetuosity; as spears hurtle in the air.

HUSB *ul hookum*, or **HASSAB** *ul hookum*, *Ind.* a patent or order, under the seal of the vizier, with these initial words, which signify *always to command*.

HUSH. See **MONEY**.

HUSSAR *Dragoons*, a term applied to such regiments of light dragoons in the British service, as have been ordered by their respective colonels to wear mustachios, furred cloaks and caps, &c. The four corps are the 7th, 10th, 15th, and 18th.

HUSSARDS, *Fr.* hussars. They were first introduced into the French service in 1692, and owed their origin to the Hungarian cavalry which was subsidized by France before the reign of Louis XIII.

HUSSARS are the national cavalry of Hungary and Croatia. Their regimentals consist in a rough furred cap, adorned with a cock's feather, (the officers either an eagle's or a heron's,) a doublet, with a pair of breeches, to which the stockings are fastened, and yellow or red boots; besides, they occasionally wear a short upper waistcoat edged with fur, and 5 rows of round metal buttons, and in bad weather a cloak. Their arms are a sabre, carbine, and pistols. They are irregular troops: before the beginning of an attack, they lay themselves so flat on the necks of their horses, that it is hardly possible to discover their force; but being come within pistol shot of the enemy, they raise themselves with such surprizing quickness, and begin to fight with such vivacity on every side, that

unless the enemy is accustomed to their method of engaging, it is very difficult for troops to preserve their order. When a retreat is necessary, their horses have so much fire, and are so indefatigable, their equipage so light, and themselves such excellent horsemen, that no other cavalry can come up with them; they leap over ditches, and swim over rivers with surprizing facility. They never encamp, consequently are not burthened with any kind of camp equipage, saving a kettle and a hatchet to every 6 men. They always lie in the woods, out-houses, or villages, in the front of the army. The Empress Queen of Hungary and the King of Prussia exceeded every country in this description of troops.

Brown HUSSARS, a corps of cavalry in the Prussian service, so called from being clothed in brown uniforms.

Death's Head HUSSARS, a regiment of cavalry in the Prussian service, so called from the emblems of death exhibited on their caps. This regiment first distinguished itself in the Seven Years war under the late General Zietben, and continued to do so during the memorable campaigns against the French in 1793, 1809, 1813, and 1815 under Field Marshal Prince Blucher. They are also called Black Hussars, the uniform being of that colour. Marshal Prince Blucher served many years in this regiment.

HUT, (*hutte*, *Fr.*) The ancient mode of encamping was in little huts. In the American war, hutted camps were not uncommon. Huts may be made of earth, or branches of trees, straw, &c.

See **HUTTER**, *Fr.* to make a hut.

HURZOOR NOVETZ, *Ind.* a secretary who resides at an Indian court, and keeps copies of all firmauns, records, or letters.

HYDER, the Arabic term for lion. This title is often given to men of rank in India.

HYDER ALLI, the usurper of the kingdom of Mysore; he is known under the name of Hyder Naik: his son Tippoo succeeded him, and was killed at the storming of Seringapatam by the British forces under the command of Lieutenant General, now Lord, Harris.

HYDER COOLY, a term of subjection used in India, meaning literally the slave.

HYDERABAD, **HYDRABAD**, a city in Asia, which arose from the desertion of Golcondah. This term is

often used in Indostan when Hyderabad is meant. Hyderabad became the principal spot of rendezvous to the Mahrattas, whose country lies between Bombay and Golcondah. Its limits (to quote the words of the author of the History of the Carnatic) are not known with any degree of certainty to Europeans, and we are equally ignorant of the origin and history of the people. See MAHRATTA.

HYDRAULICS, (*hydraulique*, Fr.) the science of that philosophy which treats of the motion of fluids, and the art of conveying water.

HYDROGRAPHY, (*hydrographie*, Fr.) an art teaching how to make sea-charts, giving an account of its tides, bays, gulphs, creeks, rocks, sands, shoals, promontories, harbours, &c.

HYDROMETER, (*hydromètre*, Fr.)

an instrument to measure the extent or depth of water.

HYDROMETRY, (*hydrométrie*, Fr.) the act of measuring the extent or depth of water.

HYDROSTATICS, the science of the gravitation of fluids; weighing fluids.

HYGROMETER, (*hygromètre*, Fr.) an instrument to measure the degrees of moisture.

HYGROSCOPE, (*hygroscope*, Fr.) an instrument to shew the moisture and dryness of the air, and to measure and estimate the quantity of either extreme.

HYPERBOLA, the section of a cone made by a plane, so that the axis of the section shall incline to the opposite leg of the cone.

HYPOTHENUSE, that line which subtends the right angle of a right angled triangle.

I.

JACK. See GIN.

JACK-boots, boots formerly worn by cavalry, made of thick firm leather, hardened in a peculiar manner. They were sometimes lined with plates of iron. The only regiments in the British service who wear jack-boots at present are the Life-guards.

JACK wambasium, a sort of coat armour, formerly worn by horsemen, not of solid iron, but of many plates fastened together, which some persons, by tenure, were bound to find upon any invasion.

JACKET, a short coat. See CLOTHING.

JACOB's staff, a mathematical instrument for taking heights and distances; called also a *cross staff*.

JACOBIN, (*jacobin*, Fr.) a white friar; a Dominican. A name given to those persons who, at the commencement of the French revolution, formed themselves into a club, (called the Jacobin Club,) which met at the church of St. Jacob in Paris.

JACOBINISM, (*jacobinisme*, Fr.) the principles of a revolutionary system.

JACOBITES, a name given to such persons as were attached to the ruined fortunes of James II. Hence also the

terms Pittites, Foxites, Burdettites, all signifying persons attached to and following the principles of the leading denomination, name, or head of some particular party, or faction.

JACOBITISM, attachment to the Stuart family, or rather to King James.

JACQUÉ, or **JACQUE**, a sort of close jacket, which was formerly worn by the *francs-archers*, or free archers and reached down to the knee. These jackets were stuffed underneath the linen or cloth with which they were made. They sometimes consisted of leather, lined with 20 or 30 pieces of old cloth, rather loosely put together. The ancient horsemen wore these jackets under their coats of mail, and they were called *gobison*.

JACQUERIE, *Fr.* the name of a faction which formerly existed in France, while king John was a prisoner in England.

JADE, *Fr.* a very hard stone of an olive colour, with which the handles of swords and sabres were made in Poland and Turkey. This stone is said to possess wonderful virtues for the removal of the gravel, or nephritic cholic; in these cases it is simply applied to the loins.

JAFFNAPATAM, the town of Ceylon is so called by the Indians. The port of Jaffier.

JAGGENHAUT, *Ind.* a Gentoo pagoda.

JAGGHIRDAR, *Ind.* the person in possession of a jaghire.

JAGHIRE, an Indian term, signifying the assignment of the revenues of a district to a servant, or dependant of government, who is hence called a *jagghirdar*. Jaghires are either *mushroot*, which means conditional, or *belashurt*, which signifies unconditional. Jaghires are frequently given in India to persons as a reward and compensation for their military services.

JAGHIRE ASHAM, *Ind.* land granted for the support of the troops.

JAGHIRE ZAT, *Ind.* lands granted for private maintenance.

JALET, *Fr.* a name given to certain round stones which are cast out of a bow called *arbalète à jalet*, or cross-bow. These stones are more generally called *galet*.

JALONS, *Fr.* long poles with a wisp of straw at the top. They are fixed at different places and in different roads to serve as signals of observation to advancing columns, when the country is inclosed, &c. They are likewise used as camp-colours, to mark out the ground on days of exercise.

JALONNEMENT d'une colonne, *Fr.* is the designation of certain points by which a column is governed on its march.

JALONNEURS, *Fr.* are the men selected from a battalion to mark out the ground, or to take up relative points towards which the column may march.

JALOUSER, *Fr.* an old term, signifying to be jealous of another. The French say, *un officier de vrai mérite ne jalouse pas un autre*; an officer of real merit is never jealous, or envious of another.

JAM, *Fr.* which is sometimes written *jamb*, is a thick bed of stone by which the operations of the miners are suddenly interrupted when they are pursuing the veins of ore.

JAMBAGE, *Fr.* door-posts; jambs.

JAMBE, *Fr.* in masonry, a sort of hold or buttress, by which the wall of an edifice is supported and kept up.

JAMBE d'encoignure, *Fr.* a corner stone or beam, upon which two architraves rest, from two sides of an edifice.

JAMBE sous poutre, *Fr.* basing stone, upon which one or more beams may stand.

Guerre des JAMBES, a figurative expression among the modern French, signifying rapid operations, or a war carried on by rapid movements in the field, instead of sieges.

JAMBS, sometimes written *jaumbs*, the side-posts of a door.

St. JAMES, Knights of, a military order in Spain, first instituted in the year 1170, by Ferdinand II. king of Leon and Galicia. The greatest dignity belonging to this order is that of grand master, which has been united to the crown of Spain. The knights are obliged to make proof of their descent, from families that have been noble for four generations on both sides; they must also make it appear, that their said ancestors have neither been Jews, Saracens, nor heretics, nor have ever been called in question by the Inquisition. The novices are obliged to serve six months in the galleys, and to live a month in a monastery. They observe the rules of St. Austin, making no vows but of poverty, obedience, and conjugal fidelity.

JANIBAR, *Ind.* an advocate; a defender; it likewise signifies a partial person.

JANIZARIES, (*Janissaires*, *Fr.*) This word signifies *new militia*. The first establishment of this body of armed men took place when the Sultan Amurat obtained such wonderful success in the inroads that were made into Thrace, and a part of Macedonia, by the Basha Lala, Saim, and Auranos. Nor was the Sultan satisfied with this good fortune; he pushed his successes into Europe, and took an immense number of prisoners of all ages, but principally children. These were put under military tuition, with the view of hereafter converting them to some useful purpose for the Ottoman state.

JANIZAR AGASI, a name, or military title, which is attached to the person who has the chief command of the janizaries. It corresponds, in some degree, with the rank of colonel general of infantry in old France, when that body was under the command of the Duke of Epemon, and afterwards under the Duke of Orleans in 1720. This *Aga* takes precedence of all the infantry officers belonging to the Ottoman empire.

The name is derived from *Aga*, which, in the Turkish language, signifies a stick. On public occasions the *Aga* always bears a stick in his hand; so indeed do all the janizaries when they appear in any large town or place, as an emblem of service.

This general was originally promoted to the rank of *Aga* out of the corps of janizaries. But as this was the occasion of much jealousy, and gave rise to various cabals, which frequently rendered the *Aga* contemptible in the eyes of his followers, the Grand Signor at present appoints him from the *Icoglan*s belonging to the *seraglio*.

JAQUE de mailles, *Fr.* coat of mail.

JARET, *Fr.* that deviation, in a straight line or curve, by which the equality of a circumference is broken, as in arches, &c.

JARETTER, *Fr.* to deviate from any given circle.

JASERANT or *JAZERANT*, a sort of ancient military vestment. The *jazerant* of double mail is often mentioned in many old romances. But what was the specific distinction of a *jazerant* seems at present uncertain.

JAVART, *Fr.* a swelling of a horse's pastern.

JAVELIN, a spear of $5\frac{1}{2}$ feet long, the haft of which was of wood, with a steel point. Every soldier in the Roman armies had seven of these, which were very light and slender.

The *Velites*, or light armed troops, among the Romans, were armed with javelins. They were two cubits long and one inch thick.

There were several sorts of javelins or darts used among the ancients; some of which were projected by the help of a short strap girt round their middle.

There was likewise another species of javelin, the bottom of which was ornamented with three feathers, in the same manner that arrows and darts are. These javelins have been used by the Poles and other nations, but principally by the Moors, who call them *zagais*. In the early days of France, the javelin was likewise adopted in imitation of the Gauls; but it disappeared with many other missile weapons, on the invention of fire-arms.

JAVELINE, *Fr.* See *JAVELIN*.

JAVELOT, *Fr.* javelin; a term used among the ancients to express every

thing that was missile; it is derived from the Latin, *jaculum*, à *jaculando*.

JAZERAN, *Fr.* an obsolete term which was formerly applied to an able veteran.

IBRAHIM CAWN, *Ind.* of the *Gardee* tribe, commander of the artillery in the *Mahratta* army.

ICH DIEN, *I serve*. A motto belonging to the badge of the arms of the Prince of Wales, which was first assumed by Edward surnamed the Black Prince, after the battle of Cressy, in 1346. *Dieu et Mon Droit*, in the badge of the King's arms, was used by Richard the First on a victory over the French in 1194.

ICHOGRAPHY, (*ichnographie*, *Fr.*) denotes the plan or representation of the length and breadth of a fortification, the distinct parts of which are marked out, either on the ground itself, or on paper. By this we are at once acquainted with the value of the different lines and angles which determine the exact breadth of fosses, the depth of ramparts and of parapets. So that, in fact, a plan upon the correct principles of ichnography, represents a work as it would appear if it were levelled to its foundations, and shewed only the expanse of ground upon which it had been erected. But the science of ichnography does not represent either the elevation, or the different parts belonging to a fortification. This properly comes under profile, which does not, however, include length. See *PLAN*.

ICOGLAN, a page in the Grand Signor's service. These pages are always chosen out of the best formed and best educated children among the Christian slaves. It has been a singular maxim of policy among the Turks to prefer Christian slaves, as confidential servants, to their own countrymen. Their motive originates in an idea, that the former, having lost all recollection of their native spot, and of the tenderness which is innate between child and parent, would have no other interest at heart but that of their employers; whereas freemen, in general, measure their attachment to their masters by the rule of self-accommodation and personal emolument. From these principles the Grand Signor has established a body of *Icoglan*s, in order that they may be devoted to his service; and as a security

for their affection he frequently raises individuals amongst them to the highest posts of trust and dignity in the empire. The rank of *Spahiler Agasi*, or General of Cavalry, has been conferred upon them; which appointment, next to that of Grand Vizier, of Mufti or of Bostangi, is the most considerable belonging to the Ottoman empire.

JEANATES, soldiers posted round the outside gates of the palaces belonging to the Greek Emperors.

JEE, *Ind.* a title of respect which is used in India, and signifies sir, master, worship.

JEE PORR, *Ind.* a statement and decree.

JEHAUNDER, *Ind.* a term used in India, signifying the possessor of the world.

JEHAUN GEER, *Ind.* a term used in India, signifying the conqueror of the world.

JEHAUN SHAW, *Ind.* king of the world.

JEHOULDAR, *Ind.* treasurer.

JELOUDAR, *Ind.* belonging to the train or equipage.

JEMADE, *Ind.* the Indian word for month.

JEMIDAR or **JEMMADAR**, *Ind.* a black officer who has the same rank as a lieutenant in the Company's service. The author of the History of the Carnatic calls Jemidars or Jemmadars captains either of horse or foot.

JENIZER-EFFENDI, an appointment among the Turks, which in some degree resembles that of provost-marshal in European armies. The only functions which this officer is permitted to exercise are those of judge to the company. He sits on particular days for the purpose of hearing the complaints of the soldiers, and of settling their differences. If a case of peculiar difficulty should occur, he reports the same to the Aga, whose opinion and determination are final.

JERSEY, an island on the coast of Normandy in France, which has belonged to the English ever since the Norman conquest. Although this island, as well as that of Guernsey, is still governed by the ancient Norman laws, it is nevertheless subject to the Mutiny Act in many particulars.

JERUMONA, *Ind.* mulct, fine, or penalty.

JESUIT, (*Jésuite*, Fr.) a learned or-

der, of which Ignatius of Loyola, a Spanish officer, was the original founder. It was confirmed by Pope Paul III. A. D. 1540. Loyola was severely wounded at the siege of Pampeluna.

The leading feature among the rules and regulations of the Jesuits, is implicit obedience to the orders of their superiors. The word Jesuit is a compound of *Jesu ite*, follow Jesus. This order was abolished by Pope Ganganelli in 1772, and was restored in 1816.

JET, *Fr.* a term signifying the motion of any body that is urged forward by main force; it likewise means the space which is gone over by any propelled body; and sometimes the instrument from which any thing is thrown or shot, as the cross-bow, &c.

JET des bombes, *Fr.* This word has been adopted instead of *tir*, which formerly expressed the course that a shell took when it was thrown out of a mortar by the power of gunpowder.

We sometimes use the word *flight*, to express the same action and progress.

JET, among the French, is likewise applied to the range taken by a fusée, as *jet de la fusée*, the flight of the fusée.

In cannon founderies it is further used to express the different pipes or hollows through which the liquid metals are conveyed into their moulds.

Un beau JET, *Fr.* a fine cast.

JET, *jayet*, *Fr.* a sort of black, light, and brittle stone.

JETH, *Ind.* the name of a month which, in some degree, coincides with our month of May.

JETTEE, *Fr.* a pier. It usually consists of a projection, made with stone, brick, or wood, at the extreme ends of a harbour, for the purpose of resisting the impetuosity of the waves.

JETTER, *Fr.* to pour metal into a mould, to cast ordnance; to throw; to impel, &c. The French say, figuratively, *Un dictionnaire ne se jette pas en moule*, a dictionary cannot be made all at one cast.

JETTER des bombes, *Fr.* to throw bombs, or shells, for the purpose of destroying the walls, &c. of a fortified town or place.

JETTER du secours dans une forteresse, &c. *Fr.* to throw succours into a fort, &c.

JETTER, *Fr.* in surgery, to suppurate, to matter. *Sa plaie commence à jeter*, his wound begins to run, or suppurate.

JEU *de hasard*, Fr. game of chance. It was our intention to have entered fully into this subject, as far as it concerns the military system, under the head *Hasard*; but as the matter has been more particularly adverted to in a French author, we judge it best to quote from that authority, and to shew, that, corrupt as the old government of France most unquestionably was, the character of its army was not neglected. Every species of chance-play was strictly forbidden in the French camps and garrisons, and throughout their armies. The prohibitions on this head bear the most ancient dates. On the 24th of July, 1534, Francis I. issued an order, which was again confirmed by Henry II. on the 22d of May, 1557, that no comrade should, under any pretext whatever, obtain money from a brother-soldier by play. It was further ordained, that in case of foul play, the persons who should be discovered were, for the first offence, to be publicly flogged; and for the second, to be punished in the like manner, to have their ears cut off, and to be banished for ten years. The delinquents were committed to the charge and custody of the provost, who was authorized to confiscate every farthing that was played for. Dice and cards were rigorously forbidden under the same penalties, as well as all sorts of games which might create animosities and dissensions among individuals.

On the 15th of January, 1691, Louis XIV. issued an order from the privy council, by which he expressly forbade not only the officers belonging to his army, but likewise all other persons of whatever sex or denomination, to play at *Hoca*, *Pharaoh*, *Barbacole*, *Basset*, and *Pour et Contre*. The penalties for every infraction or breach of this order were as follow: those persons who played were fined 1000 livres, or 40*l*. and the master or mistress of the house where games of the above description were allowed, stood fined in 6000 livres or 240*l*. for each offence. One third of these penalties was applied to his Majesty's use, one third to the relief of the poor of the place where the offence was committed, and the other third was paid to the informer. It was further ordained, that in case the persons so discovered were unable to pay the fines, their persons should be taken into custody. Those subjected to the penalty of 1000

livres were imprisoned four months, and those who incurred the fine of 6000 livres, without having the means to pay it, were imprisoned one year. The Intendants, or Lords-Lieutenant of the Provinces and Armies, the Police Magistrates, and the Military Provosts, were all and severally directed to see this edict put into execution; and by a circular letter, which, in 1712, was written in the king's name, by M. Voison, to the different governors and lords-lieutenant of provinces, the prohibitions were extended to the lansquenet, or private soldier.

On the 25th of August, 1698, Louis XIV. issued out an order, by which he rigorously forbade, under pain of death, every individual belonging to the French cavalry or infantry, (sutler and private soldier included,) to keep any gaming table in camp or quarters. In consequence of these regulations, and with the view of introducing the strictest principles of honour and regularity in a profession which must be tarnished even by the breath of suspicion, on the 1st of July, 1727, Louis the XVth ordained, by the 43d article of war, that every soldier, horse or foot, who was convicted of cheating at play, should be punished with death. He further directed, that, in case any hazard table should be set up in a camp, or garrison, the commanding officer or governor was to order the same to be broken forthwith, and to commit all persons concerned therein to prison.

JEU, *Fr.* in mechanics, the facility with which any thing moves in opening or closing. Thus, *Cette porte a du jeu*, this door opens or shuts easily.

JEUX *de main*, *Fr.* manual play, or what are vulgarly called handicuffs. The French have always looked upon the exercise of mere manual strength to be so derogatory from the character of every well-bred gentleman, that they say, figuratively, *JEUX de main*, *JEUX de vilain*.

JEWAER KHANNA, *Ind.* the jewel office.

IHTMAMDAR, *Ind.* a person appointed by the Hindoo magistrate, who has the superintending agency over several towns.

IJELAS, *Ind.* The general assembly of the court of justice in Bengal is so called.

To IMBODY, in a military sense,

implies to assemble under arms, either for defence or offence. This term is particularly applied to the meeting of the British and Irish militia.

To IMBRUE, to steep. Hence the figurative expression to imbrue one's hands in blood.

S'IMMISCEB, *Fr.* to take a part in any particular affair. Literally to mix in or with.

The IMMORTALS, a name of reproach which is given to such troops as never see an enemy, or go into real danger. The French affixed this term to their cavalry; calling them, by way of derision, *Les Immortels*. This originated in the preference which was always given to the infantry; and which indeed belongs to that arm considered as an effective force. Marshal Saxe, in his *Réveries*, says, *L'infanterie va pour faire la guerre, la cavalerie pour la voir.*

IMPERIAL, belonging to an emperor, or empire.

IMPERIAL, a leathern packing-case made to fit the top of a carriage for the purpose of holding wearing apparel, &c. it is sometimes used in armies.

IMPERIALISTS, (*Impériaux*, *Fr.*) This word is chiefly applied to the subjects of, or forces employed by, the house of Austria, when the king of Hungary was called Emperor of Germany.

IMPÉRITIE, *Fr.* incapability; want of influence from want of capacity.

IMPETUS, in mechanics, the force with which one body impels or strikes another. See GUNNERY. MOMENTUM.

IMPOST, (*imposte*, *Fr.*) that part of a pillar in vaults or arches, on which the weight of the whole rests.

IMPREGNABLE. Any fortress or work which resists the efforts of attack is said to be impregnable.

To IMPRESS, to compel any body to serve.

IMPRESS-Service, a particular duty which is performed by persons belonging to the navy. Soldiers that behave ill, and from repeated misconduct are deemed incorrigible on shore, get frequently turned over to a press-gang. This does not, however, occur without some sort of concurrence on the part of the soldier, who is left to choose between the execution or continuance of a severe military punishment, or to enter on board one of his Majesty's ships.

IMPRESS-Money. All sums which are

paid to men who have been compelled to serve are so called.

IMPRESSION, the effect of an attack upon any place, or body of soldiers.

IMPREST of Money, a term not strictly grammatical, but rendered familiar by its official adoption, signifying sums of money received from time to time, by persons in public employment, for the current services of the year. Of this nature are the imprests which the Barrack-Master General receives upon estimates signed by him, and delivered into the office of the Secretary at War.

To IMPUGN, to attack, or assault.

IMPRIMER. *Fr.* to paint any part of a building, more than once, with oil colours, for the purpose of ornament or preservation.

IMPULSE, hostile impression.

INACCESSIBLE, not to be approached, in contradistinction to accessible.

INATTAQUABLE, *Fr.* not to be attacked. Monsieur A. T. Gaigne, in his *Nouveau Dictionnaire Militaire*, gives the following explanation of this term:—An inherent right and title cannot be attacked or disputed; but a military post may always be assailed when there are some physical defects.

INCAPABLE, a term of disgrace, which is frequently annexed to a military sentence; as, such an officer has been cashiered by the sentence of a general court-martial, and rendered *incapable* of ever serving his Majesty in either a civil or military capacity.

INCH, a well known measure in length, being the 12th part of a foot, and equal to three barley-corns in length. See MEASURE.

INCIDENCE (*in geometry*), the direction by which one body strikes upon another.

INCIDENCE (*angle of*), in projectiles, is the angle which the line of direction of the projectile makes with the surface of the obstacle on which it impinges.

INCIDENTS, charges which are made by Army Agents in their accounts with the public. These consist of all expenses of a local nature. Under the Ordnance, they include travelling charges, postage and stationery, extra pay while travelling by order, pay of artificers and labourers, allowance for a horse to a Commissary or Assistant-Commissary, when claiming no travelling charges,

as also the poundage to the individuals in the field-train.—In the army at large, all expenses incurred by local, or temporary circumstances, are generally called *contingencies*.

INCLINATION, (*inclinaison*, Fr.) in geometry, is the mutual leaning or tendency of two lines or planes towards each other, so as to make an angle.

INCLINATION of a right line to a plane, is an acute angle which that line makes with any line of the plane towards which it bears.

To INCLINE, in a military sense, means to gain ground to the flank, as well as to the front. According to the last printed Regulations for the Cavalry, page 27, S. 10, inclining is of great use in the marching of the line in front, to correct any irregularities that may happen. It is equivalent to the oblique marching of the infantry. It enables you to gain the enemy's flank without exposing your own, or without wheeling or altering the parallel front of the squadron.

Right (or left) INCLINE, a word of command in cavalry movements, when each man makes a half-face on his horse's fore feet, by which means each will appear to be half a head behind his flank leader; and the whole will look to the hand to which they are to incline. It must be generally observed, that the leading officer on the flank, with a glance of his eye ascertaining his points, marches steadily upon them, at whatever pace is ordered: every other man in the squadron moves in so many parallel lines, with respect to him, and preserves the same uniformity of front and files, as when he first turned his horse's head.

At no time 'of the incline ought the former front of the squadron, or distance of files to be altered.

In the incline, the rear rank moves in the same manner, and is of course regulated by the front rank, which it takes care to conform to.

Whenever a squadron inclines it must not pass an angle of 34° with respect to its former direction, unless it should be required to gain as much or more ground to the flank as to the front. The distance of files at six inches allows the squadron to incline in perfect order, while its new direction does not go beyond the angle specified. When more is required to be taken, the squadron

must either wheel up, and march upon the flank point, or it will fall more or less into file, according to the degree of obliquity required, by moving each horse retired, half neck, or head to hoot.

INCLINED Plane. See GUNNERY.

INCLUSIVE, comprehended in the sum or number; thus when the abstracts were made out for 60 and 61 days, they generally ran from the 24th of one month to the 24th of the second month, including the last 24th *only*. Since the new regulation, the muster, as also the abstract, is taken from the 25th of one month to the 24th of the following month, both days *inclusive*.

INCOG, } privately, unknown.

INCOMBUSTIBLE-cloth, a sort of linen cloth made from a stone in the form of calk. See LAPIS.

INCOMMENSURABLE, that cannot be measured, or be reduced to any proportion or equal measure with another.

INCOMMENSURABLES, (*incommensurables*, Fr.) a term used in arithmetic, to signify those numbers that have no common divisor, as 3 and 5.

INCOMMODOER l'ennemi, Fr. to get possession of a fort, eminence, &c. from which the enemy may be harassed, or which is necessary to his security:

INCOMPETENT, incapable, unfit, unequal.

INCOMPLETE, opposed to complete, which see.

INCOMPOSITE-numbers, (*in arithmetic*,) are those numbers made only by addition, or the collection of units, and not by multiplication; so an unit only can measure it, as 2, 3, 4, 5, &c. called also *prime numbers*.

To INCORPORATE, in a military sense, is to add a smaller body of forces to a larger, and to mix them together. Independent companies are said to be incorporated, when they are distributed among different regiments, regiments among brigades, &c. &c. So that any lesser body may be incorporated in a greater.

To INCRUST, } (*incruster*, Fr.)

INCRUSTATE, } to cover with an additional coat, adhering to the original matter. To replace a defective stone in a wall or building, by a good one.

INCURSION, invasion without conquest; inroad; ravage.

INDEMNIFICATION, any reim-

bursement or compensation which is given for loss or penalty.

Military INDEMNIFICATION, a regulated allowance which is made by the king for losses sustained by officers or soldiers on actual service.

Certificates, stating the particular circumstances and causes of the losses to be indemnified are to be signed by the officers themselves, and by the commanding officers of their regiments. And the general officers commanding in chief on the different foreign stations, are to decide on the claims preferred in their respective districts of command upon the ground of this regulation, and to grant payment accordingly.

INDEMNITY, a security or exemption from penalty, loss, or punishment. It is sometimes connected with amnesty. Thus Charles II. on his restoration, endeavoured to conciliate the minds of his subjects, by promising amnesty and indemnity to the different parties that had been directly active, indirectly instrumental, or passively the means of his father's death.

To INDENT, a word particularly made use of in India for the dispatch of military business. It is of the same import and meaning as to draw or value upon. It likewise means an order for military stores, arms, &c. As an indent for new supplies, &c.

Indented line, in fortification, is a line running out and in, like the teeth of a saw, forming several angles, so that one side defends another. They are used on the banks of rivers, where they enter a town; the parapet of the covertway is also often indented. This is by the French engineers called *redans*. Small places are sometimes fortified with such a line, but the fault of such fortification is, that the besiegers from one battery may ruin both sides of the *tenaille* of the front of a place, and make an assault without fear of being enfiladed, since the defences are ruined.

INDEPENDENT, in a military sense, is a term which distinguishes from the rest of the army, those companies that have been raised by individuals for rank, and are afterwards drafted into corps that may be short of their complement of men.

INDEPENDENT company, } is one that
INDEPENDENT troop, } is not incorporated into any regiment.

INDEPENDENT (among metaphysicians)

is when one thing does not depend upon another as its cause.

INDETERMINATE, (*indéterminé*, Fr.) a term used among geometricians, to express any problem which is susceptible of an infinity of solutions that are different from each other.

INDIAN camp. An Indian camp may be considered as one of the loosest assemblages of men, women and children, that can perhaps be imagined.

Every common soldier in the army is accompanied by a wife, or concubine; the officers have several, and the generals whole scraglios; besides these, the army is encumbered by a number of attendants and servants, exceeding that of the fighting men; and to supply the various wants of this enervated multitude, dealers, pedlars, and retailers of all sorts, follow the camp, to whom a separate quarter is allotted, in which they daily exhibit their different commodities, in greater quantities, and with more regularity, than in any fair in Europe; all of them sitting on the ground in a line, with their merchandises exposed before them, and sheltered from the sun by a mat supported by sticks.

INDIAN Engineers. Mr. Orme, in his history of the Carnatic, affords an instance of the art of engineering being known, and cultivated by the native Indians. In page 265, he gives the following account of a place called Chinglapet, which had been fortified by an Indian engineer. Chinglapet is situated about 30 miles west of Cobelong, 40 south-west of Madras, and within half a mile of the northern bank of the river Palier. It was, and not without reason, esteemed by the natives, a very strong hold. Its outline, exclusive of some irregular projections at the gateways, is nearly a parallelogram, extending 400 yards from north to south, and 320 from east to west. The eastern and half the northern side, is covered by a continued swamp of rice-fields, and the other half of the north, together with the whole of the west-side, is defended by a large lake. Inaccessible in these parts, it would have been impregnable, if the south side had been equally secure; but there the ground is high, and gives advantages to an enemy.—The Indian engineer, whoever he was that erected the fort, seems to have exceeded the common reach of his coun-

trymen in the knowledge of his art, not only by the choice of the spot, but also by proportioning the strength of the defences to the advantages and disadvantages of the situation: for the fortifications to the south are much the strongest, those opposite the rice-fields, something weaker; and the part that is skirted by the lake is defended only by a slender wall: a deep ditch 60 feet wide, and faced with stone; a *fausse braye*, and a stone wall 13 feet high, with round towers, on and between the angles, form the defences to the land: nor are these all, for parallel to the south, east, and north sides of these outward works are others of the same kind, repeated within them, and these joining to the slender wall which runs to the west along the lake, form a second enclosure of fortification.

INDIAN Fortification. The entrance into an Indian fortification is through a large and complicated pile of buildings, projecting in the form of a parallelogram from the main rampart; and if the city has two walls, it projects beyond them both: this building consists of several continued terraces, which are of the same height as the main rampart, and communicate with it: the inward walls of these terraces form the sides of an intricate passage, about twenty feet broad, which leads by various short turnings at right angles, through the whole pile, to the principal gate, that stands in the main rampart. We have extracted this passage from the history of the Carnatic, as affording a general outline of Indian fortification. In the same place may be seen, (page 320), the following description of a battery, which was built by the English in 1753, and contributed to the preservation of Trichinopoly, when the French attempted to storm that place.

This battery was called Dalton's battery, from an officer of that name, who, when intrusted with the command of the garrison had converted that part of the gate-way which projected beyond the outward wall, into a solid battery, with embrasures; leaving the part between the two walls as it stood, with its windings and terraces: an interval was likewise left between the backside of the battery and the terrace nearest to it, which lay parallel to each other; so that an enemy who had gained the battery, could not get to the terrace,

without descending into the interjacent area, and then mounting the wall of the terrace with scaling ladders: the battery, however, communicated with the rampart of the outward wall of the city, but being, as that was, only eighteen feet high, it was commanded by the terraces behind it, as well as by the rampart of the inner wall, both of which were thirty feet high; upon one of the inward cavaliers, south of the gateway, were planted two pieces of cannon, to plunge into the battery, and scour the interval between the two walls, as far as the terraces of the gateway; and two other pieces, mounted on the north-west angle of the inward rampart, commanded, in like manner, both the battery and the interval to the north of the terraces.

INDIAN Guides. According to the ingenious author of the history of the Carnatic, these men are not to be depended upon. In page 217 he relates, that on the 1st of April, 1752, at night, Captain Dalton was ordered with 400 men to march, and, by taking a large circuit, to come in at the eastern extremity of the enemy's camp, which he was to enter, beat up, and set fire to. The English troops, from their long inactivity, knew so little of the ground about Trichinopoly, that they were obliged to trust to Indian guides: and these being ordered to conduct them out of the reach of the enemy's advanced posts, fell into the other extreme and led them several miles out of their way, and through such bad roads, that when the morning star appeared, they found themselves between Elimiscram and the French rock, two miles from Chamdashab's camp, and in the center of all their posts.

INDIAN Princes and their Troops. Their military character may be collected from the following curious account, which is given of a circumstance that occurred in the Tanjore country, when the English obtained a signal victory over the French and Mysoreans, in 1753. The presence of the nabob being thought necessary to facilitate a negotiation that was then judged expedient to undertake, he prepared to march with the English army; but on the evening he intended to quit the city, his discontented troops assembled in the outer court of the palace, and clamouring, declared that they would not suffer him to move, before he had paid their ar-

rears; in vain were arguments used to convince this rabble, (more insolent because they had never rendered any effectual service,) that his going to Tanjore was the only measure from which they could hope for a chance of receiving their pay: they remained inflexible, and threatened violence; upon which Captain Dalton, whom we have already mentioned, sent a messenger to the camp, from whence the grenadier company immediately marched into the city, where they were joined by 100 of the garrison of Tritchinopoly, and all together forcing their way into the palace, they got the nabob into his palanquin, and escorted him to the camp, surrounded by 200 Europeans with fixed bayonets; the malcontents not daring to offer him any outrage as he was passing, nor on the other hand, was any injury offered to them: for notwithstanding such proceedings in more civilized nations rarely happen, and are justly esteemed mutiny and treason; yet in Indostan they are common accidents, and arise from such causes as render it difficult to ascertain whether the Prince or his army be most in fault. The nabob had certainly no money to pay his troops; so far from it, that the English had for two years furnished all the expenses of their own troops in the field; but it is a maxim with every prince in India, let his wealth be ever so great, to keep his army in long arrears, for fear they should desert. This apprehension is perhaps not unjustly entertained of hirelings collected from every part of a despotic empire, and insensible of notions of attachment to the prince or cause they serve; but from hence the soldiery, accustomed to excuses when dictated by no necessity, give no credit to those which are made to them, when there is a real impossibility of satisfying their demands; and a practice, common to most of the princes of Indostan, concurs not a little to increase this mistrust in all who serve them; for, on the one hand, the vain notions in which they have been educated, inspire them with such a love of outward shew, and the enervating climate in which they are born renders them so incapable of resisting the impulses of fancy: and on the other hand, the frequent reverses of fortune in this empire, dictate so strongly the necessity of hoarding resources against the hour of calamity, that nothing is more common

than to see a nabob purchasing a jewel or ornament of great price, at the very time that he is in the greatest distress for money to answer the necessities of the government. Hence, instead of being shocked at the clamours of their soldiery, they are accustomed to live in expectation of them, and it is a maxim in their conduct to hear them with patience, unless the crowd proceed to violence; but in order to prevent this, they take care to attach to their interest some principal officers, with such a number of the best troops, as may serve, on emergency, to check the tumult, which is rarely headed by a man of distinction. But when his affairs grow desperate by the success of a superior enemy, the prince atones severely for his evasions, by a total defection of his army, or by suffering such outrages as the Nabob Mahomed-Ally would in all probability have been exposed to, had he not been rescued in the manner we have described.

INDIAN Arrow-root, a plant; a sovereign remedy for curing the bite of wasps, and expelling the poison of the mauchineel tree. The Indians apply this root to extract the venom of their arrows.

INDIAN Reed, a kind of mineral earth.

Military INDICATIONS, (*indices militaires*, Fr.) Marshal Saxe very judiciously observes, that there are indications in war which every officer should attend to, and from which deductions and conclusions may be drawn with some degree of certainty. A previous knowledge of your enemy's national character and customs will contribute not a little towards the attainment of this object. Every country, indeed, has customs and usages which are peculiar to itself. Among various indications that we might adduce, let us suppose those leading ones, by which the intentions of an enemy may be discovered by the garrison of a besieged town. If, for example, towards the close of day, groups or loose parties of armed men should be discovered upon the neighbouring heights which overlook and command the town, you may remain assured, that some considerable attack is in agitation. Small detachments from the different corps are sent forward for this purpose, and the besieging army is thereby apprised of the business, as the heights are occupied in the evening by

the parties in question, in order that they may be thoroughly acquainted with the leading avenues, &c.

When much firing is heard from an enemy's camp, and another army lies encamped near, the latter may conclude, that an engagement will take place the following day; for it must be evident, that the soldiers are cleaning and trying their muskets.

Marshal Saxe further remarks, that a considerable movement in an enemy's army may be discovered by any large quantity of dust, which is a sure indication of it. The reflection of the sun upon the firelocks of an army will likewise lead to some knowledge of its position. If the rays are collected and perpendicular, it is a certain indication, that the enemy is advancing towards you; if they disappear at times and cast a broken radiance, you may conclude, that he is retreating. If the troops move from right to left, their line of march is towards the left: if from left to right, the line of march is towards the right. Should considerable clouds of dust be seen to rise from an enemy's camp, and it be ascertained that he is in want of forage, it may be fairly inferred, that the train of wagoners and purveyors, &c. are moving, and that the whole will follow shortly.

If the enemy, observes the same writer, has his camp-ovens on the right or left, and you are covered by a small rivolet, you may make a flank disposition, and by that manœuvre, suddenly return and detach ten or twelve thousand men to demolish his ovens; and whilst you are protected by the main body of the army which is ordered to support the first detachment, you may seize upon all his flour, &c. There are innumerable stratagems of this sort which may be practised in war, and by means of which, a victory may be obtained without much bloodshed on your part, and at all events with considerable disadvantage to the enemy.

East-INDIES, West-INDIES. The French make use of two terms to describe these parts of the globe. They say *Indes orientales*, or *grandes Indes*; *East-Indies*; and *Indes occidentales*, or *petites Indes*; *West-Indies*.

INDIES (East). These are divided into India within the river Ganges, and India beyond the river Ganges. The

various provinces and kingdoms of both the divisions of India are described under their respective names.

INDIA within the river Ganges.—This division consists of a country, which is situated between the latitudes of 6 and 34 degrees north, and between 53 and 91 degrees of east longitude. A great part of this space is covered with the sea. India within the Ganges is bounded on the north by Usbec Tartary, and part of Thibet; by the Indian ocean on the south; by Great Thibet, India beyond the Ganges, and the bay of Bengal on the east; and by Persia and the Indian ocean on the west. The chief mountains are those of Caucasus, Naugracut, and Balagate, which run almost the whole length of India from north to south.

INDIA beyond the Ganges. This division consists of a country, which is situated between the latitudes of one and 30 degrees north, and between the longitudes of 89 and 109 degrees east. Great part of these limits is covered by the sea. It is bounded on the north by Thibet and China, by China and the Chinesian sea on the east; by the same sea and the straights of Malacca on the south, and by the bay of Bengal and part of India on the west.

For the different establishments that constitute the Indian army, properly so called, we refer our readers to the *Oriental Register*, which is published annually.

INDIES (West), a number of large and small islands in the Atlantic ocean, near the continent of America. They were so called when they were first discovered by Christopher Columbus in 1492, under the supposition that they were a part of the *East-Indies*.

INDOSTAN. According to Mr. Orme, this word ought properly to mean India. See *Hist. of the Carnatic*, b. i. p. 1.

INFAMOUS Behaviour, (*infamie, conduite infame, Fr.*) a term peculiarly applicable to military life when it is affected by dishonourable conduct. Hence the expression which is used in our *Articles of War*, relative to *scandalous, infamous behaviour*; on conviction of which, an officer is ordered to be cashiered. Infamy may be attached to an officer or soldier in a variety of ways; and some countries are more tenacious

than others on this head. Among European nations it has always been deemed infamous and disgraceful to abandon the field of action, or to desert the colours, except in cases of the greatest emergency.

INFANTRY, (*infanterie*, Fr.) soldiers serving on foot, and composing the main strength and body of an army.

INFANTERIE aventurière, Fr. a species of French infantry, which succeeded to the legions that were established under Francis I. in imitation of the Roman legions. This infantry was kept up as late as during the reign of Henry IV. when the whole of the foot establishments was reduced into regiments.

Heavy armed INFANTRY, among the ancients, were such as wore a complete suit of armour, and engaged with broad shields and long spears. They were the flower and strength of the Grecian armies, and had the highest rank of military honour.

Light-armed INFANTRY, amongst the ancients, were designed for skirmishes, and for fighting at a distance. Their weapons were arrows, darts or slings.

Light INFANTRY have only been in use since the year 1656. They have no camp-equipage to carry, and their arms and accoutrements are much lighter than those of the common infantry, or battalion men. Wherever there is light cavalry, there should be light infantry to act in conjunction.

Foreign INFANTRY (*infanterie étrangère*, Fr.) Foreign troops were taken into pay, in France, at a very early period. In the reign of Philip, surnamed le Bel, or handsome, treaties and agreements were severally entered into, for this purpose, with John Bailoul, king of Scotland, Eric, king of Norway, Albert duke of Austria, and many other German princes, and with Humbert, duke of Viennois.

Philip of Valois likewise made use of foreign troops; and under Louis XI. the Swiss were taken into French pay; since that period, and until the revolution, which was accomplished on the 10th of August, 1792, several regiments were maintained under the different denominations of Swiss, German, Italian, Catalonian, Scotch, and Irish corps, or brigades. After the French revolution the same system was more or less

adopted by the British government. Independent of foreign subsidies, it was judged expedient to admit foreigners of rank within those native limits, from which every stranger had been hitherto jealously excluded.

With respect to our foreign corps, they proved themselves, during the late war, worthy of the confidence placed in them.

The Turkish INFANTRY, (*infanterie Turque*, Fr.) is generally composed of regiments that are chosen or select.— This body is first divided into two parts called *Capiculy* and *Serraculy*. The militia, which is named *Capiculy*, it subdivided into *Janizuries*, *Agemolans*, *Topeys*, *Gebegys*, and *Sakkas*. The *Agemolans* constitute the military school, in which young men, destined for the corps of Janizaries, are educated; the *Topeys* are Turkish cannoniers, the *Gebegys* are armourers, and the *Sakkas* are water-carriers.

The *Serraculy* infantry is composed of *Azapas*, *Izarelys*, *Seimenys*, *Lagumngys* and *Musellims*. Count de Massilly, in his *Etat militaire de l'Empire Ottoman*, gives the following account of these corps.

The Porte being convinced, that the body of Janizaries was not sufficiently strong to garrison all the frontier places belonging to the Turkish empire, established in the different provinces new corps of infantry, whose duty was similar to that of the janizaries, in camp and garrison. These corps were maintained at the expense of each Beglierbat or principality. Some writers have inconsiderately confounded this corps with that of the janizaries, merely distinguishing it by the name of *Capiculy*. It differs, however, very materially from them, being superior in the formation of its divisions, more celebrated for the valour of its troops, and in every respect better disciplined.

This corps is not upon the same footing as the militia called *Capiculy*. It is, in general, under the direction of the *Bachas* of the different provinces, the command of which is given to those persons who are either the particular friends of the *Bachas*, or have the means of bribing handsomely for the appointments. This militia does not receive any pay, unless it be actively employed, and its subsistence in that

case is drawn from the provinces, much in the same manner as the British militia is from the different counties, at the monthly meetings. With regard to its institution, the principal object of it is to support the janizaries, and to replace them, when vacancies occur.

The number of the Azapes is not particularly fixed. They consist chiefly of independent companies, which are distributed among the different departments of the Turkish empire. They are distinguished among their own people by the different names of the week, and they are divided into as many odas or companies.

These odas or companies are indiscriminately subject to the orders of two general officers, viz. the Azape-Agasi, who is commander in chief of the Azapes, and the Azape-Kiatiby, their commissary general, who keeps a register of their names and countries.

They obey subordinate officers called Derys, Oda-Bascys and Baitactars. There are ten Derys attached to each company, who may be properly considered as corporals, entrusted with the discipline of the soldiers. The Baitactars are the standard-bearers. Each standard belonging to an oda or company consists of a horse's tail, which hangs from the end of a lance that is capped with a gilt ball. The officers are moreover directed to superintend the messes belonging to the different companies.

It is usual for each azape to be a native of the province in which he serves, and he is generally clothed after the fashion of the country. At Buda the azapes were ordered to be dressed in the Hungarian manner, which consisted in a cloth cap bordered with skin, a sabre, an arquebuse or fusil; which similarity of dress and accoutrement has frequently confounded the azapes with Hungarian Christians.

The izarelys are chiefly employed in the frontier towns, and have charge of the artillery in the room of the topeys or cannoniers. They are under the direction and command of an artillery officer, who is sent from Constantinople and is called *Topey-Agasi*.

Their number is uncertain, and they are not subdivided, as their employment depends wholly upon the quality and quantity of artillery that are used. One man is attached to small field pieces,

and two to those of larger caliber; so that instead of being distributed by companies, they are ordered upon duty according to the nature and number of the ordnance.

They have no other officer, besides the one already mentioned, attached to them, which officer is subordinate to the Bacha of the province, as their service does not require subaltern officers. The Bolukys-Bascys are officers merely employed to bring orders from the general officers, but they cannot interfere in the direction or management of the artillery.

The *Seimenys* are the least respectable body belonging to this national militia, being composed wholly of peasants, that are called out and enrolled, like the supplementary militia of Great Britain, in cases of extreme necessity. They are only, in fact, considered as a mass of people serving to increase the number of better disciplined troops, without having any credit for military skill or valour. They consist of Turks, Greeks, and even of Roman Catholics who enrol themselves in order to be exempted from the annual tax.

Their only chief, or commanding officer, is the bacha of the province. The *Seimenys* belonging to Natolia are all Mahomedans. They are called *Jajas*, or *Men on foot*, and although they do not receive any pay except when embodied, they are nevertheless divided into *Baitacs* or Standards, which are similar to the *Odas*, and they obey their *Seimeny-Boluk-Bascy*, who commands sixty men that are attached to his standard, and to the *Baitactar*, who escorts the standard, which is generally red, and of a moderate size.

The *Seimenys* usually do duty in camp and garrison. For although the Turks place little confidence in Christians, yet there have been instances wherein their services have been required on very important occasions. At the Siege of Vienna they employed Christian troops, and increased their infantry by those means very considerably; they even formed a reserve from troops of that description; and their conduct was such, that they acquired a marked reputation by the obstinate resistance which they made at Colenbergh.

These troops, however, are in general ill-armed, having only rough polished

sabres, and very indifferent arquebuses with locks, or bad fusils of different sizes, and consequently of little use in the hands of such men.

The *Lagumgys* are what we call miners. This body is chiefly composed of Armenians and Christians out of Greece or Bosnia, who being in the habit of mining, are extremely serviceable in that line, and act under the immediate direction of some old officers called *lagumgys-bascys*, or chiefs of the miners. Some particular privileges are annexed to these appointments.

The *Musellims* are Christian tributaries, whose duty is to march before the advanced guard of the army, to clear the roads and to construct bridges for the passage of the troops. On this account they are called pioneers.

The *bachas* of the different Turkish towns pay great attention to these *muscellims* or pioneers. They not only exempt them from all taxes, but even give them lands and freeholds. By a particular privilege which is attached to this corps, only five out of thirty are obliged to do duty on a march, and they are then joined to the carpenters, which renders the service less fatiguing. Their number is not fixed. It depends indeed, more or less, upon the population of the different provinces, and on the extent of land which may be disposed of in their favour.

They are commanded by a *bas-musellim*, or principal person belonging to the exempts, whose only duty is to superintend the regular discharge of their functions.

Those, however, belonging to *Natolia* are subject to the *Beg* or *Sangiah*, who superintends the distribution of their subsistence, &c. in the same manner that he does that of the cavalry which is attached to his department.

The only weapon they carry is a hatchet; but the neighbouring villages, or the public magazines belonging to the artillery, are obliged to supply them with pick-axes and other tools that may be wanted in their profession. They are strictly forbidden the use of a sabre or fusil.

Whenever the Turkish army is on its march, the *musellims* are obliged to go forward every preceding day, in order to prepare the way for its progress.

During a siege they are frequently attached to the garrison guns, which they

work in the best manner they can; and when a town is besieged by the Turks, the *musellims* are employed in the trenches, from which duty they derive considerable profit; so much so, that the *janizaries* are extremely jealous of them on these occasions. They are, in a word, the most formidable body of infantry which the Turks possess; for the ground work of every species of attack or defence, and the management of all warlike machines, rest upon their exertions.

The INFERNAL. *Strada* gives a very curious and interesting account of this machine, in his History of the Belgic War.

The *Infernal* was tried by the English at Dunkirk and St. Maloes, and by the Dutch and English under King William. It is likewise mentioned by *Grose* in his History of the English army.

The powers of this dreadful machine were tried in the month of December, 1800, when a conspiracy was formed to destroy Bonaparte, then first Consul of France. It failed as to its immediate object, but proved by its collateral effects, that the invention is as destructive as the most sanguine butcher of the human race could wish. See *MACHINES Infernales*.

To INFEST, (*infester*, Fr.) This word is more strictly applicable to places than to things.

To INFEST a place, (*infester un lieu*; Fr.) signifies to frequent any particular spot for the evident purpose of doing damage, creating uneasiness, or committing depredations. Thus freebooters or thieves are said to infest places.

INFINIMENT PETITS, Fr. infinitely small. Modern calculators call, by this name, every thing which is so exiguous that it cannot be compared to any other quantity, or which is smaller than any other assignable quantity. The new calculation which has been adopted among geometers respecting quantities that are infinitely small, is called the calculation of *infinitesimals*.

Infinitely INFINITE fractions (in arithmetic) are those whose numerator being one, are together equal to unit; whence it is deduced that there are progressions infinitely farther than one kind of infinity.

INFIRMARY. See *HOSPITAL*.

INFLEXIBLE, (*inflexible, inébranlable*, Fr.) not to be prevailed on, immovable. Every chief of an army, that is solicitous to preserve good order and discipline, must not suffer the least deviations from established rules and regulations. He must be inflexible in what is just, and resolute in what is right.

INFLEXION *point of any curve*, (geometry,) is that point or place where the curve begins to bend back again a contrary way.

INFLUENCE, (*influence*, Fr.) ascending power; power of directing or modifying.

INFLUENCE of example. In a military sense, the influence of example is of the greatest consequence. We have already spoken generally on the necessity of good example, (see **EXAMPLE**); we think it proper further to observe, that the influence which every action of a commanding officer bears, is of so much importance to the service, as to render it incumbent upon every superior person to consider its effects upon the mind and conduct of an inferior.

INFORMERS, (*dénonciateurs*, Fr.) persons who inform in a court of judicature, before a magistrate, or commanding officer, &c. against such as transgress the law, &c. Soldiers who give information of false musters, or of pay illegally detained, are entitled to their discharge. See Mutiny Act, sections 27 and 69.

INGENIER, (*ingénieur*, Fr.) an obsolete word. See **ENGINEER**.

INGÉNIEUR par rapport à l'architecture civile, Fr. an engineer, who may be properly called an adept in civil architecture. A person of this description was always employed among the French. He was a skilful and intelligent man, perfectly master of mechanics; by which means he could invent machines for the purpose of increasing propellents, so as either to draw or to raise heavy loads with facility, or to elevate or direct the course of waters.

INGÉNIEUR en architecture militaire, Fr. an engineer who is perfectly master of military architecture.

INGÉNIEUR Directeur, Fr. a responsible person in the old French service, whose duty was to superintend and take charge of a certain number of fortified towns or places, and to transmit a regular account of the actual state of the works, and to represent whatever might

appear defective, or stand in need of repair.

INGÉNIEUR en chef, Fr. chief engineer. It was the business of this officer to superintend the construction of all sorts of military works, having several subordinate engineers under him to assist, and put his plans into execution. In order to make some distinction between the man of skill and genius, and the mere pretender to knowledge in this great branch of military acquirements, it was usual to call all engineers that were acknowledged by government, *ingénieurs ordinaires du Roi*, engineers in ordinary to the king.

The usual pay of the French engineers was, from *vingt écus*, or two pounds ten shillings, up to one hundred *écus*, or four pounds ten shillings per month, according to each individual's length of service, peculiar talents, or appointment. Persons were received as engineers by the superintendant of the board of ordnance, after having passed a mathematical examination; and the situation was the more eagerly sought after, inasmuch as it led to the highest military post; as that of marshal of France, to which the celebrated Vauban was promoted.

In 1755, the French engineers were formed into one corps, under the name of the royal corps of artillery and engineers; the principal officers of which communicated with the secretary of war, and received through him the king's orders.

No country has ever paid so much attention to the art of engineering, as France has under all her vicissitudes; and this has arisen, not so much from a natural predilection to that peculiar study, as from a conviction of its utility, in all warlike operations; but most especially in sieges. This class of military men was, however, extremely neglected, until the reign of Louis XIV. Few ever saw, or were present at, above five or six sieges: being either wounded at the beginning, or during the operations of a siege. They seldom indeed, witnessed the termination of it; and from the want of engineers, the investment of a town or fortified place became tedious, and many lives were unnecessarily lost. Louis XIV. by his personal appearance and attention, gave fresh life to his army, and instilled into every part of it a spirit of subordination, which had been hitherto unknown. He

was actuated by a thorough conviction, that in every species of offensive and defensive operation, the use of artillery, under the guidance of scientific men, was essentially requisite. In no instance, however, does the skill of an able engineer appear so much to advantage as in the attack of a fortified place. This the king witnessed himself, and on that account, he considerably increased the number of engineers. Persons of the first birth and distinction became candidates for situations in that honourable body.

Whenever there was a deficiency, during a siege, of subordinate engineers, or *ingénieurs en second*, it was usual among the French to select lieutenants, or sub-lieutenants from the different infantry corps to superintend the works, and to see that the workmen did their duty. They received an additional pay of ten *écus*, or one pound five shillings per month, in consideration of this extra service; and their being selected in this manner was a sure step to the rank and emoluments of an engineer. It has been very justly observed by a French writer, that every infantry officer should be acquainted with field fortification at least; for a thousand instances occur, in which the immediate assistance of an engineer is required, and to which, in actual service, it is impossible for the regularly bred officer of that establishment to pay personal attention. We allude, among other cases, to the temporary defence of out-posts, to the laying and springing of fougasses, &c.

Before the revolution, the frontier towns and other fortified places belonging to France, were under the direction of 850 engineers, called *ingénieurs du Roi*, who were subordinate to one director-general.

All instructions relative to the fortifications passed through the latter officer to the king.

All engineers were subject to the orders that the commissary general thought proper to issue, with respect to the attack or defence of places, the construction of works, &c. and they were further directed to see, that all the necessary implements for a siege were duly provided. They gave in a weekly report to the director general of the progress and state of the works, and had authority to draw upon the treasurer for

whatever sums were wanted to pay the contractors. Every engineer was particularly enjoined to see, that the contractors furnished good materials.

INGÉNIEUR géographe, Fr. an individual attached to a general officer, for the purpose of drawing out plans, geographical charts, &c.

INGÉNIEUR ordinaire du Roi, Fr. engineer in ordinary to the king. This term was used in the old French government, to distinguish such men as were employed by authority, from common civil architects.

INGREZ, *Ind.* The English are so called by the natives of Bengal: they are frequently called *Wullaget*, which signifies the country.

INHIBITION. See **EMBARGO**.

INHUMAN, (*inhumain*, Fr.) insensible to the common dictates of humanity. We have already said, that the chief of an army must be *inflexible* and immovable with respect to good order and discipline; but on this very ground, neither he nor his followers can be inhuman.

INIMICAL, hostile.

INJURE, *Fr.* a particular phrase used by the French to signify contumelious, or offensive language. In many instances, especially among military men, words have occasioned the most serious quarrels. On this account young officers should be particularly circumspect in their behaviour to one another.

INLISTING, the act of engaging soldiers to serve either in the cavalry, infantry, or artillery. For the regulations respecting the inlisting soldiers, see **RECRUITING**.

INMATES (in law) are such as for money dwell jointly in the same house with another man, but in different rooms, passing in and out at the same door, and being able to maintain themselves.

INN-HOLDERS, or **INN-KEEPERS**, persons who have a licence to enable them to sell spirituous liquors, beer, &c. and who are obliged, by the conditions specified in that licence, to provide victuals and beer for military men, under certain restrictions. See 39th and 40th Geo. III. Cap. 27. Art. XLI. XLII. XLIII.

INNISKILLING, a town of Ulster, in Ireland. Its inhabitants distinguished themselves in favour of King William, against King James's party.

INNISKILLINERS. The officers and soldiers of the 27th are so called from the regiment having been originally raised at Inniskilling. This gallant regiment has uniformly distinguished itself, particularly at the battle of Maida. Its present colonel is the Earl of Moira.

INONDER, *Fr.* See **INUNDATE.**

INORDINATE *proportion* (in numbers) is as follows; suppose 3 magnitudes in one rank, and 3 others proportionate to them in another, then compare them in a different order; as these three numbers 2 3 9 being in one rank, and these three other 8 24 36 in another rank proportional to the precedent in a different order, so that 2 shall be to 3 as 24 to 36, and 3 to 9 as 8 to 24; then cast away the mean terms in each rank, conclude the first 2 in the first rank is to the last 9, as 8 the first of the other rank to the last 36.

INQUEST, (*enquête, Fr.*) judicial inquiry or examination. In law, the *inquest* of jurors, or by jury, which is the most usual trial of all cases, both civil and criminal, in our realm; in civil causes, after proof made on either side, so much as each party think good, if the doubt be in the fact, it is referred to the direction of twelve indifferent men, (or, at least, who are sworn to be so); and as they bring in their verdict, so judgment passes: for the judge saith, the jury find the fact thus; then is the law thus, and so we judge.

INQUIRY, interrogation; search by question. Examination, search. See **INQUEST.**

Board of INQUIRY, a term used, in contradistinction to court-martial, to signify the meeting of a certain number of officers, (who are not sworn,) for the purpose of ascertaining facts that may hereafter become matter of investigation on oath. Of this description was the Board of Inquiry, 1808, on the convention of Ciutra.

INROAD, incursion, sudden and desultory invasion.

INCONSED, in the military art. When any part of an army has fortified itself with a sconce, or small work, in order to defend some pass, &c. it is said to be *inconsed*.

INSCRIBED, (in geometry). A figure is said to be inscribed in another, when all the angles of the figure inscribed touch either the angles, sides, or planes of the other figure.

INSIDE guard, a guard with the broad sword, to secure the face and front of the body, from a cut made at the inside of the position above the wrist. See **BROADSWORD.**

INSIGNIA, ensigns or arms.

INSPECTEUR, *Fr.* inspector. Military inspectors were originally instituted among the French, after the peace of Aix la Chapelle, in 1668. Two persons at that epoch occupied this important situation; one being called inspector-general of cavalry, and the other inspector-general of infantry. Louis XIV. under whom France assumed over the rest of Europe a preponderance of military character, increased the number of inspectors, and ordered them to be distributed in the different departments for the purpose of reviewing the troops every month, and of transmitting to him a regular statement of their effective force, &c.

INSPECTING *field officer of a district,* a responsible character, selected from the line, who is nominated by the war-office, to superintend and to vouch for the faithful distribution of monies which are issued to officers acting on detachment, or on recruiting parties, within the limits of his station.

INSPECTION, a strict examination, a close survey. It likewise signifies superintendance. In a military sense it admits of both interpretations, and may be considered under two specific heads, each of which branches out into a variety of general, regimental, and troop or company duties.

A general INSPECTION is made annually by the reviewing generals of districts. Every regiment, on this occasion, is minutely looked into, and a faithful account must be delivered by each commanding officer of the actual state of his regiment, together with all the casualties that have occurred during the current year. The interior economy of the corps is not only investigated to the bottom, but the discipline of the men is likewise examined. For a more particular explanation of the latter, see **REVIEW.**

Regimental INSPECTION is made once a month by the commanding officer.—The clothing, the necessaries, arms, and accoutrements belonging to the different companies are examined by the lieutenant colonel or major of the corps.—Specific returns are made by the officers

commanding troops or companies, by whom the debts or credits of the men, which have been made up and accounted for on the 24th day in each month in infantry regiments, and on the 24th day in each second month in cavalry corps, are exhibited for examination at head quarters. This forms the groundwork or basis of the general inspection, at which the troop or company book should always be produced. The royal artillery are inspected on the 1st day in each month.

Private Inspection of companies is the first step towards the other two, and ought to be made every Monday morning, by each officer commanding a troop or company, or by his subaltern.

Inspection of necessaries is an examination of the different articles which every soldier is directed to have in good repair.

Private Inspection of arms. Twenty minutes or more before the general parade, every troop or company should be drawn up on its troop or private parade, and each man be narrowly inspected by an officer.

Inspector-general of cavalry, a general officer, whose particular duty is to inspect all cavalry regiments, to report the state of the horses, and to receive specific accounts from the different corps of their actual state; he communicates with the commander in chief, and whenever a cavalry regiment is ordered to be disbanded, it must be looked at by the inspector general, before it is finally broken.

Inspector-general of the recruiting service, an officer of rank through whom the field officers of districts, and colonels of regiments (when they personally manage the recruiting service of their own corps) transmit their several returns to the adjutant general's office. All recruiting parties which are sent to the great manufacturing towns in England and Wales, as also to Scotland and Ireland, must be previously authorised so to do by the inspector general. This department is now managed by a board, the situation of inspector general having been abolished when General White-locke was entrusted with the command of an army to South America in 1806.

Inspector of clothing. Two field officers have lately been appointed as permanent inspectors of clothing. These inspectors, or the inspectors for the time being, are directed to view and

compare with the sealed patterns, the clothing of the several regiments of cavalry and infantry, as soon as the same shall have been prepared by the respective clothiers; and if the said clothing appear to be conformable to the sealed patterns, they are authorized to grant two certificates of their view and approval thereof; one of which certificates is to be delivered to the clothier, to be sent with the clothing to the head quarters of the corps, and the other to be lodged with the general clothing board, as the necessary voucher for passing the assignment of the allowance for the said clothing.

All clothing must be viewed, and certificates be signed by both inspectors, except in cases where the absence of one of them shall be unavoidable; in all which cases, the cause of such absence is to be stated by the other inspector, in his certificate of the view of the clothing.

Inspectors of clothing are to follow all instructions which may be transmitted to them from the commander in chief, the secretary at war, or the clothing board.

Inspector of health, a civil officer of professional knowledge and abilities, who is appointed by the Medical Board to visit the hospitals, military places of confinement, and ships allotted for the sick in the service. He likewise examines into the state of transports before troops are embarked.

Inspectors of ordnance. There are in the ordnance service, several inspectors, viz. inspector of artillery, whose duty it is to approve and examine all guns and other pieces of ordnance for the artillery as well as the navy; he likewise superintends the proving of ordnance, and, in the event of any inventions being suggested, they are referred to him.

The inspector of the Royal carriage department at Woolwich has a deputy inspector under him, with assistants, and constructs all carriages for the artillery service as well as for the navy. This department has undergone many changes.

The inspector of small arms at the Tower has the general superintendance of the manufacturing of muskets, carbines, pistols, &c. for the British army; he is assisted by a deputy and others; and the department is a very extensive and important establishment.

There is also an inspector of gun-

powder, who has the superintendance of the manufacturing of it at the king's mills.

All these officers are selected from the officers of the royal artillery, who, from their abilities, are considered best capable of undertaking the employments.

INSPECTOR of hospitals, the next on the staff to the surgeon general.

INSPECTOR of Regimental Colours. In the custody of this officer are deposited books containing drawings of the colours and appointments of all the regiments in his Majesty's service, together with royal warrants for bearing additional badges thereon; together with books containing a national military record of all the battles and actions of the British army from 1803 to the present time, with paintings of the colours and trophies taken, the names of the officers killed and wounded, of those who receive medals for their gallantry, and of all the non-commissioned officers and privates who may specially distinguish themselves.

The present inspector is Sir George Naylor, York herald and genealogist of the Bath. The office is at the College of Arms, London.

INSPECTOR of Telegraphs, a person acting under the authority of the admiralty, sanctioned by an act of parliament, for the purpose of seeing that the several telegraphs about the island are kept in condition. His pay is 600*l.* per annum.

To *INSTALL*, (*investir*, Fr.) to advance to any rank or office, by placing in the seat or stall proper for that condition.

INSTALLATION, the act of investing any one with a military order.

INSTINCT moutonnier, Fr. that sort of impulse in the human mind which leads it to follow a leader, as sheep, or geese, do each other. See *Indian FILES*.

INSTRUCTION des procès criminels, Fr. a military form, or process, in criminal matters.

Those officers who may be disposed to enter more largely into the subject of French military process, as conducted before the Revolution, may be satisfied by perusing *Le Code Militaire, ou deuxième volume du Service de l'Infanterie*, page 123; and we refer all British officers in general to Mr. Tytler's publication on English military law.

Field INSTRUCTION, (*Instruction de campagne*, Fr.) a most necessary course

of practical knowledge through which the cadets at Woolwich, and the students of Marlow and High-Wycomb are constantly put, in order to make them perfectly acquainted with the nature of ground, and the diversity of position. They are also taught temporary fortification by throwing up small redoubts, &c.

Letter of INSTRUCTION, see letter.

Military INSTRUMENTS (*instruments militaires*, Fr.) By the sound of military instruments, the troops belonging to the several armies in Europe, &c. are directed in their various movements.

The instruments which are peculiar to the cavalry of most nations are the trumpet and the cymbal. In France dragoon regiments in general adopted the drum in common with the infantry. A certain number of fifers are likewise allowed in foot regiments. Hautboys and clarinets do not form any part of the music which is sanctioned and paid for by the public. Colonels of corps, however, frequently entertain a band either at their own expense, by a contribution of the captains of troops or companies, or out of what is called the stock-purse.

The principal military instruments which were used among the ancients, whether for cavalry or infantry, consisted of the trumpet, the cornet, and the buccina or French horn.

Warlike INSTRUMENTS used by the Turks. The Turks make use of wind and clashing instruments of different shapes and sizes; all, except one wind-instrument, are better calculated for pomp and ceremony, than adapted to military service.

The clashing instruments, which the French call *instrumens à choc*, consist of two sorts of drums, and an instrument which is made of two plates of metal.

Their wind-instruments consist of a winding or crooked trumpet, and of a wooden fife.

The big-drum, which they call *daul*, stands three feet high. It is carried by a mounted drummer, who makes use of a thick stick, with which he strikes the upper part, and a small one, with which he plays upon the under one; these he applies alternately, with much ingenuity of hand, and great gravity of countenance. This is the only instrument which the Turks use in military exercise

or manœuvres. The big drums are constantly beat when the enemy is near, and round all the out-posts, in order to keep the sentinels upon the alert. On these occasions the drummers exclaim with a loud voice: *Jegdar Allah!* that is, God is good! or as the French interpret it—*Dieu Bon*.

The two small drums, or the kettle drums, serve as marks of distinction for the bacha's family, and likewise as signals when the troops are to march. They contribute greatly to the general harmony of a concert. The Turkish name for them is *Sadar Nagara*. The bachas, or bashaws, with three tails are entitled to three kettle drums, which are fixed on each side of the saddle, and are beat in the same manner that those in other services are.

There is likewise another sort of Turkish instrument called *zill*, which consists of two hollow brass plates, on whose convex side is fixed a ring, sufficiently large to contain the grasp of three fingers. By clashing them seasonably together, an agreeable silvery sound is extracted. The bashaws with three tails are each entitled to two sets of these instruments.

There are two sorts of wind-instruments used among the Turks; they differ very much both with regard to the manner in which they are played, and to the materials with which they are made. The first is the trumpet, which is made of the same metal that ours are, but are somewhat longer; they are called *bori*. The man who blows this trumpet is always mounted on horseback, and every bashaw with three tails is intitled to have seven.

The second instrument is made of wood; it is a sort of pipe or flute with five holes; the Turks call it *zarnadar*. The person who plays this instrument is on horseback, and every bashaw with three tails is intitled to five.

The sounds which issue from these different instruments would be extremely harsh to the ear, were they not in some degree harmonized by the great drum; when the whole is played together, the effect is both martial and pleasant.

Surgical INSTRUMENTS directed to be provided for the use of regimental hospitals. An amputating saw, with spare blade, 1 metacarpal saw, with ditto, 24 curved needles, 2 amputating knives, 1 catlin, 2 tenaculums, 1 bullet forceps, 1

pair of bone nippers, 2 screw tourniquets, 4 field tourniquets with handle, 2 calico compresses, 2 trephines, with sliding keys, 1 trephine forceps, 1 elevator, 1 lenticular, a brush, key instruments for teeth, to fit trephine handle, 3 scalpels, 2 silver catheters, 1 trocar with spring and introductory canula, 1 ditto ditto, and canula for hydrocele, 1 probang, 1 long silver probe, 1 large bougie.

Surgical INSTRUMENTS directed to be provided for the field. An amputating saw, 1 metacarpal saw, 12 curved needles, 1 amputating knife, 1 catlin, 1 screw tourniquet, 1 silver catheter, 1 elastic ditto, 2 trephines to fit one handle, 1 trephine forceps, 1 elevator, 2 scalpels, 1 bullet forceps, 1 trocar with spring and introductory canula, 1 trocar with spring canula for hydrocele, a brush, a tenaculum, thread for ligatures.

To INSULT, (*insulter*, Fr.) in a military signification, is to attack boldly and in open day, without going through the slow operations of opening trenches, working by mines and saps, or having any recourse to those usual forms of war, by advancing gradually towards the object in view. An enemy is said to insult a coast, when he suddenly appears upon it, and debarks with an immediate purpose to attack. The British forces under the command of Sir Ralph Abercrombie, insulted the Dutch coast when they took possession of the Helder, in consequence of a bold descent. In attacking fortified places it is usual to insult the counterscarp, in order to avoid the destruction which would naturally follow, if the besieged had time enough allowed them to give effect to the different mines that must necessarily have been prepared beneath it. The grenadiers are always employed on these occasions, accompanied by workmen and artificers to secure the post, after it has been taken by assault.

Mettre hors d' INSULTE, Fr. to take such measures and precautions, either in a fortified town or camp, as to be able to resist an enemy's attack.

INSURANCE of Lives, a mode of providing for a sum which might be lost on the death of a person, or of securing to a person's heirs a sum to be paid at his decease. Thus if a debt be due from A. to B. which A. will be able to discharge at a certain time if he should live so long: B., by paying a certain sum,

may have the amount of the debt secured to him in case A. dies within that time. Also a person wishing to provide a certain sum for his family at his decease, may secure that sum by insuring his life; that is, by paying during his life small annual sums to the assurers. This business is carried on by companies, as individuals cannot easily be found to give the security which such a contract requires.

INSURANCE *Company for Lives*, a Company which, on due testimonials of the health of a person, secure to him the sum he requires to be paid at his death to his assigns.

INSURGENTS, (*insurgens*, Fr.) all vassals in Hungary when assembled together in consequence of the general proclamation by Ban and Arrière Ban, are so called. This, however, does not happen except in cases of great emergency, when they are headed by the Prince Palatine of Hungary, and march to the defence of their frontiers. The Hungarians have sometimes indeed gone beyond them, in order to support their sovereign's right, and have acted offensively in the neighbouring countries.

This term is also generally applied to any body of men that rise in open rebellion against an established authority. Thus the Americans, when they first opposed the British troops, were insurgents, as they had formerly acknowledged the power that sent them over. The Spanish patriots, in 1808, were marked as insurgents by the French emperor *Napoleon*; but the nation had not acknowledged his authority.

INTEGER, a term used in arithmetic, signifying a whole number, in contradistinction to a fraction.

INTEGRAL, (*intégral*, Fr.) belonging to integer. As an *integral penny*, or penny freed from fractions.

Calcul INTÉGRAL, Fr. a calculation in arithmetic, so called by Leibnitz, and answering to the *Inverse method* of fluxions invented by Newton. Of this description are *multiplication* and *division* which reciprocally destroy each other, and are mutually proved.

INTEGRITY of an army, the unbroken state of the several portions of armed men, which constitute an army.

INTEGRITY of an empire, the assemblage of all its parts, without the slightest encroachment upon them.

INTELLIGENCE, in a military

sense, may be variously applied, and of course has different significations. No general can be said to be in any degree qualified for the important situation which he holds, unless, like an able minister of state, he be constantly prepared with the requisite means to obtain the best intelligence respecting the movements and the designs of the enemy he is to oppose. On the other hand, it is not possible to conceive a greater crime than that of affording intelligence to an enemy, and thereby bringing about the overthrow and destruction of a whole army. A French military writer (to whose work we have the satisfaction of being frequently indebted for much general and useful knowledge) makes the following observations respecting the latter species of intelligence which he classes under two specific heads.

He justly remarks that to hold correspondence, or to be in intelligence with an enemy, (*être d'intelligence avec l'ennemi*) is not only to betray your king, but likewise your country. Armies and fortified places are almost always surprized and taken by means of a secret intelligence, which the enemy keeps up with domestic traitors, acting in conjunction with commissioned spies and delegated hirelings.

A garrison town may be taken by surprize, under the influence of secret intelligence, in two different ways.—The one is when the assailant, to whom the place has been surrendered, is not bound to join his forces to those troops by whom he has been admitted; the other, when it is necessary that an assault should be made by openly storming, by throwing shells, and by petards, or by stratagem.

The first species of intelligence may be held with a governor who has influence enough to direct the will and actions of the garrison; with a garrison which is indisposed towards the governor and the officers that command the troops; with the inhabitants who have undertaken to defend a place where no garrison is stationed; and, lastly, with the prevailing faction where there are two parties that govern in a free town.

The other species of intelligence may be practised with a governor who either wants power or is afraid to tamper with the fidelity of the garrison; with some particular officer, serjeants, or soldiers; with the body of inhabitants who think

differently from the armed force that overawes them, or with active and shrewd individuals, who have access to the ruling party and can skilfully combine *affected* loyalty with *secret* disaffection.

There is not, however, in human nature perhaps a more insidious, or a more dangerous ground to tread on than that of secret intelligence; nor are the faculties of the mind ever so much put to the test, as when it is necessary to listen to the report of an individual, who, whilst he is betraying one side, may be equally disposed to dupe the other. A wise general will consequently hear every thing and say nothing; and a wise man, let his secret wishes be what they may, will warily consider, whether the person who insinuates to him even the possibility of a plot, does not at that instant endeavour to get into his confidence, for the sole purpose of acting contrary to his supposed views, and of betraying the man who has unfolded other schemes. It is certainly justifiable policy, either in the governor of a town, or in a general, to affect to give into the views of any man or party of men whom he has cause to suspect, and whose ultimate object he is determined to defeat. But he should be equally cautious, how he listens to the communications of spies, or informers. The veil of honesty is often assumed to cover a deep-laid scheme of villainy; and apparent candour is the surest path to unguarded confidence. When villains voluntarily unfold themselves in such a manner as to convince an able and penetrating officer, that their treachery can be depended upon, much blood may be spared by making a proper use of their intelligence. This axiom has prevailed in every civilized country, and should be well attended to by thinking men. For when a battle has been gained, it avails little to ask, whether the enemy owed his success to force or treachery? No treachery, however, is admissible, or should be sanctioned by belligerent powers, which militates against those laws of nations that are founded upon the wise basis of humanity. *Private assassinations, the use of poison, or the disregard of paroles of honour,* must be generally reprobated; and whatever general obtains his ends by any of these dark means, his name should be stamped with infamy, and he himself

be exposed to all the melancholy casualties of retaliation.

False INTELLIGENCE. There is another kind of intelligence which may secure the greatest advantages to a general; it is that false intelligence which he finds means to convey, through subtle agents, to his antagonist, principally through such channels as are not likely to be suspected. The campaign in Spain in 1808 has afforded many melancholy proofs that our army was, in general, as scantily supplied with timely and authentic information as it was profusely accommodated with false intelligence, carefully fabricated at the French head quarters, made plausible by details which gave them every appearance of truth, and propagated under the cloak of open-heartedness, or even of loquacity, among the very persons best known to be most averse to the Emperor, and most likely to possess the will and the means of conveying it expeditiously to our camp:—For the purpose of obtaining themselves the first kind of intelligence, and of propagating the second, the French have formed a *corps of Guides* composed of intelligent and shrewd officers, well acquainted with every language in Europe; who by good training and constant practice have acquired a wonderful skill for gulling their less crafty neighbours, that content themselves with the old method of bribing ruffians, or of sending, on particular occasions, an officer of the general staff, seldom qualified for that sort of service.

Eight days after Madrid had surrendered, no authentic intelligence of the event had been received at Salamanca; and when our retreat began on the 25th of December, it was believed, upon seemingly good authority, that a French corps had since the eleventh begun its march from Madrid towards Portugal, and that another corps was rapidly proceeding towards Oviedo in Asturia to cut us off from the sea. All of which proved false. So much for *our* want of good intelligence, and the probable use which the enemy made of the false information that was conveyed to us.

INTELLIGENCE communicated by Balloons. A very ingenious method has been proposed to Government whereby every species of information might be given by means of small balloons.

These balloons are so constructed, that, in the course of a few minutes,

various slips of paper, containing true or false intelligence, can be distributed over any extent of country. Information can also be given to persons immured in fortified towns, or islands, in the most expeditious manner. The experiment was made at Woolwich in 1806, and approved by the committee of field officers.

INTENDANT *d'armée*, Fr. under the old government of France, the intendants *d'armée*, or superintendants of the army, were principal inspectors of all sorts of stores, &c. that were necessary for the troops. The French general officers and governors of fortified towns, held continual intercourse with the intendants or supervisors, who directed every branch of the commissariat.

When the intendant *d'armée* was not likewise intendant de province, he was directed to accompany the troops, to visit their line of encampment or cantonment, and to require of all the subordinate *intendants*, the regular proportion of stores and provisions, and to see that they were supplied according to contract and with punctuality.

INTEREST, (*intérêt*, Fr.) power, credit, of promoting oneself, or others; money paid for use.

To make INTEREST, to endeavour to obtain any thing through the power or credit of others. The French say *briguer*; hence, *cette place est fort briguée*, there is great interest made for that place.

To INTERFERE, to intermeddle; to clash.

To INTERFERE (*s'entre-tailler*, Fr.) In farriery a horse is said to *interfere* when the side of one of his shoes strikes against one of his fetlocks, or one leg hits another, and strikes off the skin.

INTERIOR, (*intérieur*, Fr.) inward; internal.

INTERIOR flanking angle is formed by the curtain and line of defence.

INTERIOR radius, the part of an *oblique radius* extending from the center of the polygon to the center of the bastion.

INTERIOR side, the line of the curtain produced to the two oblique radii of the front; or a line drawn from the center of one bastion to that of the next.

INTERIOR slope. See **TALUS**.

INTERMEDIATE, (*intermédiaire*, Fr.) any thing that is, or lies between. See *Intermediate Posts*.

INTERSECTION, the point where two lines cross each other.

INTERVAL, (*intervalle*, Fr.) any space between; a word variously applied in military dispositions and manœuvres, to denote any given distance or space.

INTERVAL between two battalions, the space which separates them when they are drawn up for action, or when they are encamped. This space is generally wide enough to admit the march of another battalion, that is to say, it is equal to the extent of its front when in line. When troops are encamped for the purpose of investing a town or fortified place, the interval is much greater, and seldom or ever less.

INTERVAL between the line and the camp. This comprehends the space which lies between the camp and the line of entrenchments. It is generally from one hundred and eighty to two hundred toises in breadth: so that the different battalions and squadrons which are necessary for the security of the camp may have room to move in, while sufficient ground is left in the rear for troops to pass and repass as occasion may require. The same observation holds good with respect to contravallation.

INTERVALLE du camp à la ligne, Fr. See **INTERVAL between the line and the camp**.

INTERVERTISSER, Fr. to overturn; to cancel; to render void.

INTERVERTISSER l'ordre du jour, Fr. to cancel the order of the day.

INTESTINE, (*intestin*, Fr.) inward, within, belonging to the inward parts.

INTESTINE war, (*guerre intestine*, Fr.) a civil war, as it were, within the bowels of a state or kingdom.

To INTRENCH, to secure against the attack of an enemy, by digging a ditch or trench, &c.

To INTRENCH upon, to invade, to make incroachments upon the property or territories of another.

INTRENCHMENT, any work that fortifies a post against the attack of an enemy. The word is generally used to denote a ditch or trench with a parapet. Intrenchments are sometimes

made of fascines, with earth thrown over them, of gabions, hogsheads or bags filled with earth, to cover the men from the enemy's fire. See RETRENCHMENT.

INTREPIDITY, (*intrépidité*, Fr.) an unqualified contempt of death, and indifference to fortune, as far as it regards personal safety; a fearlessness of heart, and a daring enterprize of mind. According to Rochefoucault, intrepidity, especially with regard to military daring, implies *firmness* of character, great *confidence* of mind, and extraordinary *strength* of soul. Buoyed up and supported by these qualities, (which are sometimes natural and sometimes acquired,) men become superior to every emotion of alarm and are insensible to those perturbations of the heart which the prospect of imminent danger almost always engenders. Chevalier Folard defines it to be a settled *contempt* of death, a species of courage which so intoxicates the mind, as to make it leap over the sober bounds of judgment and discretion: an enthusiastic impulse, which urges us forward, and renders danger imperceptible; or, if discovered, raises our sensations beyond the least impression of fear. This definition appears extremely just. Were we disposed to enter into instances of illustration, it would not be difficult to find them among our own countrymen, especially among the illustrious characters that have raised the British Navy to the highest pinnacle of human glory. The mention of the battle of the Nile will, however, be sufficient for our purpose. The late Lord Nelson, whether on his own element, or destined to act on shore, seemed to possess this quality to the full extent of its definition.

A general may be said to act with *intrepidity*, when, with forces inferior to those of his enemy, and under all the disadvantages of ground, &c. he hazards a general action, attacks his whole front, and finally defeats him. This hardiness and enterprize of character not only surprize an enemy, but likewise create emotions of wonder. If, on the contrary, a general at the head of a small army should be known to act against another that is superior to him in every point, except talent and military skill, and if by means of these qualities, the former should, by able manœuvres and well concerted measures, render all

the designs and attempts of the latter fruitless and abortive, (at a time and under circumstances, which might dishearten almost any other general,) it is then fair to conclude, that the conduct of such a general is the consequence of great military knowledge: but it cannot, with propriety, be said to be the result of *intrepidity*; for it must be evident, that before any very dangerous step has been taken, most of the obstacles have been previously removed, or rendered practicable.

An officer who is not under the influence of that species of *intrepidity* which we have described, when he has once got upon equal ground, or finds it necessary to risk an action, will, without hesitation, advance against his enemy, depending wholly upon military skill and the superior disposition of his line of battle. Full of resources, and with great presence of mind, he will march forward and obtain a victory, not by dint of courage, or by the mere favour of fortune, but through judgment, military ingenuity, and great tactical knowledge. And yet it would be an injustice done to the character of such an officer, were it imagined, that he could act in this manner without possessing great intrepidity. We are rather of opinion, that such a man must have the most undaunted courage, with the additional advantage of consummate prudence, founded upon military knowledge. The intrepidity of his soul is calmed by the cooler judgment of his head; he is aware of difficulties, but is not disheartened by their appearance; he is, on the contrary, encouraged to surmount them by that self-possession, and by that unshaken presence of mind, which enable him to execute what might seem impracticable to others.

Mere *intrepidity* is of a lively, impetuous nature, restless and impatient of restraint, which, though it may not degenerate into downright animal brutality, is nevertheless very far from being strictly rational, or enlightened. If the person who acts under its immediate influence be quick in his perceptions, his conduct is generally marked by some imprudent measure, some enterprize that bids defiance to reflection, and by some attempt that is as hastily executed as it has been inconsiderately planned. An *intrepidity* of this species is seldom

found in the first class of military characters; sometimes indeed, but rarely, it has been accompanied by great prudence and foresight.

In this number may be considered some ancient and modern heroes, such as Alexander the Great, Charles, King of Sweden, Henry IV. of France, and though last, not least, the brave and short-lived hero of Quebec—immortal Wolfe! If instances be found in their histories where prudence and discretion have been overleaped by an *intrepidity* of soul that was too actively disposed on certain occasions, the effect was temporary, and easy to be traced to a cause which was too powerfully engrafted upon their nature, to be always subject to controul.

INTRIGUANT, *Fr.* a person who puts himself forward; an intriguer in politics, &c. a confined politician. Hence the French say; *ce n'est qu'un intrigant*, he is a mere schemer.

INTRIGUER, *Fr.* to embroil; to plot; to puzzle; as, *intriguer son ennemi*, to puzzle one's enemy.

S'INTRIGUER, *Fr.* to bustle about; to put one's self forward, &c.

To INVADE, (*envahir*, *Fr.*) to make a forcible, or clandestine, entry into any thing belonging to another. In a military sense, to pass the regular line of frontier of any country, in order to take possession of the interior.

INVADER, (*envahisseur*, *Fr.*) the person who invades; the chief of any body of armed men that enter a foreign country.

INVALID, (*invalide*, *Fr.*) properly includes every soldier that has been wounded, or has suffered materially in his health, and, in consequence of his good conduct, has been recommended to a certain provision for life. Chelsea Hospital is the place allotted for the reception of such objects of public gratitude and benevolence in this country. Before the building of the *Hôtel des Invalides* at Paris, all soldiers of the above description, who belonged to the French army, were distributed among the frontier towns, and enjoyed a certain allowance for life.

In England, those invalid soldiers who are reported not wholly incapable of bearing arms, are occasionally sent into garrison places, and do duty with the regular army. The motto over the

Invalid House at Berlin, is remarkable for its fine sentiment; viz. *Militi læso sed invicto*.

INVALID-Battalion. See **VETERAN**.

INVASION, (*invasion*, *Fr.*) in war; the entrance or attack of an enemy on the dominions of another.

INVENTORY of deceased officers' effects, &c. In the British army when any commissioned officer happens to die, or is killed on service, it is directed by the Articles of War, that the major of the regiment, or the officer doing the major's duty in his absence, shall immediately secure all his effects or equipage then in camp or quarters; and shall, before the next regimental court-martial, make an inventory thereof, and forthwith transmit the same to the office of the secretary at war, to the end that the executors of such officer may, after payment of his regimental debts and quarters, and the expenses attending his interment, receive the overplus, if any be, to his or their use.

When any non-commissioned officer or private soldier happens to die, or is killed on service, the then commanding officer of the troop or company shall, in the presence of two other commissioned officers, take an account of whatever effects he dies possessed of, above his regimental clothing, arms and accoutrements, and transmit the same to the office of the secretary at war. These effects are to be accounted for and paid to the representative of such deceased non-commissioned officer or soldier; and in case any of the officers, so authorized to take care of the effects of deceased officers and soldiers, should, before they have accounted to their representatives for the same, have occasion to leave the regiment by preferment, or otherwise, they are ordered, before they be permitted to quit the same, to deposit in the hands of the commanding officer, or of the agent of the regiment, all the effects of such deceased non-commissioned officers and soldiers, in order that the same may be secured for, and paid to, their respective representatives. See **Articles of War**, Section XIX.

To INVEST a place, (*investir une place*, *Fr.*) A fortified town or place is said to be invested, when all the avenues leading to it have been seized upon by hostile troops, which are distributed and posted on the principal commands, to

prevent any succour from being received by the garrison, and to keep the ground until the rest of the army, with the artillery, can arrive to form a regular siege. To invest a place is, in fact, to take preparatory measures for a blockade, or a close siege.

For further particulars on this article, see *Traité de l'Attaque des Places, par le Maréchal Vauban, révu, &c. par P. Foissac, chef de brigade au Corps du Génie de la République Française*, vol. i. page 69.

To INVEST with authority, to empower.

INVESTISSEMENT, (a French word, which is strictly military. The celebrated Vauban has erroneously used *investiture*, to signify the same thing;) the act of investing any town or place in such a manner as to prevent the garrison or inhabitants from receiving succours or provisions.

INVESTITURE, *Fr.* See INVESTISSEMENT, *Fr.*

INVINCIBLE, not to be overcome, or conquered.

Les INVINCIBLES, a French regiment which accompanied Bonaparte when he invaded Egypt, and which had distinguished itself in several battles, during that general's campaigns in Italy. It was completely routed (leaving its famous standard in the field) on the 21st of March, 1801, and at last surrendered, with the rest of the army, to General, now Lord Hutchinson, who had succeeded Sir Ralph Abercrombie in the command of the British troops.

To INUNDATE, in a military sense, is to overflow any part of a country, in order to prevent an enemy from advancing. Holland is particularly calculated for this species of defence.

INUNDATION, the act of letting water into a country, so that it shall be overflowed, to prevent the approach of an enemy.

In the *Instruction adressée aux Officiers d'infanterie pour tracer et construire toutes sortes d'ouvrages de campagne, &c. par A. P. I. Bélair, chef de brigade*, may be found some very sensible observations on the means of making inundations to answer military purposes, see page 119, &c. chapitre huitième, *Moyens de faire des Inondations*. We likewise refer our military readers to the *Elémens de Fortification*, published by the same author, pages 75, 82, 83,

and 84. In page 294 of his *Dictionnaire Militaire*, some excellent observations upon the same subject may be seen under the article *Architecture hydraulique*.

INVULNERABLES. During the American war, certain corps of loyalists were so called by the British.

INVULNERABLES aux armées. See MONT-PAGNOTE.

JOAR, *Ind.* a general massacre of the women and children, which is sometimes performed by the Hindoos, when they find they cannot prevent the enemy from taking the town. When this dreadful and unnatural ceremony is to take place, a spot is selected, which is filled with wood, straw, oil, &c. the victims are enclosed and the whole is set on fire.

JOB, (*corvée; petite affaire, Fr.*) In a general acceptation of the term, any thing done within a limited period, for a given price. Something effected for the benefit of an individual at the expense of the public; a matter of traffic.

Military JOB, *Civil and Ecclesiastical* JOBS, &c. For a clear definition of these terms to their full extent and meaning, see the Debates in Parliament, Anno Domini 1808, anno quoque 1809.

JOBBER, (*agioteur, faiseur de places, Fr.*) a person who deals in commissions and places, or jobs in the funds, &c.

JOBENT nails, a small sort of nails, commonly used to nail thin plates of iron to wood.

To JOIN, a technical word used in the British service, generally signifying to effect the junction of one military body with another. In a more limited sense, it means the accession of an individual voluntarily, or otherwise, to a corps or army. If an officer, on being ordered to join, omits to do so wilfully, he is liable to be tried by a general court-martial, or to be preemptorily suspended or dismissed by his Majesty, for being absent without leave.

JOINT bolts. See BOLTS.

JOINT, (*joint, Fr.*) with architects, the separation between the stones, which is filled with mortar, plaster, or cement.

JOINT, (in carpentry,) the several manners of assembling or fitting pieces of wood together.

JOINTIVES, (*lattes jointives, Fr.*) a term used in masonry, signifying laths which are joined together, or placed so

close, that the plaster may be conveniently spread over.

JOINTOYER, *Fr.* to finish a building, by filling up all the chasms and crevices, between bricks or stones, with mortar or cement of a corresponding colour.

JOIST, the secondary beam of a floor.

To **JOIST**, to fit in the smaller beams of a flooring.

JOLS, *Fr.* Barges so called, are used in Denmark, and sometimes by the Russians.

JONCTION de corps militaires, *Fr.* the junction or assemblage of several military corps, so as to form one body, and thereby constitute an army.

JOODAY PERRAPUT, *Ind.* A term used in India to signify a slave taken in war.

JOOMAN, *Ind.* Friday so called in India.

JOUE! a word of command in the French service, answering to *present!*

Coucher en JOUE, *Fr.* To aim with a musket, or other fire-arm, which is used as such—as, *je l'avais déjà couché en joue*, I had already taken my aim at him.

JOUER, *Fr.* In a military sense, to put into motion or state of action.—Hence *faire jouer la mine*—To spring a mine. The French also say familiarly, *jouer des couteaux*—To fight sword in hand. It literally signifies to fight with knives.

JOUES d'une embrasure, *Fr.* the two sides of the epaulement in fortification, which form the opening of the *embrasure* from its utmost point of elevation to the *génouillère*.

JOVES, *Fr.* The two sides in the epaulement of a battery which form the *embrasure*, are so called.

JOUR, *Fr.* the tour of duty which is done in the course of a day and night.

Etre de JOUR, *Fr.* to be officer of the day, or to command a body of troops at a siege, or otherwise, in the capacity of a general officer, &c. The usual time was 24 hours, at the expiration of which another officer undertook the duty, and was relieved by one of his own rank.—See **OFFICER of the day**.

Ordre du JOUR, *Fr.* Orders. See **General ORDERS**.

JOUR de revue, *Fr.* field day.

De JOUR en JOUR, *Fr.* day after day.

JOURNAL Militaire, *Fr.* a public record or general orderly book, which

was formerly kept in the French service, and in which every transaction that occurred during a siege was entered by the governor of the town, for the future inspection of a superior authority. The general officer who carried on the siege of a place likewise kept a document of the sort, and minuted down every thing that happened under his command. So that the journal, which was kept in this manner, was a circumstantial detail of what occurred, day after day, during the attack and defence of a town.

JOURNAL, *Fr.* a sea term answering to our log book.

JOURNAL de l'armée, *Fr.* See **RETURNS**.

JOURNALIZED, done according to daily practice, &c. Hence, *journalized report*, or an account of what has been tried, or effected, day after day.

JOURNÉE, a term used among the French, to express any particular engagement or battle, as *la journée de Marengo*, the battle of Marengo. We frequently adopt the word Day in the same sense: thus a hard fought Day signifies a hard fought battle.

JOUTE, *Fr.* a close fight between two individuals. It likewise means an engagement at sea.

JOUTER, *faire des joutes*, *Fr.* to run at tilt at one another with lances.

JOUST. See **JUST**.

JOYEUSE, *Fr.* The sword of Charlemagne was so called by the French: in which sense *joyeuse* probably meant lucky, fortunate.

IRAN, *Ind.* Persia.

IRELAND, (*Irlande*, *Fr.*) one of the British isles, situated between 51 and 56 degrees of N. latitude, and between 5 and 11 degrees of W. longitude

IRENARCH, (*irénarque*, *Fr.*) an officer so called in the old Grecian empire, *irenarcha, prefectus pacis*. His principal duty was to preserve public tranquillity, and his functions were nearly similar to those of the French *prévôts de maréchaussés*, or police magistrates. We read in the Justinian code of laws, that the *irenarchs* were sent into the different provinces, for the purpose of preserving peace and good order. They were therefore invested with authority to take cognizance of all crimes and misdemeanours, and to punish the delinquents. There was likewise an *irenarch* established in every town, to settle the disputes and differences which might arise between

the inhabitants, and to secure public tranquillity. This person was anciently called *præfectus urbis*. The office of *irenarch* was abolished under the Emperors Theodosius and Honorius, it having latterly been found more productive of evil than good. The word itself is derived from the Greek, and signifies *Prince of Peace*.

IRISH, (*Irlandois*, Fr.) a people well known for their sufferings, and generally distinguished for their bravery, even in defence of the sister kingdom to which they are subordinate, from having been conquered.

IRISH brigade, (*la brigade Irlandaise*, Fr.) a body of men who followed the fortunes of James II. and were formed into regiments under the monarchy of France, in whose service they uniformly distinguished themselves, particularly at the battle of Fontenoy, when the British, having originally gained the day, were finally defeated by their intrepidity.

IRON Guns See GUNS.

IRON hat, (*chapelle de fer*, Fr.) a light helmet which was formerly worn, without visor or gorget, like those since called *bassinets*,—probably a sort of iron cap attached to, and worn over a hood of mail. This iron hat is also called in French *armet*, and was occasionally put on by knights, when they retired from the heat or *mêlée* of the battle, to rest themselves and take breath. The iron hat is mentioned by Froissart and Father Daniel.

IRONS. See PRIMING IRONS.

IRONS, (*fers*, Fr.) fetters or instruments made of iron, with which a prisoner is shackled.

To be put in IRONS, (*être mis aux fers*, Fr.) to be handcuffed and confined in fetters.

IRREGULAR Fortification. See FORTIFICATION.

ISLANDER, (*insulaire*, Fr.) an inhabitant of an island. The French usually called the British *Fiers insulaires*, haughty islanders; from having been so repeatedly beaten by them, especially at sea. The Count d'Artois (now Monsieur) first made use of the expression during the siege of Gibraltar.

IRRITABLE, soon excited to anger.

ISLAUD, *Ind.* a term to express slow music among the Indians.

ISLE OF WIGHT. This place, as subject to the militia laws, differs from

the other counties in England in one material instance, viz. that the governor has the power of appointing the officers and deputy lieutenants, without transmitting their names to the secretary of state for his Majesty's pleasure. Their qualifications, &c. are the same as those in Wales. The militia, however, when embodied, or assembled for annual exercise, is to be deemed a part of the militia of the county of Southampton, and is to be raised in the same manner. It is to continue in the island, unless it be otherwise ordered by his Majesty.

ISOCELE, (*isocèle*, Fr.) in geometry, is a triangle that has two legs equal.

ISOLE, *Fr.* This word is used among the French, to express any body or thing which is detached from another. It is variously applied in fortification. Thus a pavilion or barrack which is not joined to any other wall or building is called *isolé*, because it stands alone, and a person may walk entirely round it. A parapet is also said to be *isolé*, when there is an interval of four or five feet between the rampart and its wall; which interval serves as a path for the rounds. We have adopted the word, and say *isolated*.

ISOPERIMETRICAL figures,—(*figures isopérimétriques*, Fr.) a term derived from the Greek to express all figures that have equal circumferences, or perimeters.

ISSUE, event; consequence; the ultimate result of any undertaking; the termination of any contest.

General ISSUE. In matters of litigation with respect to the militia, it is enacted by the 36th of the King, that if any action shall be brought against any person or persons, for any thing done in pursuance of that act, such action or suit shall be commenced within six months next after the fact committed, and not afterwards, and shall be laid in the county or place where the cause or complaint did arise, and not elsewhere; and the defendant, or defendants, in every such action or suit, may plead the general issue, and give this act and the special matter in evidence at any trial to be had thereupon: and if the jury shall find for the defendant, or defendants, in any such action or suit, or if the plaintiff or plaintiffs shall be non-suited, or discontinue his or their action or suit after the defendant or defendants shall have appeared;

or if upon demurrer judgment shall be given against the plaintiff or plaintiffs, the defendant or defendants shall have treble costs, and have the like remedy for the same, as any defendant hath in other cases to recover costs by law.

ISSUES, in army accounts, certain sums of money which are imprested into the hands of agents, &c. for the payment of the army.

Over-ISSUES, more than the expenditure.

Under-ISSUES, less than the expenditure.

ISSUES, in military finance, certain sums of money which are, at stated periods, given to public accountants for public service; and for the honest distribution of which, every individual, so entrusted, is responsible to parliament.

Regimental ISSUES, monies paid by regimental agents, acting under the authority of their respective colonels, for regimental purposes: the latter being accountable to the public for the proper distribution of all such monies, and the former being subject to specific rules and regulations which come from the secretary at war.

ISSUES, *Fr.* outlets or passages from a fortified town, place, or camp.

ISTHMUS, (*isthme, Fr.*) a neck of land which joins the peninsula to the Continent, and which separates two seas.

ITCH, a cutaneous disease, extremely contagious, which overspreads the body with small pustules filled with thin serum, and raised by a small animal. It is cured by sulphur. When troops are marched into different quarters, particularly about Scotland, the greatest attention should be paid to cleanliness; as it is well known, that whole regiments have become infected by sleeping in places where itchy subjects have lain. This disorder is, however, easily cured.

ITINERARY, in a general sense, is the description which a traveller gives of the course of his journey. In military matters, it is an account of such observations as relate to the movements, &c. of an army in the field.

ITINÉRAIRES, *Fr.* itinerary movements or days of march; a technical phrase among the French to denote the order and disposition which a body of men, or an army, is directed to observe

in its march from one camp to another, or to any particular quarter of destination.

ITMAMDAR, *Ind.* a superintendent or lieutenant-governor in India.

JUDGES are authorized to take judicial notice of the Articles of War, Mutiny Act, Sect. 18.

JUDGE-MARTIAL, or *Advocate-General*, the supreme judge in martial laws as to the jurisdiction and powers of military courts. It is incumbent upon this person, as well as upon his deputies, to be well acquainted with the laws of the land, that they may admonish the court or president when their proceedings are tending to infringe the civil law. He is register of courts-martial and should take down the evidence in the very words of the witness. He is neither a judge nor a juror as to the charge.

JUDGE-Advocate. See JUDGE-MARTIAL.

Deputy-JUDGE-Advocate, a person acting under the judge-advocate with a fixed salary. There are also subordinate deputies.

JUGE, *Fr.* a judge or provost marshal. This term was particularly applicable to the interior government of the Swiss guards that were in the service of France. Each regiment of that description had one judge or provost marshal per company, and one superior to the rest, who presided over the regiment. The inferior judge was called *richter*, and the grand or superior judge *obster richter*. The inferior judges had the examination of petty crimes and offences which they reported to the captain of the company. If the crimes were of a serious or heinous nature, the inferior judges drew up a specific statement of them, and laid the whole before the *obster richter*, who communicated the circumstance to the colonel. Grounds for a general court-martial were generally established out of the latter report.

JUGEMENS *Militaires, Fr.* the cognizance which is taken, and the sentences that are passed, for military offences.

JUGES *Militaires, Fr.* See JUGE.

JUGG, *Ind.* an Indian sacrifice.

JUGGUT GROW, *Ind.* an Indian term which signifies *guardian of mankind*.

JUMBAUN, *Ind.* in Indian music, means *shake*.

JUMBOO DEEP, *Ind.* a word particularly used to signify India; it is derived from *jumboo* or *jumbook*, a jackal, and *deep*, any large portion of land which is surrounded by the sea. The inhabitants of India were so called before the introduction of the Tartar governments.

JUMMA KERCH, *Ind.* an account, stating the receipt and expenditure of the revenue.

JUNCAN, *Ind.* a toll or duty on every thing that passes.

JUNGLE, an Indian term for a wood, or woody country. It likewise means high grass, reeds, or thicket.

JUNTA, a council consisting of the principal statesmen in Spain; from which public orders, &c. have been issued; as the Junta of Seville, under whose instructions the patriots acted in 1808.

JURISDICTION, legal authority, extent of power. Officers not being liable to be tried by garrison or regimental courts-martial, may appeal from the jurisdiction of such courts; as may non-commissioned officers and soldiers in cases where their pay is concerned.

JUST, a sportive combat on horseback, man against man, armed with lances; called also *Joust*, *Tilt*, *Tournament*, &c.

JUSTICES. Military men are, in many instances, under the necessity of applying to justices in order to execute their several orders and instructions without infringing upon the civil authorities; and justices on their sides are bound to aid and assist the military in conformity to established laws and regulations. As the functions of these gentlemen seem specifically pointed out in militia acts, and every thing relating to the army is comprised under the different heads, we shall give the following brief abstract for the information of military men in general.

Justices are directed to grant warrants for impressing carriages for the use of

the regular army and militia, when any part of either of those establishments is on its march. They may grant warrants for the apprehending of deserters, and must pay 20s. to the person who brings a deserter, and has him sworn in before them.

They may billet officers and men upon the different public-houses, and when the militia is disembodied, they provide in the same manner for that establishment, during the annual exercise. With regard to the militia, it is the peculiar province of each justice to order costs for making distress on quakers for rates for raising volunteers, and to grant warrants in general for levying by distress the regulated rates under that head. They may likewise determine disputes respecting wages under 20l. between masters and their servants who have been enrolled as militia-men, and may order the same to be levied by distress. They may likewise order relief to be given to disabled militia-men, &c. and may commit militia-men for not paying the penalty they might have incurred for selling their arms, and either commit the purchasers of them, or cause them to be whipped at the cart's tail, &c.

At the quarter session after Christmas in every year, justices are to assess 5l. per man on every place that does not return an annual state of its militia when disembodied; and at Midsummer quarter session they are to order the overseers of the poor to certify the quota paid to the land tax by places not rated to the county rate, and which have not paid their assessments for not having raised their militia.

JUSTICES of the peace, being military officers, cannot give warrants for quartering their own soldiers in England. See 37, 40, of the King, chap. 27. art. xxx.

Military JUSTICE, (*Justice Militaire*, Fr.) the summary trial and punishment of offenders under martial law.

K.

K A L

KABBADE or CABADE, *Fr.* a military dress which is worn by the modern Greeks. According to Tzetzés it derives its name from Cabades, a Persian king. Codinus, on the other hand, asserts, that the Greeks in Constantinople adopted it in imitation of the Assyrians. Others again maintain, that it owes its appellation to the resemblance which it bears to a Greek letter. Father Goar, the author, very justly ridicules this etymology. We are, however, authorized to say, that the derivation of the word what it may, the dress itself consists of a short garment which was worn underneath another. It had not any folds, but sat close to the body, being buttoned with large buttons, and reaching down to the calves of the legs. It was fringed round the edges, and was usually worn with a girdle; such is the description which Father Goar has given of the kabbade in his notes upon Codinus. He concludes by observing, that, in his opinion, it is what the Romans called *sugum*, and the modern Greeks afterwards corrupted into *kabbude*.

KABEL JAUW, a name formerly given to a faction in the low countries, which constantly opposed the *Houckiens*.

KAJANA, *Ind.* a collection of treasure under the immediate controul of a Jaghirdar, or military chief, in the Indian empire. This treasure, to use the words of the editor of the Asiatic Register, consists of specie and jewels, which are lodged in a secret depository within the walls of a strong fortress, often erected for the purpose, on one of the most inaccessible mountains in the dominions of a Mahratta prince.

KAK TOWDA, *Ind.* fine mould beat strongly in between two walls, for the purpose of shooting arrows into, when the walls are taken away.

KALAI, a term used among the Turks to signify fort or fortress; a species of defence which they particularly adopt when they construct their Palanchus.

KALÉE, *Ind.* an Hindoo deity, to whom human beings are sacrificed.

K E C

KALLAAT or KELAUT, *Ind.* a dress which is given to any person invested with a new office.

KALMUCKS (*Kalmouques*, *Fr.*) This word is generally written *Calmuks*. They are wandering tribes of Tartars, who inhabit the parts north of the Caspian sea. These hordes frequently put themselves under the protection of the court of Russia. A French writer describes the Kalmuks to be a sort of militia, which is established between Siberia and the Caspian sea. There are generally some regiments of them attached to the Russian armies in common with the Cossacks. They are armed with a lance iron pointed, about six feet long, and carry a bow with a quiver upon their backs, containing ten arrows. They never serve on foot, and are only formidable by name.

KALSA, *Ind.* the king, the head.

KALSA CUTCHERRY, *Ind.* the room of business, where the king sits in person.

KAM, (*Kam*, *Fr.*) an elective prince belonging to one family, who has full power over the small states of Tartary; subject only to the Grand Signor.

KAN, an officer in Persia, who is invested with the same powers that are entrusted to an European governor.

KANAUTS, *Ind.* a term used in India, to express the walls of a canvass tent.

KARRI-MESRAC, a sort of lance or javelin used by the Turks in Asia, and by the cavalry corps *capiculy*, *seratculy*.

KATA, the Indian name for China.

KATIK, an Indian month, which, in some measure, coincides with our month of October.

KAULAUBHAIJE, the Indian term for message.

KAYMETAN. See SEYMENY-BASSY.

KECHEKLECHI, guards attached to the person of the king of Persia; they are armed with a musket of an extraordinary size and caliber. They were raised and formed into a regular corps about the middle of the last century.

KEELS, the long boats in which the Saxons successfully invaded England.

KEEP, support; maintenance.

KEEP, in ancient military history, a kind of strong tower which was built in the center of a castle or fort, to which the besieged retreated and made their last efforts of defence. Of this description is the keep of Windsor Castle.

King's KEEP, a fort built by King Henry II. in the interior part of Dover Castle.

To KEEP off, in a military sense, is either to deter your enemy from approaching close to the lines or fortifications by inducing him to suspect a superior force, an ambuscade, or a mine, or by openly galling his advanced posts in such a manner as to beat him in detail. Infantry may keep off cavalry by hot firing, or by a compact, intrepid direction of the bayonet.

To KEEP up, in military movements, is to preserve that regular pace, by which a line or column, on a march, or in manœuvring, advances towards any given point without any chasm or fluctuations. When a regiment marches by files, it is almost impossible for the rear to keep up. On this account, divisions, subdivisions, and even sections, are best calculated to preserve a regular depth and continuity of march.

To KEEP up likewise signifies to attend to the interior management and discipline of a corps, so as to prevent the least deviation from established rules and regulations. Thus commanding officers are said to keep up good order and discipline, who (whether absent or present) provide against the least insubordination, &c.

To KEEP up a heavy fire is to play with heavy ordnance against a fortified place or body of men, by a calm and well-directed succession of shot. In musketry firing, officers commanding battalions, divisions, or platoons, should be very exact in giving the word in order to keep up the different firings.

KEERAY, *Ind.* expenses, charges.

KENT. It is the peculiar duty of the county lieutenant, or of three deputy lieutenants belonging to this county, to issue orders to the chief constables of the several hundreds to send out precepts to the churchwardens or overseers to return a list of men liable to serve. The churchwardens and overseers of the county of Kent are, by act of parliament,

invested with the powers of constables, to put in force the militia acts.

KENTASSI, a range of mountains in Thibet, in which are the sources of the Ganges. This river, formed from several sources, passes successively two great lakes, and flows to the west, until the opposition of a part of the Indian Caucasus turns it to the south, and having completed, in these various directions, a course of two hundred leagues, it enters India by forcing its passage through the mountains of the frontier.

KERANA, a long trumpet, similar in shape and size to the speaking trumpet. The Persians use it whenever they wish to make any extraordinary noise, and they frequently blow it with hautboys, kettle drums, and other instruments at sunset, and two hours after midnight.

KEREEF, *Ind.* one of the two seasons into which the year is divided in India.

KERIMCHARRY, *Ind.* an inferior officer under the zemindar, who collects from the villages, and keeps the accounts.

KERN. The Irish infantry were formerly distinguished by this appellation. Each man was armed with a sword, and a dart or javelin which was tied to a small cord, so that, after he had thrown it at the enemy, he could instantly recover it, and use it in any way he thought proper. The javelin was called skene.

KERUI, *Ind.* a village or parish.

KETTLE, a vessel used to boil composition for fire-works.

KETTLE-Drums. See **DRUMS**.

KETTLE-drum cart, a four wheel carriage which is drawn by four horses, and is used exclusively by the royal artillery.

The ordnance flag is planted on the fore part, and the drummer with two kettle drums is seated, as in a chair of state, on the back part. This cart is finely engraven and richly gilt. It has not been in the field since the year 1743, when the king was present. It is kept in the tower.

KEY, (*clé, clef, Fr*) in a general sense, is an instrument with which locks are opened and shut.

KEYS, in artillery carriages, may be considered under three specific heads, viz.

Fore-lock KEYS, which serve to pass through the lower end of bolts, in order to fasten them.

Spring KEYS may be used in the same manner, but are differently made, for instead of being of one single piece, they are of two, like two springs laid one over the other. When they are put into eye-bolts, they are pinched together at the ends, and when they are in, they open again; so that the motion of the carriage cannot disturb or shake them out. Spring keys are peculiarly useful in travelling carriages.

KEYS with chains and staples fixed on the side pieces of a carriage or mortar bed. They serve to fasten the cap square by passing through the eyes of the eye-bolts.

KEY stone, in architecture, is the middle stone of an arch, by which the sweep of an arch is bound together.

KEY is also used in a figurative sense, to signify any important outlet of a kingdom. Thus Luxemburgh is called the key of the German empire towards France; Pampluna and Barcelona are the keys of Spain, with respect to France on the side of the Pyrenees. The French use the word in the same sense, *Calais est une des clefs de la France*, Calais is one of the keys of France. Dover may also be so called, with respect to England. *KEY* also means a haven for ships to ride in. See *QUAY*.

Gold KEY, (*clef d'or*, Fr.) a key which is worn by the lords of the bed-chamber in England, and in most European courts. Figuratively, a bribe or douceur in money, by which the avenues to some employments under government have been secretly opened.

KEYSERLICKS, or *Imperialists*. The Austrian troops are frequently called so. The term was indeed common among the British soldiers, when they did duty together, and invaded France in 1794. It is derived from *keyser*, which, in German, signifies emperor.

KHAN, *Ind.* signifies lord or chieftain. This title is given by the king of Delhi, for which it is supposed, the person maintains 250 horse soldiers, which he commands and disciplines for the king's service.

KHEET, *Ind.* a fortified city, which is four coss or English miles in length and breadth, and not so much as eight.

KHODA, *Ind.* God.

KHODADAUD SIRCAR, *Ind.* Tip-po Sultaun, the sovereign of the kingdom of Mysore, who fell in defence of his capital, Serungputtan, or Seringa-

patan, when it was stormed, May the 4th, 1799, by the British forces under the command of lieutenant general, now Lord, Harris.

KID. This appellation was formerly given to any person that was trepanned by kidnappers.

KIDNAPPER, a man who by improper means decoys the unwary into the king's service.

KIEU, the Indian term for any bridge under which water flows.

To KILL, (*tuer*, Fr.) to deprive of life. A power arrogated by the strong over the weak, without any other principle to justify it than the usage of mankind; for who that cannot give life ought to have the power of taking it away?

To KILL according to law, to take away life in consequence of judicial investigation, and for a breach of some known rule. Under these circumstances the execution of the culprit usually takes place in open day-light.

To KILL privately, and *with malice prepense*, to murder in the dark, or by secret means. Hence, to *assassinate*, which is derived from the word *assassin*; a modern term, taken from a set of miscreants who formerly inhabited a part of Asia, and were under a petty prince called *the Old Man of the Mountain*. This man, according to Hume, had acquired such an ascendant over his fanatical subjects, that they paid the most implicit deference to his commands; esteemed assassination meritorious when sanctioned by his mandate; courted danger, and even certain death, in the execution of his order; and fancied, that when they sacrificed their lives for his sake, the highest joys of Paradise were the infallible reward of their devoted obedience.

The greatest monarchs stood in awe of this prince of the *Assassins*, (for that was the name of his people,) whence the word has passed into most European languages.—Vol. ii. Hume's History of England, p. 18.

KILLA, *Ind.* a castle, fort, or fortress.

KILLADAR, *Ind.* the governor, or commandant of a fort.

KILMAINHAM-Hospital, a receptacle for invalid soldiers in Ireland, originally founded by Charles II. and governed by the same regulations that are in force at Chelsea.

KIND, (*genre, sorte*, Fr.) natural state of any thing.

In **KIND**, (*en espèce, en nature, Fr.*) as the thing is. Thus in military distributions, rations are ordered to be supplied **IN KIND**, (*en nature*) and not paid for or compounded in *money*.

KINDALAHS, a vagabond outcast set of people in India, originally belonging to the Hindoo tribe. By such proscription and disgrace are these miserable creatures marked, that the people of other casts not only will not visit them, but if any one of them should presume to approach a person of the Nair tribe, it is lawful for the latter to put him to instant death.

To **KINDLE**, in a military sense, is to excite mankind to arms. To kindle the flames of war is a familiar expression.

The **KING**, a person in whom supreme or qualified authority is vested by the consent of a nation; the chief magistrate, and one of the three integral parts of the British constitution.

In a military acceptance of the term, the King of Great Britain is, constitutionally, and in his own proper right, captain-general of the British army, the primary source from which all appointments in it are derived, and the last resort of naval and military jurisdiction. With him, as principal magistrate in the state, and head of the executive power, all the arrangements of the British army finally rest, as from him they primarily issued. From him all the effective forces derive energy and effect, and when war has been declared, to him only does the army look for the immediate application and general exercise of its powers, through the medium of the ministers he appoints; who are responsible to parliament in the manner in which the authority they have received has been executed. English kings have sometimes fought at the head of their armies; and the next heir to the crown has often exposed himself, in common with the rest of his father's subjects, to all the casualties of war.

The **KING** is supreme head of the militia, and has the power of appointing or dismissing lieutenants of counties. His Majesty may likewise order three deputy lieutenants to act, when the lieutenant is abroad, or when there is a vacancy. He may join independent companies into a battalion, or incorporate them with any other regiment; and by him only can adjutants be appointed to act in the militia. If they are selected from the regular army, they preserve

their rank, and their new commission bears the sign manual.

In case of an invasion or rebellion, the King has the power to order the county lieutenants to embody the militia and to put it under general officers from the regular army. On these occasions he may issue a proclamation for the meeting of parliament in fourteen days.

KING at Arms. See **HERALD**.

KIOSQUE, *Fr.* a sort of garden pavilion which is open on all sides. It is used in the Levant, particularly in Turkey, and at Constantinople.

KISSELBACHES, *Ind.* soldiers are so called in India.

KIST, *Ind.* the amount of a stated payment.

KISTYBUNDY, the Indian term for a monthly payment.

KIT, in laboratory works, a composition made of rosin 9lb. pitch 6lb. beeswax 6lb. and tallow 1lb. used for the last covering of carcasses. In order to apply it properly, it must first be broken into small pieces, and put into an iron pot over the fire, where it must be kept in agitation until it be thoroughly dissolved. When rendered very hot, and completely liquid, it may be used.

KIT is likewise used among dragoons, to signify their lot of necessaries, which are packed up in very small compass. The term has found its way in the infantry, and frequently means the contents of a soldier's knapsack.

KITSBUNDY, a contract or agreement for the discharge of any debt or obligation by stated payments.

KLINKETS, in fortification, are small gates made through palisades, for the purpose of sallying.

KNAPSACK, a rough leather or canvass bag, which is strapped to an infantry soldier's back when he marches, and which contains his necessaries. Square knapsacks are supposed to be most convenient. They should be made with a division to hold the shoes, blacking-balls and brushes, separate from the linen. White goat-skins are sometimes used, but we do not conceive them to be equal to the painted canvass ones. Soldiers in the British service are put under stoppages for the payment of their knapsacks, which, after six years, become their property. See list of necessaries, according to the last regulations, under the article **NECESSARIES**.

KNAPSACK is said to have been originally so called from the circumstance

of a soldier making use of a sack, which had been full of corn, &c. Such is the account given to us by a very worthy and respectable friend; but we are inclined to think, that knapsack comes from the Saxon word *Snapsack*, a bag to carry food.

KNAVE. For its military acceptation, see **INFANTRY**.

KNIGHT, a person who, on account of some eminent service, civil or military, or no service at all, is singled out from the common class of gentlemen, &c. and is personally invested with a title. This word, which was originally derived from the German and Dutch *knecht* or *kneht*, signifies a servant, in which sense it is applied when we speak of a knight of a shire; it likewise means a military man, or rather a horseman, from the Latin *equus*, a soldier, or horseman; knights of this description having been either the king's domestic servants, or of his life-guards.

In common law they are called *milites*, usually holding lands by knight's service, to serve the king in his wars.

KNIGHT of the Post, a hireling evidence; a wretch that has stood in the pillory, or been whipped at the cart's tail, for false swearing.

KNIGHT-errant, a foolish egotist that runs about in quest of adventures, and who, if he should do an act of kindness or humanity, cannot keep his own secret.

City-KNIGHT, a person from the city who has been knighted for presenting an address.

KNOT, the wing or epaulette, which is commonly made of worsted, of a non-commissioned officer or corporal. When serjeants and corporals are sentenced to be reduced to the ranks, the knot is generally cut off by the drum-major in the presence of the battalion, as a mark of infamy.

Knights of the Knot, an order of sixty knights, instituted by Jane the First, Queen of Naples, on occasion of the peace established by her and the King of Hungary, by means of her marriage with Lewis, prince of Tarentum.

KNOTS, the division of the log-line. Each knot is equal to an English mile.

KNOUT, a Russian punishment.

KOHISTAN, *Ind.* properly means a province. It likewise signifies a rocky or mountainous country.

KOLLEE Jogue, *Ind.* is the fourth of the four æras or periods of Indian

chronology. It is the present æra, in which all mankind are corrupted, or rather lessened; it is supposed to be ordained to subsist four hundred thousand years, of which nearly five thousand are already expired, and the life of man in that period is limited to one hundred years. *Colonel Dow* says this age is to last thirty-six thousand years: the age which preceded it, is called the *devapaaar jogue*.

KOOLOO, *Ind.* the cocoa tree.

KOONAR, an Indian month, which partly coincides with our month of September.

KOONCHY, *Ind.* a measure of about eight handfuls.

KOONWUR, *Ind.* prince, highness.

KOREISH, *Ind.* an Arabian tribe.

KORTCHI-BACHI, the chief or commanding officer of the Kortchis. In former times he was the first military character in Persia, at present he is only the second in command. He never leaves the court except upon extraordinary occasions, when his presence is required at the army. This, however, rarely happens, as the king is obliged to furnish him with an household service of plate, and to detach a part of his own guards for the protection of his person. The Kortchi Bachi is generally entrusted with one of the chief governments belonging to Persia.

KORTCHIS, a body of Persian cavalry, which is stationed along the frontiers of the country. Every individual belonging to this corps, receives fifty crowns for his annual pay. The children of the Kortchis succeed their fathers, with the consent and approbation of the general. The Kortchis are descended from a race of foreigners, who used to live under tents, and were always distinguished for their courage.

KOSSACKS, (*Kosauques*, Fr.) See **COSSACKS**.

KOTE, *Ind.* a warehouse.

KOULIE, *Ind.* a courier, a porter.

KOULS, a corps of Persian soldiers who rank as a third body among the five that constitute the king's household troops; they mount guard under the portico which stands between the first and second gate leading to the palace. The Kouls are men of birth and rank; no person can arrive at any considerable post or situation, who has not served among the Kouls. Their number is computed at 4000 men.

KOULS-AGASI, a distinguished mi-

linary character in Persia, who has the command of a body of men called *Kouls*. He is usually governor of a considerable province.

KOURIE, *Ind.* a sea shell used as money in many parts of India.

KOYAL, *Ind.* a weighman.

KOYALLE, *Ind.* fees for weighing.

KRAMA, *Ind.* wooden sandals which are worn by the natives of India during the wet season.

KUFFEET, *Ind.* an Indian term for security.

KUL, the Turkish word for slave to the prince. The grand vizier, the bachas, the beiglerbeys, and all persons who receive pay or subsistence from situations dependent upon the crown, are so called. This title is in high estimation among the Turkish military, as it authorizes all who are invested with it, to insult, strike, and otherways ill-use the common people, without being responsible for the most flagrant breaches of humanity. Horrid pre-eminence, and fitted only to Mahometan civilization!

KULLER, the governor of a fortified town in Turkey is so called.

KULLUSTANUS, *Ind.* christians.

KUNDNEE, *Ind.* a sum of money which is annually paid by an inferior governor to his superior.

KUPELE, straits so called in India, through which the Ganges disembogues itself into Indostan. They are distant from Delhi about 30 leagues, in the longitude of 96, and in the latitude of 30. 2.

KURROL, *Ind.* the advanced guard of a main army.

KURTCHI, a militia so called in Persia. It consists of one body of cavalry, which is composed of the first nobility belonging to the kingdom, and of the lineal descendants of the Turkish

conquerors, who placed Ismael Sophi on the throne. They wear a red turban, made of particular stuff into twelve folds. This turban was originally given them by Ismael, in consideration of their attachment to the religion and family of Ali. The twelve folds are in remembrance of the twelve Imans or Mahometan preachers who descended in a direct line from Ali, and distinguished themselves so much in that sect. The turban is red, for the purpose of provoking those who wear it to avenge upon the Ottomans, the deaths of Ali and Hussein, who were murdered by the chief of Sunnis, to whose sect the Turks belong. In consequence of their wearing this turban, the Persians are always called by the Turks *Kitil-Baschi* or *Red-heads*. The noblemen in Persia have adopted the term, with a slight alteration, and call themselves *Kesil-Baschis* or *Golden-Heads*. The Kurtchi form a body of nearly eighteen thousand men. The chief or commanding officer is called *Kurtchi-Baschi*. This was formerly the most distinguished situation in the kingdom, and the authority annexed to it was equal to what the constable of France originally possessed. At present his power does not extend beyond the Kurtchis.

KUSH-BASCH, *Ind.* persons who enjoy lands rent free, upon condition of serving government in a military capacity when called upon. The term also signifies people of middling circumstances, who do not cultivate their lands themselves, but hire servants to do it whilst they hold other employments.

KUTTY, *Ind.* closets.

KUVVAUS, *Ind.* servants attending on the King's person.

KUZANA, *Ind.* a treasury.

L.

LA, *Fr.* there, yonder, thither. This word is used by the French on guard, and answers to our challenge, *Who comes there?* Hence *Qui va là?* who goes there?

LAACK, *Ind.* one hundred thousand.

LABARUM, a celebrated standard which was used among the Roman emperors, and frequently means any imperial or royal standard. The original

one, so called, consisted of a long lance, at the top of which was fixed a stick that crossed it at right angles, and from which hung a piece of rich scarlet cloth that was sometimes ornamented with precious stones. Until the days of Constantine the Great, the figure of an eagle was placed upon the top of the labarum; but that prince substituted in its room

a cross, with a cypher expressing the name of Jesus.

LABORATORY, (*laboratoire*, Fr.) signifies that place where all sorts of fireworks are prepared, both for actual service, and for pleasure, viz. quick-matches, fuses, portfires, grape-shot, case-shot, carcasses, hand-grenades, cartridges, shells filled, and fuses fixed, wads, &c. &c.

LABORATORY-tent, a large tent, carried along with the artillery into the field, furnished with all sorts of tools and metals for the fire-workers or bombardiers to prepare their stores.

Aigrettes. See MORTARS.

Balls are of various sorts, shapes and forms; as,

Chain-
Light-
Smoke-
Stink-
Poisoned-
Red-hot-
Stang-
Anchor-
} **Balls**. See BALLS.

Message-Balls. See SHELLS.

Fire-barrels. See BARRELS.

Grape-shot, in artillery, is a combination of small shot, put into a thick canvass bag, and corded strongly together, so as to form a kind of cylinder, whose diameter is equal to that of the ball which is adapted to the cannon.

To make *grape shot*, a bag of coarse cloth is made just to hold the bottom which is put into it; as many shot are then thrown in as the grape is to contain; and with a strong packthread the whole is quilted to keep the shot from moving. The bags, when finished, are put into boxes for the purpose of being conveniently carried.

The number of shot in a grape varies according to the service or size of the guns; in sea service 9 is always the number; but by land it is increased to any number or size, from an ounce and a quarter in weight, to four pounds. It has not yet been determined, with any degree of accuracy, what number and size answer best in practice; for it is well known that they often scatter so much, that only a small number take effect.

Proper charges for grape-shot have never yet been effectually determined; we can only give our advice from some experiments; that for heavy 6-pounders

1-3d of the weight of the shot appears to be the best charge of powder; for the light 6-pounders, 1-4th of the weight of the shot; and for howitzers, 1-8th or 1-10th answers very well.

This kind of fire seems not yet to have been enough respected, nor depended on. However, if cannon and howitzers can be made to throw 1-3d or 1-4th, and sometimes half their charge of grape shot into a space of 39 x 12 feet, at 200 and 300 yards distance, and those fired 10 or 12 times in a minute; it surely forms the thickest fire that can be produced from the same space.

Case shot formerly consisted of all kinds of old iron, stones, musket balls, nails, &c.

Tin Case Shot is formed by putting a quantity of small iron shot into a cylindrical tin box called a canister, that just fits the bore of the piece, which, when filled for the nature of 12 pounders, 9 pounders, 6 pounders, and 3 pounders for field service, weigh half as much again as the weight of the round shot. The following table of case shot for field ordnance has lately been fixed upon, viz.

CASE SHOT.

		Number of Balls.	Weight of each Ball. Oz. Grs.
12 Pounders.	{ Heavy Case	41	6 7½
	{ Light do.	126	2 0
9 ditto.	{ Heavy do.	41	5 0
	{ Light do.	126	1 8
6 ditto.	{ Heavy do.	41	3 5½
	{ Light do.	85	1 8
3 ditto - - -	do.	41	1 8
8 Inch Howitzers -	do.	258	2 0
5½ Inch do.	do.	100	2 0
4½ Inch do.	do.	55	2 0

Case shot is used generally for all natures of ordnance. For spherical case shot, see SPHERICAL.

Tubes, in artillery, are used in quick firing. They are made of tin: the diameter is 2-10ths of an inch, being just sufficient to enter into the vent of the piece; they are about 6 inches long. Through this tube is drawn a quick-match, the cap being fitted with mealed powder, moistened with spirits of wine. To prevent the mealed powder from falling out by carriage a cap of paper or flannel, steeped in spirits of wine, is tied over it.

Tin tubes are liable to corrode and break, especially when exposed to the sea air. Paper and quill tubes are used;

the latter particularly for sea service. Lieut.-Colonel Harding of the royal artillery has invented a pewter tube, which has been approved, and will no doubt be used in lieu of the tin tubes.

Flambeau, a kind of lighted torch, used in the artillery upon a march, or in the park, &c.

Formers, are cylinders of wood, of different sizes and dimensions, used in the *laboratory*, to drive the composition of fuzes and rockets.

Formers of wood are used for making cartridges for small arms, &c.

Funnels are of various sorts, used to pour the powder into shells, and the composition into fuzes, and rocket-cases.

Fire ship, a vessel filled with combustible materials, and fitted with grappling irons, to hook, and set fire to the enemy's ships in battle, &c.

From the bulk head at the fore-castle to a bulk head to be raised behind the main chains, on each side and across the ship at the bulk heads, is fixed close to the ship's sides, a double row of troughs, 2 feet distance from each other, with cross troughs quite round, at about $2\frac{1}{2}$ distance; which are mortised into the others. The cross troughs lead to the sides of the ship, to the barrels, and to the port-holes, to give fire both to the barrels and to the chambers, to blow open the ports; and the side troughs serve to communicate the fire all along the ship and the cross troughs.

The timbers of which the troughs are made, are about 5 inches square; the depth of the troughs, half their thickness; and they are supported by cross pieces at every 2 or 3 yards, nailed to the timbers of the ship, and to the wood work which incloses the fore and main-masts. The decks and troughs are all well paved with melted rosin.

On each side of the ship 6 small port holes are cut, from 15 to 18 inches large, (the ports opening downwards,) and are close caulked up. Against each port is fixed an iron chamber, which, at the time of firing the ship, blows open the ports, and lets out the fire. At the main and fore chains, on each side, a wooden funnel is fixed over a fire barrel, and comes through a scuttle in the deck, up to the shrouds, to set them on fire. Both funnels and scuttles must be stopped with plugs, and have sail-cloth or canvass nailed close over them, to prevent

any accident happening that way, by fire, to the combustibles below.

The port-holes, funnels, and scuttles, not only serve to give the fire a free passage to the outside and upper parts of the ship and her rigging, but also for the inward air (otherwise confined) to expand itself and push through those holes at the time of the combustibles being on fire, and prevent the blowing up of the decks, which otherwise must of course happen, from the sudden and violent rarefaction of the air as will then be produced.

In the bulk head behind, on each side, is cut a small hole, large enough to receive a trough of the same size of the others; from which, to each side of the ship, lies a leading trough, one end coming through a sally port cut through the ship's side, and the other fixing into a communicating trough that lies along the bulk-head, from one side of the ship to the other; and being laid with quick match, at the time of firing either of the leading troughs, communicates the fire in an instant to the contrary side of the ship, and both sides burn together.

Fire barrels, for a fire ship, are cylindrical, on account of that shape answering better both for filling them with reeds, and for stowing them between the troughs: their inside diameters are about 21 inches, and their length 33. The bottom parts are first filled with double-dipt reeds set on end, and the remainder with fire-barrel composition, which is, corned powder 30lb. Swedish pitch 12, saltpetre 6, and tallow 3, well mixed and melted, and then poured over them.

There are 5 holes of 3-quarters of an inch diameter, and 3 inches deep, made with a drift of that size in the top of the composition while it is warm: one in the center, and the other four at equal distances round the sides of the barrel. When the composition is cold and hard, the barrel is primed by well driving those holes full of fuse composition, to within an inch of the top; then fixing in each hole a strand of quick-match twice doubled, and in the center-hole two strands the whole length; all which must be well driven in with mealed powder; then lay the quick-match all within the barrel, and cover the top of it with a dipped curtain, fastened on with a hoop to slip over the head, and nailed on.

Bavins, for a fire-ship, are made of birch, heath, or other sort of brush-wood, that is both tough and quickly fired: in length 2.5, or 3 feet; the bush-ends all laid one way, and the other ends tied with two bands each. They are dipped and sprinkled with sulphur, the same as reeds, with this difference, that the bush ends only are dipped, and should be a little closed together by the hand as soon as done, to keep them more compact, in order to give a stronger fire, and to preserve the branches from breaking in shifting and handling them. Their composition is, rosin 120lb. coarse sulphur 90, pitch 60, tallow 6, and mealed powder 12, with some fine sulphur for salting.

Iron-chambers, for a fire-ship, are 10 inches long, and 3.5. in diameter; breeched against a piece of wood fixed across the holes. When loaded they are almost filled full of corned powder, with a wooden tompion well driven into their muzzles. They are primed with a small piece of quick-match thrust through their vents into the powder, with a part of it hanging out; and when the ship is fired they blow open the ports, which either fall downwards, or are carried away, and so give vent to the fire out of the sides of the ship.

Curtains, for a fire-ship, are made of barras, about 3-quarters of a yard wide, and 1 yard in length: when they are dipped, 2 men, with each a fork, must run the prongs through the corner of the curtain at the same end: then dip them into a large kettle of composition (which is the same as the composition for bavins) well melted; and when well dipped, and the curtain extended to its full breadth, whip it between 2 sticks of about 5.5 feet long, and 1.5 inches square, held close by 2 other men to take off the superfluous composition hanging to it; then immediately sprinkle sawdust on both sides, to prevent it from sticking, and the curtain is finished.

Reeds, for a fire-ship, are made up in small bundles of about 12 inches in circumference, cut even at both ends, and tied with two bands each: the longest sort are 4 feet, and the shortest 2.5; which are all the lengths that are used. One part of them are single dipped, only at one end; the rest are double dipped, i. e. at both ends. In dipping, they must be put about 7 or 8 inches deep into a copper kettle of melted com-

position (the same as that for bavins; and when they have drained a little over it, to carry off the superfluous composition, sprinkle them over a tanned hide with pulverized sulphur, at some distance from the copper.

STORES for a FIRE-SHIP of 150 tons.

	No.
Fire barrels - - - -	8
Iron chambers - - - -	12
Priming composition barrels - -	3½
Quick-match barrels - - - -	1
Curtains dipped - - - -	30
Long reeds single dipped - -	150
Short reeds { double dipped	75
{ single dipped	75
Bavins single dipped - - - -	209

Quantity of COMPOSITION for preparing the Stores of a FIRE-SHIP.

For 8 barrels, corned powder 960lb. pitch 480lb. tallow 80lb.

For 3 barrels of priming composition, salt-petre 175lb. sulphur 140lb. corned powder 350lb. rosin 21lb. oil-pots 11.

For curtains, bavins, reeds, and sulphur to salt them, sulphur 240lb. pitch 350lb. rosin 175lb. tallow 50lb. tar 25lb.

Total weight of the composition 3017 pounds, equal to C. 26 : 3 : 21.

Composition allowed for the reeds and barrels, 1-fifth of the whole of the last article, which is equal to 600lb. making in the whole 3177 pounds, or C. 28 : 1 : 13.

Port-fires, in *artillery*, may be made any length: however, they are seldom made more than 21 inches. The interior diameter of port-fire moulds should be $\frac{19}{16}$ of an inch, and the diameter of the whole port-fire about $\frac{1}{2}$ an inch. The paper cases must be rolled wet with paste, and one end folded down. They are used instead of matches to fire artillery. The composition of wet port fire is, saltpetre 6, sulphur 2, and mealed powder 1; when it is well mixed and sieved, it is to be moistened with a little linseed oil: the composition for dry port fire is, saltpetre 4, sulphur 1, mealed powder 2, and antimony 1.

Rocket, in *pyrotechny*, an artificial firework, consisting of a cylindrical case of paper, filled with a composition of certain combustible ingredients; which being tied to a stick, mounts into the

air to a considerable height, and there bursts. Rockets are frequently used as signals in war time.

Composition for sky-rockets in general is, saltpetre 4lb. brimstone 1lb. and charcoal 1½lb.: but for large sky-rockets, saltpetre 4lb. mealed powder 1lb. and brimstone 1lb.; for rockets of a middling size, saltpetre 3lb. sulphur 2lb. mealed powder 1lb. and charcoal 1lb.

Colonel Congreve, of the royal artillery, has improved upon the rockets which have hitherto been used in India and elsewhere; and has been remunerated by the British government for his exertions.

Quick-match, in artillery, is of 2 sorts, cotton and worsted: the first is generally made of such cotton as is put in candles, of several sizes, from 1 to 6 threads thick, according to the pipes it is designed for. The ingredients are, cotton 1lb. 12oz. saltpetre 1lb. 8oz. spirits of wine 2 quarts, water 2 quarts, isinglass 3 gills, and mealed powder 10lb. It is then taken out hot, and laid in a trough, where some mealed powder, moistened with spirits of wine, is thoroughly wrought into the cotton. This done, they are taken out separately, and drawn through mealed powder, and hung upon a line to dry. The composition for the second is, worsted 10oz. mealed powder 10lb. spirits of wine 3 pints, and white wine vinegar 3 pints.

LABOURER, *Fr.* literally to remove earth with a plough, spade, &c. Figuratively, to belabour, which, according to Johnson, is to beat, thump, &c. The French use it in a military sense, to express any direct and concentrated effort which is made to destroy a fortification.

LABOURER un rempart, *Fr.* to bring several pieces of ordnance, discharged from two oblique directions, to bear upon one center. Shells and hollow balls are generally used on these occasions, and the chief design is to second the operations of the miner in some particular part whence the explosion is to take place.

Labourer likewise applies to the working of a bomb or shell, which excavates, ploughs up, and scatters the earth about wherever it bursts.

Royal Military LABOURERS and Artificers. This corps consists of 12 companies, for general service, and are

commanded by officers of the corps of royal engineers. Its distribution is as follows:

Staff. 1 Adjutant and quarter master, 1 serjeant major.

Establishment of one company. 1 Sub-lieutenant, 1 serjeant major, 5 serjeants, 5 corporals, 30 carpenters, including 4 sawyers (top men), 20 masons, 18 bricklayers, including slaters, tilers and plasterers, 10 smiths, 10 miners, 4 wheelers, 4 collar makers, 2 coopers, 2 painters, 4 drummers. This corps originally consisted of 10 companies, but was augmented on the 5th of September, 1806, on the representation of the Earl of Moira, then master general of the ordnance.

LACAY or LAQUET, *Fr.* an old French militia, formerly so called. The name is found among the public documents which were kept by the treasurers belonging to the Dukes of Brittany in the fifteenth century.

LACE, (*passement, galon, Fr.*) a line of silk, or thread, intermixed with gold or silver; also a border or edging. The uniform of many regiments, in the old French service, was distinguishable only by the lace and buttons.

LACERNA, a garment which was used by the ancients. It was made of woollen stuff, and was only worn by men; originally indeed by those alone that were of a military profession. It was usually thrown over the toga, and sometimes indeed over the tunica. It may not improperly be considered as the surtout or great coat of the ancients, with this difference, that there was a winter lacerna and a summer one.

The lacerna was adopted by the Romans towards the close of their republic. Even so late down as the days of Cicero, it was unknown amongst them, or if known, censured as a mark of disgraceful effeminacy. During the civil wars that occurred in the triumvirate of Augustus, Lepidus, and Anthony, the lacerna became familiar to the people, and by degrees was adopted, as common apparel, by the senators and knights of Rome, until the reigns of Gratian, Valentinian, and Theodosius, who enjoined the senators not to wear it.

The lacerna is the same as the *chlamys*, and the *burrhus*.

Un LACHE, *Fr.* a familiar phrase among the French to signify a coward, &c.

LACHER, *Fr.* to go off. *Son pistolet, ou son fusil, vint à lâcher*; his pistol or his musket went off of itself.

LACHER also signifies to say more than discretion or policy suggests.

LACHER *ped*, *Fr.* to run away.

LACHER *un prisonnier*, *Fr.* to let a prisoner escape, or go away unmolested.

LACHER *un coup*, *Fr.* in speaking of fire arms, signifies to discharge a pistol or musket. *Il lui lâcha un coup de pistolet dans la tête*, he lodged a bullet in his head. *Le vaisseau lâcha toute sa bordée à la portée de mousquet*, the ship fired a whole broadside within musket shot.

LACHETÉ, *Fr.* an opprobrious term which is frequently used among the French, and is applied in all instances of cowardice, want of spirit, or dishonourable conduct. One of their writers emphatically observes, that in a military sense of the word it cannot be misunderstood, as the least imputation of cowardice or want of spirit, is sufficient to destroy the entire character and fame of every officer and soldier whom it may affect. As it is the direct opposite to courage, the person who enters the profession of arms, should weigh well within himself, whether he possess that indispensable quality, which is above all the temptations of pleasure or the effeminacy of life, and is only alive to the glorious impulse of military animation. He only, in fact, is fit for arms, whose spirit is superior to every sordid view; who knows no personal fear, and who can encounter the greatest difficulties and dangers with an inward placidity of soul, and an outward indifference to life. In order to illustrate this article, we shall quote some instances of that species of cowardice, or *lâcheté*, which affects the military character.

Euripidas, chief of the Eléans, having imprudently advanced too far into a long and narrow defilé, and learning that Philip of Macedon was on his march to block up the passage through which he had entered, instead of manfully waiting the issue of an engagement, abandoned his army in the most cowardly manner. It does not appear, says the Chevalier Folard, that Euripidas possessed those talents which are necessary to form a great general; for instead of meanly stealing off by a bye road, and leaving his army to its fate, he would have remained at its head, and either have

fought his way through, honourably have capitulated, or have died combating with his men. Had Bonaparte fallen in this glorious manner at the battle of Waterloo, or have remained self-devoted surrounded by his troops as the Duke of Wellington did at the critical moment, his former achievements would not have been eclipsed by flight and self-preservation.

Base and inglorious as the conduct of Euripidas most unquestionably was, the behaviour of Perseus, king of the Macedonians, exceeded it in cowardice and degradation. This infamous prince did not wait to be visited by misfortune, or to lose a battle; he had, on the contrary, obtained a signal victory over the Romans, and when Paulus Æmilius marched against him, the army he commanded was not inferior to that of his opponent in discipline and valour, and had the advantage in point of numbers. Yet, strange to relate! the engagement was no sooner begun, than he rode off full gallop, and repaired to the town of Pydnus, under the flimsy pretext of sacrificing to the God Hercules; as if Hercules, to use Plutarch's expression, was the Deity to whom the prayers and offerings of cowards were to be preferred!

Mark Antony, on the other hand, after having acquired the reputation of a brave and distinguished general, submitted to the allurements of sensual gratification, and buried all his glory in the meretricious embraces of an *Ægyptian* strumpet. We had a striking instance, in the case of General Hoche, during the late war, of the superiority which a real military thirst for glory will always have over private indulgence.

We might enumerate a variety of cases, in which the greatest heroes have fallen victims to human weakness; and few, alas! in which a sense of public duty, and a regard for the opinion of posterity have got the ascendancy.—History, however, saves us that trouble; and we shall remain satisfied with having explained under the word *Lâcheté*, what we conceive disgraceful in an officer or soldier, who suffers personal fear, passion or interest, to get the better of public character.

The French also say, *la trahison est une lâcheté*, treason is infamous in its nature.

The French make a distinction be-

tween *lâcheté* and *poltronnerie*. Under the influence of the latter a man will go into danger, whereas if subject to the former, he will not dare to face it. So that *poltronnerie* may be called a weakness, and *lâcheté* a vice. One renders the individual infamous, and the other only makes him contemptible and unfit for actions which require courage and perseverance.

LACUNETTE, *Fr.* a term in fortification; a small fosse or ditch was formerly so called. The word *Cunette* has since been adopted.

LADAVEE, *Ind.* a release or acquittance from any demand.

Scaling-LADDERS, (*échelles de siège*, *Fr.*) are used in scaling, when a place is to be taken by surprize. They are made several ways; sometimes of flat staves, so as to move about their pins and shut like a parallel ruler, for conveniently carrying them: the French make them of several pieces, so as to be joined together, and to be capable of any necessary length: sometimes they are made of single ropes knotted at proper distances with iron hooks at each end, one to fasten them upon the wall above, and the other in the ground; and sometimes they are made with two ropes and staves between them, to keep the ropes at a proper distance, and to tread upon. When they are used in the action of scaling walls, they ought to be rather too long than too short, and to be given in charge only to the stoutest of the detachment. The soldiers should carry these ladders with the left arm passed through the second step, taking care to hold them upright close to their sides, and very short below, to prevent any accident in leaping into the ditch.

The first rank of each division, provided with ladders, should set out with the rest at the signal, marching resolutely with their firelocks slung, to jump into the ditch: when they are arrived, they should apply their ladders against the parapet, observing to place them towards the salient angles rather than the middle of the curtain, because the enemy has less force there. Care must be taken to place the ladders within a foot of each other, and not to give them too much nor too little slope, so that they may not be overturned, or broken with the weight of the soldiers mounting upon them.

The ladders being applied, they who

have carried them, and they who come after should mount up, and rush upon the enemy sword in hand; if he who goes first, happens to be overturned, the next should take care not to be thrown down by his comrade; but on the contrary, immediately mount himself, so as not to give the enemy time to load his piece.

As the soldiers who mount first may be easily tumbled over, and their fall may cause the attack to fail, it would perhaps be right to protect their breasts with the fore parts of cuirasses; because if they can penetrate, the rest may easily follow.

The success of an attack by scaling is infallible, if they mount the 4 sides at once, and take care to shower a number of grenades among the enemy, especially when supported by some grenadiers and piquets, who divide the attention and share the fire of the enemy.

The late ingenious General Sir Wm. Congreve, of the royal artillery, very much improved upon the construction of these ladders. As the heights of different works vary, and the ladders when too long, afford purchase to the besieged, he contrived a set of ladders having an iron staple at the lower part of each stem, so that if 1, 2, or 3, should be found insufficient to reach the top of the work, another may with facility be joined to the lowest, and that be pushed up until a sufficient length can be obtained.

LADLES, in *gunnery*, are made of copper, to hold the powder for loading guns, with long handles of wood, when cartridges are not used.

LADLES, in *laboratory business*, are very small, made of copper, with short handles of wood, used in supplying the fuses of shells, or any other composition, to fill the cases of sky-rockets, &c. There is another kind of ladle, which is used to carry red hot shot. It is made of iron, having a ring in the middle to hold the shot, from which 2 handles proceed from opposite sides of the ring.

LAI *Frère*, *Fr.* lay-brother. This term was originally given to an invalid soldier, whom the heads of religious houses and monasteries in France were obliged to receive and support during the remainder of his days. The monks generally agreed to take one;

but the number seldom exceeded two. To use a French writer's expression, these *living remains* of military glory led a melancholy life in the midst of their fat and pampered masters. They were obliged to clean the courts in front of the monasteries, and to do all the drudgery within doors. Louis XIV. rescued them from these disgraceful occupations, by establishing the *Hôtel des Invalides*, in Paris.

LAIT *de chaux*, Fr. lime mixed with water, making what we generally call white-wash. The French also say **LAI-TANCE**.

LAITON, sometimes written **LET-TON**, Fr. a metallic composition which is made of copper and the lapis calaminaris. See **LETTON**.

LALA, *Ind.* lord; sir; master; worship.

LAMA, *Ind.* a chief priest, whose followers suppose him immortal. They imagine, that on the dissolution of his mortal frame, his spirit enters the body of a new born-child. He is also monarch of Thibet.

LAMBOURDE, Fr. a joist.

LAMBREQUINS, Fr. small mantles or ribbons which were twisted round the hood or top of an helmet at the bottom of the crest, and kept the whole together. These ornaments fell into disuse when the helmet was laid aside. In former times, when the cavaliers, or persons who wore them, wished to take breath, and to be relieved from the weight of the helmet, they untied the mantles, and let them float about their shoulders suspended from the hood only. Hence the appellation of *valets* as hanging behind.

LAMPASS, (*lampas*, Fr.) a lump of flesh, about the bigness of a nut, in the roof of a horse's mouth.

LAMPION *à parapet*, Fr. a lamp generally used on the parapet, or elsewhere, in a besieged place. It is a small iron vessel filled with pitch and tar which the garrison light as necessity may require. The *lampion* is sometimes confounded with the *réchaud de rempart*, or chaffing dish, which is used upon the rampart on similar occasions.

LANCE, (*lance*, Fr.) This offensive weapon was much used by the French in former times, particularly by that class of military gentlemen called chevaliers, and by the gendarmes. It has also been used by the English and other

nations. Lances were made of ash, being a wood of tough quality, and not so liable to break as other species. Before the reign of Philip de Valois, the chevaliers and gendarmes fought on foot, armed with lances only, both in battles and at sieges. On these occasions, they shortened their lances, which were then said to be *retailles*, or cut again. A sort of banderole or streamer hung from each lance, and was attached to the bottom of the sharp iron or blade which was fixed to the pole. Lances were used in this manner as far back as during the crusades.

LANCE-serjeant. See **SERJEANT**.

Polish-LANCERS, a body of men armed with long lances, and mounted on swift horses. They were originally formed in Poland, and brought into constant practice by Bonaparte, particularly at the battle of Waterloo, when they were annihilated by the superior physical strength and courage of the British Life-Guards.

LANCE, Fr. This word formerly signified, among the French, a gendarme, who carried a pike or lance. Hence, *une compagnie de cent lances*, a company consisting of one hundred gendarmes.

LANCE fournie, Fr. an old expression signifying a knight or squire who was completely equipped, and had his complement of archers, &c.

Rompre la LANCE, Fr. to break a lance. This was a phrase peculiar to any assaults which were given at tilts or tournaments, and signified to engage or come to close combat. The French say: *rompre des lances pour quelqu'un*, to defend another:—*rompre une lance avec quelqu'un*, to enter into any warm dispute, or controversy, with another.

Mai de la LANCE, Fr. a figurative expression, to signify the right hand of a cavalier or horseman.

LANCE de drapeau, Fr. the staff to which regimental colours are attached.

LANCES levées, Fr. uplifted lances, indicated that the enemy was beaten, and that the chevaliers or gendarmes should close the day by giving a final blow to the disordered ranks. The use of the lance was discontinued in France some time before the *compagnies d'ordonnance*, or independent companies, were reduced and formed into the *gendarmerie*. Little or no use indeed was made

of them during the reign of Henry IV. But the Spaniards still retained that weapon as low down as the days of Louis XIII.

LANCE means likewise a rod which is fixed across the earthen mould of a shell, and which keeps it suspended in the air when it is cast. As soon as the bomb or shell is formed, this rod must be broken, and carefully taken out with instruments made for that purpose. Shells ought to be scrupulously examined with respect to this article, as they could not be charged, were the lance or any part of it to remain within. *Lance* is also an instrument which conveys the charge of a piece of ordnance and forces it home into the bore. See RAMMER of a GUN.

LANCE *à feu*, Fr. a squib. A species of artificial fire-work which is made in the shape of a fuse, and is used for various purposes. According to the author of *Œuvres Militaires*, tom. xi. p. 208, the composition of the *lance à feu* consists of three parts of the best refined saltpetre, two parts of flour of sulphur, and two of antimony; the whole being pounded and mixed together.

The chief use which is made of the *lance à feu* is to throw occasional light across the platform, whilst artificial fire-works are preparing. They likewise serve to set fire to fuses, as they can be taken hold of without danger.

LANCE *à feu puant*, Fr. stink-fire lances prepared in the same manner that stink-pots are, and particularly useful to miners. When a miner or sapper has so far penetrated towards the enemy as to hear the voices of persons in any place contiguous to his own excavation, he first of all bores a hole with his probe, then fires off several pistols through the aperture, and lastly forces in a *lance à feu puant*; taking care to close up the hole, on his side, to prevent the smoke from returning towards himself. The exhalation and stinking hot vapour which issue from the lance, and remain on the side of the enemy, infect the air so much, that it is impossible to approach the quarter for three or four days. Sometimes, indeed, they have had such an instantaneous effect, that in order to save their lives, miners who would persevere, have been dragged out by the legs in an apparent state of suffocation.

LANCE *de feu*, Fr. a species of squib

which is used by the garrison of a besieged town against a scaling party.

LANCE-*gaie*, Fr. an offensive weapon formerly so called in France.

LANCEPESATA, ANSPESADE, or *Lance-Corporal*, was originally a man at arms, or trooper, who, having broken his lance on the enemy, and lost his horse in fight, was entertained as a volunteer assistant to a captain of foot, receiving his pay as a trooper, until he could remount himself. At present he is only the assistant of the corporal, and receives the pay of a private soldier. *Lancespesata* is derived from the Italian, *Lancia spezzata*, a broken or spent lance.

LANCE *spezzate*, Fr. a reduced officer. In former times it signified a dismounted gendarme who was appointed to an infantry corps, with some emolument attached to his situation.

To LANCE *upon the enemy*, to dart, or rush, precipitately upon any opposing force, by charging it in front, flank or rear.

LANCIER and DEMI-LANCIER, anciently written LAUNCIER, a horseman in ancient times who was armed at all points from the head to the knee, like the gentlemen at arms. His offensive weapons were a lance, a case of short pistols, a battle axe, and a dagger. His horse was armed with a breast plate.

LANCIÈRE, Fr. a mill sluice; or sluice.

LANCIR, Fr. a mill dam.

LANDE, Fr. a heath. It also signifies, figuratively, any long tedious passages in a work.

LAND FORCES, troops whose system is calculated for land service only, in contradistinction to seamen and marines. All the land forces of Great Britain are liable to serve on board the king's ships.

LANDING *troops*. See DEBARKATION.

LANDRETUN, Fr. a sort of brown stone, with streaks, or veins, of red intermixed. It is as hard as marble, but not so fine. It is so named from being found in a quarry about nine miles from Boulogne in Picardy, at a place called *Landretun*, and is much used in buildings and fortifications.

LANE, in a *military sense*, is where men are drawn up in two ranks facing one another, as in a street, for any great personage to pass through, or sometimes for a soldier to run the gantelope.

LANGUAGE, (*langue*, Fr.) the tongue of one nation as distinct from others.

Foreign LANGUAGES, (*langues étrangères*, Fr.) languages different from our own.

The knowledge of languages is perhaps one of the most important branches of military education. Its necessity was never felt so strongly as during the French revolution, and in the Spanish insurrection. Among the qualifications which an aide-de-camp should possess, a knowledge of some foreign language, particularly of the French, must appear indispensable.

LANGUARD, Fr. a blab; one who cannot keep his own secret, nor that of another. A man unfit to be employed confidentially.

LANGUE, Fr. a term peculiarly connected with the order of Malta. The eight nations of which this celebrated order consisted were distinguished by the appellation of *Langue*. There were three of this description in France, viz. *la langue de France, la langue de Provence, et la langue d'Auvergne*; two in Spain, viz. *la langue d'Arragon, et la langue de Castille*; and three indiscriminate ones, viz. *la langue d'Italie, la langue d'Allemagne, et la langue d'Angleterre*. The head of each langue was called *Grand Prieur, or Grand Prior*.

LANGUE de terre, Fr. tongue of land.

Coups de LANGUE, Fr. See **COUPS**.

Prendre LANGUE, Fr. to get intelligence.

LANGUETTE, Fr. tongue of several things. Lingel or little tongue or thong of leather; also a slip of wood; a small piece of metal which opens or shuts the vent of a hautboy or flute.

LANSQUENETS, Fr. The German mercenaries which Charles VII. of France first added to his infantry, were so called. They continued in the French service until the reign of Francis I. who consolidated all the foot establishments into a certain number of legions.

LANS-PESATE, } a soldier that

LANCE-PESADE, } does duty as a corporal, especially on guards and detachments; a lance corporal; the same as *Lancepesata*.

LANTERN, } Muscovy lanterns

LANTHORN. } are used in magazines, as being much safer than others.

The common dark lanterns are more applicable to field service.

LANTERNE, Fr. a word used in the French navy to signify a wooden case or box in which cartridges are brought out of the powder-magazine for the purpose of serving the guns; also a spoon or ladle, made of copper, and fixed to a long pole, which serves to convey gun-powder into a piece of ordnance.

LANTERNE à mitrailles, Fr. a round piece of concave wood, something like a box, which is filled with case shot, and is fired from a piece of ordnance when the enemy is near.

LANTERNE de moulin, Fr. trundle head of a mill.

LAPIS amianthus, a kind of stone, like alum, tozy like wool, which will not burn or consume; called earth-flax, or Salamander's hair.

To LAPSE, to fall in, or belong to. This expression is used in military matters, to signify the reversion of any military property. Thus upon the sale or purchase of one commission at the regulated difference, another (where there are two) is said to lapse to government. Commissions lapse, or fall into the patronage of government when vacancies happen by death, by officers being superseded, or where officers apply to sell who have only purchased a part of their commissions, and have not served long enough to be entitled to sell the whole; in which case they are only permitted to sell what they actually purchased, and the remainder is in the gift of government.

LARDER de coups d'épée, Fr. to run through the body with a sword, in more places than one.

LARDOIR, Fr. a piece of iron with which the end of a pile is shod. It is also called *sabot*.

LARES, household gods, called also *penates*, among the ancient Romans.

LARMIER, Fr. the brow or coping of a wall; the eave or *drip* of a house.

LARMIERS, Fr. the eye veins of a horse.

LASCARS, or *Laskars*, the native seamen of India; the native gunners are sometimes so called. They are often employed to tend and serve the artillery on shore, and are attached to corps as pioneers, or tent-pitchers.

Gun LASCARS, men of colour, or se-

poys who are attached to the guns in India, chiefly as drag-rope men.

LASH, a blow given with a whip, or cat-o'-nine tails, or any thing plant. Hence to be sentenced to a thousand lashes.

To LASH the guns very taught, (*ai-guilleter les canons*, Fr.) to brace the carriages of the guns, &c. so as to prevent them from recoiling.

LASHING, a term chiefly used among sailors, signifying to make fast, or to tie any thing to the ship's sides, masts, &c. as pikes, muskets, boards, casks, &c.

LASING RINGS, } in *artillery*,
LASHING RINGS, } with hoops,
fixed on the side-pieces of travelling carriages, to lash the tarpaulin, as also to tie the sponge, rammer, and ladle. See CARRIAGE.

The LASO, a very long thong which the pion uses in South America.

LATE, last in any place, character, or office: as, *late* master-general of the ordnance; *late* of the 27th foot.

LATCH, an old English cross-bow.

LATH, in *building*, a long, thin, and narrow slip of wood, nailed to the rafters of a roof or ceiling, in order to fasten the covering. Laths are distinguished into three kinds, according to the different sorts of wood of which they are made, viz. heart of oak, sap-laths, deal laths, &c.

LATHE, a division of some extent in a county, which generally contains three, four, or five hundreds.

LATHE reeve, an officer during the Saxon government, who held a certain jurisdiction over that part of the county which was called a tithing.

LATHE, the tool of a turner, by which he turns about his wood, ivory, &c. so as to shape it by the chissel.

LATTIE, an Indian term for warehouse.

LATITUDE, in *geography*, the distance of any place from the equator, measured in degrees, minutes, seconds, &c. upon the meridian of that place; and is either north or south, according as the place is situated either on the north or south side of the equator.

LATRINES, Fr. privies or holes which are dug at the back of a camp for the convenience of soldiers. The pioneers are generally employed to make them. The French say also *retraits*.

LATRO. This word, which in Latin signifies a thief, was also used among the Romans to mark out a soldier who served for pay.

LATROCINARI, among the Romans, to bear arms for pay or money.

LAVER, LAVIS, Fr. a wash or superficial stain or colour; used in sketches, plans, and drawings; the different intervals or spaces of which are slightly shaded or coloured.

LAUGHINGSTOCK, a butt; an object of ridicule. Military affectation, without real science, frequently begets an animal of this kind.

LAUNCEGAYS, according to Bailey, offensive weapons prohibited and disused.

LAUREA, Lat. the bay-tree or laurel.

LAUREATED, crowned with laurel. The ancient conquerors used to wear crowns of laurel, in token of victory.

LAUREL, (*laurier*, Fr.) a shrub which is green, and never fades; on which account it is selected for the brows of heroes and conquerors, being emblematic of their unfading reputation.

To be crowned with LAUREL, a figurative expression, signifying that a man has achieved glorious actions, and is entitled to marks of public distinction. In ancient times, heroes and conquerors had their heads encircled with a wreath of laurel. The heads of kings and princes are generally so decorated upon coins, whether they have conquered or not.

LAUREL, (hieroglyphically) represents favour and preservation, because lightning never blasts it as it does other trees; and upon that account it is dedicated to *Jupiter* and *Apollo*.

LAUREOLA, the spurge or laurel wreath.

LAURES, gold coins which were issued from the mint in 1619, representing the head of King James I. encircled with laurel.

LAURETS, certain pieces of gold coined A. D. 1619, with the head of James I. laureated. The 20 shilling piece was marked with XX. the 10 shilling piece with X. the 5 shilling piece with V.

LAURIGEROUS, wearing a garland of bays, as conquerors and poets are represented to have done.

LAVURE, Fr. the grains, dust, or detached pieces of metal which fall in casting cannon.

LAW, in its general acceptation, a certain rule, directing and obliging a rational creature in moral actions; forbidding some things, and enjoining others.

Common LAW, a judicial process, against which every officer and man of honour should be particularly guarded; as it is morally impossible for a liberal and high spirited character to cope with the quirks and quibbles of a set of men, whose livelihood depends upon the feuds and quarrels of their fellow creatures. On this account officers should be scrupulously correct in all money transactions, for from them originate actions at common law, costs of suit, and generally imprisonment, &c. &c.

LAW, (*loi*, Fr.) The genuine and fundamental principles upon which the government of an empire, a kingdom, or a republic, is founded, are comprehended under this term. Its subordinate branches consist of rules and regulations made for the maintenance of good order in a state, for an observance of mutual compacts between nations at war with each other, and for the due preservation of the ties of amity, that keep peace among mankind.

Laws of arms, certain acknowledged rules, regulations and precepts, which relate to war, and are observed by all civilized nations.

Laws of arms are likewise certain precepts shewing how to proclaim war, to attack the enemy, and to punish offenders in the camp; also restricting the contending parties from certain cruelties, &c.

Military LAW, a prompt and decisive rule of action by which justice is done to the public or to individuals, without passing through the tedious and equivocal channels of legal investigation. The persons who are subject to military law, and are amenable to trial by court-martial, are, in the terms of the mutiny act, all persons commissioned or in pay, as officers, non-commissioned officers, private soldiers, and all followers of an army. Half-pay officers are not subject to military law, whilst civil justice can be resorted to.

Laws of Nations, such general rules as regard embassies; the reception and entertainment of strangers, intercourse of merchants, exchange of prisoners, suspension of arms, &c.

LAW of marque, or *letters of marque*, that by which persons take the goods or shipping of the party that has wronged them, as in time of war, whenever they can take them within their precincts.

LAWSUIT, a process in law; a litigation; to succeed in which eight things are required:—A good cause; a good counsel; a good attorney; a good judge; a good jury; good witnesses; a good purse; and above them all, *good-luck*. We sincerely hope, that military men, in order to escape from the fangs of these *good* things, will have the good sense never to enter into a law-suit.

LAY. To *LAY down* implies to resign, as, the enemy laid down their arms; he means to lay down his commission.—To *LAY for* is to attempt something by ambuscade.

To *LAY before*, to submit for perusal and consideration; as, to lay a memorial before the commander in chief.

LAYE, Fr. a riding or lane through a forest.

LAZARET, Fr. Those large houses are so called, which are built in the neighbourhood of some sea-ports belonging to the Levant, for the purpose of lodging the people that are ordered to perform quarantine.

LAZARETTO, a pest house.

LAZARUS, } a military order insti-

LAZARO, } tuted at Jerusalem by the Christians of the west, when they were masters of the Holy Land, who received pilgrims under their care, and guarded them on the roads from the insults of the Mahometans. This order was instituted in the year 1119, and confirmed by a bull of Popé Alexander IV. in 1255, who gave it the rule of St. Augustine.

LEAD, a metal well known. It is employed for various mechanic uses; as in thin sheets for covering buildings, for pipes, pumps, shot bullets, windows, for securing iron bars in hard stones, for sundry kinds of large vessels for evaporation, and many other purposes.

LEADER. See *COMMANDER*.

File LEADER, the front man of a battalion or company, standing two deep.

LEADING Column, the first column that advances from the right, left, or center, of any army or battalion.

LEADING File, the first two men of

a battalion or company that marches from right, left, or center, by files.

Flank LEADING File, the first man on the right, and the last man on the left of a battalion, company, or section.

Center LEADING File, the last man of the right center company, division, or section; and the first man of the left center company, division, or section, are so called, when the line files from the center to the front or rear. At close order, the colours stand between them.

LEAGUE, in *military history*, a measure of length, containing more or less geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land-measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or three English miles.

The French league sometimes contains the same measure, and, in some parts of France, it consists of 3500 paces: the mean or common league consists of 2400 paces, and the little league of 2000. The Spanish leagues are larger than the French, 17 Spanish leagues making a degree, or 20 French leagues, or 69 and $\frac{1}{2}$ English statute miles. The German and Dutch leagues contain each four geographical miles. The Persian leagues are pretty near of the same extent with the Spanish; that is, they are equal to four Italian miles, which is pretty near to what Herodotus calls the length of the Persian parasang, which contained 50 stadia, 8 whereof, according to Strabo, make a mile.

LEAGUE also denotes an alliance or confederacy between princes and states for their mutual aid, either in attacking some common enemy, or in defending themselves.

To LEAN, (*appuyer*, Fr.) in a military sense, to be drawn up, or to have a position, close to some tenable object, such as an arm of the sea, a river, a strong town, a village, hill, &c. Hence *point d'appui*—any thing which is leaned upon.

LEAVE, indulgence, license, liberty.

LEAVE of absence, a permission which is granted to officers, non-commissioned officers, and soldiers, to be absent from camp or quarters for any specific period.

General LEAVE, an indulgence which

is annually granted on home service, by the Commander in Chief, to a certain proportion of the army, to be absent from military duty. This generally occurs in the winter months, and ends on the 10th of March.

Regimental LEAVE, (*congé régimentaire*, Fr.) a permission which is granted by the Colonel or Officer commanding a regiment, and is more limited than a General Leave.

Long LEAVE, a term peculiar to the British service, signifying that leave of absence which is granted during the winter months, when troops are in garrison, cantonments, or quarters.

Short LEAVE, a leave of absence which is granted after the 10th day of March, at which period all officers are ordered to join their respective corps; in order to prepare for the necessary field days, &c.

LECTURE, Fr. See READING.

LECTURES. Lectures are read at Woolwich to the officers of artillery, and engineers, and cadets, on chemistry; lectures upon topography and upon other essential parts of military science are given at High Wycombe.

LEEKUK, *Ind.* secretary or writer.

LEFT *give point*. See SWORD EXERCISE.

LEFT *protect*. See SWORD EXERCISE.

To put on the LEG, among cavalry, is to press the inside of the foot and leg against the horse's flank. It is always used in passing to direct the horse which way to passage, and again on the opposite flank to stop him after he has passed to his place.

Cavalerie LÉGÈRE, Fr. light horse.

Un cheval LÉGER à la main, Fr. See HAND.

Troupes LÉGÈRES, Fr. light troops, or such as act in desultory warfare.

Armée à la LÉGÈRE, Fr. light armed.

LEGION, in Roman antiquity, a body of foot, which consisted of ten cohorts, or 5000 men.

The exact number contained in a legion was fixed by Romulus at 3000; though Plutarch assures us, that, after the reception of the Sabines into Rome, he increased it to 6000. The common number afterwards, in the first times of the free state, was 4000; but in the war with Hannibal, it rose to 5000; and after that, it is probable that it sunk again to 4200, which was the number in the time of Polybius.

In the age of Julius Cæsar we do not find any legions exceeding the Polybian number of men; and he himself expressly speaks of two legions, that did not make above 7000 between them (Commentar. lib. 5.)

The number of legions, kept in pay together, was different, according to the various times and occasions. During the free states, four legions were commonly fitted up every year, and divided between the consuls: yet in cases of necessity, we sometimes meet with no less than 16 or 18 in Livy.

Augustus maintained a standing army of 23 or (as some will have it) of 25 legions; but in aftertimes we seldom find so many.

They borrowed their names from the orders in which they were raised, as *prima, secunda, tertia*, &c. but because it usually happened, that there were several *primæ, secundæ*, &c. in several places, upon that account they took a sort of surname besides, either from the emperors who first constituted them, as Augusta, Claudiana, Galbiana, Flavin, Ulpia, Trajana, Antoniana, or from the provinces which had been conquered chiefly by their valour, as Parthica, Scythica, Gallica, Arabica, &c. or from the names of the particular deities for whom their commanders had an especial honour, as Minerva and Appollinaris; or from the region where they had their quarters, as Cretensis, Cyrenaica, Britannica, &c. or sometimes upon account of the lesser accidents, as Adjutrix, Martia, Fulminatrix, Rapax, &c.

The whole Roman infantry, which was divided into four sorts, Velites, Hastati, Principes and Triarii, consisted of Manipuli, Cohorts and Legions. So that legion was considered as the largest establishment for foot soldiers. See Kennet's *Antiquities of Rome*, pages 190, 191.

LEGION, in a general acceptance of the term, signifies any large body of men. In a more confined one, among the moderns, it applies to a specific number of horse or foot, who are distinguished by that name, and do duty with the rest of the army. Such, for instance, was the British legion which served in America; and of this description were the Polish and Belgic legions, that formed part of the French army.

LEGION of Honour, a French order created by Buonaparte, and still con-

tinued by Louis XVIII. for the reward of meritorious and gallant individuals.

LEGIONARY, any thing appertaining to a legion, or containing an indefinite number.

LÉGUMES, *Fr.* vegetables, roots, grain, &c. Every species of subsistence, which, under the old government of France, was not provided for the troops by direct instructions from the war-office, and at the expense of the public, was called *légumes*. Subsistence of this sort, however, may more properly be called that diet which soldiers got for themselves in foreign countries during actual hostilities.

LEMBARII, among the Romans, soldiers that did duty on board of ships, or in barges, either at sea, or on rivers.

LEMMA, (*lemme*, *Fr.*) an assumption or preparatory proposition laid down by geometricians to clear the way for some following demonstration; often prefixed to *theorems*, to render their demonstration less perplexed and intricate; and to *problems*, in order to make their resolution more easy and short.

LENGTH, (in horsemanship,) *to passage a horse upon his own LENGTH*, is to make him go round in two treads, as a walk or trot, upon a spot of ground so narrow, that the haunches of the horse being in the center of the volt, his own length is much about the semi-diameter of the volt, the horse still working between the two heels, without putting out his croup, or going at last faster or slower than at first.

To LENGTHEN out, in a military sense, to extend, by increasing the distances between the files, &c.

To LENGTHEN the step. See *STEP out*.

LESE *Majesté*, *Fr.* high treason.

LESE *Nation*, *Fr.* treason against the nation or country.

LESKAR, the camp of the Great Mogul.

To LET in, to admit; as he *let* some of the enemy's advanced parties *in*, or into the camp, &c.

To LET off, to discharge.

To LET off a pistol or musket, to fire either of those fire arms.

LETTER, in its general acceptance, a character such as forms the alphabet; or anything written, such as an epistle, &c.

LETTER of mark, } a letter granted
LETTER of marque, } to one of the king's subjects under the privy seal, empowering him to make reprisals for what

was formerly taken from him by the subjects of another state, contrary to the law of mart. See MARQUE.

LETTER *of mark*, a commission granted by the lords of the admiralty, or by the vice-admiral of any distant province, to the commander of a merchant ship, or privateer, to cruise against, and make prizes of the enemy's ships and vessels, either at sea, or in their harbours.

LETTER *of service*, a written order or authority issued by the secretary at war, empowering any officer or individual to raise a certain body of men to serve as soldiers, within a given time, and on special conditions.

LETTER *of attorney*, an instrument in writing, authorizing an attorney, or any confidential person, to take the affairs of another in trust. A letter or power of attorney is necessary to empower a person to receive the half-pay of an officer. This paper did cost six shillings, but now fifteen, and must be accompanied by a certificate sworn to by the half-pay officer before some magistrate or justice of the peace.

LETTER *of credit*, a letter which is given from one merchant or banker to another, in favour of a third person, enabling the latter to take up money to a certain amount. Sometimes a letter of credit is given without any specific limitation.

LETTER *of licence*, a deed signed and sealed by the creditors of a man, by which he is allowed a given period to enable him to discharge his debts by instalments or by a certain proportion in the pound.

Military LETTER or dispatch. A letter of this description should be clear, and as brief as possible; containing in a few words all that is necessary to be known, without endangering the object of its communication, through a want of sufficient explanation. We have a remarkable instance in history of this species of writing. When Spinola, who was originally a Genoese merchant, appeared unwilling to undertake the siege of Breda, the king of Spain's laconic letter determined him.

Marquis,

Take Breda.

I the King.

Spinola did so: and, in recompense for that, and other brilliant services, he was afterwards abandoned by his master, and died of a broken heart.

We also find, in the history of Gustavus Adolphus, two other instances of the same laconic style.

General Kuiphausen, being anxious to preserve the pass and fortress of *Scheffelbeiu*, wrote to lieutenant-colonel Monro, who commanded the garrison, a short billet to this effect: *Maintain the town as long as you can, but give not up the castle whilst a single man continues with you.*

This place, observes the historian, was not defensible for a longer time than twenty-four hours; yet Monro, having the possession of it three days before Montecuculi's arrival, made a good appearance of resistance; and when the imperial general had ranged his army round the walls, in order to give one united assault, and sent a trumpeter to propose a treaty, the brave Scot replied, with great plainness, *that the word TREATY, by some chance, had happened to be omitted in his instructions, and that he had only powder and ball at the count de Montecuculi's service.* Upon this, orders were given to commence a general storm; but the Scottish troops behaved to admiration; and having laid the town in ashes, retired with great regularity into the castle. The Imperialists, perceiving the governor to be a man of resolution, broke up their encampment, and quitted the siege. H. G. Ad. page 217.

LETTER *of instruction*, (*dépêche*, Fr.) this is sometimes called a *Military letter* or *dispatch*. Commanders in the British service labour under peculiar difficulties with respect to this article. So little discretionary power is vested in them when they are on foreign stations, that the most important objects are sometimes neglected, or lost, from the dread of personal, or direct, responsibility.

Circular LETTERS, (*lettres circulaires*, Fr.) documents (which, in official language, and for the sake of abbreviation, are generally called *circulars*) that are sent to several persons upon the same subject.

LETTER-*men*, certain pensioners belonging to Chelsea Hospital are so called.

LETTON, *Fr.* a metal composed of molten copper, called *rosette*, and of *lapis calaminaris*, a yellow mineral, of which quantities may be found in the neighbourhood of Liege.

LETTON is used in cannon-foundries. The best practical mode of digesting and

mixing the materials, is to put 11 or 12,000 weight of metal, 10,000 weight of rosette, or molten copper, 900 pounds of tin, and 600 pounds of letton. There are various opinions respecting the mixture of these several ingredients.

LETTRE de cachet, Fr. an infamous state paper, which existed before the French revolution, differing in this essential point from an order of our privy council, that the former was sealed, and the person upon whom it was served, carried into confinement, without even seeing the authority by which he was hurried off in so peremptory a manner, or being tried afterwards for any specific offence; whereas the latter is an open warrant, which (except when peculiar circumstances occasion a suspension of the Habeas Corpus act) has its object closely investigated before an English jury. The French *lettre de cachet* was written by the king, countersigned by one of his principal secretaries of state, and sealed with the royal signet.

LETTRE de service, Fr. See **LETTER of service**.

LETTRE de passe, Fr. a paper signed by the kings of France, authorizing an officer to exchange from one regiment into another.

LETTRE de créance, ou qui porte créance, Fr. a letter of credit. It likewise signifies the credentials which an ambassador presents from his sovereign to a foreign court.

LETTRES en chiffre, Fr. cyphers. Baron Espagnac in the continuation of his *Essai sur l'Opération de la Guerre*, tom. i, page 269, gives the several instructions relative to this acquirement.

LETTRES de représailles, Fr. reprisals. See **LETTER of marque**.

LETTRES de santé, patentes de santé, Fr. letters of health.

LETTRES de récession, Fr. a writ, or paper, to render a contract void.

LEVANT, the countries bordering upon the Mediterranean are so called.

LEVANTIN, Fr. a word generally used among the French to distinguish any person from the Levant.

LEVANTINE nations, (*nations Levantines*, Fr.) nations belonging to the East, or to those countries which border on the Mediterranean. The French likewise say, *peuples Levantins*.

LEVANTIS, Fr. the soldiers belonging to the Turkish galleys are so called.

LÈVE, Fr. hollow mallet.

LEVÉE, Fr. bank, causey or causeway, mole.

LEVÉE des troupes, Fr. See **LEVY**.

LEVÉE en masse, Fr. a general rising of the people of any country, either for the purposes of self-defence, or to answer the intentions of its governing powers.

LEVÉE d'une siège, Fr. the raising of a siege. See **SIEGE**.

LEVÉE, Fr. the concourse of those who crowd round a man of power in a morning, or at noon. Hence *Military Levee*.

LEVEL, an instrument to draw a line parallel to the horizon, whereby the difference of ascent or descent between several places may be found, for conveying water, draining fens, &c.

Air-LEVEL, that which shews the line of level by means of a bubble of air, inclosed with some liquor in a glass tube of an indeterminate length and thickness, whose two ends are hermetically sealed. When the bubble fixes itself at a certain mark, made exactly in the center of the tube, the plane or ruler wherein it is fixed is level: when it is not level, the bubble will rise to one end. This glass tube may be set in another of brass, having an aperture in the middle, whence the bubble of air may be observed. There is one of these instruments with sights, being an improvement upon the last-described, which, by the addition of more apparatus, becomes more commodious and exact: it consists of an air-level about 8 inches long, and 7 or 8 lines in diameter, set in a brass tube, with an aperture in the middle: the tubes are carried in a strong straight ruler, a foot long, at whose ends are fixed two sights, exactly perpendicular to the tubes, and of an equal height, having a square hole, formed by two fillets, of brass, crossing each other at right angles, in the middle whereof is drilled a very little hole, through which a point, on a level with the instrument, is described: the brass tube is fastened on the ruler by means of two screws, one whereof serves to raise or depress the tube at pleasure, for bringing it towards a level. The top of the ball and socket is riveted to a little ruler that springs, one end whereof is fastened with screws to the great ruler, and at the other end is a screw, serving to raise and depress the instrument when nearly level.

Artillery foot-LEVEL is in form of a

square, having its two branches or legs of an equal length, at the angle of which is a small hole, whence hang a line and plummet, playing on a perpendicular line in the middle of a quadrant: it is divided into twice 45 degrees from the middle.

Gunner's-LEVEL, for levelling pieces of artillery, consists of a triangular brass plate, about 4 inches, at the bottom of which is a portion of a circle divided into 45 degrees; which angle is sufficient for the highest elevations of cannons, mortars, and howitzers, and for giving shot and shells the greatest range: on the center of this segment of a circle is screwed a piece of brass, by means of which it may be fixed or screwed at pleasure; the end of this piece of brass is made so as to serve for a plummet and index, in order to shew the different degrees of elevation of pieces of artillery. This instrument has also a brass foot, to set upon cannon or mortars, so that when these pieces are horizontal, the instrument will be perpendicular. The foot of this instrument is to be placed on the piece to be elevated, in such a manner, as that the point of the plummet may fall on the proper degree, &c.

The most curious instrument, for the use of the artillerist, has been invented by the late General Sir William Congreve, of the royal artillery; having the following qualifications, viz. 1. It will find the inclination of any plane, whether above or below the horizon. 2. By applying it either to the cylinder, or outside of any piece of ordnance, angles of elevation or depression may be given to the 60th part of a degree, with less trouble than the common gunner's quadrant, which only gives to the 4th part of a degree. 3. It will give the line of direction for laying either guns or mortars to an object above or below the horizon. 4. It will find the center of metals of any piece of ordnance. 5. With it, a point may be found in the rear of a mortar-bed, in the vertical plane of the mortar's axis; consequently a longer line of sight is given for directing them to the object than the usual way. 6. It answers all the purposes of a pair of calipers, with the advantage of knowing (to the 100th part of an inch) diameters, whether concave or convex, without the trouble of laying the claws upon a diagonal scale. 7. On the sides of the instrument are the following

lines, viz. equal parts, solids, planes, and polygons, logarithms, tangents, versed sines, sines and numbers, plotting scales, and diagonal scales of inches for cutting fuses by. 8. In the lid of the instrument-case is a pendulum to vibrate half seconds. It is likewise of singular use in surveying: as, 1. It takes horizontal angles to the 60th part of a degree. 2. Vertical angles. 3. Levels. 4. Solves right-angled plane triangles. 5. Oblique-angled plane triangles. 6. Answers all the purposes of a protractor, with the advantage of laying down angles exactly as taken in the field. N. B. Captain Jordane's ingenious instrument answers nearly the same purposes.

Spirit-LEVEL. See *Air-LEVEL*.

By the term *level* is also to be understood the line of direction in which any missive weapon is aimed.

LEVEL, an instrument whereby masons adjust their work.

LEVELLER, (*niveleur*, Fr.) a term not known in military phraseology, as far as it relates to rank and situation. In a general acceptation, one who destroys superiority; one who endeavours to bring all to the same state of equality; a fool or a madman. See *LEVELLING SYSTEM*.

LEVELLING, the finding a line parallel to the horizon at one or more stations, and so to determine the height of one place in regard to another.

LEVELLING staves, instruments used in levelling, that carry the marks to be observed, and at the same time measure the heights of those marks from the ground. These usually consist of two wooden square rulers that slide over one another, and are divided into feet, inches, &c.

LEVELLING has two distinct applications in the art of war; in the one case, it implies the reduction of an uneven surface to that of a plane, so that the works of a fortification may be of a correspondent height or figure throughout. The other is the art of conveying water from one place to another; in this process, it is found necessary to make an allowance between the true and apparent level, or in other words, for the figure of the earth, for the true level is not a straight line, but a curve which falls below the straight line about 8 inches in a mile, 4 times 8 in two miles, 9 time 8 in 3 miles, 16 times 8 in 4

miles, always increasing with the square of the distance.

LEVELLING system, (*système des niveleurs*, Fr.) a term which since the commencement of the French revolution has been grossly misinterpreted, and cannot be found in any civilized country to answer any other purpose than that of delusion; such was the proposed agrarian system of the Romans; and such the absurd suggestion of the sanguinary Marat in the height of the French mania.

LEVER, a balance which rests upon a certain determinate point, called a fulcrum.

LEVER, in *mechanics*, a line, rod, or beam, moveable about, or upon, a fixed point called the prop or fulcrum, upon one end of which is the weight to be raised, at the other end is the power, applied to raise it; as the hand, &c.

Since the momentum of the weight and power are as the quantities of matter in each, multiplied by their respective celerities; and the celerities are as the distances from the center of motion, and also as the spaces passed through in a perpendicular direction in the same time, it must follow that there will be an equilibrium between the weight and power, when they are to each other reciprocally as the distances from the center, or as the celerities of the motions, or as the perpendicular ascent or descent in the same time; and this universally in all mechanical powers whatsoever, and which is therefore the fundamental principle of all mechanics. According to N. Bailey, vol. II., the lever is one of the six powers; the *lever* differs from the common balance in this, that the center of motion is in the middle of a common balance; but may be any where in the *lever*. Dr. Johnson calls it the second mechanical power, used to elevate or raise a great weight. Belidor in his *Dictionnaire de l'Ingénieur* distinguishes the word *levier* by saying—*Levier de la première espèce*, *Levier de la seconde espèce*, and *Levier de la troisième espèce*. See LEVIER and MECHANICAL POWERS.

LEVET, a lesson on the trumpet.

LEVEUR, Fr. a tax-gatherer.

LEVIER, Fr. lever. As the French writers have been more explicit on this head than any of our lexicographers, we shall extract the following passages as conducive to general information.—The *levier* or lever is an instrument made of

wood or iron, by means of which the heaviest weights may be raised with few hands. When the lever is made of iron, it is called pince or crow. The lever may be considered as the first of all machines. Wheels, pulleys, capstans, &c. act only by the power it possesses. The lever must be looked upon as a straight line, which has three principal points; namely, the one on which the load is placed, and which is to be raised; the appui, or rest, which is the center round which it turns, and which the French mechanics call *orgueil*; and lastly, the human arm, which is the power that puts the lever into motion. The different arrangements or dispositions which are given to these three points, or rather the unequal distances at which they are placed, occasion the force that is collectively displayed.

LEVIER, Fr. in artillery, a wedge.

LEVIER *de pointage*, Fr. a wedge to assist in pointing pieces of ordnance.

LEVIER *de support*, Fr. a wedge by which cannon is raised to a certain line of direction.

To LEVY, has three distinct military acceptations, as to *levy* or *raise* an army; to *levy* or *make* war; and, to *levy* contributions.

LEVY. The levying or raising troops, by enregistering the names of men capable of bearing arms for the common defence and safety of a country, has from time immemorial been a leading principle among men.

There are indeed some people still existing, who indiscriminately go to war; leaving for the immediate security of their huts, or habitations, only their old men, their wives and children.

Among the Romans, however, and in some other civilized countries, it was a prevailing maxim never to employ above a certain proportion of matured population, and that proportion consisted uniformly of men who were expert at arms. National assemblies were called together, whenever the situation of the country required that the senate's decree should be published and put into effect.

LEVY likewise means inlisting money, as *levy-money*.

LEZARDES, Fr. chinks or crevices in walls; occasioned generally by the foundation giving way.

LIAIS, Fr. very hard free-stone.

LIAISON, Fr. in building, the bind-

ing or connecting stones or bricks together so as to keep them firm and solid.

LIAISON à sec, Fr. stones, generally of a large size, placed upon one another without cement or mortar, as in ancient buildings, &c.

LIAISON de joint, Fr. the cement, or adhesion which is made with mortar, for the purpose of binding stones or bricks together.

LIAISONNER, Fr. to bind or fasten stones together.

A **LIAR**, the most mischievous and, when known, the most contemptible reptile that crawls upon the earth. A creature that will say and unsay; that will impugn the truth; and assert any thing which his interest may direct, or his policy suggest. A thing, in short, with which no military character can accord, and to which may be applied the following adage:—*You may shut your door against a thief, but you cannot against a liar.*

LIAR, (on ship board,) he who is first caught in a lie on a Monday morning, who is proclaimed at the main-mast, *liar, liar, liar*; whose punishment is to serve the under-swabber for a week, to keep clean the beak-heads and chains. Something of this sort should be adopted in the army; for it is well known, that deviations from the truth, too frequently disgrace the high character of a soldier.

LIASSE, Fr. bundle of papers; bundle string; such as returns, &c.

LIBAGE, Fr. rough stones; shards.

LIBERTY. See **FREEDOM**.

LIBRARY, *regimental*, a collection of military books, charts, and plans, necessary to be studied by every officer who wishes to be acquainted with his profession. They are placed in boxes, which being set one upon the other, in a room or tent, and having their upper lid taken off, present the appearance of a book-case, and in a few minutes each box can be separated from the other, and the whole may be stowed away with the rest of the baggage. A day's pay from every officer yearly, and a small present on every promotion is sufficient for the establishment, and the junior officer in quarters might be librarian. None but military books should be admitted, and the selection of them should be left to those above the rank of lieutenant.

A library has been established in Gibraltar by subscription, and one at Woolwich in 1806, when the Earl of Moira was master-general of the ordnance.

General Wolfe, having shewn some general officers how expert his men were at a new mode of attacking and retreating upon hills, stepped up to one of them, and asked him what he thought of it? I think, said he, I see something here of the history of the Carduchi, who harassed Xenophon, and hung upon his rear in his retreat over the mountains. *You are right*, said Wolfe, *I had it thence: but our friends here are surprized at what I have shewn them, because they have read nothing.*

LICE, Fr. lists for combats.

LICENCE, a grant of permission; liberty; permission.

Wine **LICENCE**, a licence granted to publicans in Gibraltar, the emoluments of which were formerly given to the governor; but are now carried to the credit of government.

LICENCIEMENT des troupes, Fr. an order to go into winter quarters. At the end of a campaign this generally happened in France, when troops could not any longer keep the field owing to the severity of the weather. In former times it was usual, during the continuance of a war, for the French army to retire into winter quarters, about the latter end of October. But since the revolution, hostilities have been carried on at all seasons, and under the most disheartening pressure of the atmosphere.

LICENCIEMENT des équipages des vivres, Fr. It was usual in the old French army, for an order to be issued by which the contractors and commissaries for the time being were discharged at the close of a campaign. The director general of the stores always preserved this order, as it formed the only final voucher, upon which the contractors could receive any demand against government. The greatest attention was paid to this important branch of military economy; and if, at the conclusion of a campaign, it was found necessary to retain any part of the establishment for the immediate subsistence of the troops in winter quarters, that part was minutely noticed in the order.

LICENCIER, Fr. to discharge.

LICOU, Fr. a halter, with which horses and other animals are fastened to

any thing; and by which men are hanged according to law.

LIDE, *Fr.* a warlike machine, which was formerly used to throw large stones against a fortified place, or upon an enemy.

LIE, *La LIE du peuple*, *Fr.* See **DREGS**.

To **LIE**, in a military acceptance of the term, to be in quarters, in cantonments, or to be in camp: the 29th regiment of foot, for instance, **LIES** encamped between Richmond and Windsor; or it **LIES** at Windsor. The light dragoons **LIE** along the coast.

To **LIE** in ambush, to be posted in such a manner as to be able to surprize your enemy, should he presume to advance, without having previously cleared the woods, hedges, &c.

To **LIE** under cover, to be under the protection of a battery, or to be sheltered by a wood, &c.

To **LIE** in wait, to take a position unobserved by the enemy, and to remain under arms, in expectation of suddenly falling upon his flanks or rear.

To **LIE** on their arms, (*coucher sous armes*, *Fr.*) a term used to express the situation of a body of armed men, who remain prepared for action at all seasons.

To give the **LIE**. See **DÉMENTI**, *Fr.*
LIEGE, *Fr.* cork.

LIEGE, bound by some feudal tenure; whence Liege-man, or subject; it also signifies Sovereign, in which sense it is called *Liege Lord*.

LIEN, *Fr.* a piece of wood which is used in the timber-work of a roof.

LIEN de fer, *Fr.* a bar of iron, curved or otherwise, by which pieces of wood are bound together.

LIERNES de palée, *Fr.* flat pieces of wood which are fastened to the piles of a wooden bridge with iron pins.

LIERNES, *Fr.* slits, interlaces, or intertoises of timber.

In **LIEU**, in the room, place, or stead of.

LIEU has various significations in the French language, viz.

LIEU, *Fr.* place; quarter. It also signifies matter of immediate consideration; as, *prendre une chose en premier lieu*.

LIEUE, *Fr.* See **LEAGUE**.

LIEUTENANCY, (*lieutenance*, *Fr.*) the post, station, &c. of a lieutenant.

LIEUTENANT. This word is ori-

ginally derived from the Latin *legatus*, *locum tenens*, and comes immediately to us from the French *lieu-tenant*, supplying or holding the place of another. In a military sense it means the second person or officer in command: as *lord lieutenant*, one who represents the person of the prince, or others in authority; *lieutenant-general*, the next in command to a general; *lieutenant-colonel*, the next to a colonel; *captain-lieutenant*, an intermediate rank; and *lieutenant* the next to a captain, in every company of both foot and horse, and who takes the command upon the death or absence of the superior officer. Fusileer corps, grenadiers, and light infantry, have second lieutenants and no ensigns.

LIEUTENANT, (*Lieutenant*, *Fr.*) a deputy, one who acts under the authority of another.

LIEUTENANT of Engineers. See **ENGINEERS**.

LIEUTENANT-Colonel. See **COLONEL**.

LIEUTENANT-General. See **GENERAL**.

LIEUTENANT du Roi, *Fr.* During the old monarchy in France there was a deputy governor in every fortified place, or strong town, who commanded in the absence of the governor, and was a check upon his conduct when present. This person was called *LIEUTENANT du Roi*.

LIEUTENANT reduced, (*Lieutenant réformé*, *Fr.*) he whose company or troop is broke or disbanded, but who continues on full or half pay, and still preserves the right of seniority and rank in the army.

LIEUTENANT de la colonelle, *Fr.* the second officer (or what we formerly stiled the captain lieutenant of the colonel's company) of every infantry regiment was so called in France.

LIEUTENANS des Gardes Françaises et Suisses, *Fr.* lieutenants belonging to the French and Swiss guards. During the old monarchy in France they bore the rank of lieutenant-colonel, and took precedence of all captains.

LIEUTENANS provinciaux d'artillerie, *Fr.* were certain officers belonging to the old French service, and immediately attached to the artillery, who bore the title or name of the particular province in which they were stationed.

LIEUTENANT Général, *Fr.* The title and rank of lieutenant general were of a

less confined nature in France under the old government of that country than it is with us. High officers of justice were distinguished by the name; and all governors of provinces, as far as their jurisdiction extended, together with the persons who acted under them, were called *lieutenans-généraux*. There were likewise persons who bore the title of lieutenant-general of the kingdom at large.

LIEUTENANT-Général d'artillerie, Fr. *Lieutenant-general of the Ordnance*.

LIEUTENANT-Général des armées navales du Roi, Fr. an officer in the old French service, belonging to the naval department. He took rank of all chefs d'escadre, or commodores, and issued orders through them to inferior officers.

LIEUTENANTS of counties. See *LORD-LIEUTENANTS*.

LIFE-GUARDS.—See *GUARDS*.

LIGE homme, Fr. a person on whom the lord of the manor had more ascendancy than over a common vassal. See *LIEGE*.

LIGHT-BELLIED, (spoken of a horse,) is one that has flat, narrow, and contracted sides, which make his flank turn up, like that of a grey-hound.

LIGHT BOBS, a familiar term used for the light infantry.

LIGHT HORSE. All mounted soldiers, that are lightly armed and accoutred for active and desultory service, may be considered under this term. Thus light dragoons, fencible cavalry, mounted yeomanry, &c. are, strictly speaking, light-horse.

The *City LIGHT-HORSE* is a particular body of men, consisting chiefly of rich merchants belonging to the city, who first formed themselves into a corps in 1779. Great attention was paid, during the late war, to the discipline of these gentlemen. They were frequently honoured with his Majesty's presence; and if their capability of service be viewed through the influence they possess from immense wealth and credit, aided by an esprit de corps, which makes them sacrifice private convenience for public duty, the city light-horse must be allowed no inconsiderable weight in the scale of metropolitan defence. They are now called the Light-horse Volunteers. Colonel Herries, who has commanded them many years, has received a pension for his assiduity and zeal.

LIGHT INFANTRY, a body of

active, strong men, selected from the aggregate of battalion companies, and made up of the most promising recruits that are occasionally enlisted. Too much attention cannot be given to the organization of light troops on foot. They are very properly called the eyes of an army, and ought always to be considered as indispensably necessary. See *VOLTIGEURS*.

LIGHT TROOPS, (*troupes légères*, Fr.) By light troops are generally meant all horse and foot which are accoutred for detached service.

To *LIGHTEN a ship*, (*alléger un vaisseau*, Fr.) to take out any part of its cargo, or to diminish its ballast. This is frequently done, when ordnance, troops, or horses are embarked.

To *LIGHTEN a horse*, in horsemanship, is to make a horse light in the fore hand, i. e. to make him freer and lighter in the fore hand than behind. This is usually done by throwing him on his haunches, and by a proper management of the bit.

LIGNE, Fr. See *LINE*, also *FORTIFICATION*.

LIGNE d'eau, Fr., a term used in aquatics. It is the hundred and fortieth portion of an inch of water, and furnishes or supplies one hundred and four pints of water, Paris measure, in twenty-four hours.

LIGNE de chanvre, Fr. the piece of packthread which is used by masons and by carpenters, for the purpose of ascertaining the depth and elevation of walls, and of measuring wood.

LIGNE de plomb, Fr. a mason's, or carpenter's plummet.

LIGNE de sonde, Fr. the packthread, or cord to which the sounding lead is attached.

LIGNES en forme de crémaillère, Fr. *indented lines*, or *lines resembling the teeth of a saw*, or *pot-hook*: they are connected with one another like crotchets; or united by small flanks comprising fourteen or fifteen toises each. M. de Clairac has given a particular account of their construction in his *Ingénieur de Campagne*. The effect, observes that writer, which is produced by the concentrated fire that may be poured from these lines, is perhaps unexampled. One advantage is certain, that of being able to increase your efforts of defence, in proportion as the enemy advances; since it must be evident, that, construct-

ed as the flanks are, and enchasing one another, the execution becomes multiplied in every quarter. It may moreover be stated, among other advantages, that as the salient points are double in number, and are flanked within half a distance of musket-shot, without stretching far into the country, they must, of course, be less exposed to the enemy's approaches. From the figure of these lines the troops are enabled to keep up an uninterrupted and regular direct fire; and it is the only construction from which an equal discharge of ordnance, or musketry, may be served in every quarter at once.

LIGNEUL, *Fr.* shoe-maker's thread.

LILY-livered, white-livered; cowardly. Boisterous and overhearing characters are almost always of this description. True courage, which generally shews itself by an open and manly suffusion of the face, is here replaced by sudden bursts of passion, that terminate in pale quivering lips, white countenance and trembling limbs; all symptoms of a dastardly mind. We offer these remarks to military men, because it must be obvious, that a complete ascendancy over the inward workings of the mind, is the only sure way of succeeding. The greatest military characters have at times risked their reputation and station, by intemperate heat.

Order of the LILY. See **ORDER**.

Faire le LIMAÇON, *Fr.* to wind, twirl, or turn round about; this term is used to answer to our forming the ring, as the soldiers do when they cast themselves into a ring.

LIMAÇON, *Fr.* a winding staircase.

LIMAÇON, *Fr.* See *Vis d'Archimède*.

LIMAÇONNER, *Fr.* in a military sense, to form into a ring, as soldiers do when they form circle.

LIMANDE, *Fr.* in the literal sense of the word, signifies a burt or bret, a species of flat fish. Belidor applies the term to any piece of flat wood.

LIMBER, a two wheel carriage fitted up with boxes, to contain the ammunition applicable to each nature of ordnance, to accompany them in the field. These limbers have a strong iron hook in the rear, to which the carriages, conveying the guns or howitzers, are affixed when travelling, by means of an eyebolt at the end of the trail of the carriages. The hooking or unhooking the gun, or howitzer carriages, from the lim-

bers is called in the artillery service, limbering up to retreat, or unlimbering for action.

To LIMBER up, to make every thing ready in a gun-carriage, either for the purpose of retreating or advancing. For the manner in which this is done, in the exercise of a light 6 pounder without drag-rope-men, see **REGIMENTAL COMPANION**, 6th edition.

LIMBO, any place of misery or restraint. Thus, officers who undertake the profession of arms from mere interest or ostentation, may be said to be in limbo, when their services are required. According to the doctrine of Rome, limbo signifies a place between heaven and purgatory, to which human beings that have not been baptized are consigned for ever.

LIME, (*chaux*, *Fr.*) in *military architecture*, is made of all kinds of stones, that will calcine; that which is made of the hardest stone is the best, and the worst of all is that which is made of chalk.

Different counties in England produce different kinds of lime-stones. In Kent, abounding with chalk pits, the lime is very bad. There are some rocks near Portsmouth, that make exceeding good lime. The best lime in England is that made of the marble in the neighbourhood of Plymouth. Before the stones are thrown into the kiln, they are to be broken into small pieces; otherwise the air contained in their cavities, being too much expanded by heat, makes them fly with so much violence as to damage the kilns. Lime will not be sufficiently burnt in less than 60 hours. The signs of well burnt lime are, that its weight is to that of the stone in a sequalterate proportion; that it be white, light, and sonorous; that when slaked, it sticks to the sides of the vessel, sending forth a copious thick smoke, and requires a great deal of water to slake it.

In some foreign countries they make good lime of shells of fish, which dries and hardens in a very short time; and when it is mixed with Dutch terras, is fit for all kind of aquatic works.

Lime should always be burnt with coals, and never with wood; the coals being strongly impregnated with sulphurous particles, which, mixed with the lime, make it more glutinous. See **MORTAR**.

Line should be frequently used in barracks, and in prisons, to preserve cleanliness, and to destroy vermin.

LIME-Water, a medicine made by pouring water upon quick lime; supposed to be very efficacious in some complaints of the stomach.

LIMIER, *Fr.* a blood-hound; such as was used in Jamaica and St. Domingo to hunt the negroes.

LIMINARQUE, *Fr.* an office of distinction, which existed in the Roman empire. The persons invested with it were directed to watch the frontiers of the empire, and they commanded the troops that were employed upon that service.

LIMITARY, a guard or superintendent, placed at the confines or boundaries of any kingdom or state.

LIMITED, confined to time or place.

LIMITED Service. See **SERVICE**.

LIMITROPHE, *Fr.* on the borders; adjoining to.

LIMITS, in a military sense, is that distance which a sentry is allowed on his post, namely, 50 paces to the right, and as many to the left; also the space which is allowed to a prisoner of war who is on parole.

LIMON, *Fr.* a shaft.

LIMON, *Fr.* the stringboard of a staircase.

LIMOSINAGE, *Fr.* rough walling. It is also called *Limosinerie*. Hence *Limosiner*, to rough wall.

LIMOSINS, *Fr.* plasterers; also masons.

LINCH-pin, in artillery, that which passes through the ends of the arms of an axle-tree, to keep the wheels of trucks from slipping off in travelling.

LINCH-clout, in artillery, the flat iron under the end of the arms of an axle-tree, to strengthen them, and to diminish the friction of the wheels.

LINÇOIR, *Fr.* a hold-fast, or prop, used in chimnies, garret windows, and in the roofs of houses.

LINDEN-Tree, the wood used in artificial fireworks, &c.

LINE, in geometry, signifies length, without any supposed breadth or depth. A *straight* or *right line* is the shortest way from one point to another. A *curved* or *crooked line* is that which deviates from the shortest way, and embraces a greater space between one point and another. A *perpendicular*

line is a straight line, which falling upon another line, does not incline either to one side or the other. *Parallel lines* are lines which are at equal distances from one another, in such a manner, that although they may be prolonged ad infinitum they never can meet.

Euclid's second book treats mostly of lines, and of the effects of their being divided, and again multiplied into one another.

Horizontal LINE, (*ligne horizontale*, *Fr.*) is that which is spread upon the plane of the horizon; such, for instance, are those lines that may be supposed to form the level surface of a plain.

Inclined LINE, (*ligne inclinée*, *Fr.*) is that line which leans or is raised obliquely upon the plane of the horizon, and which might resemble the sloping or declivity of a hillock.

Oblique LINE, (*ligne oblique*, *Fr.*) a straight line which leans more to one side than another, the instant it is brought into contact with any other line.

LINE tangent, (*ligne tangente*, *Fr.*) a straight line, which, without intersecting it, meets a *curve* at one point, and does not enter it, but barely touches it.

Vertical LINE, (*ligne verticale*, *Fr.*) a line which is raised perpendicularly above or below the horizon. Of this description are all lines that express height or depth.

The LINE, (*la ligne*, *Fr.*) This term is frequently used to distinguish the regular army of Great Britain from other establishments of a less military nature. All numbered or marching regiments are called the line. The Guards are an exception to this rule; neither do the marines, fencible, militia, volunteer, and yeomanry corps, together with the Life-guards, come under the term. It is, however, a corruption and misapprehension of the word amongst us, since the true import of line, in military matters, means that solid part of an army which is called the main body, and has a regular formation from right to left. Thus in the seven year's war, when Prince Ferdinand commanded the allied army, the British troops under the Marquis of Granby did not belong to the line, because they were always detached and acted in front of the main body. Grenadiers and light infantry, when from their several corps, cannot be called the line, but the instant they are incorporated they become so.

According to this explanation, (and we think it a correct one,) the word is generally misapplied amongst us, as it cannot strictly be used to distinguish any particular establishment from another. The French say, *troupes de ligne*, which term corresponds with our expression, Army of the Line, or Regulars.

Vaisseau de LIGNE, Fr. line of battle ship.

LINE, or **LINE of battle**, (*ligne*, or *ordre de bataille*, Fr.) is the arrangement or disposition of an army for battle: its front being extended along a straight *line* as far as the ground will permit, in order that the several corps of cavalry and infantry which compose it, may not be cut off or flanked by the enemy.

The Ottoman troops are generally drawn up on a curve line, or half-moon, for the purpose of surrounding their enemies by superior numbers. European armies are generally drawn up in three lines; the first being named the *van*, (*avant-garde*, Fr.) the second, *main body*, (*corps de bataille*, Fr.) and the third, which is always the weakest, is called the *reserve*, or *rear-guard*, (*corps de réserve ou arrière-garde*, Fr.) Each of these lines is so drawn up, that the wings or extremities are always composed of some squadrons of horse, whose intervals are likewise supported by infantry platoons. The battalions are posted in the center of each line; sometimes they are intermixed with squadrons of horse, when there is a considerable body of cavalry attached to the army.—The space of ground, which in each line separates the different corps from one another, is always equal in extent to the front that is occupied by them. These intervals are left in order to facilitate their several movements, and to enable them to charge the enemy without being exposed to confusion and disorder. It must be observed, as a general rule, that the intervals or spaces which are between each battalion and squadron belonging to the second *line*, should invariably correspond with the ground that is occupied by the battalions and squadrons, which constitute the first *line*; in order that the first *line*, on being forced to fall back, may find sufficient ground to rally upon, and not endanger the disposition of the second *line*, by precipitately crowding on it.

All great bodies of troops are formed in one or more lines. Each line is di-

vided into right and left wings. Each wing is composed of one or more divisions. Each division is composed of one or more brigades. Each brigade is formed of two, three, or four battalions.

Battalions are formed in line at a distance of twelve paces from each other, and this interval is occupied by two cannon, which are attached to each battalion. There is no increased distance betwixt brigades, unless particular circumstances attend it. In exercise, should there be no cannon betwixt the battalions, the interval may be reduced to six paces.

LINE, *how regulated*. Its regulating body in movement is, in general, the battalion of that flank which is nearest to, and is to preserve the appui, or which is to make the attack. There are very few cases in which the center ought to regulate, although the direct march of the line in front appears to be the easiest conducted by a battalion of the center. It is the flank, however, that must preserve the line of appui in all movements in front. If the line is thrown backward or forward, it is generally on a flank point.

It may not be superfluous to remark, that the term *line*, as expressing a military disposition for battle, was not known until the sixteenth century.—Before that period, when armies were ranged in order of battle upon three lines, the first *line* was called *advanced guard*, (*avant-garde*,) the second, *main body* only, (*corps de bataille*,) and the third, *rear guard*, (*arrière-garde*.)—These terms are never used in modern times, except when an army is on its march. When drawn up for action, or in the field of review, *lines* are substituted.

LINEs of support, are lines of attack, which are formed to support one another. Where there are several, the second should outflank the first, the third the second; the advanced one being thereby strengthened and supported on its outward wing.

LINE of march, the regular and tactical succession of the component parts of an army that is put in motion.

LINEs of march, are bodies of armed men marching on given points to arrive at any straight alignment on which they are to form. The general direction of such alignment is always determined before the troops enter it, and the point

in that line at which their head is to arrive, must next be ascertained.

The line is said to be well-dressed, when no part is out of the straight alignment. That this may be effected, at the word *dress*, which is given by the commander, it is immediately to commence from the center of each battalion, the men looking to their own colours, and the correcting officers lining them upon the colours of their next adjoining battalion.

LINE-firings are executed separately and independently by each battalion.

Inversion of the LINE, in formation. This is a manœuvre which ought only to be resorted to on the most urgent occasions, as it is prudent to avoid the inversion of all bodies in line. The inversion is effected by facing a battalion or line to the right about, instead of changing its position by a countermarch; sometimes, indeed, it may be necessary to form to a flank with its rear in front. The column with its right in front may arrive on the left of its ground, and be obliged immediately to form up and support that point, so that the right of the line will become the left. Part of a second line may double round on the extremity of a first line, thereby to outflank an enemy. These, and various other movements, may be found necessary, and they can only be practised with safety and expedition by the inversion of the line.

LINES advancing to engage an enemy, (lignes marchant à l'ennemi, Fr.) According to Marshal Puysegur, all lines should take the center for the regulating point of movement, and not the right, as many have maintained. He grounds his opinion upon a known fact, that the more extended a line is, the more difficult it must prove to march by the right. By making the center the directing portion of the line, more than half the difficulty is removed. To which it may be added, that the center is more easily discernible from the right and left, than the right is within the just observation of the left, or the left within that of the right.

When the *line* advances it must uniformly preserve a convexity from the center, so that when it halts, the right and left may have to dress up; but this convexity must be scarcely perceptible. Were the line to be concave on approaching the enemy, a necessity would occur of throwing the wings back, perhaps even of putting several corps to the right

about; during which operation the whole army may be endangered.

When lines are marching forward they must be occasionally halted: in which cases the center halts first, and when the line is ordered to advance again, the center steps off, though in an almost imperceptible manner, before the right and left.

Each commanding officer must place himself in the center of that proportion of the line which he has under his immediate orders, unless he should be otherwise directed. The center is always the most convenient point, from whence every thing that passes on the right and left may be observed. When the line advances in charging order, he must march at the head of his battalion or squadron; the captains of troops or companies taking care that he is followed with an equal cadenced step, and regulating their own movements by that of the divisions which are formed on their right and left.

The greater the extent of line proves, which is composed of several battalions and squadrons that advance forward with the same front, the more difficult will be the movement of the several bodies; but as we have already observed, a great part of this difficulty is overcome when the center is made the directing body. The right and left must be invariably governed by it.

Retiring LINE, a body of armed men that has advanced against an opposing enemy in order of battle, withdrawing itself with regularity from the immediate scene of action. On this occasion it is of the greatest importance, that the line should be correctly dressed before it faces to the right about; and the battalions will prepare for the retreat in the manner prescribed for the single one by receiving the caution, that the *line will retire*.

To form the LINE, is to arrange the troops in order of battle, or battle array.

To break the LINE, to change the direction from that of a straight line, in order to obtain a cross fire.

To break the LINE. (percer, ou enfoncer la ligne, Fr.) to attack an opposing front, so as to throw it into confusion. See *Rompres la LIGNE*.

Turning out of the LINE, in a military sense. The line turns out without arms whenever the general commanding

in chief comes along the front of the camp.

When the *line* turns out, the private men are drawn up in a line with the bells-of-arms; the corporals on the right and left of their respective companies: the piquet forms behind the colours, with their accoutrements on, but without arms.

The serjeants draw up one pace in the front of the men, dividing themselves equally.

The officers draw up in ranks, according to their commissions, in the front of the colours; two ensigns taking hold of the colours.

The field officers advance before the captains.

The camp colours on the flanks of the parade are to be struck and planted opposite to the bells-of-arms. Formerly the officers' spontoons were planted between the colours, the serjeants pikes are now placed in their stead, and the drums piled up behind them; the halberds are to be planted between, and on each side the bells-of-arms, and the hatchets turned from the colours.

LINE, or Camp COURTS MARTIAL. These courts-martial are not frequently resorted to, and differ from regimental ones, inasmuch as they are composed of the officers belonging to different corps, and the ratification of the sentence is vested in the general or commanding officer of the camp. So that no time is lost in waiting for the king's pleasure, or for the commander in chief's approbation, when he is delegated by him; nor has the colonel or commanding officer of the regiment to which the offender may belong, any power to interfere. The sentences of line or camp, field and garrison courts-martial, are confined to corporal punishments, but they can neither affect life, nor occasion the loss of a limb. The proceedings are read by the adjutant of the day; the surgeon is from the regiment to which the prisoner belongs, and the punishment is inflicted in front of the piquet by the drummers of the different corps under the direction of the drum-major, who is from the regiment to which the adjutant of the day belongs. Field and drum head courts-martial may be considered in the same light, when an army is on its march; with this difference, that the prisoner is tried either by officers belonging to his own corps, or by a mixed roster. A circle is formed at a short distance from

the men under arms, and the sentence is written upon a drum head; whence the appellation of drum-head courts-martial is derived. When there are several regiments present, the same forms are attended to in punishing prisoners as are observed in line, or camp courts-martial; and when there is only one regiment, the examination and the punishment of the prisoner, or prisoners, takes place within itself.

LINE of communication, in military strategy, that line which corresponds with the line of operation and proceeds from the *base-point*. See **BASE**.

LINE of communication, (*ligne de communication*, Fr.) that space of ground in a fortified place which joins the citadel to the town.

Capital LINE of the half-moon, (*ligne capitale de la demie-lune*, Fr.) that which is drawn from the flanked angle of a half moon, to the reentrant angle of the counterscarp on which it is constructed.

LINE of counter-approach, (*ligne de contre-approche*, Fr.) See **APPROACHES**.

LINE of defence, (*ligne de défense*, Fr.) See **FORTIFICATION**.

LINE magistrale, Fr. See **Capital line in FORTIFICATION**.

LINE of circumvallation, (*ligne de circumvallation*, Fr.) See **FORTIFICATION**.

LINE of direction, in gunnery, is a line formerly marked upon guns, by a short point upon the muzzle, and a cavity on the base ring, to direct the eye in pointing the gun.

LINE of distance, the interval between two things, either in regard to time, place, or quantity.

LINE of operation, in military strategy; that line which corresponds with the line of communication and proceeds from the *base-point*. See **BASE**.

LINE of gravitation, of any heavy body, is a line drawn through its center of gravity, and according to which it tends downwards.

LINE of swiftest descent, of a heavy body, is the cycloid. See **CYCLOID**.

LINE of projectile. See **PROJECTILES**.

LINE of the least resistance, (*ligne de moindre résistance*, Fr.) that line which, being drawn from the center of the furnace, or the chamber of a mine, takes a perpendicular direction towards the nearest superficial exterior.

LINE of fire, the space between contending armies in the field, or any space

from which objects may be hit by cannon or musketry.

LINE of fire, (*ligne de feu*, Fr.) in fortification. This term admits of two distinct acceptations; first, when it is found necessary to give an idea of the manner in which a rampart, or an entrenchment overwhelms and crosses any space of ground by the discharge of ordnance or musketry, lines must be drawn to express the distances which have been traversed by the shot, &c. These lines are called lines of fire, being an abbreviation of those lines of direction which have been given to the shot.

In order to convey a more just and accurate conception of this species of line of fire, it is recommended to give a profile, which shall not only shew the curves of the trajectories, but likewise point out the intersections and impressions which have been made by such fire upon a rampart, entrenchment, ground, or fortification of any description.

In the second place all that extent of a rampart or entrenchment, whence the shot of ordnance or musketry is discharged, is understood to be a line of fire.

If, for instance, it were to be said that a reverse or oblique direction was taken against a long extent of rampart or entrenchment, by means of a *jetée* or any great work thrown up, so as to outflank or take it in the rear, it might be concluded, that those points would be supplied with a long line of fire.

LINE of penetration, any given extent of ground upon which an invading army advances into an enemy's country. The best system of defence on this occasion is that of skirmishing, &c.

LINE of direction, (*ligne de direction*, Fr.) in mechanics, any straight line down which a heavy body descends. There are likewise lines of direction which relate to powers; they are then straight lines by means of which a power draws or urges on a weight for the purpose of supporting or moving it.

LINE of march, any distance of ground over which armed bodies of men are directed to move in succession towards some given object.

Capital LINE of the bastion, (*ligne capitale du bastion*, Fr.) a line which is drawn from the center angle of a bastion to its flanked angle. In regular fortification this line cuts the bastion in two equal parts.

Base-LINE. See *BASE*.

To LINE one-self; to place one's person in such a position and attitude as perfectly to accord with any given points of alignment; as, to line with the pivot files.

LINE in fencing, that direction opposite to the enemy, wherein the shoulder, the right arm, and the sword, should always be found; and wherein are also to be placed the two feet at the distance of 18 inches from each other. In which sense, a man is said to be in his line, or to go out of his line, &c.

LINE of demarcation, a line which is drawn by the consent of parties to ascertain the limits and boundaries of certain lands and territories belonging to different powers. Dr. Johnson does not mention the term.

LINE also denotes a French measure, containing 1-12 part of an inch. It is of late frequently made use of in calculations.

To LINE, from the French *aligner*, is to dress any given body of men, so that every individual part shall be so disposed as to form collectively a straight continuity of points from center to flanks.

To LINE men. Officers and non-commissioned officers are said to line the men belonging to their several battalions, divisions, or companies, when they arrive at their dressing points, and receive the word *dress* from the commander of the whole.

When a single battalion halts, it is dressed or lined on its right center company and must, of course, be in a straight line. When several battalions dress from the center of each on its next colour, the general line will be straight, provided all the colours have halted regularly in a line. On these occasions every thing will depend upon the two center dressers of each battalion.

To LINE a coast. To line a coast well under the immediate pressure of invasion, requires not only great ability and exertion in the commanding officer of the particular district against which an insult may be offered, but it is moreover necessary, that every individual officer in the different corps should minutely attend to the particular spot on which he may be stationed. The English coast, especially where there are bays, is almost always intersected

by narrow passes through the rocks or sand-hills. On this account, when any body of men receive orders to line a specified extent of ground, the officers who are entrusted with the several parts of a battalion or brigade, should take care to make the most of their men, and to extend their files in such a manner, as not only to present an imposing front from the crown of the hill, but to be able, at a moment's warning, to carry their whole strength to prevent the enemy from getting upon the flanks by suddenly rushing up the gap. Much coolness is required on these occasions. The French say *Fraiser*.

To *LINE hedges, &c.* to plant troops, artillery or small arms, along them under their cover, to fire upon an enemy that advances openly, or to defend them from the horse, &c.

To *LINE a street or road* is to draw up any number of men on each side of the street or road, and to face them inwards. This is frequently practised on days of ceremony, when some distinguished person is received with military honours on his way through places where troops are stationed.

To *LINE*, in fortification, is nothing more than to environ a rampart, parapet, or ditch, &c. with a wall of masonry or earth.

LINES, in fortification, bear several names and significations; such as,

LINE of	}	<i>defence fichant</i>	} See	FORTIFICA- TION.
		<i>defence razant</i>		
		<i>countervallation</i>		
		<i>counter-approach</i>		
		<i>defence prolonged</i>		

LINE Capital - - - -

Full or close LINES, (*lignes pleines*, Fr.) Marshal Puysegur in his *Art de la Guerre* is a strong advocate for full or close lines, in his disposition of the order of battle, provided the ground will admit it. He proposes, in fact, that the battalions of infantry and the squadrons of horse should form one continuity of line, without leaving the least interval between them. Warnery, in his treatise on cavalry, differs materially from the French tactician. See page 38 on this subject.

LINES that are close and open, (*lignes tant pleines que vuides*, Fr.) When troops are drawn up in order of battle with intervals between the battalions

and squadrons, the lines are said to be *close and open*.

LINES of communication are trenches that unite one work to another, so that men may pass between them without being exposed to the enemy's fire: thence the whole intrenchment round any place is sometimes called a *line of communication*, because it leads to all the works.

Inside LINES are a kind of ditches towards the place, to prevent sallies, &c.

Outside LINES are a kind of ditches towards the field, to hinder relief, &c.

LINES of intrenchment, (*lignes retranchées*, Fr.) All lines which are drawn in front of a camp, &c. to secure it from insult or surprize are so called. Whenever an army is not sufficiently strong to run the hazard of being attacked, the general who commands it must have the precaution to dig a ditch in front measuring three toises at least in breadth, and two in depth. He must likewise throw up a parapet with redans, or have it flanked at intermediate distances by small bastions two toises thick, made of strong close earth, and get it covered and supported by fascines, with a banquette behind, sufficiently high to cover the soldiers' tents. If water can be got into the ditch from a neighbouring stream or rivulet, an additional advantage will be derived from that accession. When the lines are constructed for any space of time, it will then be proper to make a covert-way in the usual manner.

Other lines are likewise constructed for the purpose of communicating with different quarters; great care must be taken lest any of them be exposed to the enemy's enfilade. To prevent this, they must be supported by redoubts, or by works belonging to the neighbouring forts; for the enemy might otherwise make good his ground within them, and use them as a trench.

If an army is so weak as to be within lines, you must take care to have communications between the villages, and small parties of light horse patrolling towards the enemy, and to have videttes and sentries posted so near one another, that you may have intelligence of all their transactions.

LINGE et chaussure du soldat, Fr. necessaries belonging to a soldier. During the monarchy of France, a sol, or

about one English halfpenny per day, was added to the pay of each serjeant, and about six deniers, or three English farthings to that of each corporal, anspe-sade or lance-corporal, grenadier, private soldier, and drummer, to enable them to keep up a certain list of necessaries. On any deficiency being discovered, it was in the power of the commanding officer of the regiment to reduce the soldier's subsistence to four sols, or two pence English per day, until the full complement was made up.

LINGERER, (*longis*, Fr.) one who pretends to be indisposed, in order to to avoid his tour of duty—a skulker. Hence the term *malingerer*, or a soldier who avoids duty in a disreputable manner.

LINGOT, Fr. a slug; an oblong piece of lead; also an ingot. This species of shot is not considered as fair ammunition in war. It is generally used to shoot game and wild beasts. Count Lagarde was severely wounded in the shoulder with a shot of this description, whilst he was gallantly exerting himself at Nismes, in 1815, to protect the French Protestants against the fury of some bigoted Roman Catholics.

To LINK together, to tie together. Cavalry horses are frequently linked together when it is found necessary for the men to dismount.

LINKS, are distinct reins, or thongs of leather, used by the cavalry to link their horses together, when they dismount, that they may not disperse. Every tenth man is generally left to take care of them.

LINS-pins. See LINCH-PINS.

LINSTOCK, (*boute-feu*, Fr.) in gunnery, a short staff of wood, about three feet long, having at one end a piece of iron divided into two branches, each of which has a notch to hold a lighted match, and a screw to fasten it there; the other end being shod with iron to stick in the ground.

LINTEAU ou LITTEAU, Fr. a long piece of timber, of a triangular profile, or made in the shape of a trapeze. It serves to fasten together the palisades which are fixed in the covert-way, and is placed upon the berms of works in fortification that are not lined.

LINTEAU de fer, Fr. a bar of iron which supports the hauses of a plat-band, and is proportioned to the weight it bears.

LINTEL, (*linteau*, Fr.) that part of the door frame that lies across the door posts over head.

LIS, Fr. Lily; the emblem of France, which was discarded at the Revolution in 1789, and afterwards replaced by the bee and the eagle when Bonaparte assumed the sovereign power.—These were destroyed in 1814 on the first restoration of Louis the XVIIIth, and again resumed when Bonaparte took possession of the crown in 1815. The lily now prevails in consequence of the second restoration of Louis the XVIIIth, effected through the victory gained at Waterloo on the 18th day of June, 1815, by the British and Prussian armies, under the Duke of Wellington and Prince Blucher.

LIS, Fr. A warlike machine was formerly so called: it consisted of a piece of wood, or stake, about the size of the human body, which was made smaller at the top than at the bottom, and resembled a lily not yet blown. Several of these were tied together with ozier or willow twigs, and were used for the security of a camp. They were not unlike the palisades of the present day.

Fleur de Lis, Fr. a flower borne in the ancient arms of France, and adopted by our kings until the late union with Ireland. The Electoral Cap, as emblematic of Hanover, and the sham-rock for Ireland, have been substituted in their stead.

Fleur de Lis, during the French monarchy, signified also a mark of infamy, which was made with a hot iron, upon the back of a malefactor.

LISSE, Fr. any smooth and unornamented piece in architecture.

LISSE ou chapiteau, Fr. a piece of timber which surmounts any pile-work.

LISSE, Fr. the railing of a bridge to prevent passengers from falling over. There are generally two rows of railing; the first of which is called by the French *Lisse d'appui*, or railing to lean upon.

LISSOIRE, Fr. from *lisser*, to smooth. This word was particularly applied in France, to an operation which gunpowder went through, in order to make coarse grains smooth and round. This was effected by tying several barrels together, and by means of a mill turning them round, so as to occasion considerable friction within.

LIST, (*liste*, Fr.) a roll; a catalogue. Annual Army LIST, an official roll or

catalogue which is published every year, containing the names and rank, &c. of all individuals holding military commissions or warrants under the king. The French call it *Etat Militaire de l'Empire*.

Monthly Army List, an official roll which is published monthly, at a reduced price, containing the names of all the officers belonging to the artillery, guards, marching regiments, &c.

Compassionate List, a roll upon which the names of widows and children of deceased officers are inscribed.

To *List soldiers*, } to retain and enrol
To *Inlist*, } soldiers, either as
volunteers, or by a kind of compulsion.

Listel ou LISTEAU, *Fr.* a listel; fillet.

LISTING. Persons listed are to be carried within four days, but not sooner than twenty-four hours, after they have inlisted, before the next justice of peace of any county, riding, city, or place, or chief magistrate of any city or town corporate (not being an officer in the army); and if, before such justice or magistrate, they dissent from such listing, and return the listing money, and also 20 shillings in lieu of all charges expended on them, they are to be discharged. See *ATTESTATION*.

LISTS, in a military sense, a place inclosed, in which combats are fought.

To *enter in the Lists*, is to contend with a person.

LIT de camp, *Fr.* a camp-bed, which takes to pieces, and is portable. The French frequently call it *lit brisé*, or a bed taken to pieces. The Turks never use these beds: they always carry mattresses, which they spread upon sofas when they halt at night.

LIT, *Fr.* a bed; lay; the natural position of a stone in the quarry. The part which is uppermost is called *lit tendre*, that at the bottom, *lit dur*.

LIT de vousoir et de claveau, *Fr.* the bed or seat of the bending of a vault.

LIT de pont de bois, *Fr.* the floor of a wooden bridge.

LIT de canal, ou de reservoir, *Fr.* the bed or bottom of a canal or reservoir; which is usually made of sand, clay, pavement, or of any cement and pebbles.

LITERARY, (*littéraire*, *Fr.*) See *Literary Regiment*.

LITTER, (*litière*, *Fr.*) a sort of hurdle bed, on which wounded officers or men are carried off the field. A kind of vehicular bed.

LITTLE, (*petit*, *Fr.*) small; mean; self-interested; having feelings unbecoming an officer, or a gentleman.

LITTLE fortification. The first division of the first system of M. de Vauban is so called when the exterior side of a fortification does not exceed 175 toises, or 350 yards. It is used in the construction of citadels, small forts, horn and crown works.

LIVER-Complaint, a disease to which British officers and soldiers are peculiarly exposed, especially in the East Indies. It is frequently brought on by an immoderate use of spirituous liquors, particularly in Europe.

LIVERY. This word is only known in military matters by its prohibition. It is particularly specified in the Articles of War, that if any officer shall presume to muster any person as a soldier, who is at other times accustomed to wear a livery, or who does not actually do his duty as a soldier, he shall be deemed guilty of having made a false muster, and shall suffer accordingly. See Section IV. Art. V.

LIVERY, the state of being kept at a certain rate, as horses are in livery stables. Hence *to be at livery*.

LIVRE, a French money of account consisting of 20 sols, about 10*d.* English; each sol containing 12 deniers. The livre is of two kinds, *Tournois* and *Parisis*.

LIVRE Tournois contains 20 sols *Tournois*, and each sol 12 deniers *Tournois*.

LIVRE Parisis, is 12 sols *Parisis*, being worth 12 deniers *Parisis*, or 15 deniers *Tournois*; so that a livre *Parisis* is worth 25 sols *Tournois*. The word *Parisis* is used in opposition to *Tournois*, because of the rate of money, which was one fourth higher at Paris than at Tours.

LIVRÉE, *Fr.* board-wages.

LIVRER bataille, *Fr.* to deliver, give or join battle.

LIVRER assaut, *Fr.* to storm.

LIVRER une ville au pillage, *Fr.* to give a town up to plunder.

LIVRET, *Fr.* literally means a little book; any thing containing a series of words.

LIVRET de commandemens, *Fr.* printed or written words of command, according to prescribed rules and regulations.

LOAD, a word of command given, when men are to charge their guns, or muskets.

LOAM, (*ardille*, Fr.) a sort of clay; unctuous, tenacious earth; marl.

LOCAL, appertaining to some particular spot, quarter or district; being in a particular place.

LOCAL Militia, a temporary armed force which is embodied for the internal defence of a country, and exercised within certain limits.

LOCHABER-AXE, a tremendous Scotch weapon, now used by none but the town guard of Edinburgh; one of which is to be seen among the small armoury in the Tower of London.

LOCKS, in gunnery, are of various sorts; common for lockers in travelling carriages or for boxes containing shot, powder or cartridges. Also locks for fire arms; being that part of the musket, by which fire is struck and the powder inflamed.

LOCK-COVER, a piece of leather, or oil-cloth, which is used to secure the lock of a musket, or pistol, from rain and moisture.

LOCK-STEP. This step was first introduced into the British service by the late Lord Heathfield, when he commanded the garrison at Gibraltar; and is the same that General Saldern (from whose works all our regulations have been almost literally selected) calls the *deploy step*. This step consists in the heel of one man being brought nearly in contact with the joint of the great toe of another, so that when men step off together, they constantly preserve the same distance. The lock or deploy step is always practised when a battalion marches in file, or close column; and the great advantage to be derived from it is, that the last file gains ground at the same time that the front advances. It is ludicrously called *goose-step*.

To Lock, to fasten one or more of the wheels of a carriage to prevent their going round, in going down a hill, &c.

To Lock up, to take the closest possible order in line, or in file. The expression is derived from the lock-step.

Lock up! a word of command which is frequently used in the British service, to direct soldiers to take or preserve the closest possible order, especially in *file-marching*.

LOCKER hinges serve to fasten the cover of the lockers in travelling carriages.

LOCKING plates, in artillery, are

thin flat pieces of iron, nailed on the sides of a field carriage, where the wheels touch it in turning, to prevent the wearing of the wood in those places. See **CARRIAGE**.

LOCKSPIT, in field fortification, a small cut or trench made with a spade, about a foot wide, to mark out the first lines of a work.

To LODGE ARMS, a word of command which is used on guards and pickets. When a guard has closed its ranks, and the men are to place their arms in front of the guard-house or quarter-guard, according to circumstances, the commanding officer gives the words *port arms, to the right*, or *right about*, (as the case may be) *face. Lodge Arms*.

LODGING-MONEY. When a regiment is quartered in a town, and there are not sufficient accommodations to answer the required number of billets, an allowance is made to the officers according to rank. The gross amount is charged in the paymaster's abstract. For particulars, see **MILITARY FINANCE**.

LODGINGS. Officers billeted in the suburbs of Edinburgh, pay for their lodging, but no where else in Scotland.

LODGMENT, in military business, a work made by the besiegers in some part of a fortification, after the besieged have been driven out, for the purpose of maintaining it, and to be covered from the enemy's fire. It also means possession of an enemy's work.

When a *lodgment* is to be effected on the glacis, covert-way, or in a breach, there must be a great provision made of fascines, sand bags, gabions, wool packs, &c. in the trenches; and during the action, the pioneers (under the direction of an engineer) with fascines, sand bags, &c. should be making the lodgment, in order to form a covering, while the grenadiers are storming the covert-way, &c.

LOF, Fr. loof of a ship.

Au Lor, Fr. loof up, commonly pronounced luff up.

Etre au Lor, Fr. to have the weather gage, or the advantage of the wind.

LOG, a round piece of wood which is attached to the watering bridle, or halter, of a horse when he is tied up in a stall.

To Log, to fasten something cumbersome upon any thing; a punishment which is inflicted in some dragoon or

hussar regiments, for indisciplined and disorderly conduct. It consists of a heavy piece of wood which is fixed to the leg of a soldier, and which he is obliged to wear under confinement in the barrack yard.

LOGARITHMS, the indexes of the ratios of numbers one to another.

LOGEMENT, *Fr.* means generally any place occupied by military men, for the time being, whether they be quartered upon the inhabitants of a town, or be distributed in barracks. When applied to soldiers that have taken the field, it is comprehended under the several heads of huts, tents, &c.

LOGEMENT *d'une attaque*, *Fr.* See *Lodgment in FORTIFICATION.*

Se *LOGER*, *Fr.* to take up one's quarters. It likewise signifies to take a position in the neighbourhood of an enemy's camp; or to make a lodgment in the outworks of a besieged place.

LOGIS, *Fr.* quarters.

Marquer les LOGIS, *Fr.* to mark the officers' rooms according to their respective ranks.

LONDON, (*Londres*, *Fr.*) the capital of the British empire, and the emporium of the world.

LONDON, *City of*, is exempt from the billeting of soldiers by the 31st section of the Mutiny Act.

LONDON *Military District.* The bounds or extent of a military command in and about the capital of Great Britain. It is commanded at present by one general, one lieutenant general, six major generals, three brigadier generals, with a proportionate staff: the whole being subject to the commander in chief.

LONDON *Militia.* Two regiments called the East and West London Militia, were raised during the late war for the immediate security of the city and its environs. The officers are appointed by the lieutenants commissioned for the militia of the city.

LONG-BOAT, the largest boat belonging to a ship: it serves to bring goods, provisions, &c. to or from the ship, to land men, to weigh the anchor, &c.

LONG-BOW. See *Bow.*

LONG, *Fr.* long; great.

Tout du LONG de l'année, *Fr.* all the year round.

Long à la guerre, *Fr.* an expression used in the French service, to express a circuitous march. It also signifies to

leave a considerable opening between the ranks, and is the same as *faire long bois.*

Prendre le plus LONG, *Fr.* to go the farthest way about, as *l'armée fut obligée de prendre le plus LONG pour éviter les défilés*; the army was under the necessity of going the furthest way about in order to avoid the defiles.

Le LONG de la côte, *Fr.* along the coast.

LONGANIMITY, (*longanimité*, *Fr.*) forbearance; patience of offences. The word *longanimité* is particularly used among the French, to signify that noble forbearance which distinguishes the high-minded conduct of a truly great man, from the petulant and vindictive character of a little being. Officers, in high command, should constantly keep in view this heavenly quality.

LONGE, *Fr.* a strap or thong of leather.

LONGER, *Fr.* to skirt, to move by the side of any thing.

LONGER *la rivière*, *Fr.* to move up or down the river. It is frequently found necessary to attack an enemy's post in order to have a free passage on the river, *pour LONGER la rivière.*

LONGER *le bois*, *Fr.* to march by the side of a wood.

LONGER *l'ennemi*, *Fr.* to follow the movements of an enemy, so as to prevent his crossing a river; or to march upon his flank, in front or rear, that you may defeat his plans, or attack him with advantage.

LONGIMETRY, (*longimétrie*, *Fr.*) the art of measuring lands and distances, whether the extent or space be accessible as in a road, or inaccessible, as in a river or branch of the sea.

LONGIS, *Fr.* a lingerer; a drowsy, slow-winded mortal, totally unfit for military affairs; hence, perhaps, a *lounger.*

LONGITUDE *of the earth* denotes its extent from west to east, according to the direction of the equator.

LONGITUDE *of a place*, in *geography*, its distance from some first meridian, or an arch of the equator intercepted between the meridian of the place, and the first meridian. See *GEOGRAPHY.*

LONGITUDE *of motion*, according to some philosophers, is the distance which the center of any moving body runs through as it moves on in a right line. See *MOTION.*

LONGPAN, *Fr.* the longest side of the timber-work of a roof.

LONGRINES, *Fr.* pieces of wood or branches, which are laid along the extent of a sluice, and make part of its grating.

LONG-côtes, *Fr.* those sides are so called, which belong to places that are irregularly fortified, and contain, indiscriminately, eighty toises and upwards. In which cases they are usually strengthened by a flat bastion in the center, or by several flat bastions, which are constructed, according to the extent of the sides, at intermediate distances.

LONGUEUR, *Fr.* length; extension or duration of what is long.

Épée de LONGUEUR, *Fr.* a sword of a proper length to serve as a weapon of defence. This term is used to distinguish it from the short swords, which are worn for mere dress or parade.

To LOOK, a word frequently used in the British service, to express the good or bad appearance of a corps, &c. viz. such a regiment looks well, or ill, under arms.

To Look at, to go down the front of a regiment, &c. without requiring that the troops should be put through the different evolutions. A general officer frequently looks at a regiment in this manner. Sometimes, indeed, the expression bears a more extensive meaning: it is usual, for instance, to say—It would be ridiculous to think of *looking at* a strong place for the purpose of attacking it, without having sufficient force to carry its works.

LOOP, in a *ship-carriage*, a ring made of iron, fastened one on the front of a fore axle-tree, and two on each side, through which the ropes or tackle pass, whereby the guns are moved backwards and forwards on board of ships.

Loop, a small iron ring or staple, by which the barrel of a gun is affixed to the stock; also, an ornamental part of a regimental hat.

Loop-hole for ordnance (*canonnière*, *Fr.*) an opening in the wall or battlement of a fortified place, through which cannon may be run.

Loop-holes, (*crénaux*, *Fr.*) in fortification, are small holes in the walls of a castle or fort, through which the garrison may fire. In field fortification loop-holes are frequently resorted to.

LOOSE, (*dégagé*, *Fr.*) unconnected, not close.

Loose files, (*files déliées, éparses*, *Fr.*) files are so called when the men do not lightly touch one another as in close order.

Loose order. See **ORDER**.

Loose rein, (*reine flottante*, *Fr.*) not tight; it is also called flowing rein.

To Loose, to set sail, to depart by losing the anchor.

To LOOSEN, to separate, to detach, to make loose; as to loosen your files. In a military sense it implies to open ranks or files from close order.

LOOT, Indian term for plunder, or pillage.

LOOTICKS, *Ind.* a term in India to express a body of irregular horsemen, who plunder and lay waste the country, and harass the enemy on their march. They may be compared to the Hulus of Europe, and other free-booters.

LOOTYWALLOW, *Ind.* a term of the same import as Looticks.

LOQUET, *Fr.* a latch.

LOQUETAU, *Fr.* a little latch.

LORD, (*lord*, *Fr.*) a nobleman; a general name for a peer of the realm; a baron. When persons of this class, or indeed of any other above that of esquire, hold commissions in the army, the rank is always specified before the title; as, Field Marshal his Royal Highness the Duke of York, commander in chief, &c. Colonel the Earl of Euston.

LORD lieutenants of counties, persons of weight and consequence who have the management of the militia, &c. They were first appointed in England, in the reign of Edward VI. 1549, in consequence of insurrections occasioned in various parts of the country, by the suppression of monasteries and other proceedings of the reformation then vigorously carried on by the Protector Somerset.

LORDANT, } according to Bailey,

LORDANE, } some derive this of

Lord and *Dane*, because the Danes, when they held the government in England, enjoined the better sort of people to maintain a Dane in their houses, as a spy, and a curb upon them; it is full as likely derived from *Lourdaut*, signifying a lazy lubber.

House of LORDS, one of the three estates of the kingdom.

LORICA squamosa of the ancients—chain and plate coat of mail; it was also called *Lorica hammata* from the rings being hooked together.

LORMERIE, *Fr.* bridle cutter's work.

LORMIER, *Fr.* lorimer, bit maker.

LORMIERS, } (*lormiers*, *Fr.*) a

LORINERS, } company of artificers in London, who make bits for bridles, spurs, and such like iron ware belonging to horse furniture.

LOSS of a river, that particular spot where a river disembogues itself and ceases to be called by its original name. A river is also said to lose itself when it runs under ground and disappears, as is the case of the Loire in Switzerland.

LOT, a die, or any thing used in determining chances. As, to cast lots.

To LOT for men, a phrase peculiar to military arrangements. When recruits join, they should be lotted for with the strictest impartiality. If some troops or companies should be less effective than others, they must be first completed to the strength of other troops or companies, and then the whole must lot equally.

LOUAGE, *Fr.* letting out; hiring; hire.

Cheval de LOUAGE, *Fr.* See HACKNEY.

LOUANGER, *Fr.* to praise or flatter for the direct purpose of turning the object into ridicule.

LOUANGEUR, *Fr.* a person who praises or flatters in contempt.

LOUCHET, *Fr.* a spade, or spade-like instrument half headed with iron; such as is used in digging in fortifications, &c.

LOUIS, or *Knights of St. Louis*, the name of a military order in France, instituted by Louis XIV. in 1693. Their collars are of a flame-colour, and pass from left to right: the king is always grand master.

LOUIS d'OR, a French coin first struck in the reign of Louis XIII. in 1640; but laid aside at the revolution. Its original value was 24 francs, 20 shillings English. A new Louis d'or of 20 francs is now current, and its value, at par, is 16s. 8d. English.

To LOUNGE, to live idly; to be in possession of more time than wit, or knowledge to employ it to advantage.

A LOUNGER, an idler.

LOUP, *Fr.* literally signifies a wolf.

Trou de LOUP, *Fr.* See WOLF-HOLE.

LOUP des anciens was an iron instrument, made in the shape of a tenaille, by means of which they grappled the battering rams, and broke them in the middle.

Voir le LOUP, *Fr.* to see, or to experience vicissitudes.

LOUVE, *Fr.* slings of a crane; also an iron wedge which is put into a stone.

LOUVER, *Fr.* to make a hole in a stone.

LOUVETAUX, *Fr.* iron wedges.

LOUVOYER, *Fr.* to tack.

LOW-WORM, a disease in horses like the shingles.

LOXÓDROMY, (*loxodromie*, *Fr.*) the course of a ship, or the point it describes in sailing from any point towards another, excepting a cardinal point, making equal angles with every meridian.

LOYAL, true to the king, or state.

LOYALISTS. During the war with America several American loyalists served in the British army; and at the conclusion of it many came over to this country, and received compensations for the losses they had sustained. The allowances made on this occasion were not, however, confined to those that had served: several families had their cases taken into consideration, and were provided for by the British government. These compensations did not give any right to a military man to avail himself of the allowance on the score of half-pay.

LOZENGE, (*losange*, *Fr.*) in geometry, a figure, the two opposite angles of which are acute, and the other two obtuse.

LUCARNE, *Fr.* a dormer window.

LUCARNE bombée, *Fr.* a window made in a circular form.

LUDDITES, a band of depredators about Nottingham, Chester, and York. The word *Lluyd*, in Welsh, signifies an army or camp; *Lluyddu*, in the same language, is to make war, and *Lluydder* is a soldier. As Cheshire borders upon Wales, it is not impossible but some Welchman may have given the name. On the other hand, we learn from history, that there was a daring and active character in Cromwell's army whose name was Ludd; and we find by the trials at Chester, that one Walker had assumed the title of General Ludd.

To LUFF, or to spring, to keep to the wind: the French say, *faire une aulofée*.

LUMBAGO, (*douleur de reins*, *Fr.*) an acute pain about the loins and small of the back, such as precede ague fits. Soldiers, particularly of the infantry, are much exposed to this complaint.

LUMIÈRE, *Fr.* vent; touch-hole; aperture.

To LUMP, (*prendre en gros, en bloc*, Fr.) to take in the gross. We also say, to lump an account, that is, to forego the several items of expenditure.

LUMPERS, (*tanqueurs, ou gabarriers*, Fr.) men employed to load and unload ship-cargoes; quay-porters.

Cheval sujet à la LUNE, Fr. a moon-eyed horse.

LUNETTE, Fr. See FORTIFICATION.

LUNETTE *de toit*, Fr. a little dormer window.

LUNETTE, Fr. the seat of a close stool. See BELIDOR.

LUNETTE, Fr. any wall which is raised so as to interrupt the view from a neighbouring building; generally within six or seven feet.

LUNETTE, a sky-light, or any aperture from the top of a building.

LUNETTE *d'approche*, Fr. a telescope. The French sometimes call them *Lunettes de Galilée*, from the perspective glass or telescope having been invented by Galileo.

LUNETTE *à facettes*, Fr. a multiplying glass.

LUNETTE *polyèdre*, Fr. a magnifying glass.

LUNETTE *à puce*, Fr. a microscope.

LUNETTES, in *fortification*, are works made on both sides of the ravelin: one of their faces is perpendicular to half or two thirds of the faces of the ravelin; and the other nearly so to those of the bastions.

LUNETTES are also works made beyond the second ditch, opposite to the places of arms; they differ from the ravelins only in their situation. See FORTIFICATION.

LUNETTONS are a smaller sort of *lunettes*.

LUNGER-CONNA, a poor-house or hospital is so called in India.

LUNT, the matchcord with which cannon, &c. are fired.

LUNULÆ, (*lunules*, Fr.) in geometry, a half moon or crescent, which is made by the arcs of two intersecting circles. If you inscribe a triangle-rectangle within a half circle, the diameter of which becomes the hypotenuse; and if upon each side that compresses the right angle, as its diameter, you describe a half circle, the space in shape of a half moon, closed in by the circumference of each of these two circles, and by a part of the circumference of the great half circle, will form the figure called the Lunula.

LUTTE, Fr. struggle; an exercise of the body, which consists in a full exertion of all its muscular powers, to overcome another body, that resists with equal force and pertinacity.

Mener les choses de haute LUTTE, Fr. to carry things by force, or with a high hand.

LUTTER, Fr. to struggle with or against.

LUXHEBAR, the Indian name for Thursday.

LUZÉRNE, Fr. Spanish trefoil, called likewise in English *lucern*; a species of hay, which is cultivated for the subsistence of horses. It bears a violet coloured flower.

LYCANIANS, (*Lycaniens*, Fr.) a militia that was formerly raised in Sclavonia, the troops of which resemble the *Pandours* and *Warasdins*. It derives its name from being quartered in the neighbourhood of the lordship of *Lyka*.

LYING, to be actually stationed or quartered in a given place.

In-LYING. This term is peculiarly applicable to pickets. A picket is said to be an *In-lying picket* when it is confined within the immediate lines of entrenchments belonging to a camp, or within the walls of a garrisoned town.

Out-LYING picket, is that which does duty without the limits of the camp or garrisoned town; that is, beyond the immediate sentries belonging to either. Those pickets are likewise called *In-line* and *Out-line* pickets.

Out-LYERS, the same as *jaggots*. The term *Out-lyers* was, however, peculiarly understood among the Guards; and consisted of a certain number of men from each company, who were permitted to work on condition that the whole of their pay was left in the hands of the captain, for the time they were so employed. This sum the officer appropriated to his own use, and was thereby enabled not only to increase his pay, but to keep a handsome table whenever he mounted guard. During the winter months, the money arising from *Out-lyers* amounted to a considerable sum. This was allowed as a sort of compensation for the expense the captain incurred by the dinner he gave to his subalterns; and for his contribution to the support of a regimental hospital. The custom is now abolished, as a table is kept by the king, and copiously paid for out of the civil list.

M.

M A C

M, in astronomical tables, signifies meridional or southern.

M, in law, was formerly a brand or mark, with which a criminal convicted of murder, and having the benefit of clergy, was stigmatized, it being burnt on the brawn of the thumb. It has been proposed to stigmatize deserters by burning the letter **D** on their shoulder blades, and impressing the name of the regiments from which they deserted. This could be done in the usual way with gunpowder.

M, in Latin numbers, stands for a 1000.

M̄, with a dash above, (with the accents,) signifies a thousand thousand.

MALER, *Ind.* a certificate which is attested by the principal inhabitants of a town or village.

MACE, a heavy blunt weapon, having a metal head; a club. The mace was formerly much used by the cavalry of all nations, and likewise by ecclesiastics, who, in consequence of their tenures, frequently took the field, but were, by a canon of the church, forbidden to wield the sword.

MACHEFER, *Fr.* dross of iron.

MACHEMOURE, *Fr.* the crumbs of sea-biscuit.

MACHER, *Fr.* to chew; to claw it off. *Un cheval qui MACHE son frein*, *Fr.* a horse that champs his bit.

MACHIAVILIANISM, (of Nicholas Machiaval, a politician of Florence, in Italy,) a political principle, not to stick at any thing to compass a design; to break through the most solemn obligations; to commit the greatest villainies, in order to remove any obstructions to great and ambitious designs; especially in relation to government. So writes honest N. Bailey.

MACHICOULATIONS, **MACHICOULIS**, or *Masse-coulis*, *Fr.* in ancient, and sometimes in modern fortification, that upper part of the wall which is sustained by brackets or corbels, juts out, and overlooks the gate or ditch.

When a place is besieged, detached parties of the garrison may be posted in

M A C

the several machicoulises. Through the intervals of the corbels, or supporting brackets, they may easily observe every thing that passes at the foot of the wall; and if the besiegers should be hardy enough to penetrate as far, they may easily overwhelm them by throwing down large stones, melted lead, combustible materials, hand-grenades, or bombs. The besieged likewise let down large weights fastened to ropes or chains, by which they were retracted after they had taken effect. These brackets or supporters, which in ancient fortification were of a slight construction, might be made of solid materials. The machicoulis, in fact, is susceptible of great improvement, and in many instances might be adopted in order to defend the lower parts of angular forts or turrets.

MACHINALEMENT, *Fr.* See **MECHANICALLY**.

MACHINES used in war by the ancients, or *warlike MACHINES*, (*MACHINES militaires des anciens*, *Fr.*) Every species of instrument or machine, which was employed before the invention of fire-arms, for the purpose of demolishing the fortifications of an enemy, or of rendering them accessible to the besieger, came under the denomination of machine. For a full and elaborate explanation of the different machines that were adopted by the ancients, we refer our military readers to the second volume of the *Recueil Alphanétique*, page 73.

Infernal MACHINES, (*Machines Infernales*, *Fr.*) Although the first idea of these machines has been attributed to France, the invention, nevertheless, is by no means new. Frederic Jambelli, an Italian engineer, was the first that used them, when Alexander of Parma besieged Antwerp. The Prince of Orange likewise had recourse to the destructive effects of an infernal machine, in order to bombard Havre-de-Grace, and to set it on fire. The Dutch and English, in conjunction, attempted to destroy St. Malo by the same means. The first in-

stance, however, upon record, in which the French made use of this machine, was when Louis the XIVth ordered a vessel carrying an enormous shell, full of every species of combustible matter, to be dispatched to Algiers, for the purpose of demolishing its harbour. This probably suggested to other nations the adoption of fire-ships, and other destructive machines, which have frequently been used against maritime places.

The author of *Œuvres Militaires*, tom. xxii. page 222. speaking of the infernal machines, observes that if he were to be in a situation which required the use of so dreadful an explosion, especially to destroy a bridge, he would prefer having the machine made simply with different strong pieces of wood joined together, so as to be in the shape of an egg, or of a cone reversed. The whole must then be made compact with cords twisted round. This method, in his opinion, is not only the best, but can be executed in the most easy and expeditious manner. He further adds, that in order to burn and blow up wooden bridges, and even to destroy such as are constructed upon arches, several sorts of barges or boats might be used, which should be filled with fire-works, bombs, petards, &c. It would likewise be extremely easy to construct these machines upon floating rafters, carrying several thousand pounds weight of gunpowder, which might be confined within strong pieces of wood, put together in the manner already described.

These machines should be piled one above the other, and long iron bars must be thrown across the floats, or be fixed like masts, so that when the whole of the combustible materials is beneath the center of the bridge, the rafters may be stopped. Great care must be taken to dispose the matches in such a manner, that no fire may be communicated to the gunpowder before the machine reaches the exact spot which is to be destroyed.

The infernal machine which was used at Boulogne in 1304, is described as follows :

This machine appears to be as simple in its construction as it is calculated to be effectual in its operations. It is composed of two stout planks seventeen feet long, which form its sides, and are distant from each other about seven feet. These planks are connected by transverse timbers, serewed to the planks, so

as to keep the whole firm and compact and to prevent the danger of their being separated at sea. Of these transverse timbers two are at the fore extremity, and three behind. This may be called the frame or hull of the machine; the remainder of the work being either for the stowage of the combustible matter, or for the accommodation of the seamen, who row the machine. Along the transverse timbers, at both extremities, are laid parallel to the sides five longitudinal bars of nearly the same strength as the transverse timbers, which form a kind of grate, on which the coffers, containing the combustible matter, are placed. The grate behind is double the size of the one before, on the principle of giving facility to the motion of the whole by making the machine lighter at the head. In the center, between the planks forming the sides from the inner extremity of the grate behind, to the outer extremity of the grate before, there is fixed a plank somewhat broader than the side planks, which is well secured to them by three stout transverse timbers, which pass under this center plank to prevent its giving way to pressure. In this plank two triangular apertures are cut for the men who row, to dispose of the lower extremities whilst they ply the machine. Their seats, however, are so contrived, that each man's pressure is directly over that part of the plank which is supported by the transverse timbers. The seats lie nearer to the head than to the hind part of the machine, perhaps, to be some counterpoise for the greater weight of the combustible matter behind. Near each seat are fastened by rings to the sides two oars, one on each side, and each man plies a pair. When the machine is worked to its destination, the men set the combustibles in a train for explosion, and abandon their posts. The whole is so regulated as to weight of the materials, that the machine floats, or more probably moves under the surface of the water, so that little more than the heads of the men are seen. This secures the men and the machine from the fire of the enemy, and as the oars must consequently be plied under water, there is less danger of their being discovered by their noise on their approach. See TURTLE.

MACHINE, in general, whatever hath force sufficient to raise or stop the motion of a heavy body.

MACHINES are either simple or compound.

Simple MACHINES, (*machines simples*, Fr.) are the balance, the lever, pulley, wheel, wedge, and screw. See **MECHANICAL POWERS**.

Compound MACHINES, (*machines composées*, Fr.) are formed by various combinations, and serve for different purposes; in all which the same general law takes place, viz. that the power and weight sustain each other, when they are in the inverse proportion of the velocities they would have in the directions wherein they act, if they were put in motion.

Boring-MACHINE, an instrument used for the purpose of boring cannon. There was a celebrated machine of this description in the iron foundry in Hanover, valued at 2,000,000 crowns, which was carried away by the French in January, 1804. We presume it has been reclaimed by the representatives of the electorate of Hanover.

Hydraulic MACHINE, (*machine hydraulique*, Fr.) a machine by means of which water is conveyed or raised.

MACHINE for submarine navigation. See **AMERICAN TURTLE**.

MACHINE pneumatique, Fr. pneumatic engine. It also signifies an air-pump. This useful instrument was invented in the 17th century, by Otho Guericke, a magistrate of the city of Magdeburgh, in the circle of Saxony.

MACHINER, Fr. to plot; to conspire; to enter into secret cabals. We also say to *Machinate*.

MACHINISTE, Fr. an engine-maker; one who assists the natural strength of man by the inventions of art.

MACHRONICOS, an extensive wall, such as was built round Athens, &c. There were two large piers erected at each end, with arched galleries under, for a garrison of soldiers.

MAÇON, Fr. mason; it also signifies bricklayer.

MAÇONNAGE, Fr. mason's work.

MAÇONNER, Fr. to build; to make; to construct any building with stone or brick. The French say, figuratively, *maçonner*, to perform in a bungling manner.

MAÇONNERIE, Fr. masonry; mason's work; bricklayer's work. This word is applied not only to the work itself, but also to the art with which it is done.

MAÇONNERIE de blocage, Fr. mason's, or bricklayer's, work which is done with mortar, mixed with small stones or gravel.

MAÇONNERIE en liaison, Fr. mason's, or bricklayer's, work which is done with square stones, or stones laid across, one covering the other.

MAÇONNERIE en limosinage, Fr. mason's, or bricklayer's, work done with rough stones, or shards.

MAÇONNERIE de moilon, Fr. mason's, or bricklayer's, work which is done with stones that are squared, placed upon a level one with the other, and pointed at the outside.

MADRAS, Fort St. George. A town and fort on the Coromandel coast, in the East Indies, belonging to the English. The town is called Madras by the inhabitants, but by the natives Chilipatam. It is divided into two towns, the one called the White, and the other the Black Town; the former being inhabited by Europeans, and the latter by Gentoos. The diamond mines are only a week's journey from this place. The town is governed by a mayor and aldermen, with other officers. It is 63 miles north of Pondicherry, lat. 13° 5' N, long. 80° 34' E. It may not be irrelevant to state, that the establishments belonging to Great Britain, in the kingdom of Indostan, are divided into three governments, independent of each other, Bombay commands the factories on the western side of the peninsula, commonly called the Malabar coast; together with those in Persia: the establishments and possessions on the eastern or Coromandel coast, are under the government of Madras; and those in Bengal depend on Calcutta.

MADRJERS, planks of wood, used for supporting the earth in mining, carrying on a sap, making colliers, caponiers, galleries, and various other purposes.

MAGASIN, Fr. a magazine.

Petit-MAGASIN, Fr. This was a sort of intermediate building, called entrepot, where stores, provisions, &c. to answer daily consumption were deposited.

MAGASIN d'approvisionnement, Fr. magazine of stores.

MAGASIN d'artillerie, Fr. } a powder-

MAGASIN à poudre, Fr. } magazine.

MAGASIN d'atelier, Fr. a store-house, or magazine of stores, such as contractors and commissaries build or hire for

the purpose of keeping all the necessary materials.

MAGASINS généraux de guerre, Fr. all sorts of buildings in which military stores are placed.

MAGAZINE, a place in which stores are kept, or arms, ammunition, provisions, &c. Also a small tin box covered with black leather, which is fastened to the soldier's belt, for the purpose of carrying an additional quantity of ammunition.

Powder-MAGAZINE is that place where the powder is kept in very large quantities. Authors differ greatly both in regard to situation and construction; but all agree, that they ought to be arched and bomb-proof. In fortifications they are frequently placed in the rampart; but of late they have been built in different parts of the town. The first powder magazines were made with Gothic arches; but M. Vauban, finding them too weak, constructed them in a semicircular form, whose dimensions are, 60 feet long, within; 25 broad; the foundations are eight or nine feet thick, and eight feet high from the foundation to the spring of the arch; the floor is 2 feet from the ground, which keeps it from dampness.

One of our engineers of great experience some time since, had observed, that after the centers of semicircular arches are struck, they settle at the crown and rise up at the hances, even with a straight horizontal extrados, and still much more so in powder magazines, whose outside at top is formed like the roof of a house, by two inclined planes joining in an angle over the top of the arch, to give a proper descent to the rain; which effects are exactly what might be expected agreeable to the true theory of arches. Now, as this shrinking of the arches must be attended with very ill consequences, by breaking the texture of the cement, after it has been in some degree dried, and also by opening the joints of the voussoirs, at one end, so a remedy is provided for this inconvenience, with regard to bridges, by the *arch of equilibration* in Mr. Hutton's book on bridges; but, as the ill effect is much greater in powder magazines, the same ingenious gentleman proposed to find an arch of equilibration for them also, and to construct it when the span is 20 feet, the pitch or height 10, (which

are the same dimensions as the semicircle) the inclined exterior walls at top forming an angle of 113 degrees, and the height of their angular point above the top of the arch, equal to seven feet: this very curious question was answered in 1775 by the Rev. Mr. Wildbore, to be found in Mr. Hutton's *Miscellanea Mathematica*.

Artillery-MAGAZINE, in a *siege*. The magazine is made about 25 or 30 yards behind the battery, towards the parallels, and at least 3 feet under ground, to hold the powder, loaded shells, portfires, &c. Its sides and roof must be well secured with boards, to prevent the earth from falling in; a door is made to it, and a double trench or passage is sunk from the magazine to the battery, one to go in and the other to come out at to prevent confusion. Sometimes traverses are made in the passages to prevent ricochet shot from plunging into them.

MAGAZINES in general, including provisions for the army, &c. (*Magasins des vivres, &c. Fr.*) Under this article may be included all the necessaries required for the subsistence and support of an army. Common sense dictates, that if an individual sent upon active business must be provided with all the means to support him during his journey, &c. an assemblage of many individuals ought more especially to be well taken care of. An able commissary general can alone be equal to the supply of these necessaries; but he must, at the same time, be seconded by a wise administration. The French have been peculiarly marked for their foresight in this important branch of military economy. Before they enter a country, the necessary arrangements are always made for the certain supply of all the essential means by which an army is enabled to keep the field. For this purpose, a regular communication is kept up between the advanced posts and the reserve; and provisions are not only secured in the front, but also in the rear of every effective force. During active hostilities, the French—who certainly surpass all other nations in their ways and means with respect to a commissariat—have recourse to requisitions; so that before any army advances into a country, provisions, forage, &c. are always in readiness. We wish the same precautions would be attended to, when British troops are landed upon the continent.

MAGNA CHARTA, the great charter of liberties granted to the people of England in the 9th year of Henry the Third, and confirmed by Edward the First. It is so called on account of the excellence of the laws therein contained; or, according to some writers, because another lesser Charter, called Charter de Foresta, was established with it; or because it contained more than any other charter, &c. or in regard of the remarkable solemnity in the denouncing excommunications against the infringers of it.

MAGNANIMITY, (*magnanimité*, Fr.) greatness of mind; bravery; elevation of soul; disinterestedness; every thing opposite to meanness and selfishness. Vauvenargues has the following maxim on this head:—*la magnanimité ne doit compte à la prudence de ses motifs*, magnanimity or elevation of soul is not accountable to prudence for its motives.

MAGNANIMOUS, (*magnanime*, Fr.) great in sentiment; elevated in mind; brave.

MAGNITUDE, or quantity, any thing locally continued, or that has several dimensions. Its origin is a point which though void of parts, yet its flux forms a line, the flux of that a surface, and of that a body, &c.

MAHEUTRE, an old French term signifying *soldat de la ligne*, a regular soldier, or soldier belonging to the army of the line.

MAHOGANY, (*acajou*, Fr.) a wood that comes from the West-Indies; the tree of which grows most abundantly in the Antilla Islands. In Nugent's Pocket Dictionary, it is called *bois de la Chine*. The mahogany wood is never worm-eaten, and is applicable to many useful purposes in the artillery. The best mahogany comes from Honduras.

MAHONNE, Fr. a species of galeas or double galley which the Turks use. The Venetian galeasses are larger and stronger built.

MAHRATTAS, *Ind.* descendants of a pastoral people who formerly inhabited one of the grand divisions of ancient Hindustan, described by the Hindu geographers, and called in the Puranas, *Maharashtra*; by which name its inhabitants are likewise designated. The ancient Maharastras, like the Tartar hordes, united the business of war and plunder with the occupation of shepherds; and

the modern Mahrattas, though in some respects more civilized, still inherit the warlike and predatory spirit of their ancestors. This spirit, (we quote from the editor of the Asiatic Register,) directed by the talents of some distinguished chieftains, has, in the course of one hundred and sixty years, raised them from the obscurity of free-booters to be one of the most powerful nations of Asia.

Were it not for a manifest disunion among the Mahratta princes, their collective military strength and resources would be extremely formidable.

The efficient force of their combined armies amounts to 210,000 cavalry and 96,000 infantry; of this force the whole of the infantry, and about three fourths of the cavalry, are kept in a constant state of readiness to march against the enemy. The infantry is chiefly officered by European adventurers; and in the service of Scindiah, the battalions are accoutred, formed and brigaded, nearly in the same manner as the native regiments in the British Indian army. To the different bodies of infantry there are attached very large trains of artillery, well appointed and served; and at the commencement of the late war, the pieces of ordnance attached to Scindiah's brigades amounted to 464.

The cavalry is divided into four distinct classes, namely, the body guards of the princes; the troops furnished by the Silladars; the volunteers, who find their own horses, arms, and accoutrements; and the Pindarees or marauders, who serve without pay, and subsist entirely by plunder. This last class, however, is composed of so licentious and ungovernable a rabble, that it is not now employed in the armies of the principal chieftains. The Mahrattas are accustomed, from their infancy, to the use and management of horses; and hence arises that extraordinary dexterity in horsemanship, which their troopers often display.

The Mahratta tribes were first formed into a nation between the years 1660 and 1670, by Levajee, a man of an enterprising and aspiring mind, who was a descendant of the Rajahs of Chittore, the most ancient of the Hindu princes in the Deccan. The father of this celebrated chief was a general in the service of the Mussulman prince Ibrahim Adil Shah, sovereign of Beejapur, from

whom he had obtained, in perpetual sovereignty, the principality of Sattarah, besides a valuable jaghire in the Carnatic.

The *Empire of the Mahrattas* comprehends all the western provinces of the Deccan which lie between the rivers Nartudda and Krisna; the province of Berar in the interior; that of Cuttack on the eastern coast of the peninsula; and the whole of the western Hindostan, excepting Moultan, the Punjab, and Sirhind. These extensive territories are bounded on the north by the mountains of Lewalic, which separate them from Sirnayer and Cashmir; on the north-east by Rohilcund and Oude; on the east by the British provinces of Benares, Behar, Bengal, part of Orissa, the bay of Bengal, and the northern Sircars; on the south by the dominions of the Subahdar of the Deccan, the rivers Krisna and Tumbudra; on the west by that part of the Indian Ocean which divides India from Africa; and on the north-west by the sandy deserts of Monltan, the river Sursootee, and the province of Sirhind. The greatest length of the Mahratta dominions, from Delhi in the Northern, to Tumbudra in the Southern extremity, is 970 British miles; and the extreme breadth, from east to west, where they stretch across the peninsula, from the bay of Bengal to the Gulph of Cambey, is 900 British miles. This immense tract of country contains the provinces of Delhi, Agra, Ajmere, Malwa, Gujerat, Condeis, Baglana, Visiapur, the Konkar, Berar, Cuttack, and part of Dowlatabad. Of these provinces Delhi, Agra, part of Malwa, Gujerat, Baglana, and Visiapur, are highly fertile and populous; yielding abundance of the finest grain, thronged with towns and villages, and enriched by a busy internal commerce. The other provinces of the empire are not less productive, but much less disposed, by nature, for cultivation and improvement. Lofty ridges of mountains and vast sterile vales, sometimes covered with wood, form the most prominent features of their local scenery. They are consequently thinly inhabited; but the inhabitants, partaking of the nature of the soil, are hardy, robust, and intrepid. The whole population of the Mahratta empire may be computed at about forty millions. The population is composed of different nations and of

various tribes, of whom nine-tenths are Hindus, and the rest Mussulmans. The nation from which the empire derived its origin and takes its name, occupies the province of Baglana, the northern part of Visiapur, and the mountainous districts of Dowlatabad and Berar.

We refer our readers to an interesting paper on the military institutions of the Mahrattas in the Asiatic Annual Register, vol. I. Miscellaneous Tracts, p. 121. and for further particulars respecting the Mahrattas in general, to the introduction of the last volume published in 1804.

MAIDEN, an edged instrument used at Edinburgh, in former times, for the decapitation of criminals. The original invention is by some attributed to an inhabitant of Halifax, in Yorkshire. The guillotine, so called from a French physician whose name was *Guillotin*, and by which Louis the Sixteenth was executed, January 21st, 1793, owes its origin to the maiden.

MAJESTAS, a Latin word, from which are derived *Majesté*, Fr. and *Majesty*. It was originally used among the Romans to signify the power which was vested in the Roman people, when they had the exclusive privilege of making laws, creating their chief magistrates, and of determining upon peace or war. Hence also our term majesty or sovereignty of the people, signifying that right of electing their representatives which Englishmen possess.

MAIL, primarily denotes the holes or meshes in a net: it likewise signifies a round iron ring. Hence

Coat of MAIL, a coat of armour, or steel net-work, anciently worn for defence.

MAILLET, Fr. a mallet. The French formerly made use of this instrument as an offensive weapon in their engagements.

In 1351 the mallet was used at the famous battle *des Trente* (of thirty) which derived its name from the number of combatants that fought on each side.

This extraordinary combat holds a distinguished place in the history of Brittany, and was entered into by the partizans of Charles of Bois, and the King of France on one side, and by the Count Montfort and the King of England on the other.

Under the reign of Charles VI. a Parisian mob forced the arsenal, took out a large quantity of mallets, with which they armed themselves for the purpose of murdering the custom-house officers. The persons who assembled on this occasion were afterwards called Maillotins.

In the days of Louis XII. the English archers carried mallets as offensive weapons.

MAILLOTIN, *Fr.* an old French term, which signified an ancient weapon that was used to attack men who wore helmets and cuirasses.

MAILS ou *Maillets*, *Fr.* See **MAILLET**.

MAIN-BATTLE. See **BATTLE-AR-RAJ**.

MAIN-BODY of the army, the body of troops that march between the advanced and rear guards. In a camp, that part of the army encamped between the right and left wings.

MAIN-GUARD, or grand-guard, a body of horse posted before a camp for the security of an army. In garrison, it is a guard generally mounted by a subaltern officer and about 24 men. See **GUARD**.

MAIN, *Fr.* hand.

MAIN armée, *Fr.* armed force.—*Entrer à main armée dans un pays*, to enter into a country with armed men.

Un coup de MAIN, *Fr.* a bold action; the sudden execution of any military enterprise.

En venir aux MAINS, *Fr.* to come to blows, to come to close action.

Avoir les armes bien belles à la MAIN, *Fr.* an expression used in fencing, signifying, that the person who handles the sword or foil does it gracefully.

Mettre l'épée à la MAIN, *Fr.* to draw one's sword, either for the purpose of falling in, giving a word of command, (when troops are under arms), or of fighting a duel.

Faire MAIN basse, *Fr.* to put to the sword; to give no quarter.

Léger en MAIN, *Fr.* light in hand.

Dur, ou pesant en MAIN, *Fr.* heavy in hand.

Sûr en MAIN, *Fr.* steady in hand.

MAIN de la bride, *Fr.* the left hand.

MAIN de la lance, *Fr.* the right hand.

Un homme de MAIN, *Fr.* an active, stirring man. We familiarly say, an off-hand man.

En être aux MAINS, *Fr.* to be actually engaged.

Sabre à la MAIN, *Fr.* sword in hand.

Aller bride en MAIN, *Fr.* to act with deliberation.

To **MAINTAIN**, to support.

MAJOR, a superior officer in the army, whose functions vary according to the nature of the service on which he is employed.

MAJOR of a regiment of foot, the next officer to the lieutenant-colonel, generally promoted from the eldest captain: he is to take care that the regiment be well exercised, to see it march in good order, and to rally it in case of being broken in action: he and the adjutant are the only officers among the infantry that are allowed to be on horseback in the time of action, that they may the more readily execute the colonel's orders.

The MAJOR of a regiment of horse, as well as foot, ought to be a man of honour, integrity, understanding, courage, activity, experience, and address: he should be master of arithmetic, and keep a detail of the regiment in every particular: he should be skilled in horsemanship, and ever attentive to his business: one of his principal functions is, to keep an exact roster of the officers for duty; he should have a perfect knowledge in all the military evolutions, as he is obliged by his post to instruct others, &c.

Town-MAJOR, the third officer in order in a garrison, and next to the deputy-governor. He should understand fortification; and has a peculiar charge of the guards, rounds, patrols, and sentinels.

Brigade-MAJOR is a particular officer appointed for that purpose, only in camp, quarters, or barracks: he repairs every day to head-quarters to receive orders from the adjutant-general: thence he goes and gives the orders, at the place appointed for that purpose, to the different majors or adjutants of the regiments which compose his brigade, and regulates with them the number of officers and men which each are to furnish for the duty of the army; taking care to keep an exact roster, that one may not give more than another, and that each march in their tour: in short, the major of brigade is charged with the particular detail in his own brigade, in much the same way as the adjutant-general is charged with the general detail of the duty of the army. He sends every

morning to the adjutant-general an exact return, by battalion and company, of the men of his brigade missing at the retreat, or a report expressing that none are absent: he also mentions the officers absent, *with or without leave*.

As all orders pass through the hands of the majors of brigade, they have many occasions of making known their talents and exactness.

MAJOR of *artillery* is also the next officer to a lieutenant-colonel; but his duty differs very materially from officers of that rank in the army: for he is usually in command of a detachment of artillery at some particular post, or in the field, and has not immediately the charge of drilling and disciplining the men of the regiment; but is more generally employed in executing the various duties attached to the profession; which comprehend many very important objects. He should be well skilled in fortification, and the construction of field works; as in some instances he may be thrown into situations where no engineer is upon the spot to perform such duties.

MAJOR of *Royal Artillery Drivers*, [formerly called Gunner Drivers.] (*Major des Conducteurs d'Artillerie, Fr.*) A particular officer whose appointment was first created in 1806, (as appears by the King's warrant, dated 1st day of January in that year,) on the recommendation of the late Mr. Pitt, the present Lord Liverpool, and the Earl of Chatham, then master general of the ordnance. Two troops were to have been added to the old establishment, under an impression that our co-operation with Russia, Prussia, &c. would have required a large disposable force, especially of artillery. In which case, it was thought that a chief commissary of the drivers, acting confidentially with the master general in regard to intelligence, &c. and (although subordinate to the artillery in service) still liable to be called upon for the interior economy of the corps, might be very useful during the course of a campaign; most especially if the individual, so entrusted, should possess a certain knowledge of the country, and be acquainted with the manners and language of the inhabitants. This situation was abolished in 1812.

MAJOR of *engineers*, commonly with us called sub-director, should be very

well skilled in military architecture, fortification, gunnery, and mining. He should know how to fortify in the field, to attack and defend all sorts of posts, and to conduct the works in a siege, &c. See ENGINEER.

Aid-MAJOR is on sundry occasions appointed to act as major, who has a pre-eminence above others of the same denomination. Our horse and foot-guards have their guidons, or second and third majors.

Serjeant-MAJOR is a non-commissioned officer, of great merit and capacity, subordinate to the adjutant, as the latter is to the major. Among the privates the serjeant major is generally called major. In France, the first serjeant of each company was called *Serjeant-Major*.

Drum-MAJOR is not only the first drummer in the regiment, but has the same authority over his drummers as the corporal has over his squad. He instructs them in their different beats: is daily at orders with the serjeants, to know the number of drummers for duty. He marches at their head when they beat in a body. In the day of battle, or at exercise, he must be very attentive to the orders given him, that he may regulate his beats according to the movements ordered.

Fife-MAJOR is he that plays the best on that instrument, and has the same authority over the fifers as the drum-major has over the drummers. He teaches them their duty, and appoints them for guards, &c.

MAJOR-General. See GENERAL.

MAJOR, *Fr.* The French considered this term, in a military sense, under the following heads:—

MAJOR-général *d'une armée, Fr.* major-general generally so called, which see.

MAJOR-général *de l'Infanterie Française, Fr.* major-general of the French infantry. This appointment was made under Francis I. in 1515.

MAJOR-général *des Dragons, Fr.* a major-general of dragoons. His functions were similar to those exercised by the *Maréchal général des logis de la cavalerie*, and nearly the same as those of major-general of infantry.

MAJOR *de brigade, Fr.* brigade-major.

MAJOR *d'un régiment de cavalerie, Fr.* major of a regiment of cavalry.

MAJOR *d'un régiment d'infanterie*, Fr. major of a regiment of infantry. Under the old government of France all majors of infantry regiments were styled *sergent-majors*, or serjeant-majors, in their commissions. They were not permitted to have any company of their own; because it was reasonably judged, that their own interest might render them more partial to that company, and the service be thereby injured.

MAJOR *d'une place de guerre*, Fr. town-major.

MAJOR *des quatre compagnies des Gardes du Corps*, Fr. a rank which was exclusively given to an officer belonging to the old French guards. This was an appointment of considerable trust under the old government of France. He was lieutenant in each of the companies, and had the right of seniority over all lieutenants younger than himself in date of commission.

MAJOR *sur un vaisseau de guerre*, Fr. an officer on board a king's ship, whose duty is to see the guard regularly mounted, and the sentries posted.

Etat-MAJOR, Fr. a comprehensive French term in which is included every thing that can be conveyed under the word *Staff*, as applicable to the British service. In the *Manuel des Adjudans-Généraux et leurs Adjoints*, the particular duties of the état-major are accurately explained.

Etat-MAJOR, Fr. the staff officers of a regiment.

Grand Etat-MAJOR, Fr. the staff officers of an army, who are detached from their several corps for the purpose of attending a commander in chief, or other general officer.

MAJOR-Dome, Fr. an officer belonging to the galleys, who has the chief superintendance of provisions.

MAJORITY, (*majorité*, Fr.) the rank or situation of the junior field officer or major of a regiment.

MAIRE, Fr. Under the ancient monarchy of France the person so called was invested with the first dignity of the kingdom. Charles Martel, of whom so much is said in the history of the French kings, was Mayor of the palace. He was, in fact, grand master of the king's household, and had an entire controul over the officers belonging to that establishment. The appellation of *Maire du Palais*, mayor of the palace, was given in lieu of *Maître du Palais*, Master

of the palace. This name was borrowed from the Roman Emperors, who had each a grand master of the palace. Du Tillet, a French author, in page 12 of his book, pretends that the word is derived from *Mer*, which signifies *Præfect*.

MAISON-du-Roi, Fr. the king's household. Certain select bodies of troops were so called during the monarchy of France, and consisted of the *gardes du corps*, or body guards; the *gendarmes*, *chevaux légers*, or light horse; *mousquetaires*, or musketeers; *la gendarmerie*, *grenadiers à cheval*, or horse grenadiers; the regiments belonging to the French and Swiss guards, and the *cent Suisses*, or hundred Swiss guards. The *Maison-du-Roi*, or king's household, was not considered as a separate establishment from the rest of the army, until the reign of Louis XIV. This establishment was successively formed by different kings out of militia companies, which they took into their body-guard.

MAISON *Meurtrière*, Fr. This term was formerly given to casemates.

MAITRE, Fr. This word (which signifies, in a literal sense, *master* or *superior*) was formerly attached to every trooper belonging to the heavy French cavalry. Among the Romans, the term *magister* (master) was used to mark out different officers who held situations of trust. Hence the *Dictator* was called *Magister Populi*, the master or leader of the people. The Romans likewise applied the word to the leading officers of their infantry.

MAITRE des armes, Fr. master at arms. An officer, during the existence of the Grecian empire, who took precedence of the *Maître de la milice*, or master of the militia.

MAITRE d'armes, Fr. a term in general use among the French, signifying a fencing-master. Every regiment has a *maître d'armes* attached to it.

MAITRE homme, Fr. an individual possessing great talents and much firmness.

MAITRE fripon, Fr. an arrant knave.

MAITRE aliboron, Fr. a busy-body.

MAITRESSE femme, Fr. a woman of superior capacity; in a familiar sense, one who wears the breeches.

MAITRISE, Fr. a place of rank and dignity; as *la Grande Maîtrise de Malte*, the situation of Grand Master of Malta.

MAITRISE, Fr. to subdue; to do-

mincer over; to overcome; to get the better.

MAITRISER *les événements*, Fr. to get the better of apparent obstacles, by anticipating events, or overcoming them by judgment and intrepidity.

MAIZE, *Ind.* Indian corn.

MAKE *Ready*, a word of command in the firing, on which the soldier brings his piece to the *Recover*, at the same time cocking it ready for firing.

To **MAKE** *land*, to discover land when at sea. The French say, *découvrir la terre*.

To **MAKE** *war*, (*faire la guerre*, Fr.) to commence hostile operations against another.

MAL *d'armée*, Fr. a sort of contagious disorder which sometimes rages in an army, and is occasioned by too much fatigue, or by bad food.

MAL-de-mer, Fr. sea-sickness.

MAL-de-terre, Fr. the scurvy is so called by the French.

MAL-de-corne, Fr. See **SIT-FAST**.

MALABAR-GUNS, heavy pieces of ordnance, which are made in the Malabar country, and are formed by means of iron bars joined together. They are very long, and extremely unwieldy.

MALADE, Fr. sick.

Soldats MALADES, Fr. soldiers on the sick list.

MALAI *language*, (*Le Malai*, Fr.) this was anciently the learned language of the East; but is now that of trade and commerce.

MALAIS, (*Malais*, Fr.) the inhabitants of a Peninsula, called Malacca or Malaya, joining to Siam on the north; but surrounded on the other parts by the sea. It is about 600 miles long, and lies in the direction of S. S. E. and N. N. W.

MALANDRE, Fr. melanders; a disorder among horses which affects the knees, when the skin is chapped, and a fetid humour runs from it.

MALANDRES, Fr. wood that is worm-eaten, or otherwise defective from knots, &c. The French say *bois malaudricux*.

MALANDRINS, Fr. a set of freebooters, who under the reign of Charles V. infested France. During the last century these plunderers made their appearance twice in considerable bodies. They consisted chiefly of discharged soldiers, who formed themselves into marauding parties, and pillaged, with impunity, all the travellers they met.

Abbé de Choisi relates, that it was extremely hazardous to oppose them in their first onset. These pillagers, whom the inhabitants called *Malandrins*, assembled in different cantons, chose their own leaders, and observed a sort of discipline in their depredations.

They usually contrived to station themselves in such a manner, that it was impossible to attack them.

They plundered, or destroyed, many places and buildings through which they passed, and paid no regard to church or state. Their principal and most notorious leaders were, the Chevalier de Vert, brother to the Count D'Auxerre, Hugues de Caurelee, Mathieu de Gournar, Hugues de Varennes, Gauthier Huet, and Robert Lescot, who all belonged to some order of knighthood. Bertrand du Guesclin cleared the country of these dangerous and unprincipled men by leading them into Spain under a pretence of fighting the Moors, when in reality his object was to attack Peter the Cruel. See French Hist. de Charles V. liv. i. page 86.

MALE, in composition, signifies *bad*.

MALE-Administration, (*malversation*, Fr.) bad management of affairs.

MALECONTENT, (*mécontent*, Fr.) dissatisfied; discontented.

MALEFACTOR, (*malfauteur*, Fr.) an offender against law; a criminal.

MALEPRACTICE, practice contrary to rules; as the embezzlement of the king's stores, &c.

MAIÇAÇON, Fr. defect. This word is applied to any thing which is not perfectly finished.

MALINGERER, (from the French;) one who feigns illness to avoid his duty.

MALINGRE, Fr. peaking, sickly.

MALL. See **MAUL**.

MALLET, a wooden hammer.

MALLEABLE, a property of metals, whereby they are capable of being extended under the hammer.

MALLETIER, Fr. a trunk-maker.

MALLETTE, Fr. a small portable trunk.

MALLIER, Fr. shaft horse; also a pack-horse.

MALTA, the strongest place in the Mediterranean, taken by the French troops during the Revolutionary war, from the Knights of that order, and afterwards retaken by the British. The island of Malta may be considered as a key to the Levant. The fortifications of this

place have been carried to a great extent, owing perhaps to the facility with which the stone can be worked, from its peculiar softness; the whole island being a rock of the same stone, and having a surface of earth of depth merely sufficient to produce grain or cotton. See MILITARY ORDERS.

MALTOTE, *Fr.* an oppressive tax.

MALVOISIN, (from *Mal*, evil, and *Voisin*, a neighbour,) an ancient warlike engine for casting stones, battering walls, &c.

MAMALUKES, (*Mammelus*, *Fr.*) Some writers assert, that they were Turkish and Circassian slaves, originally purchased from the wandering Tartars by Meliesahéh, and amounting in number, to one thousand men. They were trained and disciplined to war, and some were raised to the first places of trust and empire. Other writers say, that the Mamalukes were generally chosen out of Christian slaves, and may be considered in the same light as the Turkish Janizaries are: others again assert, that they originally came from Circassia, and attracted public notice by their valour, &c. in 869. See *D'Herbelot*, page 545. The Mamalukes made a considerable figure during the war of 1800, especially in their contest against Bonaparte, for the defence of Egypt. They afterwards joined the French, and formed a considerable part of their cavalry.

MAMMELON, *Fr.* literally a nipple. The word is applied to the end of any piece of iron or wood which is made round for the purpose of being moveable in a hole or cavity.

MAMMELON signifies also the extremity of an upright which is made round, and used in dams and sluices.

MAMMELONS, *Fr.* round hillocks of easy ascent, rising upon the surface of level ground.

MAMMILLIARIA, (*Mammelière*, *Fr.*) a word corrupted from the Latin, signifying a sort of armour, or that part of armour which formerly covered the chest and nipples. *Etienne de la Fontaine*, who was silver-smith to the French court, mentions, among other articles, two sets of *Mammelières*, in an account which was delivered in the year 1352.

MAN. To *man the works* is to post the soldiers on the lines so as to be ready for their defence, &c. In the plural number it means soldiers, as an army consisting of 12,000 *men*.

Flank-front-rank-MAN. Each soldier upon the right and left extremity of the first line or rank of any given body of troops is so called.

Flank-rear-rank-MAN. Each soldier upon the right and left extremity of the last line or rank of any given body of troops.

When a company or battalion is drawn up three deep, the two men who stand at the extremities of the center line may be called *flank-center-rank-men*.

Great MAN, (*Grand Homme*, *Fr.*) See GREAT.

Little MAN, (*Homme de Petitesse*, *Fr.*) See LITTLE.

MAN, *Isle of*, anciently *Mona*, is situated in St. George's channel, between 4 and 5 degrees of western longitude; and between 54 and 55 degrees of north latitude; it is about 30 miles long and 15 broad. The three united kingdoms, England, Scotland, and Ireland may be seen from it. The *Manx fencibles*, under the command of Lord James Murray, were raised for the defence of this island. The Mutiny Act extends thither in many instances. See Sect. 78.

MANACLES, MANICLE, (*menotte*, *Fr.*) chain for the hands; shackles.

To MANAGE, to train a horse to graceful action. The French say: *dresser un cheval*.

MANCELLE, *Fr.* a small chain which is fixed to the collars of carriage or dray horses, and which terminates in a large iron ring, that is attached to the shaft. It likewise means the ring itself.

MANCHE *d'un bataillon*, *Fr.* literally means the sleeve of a battalion. This word originally signified any small body consisting of 40 or 60 men, which were drawn out of the main-body of a battalion, and were posted by files upon the corners or angles of the same battalion.

At present the word *manches* means the wings of a battalion, the center of which was composed of pikemen, whilst pikes were in use. Thus there were right and left wings, which were again divided into half-wings, quarter wings, and half-quarter wings.

Gardes de la MANCHE, *Fr.* men belonging to the old French body guards, who on particular occasions, as at the Royal Chapel, &c. stood on each side of the king, dressed in hoquetons, and armed with pertuisanes or lances.

La MANCHE, *Fr.* the channel.

La MANCHE Britannique, Fr. the British channel.

La MANCHE de Bristol, Fr. St. George's channel.

MANCHE d'outil, Fr. the handle of any utensil, tool or instrument.

MANCHES à vent, Fr. windsails.
